...[*British hospitals are in chaos and it could lead to a formal rationing of care* Patricia Trimble (68), a grandmother with pneumonia, spent 10 hours on a trolley at Hope Hospital, Salford, before being transferred to the Halifax Royal Infirmary. She later died. At Portsmouth's Royal Alexandra and St Mary's hospitals, staff handed out notices to patients' families asking them to help wash, feed and shave their sick relatives. In Northampton, the town's general hospital effectively closed its doors to the sick and injured for 3 1/2 hours. Even emergency cases were diverted. Nearby Kettering General hospital ran out of beds the next day and turned away patients for the first time in its 100-year history. A 24-year-old was left stranded in France after being seriously injured because no suitable hospital space could be found for her in Britain. The NHS, like a car crash victim, seems to be suffering cardiac arrest after multiple injuries. Although the health secretary tried to make capital from the falling numbers of NHS waiting lists, he was forced to admit: "There is a crisis." Amid the tragedies and headlines, many patients remained sanguine. They recognised it was not so much an exceptional crisis as an exacerbated symptom of chronic malaise. Has the NHS, after years of argument over cuts versus efficiency, finally reached a point where it no longer has the capacity to cope? One element of the NHS illness is that the service is short of 8000 nurses and finding it difficult to keep those it has. Some hospitals have sent managers on recruitment drives to the Far East, Scandinavia, and Commonwealth countries; it is estimated that last year more than 5000 nurses working for the NHS came from abroad. Others turn to agency services. Thornbury Nursing Services, based in Bristol, has been charging hospitals \$180 an hour to hire nurses, of which \$114 goes to the nurse – equivalent to more than \$210,000 a year. In comparison, the starting salary for a newly qualified NHS nurse is \$38,400; the average pay is \$45,000. However, alongside the shortage of nurses and low pay there are questions over the number of beds. In the 1960s there were more than 3000 hospitals providing 550,000 beds in Britain. By 1995 the number of beds was down to 250,000. Now it stands at 194,000, of which 108,000 are for acute cases. Further reductions are likely as hospitals are modernised under the Private Finance Initiative. A new hospital in Norwich, for example, will provide 800 beds, about 400 fewer than the hospitals it will replace. There are some good reasons for the decline. Quicker techniques and better management have led to a 50% reduction in overnight stays. Although there are fewer beds, more patients are being treated – 11.5 million in-patients last year, compared with 8.2 million in 1987. But Britain could spend more. Among European and Scandinavian countries it is fifth from bottom based on the amount spent per head of population on health services. There is a limit, however, as to what can be done and how much taxpayers are prepared to pay. Recently, the chairman of the junior doctors committee at the BMA said that what most annoys doctors is: "People are literally calling 999 because they have got the shivers. This is not just the old, but people in their 20s and 30s. When you tell them they've got a common cold or the flu, they then ask to be taken home in an ambulance. There is a general increase in the unwillingness of people to take responsibility for their own health." Was this exaggeration in the heat of the moment? The Department of Health could not supply figures. But, by some estimates, there were 18 million admissions last year – suggesting that an extraordinarily high proportion of the population sought hospital help. Patients complain they often have little choice but to go to their local A&E unit for swift treatment. In big cities, getting appointments, let alone home visits, from GPs can be a lengthy process, especially during holiday periods. Part of the problem is the increasing use of locums – who may be more ready to refer patients to hospital – to cover out-of-hours calls. GPs, however, also complain of unrealistic demands. "Patients were using us in the same way as they use supermarkets," says a GP in Bolton, referring to his experience in recent weeks. "Medical services are quite simply undervalued by the majority of the population. Try calling a plumber on Christmas Day and see how much it costs." Against this background of demand outstripping supply, health experts are urging the government to acknowledge what many already accept: there will have to be some form of rationing. It is already happening informally whether patients like it or not. A survey of 3000 GPs, published in *Doctor* magazine this month revealed that 8 out of 10 had denied patients treatment, with the situation worst in the south. The government, the journal said, was "like a child hiding under the bed covers in the hope that the rationing monster will go away".

...[*While insisting that the NHS was safe in her hands, the Iron Lady trumpeted the virtues of privatised, US-style health care. Essential to her plan was the idea of getting hospitals and GP surgeries to compete for patients within an internal market. The more patients an institution gets, the more money it receives from the public purse. Those who don't satisfy the customer go under. In theory it sounded like a way of increasing choice, but it had obvious drawbacks. There was no incentive for GPs to take on patients with chronic and expensive illnesses. Without very strict regulation the elderly, the disabled and those needing long-term treatment lost out in such a market. AIDS victims and those who suffer from related syndromes can find it impossible to get care other than in expensive private clinics, or they are moved from practice to practice, hospital to hospital. Doctors had to become accountants first and carers second to survive the harsh climate of competition. The internal market led to an enormous growth in paperwork, administration and non-medical costs in the American system. There was nothing to suggest that the situation would be any better in Britain. Indeed most health professionals, from doctors to hospital administrators, believed that it would be a great deal worse. "The motive in business is to make a profit. The Health Service cannot make a profit. The Health Service in this country has been very successful. I'm not sure the same can be said of British business," claimed a London consultant when the former Tory PM first trumpeted her plan*']...

No other people ever look half so lost or so piteous as former cabinet ministers. Once, whenever they descended from a plane, government chauffeurs stepped forward to carry their briefcases and to open the car door. Now they must queue for shuttle buses... The former minister I banged into the other day actually said he was surprised to be recognised. Not that he has completely sunk from view. He is now chairman of [an RHA]... So, either rudely or honestly, I flew into him over the hopeless state of public hospitals. With a practised tongue he put me in my place. And then he said that the real crisis is still to come – and no one will talk about it. At some stage, he said, people must decide where we are going to draw the line on other people's lives... As he sees it, doctors can now perform tricks that are so clever and so impossibly expensive that we are forced to ask ourselves: How are we to decide who gets treated and who gets left to die? This is the first time in history that people have had the choice. Until now people, like other worn-out animals, could only lie down, try to get comfortable and wait. Then the question began to answer itself. If the dying were bossy and important enough their final days could be stretched out into months. While the rest of the world looked on in disbelief, the taxpayers of Spain, Yugoslavia and Portugal were forced to keep alive the wasted shells of their former dictators, Franco, Tito and Salazar. Yet at the same time it was possible to see in public hospitals motionless forms in beds on which were hung DNR cards... Do Not Revive. The Franco-Tito-Salazar treatment was too costly for ordinary people. For them a bed, a bedpan and a DNR card were good enough. Today doctors are cleverer. And they have cleverer machines. So they could spin out the last comas of more people. But who gains if Granddad lies motionless and silent for a month longer than the term of his natural life? And... has anyone the right to force everyone else to pay for those blank and costly days? Thirty, 40, 50 years ago the world was more passive. The doctor decided... Sheeplike, we accepted the decision or preferred not to

know. Today we are more nosy. And stropplier. So, if the old cabinet minister... is right, we must take the responsibility of setting up the rules on when we keep pouring money into the not-quite-dead and when we pull the plug...

Auckland Healthcare will be thumped with an extra \$87,000 on its annual water and wastewater bill because of Metrowater's new system charges. The [CHE] is wondering where the money will come from to meet the unexpected charges and the facilities manager... is considering refusing to pay... [He] said the charges were already unreasonable and the enterprise had been negotiating with the Auckland City Council-owned company for months... The annual \$600,000 water bill... will jump 14[%] now that the fixed charge is based on pipe sizes... Three 150mm pipes run into Green Lane Hospital and Auckland Hospital has two... [E]ach hospital needed only one, but the Metrowater system was unreliable and backup pipes were necessary... However, the commercial wastewater removal charge will drop from \$1.44/cu m to 95c.

...First it was the neon S[HARP] sign on top of Auckland Hospital – now it's going to be McDonald's "golden arches" at the front of the Auckland Starship children's hospital... [T]he hospital had lacked a seven-day food outlet for staff, parents and visitors... [Now] the McDonald's chain is to open in the front foyer... a move that some health lobby groups fear will confuse healthy lifestyle messages. But the Starship general manager... said McDonald's food was analysed by experts and deemed suitable within a balanced diet. He said McDonald's would expand its menu to include cereals, low-fat milk and seasonal fruit. The National Heart Foundation medical director... said the extra healthy foods were commendable but could be a token gesture. "McDonald's isn't going into the Starship for the nutritional sake of children, they are there to make money..." ...obesity among children was rising... due to lack of exercise and poor diet... "Kids will be getting the message from elsewhere that if you eat too many takeaways it's not good for your nutrition – yet here it is within a hospital." ...The creeping commercialism of hospitals is not new. McDonald's is set up in 50 hospitals around the world...

The Starship hopes to feast on a deal struck with its new tenant, McDonald's, in which the rent goes up as more hamburgers are sold... Under the deal, the Starship will earn either \$70,000 (as a base rate) or... 7.5[%] of gross sales up to \$1.29 million... Then 8[%] for sales from \$1.29 million to \$1.69 m... Then 8.5[%] of sales above \$1.69 m... The Starship general manager... said the rent would go into the hospital's operating budget. About 96[%] of that is spent on treating sick children. The deal was commercially favourable... especially given that the foyer space had been empty for four years... McDonald's will also run two public awareness campaigns a year by printing health messages on placemats in its 138 [NZ] stores. The theme for its next campaign, scheduled for next month, is child safety. It will also support one fundraising effort a year run by the Starship Foundation.

...It is a popular fiction that doctors are money-hungry and mercenary in their dealings with patients. It probably does apply to a small minority[, but the] majority have entered medicine with a genuine desire to help humanity through medicines.

...The Human Rights Commission will take legal action next week over a ruling which stops about 200 foreign doctors from working in Auckland. The commission is seeking a High Court judgment to overturn the North Health ban, which prevents overseas-trained doctors from receiving a Government subsidy. It is expected to argue that the ruling is unlawful discrimination based on nationality. The hearing... is expected to take three days... North Health has refused to register overseas doctors since October 1995, in an attempt to save about \$80 million a year in drug and laboratory testing costs... Without a state subsidy... foreign doctors could not hope to compete with local GPs.

...The High Court yesterday found that a North Health policy unlawfully discriminated against [overseas doctors] by subsidising only N[Z]-trained doctors... The South African doctor who originated the legal action... said last night... "I'm sure all 200... doctors are extremely excited by this. It will mean we can practice where we want to instead of being completely restricted. We definitely have to talk about compensation, depending on how much people suffered during this time."

...[the] North Health primary care general manager... said the authority would appeal against the High Court decision on a number of grounds... He said discrimination in favour of local doctors happened around the world, because other countries had the same problem of too many doctors and not enough taxpayer money[('of the 645,000 active physicians in the US in 1989, 116,000 held foreign medical degrees')]... Auckland already had too many GPs... It will not issue any more general practice contracts unless applicants can identify a shortfall. Doctors selling their practices must try first to find buyers with existing contracts, and new documents will be issued only if none comes forward. The ban is not the first in N[Z], but it is the biggest... A senior North Health manager... said... [he] expected the immediate reaction of many Auckland doctors would be: "That's wonderful – that protects my patch and stops competition." Although new medical graduates might object, he said they would only be facing the same kind of competition specialists seeking hospital positions find. There might still be openings in "overdoctored" localities, but probably only as assistants to existing GPs... [Yesterday the] deputy chairman of the General Practitioners' Association... said... "We're putting our own graduates into unemployment. They are casualties and we're not comfortable." He said it was vital to look at policies on how many doctors were able to immigrate to N[Z] and the number of medical students able to train locally... [In addition,] doctors should be offered incentives to practice in locations outside their preference.

...YOUNG doctors already frozen out of practicing in GP-saturated main centres face further restrictions, with limits likely to be placed on those wanting to set up in central N[Z]. Central Health has... been forced to regulate the number of doctors it subsidised because graduates had been targeting the region after failing to establish in other areas, such as Auckland, Dunedin and Christchurch. The Southern RHA[has taken] steps... to restrict for two years the number of [GPs] wanting to set up in parts of its region.

...[the government hopes to solve doctor shortages in rural areas by recruiting overseas doctors whose qualifications the Medical Council has refused to recognise. A package announced yesterday aims to give immigrant doctors training and registration in return for their accepting remote GP postings shunned by NZers. However, some immigrant doctors plan to refuse the jobs, which one Ukrainian orthopaedic specialist described as just another humiliation. He was not willing to start over as a GP. "I will go anywhere I am needed, to the West Coast or Invercargill – but as a surgeon, not a beginner." Another problem is that there are not enough rural vacancies for them all. The Health Minister said there were about 200 overseas doctors living here whose qualifications did not meet registration requirements.]

...[one in 10 foreign doctors seeking full registration in NZ is struggling to meet requirements, says the Medical Council. This is based on supervisors' reports on 142 doctors who passed exams but have been on probation for a year to qualify for full registration. The council found the doctors were inadequate or poor in one or more of the assessment areas, which included competence in English, medical knowledge, ethical standards, practical skills, initiative and judgment. The council's annual report said: "The transition of a significant percentage of overseas trained doctors into the local workforce is unsatisfactory from the point of view of the public, the employer and the individual doctor." Normally, doctors needed two reports to prove themselves, but a third of the doctors surveyed had to have three or four reports, and 5.6% required five to 10 reports. The council said some were unlikely ever to succeed. The Overseas Doctors' Association blamed the registration process. A spokesman said doctors took on average three years to pass the exam because they had to re-learn theory. During that time they were unable to work and their clinical skills could wane. He said the exam should be scrapped and replaced with clinical training and assessment. A Medical Council spokeswoman said the majority of overseas trained doctors became valued professionals in the workplace. "It is to be expected some doctors will take longer than others to adjust."]

...[the surgeons who assessed whether he was fit to replace the bones and torn muscles of NZers were brutally frank. It was highly unlikely, they concluded in April last year, that the Bosnian orthopaedic surgeon would qualify inside two years to work here, even if he managed to pass the specialists' examination. There were "major deficits" in the total joint replacement area, his arthroscopy was not up to scratch and he had hardly picked up a scalpel since 1992. He "requires further training," remarked the NZ committee of the Royal Australasian College of Surgeons. The 48-year-old immigrant was]

dumbfounded. In a six-page riposte he lashed out at the “wrong statements and lies” in the report, listed references and tributes from European specialists about his work and enclosed a string of job prospects in Norway, where authorities accepted his qualifications. He has a medical degree from Sarajevo University, a doctorate in clinical immunology from the University of Zurich and a 20-year work history in European hospitals and clinics. He is registered to work in Germany – but not in NZ. He calls himself a victim of the scandalous discrimination meted out to foreign trained doctors trying to enter the NZ medical workforce. He complains that NZ’s highly paid specialists don’t want competition. “I’ll be honest and say if I earned more than \$1 million a year in a tax paradise where no patient could sue me for mistakes, then I’d want to keep a closed shop too. But what have you got? There are patients who wait a couple of years for simple procedures while I sit jobless at home.”

...‘up to 60 overseas doctors living in west Auckland are likely to benefit from a \$11.8 million retraining package announced by the Health Minister. The Overseas Doctors’ Association president says it’s the “best deal” they’ve had from the Government so far. “It’s a wise investment because we estimate foreign doctors on the unemployment benefit have cost the Government nearly \$45m.” More than 300 overseas doctors granted permanent residency in NZ between 1991 and 1995 have not been able to practice because of the NZ Medical Association’s registration requirements. The minister has been asked to bring NZ’s registration standards into line with international requirements.’

...about] 50 migrant doctors... yesterday began a hunger strike outside the N[SW] Parliament in protest at “discriminatory” policy that keeps them from practicing in A[US]. A spokesman for the doctors said about 1000 of them were on social security while rural areas were suffering a shortage of doctors.

...The dire shortage of Maori and Pacific Island doctors has come under scrutiny at the Auckland School of Medicine... It had hoped to create 50 spots for first-year Maori and Pacific Island students, but the Ministry of Health torpedoed the proposal, saying the country did not need such a large rise in young doctors... The school... was now negotiating for 30 extra places and hoped for Government approval. These places would be on top of the 110 first-year spots for medical training at Auckland. Only about 13 of the present 110 first-year students are Maori or Pacific Islanders. Plans are also being finalised for a “foundation year” aimed at high school graduates needing extra preparation before tertiary health training.

...A charity famed for performing eye operations in Third World countries wants to set up “eye camps” in N[Z] and blitz what it says is an appalling wait for cataract surgery... The Fred Hollows Foundation conducts low-cost, fast-turnaround corrective surgery in countries like Nepal, Eritrea and Vietnam – and says it can perform cataract surgery for less than half the... \$3000 some... N[Z] specialists are charging... The foundation’s technical director... said hospital and Government representatives had asked the foundation to come up with a scheme to slash the cataract waiting list... The most recent figures from the Ministry of Health show that about 10,300 patients were waiting for ophthalmology procedures in 1996. Most needed cataract operations... N[Z] would be the first developed nation the foundation has set its sights on... Foundation surgeons in the Third World performed “conveyor belt” cataract operations every 15 minutes, improving the sight of thousands of people in just days... The quality of the operations was equal to that in first-class clinics... The foundation was launched by the late Fred Hollows, a N[Z]-born AUS]n eye surgeon.

...The Commerce Commission will decide within a week whether to take N[Z] eye surgeons to the High Court over the blocking of two A[US]n surgeons from working in the South Island... A landmark proposal by the Fred Hollows Foundation... hinges on the outcome of the commission’s inquiry... into the South Island case – which could take up to 18 months if it goes to court.

...It is fitting in a way that eye surgeons should provide an insight to the forces that have helped to sink [NZ’s] health reforms... On Christmas Eve [last year]... Southern Health, had to abandon an arrangement for an A[US]n to treat 130 people waiting for cataract operations at Southland Hospital. Not one N[Z] ophthalm]ologist would provide a signature authorising the surgeon to practice in this country. They did not doubt his capabilities. [The doctor] is reportedly one of the best in A[US]. He was going to be in Dunedin visiting family and agreed to help clear the backlog at Invercargill. Unfortunately for the patients, eye surgery turned out to be a closed shop. The Ophthalmologists’ Society insists that there is no shortage of surgeons in N[Z], though Southern Health could find none to help to attack Invercargill’s waiting list after the Government provided extra funds for the cataract operations last year. [The doctor] was the second Sydney substitute sought. The first demurred when, according to Southern Health, he was warned that the work was “not in his career interests.” If the story begins to sound like one of the cruder cloth-cap tactics of yesteryear, it is not redeemed by the society’s explanation for opposing the employment of “itinerants,” as it calls them. The suggestion that [the AUSn] would have left too much post-operative work for others to do added insult to injury for Southern Health if not for the surgeon. The difficulty has evidently disappeared now that publicity has embarrassed the society and two ophthalmologists from Christchurch will do the operations... [T]he new Minister of Health, who blew the whistle on the Invercargill blockade, [accused the society] of “closing ranks in order to maintain the private business generated by waiting lists.” ...To compare the incident to the worst days of the unqualified preference clause is probably a trifle unfair – to trade unions. Had any individual member of most unions the power to authorise the hire of an itinerant it is likely one could have been found to sign the paper. Not one of [the society’s] adherents to the Hippocratic oath would do so. That, brothers, is solidarity. But the real lesson of the piece was not the closed ranks of the medical profession which is well known; the revelation rather was that ophthalmologists – and who knows what other specialists – have been given such control of the gate to their field. We should have guessed, I suppose. The Medical Association has demonstrated the same power to exclude immigrant doctors from general practice in recent years and on pretexts equally transparent... After all, health is no stranger to markets. Competitive private enterprise produces the very potions that heal, the technology that keeps expanding diagnostic and surgical capabilities and costs, the insurance benefits that not all can afford, the food and fitness studios, footwear, physiotherapy, counselling for every anxiety. Health is good business in all countries where people have the money and leisure to pursue it. And in all those countries the subsidised services are struggling to contain the demand. None has yet found a way to check the rocketing costs that consumers can pass to taxpayers and nor yet has N[Z]’s new Government.

...Some public servants are attempting to frustrate the coalition agreement, says the Associate Minister of Health... who was the principle author of N[Z] First’s health policy... They were treating it as an obstacle rather than a mandate “which flags a fundamental shift in Government direction,”... [he said. He] also attacked National’s health reforms. They had failed to match the claims made for them and in some areas had proved disastrous... They had shifted the emphasis from a service to making a profit and had put the public health system on the track to privatisation. [He] described... the introduction of competition between public and private health providers as “madness.” ...[he went on to attack the RHAs as bureaucratic because today] the four authorities and the Ministry of Health spent 82[%] more managing the health system than had been spent before the 1993 reforms. The authorities argue that they have taken on far more work, including rest home care, and... have saved the country far more than the extra spending by cutting fraud and inefficiency.

...Public spending on health has fallen in real terms under the National Government. A damning Ministry of Health report... said “funding is less generous now than it was in 1988-89.” ...expenditure was now 10[%] lower. Most growth in health spending had been in the private sector. Between 1980 and 1995... private spending grew at an annual... 5.8[%]. The... Minister of Health... said... “People now realise that health services have an insatiable appetite for money and we must put the brakes on somewhere.”

...The first is to break down traditional barriers between GPs and hospitals so that a single organisation takes responsibility for a patient’s care... The Minister of Health... said... “...where it’s going to make a bigger difference is not so much in trying to control particular sets of costs, but in crossing the traditional boundaries... You wouldn’t want to underestimate the extent to which these people had nothing to do with each other and held nothing but contempt for each other’s clinical practice.” He said a typical GP attitude was to see hospitals as a black hole, which swallowed up

their patients. Many hospital doctors in turn regarded GPs as incompetent and blamed them for the poor health of their patients... [C]ollectively they could do a much better job for their patients. This had rarely happened under the old system because doctors did not have the financial incentives to keep their communities healthy...

In a quiet revolution, doctors are being put back in charge of running hospitals. In the process a host of non-medical management jobs will go... [The] Health Minister... is, in part, going back to the kind of hospital management that existed before CHEs were invented... This shouldn't be seen as a complete turning back of the clock, nor do doctors see the changes as the answer to all their prayers.

...The former *Alice in Wonderland* world of public hospital clinicians being separated from any of the financial allocation decisions was surreal – incapable ever of an efficient allocation of taxpayers funds. Similarly, the idea that financial managers could take charge over medical professionals and effectively dictate to them what medical options they did or didn't have reeked of poor corporate design.

...DOCTORS at Christchurch Hospital are so worried by faulty systems they have told management that patients are no longer safe... [A] confidential report written by senior doctors provides a behind-the-scenes look at... the hospital's over-stretched systems... [and] documents the numerous attempts by staff to alert management to problems as they developed from critical to terminal... The problem came to a head[last] July when the hospital was struggling to cope with its winter rush of patients. Doctors painted a bleak picture of a total breakdown in the system for admitting acutely ill patients. Seriously sick patients were scattered throughout the hospital. They were difficult to find, reports were going astray and an increasing pool of casual nurses was not trained to manage such sick people... The hospital's main problems can be traced back to February when the top layer of experienced nurses, 23 unit nurse managers (similar to the old charge nurses) was stripped away. They were replaced by seven patient care managers and 20 "facilitators". The facilitators do walk the wards, but spend much of their time doing rosters and administration. "The major problem we have is that we have lost the institutional knowledge the 23 unit managers had," said[an] organiser of the N[Z] Nurses Organisation. "Some had been nurses for up to 20 years and they knew their stuff backwards. Apart from people going sideward, or occasionally upwards, we lost about 15 of them. That's an awful lot of knowledge in highly specialised areas." ...[the] Nurses Organisation area manager... wrote to the Health Ministry on June 10, warning that patients were being put at risk by inadequate planning for a predictable rise in winter admissions and increased use of casual staff. (In the last four years the casual pool has risen from 20 to 180). "...We think it is timely for you to review your monitoring of the risk to patient safety at Canterbury Health. We do not want to see another Cave Creek..." [his letter] said... Three days later, the first of four deaths that the Medical Staff Association linked to system failures occurred.

...Untrained junior staff trying to cope with situations beyond their expertise are contributing to hospital system failures, says the Medical Practitioners Disciplinary Committee... Budget cuts in hospitals do not help to decrease the potential for such failures... The committee was also disturbed by cases in which parents' concerns, later established as legitimate, were ignored by the practitioner. "It seems as if on occasions the mere suggestion by the parent of a particular diagnosis was enough to make the doctor reject this." It was a doctor's obligation to listen to the parents because they knew what was going on with the child, the committee said... The Medical Council said that of 116 complaints in the year to March 31, 35 were about inadequate/wrong diagnosis and 22 were about inadequate/wrong treatment... Sixty percent of complaints were upheld. Lack of communication was a feature in many cases...

Health Care Hawke's Bay is on the verge of launching a... scheme which will see the work of enrolled nurses being taken over by "clinical associates". The new aides, with only a fortnight's training, will provide basic care – for less pay – under the supervision of registered nurses. They will assist with technical procedures such as... bone marrow collection, answer call bells, clean equipment and do reception duties. Hospital orderlies, trained as "support associates", will assist with domestic chores, such as lifting and toileting patients... Critics say the new workers could miss dangerous symptoms which more qualified nurses would have spotted... [A] Nurses Organisation spokesman... was... concerned about the "brain drain" from Hawke's Bay of 185 enrolled nurses whose jobs were on the line. The nurses have had 12 to 18 months of formal hospital-based training, and up to 25 years of experience. "It is the most incredible waste you could imagine." ...[a] Napier MP... said the scheme was aimed at cutting costs rather than improving patient care... Clinical associates will get \$26,000, whereas senior enrolled nurses receive \$27,609 plus a shift allowance of around \$8000 a year... [The] CHE... denies the system is a cost-cutting exercise – it says staffing costs will be roughly the same as they are now... It... saw registered nurses as the key to future nursing and is urging enrolled nurses to re-train... The CHE was increasing the number of registered nurses, while taking away the menial jobs that took up 25% of their time... So far, only one enrolled nurse had applied and been accepted as a clinical associate... [The spokesman said many enrolled] nurses could not afford the two years of bridging training before they could gain registration... N[Z] has around 6500 enrolled nurses in the workforce. The training of enrolled nurses stopped in 1993. There are about 28,000 registered nurses who have three years' training, now known as a degree in nursing.

...The Minister of Health wants to see nurses taking on some of the tasks of junior hospital doctors and [GPs]. The minister [told a nurses conference in Wellington yesterday that highly skilled nurses in hospitals had the... experience to do a better job than junior doctors... [The minister] told the N[Z] *Herald* that hospitals were already beginning to regard junior doctors as too expensive, and they might be forced to try other avenues for training. But the Resident Doctors' Association said last night that the minister was misinformed and was trying to play nurses off against doctors. The association's senior advocate, said junior doctors were paid less than many nurses but played a vital role in plugging the many gaps in the public health system. Junior doctors had no problem with nurses taking over simple tasks, so long as they then took full responsibility for their work[. He thought i]t was unlikely hospitals could cope without junior doctors who often worked unattractive hours and performed medical tasks that nurses could not. The chief executive of the Nurses' Association... said the minister's comments received a mixed reaction yesterday, especially since nurses had previously been told they would have no further pay rises. "The issue is how much more does he want nurses to do with no recognition?" She said... many nurses were keen to take on new responsibilities if they were given training.

...[The experience of doctors on the night shift for emergency departments in at least two North Island hospitals falls short of the international minimum. The international standard is that doctors in charge should be third-year registrars training to become emergency medicine specialists. But at Whangarei Hospital a second-year house officer is left in charge, and at Tauranga Hospital a senior house officer or a second-year junior house officer']...

Junior doctors at Health Waikato may strike over a contract offer which the health provider admits reflects its... [burgeoning] deficit. About 180 doctors will meet in the next two weeks to discuss Health Waikato's final offer... [By the way, Health Waikato has confirmed that it] spent \$6736 advertising the positions of five ear, nose and throat specialists who quit last year – only to reappoint them at the end of the recruitment process...

Labour has criticised as an "outrageous waste" the \$553,000 to be spent... by Central Health... on [consultants]... for a secondary services study...

The \$5.2 million paid by Taranaki Health to consultants could have kept hundreds of threatened jobs going for four years, says the Alliance health spokeswoman. Taranaki Healthcare said yesterday the aim of its "re-engineering" was to remain competitive in a rapidly changing environment. Staff would be reduced from 1200 full-time equivalent staff to 900...

Constant restructuring and threats of redundancy within Health Waikato are leaving staff bewildered and demoralised, says the nurses union, and is affecting the quality of service... [S]taff are waiting for the completion of two reviews, both of which are likely to result in redundancies... The reviews stemmed from the [CHE's] worsening financial position. It had estimated a \$3 million deficit, but... this was now more likely to be between \$8 million and \$12 million. One review was of non-clinical staff. About 40 people in the accounting and business support service areas were expected to lose their jobs, saving... about \$2 million annually. The other review was announced... as a "full organisation-wide functional review."

...The Minister of Health... told a [CHE] that staff should have no pay rises for at least two years, unless they can be funded by cutting costs or jobs... "He instructed that any changes to wages should be offset by productivity improvements using 'fewer or a less costly mix of staff'." ...It was revealed yesterday that Capital Coast Health was "technically insolvent" and had borrowed money to pay wages this week.

...Capital Coast Health nurses yesterday besieged a recruitment agency which is seeking staff for British hospitals as news broke of job losses at the [CHE. Its] deficit is heading towards \$50 million and the chief executive... has triggered formal consultation with unions about possible redundancies. The enterprise has 3170 fulltime-equivalent positions, but more actual staff because many work only part-time. Earlier predictions had suggested that up to 600 jobs could go as [the chief executive] implements a recovery plan. The Minister of Health... made it clear yesterday that [the CHE] was one of the worst performers... and needed to be more cost-effective rather than relying on increased Government revenue. He said the Government was being "quite hard-line" about pouring more money into hospitals "when other providers could do a lot with \$1 million."

...As many as 1000 jobs will[eventually] go at... the cash-strapped... Capital Coast Health... A summary of its business plan shows 411 jobs to go in the next two years and a six-month wage freeze for staff on collective employment contracts... [In international news, t]housands of doctors working for Greece's main social welfare fund have started a... strike, leaving affiliated hospitals and out-patient clinics operating on skeleton staffs. They are demanding salary increases and the payment of a variety of bonuses.

...[about] 70,000 Israeli health workers held a national strike yesterday, paralysing Government hospitals and clinics, to protest at planned reforms to the universal health system. Hospitals continued emergency services... but most patients were refused medical facilities.

...Nurses are preparing for possible strikes at six Auckland hospitals... But health chiefs have warned that services will have to be cut if nurses do walk out the door, which would affect thousands of patients. About 3000 nurses at Auckland Healthcare and Waitemata Health have rejected pay offers based on no increase now and 1.5[%] later next year... A Nurses Organisation spokeswoman... said yesterday that the union would hold a round of meetings late next month, followed by a possible ballot on striking.

...More than 2000 disgruntled Auckland nurses are set to vote on strike action that would throw major emergency hospitals into turmoil... The country's largest... [CHE]'s nurses were paid less than counterparts at neighbouring hospitals, the union said. New graduates were on \$14.05 an hour, compared with \$14.72 at South Auckland Health and \$14.38 at Waitemata Health... A union organiser... said management would not offer base-rate pay rises. It did offer to pay higher-ranked nurses more, but only if junior nurses took pay cuts. Auckland Healthcare's stance falls in line with a Government letter ordering hospitals to freeze pay unless they can shed staff or slash wages elsewhere... The Nurses Organisation said yesterday that talks with Auckland Healthcare had broken down and a strike ballot would be held later this month... The head of Auckland Healthcare... said he had not heard of the strike threat and hoped to meet nurses before they voted.

...Nursing staff turnover at Auckland Hospital is 23[%] per annum. That is too high. Recruitment and retention of nurses is a key problem. Fair and reasonable pay settlements are an important part of managing turnover. CHE managers know this perfectly well. But there is the instruction from Wellington to contend with. The problems with top-down, bureaucratic decision-making are reasonably well-known. It leaves those at the coal face with no way of influencing decisions while those at the top of the pyramid have insufficient information on which to make good decisions... [Incidentally,] Palmerston North Hospital staff face increasing violence and abuse from patients and their visitors. A spokeswoman for MidCentral Health said... [s]ick people could not be turned away or discharged because of their behaviour and it was distracting for staff to have to divert their attention from caring for patients to cope with abuse.

...Seventy-one complaints about nurses and midwives were made to the Nursing Council last year – a third of them by the ACC. The complaints include negligence, assault, verbal abuse and sexual impropriety.

...ACCORDING to [the witness], the doctor asked her to take off her clothes and then masturbated her for what seemed like five minutes before telling her to get up and get dressed. "It was nothing remotely like a medical internal examination," she said... [She] went home crying hysterically and told her story to the family friend looking after her. Her parents reported the matter to the police who informed them they had had other complaints against the doctor but no charges had been laid because there had not been sufficient corroboratory evidence. [She] went public when she heard of other females, including a 12-year-old, who apparently had similar stories. The publication of [her] story inspired 12 other women to join her in laying assault charges in court. Ten complaints were also made to the... ACT Medical Board... which entered into a prolonged legal battle aimed at suspending the doctor's medical registration... [T]he attempt to lay... criminal charges against the doctor came unstuck when[a] Supreme Court Justice... granted a permanent stay on the proceedings. Among his cited reasons were the prejudice to the doctor that would result from the... 20-to-35-year delay in taking action... and the fact that relevant medical records had been destroyed. An appeal to the full court supported[the] decision... "Although there is a public interest in bringing allegations of serious criminal conduct to trial, there is no public interest in doing so under circumstances of irreparable unfairness... [T]o force [the doctor] to stand trial on these charges under these circumstances would offend the court's sense of justice," the appeal judges said... [T]hese judges took issue with... one case where the complainant continued to visit the doctor 11 years after the alleged assaults and another where the complainant reported having four orgasms in response to the doctor's attentions... For the women, there was one small victory in June 1995 when, after an application from an ABC Radio journalist, the Appeal Court overruled the confidentiality notice suppressing publication of the doctor's name... In N[Z] about two doctors a year are found guilty of some form of sexual misconduct, according to the Medical Council. Sixteen have been struck off the register for sexual offences since 1987.

...[the] agency that sent the nurse who killed an elderly Auckland couple in their home later billed the couple's estate for nursing services... No covering note or expression of regret accompanied the bill... [A] lawyer who was close to the couple... was unsure whether it covered care provided on 17 August [1996] by... the former nun who kicked and beat the couple to their deaths that day. [She] was found not guilty of their murders by reason of insanity in the High Court at Auckland on Friday and committed to a mental hospital... Nurses With Hearts... has refused to comment since suppression orders protecting its identity were lifted by the court. The Labour Department's occupational safety and health service... was satisfied that the agency complied with its legal obligations to people affected by the actions of its employees... [In related news, a] former intensive care unit nurse who was on duty during dozens of unexplained deaths[at] a hospital in the American Midwest was arrested yesterday and accused of killing six people. [The suspect], aged 36... has maintained his innocence throughout the 2 1/2-year... \$US1.5 million... investigation... He was suspended from his job after authorities realised the death rate when he was on duty was triple the normal rate. There were 130 deaths at the hospital while he was on duty. During their... investigation, authorities exhumed and examined the bodies of 15 patients. An affidavit said police had searched [his] former residence and seized several syringes and needles... He was not authorised to give injections...

Medical problems in Auckland's public hospitals – ranging from bad side effects to unexpected deaths – will be analysed in a new survey. Researchers at the Auckland University medical school... say the results will be used to improve future medical care... But they will also give the first accurate picture of what goes wrong and how often...

A Ministry of Health draft report... ranks each of the country's 23 [CHEs]... Auckland public hospitals are leading the way in patient care with the lowest death rates in the country – well ahead of many poorly performing counterparts. Patients appear to fare better in northern hospitals than those in the central region and the South Island... The findings, worked out by complex statistical formulas... using death and readmission rates... [to find a ratio] of actual to expected death rates... reflect a similar ministry report last year ranking hospitals on safety... To make valid comparisons, the hospital data was adjusted for patient risk on admission. The adjustments mean that large hospitals... will not be disadvantaged when compared with a basic, smaller hospital... South Auckland Health and Auckland Healthcare have the lowest [ratio of 0.89]... Hutt Valley

Health and Nelson-Marlborough Health had death rates [of 1.19, which is]... far higher than... the national average... [of 1.0. By the way, h]ealth ministers want more study of the options for providing surgical services in the Bay of Plenty. A joint Lakeland-Eastbay working group presented its proposal for a merger of the Rotorua and Whakatane-based [CHE]s in Wellington on Thursday. A merger would... significantly reduce operational and administration costs, the group's report said... [It] would also... maintain the clinical viability of services in the region... This meant patients could be assured they were in a safe environment when undergoing surgery.

...The level of services provided by Northland hospitals is unsafe, say Bay of Islands doctors, whose concerns were raised in Parliament yesterday... [T]he doctors... also said that unacceptable delays for urgent treatment were causing patients undue pain and suffering.

...Northlanders are being put at risk because of unacceptable delays in getting... radiology, which is a crucial tool in detecting the [cancer]... says a spokesman for Whangarei GPs... He said some patients with suspected cancer had been waiting more than six months... [and] that although the waiting list had been reduced... [a] large number of cases had gone on to a "new" waiting list, which... already included hundreds of people. North Health's communications manager... said discussions were taking place to allocate more funding for radiology in Northland next year.

...Cancer patients are waiting up to 12 weeks for radiotherapy treatment at Auckland Hospital – three times what international guidelines suggest... Most of the patients have had surgery to remove the cancer, but needed radiotherapy to cut the risk of relapse... Auckland Hospital's director of radiation oncology... said the present situation, although far from ideal, was an improvement on waits of up to 18 weeks last year... However... a \$1.9 million Government plan, launched last September, to cut queues, largely by sending patients to Christchurch or Palmerston North[, fell]... well short of the 124 originally expected to have gone by late next month... [O]nly 40 patients have taken up the offer... [The director] said... he could understand people's reluctance to travel. "People are incredibly anxious after being diagnosed and then to have to disrupt their lives to travel for treatment is a major thing. For people who work, having to go away has a huge financial impact." ...North Health... yesterday said that the 12-week wait was unacceptable... Waiting times are expected to drop early next year when Auckland Hospital gets two new linear accelerator machines for radiotherapy.

...Cancer patients will be victims in an industrial dispute likely to leave them without vital radiography treatment. Radiation therapists at Auckland Hospital have issued strike notices for four days in the next two weeks. But management say that would make treatment impossible, and they have given notice of a lockout. The parties have been negotiating the collective contract for the past four months. The sticking point is Auckland Healthcare's efforts to have radiographers work a night shift... [T]he four linear accelerators used in radio therapy cost \$4 million each and the hospital wanted to utilise them for longer hours to treat more patients.

...[H]ospital radiation therapists strike this morning in Auckland, Hamilton and Palmerston North (hospitals have rebooked more than 160 radiation therapy appointments until the 48-hour strike is over) adding to pressure on the health system from a 2-day walkout by more than 3000 Canterbury workers – the most serious strike to hit the public health sector, reducing services in 16 hospitals and prompting warnings that patient safety cannot be guaranteed. Auckland hospitals have fielded pleas to take critically ill patients from Christchurch, with only a handful of empty beds remaining around the country to cope with emergencies while nurses and other Canterbury health workers remain on strike. The cancer centres are embroiled in a separate industrial dispute to that of the Canterbury District Health Board, but the combined effect is increasing calls for Government intervention. The therapists are seeking pay rises of 20% to 35%, saying an offer of 3% for each of two years is woefully inadequate for attracting enough new staff to cut unacceptable waiting times.]

...Women with pre-cancerous conditions have been left untreated because specialist laser equipment at National Women's Hospital was broken for six months... [due to] holdups in obtaining a part from the U[S]... The Alliance health spokeswoman... said... [no] alternative arrangements had been made for treating urgent cases... while the machine was out of action... [Furthermore, the] patients had not been told of the problems with the machine... But the National Women's manager... said none of the women had cancer and none of their cases was urgent[, although he]... said he was not familiar with... one case[of] a woman known as Anne with a pre-cancerous growth on her vulva[who] was told by her specialist... [two months after the machine failure] that she needed the laser treatment within three months. The woman was still waiting. "National Women's treatment of Anne and others waiting for laser treatment on pre-cancerous growths is utterly deplorable and inhumane." ...[the Alliance spokeswoman went on to label] the situation a repeat of the hospital's so-called "Unfortunate Experiment" 10 years ago when women with serious levels of pre-cancer were left untreated['so the natural progression of the condition could be monitored (the women were not aware of the experiment'; in addition, 'smears were taken from about 2000 newborn girls without their parents' permission or knowledge')]. More than 30 of the women died unnecessarily of invasive cancer... A N[Z] study published last month in the prestigious American College of Obstetricians and Gynaecologists journal found cancer of the vulva in women under 50 years had increased by 10 times during the past 20 years. The pre-cancerous condition known as VIN, which Anne is understood to have, had also increased in women under 50. The study identified "early and effective treatment" as imperative.

...Women who have been waiting... for pre-cancer treatment at National Women's Hospital will now be seen almost immediately at a private clinic – one week after publicity about the delay. National Women's says it will pay an extra \$4000 for laser treatment within the next few weeks at the Columba Women's Health Centre in Epsom, because its own laser machine is still not working properly... The hospital... [also] plans to repay two women who had private treatment... when faced with a standstill public queue... For one patient, receiving treatment last week... brought fresh problems. Anne, aged 35, said she had laser treatment at the private clinic but was sent back to National Women's to recover. Despite being in intense pain, she was discharged the next day and sent home without appropriate painkillers or nursing care. Last night she said she would complain formally to the hospital[, which]... has admitted that... some... women had been waiting a year... for laser treatment.

...Women who have annual mammograms are not endangered by radiation exposure from the procedure, says a radiologist... [While] addressing the Radiological Society of North America[, he said that]... his findings provided more evidence that women should be screened annually after the age of 40, a recommendation not subscribed to by all health advisory groups. A U[S] Government panel decided this year to leave it up to the individual whether or not to have annual mammograms after 40. Among the concerns were possibly unhealthy doses of radiation, possibly unnecessary biopsies on younger women whose dense breast tissue can falsely appear to be a tumour, and the cost of the procedure... [However, a US] Army doctor... told fellow radiologists the advantages of catching and treating breast cancer early... outweighed the potential costs of full-scale cancer treatment later on... Also, a recurrence of the disease after treatment was less likely if it was discovered at an early age.[Meanwhile,] Thomas Jefferson University has... announced the results of a study, which said digital technology that can create a three-dimensional image could reduce the need for breast biopsies in women.

...A[51-year-old] woman with ovarian cancer says she and others are being "relegated to the dustbin" by North Health's decision not to fund... the drug Taxol... which could extend her life expectancy by up to 18 months... after her tumour failed to respond to conventional treatments... North Health, said using Taxol to treat the 40 to 50 appropriate cases each year in the... area could cost \$1 million... Yet if she lived just 130km away in Hamilton she would receive the drug free... [Incidentally, t]he initial treatment of a now terminally ill cancer patient was delayed 10 weeks beyond... the... maximum acceptable delay... [of] four weeks under the "best practice guidelines" of... the [RHA] funding the treatment... [The 35-year-old man] was diagnosed with melanoma in an eye in December 1995. He was referred for treatment in Christchurch, designed to remove the cancer and save his sight, but by the time it took place three months later the growth was too large. The eye was removed and liver cancer was found six months later... However[, a report says the man's]... melanoma was unusually aggressive and grew unusually fast from the time of referral. Prompt treatment was... unlikely to have prevented the cancer spreading to the liver... The report failed to explain why no one had taken charge of

his care, sought urgency and co-ordinated treatment... [An] Alliance list MP... says [the man] should be compensated because the system had failed him.

...The death rate from prostate cancer is predicted to double in 20 years... to 6.2[% of NZ] men... over 45... There's no explanation for the continuing increase... and improved diagnostic techniques do not account for it. There is a suspicion that environmental factors may be involved and this aspect is being worked on in the U[S] where more than 42,000 men will die from prostate cancer this year, far outstripping Aids... [An] Auckland Medical School... pathologist... [is] critical of the lack of official interest in prostate cancer. "It may be a men-only complaint but it's much more than that. It impacts on... partners and families and the increasing mortality makes it a national disaster. Whereas breast cancer death rates are constant, prostate cancer age-specific death rates are doubling each decade. Despite this statistical evidence there is a concerted effort in N[Z] to discourage intervention and curative therapy for prostate cancer." ...there was a perception... that the disease mainly affected elderly men, who were more likely to die from other ailments such as heart disease. This was based on a general assumption that... prostate cancers were slow-growing and, combined with the difficulties of treatment, not worth the trouble... He said this muddlement... was disclosed by the Government's health advisers' opposition to an education campaign to encourage prostatic specific antigen... blood testing which could be effective in detecting early and potentially curable prostate cancers. Some were aggressive and killed quite quickly... The Cancer Society has estimated that an educative and treatment programme would initially cost \$27 million a year and progressively reduce.

...An undeclared diabetes epidemic is costing N[Z] at least \$200 million a year... [The] Royal Australasian College of Physicians conference in Auckland... [was] warned... that the epidemic would get worse because of a rapid increase... among Maori and Pacific Islanders... [One] of the best ways of stopping the spread of the disease was diabetes screening of all pregnant Maori, Pacific Island and Indian women. Research showed that the children of diabetic mothers in these groups were likely to suffer from diabetes, too. Women whose diabetes was picked up by screening could be offered diet or insulin therapy, or the option of early delivery to protect their babies... [B]etter diet and more exercise were still the best long-term options but changing people's lifestyles was "phenomenally hard" and could take many years... In the next 35 years the number of Pacific Islanders with diabetes was expected to grow from 3000 to about 25,000... [T]he number of Pacific Islanders with diabetes-related hospital admissions for kidney disease was increasing at a rate of 10[%] a year.

...TREATING diabetic women with insulin during pregnancy may help control the coming epidemic of diabetes... says a prominent researcher in the field. [The] South Auckland physician... is co-author of a new study which shows that insulin-treated diabetic women produce slimmer babies than those treated with diet alone... "It suggests that when you treat the mother, you are treating the baby." ...About 75%-85% of non-insulin-dependent diabetics are obese, and current prevention strategies focus on diet and exercise. The rate of diabetes, a leading cause of blindness, kidney failure and a major risk factor for stroke, heart attack and heart failure, is expected to increase 20% in Europeans, 50% in Maori and 130% among Pacific Islanders in the next 10-15 years... [The] diabetes specialist... said a significant part of that problem was the generational cycle in which children of diabetic women became diabetic because of the damage to the pancreas during gestation, and obesity from birth.

...It can start with symptoms so vague you may not notice them, but it can kill. Now experts say diabetes is spreading so quickly that an epidemic is on the way. Already the fourth main cause of death in many countries, diabetes affects 135 million people worldwide and experts say the number of sufferers is rising sharply. "By 2010 there will be 240 million diabetics, the majority of them in developing countries," said [a] Professor... of the University of Helsinki, who is heading an international conference on the disease this week... She was citing research by [an AUS]n Professor... of the International Diabetes Institute, on "type two" diabetes, which affects 90[%] of sufferers... About 8000 scientists and diabetes specialists are focusing on that prospect at the conference. So are drugs firms eager to promote new discoveries in treatment. Driving the increase in diabetes are the world's ageing population and modern lifestyles – people eating too much of the wrong kinds of food, becoming overweight and failing to take enough exercise. Statistically, that spells North America. In the U[S] and Canada, diabetes is the third-largest cause of death by disease, above breast cancer and lung cancer. But obesity and diabetes had also reached "alarming, and indeed epidemic, proportions... in Polynesians, Micronesians, Melanesians, and migrant Asian Indians of the Pacific[.] The AUSn professor's... team at Monash University has found that among adults in the Pacific Island state of Nauru, up to 35[%] have diabetes.

...the] Government of the tiny Pacific Island republic of Nauru will take a 50-50 share from any profits resulting from genetic research into its diabetic population. An agreement between the Government and the Melbourne-based International Diabetes Institute will allow the institute to carry out genome studies in... Nauru where 40[%] of its 9600 inhabitants suffer from diabetes, the second-highest rate in the world. The chief executive officer of the institute... had sought the agreement on "ethical and moral grounds" to dispel the perception that research exploited indigenous people. The advent of the U[S]-funded Human Genome Project had raised ethical questions about the ownership of genetic material, he said. Research and pharmaceutical companies could potentially reap millions of dollars in profit from products developed from the discovery of a rare antibody or gene, with no financial benefit to the source country. The research... will take place over the next 20 years... in the hope of isolating one or more diabetes genes.

...[researchers have localised a second gene responsible for the most common type of diabetes, and believe severe mutation of the gene may cause a rare form of the disease among younger people, MODY3. An international team of scientists studied 217 individuals from the Botnia region on the western coast of Finland, considered an ideal locale for genetic studies because its largely homogenous population makes it easier to detect genetic defects. The subjects were from 26 families who had three or more members stricken with non-insulin dependent, or type 2, diabetes (NIDDM). The researchers located a gene called NIDDM2 on chromosome 12. Earlier this year, researchers from the University of Chicago reported that they had found among a group of Mexican-Americans the first gene linked to type 2 diabetes, located on chromosome 2. The disease is caused by different chromosomes in different groups of families.]

...Wellington diabetics and their families are frustrated that blood glucose monitoring machines are gathering dust at Kenepuru and Wellington Hospitals because of a lack of funding. Now they are preparing to raise the money to buy the machines themselves... [T]he machines... save people the trauma of having full blood tests regularly to check their glucose levels, because they work on a pinprick of blood. Also, results would be available within a few hours instead of a few days.

...Diabetes is becoming more common but less severe in Auckland, a new study of children has shown... The study looked at glucose levels, length of stay in hospitals and insulin treatment... [By the way, a k]idney dialysis patient... does not mind travelling from Orewa to Auckland Hospital three times a week to get to his "lifeline." However, he has a problem with paying half his \$360 weekly taxi bill – a cost he has suddenly been landed with. The Government has cut transport assistance to high-user kidney and transplant patients by restricting eligibility rules. Exceptions apply for under-16-year-olds and community services cardholders, but patients must travel at least an hour to get to the hospital. The 71-year-old has had to pay the \$180 since... North Health brought in the changes[about six weeks ago]. The remaining \$180 is paid by the Kidney Association. His wife... said her husband had relied on the kidney machine for the past two and a half years. Their income was too high for a services card, but she said it would be tough having to pay the \$180 each week long term. There was little choice, given that neither of them could handle the hour-long drive. Moving to Auckland to be closer to the hospital would be stressful, she said, as they were settled in Orewa... North Health spent \$1.5 million on transport and accommodation assistance a year and that kept rising, [its]... general manager... said. "At the end of the day you have to prioritise."

...The Ministry of Health has been faulted over the delivery of its service to Maori. A review by the Ministry of Maori Development has censured the health ministry, finding that no single section within it co-ordinates research and sometimes one group does not know what another is doing. "Groups and sectors have failed to advise the Maori policy sector of the work they were undertaking even though the subject of their work had a direct bearing on Maori health," it said... • Maori are more likely to suffer diabetes, cataracts and respiratory, kidney and circulatory diseases than non-Maori. In some cases the rate is twice as high.

...The high fertility and poor health of Pacific Island people living in N[Z] add up to significant implications for the health sector, says a Ministry of Health report... Making a Pacific Difference, sets out a strategy for dealing with problems such as the number of babies admitted to hospitals – the Pacific Island rate is nearly 40[%] higher than that for Europeans... The late foetal death rate among Pacific Island women was 48[%] higher...

Traditional health practices in [NZ] have failed the Pacific Islands people, says the Minister of Health... Faceless people in Wellington who decided the best way to deliver health did not take into account the different economic and cultural environments... "The health needs of the Pacific people are no longer invisible and there has to be a change in health delivery... Traditional health has been ignorant of the obvious, commonsense principles and establishing a relationship with those who already have the management and experience would make the job a lot easier." ...[he] said altering the eating habits of Pacific people through education by Pacific Island health workers could effect positive change.

...When they arrive in N[Z], Pacific Islanders' health problems tend to get worse... Traditional dietary habits have been carried from the... Islands to suburban Auckland – with a little high-fat embellishment... Western-style diet – takeaway fried chicken, hamburgers, ice-cream, milkshakes and fish and chips – and a sedentary lifestyle lead to obesity and consequent disease... In fact, attitudes to food and feasting are so deep-rooted that the Pacific Islands Heartbeat wing of the Heart Foundation has dropped middle-class palagi[(European)] scruples and is unashamedly feeding the anti-obesity, anti-dietary fat and pro-exercise message through Pacific Island churches and ministers. Part of Heartbeat's... \$1.1 million programme, which is due to return some data soon, revolves around a series of three-day training courses... The main focus is aerobics classes, weigh-ins and nutrition education, including instruction in the art of healthy feasting... So far the programme has delivered 1492 sessions and has reached 40,000 Pacific Islanders... Seventy per cent of Pacific Islanders are overweight... One in six has high blood pressure as against one in nine Europeans... Arthritis and asthma are also common.

...Asthma has reached epidemic levels among women and Maori, the Asthma and Respiratory Foundation says. Unpublished Ministry of Health figures released to the foundation show one in six N[Z] women have been diagnosed with asthma, and more than one in 10 suffer attacks. The figures... also show one in four adult Maori have been diagnosed with asthma, and more than one in seven suffer attacks.

...The word asthma means different things to different people. This is because it is used to describe both very mild and very severe forms of the condition... Because asthma varies so widely from person to person, the management of asthma needs to be designed for each patient. ['Latest research shows 3-out-of-5 people with asthma are not controlling it as well as they could', yet in NZ] there is now a well-developed system of asthma management where individual plans can be developed by doctors, and patients should know what to do when their asthma worsens. Asthma occurs when the air tubes in the lung react to some trigger in[the] environment... *It is often not clear what triggers asthma... but we know that asthma, like other allergic conditions, does run in families...* [Next week] is Asthma Awareness Week. This year's theme is "Breathe Easy in the Workplace."

...researchers hope to establish through a national survey why farmers have the highest rates of asthma and respiratory problems... Last year the Wellington Asthma Research Group studied 1609 people from 21 job groups and rated them... [The results showed that] farmers are four times more likely to suffer respiratory illness than other occupational groups... "Grain and dairy farmers suffer an abnormally high rate of chronic bronchitis and about 30% of grain and swine workers suffer organic dust toxic syndrome,"... Behind farmers and agricultural workers, were food and chemical processors and laboratory workers. Bakers, spray painters and woodworkers, jobs often associated with occupational asthma, did not show a high degree of risk. Hairdressers also had low levels, despite the potential exposure to chemicals known to cause asthma.

...Asthma costs N[Z] at least \$376 million a year in medical costs and lost productivity, says a... Asthma and Respiratory Foundation report... [M]edical costs of about \$160 million a year are borne by the taxpayer while \$216 million is lost in indirect costs, such as time off work. Costs borne solely by asthma sufferers – including prescription charges and doctors' fees – are not included in the report... [I]t was vital... all children under 12... had... free... [and] easy access to primary health services so they could receive appropriate treatment and care... [S]tudies had consistently shown that asthma was caused by environmental factors in those with a genetic predisposition to the disease and was therefore potentially preventable. Yet funding from Government bodies for new asthma research was only \$170,000 last year... [M]any of the costs could be avoided or significantly reduced with greater commitment from the Government... [A]s part of Asthma Awareness Week... the foundation... [is lobbying] the Government for greater recognition. The report says asthma affects about 450,000 people, or 13[%] of the population... Prevalence of the disease drops in adulthood, with about 8[%] of adults of working age thought to be sufferers... about 15[%] of 15 to 24-year-olds are sufferers... while... about 21[%] of children aged up to 14 have asthma... The number of working days lost due to asthma is estimated at 690,000... based on overseas studies showing the average time off work for adults with asthma is five days a year[(in comparison, 'migraines – which affect 1-in-3 NZers – annually cost the country \$80m and 700,000 work days lost')... Asthma is also estimated as affecting workers on a total of 306,000 days to the extent that their effectiveness at work is reduced... The number of working days lost due to a parent remaining at home with a sick child is estimated at 550,000...

German research indicates that... the incidence of classic children's diseases ha[s] decreased over the past two decades... On the other hand... more children are suffering from typical adult illnesses such as allergies and stress... A survey... found out that 24[%] of 9-to-11-year-olds complained of at least one allergic reaction... As many as 30[%] of 12-to-16-year-olds, above all girls, suffered from psychosomatic complaints, most frequently from headaches, anxiety, giddiness and stomach upsets... [A] youth research scientist at the University of Bielefeld... said children were increasingly overtaxed by schools or their family situations... [Modern] civilisation... did not seem to be good for building healthy immune systems.

...Many Aucklanders are suffering slipping health standards, despite the advances in modern medicine. A report looking at the use of Auckland public hospitals shows... 22,500... more people needed care in the past financial year compared with 1994-1995. The report by North Health... says population rises accounted for busier hospitals but many illnesses were on a dramatic rise... The region also had many poverty-stricken residents who lacked the skills and money to stay well. Child health remains a grim area in Auckland... Signs that an aging population is making big demands on services are obvious in the growing number of hip joint and cataract patients queuing for surgery. Many face long waits as more urgent types of surgery take priority... North Health is keen for patients to have shorter stays in public hospitals. Many cataract operations are being performed as day surgery, while coronary heart bypass and angioplasty patients may also be out of hospital sooner... A North Health general manager... said Aucklanders had to be sicker to get into hospitals because the region received less money than others. About \$43 million was lacking because of the population boom. The Government was finally going to address this by adding more money to North Health's coffers from July, he said... The solution was to get rid of the waiting list backlog so patients were helped before developing chronic problems.

...It's a plain tale, so I shall tell it plainly... A man I know in Whangarei had been waiting months for a hernia operation. Unable to afford private hospital fees, he was placed on a list. In the meantime the lump in his groin got bigger and sometimes he had to lie down to ease the soreness... But being normally an uncomplaining man his inquiries about his place on the list remained polite. Six months later, just after its chairman had trumpeted that Northland Health was the country's most efficient health enterprise, and the local paper had detailed the size of its managers' salaries, perks and so on, the man was told to be at the Kawakawa Hospital[50km north of Whangarei] by 1.30 on a certain date. He was told he

would be on his way home by about 4 o'clock. After all, the operation was not really much. So "nothing much," in fact, that it would need only local anaesthetic. The man was a little surprised at this and asked me, having already had a couple of hernia operations myself, how sore he would be on the way home. I told him I was damned if I would even come home. I would want a night in the hospital... to be sure that if something went wrong it could be fixed on the spot. After all, he was going to be knifed in the abdomen, have various bits and pieces pulled about inside and pushed back into place and be sewn up again. Go home immediately afterwards? Get real. But being a trusting man, he said he was sure the system knew what it was doing. He had been assured of it and he believed it. So he was driven to the Kawakawa Hospital... and the job was done. During it he was told it was as well he was being fixed up now since the hernia had also begun to affect his bladder and bowel. The wound was relatively painless on the way back to Whangarei since the anaesthetic had not fully worn off. But his wife did wonder in passing that he had been given no painkilling tablets to take when the anaesthetic wore off. She supposed an aspirin or two would suffice. Later that evening he was feeling faint and there was a lot of blood coming from the wound. Was it normal? What should she do? We said she should immediately ring their own doctor or better still take him to a private clinic. She opted for the clinic. Staff there said there was nothing they could do; he should go to Whangarei Hospital. He was charged \$20 nevertheless. He arrived at the hospital about 9 o'clock but it was after 1 am before he was admitted. In the meantime, the man told me, he was "writhing in agony." He must have been since he is a man not particularly prone to imagination. Then he began passing in and out of consciousness. His alarmed wife, who in the meantime had been soothing his fevered brow and, probably more helpfully, mopping up the continued seepage of blood from the wound, finally asked that someone should do something. A test showed his blood pressure had gone too low. This was attended to and the man began to regain himself. He was given more local anaesthetic, the wound was reopened for things to be put right. During the putting right, however, he said he didn't think he had had enough anaesthetic because what they were doing was very painful and so they put him right out. He went home a couple of days later somewhat recovered but with the area around the wound now bruised black and blue. Early that evening he was carried by ambulance back to the hospital, this time with an apparent heart attack. It turned out his system was receiving insufficient oxygen because of the amount of blood lost, thus the symptoms of a heart attack. He's home again now and on his way to recovery. Now, I don't know what your reaction is to all this. Mine is that because of the system's obvious inefficiency the man was not in hospital soon enough, and because of its alleged efficiency was out of it too soon. And that makes me angry... I am angry that, if cost really must be a consideration, the whole episode must have ultimately cost much more than a night in hospital. I am also angry at the man and his family's complete loss of trust in the health system[, and]... at the impotence of those caught up in it... I am angry at the system... I am angry at the politicians and bureaucrats who devised it and are encouraging it to get worse... Of course everyone except the central figure, the patient – sorry, the customer – could explain it away. They would talk earnestly about reforms, throughputs, outputs, objectives, strategies, mission statements, bottom lines, customer service, efficiency and similar business-suited managerial garbage. Even worse, they would believe it. Would you?

...Hundreds of patients are being sent home on the verge of surgery at Auckland Hospital because they do not need operations. Staff say about one in 10 of the mainly frail and elderly people admitted for urology operations goes through the stress and inconvenience of preparing for surgery for nothing... [A]bout 165 urology patients each year come into hospital overnight – often after months on a waiting list – mentally prepared for their operations the next day. The surgery is then cancelled or postponed at the last minute when a consultant assesses their urinary problems for the first time. A day surgery pilot study... suggested a "one-stop shop" for pre-surgery assessment, followed by single day surgery which would free-up hospital beds... [I]t would... cost \$900,000 to build the new facilities for day surgery but... the savings would pay back the cost in two years... The cost of pre-operative tests could be halved from \$270 to \$127 per patient under the [proposed] system... But the hospital says it cannot afford to spend... [\$900,000] to make sure no one is admitted unnecessarily.

...[a] urological surgeon, sits comfortably in front of his screen, directing the thin red line that slices cleanly through the flesh 2mm around the enlarged prostate gland... The super-sensitive area at the base of the bladder above the prostate is virtually unaffected. Meanwhile, the swollen gland is deftly isolated by the laser, cut away and removed – all in the space of 30 minutes. The patient... has lost almost no blood and suffered minimal shock to his system... His prostate symptoms will rapidly resolve. This is just one example of the new face of medicine. Procedures such as prostectomy, which used to mean five days in hospital and possible blood transfusion, are now 24-hour affairs with very little pain. Formerly inoperable cases can be treated quite safely. Overall costs are reduced. Trauma – to surgeon and patient – is minimised. However... the procedure has its downside. "A lot of patients who were too unwell to undergo surgery, in some cases facing catheters draining their bladders for the rest of their lives, can now be operated on. It's great for the patients but it also means that there are more people waiting for operations." [These] comments apply right through straight-forward surgical procedures. In the past five years hospital time for many operations has been cut dramatically. Thanks to advanced diagnostic techniques, lasers, laparoscopes... and modern surgical, nursing and convalescent techniques, recovery times have been halved or better... But high-tech, fast-healing, short-stay is only half the story of modern medical care.

...[AS [he] plays with his train set it's hard to imagine that here is a man who only has half of a brain. The 42-year-old was one of the first patients to undergo one of the greatest medical feats this century: The removal of the damaged right side of his brain, an operation that transformed him from a drugged vegetable into a human being... [with] a mental age of eight... "He's happy, relaxed, has friends and enjoys life. It's almost a miracle." ...What's even more incredible is that this medical marvel happened right here in N[Z] 32 years ago... [He] was born in 1955 with Sturge Weber syndrome, a rare condition of the central nervous system in which part of the brain is affected by malformed blood cells. It is the reason why his face is scarred with a large red birth mark. And not only did his damaged brain not function properly, it also triggered epileptic convulsions. At the age of four he suffered fits every day, often losing consciousness. The only option was to put him on a drug called Dilantin, which controlled his seizures but reduced him to a vegetable-like state... The breakthrough came in 1965 when a neurosurgeon from Scotland visited Auckland, explaining how he had performed a hemispherectomy... The little-known procedure defied all medical belief. Doctors refused to accept it was possible, thought it unethical, and believed it would almost certainly lead to permanent brain damage and possible death... Over the years hemispherectomies have almost become an accepted practice. There have been at least eight in N[Z]... and many more around the world. But even today some doctors still shake their head in disbelief and refuse to accept this... is possible... [By the way, arthritis affects 'one-in-three NZers' but] sufferers are... waiting an average of two years for surgery... [T]he number of people waiting for outpatient appointments for [all types of] surgery increased from 47,194 in 1995 to 52,437 last year.

...Thousands of people will be cut from surgery waiting lists this year as health authorities move towards a points-based booking system. Yesterday, a Wellington professor of surgery condemned the Government-driven move as a way to ration health care. But [RHAs] say it would ensure that the sickest patients got treatment by placing them at the top of the queue. Under the new system, set to operate in Auckland and Northland by mid-year, patients will be graded according to how urgently they need an operation... [O]perations would go to people who most needed them rather than those who had been longest on a waiting list... Those who meet the pass marks – which are still to be determined – will get surgery within six months. Those who do not will miss out on state-funded operations until their condition gets worse. The points system will in theory be based on medical criteria agreed on by doctors. In practice the cut-off points will still depend on the limits of the [RHAs'] budgets. North Health... rejected claims that the new system was designed to save money by cutting back on surgery, saying [the RHA] wanted to see an increase [in surgery]... North Health already used the points system in some areas such as cataract operations and cardiac surgery. About 10 to 15[%] of patients waiting for cataract surgery in Northland would not qualify under the new system... [North Health] did not yet know how many of the 25,000 people on waiting lists in the region would lose their places when the points system was extended to other common operations such as hip

and knee replacements... On Tuesday, the Wellington-based central [RHA] said about 770 out of 4650 patients would be taken off its waiting lists for cataracts, joint replacement, gall bladder and prostate surgery... [RHAs] have to introduce the system to gain access to the Government's \$130 million fund to tackle waiting lists. [● 'Angie Webster, a 15-year-old diagnosed with Wolfe Parkinson White Syndrome (which causes an irregular heartbeat), was put on the drug flecaionide. Her dosage was increased and she was put on a waiting list for heart surgery to correct the abnormality. But she died before making it to the top of the waiting list' for the 'simple operation.' 'There was a 1 to 2% chance that the drug could trigger a heart attack.']

...a young man [has died] while on the waiting list for heart surgery...

A SENIOR N[Z] cardiologist says people will continue to die waiting for heart operations under the Government's proposed new booking system... [The] senior lecturer at... Christchurch School of Medicine, said the system would not ensure people who had a high risk of dying would be operated on first... [P]atients will need to score 35 priority points or more to get bypass surgery within six months. Fewer than half... [of the N[Z]ers awaiting this surgery... would score enough points... [A] study... due to be submitted to international health journals, analysed the 324 patients accepted for bypass surgery at Christchurch Hospital during 1994-1995. When the priority points were awarded to the patients retrospectively, 76 scored fewer than 35 points. Of those, three died awaiting surgery, seven had a heart attack and 27 were admitted to hospital with serious chest pain... 257 of the 324 patients waited an average of 212 days for the surgery – around a month longer than the new system's six-month guarantee. A quarter of those 257 patients... waited more than a year... [The] number of operations done in N[Z] – 33 per 100,000 people – was less than half the rate in Canada (75 per 100,000), a country that had a lower mortality rate from bypass surgery than N[Z].

...N[Z]ers are being forced to wait dangerously long times for heart surgery, according to an international comparison with Canada... [The N[Z] *Medical Journal*... says this country's lengthy heart bypass waiting lists are a direct consequence of chronic underfunding and "embarrassingly low" treatment rates... N[Z]ers had to wait on average 196 days... [whereas] Canadians queued for 34 days... [B]oth countries had a similar threshold for referral... [A] senior lecturer at Christchurch medical school... said 13 out of 415 Christchurch patients had died waiting for heart surgery in a continuation of the study. Most had been waiting more than a month. "A couple of people died after having surgery and you just have to wonder, if they had had the operation earlier, would they have survived? There's always going to be a few people die – that's the nature of heart disease – but I think it's unacceptable to have a 3[%] chance of dying while you wait." ...He... said waiting times were now even higher.

...In 1993, because of mounting concern about the resources available for coronary surgery in N[Z], a review was undertaken of the 260 patients who were on the Green Lane Hospital waiting list at the time. A numerical coding system was devised... It was concluded that waiting times for surgery were grossly excessive despite our waiting list criteria being very conservative by international standards. They also showed that numerical ranking systems can be no more than aids to establishing priorities. They cannot replace clinical judgment, for each patient's priority is determined by a small cluster of factors which vary from one individual to the next... [In related news, h]eart disease is replacing infectious disease as the leading cause of death worldwide, reflecting lifestyle changes in less developed countries and a gradual ageing of the world's population... Only in sub-Saharan Africa are infectious diseases still the leading killer... Statistics are sketchy because only about a third of the roughly 50 million annual deaths worldwide are documented. But... [a doctor at] the M.I. Bassett Research Institute in Cooperstown, New York... estimates that in 1990, cardiovascular disease caused about 25[%] of all deaths in less developed nations and 50[%] in the developed world. By 2020, as many as 34[%] of underdeveloped nations' deaths will be related to cardiovascular disease, with the industrialised world holding at about 50[%], the doctor] says, citing forecasts based on statistics from the World Bank and the W[HO].

...While you were worrying about your heart problem, you and your deteriorating health were being given a score. The number allocated to your condition has an important bearing on your future. If you fall on the right side of the magic mark, you should, in theory, be booked for that longed-for coronary artery bypass surgery in the public system. A score on the low side of the same line means you will not even feature in a queue. You will be referred to your doctor until your number is big enough to cross the divide. You will be judged on factors including how badly your coronary arteries are obstructed, angina (pain due to shortage of oxygen to the heart muscle) and how you fare in an exercise stress test. Social factors, such as ability to work or whether you look after others, will also come into your health equation. The critical number in your case is 35. Doctors wanted the cut-off point to be 25 but money – or lack of it – set the threshold 10 points higher... In some cases, however, even those qualifying do not get an operation booking. A backlog of patients and continued demand mean some with a high enough score go on to a list with no definite date for treatment... [Incidentally, a] common sleeping problem could be a bigger risk factor in heart disease than high blood pressure or cholesterol, say Swedish researchers. They found a three-fold higher risk of disease among patients with the sleeping disorder called obstructive sleep apnoea[, which causes people to]... have uneven breathing patterns and unusually long periods when breathing stops altogether.

...Surgery on a beating heart has been performed for the first time in N[Z]... Usually the heart is stopped using drugs, and a heart-lung machine takes over. But... [a] Wellington Hospital surgeon... used a device called an octopus, which sucks on to the heart. Octopus "arms" surround the area of the heart to be worked on, and this keeps it still... About 2000 operations have been done worldwide using the procedure... [T]he method had potential as there were sometimes complications from using the heart-lung machine. These included neurological problems, infections, bleeding and kidney problems. The procedure could also hasten recovery time and reduce operating time... [However,] it was hard to say if... [the first NZ patient] was better off than if the usual method had been used... The head of cardiothoracic surgery... said the technique... might be useful only on a small range of cases... The patient had been selected... because his blood vessels were suitable... [By the way, l]egal complexities are continuing to delay setting up the Christchurch heart unit... A long-time Christchurch heart unit campaigner... said the continued delay was unacceptable. "My concern is that deadlines are rolling over and over... In the meantime, people are dying and waiting lists are increasing..." ...[the] chief medical adviser to the Minister of Health... said complex legal issues, including a \$7.5 million lawsuit by the Southern Cardiothoracic Institute, were still unresolved... The... original contract[was] awarded to a public-private consortium involving Healthcare Otago and the Southern Cardiothoracic Institute... [Then] the Minister... announced... that the unit would be run as a joint venture by Canterbury Health... and [the consortium]...

Heart disease patients from Canterbury south were dealt a blow yesterday when... it was... confirmed... Healthcare Otago... [will get funding for] only 300 angioplasties [– or 150 surgical hours ('30 minutes per operation') –] this year... The move was described by a senior Dunedin cardiologist as a step back 30 years. At the same time... a tough new threshold level... [of] 55... points... for patients hoping to qualify for heart surgery [was] also announced... effective immediately... Cardiologists say this means only people too sick to leave their hospital beds will get their operations.

...More than 30,000 N[Z]ers on hospital waiting lists will soon get the health message they have been dreading: they must get sicker before they get the operation they need. Letters are due to go out over the next few weeks to patients who have missed the cut-off point under the Government's new booking system. Hospitals are now finalising their cull to match the one-in-three cuts predicted a fortnight ago... But health staff worry that patients who need surgery will suffer and that doctors will bend the rules to get their patients seen first. Doctors warn that rich patients will still leapfrog queues... At least half of the 10,000 patients on Midland region waiting lists will receive letters next month telling them they have been knocked off the list.

...Doctors fear they will unfairly cop public fury... and... hostility... over a surgery booking system that will openly deny operations to thousands... Auckland Healthcare's chief of surgery... was concerned that some patients denied surgery would not have the money to keep seeing their local doctors and would be lost from the system... Urgent surgery cases... often ate into funding for elective surgery. He said this could still easily happen under the booking system.

...Auckland Healthcare warned coalition ministers several months ago that elective surgery was falling below minimum levels required to run the [CHE] properly. A confidential draft business plan, released yesterday... shows the enterprise striving to achieve a minimum 20:80 balance between elective and acute surgery. "We presently operate at approximately 15[%] elective... The acute-elective mix... is critical to efficient hospital management." However, funding levels as well as "the declining input into discretionary electives" were placing considerable pressure on the balance... [And now t]he hospital booking system for elective surgery looks set to be delayed as the Government searches for more money.

...More and more, the murky grey uncertainties of hospital waiting lists are moving closer to black and white. Lines are increasingly being drawn between patients who meet criteria for treatment and those who do not... [Patients] must wait until they are deemed sick enough to make the grade... as the Government marches towards a booking system which it insists is fairer... People have always lingered and died on traditional waiting lists but the new and growing sets of "clinical guidelines" come into sharp focus every time someone misses out and cries foul. The latest outrage over health rationing comes from Wellington where a kidney patient has been denied long-term hospital-based dialysis... because of a 20-year-old policy of not offering hospital dialysis to long-term patients and he has been sent home to die. The 24-year-old was considered to be clinically unsuitable for home dialysis. Hospital treatments were, reportedly, for those with chronic kidney problems where recovery was likely and those with chronic kidney failure awaiting training for home dialysis... In 1995, a 76-year-old kidney patient went public when he was denied dialysis at Middlemore Hospital... because of his age. [He] fought the ruling which was turned around after it was deemed discriminatory under the Human Rights Act. [The 76-year-old], who died in September last year, was expected to live only two or three months without dialysis but with the treatment, lasted 20 months... An Auckland Hospital renal physician working with dialysis guidelines... said about 12 patients a year were turned down for dialysis treatment. Problems which could preclude patients from treatment included acute diseases of other parts of the body, a mental illness or dementia. "They are, on the whole, usually major heart disease patients who are not likely to do well on dialysis and live for very long." ...About 70 Auckland central renal patients received dialysis at the hospital three times a week and around 140 treated themselves at home... [H]ospital dialysis was by far the most expensive option but some people could not dialyse at home because of a range of limitations including lack of help and confidence. As a result, central Auckland health officials were looking to open a satellite centre this year where kidney patients could have their treatment with some support, without having to come to the hospital. Middlemore Hospital... also turns down about 12 patients a year on clinical grounds and treats up to 27 a year in hospital. About 132, including... 20 Auckland central patients, receive... home dialysis each year... Supporters say that on balance... criteria and points systems... are superior to the old waiting list system because patients know exactly where they are in the queue... Critics... say they are unfair because they inevitably involve decision-making about the value of an individual's life. The guidelines, tools for people making the decisions, were a mixture of national and regional policies... "The real fear with clinicians is that bureaucrats and the Government will raise the thresholds..." But what really rankles critics is that such systems gauge social worth as well as medical need... [T]here were judgements made on whether someone was a "productive member of society." ...some treatments were given to people looking after others, but not those who lived alone. "If they live alone, they don't get the points... that's not fair." ...meanwhile... the Auckland car salesman who offered \$10,000 for a spare kidney, has... been enjoying a new life since starting dialysis last November. While he is still waiting for a suitable kidney donor, the dialysis treatment has boosted his energy levels. His wife... had their first child last month... She said without dialysis, her husband was expected to die before Christmas last year. Like... [the Wellington patient, her husband] was at the final stage of renal failure.

...The Wellington kidney specialist at the centre of a row over refusal to provide dialysis treatment to a young man who will die... within a few months... without it spoke yesterday of staff anguish over the issue... [The young man] says he feels he has been given a death sentence, perhaps because he has a psychiatric history... [The] renal physician... said he was immensely saddened by the situation. "I know him and like him... [but] I have to let him down,"... The decision was made by medical and nursing staff as a group... He said similar decisions were being made for six to eight people every year. "The decision does not get any easier. It's anguish each time." [The young man's] father... indicated he would be prepared to pay for the dialysis for his son, but his offer had been received "not at all well."

...Even as technology allows people to be kept alive longer, death is often still the best option, doctors say... The Starship children's hospital considered fighting for custody of a gravely ill patient so it could stop treatment against the parent's wishes. The Starship head... said medical specialists felt strongly that it was best to let the child die. "We were going to go to the High Court to make the child a ward of the hospital. Care would not have been accelerated if we had won custody. As it happened, the child died before court action needed to be taken." ...With such an intense focus on health spending, doctors could be unfairly accused of making decisions just to save money. "What the public doesn't understand is that some of the treatments that can be offered are horrendous: they are prolonged, painful and, for kids, they are a nightmare. The focus is not on the dollar but what's best for the kid... This hospital can keep anyone alive for 200 years so long as we put in the money, but we won't do it because it's not the right thing to do. Quality of life coupled with survival are key considerations. People confuse clinical effectiveness with cost-effectiveness. If we can't guarantee long-term survival with quality of life, we should not apply the technology." ...The clinical director of paediatric intensive care... said... "The important issue is unnecessary suffering for no gain." She had seen the flip side when working in the U[S], where children were kept alive at all cost, largely to prevent law-suits from families. "I stood back in horror at the suffering – not being able to say to... the family it's okay to allow this child a dignified natural death. Sometimes death is the best answer."

...[South African nurses were baffled when patients in one particular bed kept dying. They were starting to suspect a curse when all was revealed – every time the cleaning lady went to polish the floors she would inadvertently unplug the patient's life-support system. By the time she plugged it back in the patient had usually passed away. There have been no more unusual deaths since an extra power socket was installed.] In local news, the] chairman of the Nephrology Group, which represents all renal physicians, and head of renal dialysis at south Auckland's Middlemore Hospital... says diabetes is about to engulf us... and... send demand for renal dialysis soaring... Hospitals are funded for 7% annual growth in dialysis, but... demand would soon outstrip that figure. The problem was exacerbated in south Auckland with its... growing and ageing... Pacific Island population – a group with a rate of renal failure two to four times the European rate... [● A] Wellington kidney patient who had been rejected for dialysis is now to get the life-saving treatment... [T]he opening of a new facility outside Wellington Hospital meant he could be treated when he required it. Capital Coast Health says that until the facility is established, [the 24-year-old] will be eligible for dialysis treatment in hospital.

...The family of a dying Whangarei man say the decision... to deny him dialysis treatment is tantamount to murder. Papers were filed in the High Court at Auckland yesterday seeking an injunction against Northland Health to force it to continue giving dialysis treatment to 64-year-old Rau Williams at Whangarei Area Hospital. The Northland Health chief medical adviser... said Mr Williams was not on the dialysis treatment programme and had only been treated as part of his assessment for the programme, for which he was turned down two weeks ago. He would not give the reasons for Mr Williams' unsuitability because of privacy concerns, but said expert medical advice showed it was a clear case of someone not eligible for dialysis. "This is one of those decisions made nationwide dozens and dozens of times." [He] said family members had initially been quite happy with the decision but had later been "talked around." He confirmed that Mr Williams could die within a few weeks without the dialysis treatment, but said Northland Health would oppose the injunction. A member of the sick man's extended family... said that Northland Health had decided Mr Williams' quality of life was not worth keeping. She said her husband had discussed the matter with Mr Williams, who did not want to die. "He's not brain dead."

...Rau Williams... retreats into a long silence. "Nobody wants to die," he eventually murmurs. Mr Williams... realises he may have just a few weeks to live... Yesterday, he missed dialysis... for the first time. The subdued former patient was left accepting that without the treatment he

would die... [He then says] flatly that the decision should be “looked at.” His 26-year-old daughter... said the family had been given false hope by the dialysis treatment. “It seems cruel to now suddenly take him off it.” ...The Northland Health medical adviser... said the “difficult decision” to stop treatment would have been made in any N[Z] hospital. The Whangarei team had consulted renal experts elsewhere, and it was agreed dialysis should stop in line with national guidelines... the guidelines related to what was in the best interest of patients. “Clinical staff obviously feel this is the best treatment – to let nature take its course.” [The adviser] said the decision had upset all involved.

...While more than 700 people around the country with chronic kidney problems are being kept alive with dialysis treatment, dozens are denied treatment because they do not meet national guidelines... [The] guidelines state that patients must be able to cope both medically and socially with the therapy. For instance, dialysis puts additional stress on hearts and lungs, so these organs must be working well... The guidelines also rule out dialysis for many people who have previously had a major stroke or liver failure, and people with severe heart, lung, or brain diseases. People who are about to die from another terminal disease, such as cancer or Aids, do not qualify either, but the guidelines do not disqualify people with cancer who have a good prognosis for recovery. The dialysis treatment, which costs from \$30,000 to \$50,000 a patient, must also be able to give the patient “a quality of life acceptable to him or her,”... Patients remain on dialysis either until they get a kidney transplant, or they die. This could be anything from two to 20 years... [The] clinical director of Auckland Hospital renal service, said... “There is a bottleneck in the system. I’d like to see more kidneys available, but there is no quick fix.” He said he was not aware of anyone who is refused dialysis on cost grounds “although a couple of years ago that could have been an issue.” ...North Health has budgeted \$13 million for dialysis. “We buy dialysis for everybody who meets the criteria.” ...there are 450 people on dialysis in the northern region.

...It would take a heart as hard as flint to be unmoved by the plight of the dying Whangarei man who has been denied kidney dialysis treatment. But I cannot help feeling sorry for the doctors and clinicians in many disciplines who daily deny treatment to patients not because it will not do them any good but because it will not do them enough good to justify the expense. It is easy to say withholding treatment is condemning a patient to death, and when the patient is your flesh and blood or loved one, I do not doubt that is how it looks. But it is not the full story. The inescapable and unpalatable truth about public provision of health services is that demand is endless and supply is limited... Managing scarce resources is like a Chinese puzzle and when individual cases take on a human face, it always seems to mock the wisdom of the wider view. Denying one patient dialysis might free up money to do, say, 50 hip replacement operations or treat several thousand cases of glue ear in children. Meanwhile, we do not hesitate to give nursing home care to an old person with dementia who has next-to-no quality of life but deny dialysis to a patient who might get 18 months of good life out of it... [The] professor of community health at Auckland University medical school, points out that society – that is us, not the doctors – makes the life-and-death decisions when it decides how much to spend on health... “...when people make the decision how much to spend on health or frigates, they must be clear that it’s rationing and not medical futility.”

...[she] turns 10 tomorrow but birthday celebrations will be muted because her great-uncle... will not receive the greatest gift of all. The tearful youngster made an emotional plea for her relative’s kidney dialysis treatment to continue although a legal bid to force Northland Health to provide... [the treatment floundered yesterday. The High Court] Justice... did, however, recommend that Northland Health tell Mr Williams and his family exactly why he had been refused dialysis treatment... Family members then drove back to Whangarei... to tell him the court had, in effect, sentenced him to die... [An] appeal was a possibility although he [is] expected... to live only another three weeks.

...[the] family are expected to decide this morning whether to fight a High Court refusal to readmit their uncle to dialysis treatment... His nephew... received offers of financial help for his uncle over the weekend and his family was considering an appeal. “...A lady said we should save the \$10,000 we would spend on appealing the High Court decision and spend it on private treatment instead. We have a hard decision to make.” ...The term uncle... is applied loosely: Mr Williams’ wife is [his] wife’s great-aunt which means... “that I’m not actually related to him at all. But when it comes to whanau [family] I am...” More than family ties keep... [him going for] up to 20 hours a day looking after Mr Williams’ interests... He traces his bloodline directly back to... the Ngapuhi warlord who was a fierce opponent of colonisation and among the last, most reluctant and most suspicious signatories of the Treaty of Waitangi... [He] is no stranger to fighting the system. In 1994, he helped his father... to appeal against an ACC decision which... failed to recognise that an injury to his [father’s] leg had eroded his mana because he could no longer stand on the marae.

...The niece of a... man who is no longer allowed dialysis treatment wants Whangarei Hospital to teach her how to administer it so she can keep him alive... “...at home.” ...Home treatment cost about \$25,000 a year... [In the meantime, politicians] have taken up Mr Williams’ fight. In a letter to Whangarei Hospital, the Minister of Maori Affairs... urged the medical health manager... to reconsider... “People like Mr Williams have contributed to the welfare of the nation through years of hard work... and you, the hospital... should give him the opportunity he richly deserves.” ...Northland Health stopped his treatment last Wednesday...

It takes a lot to bring a full Parliament to silence. But [one MP] did it yesterday in question time after an outburst that shocked the House... [The MP] was ordered out of the chamber by the Speaker... during questions on Rau Williams... Mr Williams is not a constituent of [the MP] but the case involves a hospital in his constituency, Whangarei. The Speaker has ejected MPs often enough before but it has almost always been because someone has ignored his warnings about being rude to a parliamentary colleague. [The Whangarei MP], however, was rude and defiant to the Speaker, waving his arms and yelling at him – unknown behaviour, according to one long-server, since the worst indiscretions of Sir Robert Muldoon. [The Whangarei MP] had tried to get the Speakers’ attention for about 15 minutes to ask his question... He had a poke at the Government [– of which he is a member –] on the way, so it took a while to ask his question. The Speaker accused him of grossly abusing the privilege of having been allowed to ask a seventh question, after the matter had been closed. “This is a matter of life and death for this man,” [the Whangarei MP] shouted back. “Order! Sit down!” “Nothing is more important than this man’s life!” “The member will leave the chamber.” “Nothing is more...” “Now, out, out... You’re defying the chair. Leave the chamber immediately.” ...[the MP] wanted to know how to judge between the clinicians who say Mr Williams has been turned down on medical grounds and the clinicians who say he has been turned down on funding reasons.

...THE family of... Rau Williams is considering opening his medical file to the public... “The doctors say there are other things wrong with him which influenced their decision... Well let’s open the file and see what the public thinks... [We’re] worried about this country. The public is apathetic. They don’t realise what is going on. This should not be allowed to happen,”...

[THE] NORTHLAND Health boss... does not want Rau Williams’ medical files made public after calls were made yesterday that such a move could clear up the dialysis controversy once and for all... [He] said public debate would achieve nothing and... possibly be misleading. “I don’t think a simple expose in public would be helpful. Dialysis is a very complex area; there isn’t any simple explanation,”... [He believed] Northland Health had been put in an invidious position over the controversy.

...Citing privacy rules, Northland Health has repeatedly refused to elaborate on the “serious and multiple underlying conditions” given as the reason for its decision to stop Mr Williams’ treatment. His family have now released the file... [H]undreds of medical papers... show that [he has] chronic renal failure, diabetes, dementia, gout and hypertension, and... [carries] hepatitis B. They clearly show that Mr Williams initially made progress towards managing home dialysis but eventually could not handle it and developed peritonitis and septicaemia. But the papers do not explain why the [CHE rejected the] offer by a niece... to administer the home treatment.

...The Human Rights Commission is lending its weight to a family’s campaign to help their dying relative... Rau Williams’ family last week wrote to the commission asking for an ethical review... The commission announced yesterday that it wanted to help... and was seeking full details from all the parties involved.

...North Health has warned politicians, judges and the Human Rights Commission not to interfere... after an outcry over the Rau Williams case... [They] could check the procedure was fair, but it was not appropriate for them to interfere with individual clinical decisions... The acting chief of North Health... said yesterday that the decision... was made according to guidelines developed with... the Kidney Society and the Human Rights Commission... A medical and psychiatric team assessing Mr Williams agreed that he did not meet the guidelines. But according to the Kidney Society, the guidelines are not working because there is a lack of money for treatment and each doctor interprets them differently. The manager of the society's northern region branch... said... "If the guidelines were applied equally across the region, things wouldn't be so bad..."

...IF KIDNEY patient Rau Williams lived in Reefton... nobody would have heard of him. He would be quietly sitting at home having dialysis, supported by his doctor... "We would have turned him away over my dead body," [the Reefton doctor] said. If Mr Williams was unable to pay for home visits, he wouldn't be charged. "If he had a Community Services Card we'd put in a claim every time we saw him. If he didn't we would write it off as a service. We would have genuinely enjoyed seeing him and written it off as a professional indulgence... You cannot apply economic principles to health... [A]s soon as you do you fall over... The market philosophy is replacing the caring philosophy with the dollar and it breaks my heart." It is also setting the scene for absurd competition within the system.

...Mr Williams – his health steadily deteriorating – has now gone 11 days without dialysis... [While] his whanau prays the scales of justice will tip in their favour... [the legs of his] trackpants have... had to be cut to accommodate his bloated limbs... "He put on 2 1/2kg in one day. I was too scared to weigh him again after that, the toxic fluid is all building up in him, he's having trouble urinating." [A] businessman had approached the family offering to pay for Mr Williams' treatment[, and the]... Maori Affairs Minister... yesterday backed a proposed claim under the Treaty of Waitangi... [The] Maori Council chairman... said an urgent claim may be lodged under the Treaty... because "there seemed to be no other law that could save him"... [A relative] said if the... intervention failed he may approach the Governor-General... "If I had a dog and treated him the way they are treating uncle... I would end up in court... [U]ncle... hasn't committed a crime... [but he]'s been sentenced to death, he... needs a pardon."

...THIS is what it comes down to: After all the green papers, white papers, prestigious conferences, think tanks, the steering groups [and] media campaigns... we have now got down to the essential meaning of the health reforms. This is where it was leading: A man who is condemned to die. State euthanasia. Oh, no, nothing to do with me, says [the Minister of Health]. While staunch on the right to life of foetuses, [he] wants nothing to do with saving the life of a man... [The minister] is finding the public has strong feelings about these things. After all, Rau Williams could be any one of us. Truly these clinicians are God-like creatures, or at least convenient to hide behind... [The minister] is in awe of them. He will abide by their bidding, unless of course, they were to ask for more health dollars to be able to do a proper job. The High Court has even put the doctors above the law. This is part of a worrying trend for the courts to support anything doctors want to do, including, in the U[K], enforced Caesarean sections... The refusal to treat Mr Williams is justified on the grounds that he has not met some mysterious criteria... [But] the criteria are not graven in stone. They were not brought down from the mountain by Moses. They have emerged as part of the politically driven rationing process... The Human Rights Commission said they were illegal when they were used to prevent [a 76-year-old] getting dialysis because he was one year older than the cut-off. Since then they have been reworked at... [RHA] level, but age and disability still earn you bad points. This is probably illegal under the Human Rights Act, which outlaws discrimination on such grounds, as well as the Bill of Rights, which gives rights "not to be deprived of life" and "not to be subjected to torture or cruel treatment". The decision could also breach the Code of Health Services Consumers' Rights. [The minister] says Mr Williams would have got the same decision in any N[Z] hospital. That... is an indictment, not a defence... In America, people's right to dialysis is enshrined in legislation and is provided publicly. Our rates of dialysis are half those of the US and Japan but similar to those of A[US] or the U[K], although we have far lower rates of dialysis among the elderly – only around a sixth. Since we have high rates of kidney failure among Maori and Pacific Island people, one might expect N[Z] would do more dialysis than those countries. We are moving into an era when the Government wants to put money only into those areas where there is a measurable benefit. Mr Williams is not a "health gain" area. He is not going to get better, only worse. In purely fiscal terms, he is wasting money. But a society that succumbs to this kind of reductionist logic is in grave moral danger. If Mr Williams is expendable, then so are people with serious disabilities, long-term prison inmates, and the very dependent, fragile old. We stand judged as a society by how we protect the most helpless among us... [● Tomorrow] Northland people will march on Whangarei Hospital... in an attempt to save the life of Rau Williams... More protest action is planned...

Police will investigate whether Northland Health can face a culpable homicide charge for failing to provide Rau Williams with lifesaving dialysis treatment... The Acting Senior Sergeant in charge of the Whangarei station... said the police legal section in Auckland would determine if charges could be laid... under section 151 of the Crimes Act... "A charge of culpable homicide is possible under the Crimes Act, even if the victim is still alive, if it is found that someone is guilty of failing to provide the necessities of life..." Mr Williams' lawyer... said the neglect case could be a first. Mr Williams' family are running out of options... [The Crimes Act] move came as Mr Williams' brother... dropped a discrimination complaint which had been laid with the Human Rights Commission. In another development, the Whangarei MP... said he would ask the U[N] Human Rights Committee to intervene. It has been more than two weeks since Northland Health stopped treating Mr Williams...

Rau Williams' whanau have failed with one legal avenue in the fight for his life but still have another to pursue. Police told them yesterday that they could not charge Northland Health... The whanau are expected to file papers... this morning seeking an amended injunction to the one they failed to win last month... His whanau said doctors had given him about a week to live.

...Rau Williams' condition worsened yesterday as supporters gathered in the rain outside Whangarei Hospital... Although the hospital said his condition last night was stable... [he] had "gone downhill. He's not in a coma but it is in the wind. Time is running out... His spirits are low and... he didn't know how much longer he could hold on." ...[the support group was] appealing to public and private hospitals to accept Mr Williams for treatment, and for renal-failure doctors to volunteer services. A financial appeal was launched, along with a national "fax attack" on Northland Health and the Government. The intervention of the Queen and the "international community" was also being sought via the internet.

...Rau Williams received another setback last night when Whangarei Hospital refused to allow an A[US]n renal specialist to examine the dying man. A charitable trust, Lifecare N[Z], has offered Mr Williams private dialysis treatment. It bought a machine on Wednesday for \$30,000. Yesterday the trust flew [the AUSn doctor] from rural Victoria, where he runs two dialysis units, to access whether [Mr Williams] is suitable for treatment. A Nelson technician was also flown to Whangarei in case the doctor cleared Mr Williams for treatment. However, Whangarei Hospital said [the AUSn doctor] could not examine the patient. He could visit as a friend... but he could not act as a specialist because he was not registered in N[Z]... "I was surprised a bit," said [the AUSn doctor]. "I wouldn't have thought [registration] would be required if all that was to be done was look at the patient and give an opinion which had no authority and would carry no responsibility." ...A whanau spokesman... said he would ask [the AUSn doctor] to examine Mr Williams as a friend... Meanwhile, hopes of having a dialysis machine up and running for Mr Williams lie with an Auckland doctor due back from holiday this weekend... [Mr Williams' supporters hope that the Auckland doctor], a renal consultant, will accept a plea to help oversee the operation of the machine... [A Court of Appeal] Justice... will decide... this morning on an application to force Northland Health to provide... interim treatment "to bridge a gap until his family had another option in place."

...The Court of Appeal early today refused the last legal bid from relatives of... Rau Williams... The three judges, who heard legal argument last night in a hastily convened session in Wellington, returned just after midnight with their decision. Their reasons will be given later.

...AFTER... 24 days... of [waiting] for medical treatment that money couldn't buy... Mr Williams' much-publicised fight for life ended with his last breath about 3.30am yesterday... just hours after... [his niece, who maint]ained a constant vigil at his bedside in ward 14... whispered to him

that an appeal to the highest court in the land... had failed... Mr Williams hardly registered the final disappointment... As dusk fell in Whangarei yesterday, Mr Williams began a long journey to his ancestral home in the Bay of Plenty, a place he left when he was 13... Six or seven years ago, Mr Williams'... wife... died from renal failure... which ironically she refused treatment for[, and]... his father... died last year after also battling with kidney problems... [The] Health Minister... said he would send his condolences to Mr Williams' family. He said the public way the saga had been played out was "disappointing"... Mr Williams... had received the best care possible, he said.

...The Minister of Health... has decreed that if hospitals want money for more operations they must prove their sickest patients benefit first. This means a ranking system – which sounds fair and logical but... [rankings or points] are just a small part of the rationing process, which starts with the Government deciding how it funds health and ends up with a patient being given or denied public treatment. Although health rationing has always existed, it is commanding centre-stage against the backdrop of Rau Williams' futile fight for life-lengthening dialysis and the developing criteria for ranking people's relative ill-health. Where politicians and bureaucrats once deflected flak over people's lengthy waits for treatment by simply ploughing more money into particular services, they are now forced to admit that some suffering patients will inevitably miss out. How much money should go into services is something health officials must grapple with over the next few months... [Is] it better to do a major operation on a patient with severe lung cancer or more hip replacements? "Doing the lung cancer operation may not help anyone, yet we often do these things because they're urgent and people feel helpless." The points system and the level of money devoted to health have predictably riled some and pitfalls are already being pointed out. These include private system shortcuts, continued regional inequities and the number of operations funded not matching the tally of people who qualify. Some are wondering whether it is a blunt instrument for ushering in means-testing... A senior health official wants to see means-testing introduced so that the poor are not disadvantaged by health rationing... In N[Z], the Core Health Services Committee (now called the National Health Committee) was the group charged with giving public health services priorities. It went to the U[S] and investigated a much-debated system used in Oregon... The Oregon Health Plan involves a constantly reviewed list which defines the treatments the state will provide for the poorest citizens and those who cannot get insurance... No other procedures were taxpayer-funded... [M]oney saved by restricting the number of publicly funded services was poured back into the system to allow more people to get those services. It did not disappear into the likes of roading, prisons and political trips... [The] system is by no means perfect. Real fairness could be achieved only by all the needy people having full access to a full range of health care... The Oregon... [list is] constantly reviewed... Of about 750 identified conditions and treatments, about 530 are on the list... An example of one condition left off the list in 1993 was cancer when a patient had a less than 5[%] chance of surviving five years.

...[the] 44-year-old... accepts he is going to die, and now he just wants to go home to be with his family. His twin sons have built a wheelchair ramp... and friends have raised funds to buy an old ambulance to transport him around. Aside from the odd day visit home, however, the ramp and ambulance sit unused. His wife... can't afford the home nursing care [her husband], who is dying of cancer, needs. Given one to two years to live about a year ago, [her husband] has spent 11 months in a windowless intensive care unit at Wellington Hospital, waiting for health authorities to decide if they will pay for that care... An assurance that the CHE would respond by Friday was not followed through... What infuriates the family most is that the hospital estimates the cost of home care is the same as the cost of keeping him in intensive care... Ironically, he could claim ACC if he was an accident victim, the couple said... [Incidentally, i]t was alleged on TV3's 20/20 programme on Sunday night that bungling by... Wellington Free Ambulance... staff contributed to... the death last month of a [27-year-old] Wainuiomata mother of two... Mrs Trueman... died on June 3 after unsuccessful attempts by an ambulance officer and Fire Service staff to revive her. The previous day she had gone to hospital in agony with a bruised leg but was told by a nurse to go home and take Panadol... On Wednesday... [the WFA] chief executive... sidelined two officers pending an independent review... [He] confirmed yesterday that... [the] service's communications manager had also been stood down for an "undetermined" period. [However, he pointed out that the 'WFA – which is one of the few ambulance services in NZ not run by St John – has been saving lives for 70 years'.]

...At least eight Wellington patients died or were further injured because of a lack of skills and resources among the ambulance service, a former ambulance officer claimed yesterday. [The officer], who left the WFA service in March after 10 years' service, said he was frustrated and disgusted at the way the service was managed. His claims follow details shown on TV3's 20/20 on Sunday surrounding the death of Karen Trueman[, whose]... widower... said he would seek a legal opinion about the care given to his wife... He had not realised there had been a problem with his wife's treatment until contacted by TV3 on Sunday... "The biggest problem I had was that [the WFA chief executive] had full knowledge of other cases where patients have suffered and he hasn't done anything about it,"... said... [the former officer. However, the] chief executive... said he had no details of any other cases being referred to... [He pointed out that the former officer] had twice been passed over for the paramedic training course at the National Ambulance Officers Training School in Auckland... The service had the money to pay for training but was spending it on vehicles, management reorganisation and researching the buying of a rescue helicopter, he said.

...Night-vision goggles that show up people as green figures in the dark are the latest aid for Wellington rescuers. The Life Flight Trust – which operates the Westpac Trust rescue helicopter and the NZ Post air ambulance from Wellington Airport – had spent about \$53,000 on two pairs... [In related news, a] dogfight broke out yesterday after St John Ambulance revealed it would soon dump the services of the Westpac Rescue Helicopter and use an expensive new aircraft for air emergency work in Auckland. The Order of St John has bought a Sikorsky S-76 helicopter from A[US] for \$1.7 million and given the Westpac operators three months' notice that their services are no longer required. The Westpac operators, the Auckland Rescue Helicopter Trust, are angry at the apparent end of a 25-year relationship with St John. The trust chairman... could not understand why St John had decided to buy its own helicopter when the Westpac machine – leased from Helicopter Line – had worked successfully for the organisation for so long... [The] BK-117... had completed 8000 successful missions... St John Ambulance claims it will make huge savings by ditching the Westpac rescue helicopter... [A]n Auckland board member... said St John could run the Sikorsky for just under \$1 million a year, compared with the more than \$3 million it cost to run the Westpac helicopter... [But t]he trust chairman... called the St John costings "absolute garbage" and accused the organisation of trying to create a national monopoly on road and air ambulance work... [Indeed, t]he trust had contacted lawyers because it was concerned that St John was trying to shut it out of funding contracts with North Health and ACC... [The chairman] claimed the Sikorsky would... struggle with parts and maintenance because there were no others in the country... [In addition,] St John would have to pay a further \$500,000 to kit the helicopter out properly and... it would cost \$2500 an hour to run, compared with the trust's \$1800 an hour charge-out rate... – which the... trust sought to increase by \$400, withdrawing the claim on April 17... [He believed] his operation would probably be forced to close if St John went ahead with its plan... If his trust was forced to close its operations no one would be left to do winch rescue work... He [then] said there was not enough work in the Auckland area for two air ambulances... [However,] St John... believes there is work for two helicopters...

[The Auckland helicopter trust which ousted a Northland operator for rescue work in the north had to call in its rival for a job it could not do. The community-owned helicopter used its winch to hoist a woman with a broken ankle from a gully in the Whareora Forest east of Whangarei on Thursday. The Auckland Helicopter Trust's helicopter, which is based in Whangarei, did not have a winch capable of lifting the woman from the gully.]

...A mysterious benefactor... who wanted to remain anonymous... has helped the Northland Electricity rescue helicopter to extend its lifesaving grasp through the purchase of two long-range fuel tanks, worth \$100,000. The... tanks increased the helicopter's range by 150 nautical miles. That meant ocean mercy dashes would not have to be delayed until the victim was closer to shore... [The donation is timely,] because... North Hokianga ambulance staff [are saying] lives could be lost in the Far North... [due to] a shortage of drivers [that] will keep one of their vehicles off the road

from next week. The Kohukohu station has four volunteers but only one is qualified to drive the ambulance. The station will lose him when he starts fulltime work next Monday. The nearest backup ambulance is at Mangamuka, about 30 minutes away.

...Five severely burned people had to wait more than three hours to get to hospital after their caravans caught fire in the remote Wairarapa coastal settlement of Tora at the weekend. A 2-year-old Martinborough boy and his father, aged 27, were battling for their lives in Wellington hospital's intensive care unit last night. The boy's mother and two elderly Hutt Valley residents were in Hutt Hospital's burns unit in a satisfactory condition. The two families were cooking together in one caravan about 10.30 pm on Saturday when they went to change a gas cylinder without first turning the gas off. "It... just blew the end off, which acted like a flame thrower." Bad weather prevented the WestpacTrust helicopter from reaching the injured, so they had to be taken out by ambulance.

...Lions, Lionesses and Leos will be out in their hundreds in Auckland today and tomorrow raising money for the Westpac Trust rescue helicopter... The service clubs aim to raise \$90,000 during the appeal... which will fund urgently needed medical equipment and flying expenses. Each year the demand for the service grows, and this year more than 600 rescues are expected to be flown by the trust.

...Rival services will soon bid for helicopter work in the Auckland region. The A[CC]... confirmed last night that it would put its majority share of the service out to tender. An ACC spokesman... said a new contract became necessary when St John Ambulance bought its own machine instead of relying on the Westpac rescue helicopter, which is co-sponsored by the N[Z] Herald... Last night... the Auckland Rescue Helicopter Trust[s]... chairman... said he was delighted with the corporation's decision and confident that the trust would win the contract. The ACC pays for about 70[%] of the service. The other 30[%] is funded by North Health, which is waiting to see details of the tendering process before deciding what to do... Earlier [the trust's chairman] said the... S-76 Sikorsky... would cost \$2.7 million once St John added a winch for emergency work... [In response,] the order's chief ambulance officer... said a winch could be added but the total cost would still be within \$2.2 million.

...A bitter battle for the right to operate Auckland's air ambulance service has ended with the Auckland Regional Rescue Helicopter Trust winning the [ACC] contract... The chief executive of the Order of St John in Auckland... said last night that he would not comment until being formally advised of the contract going in favour of the trust... St John... is to build a half-million-dollar hanger for its new Sikorsky helicopter...

The dogfight over air ambulance duties above Auckland is set to resume as the new St John helicopter prepares to start work. The Order... bought a Sikorsky S-76... earlier this year... But its plans to take over air emergency work hit a snag when the contract was put out to tender and the incumbent[provider won. The]... trust chairman... said last night that all hospitals in the Auckland region... had refused contracts with St John when approached recently... "St John might be in the air... but they'll have no work." ...St John... was confident of gaining the ACC contract when it went out to tender next year. "We have the superior helicopter. It can travel faster and further than any other air ambulance operating in N[Z], and it can carry more passengers..."

...Allegations that a... St John rescue helicopter was unavailable for mercy missions because it was carrying commercial passengers will be investigated by North Health today. The Auckland Rescue Helicopter Trust... says St John... [was] ferrying passengers from New Plymouth to a Taranaki oil rig... While the... trust's Westpac rescue helicopter... [was flying one of three missions and the] St John's... helicopter... was... in New Plymouth... a Waiheke resident suffering chest pains had to be evacuated by the police launch...

[The Order of St John is facing enormous losses, and the future of three helicopters is in question, after crucial ACC contracts did not materialise, or were rejected. A Sikorsky helicopter, intended to secure the service emergency work in Auckland, has instead left it with a \$1.5 million budget blowout, although the Auckland St John chief executive denied that the helicopter was a white elephant. And St John in Christchurch is having to rethink the role its newly acquired \$2.35 million BK117 helicopter will play in the Canterbury-West Coast region after ACC accepted Garden City Helicopters' tender. This month the Sikorsky was swapped with Northland's BK117 rescue helicopter after St John decided it was too expensive to justify the short flights it was running around Auckland and would be better suited for longer flights in the north. But ACC officials are believed to have pulled the plug on that plan after refusing to allow the Sikorsky to fly regular ACC-funded missions in Northland. They said the aircraft did not meet ACC requirements. And the Sikorsky specifically has the tender to provide the backup for the WestpacTrust aircraft in Auckland, not the BK117. St John officials were yesterday still hoping to secure ACC-funded contracts, enabling the helicopters to fly. But failing that, the emergency ambulance service organisation faces substantial cost-cutting.]

...although 'one woman who recently gave a large donation to St John was understood to be unhappy at the thought of her money being used to "pay for a white elephant," public donation money – that had been earmarked for charity work – is plugging a million-dollar hole left by the failed bid by the order to take over air emergency work in Auckland. The Auckland St John chief executive confirmed yesterday that money for the road ambulance service had not been siphoned off to cover the Sikorsky losses. The order receives \$20 million through the ACC, regional health funding authority and hospitals to provide Auckland's road ambulance service.' Editor's note: 'When a 3-year-old began having seizures, his mother didn't hesitate in phoning 111. But \$67.50 later, it's something she'd think twice about doing again. "This is an essential emergency service and it should be free for everyone." The bill for the five-minute ambulance ride arrived when the Otahuhu family couldn't afford it. The Order of St John relies on financial support from the public, but says a Health Select Committee inquiry into ambulance services is underway. Last year, St John contributed nearly \$10m towards running costs of the ambulance service. The ambulance provider says, under its contract with Crown funding services, the bill for ambulance users ranges from \$45 to \$67.50.'

... 'Ambulance staff would treat more people over the phone and in their own homes rather than taking them to hospital under plans to improve services (about 40% of callers are currently taken to hospital). The suggestion, based on the British method, is one of 14 recommendations made by Parliament's health select committee after an inquiry highlighted inadequacies in ambulance services. But an Auckland ambulance officer said there were far bigger ambulance issues that needed to be addressed than introducing the UK plan. The main ones were the lack of funding and staffing that meant many officers had to go on jobs alone. The inquiry recommended the Government work to achieve double crewing in metropolitan areas in three years. NZ ambulance services are run by four main providers – the Wairarapa and Taranaki District Health Boards, Wellington Free Ambulance and St John.'

...Staff in the Auckland control room of St John Ambulance could soon work like air traffic controllers, directing ambulances from the station to emergencies and on to hospitals if satellite tracking – or automatic vehicle location – is introduced. Operators can already place ambulances on a computer map of Greater Auckland and locate the site of the emergency using mapping technology. But St John... hopes to upgrade its computer system so its fleets of ambulances from Cape Reinga through to Tauranga can be watched on the computer screen... If the costs can be met, St John will be the first emergency service in the Southern Hemisphere to introduce satellite-tracking... "All this has to be good for patients as it means we're cutting time off how long we take to get to emergencies," said... [the deputy ambulance chief... [Now if only someone could work out how to cut time off how long we take to supply children with wheelchairs!]] Due to a premature birth, [a boy] has cerebral palsy, and despite his parents' best efforts, he had to start school last week in a pushchair. He could have been there months ago, but his parents... had kept him home in the hope that he would reach the top of the waiting list for a standard-issue junior wheelchair before turning six and being legally required at school. This week his sixth birthday arrived and so did first day at Marist School, Herne Bay, where [he] was greeted by other children asking if he was a baby. After his parents explained his condition to a school assembly, [he] now loves going to school, but is frustrated he cannot get about by himself. In [his] own words a wheelchair would be "good for the... playground... zoo and holidays, good for going to the shops and on aeroplanes..." ...He wants... a pink one – "you write that down." ...[his mother] first contacted Equipment for Independence, which is contracted to provide services to North Health, about six months ago... The Alliance spokeswoman for disabilities... highlighted the case, saying [the boy] had been stripped of dignity. "North Health has an absolute responsibility to ensure that [this boy] has his wheelchair now." ...the general manager of disability support services

at North Health, said wheelchairs had waiting lists just like every other service in the health system. She had a lot of sympathy for [the boy] and said the situation was improving. The waiting list was now under 50.

...[yesterday the] Opposition health spokeswoman... released statistics showing 99,161 people... are on waiting lists for surgery at public hospitals.

...Health chiefs are alarmed at Government-driven demands for yet more cost savings in hospitals... [and,] in the face of burgeoning waiting lists, they say they are unsure where the savings will come.

...Medical specialists see a disturbing trend of creeping privatisation of the public health system... [However, private] patients should be treated in public hospitals, says a health chief... concerned that... public hospitals were losing cheaper, less complex procedures... to private providers.

...A private hospital taking public patients for day surgery could soon be [operating] in the grounds of North Shore Hospital. Waitemata Health is considering the plan as part of selling more than \$15 million of property assets to pay for new services... Waitemata would lease the old hospital site... to [an investment bank, which] would then lease back operating theatre time to North Shore Hospital for public surgery, as well as treating its own private patients. The chief executive of Waitemata Health... said the cost of paying mortgages and maintenance on the buildings was about the same as leasing. Selling the properties allowed Waitemata to move away from being a landlord and concentrate on its real business of delivering health services. Waitemata will take over responsibility for an extra 50,000 people in West Auckland next year... The Government has said it will pay for the increased services but Waitemata Health has to find the money for new buildings and equipment itself... [By the way, a]bout 40 patients and staff have been struck down by an unknown infection at Waitakere Hospital... forcing the isolation of two wards. The infection is thought to have contributed to the death of an elderly patient in recent days, although it was not the main cause... [S]cientific tests are being done in Wellington to identify the bug[, which causes]... diarrhoea, vomiting and occasional abdominal pains.

...A nurse at Waitakere Hospital claims that managers failed to stop the potential spread of an unknown bug through two wards[, which]... were reopened last night... [The] maternity nurse... said... she and her colleagues had learned about the gastroenteritis-type illness only after reading the *N[Z Herald]*. Furthermore... management claims that the two geriatric wards were isolated were a joke... [-] signs had not been put up around the two... wards, and staff were walking between them and other parts of the hospital. This could have easily spread the disease to other vulnerable patients... The communications manager for Waitemata Health... said adequate precautions had been taken, but it would investigate the nurse's allegations immediately.

...Hospitals are usually places for people to heal but infectious diseases can easily turn that around... The unknown infection which... swept through two wards at Waitakere Hospital... is thought to be a viral infection which clears within three days. Therefore, in the context of hospital infections, it is set to go down in the history books as a relatively minor event. Health officials have reserved their biggest worries for bigger threats – like[if] a drug-resistant “superbug” arrives in wards. International headlines this year announced the discovery of an untreatable and deadly superbug from Japan. It was... found in a four-month-old baby. Hospitals in N[Z] were jolted into boosting infection-control programmes in fear of it reaching our vulnerable shores. But the case may have been a false alarm. The infant had an abscess which was not treated properly to start with, leading doctors to think it was resistant to drugs. When this was picked up, drugs were prescribed and the abscess healed. While hospitals and health officials worldwide breathed a sigh of relief, it is thought to be only a matter of time before another scare emerges. A British report last year said a superbug epidemic was set to take hold of British hospitals, with clear signs emerging. It said at least 50 hospital patients died each year from the superbug (methicillin-resistant *Staphylococcus aureus*) and “that every hospital in the country will sooner or later be hit.” The superbug and drug resistant germs were also the focus of 12,000 disease experts at a 1995 conference in the U[S]. But the attention has not been restricted to science boffins overseas. Earlier that year a ward at Christchurch Hospital was isolated after two patients were found to be infected with a potentially dangerous superbug... The Ministry of Health's chief adviser of regulation and safety... said if a strain of *Staphylococcus aureus* was resistant to methicillin, it was treated with a combination of antibiotics, or, as a last resort, vancomycin. The need to use vancomycin was rare in N[Z]. One thousand cases last year, 4[%] of all cases, were found to be methicillin-resistant.

...*War on superbug strains*... Medical experts are calling for special precautions after Japanese doctors identified new strains of a superbug with some resistance to the most potent antibiotic... [Doctors] at Jutendo University in Tokyo found a strain of the common infection *staphylococcus aureus* earlier this year – known by its initials as VRSA – that did not respond to vancomycin, the last line of defence against infection. In their latest research, reported in the *Lancet* medical journal, they uncovered more strains of the organism that showed variable resistance to the drug... [They] examined vancomycin resistance in 1149 strains of... the so-called MRSA bacteria... isolated from patients in 203 hospitals... Variable resistance was found in 20[%] of strains from Jutendo... in 9.3[%] of those from [another 7] university hospitals and in 1.3[%] of strains in clinics.

...Resistance to antimicrobial agents is seen widely among the microbes or micro-organisms which infect humans. It is an inevitable evolutionary response to a world in which antimicrobial agents are extremely widely used in human medicine and used as growth-promoting food additives in young[farm] animals in many countries... No one has ever isolated a *Streptococcus pyogenes* resistant to penicillin. Resistance of *Escherichia coli* to amoxicillin developed slowly over 20 years in Auckland and by the early 1990s about 50[%] of them were resistant. However, the percentage has not changed at all in the last few years and we don't know why. All *Streptococcus pneumoniae* used to be sensitive to penicillin and for years there was no change. Then in the late 1980s and continuing until now there has been an explosion of resistance which has reached us here in N[Z]... Last week a *Staphylococcus aureus* resistant to the antibiotic vancomycin was isolated in Japan. Why on earth has that created such a furore when the world is clearly already awash with antimicrobial-resistant organisms? ...*Staphylococcus aureus* is a common bacterium which makes people sick in N[Z] every day. It is not some weird organism which very occasionally invades people already weakened by disease or immune-suppressing drugs – though it can do that as well. About half of us carry it around in our noses all the time so that it is an integral part of the microbial world that we share. Let's go back in history a bit. Within a very few years of the first use of penicillin in 1941 against *Staphylococcus Aureus*, microbiologists started seeing occasional strains which were resistant to penicillin... In terms of the endless battle that we wage against infectious disease with antibacterial drugs, it has taken just over 50 years for these particular organisms to become completely resistant. That is, of course, but a microsecond in evolution.

...*It seems every year brings a new health scare*... REMEMBER them? The scare stories which became the fodder of dinner parties for months... Each new disease was billed as the scourge of the decade; each seemed more terrifying than the last. But where are they now? ...NECROTISING FASCIITIS “Attack of the flesh-eating terror bug” the headline from 1994 screamed. “Killer necrotising fasciitis spreading worldwide”. Well, not quite. But two unexplained surges in rates of so-called “galloping gangrene” – severe, invasive infection by the common bacteria *streptococcus A*, caused the horror headlines... In N[Z, a] Masterton man... thought he was in the grip of a science-fiction story as he watched his leg being eaten away... He quickly accepted his leg had to be amputated to save his life. “Goodbye you bastard,” he told it as he was wheeled to surgery... N[Z now] sees about 10-15 cases a year, but there are “very few” deaths because the disease is usually quickly diagnosed. It strikes young and old alike, often healthy, vigorous people whose infection begins with no more than, say, a scraped knee from a fall off a bike... The bug has been known to kill healthy people in 24 hours... In [the Masterton amputee]'s case, the bug moved up his leg at the rate of three centimetres an hour... TAPANUI FLU Named originally after an outbreak in Southland in 1983-1984, Tapanui flu (Myalgic encephalomyelitis) is now known as chronic fatigue syndrome and is thought to affect about 3500 N[Z]ers – a number which has been static for many years. [A m]edical virologist... of Otago Medical School... believes about 75% of those 3500 are not suffering [CFS] at all – but about the same number again have the disease but have not been diagnosed... In 1994, he discovered that syndrome sufferers appeared to have fewer “natural killer cells” and that those they did have were not working

properly. His team has just received ethical approval for a pilot study to investigate natural killer cell activity in people severely affected by [CFS]. In the US, [a] researcher... has identified a crucial enzyme that triggers a biochemical fighting reaction in response to a challenge from a virus. In CFS sufferers, the enzyme is either absent or of a defective type... **TOXIC SHOCK SYNDROME** It was the disease which took tampons off the supermarket shelf and on to the front pages of... newspapers. Toxic shock syndrome claimed 28 lives in the U[S] in 1980, and... researchers announced they had identified two kinds of fibre... used in tampons as fostering the production of a bacterial poison which could, particularly when tampons were not regularly changed, lead to high fever, low blood pressure, a rash, vomiting, diarrhoea and death... In October, 1980, just when the first sanitary protection ads were being run on [NZ] television, the Health Department advised women to stop using tampons while tests were conducted... A week later it withdrew the warning, saying tampons used here were not a problem. Only three cases a year were reported for the next three years and since 1986 the condition has not been notifiable. There have been no recent reports... **LEGIONNAIRE'S DISEASE** The bacterial lung infection killed 26 American ex-servicemen at a Philadelphia convention in 1976 and was thought to have claimed its first N[Z] victim in 1979. But there were "hundreds" of suspected cases in the late 1970s. In May, 1985, the Speaker of Parliament, Sir Basil Arthur, died from a rare form of Legionnaire's. The bacteria was commonly found in water cooling tanks and circulated through ventilation systems, and by the late 1980s, it was popping up everywhere... [I]t was found in office blocks in Christchurch, Auckland and Wellington... In Britain, 58 BBC workers contracted the disease and two died... While Legionnaire's has long since faded from the headlines, it is now believed to be greatly under-reported... 37 cases were notified [in NZ] last year, with three deaths, but... Environmental Science and Research... networks indicated there were at least 60 cases nationally. In 1995 there were 33 cases, in 1994, 66... [Speaking of scourges of the decade – in this case, the privatisation of public facilities –] South Auckland Health is considering selling its \$7 million Howick superclinic to local doctors... The Howick centre, which is due to open in two weeks, is intended to take some of Middlemore Hospital's annual load of 240,000 day surgery cases... The chairman... said yesterday that the day surgery centre – which is [to be] jointly run by hospital staff and [GPs] – could be fully or partly sold... It would either keep part of the building where its specialists worked or lease the space back from its partner, Eastcare, a business group of Howick doctors... South Auckland Health is building another, larger superclinic at Manurewa and hopes to build a third in Mangere. Waitemata Health, meanwhile, yesterday confirmed it was planning to go ahead with a private hospital venture with [an]... investment bank in the grounds of North Shore Hospital.

...T[aranaki] Base Hospital could be the first in N[Z] to privatise its radiology services... [It] is also considering contracting its laboratory services.

...[A Government cost-cutting drive could force some people to pay for the 8 most common state-funded diagnostic tests for serious diseases. Health funding officials raised the idea of charging for the tests as a means of curbing overuse by doctors and other health workers. Medical groups are aghast at the suggestion. The Government pays the laboratories more than \$160m a year for the work – about 27 million individual tests. The top 8 absorb over half the spending. Disorders revealed by these tests include hepatitis, urinary infections and all types of cancer. Possible strategies include introducing part-charges of up to \$20 a test for a quarter of public patients, and making specialists' private patients and private hospital users pay the full cost of their laboratory tests – about \$20m a year.' On a positive note,] **the country's first liver transplant... will... [be performed] early next year at Auckland Hospital**, which... won the... three-year... contract in April... [The annual] budget... allows the hospital to operate on about 22 patients a year[, including]... travel, accommodation and follow up care. But... [the] head of the new transplant unit, [who] [has... returned from the U[S] where he was associate professor of surgery at the prestigious Mayo Clinic... expects demand to rise once the service is running... [Over] 30... staff have gone to the U[S], Britain or A[US] recently to get transplant experience... From next month patients will be accessed and one chosen as the inaugural patient to go under the knife... Most of the patients needing the life-saving operation have a history of hepatitis C or B or alcoholic liver disease.

...[supporters] of... the man convicted of killing Martin Luther King Jun, will try to raise the \$US250,000... he needs for a life-saving liver transplant in Pittsburgh... He is serving a 99-year sentence in a Tennessee prison for killing the civil rights leader in 1968... Doctors said... [three months ago that the prisoner, who is now aged] 69... would die within six months unless he got a liver transplant. Tennessee court officials have barred [him] from leaving the state for a transplant, and the state's two transplant centres have denied him admittance... [In related news, a British girl] born with a rare liver disease that killed her two brothers as infants... was just five days old when she received a new liver and became the world's youngest liver transplant patient... Now five months old, [she] has overcome the trauma of surgery and her body has accepted the new organ[, which]... had to be cut down to one-eighth of the original size and was transferred in a delicate six-hour operation... Transplants in infants are helped because for its first 30 days, a baby's immune system is too immature to detect foreign bodies, reducing the risk of rejection.

...Japanese citizens Toshio Okano and Kazuo Mori[went] to the Philippines to save their lives by buying a kidney for transplant, but instead the trip killed both. Japanese, Koreans, Micronesians and Saudi Arabians, eager to circumvent long waiting lists at home, regularly [g]o... to th[e] poverty-stricken archipelago seeking donors for dollars... [S]ources who asked not to be named said each[patient] paid around \$25,600 for his new kidney – more than a year's salary for many Filipinos... With more than 30[%] of the Philippines' 65 million population living below the poverty level, the dollars from selling a kidney can be hard to resist... [However, a]n official at the Japanese embassy in Manila sa[ys it i]s "immoral" to buy a kidney from a living donor. And medical treatment in the Philippines [i]s not as safe as in Japan she [adds]... Many of the transplants... [– which] cost... about 500,000 pesos (\$31,800) excluding doctor's fees, donor-screening costs and pricey preparatory and follow-up treatment... [–] have been successful. But... the patients run the risk of losing more than their money, as both the Japanese men found out... Mr Okano was treated at... Manila's St Luke's Medical Centre... in 1994 and Mr Mori in 1996. Mr Okano died just before his transplant as a result of an infection caused by a minor operation – the removal of a tooth. Mr Mori died of cancer last June, about a year after his transplant. Apart from the cancer his second kidney – not the transplanted one – had also become infected... Before and after a kidney operation, patients are given immunosuppressives to prevent their bodies rejecting the new organs. These drugs weaken the immune system, leaving the patient prone to infection. They can also promote the growth of tumours[. Incidentally, a NZ 'MP is fighting bureaucracy to give his air miles to a sick girl. New Plymouth's Labour MP has built up thousands of air miles through taxpayer-funded flights. But parliamentary services officers are stopping him passing them on to a 15-year-old New Plymouth girl who needs to fly to the USA twice a year to treat her rare disease. The bureaucrats would rather the air miles pass their use-by-date than be given to the girl, who has melas – which causes severe fits and was ruining her life. Her case made national headlines two years ago when her dad drove a tractor from Cape Reinga to Bluff to raise \$120,000 to send her to Florida, where doctors were trialling a new treatment for melas. But health authorities here wouldn't pay because the treatment was experimental. She has flown to Florida every three months for the past two years and the drug trial appears to be working. But she still needs to get to America twice a year for follow-up treatment and her family is running short of cash']...

Cleaning up after preventable accidents in the country's health services is estimated to be costing more than \$400 million a year, says the Ministry of Health. [The total would be even higher if the cost of medical misadventures, and inquiries such as the one into the practice of chest-tapping premature babies at National Women's, had been included.

...residents who live around Green Lane and National Women's hospitals say a user-pays hospital parking policy forces staff on to nearby streets. Consequently, the neighbourhood is choked from 8.30 am while hospital car parks sit empty. Eight years ago hospital staff used council-owned land next to the hospital as a car park. It held 500 cars. But the land was sold']...

Green Lane Hospital is due to get a \$2 million upgrade of an intensive care unit... which may be used for only three years... as all high-tech surgery at Green Lane is due to move to Auckland Hospital... in 2000 or 2001. The hospital manager... estimates that until then the extra facilities could reduce waiting times by allowing up to five more operations a week... It needs to make the improvements to pass an accreditation test, which may soon be used to decide if hospitals are fit to carry out state-funded operations.

...CASH-strapped[public] hospitals which cannot pull themselves out of financial difficulty could lose some of their services... That's the warning from[the] Health Minister... who says taxpayers cannot continue "feeding the monster... We are still putting too much taxpayers' money into organisations which are not doing as well as they should be... Some CHEs need capital spending to fix their deficits... And where they are not able to... [eliminate] their deficits... quickly enough, we will have to take more significant action to fix the problem. It might mean restructuring them or having someone else run some of their services... Hospital wages and salaries are one of my big concerns. Some groups have had huge increases in the last few years but the reality is, they are working for organisations which are insolvent."

...Patients are missing out on millions of dollars of medical care because health coffers are being "bled dry" by bureaucrats, says a former hospital manager. [The man] who quit his \$150,000-a-year job at Auckland Hospital last month, said frustration at the management structure became overwhelming... [T]he "parasitic approach" saw funding spent on executives well before it got to doctors, nurses and patients... Auckland Healthcare's chief executive had financial, legal, media and planning advisers[, who]... should all go as the Auckland, Green Lane, Starship and National Women's hospitals had general managers and their own advisers... But the acting chief executive of Auckland Healthcare... said [the former manager's] naive call ignored the commercial realities of a \$500 million organisation...

[The former] Health South Canterbury chief executive... received a taxpayer-funded golden handshake of between \$65,000 and \$85,000 when he quit his job last year... [The] Health Minister... w[il]l... not divulge how much... ha[s] been paid in leaving packages... since the reformed health system came into effect in July 1993... The *Sunday Star-Times* requested that information from the individual CHEs, but not all responded. However, up to \$472,000 [in total is known to have] been paid to[just] four resigning chief executives[, while two]... CHEs did not pay their resigning chief executives any golden handshake... The payouts have been condemned by[the] opposition health spokesperson... "I'm speechless, and I'm sure the public will be suitably outraged. I know of one instance where a health manager quit, leaving his CHE in absolute disarray, and still got a bonus payout. Some of this is hush money, pure and simple. They're being told that if they go quietly and don't tell anyone what's been happening, they'll be paid off. It's unacceptable," she said... [A] Coalition for Public Health... spokespe[rson]... said the money would be better used to treat some of the... N[Z]ers waiting for surgery... "These managers are being paid for the risk they undertook in taking on the job when, in fact, the evidence is that the commitment was not there to see the job through and in many instances, they probably did not have the skills to do it..." [The Health South Canterbury chief executive] said when he resigned that it had become increasingly difficult for him to meet the conflicting expectations of the public, his staff and the Government.

...The Government's preoccupation with financial "success" has distracted hospitals from their health goals, says the Auditor-General. In a strongly worded report to Parliament, [he] questions the way [CHEs] were established with huge debts by the previous National Government. He says the country's 23 hospital-based enterprises, which now owe almost \$1.2 billion, are still in poor financial condition. Sixteen are relying on letters of support from the Government to say that they remain a "going concern" and will not be allowed to go under... The Minister of Health... acknowledged that the enterprises could be losing money because they were not paid enough to cover their costs. But he said the fault could also lie with the enterprises, which was why the Government wanted better cost controls and sanctions. "As long as CHEs can forfeit on loan repayments and turn to the Government for extra funding for debts, the incentives for CHEs to examine the cause of the debt are lost."

...Figures from the Government statistician show the enterprises' operating deficits for the[financial] year... at \$219.2 million, up 28.4[%] from the previous year's \$170.7 million. Twenty of the 23 health enterprises were in the red... The total debt of the 23 [CHEs has risen] to \$1.219 billion...

MOST hospitals will chase former patients for \$2.26 million in outstanding fees, despite the charges being abolished in the Budget... [T]he Health Ministry has told CHEs they are expected to collect outstanding fees, like any other unpaid debt. Already... Eastbay Health... has said it won't pursue the \$16,849 owed by 764 outpatients. "But if someone comes to pay, their money is receipted,"... For the remaining CHEs it will be business as usual for their debt collectors... Health Waikato wrote to the *Sunday Star-Times* that it would be flagging the \$92,000 owed until the end of June. However, after being spoken to by a representative of[the] Health Minister... it telephoned back to say the debt would be collected. Health Waikato said the mistake resulted in a misunderstanding between its finance and communications departments, and the debt "was always going to be pursued". It denied there was pressure from the minister's office... The removal of fees is... expected to cost the country \$6.2m annually... Hospitals charged out around \$9 million last year, with outstanding fees rising to 25% from 17.4% the previous year... Last year, debt collectors had \$1.64m to pursue on behalf of CHEs... Hospitals in Auckland are owed about \$453,000... Auckland Healthcare [alone has a debt of \$272,860 from a charged total of \$2.1m last year - the highest total of any CHE by more than \$1m]... The revenue manager of Auckland Healthcare... said patients were generally given two months to pay... Patients should not think it was acceptable to simply ignore a hospital bill... [The] Budget scrapped outpatient and day patient charges - \$31 for adults and \$16 for children without community service cards...

Health chiefs are furious that... [while] free doctor visits[for under-six-year-olds have gone] ahead... a \$30 million-a-year "safety net" budget for [child] health and disability services... is off limits for a year while the Ministry of Health assesses the need[for it]... The head of the Starship children's hospital... said... "There's no doubt [RHAs], medical authorities and community groups have a very clear understanding of the need... The Starship will again become the place of last resort for... desperate... families... It makes me wonder whether the [coalition] agreement... has any integrity." ...An area of urgent need was "medically fragile" children dependent on continuing support and care. At least 500 children in the... North Health... region fitted this category... [T]he delay had really upset the authority's plans to help their families. "We had spent a lot of time thinking we could do something for them." ...North Health[']s medical adviser... said the current system was unfair because medically fragile children were eligible for only minimal Government support... [Furthermore, although p]hysically disabled children were given a needs assessment so services could be specifically designed[for them, n]o assessment was given to medically fragile children... "I don't think the needs of chronically ill children have ever been looked after well in this country."

...It's not often I find myself agreeing with [the Deputy PM,] but I have to say the spectacle of the whingeing Grey Power mob at the Wellington Town Hall on Wednesday last caused me to do just that. As [the Deputy PM] put it, they only have health to whinge about now that their universal entitlement to national superannuation has been restored.

...A few weeks ago, for an article on health cuts in Wellington, I visited two wards for the elderly. One was a specialist psychogeriatric ward at Porirua Hospital. It is a modern, self-contained, single-story building, rebuilt virtually as new in 1989, set in a large garden. There are only 15 patients, all either with their own rooms or sharing with one other person. The whole ward is "dementia-proofed" - the elderly patients can fiddle with the appliances and other things without hurting themselves or others. This ward is closing, along with the rest of what's left of Porirua Hospital. The... patients will be transferred to general geriatric wards at the nearby Kenepuru Hospital and at Wellington Hospital. The other ward I visited was Ward 5, the only remaining geriatric assessment, treatment and rehabilitation ward at Wellington Hospital... [After] Porirua's other geriatric ward was closed... the patients were all moved into Ward 5. Ward 5 is a small ward on the first floor of an old block. Twenty-five patients are crammed into an area that previously held 15. Most are in four-bed cubicles. Although there is a pleasant view of the gardens below, there is no easy access... Somehow, some of the patients from the Porirua psychogeriatric unit are going to be squeezed into this environment. The specialist doctors and nurses who look after them now say it will mean "going back into the Dark Ages." The only reason this is happening is financial... [Capital Coast Health] overspent its budget for services for the elderly last year by \$3.8 million and has to cut spending by 25[%]. It is squashing four wards into two so it can cut total geriatric beds from 80 to 55. Most other departments also overspent and their services are being cut, too. [That could mean a further reduction in the number of non-geriatric beds available in the Capital Coast region - although the region has already

lost '48% of its hospital beds since 1993 (nationally, the number of hospital beds has declined by 11% since 1993'). Returning to the topic of geriatric wards, in the]... British... House of Lords[a] Labour peer... has... called on ministers to finance "preventative medicine". He suggested informing people about "methods of hygiene such as washing hands and not picking their noses, especially during the winter".

...It has been a record-breaking year for many public hospitals. But don't count on any celebrations – seriously ill patients have poured into wards like never before... Most Auckland hospitals are having to spend almost their entire surgical budgets on emergency cases. As people have to get sicker to be admitted, fingers point at the lack of strategies to keep people out of hospital... "The call to throw money into hospitals is a whiplash reaction. The question is why are people going into hospital and why are we having such high acute levels of demand? We should be managing that a lot better as a country." ...Government spending on acute services had risen 31[%] since 1992 while the percentage on services like family doctors (primary care) had fallen... "People become increasingly dependent on hospital emergency departments and are more likely to come back. They could easily have had the illness prevented if someone had seen them beforehand." ...investing health dollars on keeping people well would ultimately benefit the public, but there was immense pressure from those already sick. "Most of the people using most of the health resources are older people. They are in the know and are a powerful political lobby... [Therefore,] it's very hard to change the balance at the moment... The challenge is to take away bureaucratic boundaries." But the strain on hospitals remains constant. Almost 4000 people were admitted to Green Lane Hospital in the past three months, up about 600 on the same period last year... [A]cute cases made up 85[%] of Middlemore Hospital's work... and urgent cases are growing by about 8[% a year. At]... that rate, elective surgery faced being squeezed out. The big winter surge in urgent cases had already thrown... South Auckland Health... \$500,000 over budget.

...Long-awaited extra health funding is heading to Auckland and Northland to meet booming population growth... [However,] Auckland hospitals are[still] planning further service cuts for next year... The new official [population total for the North Health region] is 1,205,697 – an 11.2[%] increase since the 1991 census... Although the population in Auckland had exploded... Government money had not followed. "Some \$27 million of health funding this year has stayed with other [RHAs], instead of following the people moving to the North Health region,"... [Funding figures show the Northern region] getting \$1216.79 per head[; the Midland region]... getting \$1328.48 per head[; the Southern region getting \$1360.20; and the Central region – where more]... than \$28 million in savings can still be squeezed from hospitals... according to a report on the future of hospital services... [-] getting \$1303.74 per head.

...More than one-third of residents in the Central North Island struggle to pay for health care, says a new report by Midland Health. The report makes grim reading, stating Central North Island people are sicker and more likely to die[through poor health] than other N[Z]ers... "This is attributable to the poor health status of Maori and their comparatively high proportion in the Midland population....," it said... [T]here were "serious inequities" in health services across the region, with low socio-economic communities experiencing poorer access and worse health than wealthier communities... Women found it harder to find the money... to pay for visits to GPs and other family health practitioners... than men... It also says people in the rural... areas wait too long for ambulances... The report recommended ambulance providers and health professionals review their training and co-ordination of services in the region... The report... was a landmark publication and the first comprehensive picture of family health services in N[Z]. Its findings would be used when making future decisions on health services.

...Chances are your local doctor will undergo a huge transformation in the next few years. GPs are having to rethink how they operate and how they manage your health. By the next millennium, many will be the gatekeepers to specialist services. It will herald the dawn of managed health care where doctors are given a set budget for a set population and are responsible for keeping within that. Any savings will be spent on additional health care. Doctors will act as the Government's frontline foot soldiers to try to curb mounting pressure on health dollars... To gear up for the challenge, most GPs have formed groups called independent practitioner associations. Many groups are already taking responsibility for drug and lab-test spending and savings are starting to roll in... The focus would go on efficiencies and keeping people well. Rather than traditionally working in isolation, doctors could review their work against others in the group and follow guidelines on the best way to manage diseases. Managed care, which opened the way to better co-operation and communication between GPs and specialists, was historically unprecedented. GPs could use agreed guidelines so they knew which patients to refer to specialists and which to "manage" themselves... The Procure chairman... said... "If we are able to reduce admissions before people are really ill it will be better for everybody. But this means putting resources and training in the hands of primary care to cope with that challenge." The general manager of a West Auckland doctors' group... said managed care involved a big shift in how GPs worked. "Instead of a GP being driven by seeing lots of patients, you could have appropriate patients seen by nurses and nurse specialists and those who are really in need seen by the GP... [The GPs should have enough spare time] to get into preventative care. The current funding structure is not geared for good health care. An incentive for primary care is to practise throughput medicine – the more people you see the more you earn. If you have a potentially complicated case as a GP and your incentive is to see lots of patients, the easy option is to quickly refer it on to secondary care, which can be expensive... You hear of patients on 10 different drugs. The best clinical practice may be the pharmacist, doctor and rest-home owner sitting down to talk about the best treatment." He said giving doctors a capped budget for a given population was the best way to foster cooperation between professionals. But strict guidelines and monitoring were needed so patients did not feel they were missing necessary treatment for the sake of penny-pinching. The head of South Auckland Health... said bulk funding responsibilities could not be given solely to GP groups. "If you have one group holding the budget and having all the power you will have the same problems as now. You don't want high-risk patients not being referred on until they are really sick." ...[By the way, t]housands more people on hospital waiting lists can expect surgery next year with the Government's firming up of a \$200 million reprieve... In total, the Government has earmarked an extra \$435 million over four years for waiting lists... \$190 million has already gone to fund 55,800 operations... But the... Labour health spokeswoman... said the \$200 million was a mere sweetener ahead of planned cuts in rural services.

...RURAL people might be slow to anger, but when they feel they are being short-changed they can get very angry indeed. This is happening at the moment due to the strong talk that rural health services are to be downgraded further... largely because of the whole business of population-based funding and the diminishing power of the rural regions... Population-based funding has worked to the great detriment of rural communities, and it is clearly going to get worse. It would have been unthinkable during the golden... years[of 1960-72] that rural folk could be put at a disadvantage by city people, either in health or in anything else. But that was... when farming was the backbone of the nation, and farmers not merely the aristocrats but a mighty force in Parliament and within the Cabinet power centre. That status and that power has diminished, just as the voice of the South Island has become a whisper since MMP – 16 electorate seats now in a Parliament of 120, compared with 26 out of 96 previously. Oh, nostalgia, where is thy balm?

...THE southern public is awaiting the new deluge of health news telling of more cuts to services... A funding spokesman talks of[any] decision to cut back as "a pretty tough call"[, especially while the Government is promoting]... some weird idea that problems in the health service can be solved by pouring... [another] \$200 million... into a maw already chomping on record spending... So is it about insufficient funds? Well, Healthcare Otago published a 16-page, four colour "piously worded annual report" (to quote the local newspaper) on heavy ivory paper for 54,000 readers at a cost it refuses to release... within... which... was a mealy-mouthed piece... stat[ing] that the transition of community control of our rural hospitals at Oamaru, Balclutha and Dunstan... "[was] planned for the coming year..." Planned by whom? Healthcare Otago walked away from its responsibilities to rural health with a bald announcement it was withdrawing. Any planning has been done by local people forced to pick up the

pieces. From July 1 [next year], Dunstan Hospital, an efficient, effective and caring institution with a good record amongst the... people it serves from Wanaka to Haast to Roxburgh and places in between, will be on its own.

...S[outhern] people are bemused, confused and disconcerted about what is occurring within[their] health services... They are angry, even bitter, that Healthcare Otago... can shed responsibility for both Dunstan (Clyde) and Oamaru hospitals. In other words, Healthcare Otago is effectively to become Healthcare Dunedin, as it cuts adrift rural servicing, with the recommendation that it be managed by some “community-based organisation”... Dunstan Hospital services a wide area... with a scattered population of some 33,000 – all within helicopter emergency services at Dunedin Hospital... What... Healthcare Otago... [wants] for central Otago is... a community trust operation... [to set up] an efficient, small hospital... This will involve a greater financial burden falling on residents, either through donation, investment or rates... and [they must] run the organisation as well! ...The... Health Minister... has offered no rebuke to Healthcare Otago for its abdication of responsibility for rural servicing, possibly because it is a policy he espouses, though one that has undermined his popularity in Southland and Otago, where protest meetings have become the order of response... There is concern about the future of the Otago Medical School, the heart unit, oncology services and the crude measurement instrument of population-based funding... N[Z] health protest thus far has been largely ignored. The official attitude is change it or lose it.

...IT'S TOUGH enough to attract new blood to Waimate at the best of times. The small community of 7620, [situated midway between Oamaru and] Timaru, is suffering the small town syndrome of an ageing, declining population. It's doing its best to entice people to detour off State Highway One for a visit, but it is much harder to make them stay... “You get older people coming here for a quieter life, to get out of the Christchurch rat race. One of the things they ask is ‘what are the health services like?’...” ...Since losing the 124-year-old Waimate Hospital last year, the township can no longer offer full medical facilities. For the most minor surgical procedures, and even x-rays, residents have to make the 40-minute trip to Timaru – and that hospital is downsizing... [Furthermore, ‘many rural patients are going to the larger hospitals only to be sent straight back’ to their local services! “However, a]t Waimate... the... surgery... cut[s] toenails... and that is all,” says [the mayor, who believes]... a piece of Waimate's history died when its hospital closed down... It had grown... from a three-room cottage... to a modern 80-bed facility. There were threats of closures in the early 1900s, but W[W]II, ironically, brought hope. Waimate was called on to help cope with the 30,000 sick and wounded returning soldiers. It led to the hospital being effectively rebuilt and it flourished until the late '60s when health chiefs decided to cut services for minor operations and casualties. In February 1994, further major cuts were proposed. There was a brief plan for a new hospital-rest home on site, but it never eventuated... [Today] Waimate Hospital is empty, apart from odd pieces of medical equipment and broken beds.

...ASHBURTON residents may have won the battle to keep their hospital open, but the war is not over. The feisty Mid-Canterbury community successfully fought off plans to gut its hospital of specialist services in 1994... But... [as] the hospital's three year contract with Southern Regional Health, which pays for virtually all services, comes up for renewal... campaigners are more scared than ever to call it a victory... If faced with a cut... Ashburton's troops would certainly rally again... Meanwhile, [more]... than 1000 people marched in Thames yesterday to protest against the downgrading of their hospital... into a community hospital and cutting 24-hour surgery and secondary obstetrics care.

...The 20-year-old cerebral palsy sufferer has been in and out of the hospital all her life – and she would like to see politicians swap places with her “just for an hour.” A regular customer at the accident and emergency department because of her congenital condition, and veteran of 27 operations, [the wheelchair-bound protester]... was to the fore at a “save Whakatane Hospital” march yesterday... Many had marched the 3km from the town centre through streets lined by hundreds of supportive onlookers... Although the turnout... equalled about 10[%] of the population served by Eastbay Health, the crowd's call for their local members of Parliament was wasted. [Their] MP... was holidaying overseas and [another local], the Associate Minister of Health, was in Wellington... [In related news, a] letter from the Deputy P[M]... to a Far North resident about future services at Kaitia Hospital has set a cat among northern pigeons. The letter... says “most medical and surgical services for the people of Kaitia will now be provided at Whangarei.” ...the Labour spokeswoman for health... said that was the “kiss of death” for Kaitia. “Far North people will have to travel up to 250km to Whangarei for virtually any hospital service.”

...Hospital funding cuts will result in early death, blindness, deafness, undiagnosed cancer, increased abortions, infertility, amputations and strokes, says a secret health report. Written by doctors at Waikato Hospital... the report outlines in detail the effects of the latest Government clampdown on health spending...

Senior[Waikato Hospital] doctors pleaded last night with the Government to spare provincial hospitals from more severe cuts... “We consider that there is no excuse for blocking access to patients with serious conditions...” ...Documents obtained by the Waikato coalition for Public Health have indicated Midland Health funding for base contracts for Waikato Hospital will be cut by 6[%] this year, and up to 12[%] the following year... In an emotive open letter to... the Minister of Health... [the] doctors said more reductions in funding would... affect all major specialties... and... the hospital's ability to retain clinicians, train staff, and keep all services viable... Services outside the hospital, such as disability support would face increased workloads... [The letter went on to say that] it is pointless relying on private services to fill the gap... because a high proportion of children and elderly on waiting lists are from low-income families... The doctors went public as the Alliance... [said that more] than 40 hospitals have closed their doors since 1986 and... released a list of[another] 40 hospitals facing service reductions, private ownership or closure in the latest squeeze on health spending. More details have been promised today by the... Associate Minister of Health... who says he will reveal hospital cuts from business plans which he saw... in the cabinet...

Government ministers have cast doubt on claims... [made by the] Associate Minister of Health... that widespread hospital closures are planned... The... Minister of Health... said some of the figures were wrong[although he]... did not detail them... The political heat also went on Wairarapa Health last week with its decision to close Greytown Hospital in six months. The CHE said it had to close because it could not get \$960,000 a year from... Central Health... to keep it open. The cost of running the hospital was \$80,000 a month, more than it was receiving in revenue...

GREYTOWN'S first hospital was built in 1873. At its peak in 1975, it had 74 beds, including 56 for geriatrics. Now it has 11 beds, housing five long-term patients and a birthing unit, staffed by 25 people. Soon, it will have none.

...Pahiatua Hospital, in the Northern Wairarapa, will close next June. The chief executive of... MidCentral Health... told the hospital's 47 staff yesterday that her hand had been forced by the funding agency Central Health.

...As with delivering the mail, the cost of providing hospital care in remote locations is, of course, higher than in major centres of population such as Auckland... Clearly it's already the case that the most remote locations are denied ready access to the level of public-sector health available in the cities... The furor that has again erupted over small hospitals needs to be seen in the context of fair access to the public health purse. Over time the N[Z] population base is becoming more concentrated in the major cities so these capture an increasing share of the budget. For smaller population areas this implies a total rewrite of health service delivery, invariably including reduction of the investment in fixed facilities and instead improving the ability to transport patients to capable city-based facilities... A central tenet of taxpayer-funded industries is that the total cost of provision to all should be the same – otherwise it is an intervention designed to effect change in population distribution – hardly a understandable objective of, say, health policy. This invariably means services to provincial patients will fall short of those available to citizens of a major city – well short for the residents of Milford Sound. Media sob stories, such as those of the patients from East Cape having to drive[96] more kilometres to Tauranga if Whakatane hospital closes, should not distract from the core issue. Health policy is not a vehicle for supporting population numbers in areas where market forces would have them lower. In a similar vein the availability of the dole to people in locations where

there is no work is incongruous. If the area is one of little or no work, then providing the unemployment benefit certainly cannot be justified as a temporary measure until people find a job. Yet that is the central reasoning behind having that particular welfare benefit.

...Largely by historical accident N[Z]ers are accustomed to paying for some health services, not others. Interestingly, those they pay for, such as general practice and dentistry, rarely cause public outrage. Discontent erupts usually where governments, not prices, ration the supply. Governments are proxy customers, easily pressured to pay more, and private insurance companies are proving even weaker.

...Private medical insurance companies have taken their policy holders for a ride... by paying doctors astronomical fees and simply passing the costs on... says[the] Health Minister... "Private insurers have been lazy and short-sighted and their customers are now paying for it literally,"... The average N[Z] household spent 125% more on medical insurance in 1996 than in 1990... [The] Southern Cross Healthcare chief executive... said insurers would no longer passively accept doctors fees, as they had previously done. They now wanted to hold fees, and hopefully reduce them.

...Insurers are cracking down on surgery costs, forcing some customers to pay extra if they want the most expensive treatment... Southern Cross has started by cutting eye surgeon fees... for cataract surgery... [It] is now paying up to \$2500... [compared to] the \$3000-plus that it has sometimes been charged... [M]odern equipment meant cataract surgery was much shorter, with less risk... The move to curb cataract surgery costs follows revelations this year that surgeons could get \$2000 an hour[and last year's decision to 'drop cover for laser eye surgery after the company discovered that many customers were only taking out policies to have the work done. Around \$12 million was paid out to policyholders in 1995 for the surgery used to treat short-sightedness, or myopia, which normally means patients no longer have to wear glasses']... The president of the Ophthalmological Society... said most eye surgeons performed only up to three operations a week in private practice... But he conceded that the new price seemed fair... [Insurers are also] asking surgeons to undercut colleagues' prices, the Medical Association claims.

...Cover high cost hospital expenses... You may not need healthcare that includes doctors visits and other day-to-day medical treatment you are unlikely to use... Hospitalcare is the hospital-only plan that provides cover of up to \$60,000 per operation. There is no limit to the number of operations you can claim for in any one year. Plus, in addition to your hospital and surgeon costs you can also claim on your pre and post operative expenses – up to generous amounts... *Here's how affordable it really is.* Age... 0-18... Monthly Premium... \$10.47... 19-45 \$21.34... 46-64 \$30.50... 65 plus \$94.96... CALL TOLL-FREE ON 0800 4 HEALTH... Join... before 31 October 1997 and we will waive the usual 90 day no claims period... Southern Cross Healthcare... Keeping *your* healthcare in *your* hands...

"Rue the day" is not my kind of phrase... But with all due gloom, I rue the day that I cancelled my medical insurance. I recall the conversation with the Southern Cross rep. How, young... and naive I was. I didn't realise she was not just trying to sell me something, but tell me something. "We've rung a fifth time to make extremely sure you want to do this," the voice beseeched me. "I haven't changed my mind," I said, in the tone usually reserved for persistent religious door-knockers. "But you'll lose your life-long benefits, we're sure you'll find it worthwhile in the future..." Me: "Future schmuture." I hung up. When they rang back a sixth time, I told them why I couldn't be bothered part-funding the health of a third of the nation any more. All I'd wanted out of it was a few thousand dollars of elective laser surgery, to fix a little bit of myopia. And just when I'd decided to bare my eyeballs, the letter came. I would not be getting my operation, as health insurance no longer covered it. So for all the cajoling of the insurance rep, I didn't see the point of sticking around. I was healthy, not so wealthy, and thought it was wise. So then what happened? Well, my ageing body started to let me down. From teeth to toenails, you name it, I trotted from specialist to specialist, stopping at the bank in between... [So now I'm] just letting you know, Southern Cross, that I'll be back. No hard feelings. I'm not too much of a bad risk, still only 23... I'll declare all my pre-existing conditions, pay increased premiums, whatever. And even though, in my day, I could have had my 20/20 vision, I won't whinge once about having to wear glasses.

...Southern Cross... has offered to sterilise an elderly couple free as a reward for their loyalty... Aged in their 70s, the Christchurch couple have been customers for 30 years and are involved in a dispute... over payouts lower than the 80[%] returns advertised.

...Southern Cross is trumpeting outstanding financial results for the third year running, but this does not mean premiums will drop. Over the past financial year revenue rose 9.3[%] to \$411 million... Its chairman... said... 95.6[%] of every dollar was returned to members.

...N[Z]'s biggest health insurance company, Southern Cross, is raising premiums... for the third year running. The company yesterday blamed the average 12[%] increase on the rising number of people using private surgery to avoid public waiting lists. The general manager... said that about three-quarters of customers would pay 6[%] more. This meant a typical family of four on a regularcare policy – which pays about 80[%] of most medical bills – would pay about \$1365 a year, a \$77 increase. Customers on supercare and ultracare policies, which offer close to full cover, face increases of 20... and 15[%] respectively. The manager... conceded that steep premium increases would probably drive away some "marginal" customers – "and that's a big worry for us." ...Southern Cross has two-thirds of the medical insurance market and about a million members... The second-biggest health insurer, Aetna Health, which boosted premiums by an average 20[%] last October, said it had no plans for another increase. But the marketing manager... said Aetna was now telling its 235,000 customers to check prices first before having operations. If the costs were too high the company would refer customers to cheaper surgeons.

...Southern Cross, says it now pays for more elective surgery than the public health system... The chairman... said yesterday that the private sector supplied two-thirds of elective surgery and the Ministry of Health had predicted the state's share could be halved within three years. He suggested all N[Z]ers should have compulsory health insurance, as waiting lists showed the Government could not afford the rising cost of health services... Southern Cross... has seen its claims bill jump 63[%] in the past four years... to \$155 million. It blames the blowout on more claims from people who cannot wait for public surgery. The company has responded by raising premiums an average 12[%] a year for the past three years. Some policy holders have had their premiums rise up to 70[%]... The Southern Cross warning comes a day after the P[M] told the country to be more accepting of private health care. [His] comments were interpreted as a signal that a bigger share of public money would go to private organisations, including insurance companies, at the expense of public hospitals. ["Should taxpayers' money be used for healthcare, or wealthcare for shareholders?" asked one Alliance MP.']

...People should consider getting health insurance because access to public health care is worsening, *Consumer* magazine says... [I]n 1985, around 12% of health care was funded by the individual and 88% by the Government. Now, the Government picked up only 76% of the bill...

Private hospitals are receiving a growing share of taxpayer funding while spending on public hospitals is being slashed, says a medical specialists group... [F]igures equated to a 1[%] cut in public hospital funding and a 238[%] rise in Government funding of private hospitals in the same period.

...PATIENT charges could be increased to pay for more health care, according to a draft report by the high-powered Government adviser the National Health Committee... [Incidentally, t]he hospital cuts row turned into a furious privatisation debate yesterday, with the Government's health policies[coming] under attack from both left and right.

...Back in 1990 I met one of the architects of the new right. He brought to our discussion on health matters the same ignorance, arrogance and vindictiveness that characterises today's Government's attitudes to health care. *Ignorance* in its misguided belief that the market model of health care delivery leads to cost efficiencies when all the evidence points the other way. For example, the... competitive system has led to huge cost blowouts through duplication of services... in the U[S, where 15%] of GDP is spent on health... [(up from '5.1% of GDP in 1960'),] yet in any one year 40[million] to 50 million American citizens are at some time uninsured. *Arrogance* in its "I know best" attitude and failure to respond to the overwhelming concerns of the public and medical community. *Vindictiveness* in its callous disregard for the suffering of increasing numbers of N[Z]ers.

...The public health system is on the brink of disaster... says the Alliance. A report released yesterday... says full privatisation... is inevitable unless the Government moves now... Privatisation is already so far advanced in some [CHEs] that the process will soon be irreversible... The Alliance estimated an extra \$1.1 billion was needed to avert the financial crisis facing health enterprises.

...“...This year 530,000 N[Z]ers will go to a hospital, 16 million will go to a GP[(i.e., on average every NZer will go to a GP about 4.4 times – in comparison, the ‘average American male visits his doctor 4.7 times a year and the average American female visits her doctor 6.1 times’)], hundreds of thousands will go to resthomes or use district nurse services and so on. That doesn’t sound like a crisis to me.” ...You might expect a health minister to be looking a little down... After... the harrowing Rau Williams dialysis saga, constant headlines about cuts in provincial hospitals and the launch of a national petition to increase health spending by about \$1.7 billion, [the minister] has been a man under pressure. In an interview... this week, he acknowledged... “There are obvious pressures in the system and we’re not fudging those pressures...” But most of the time he preferred to talk enthusiastically about his radical prescription for solving the country’s health... Expressed in its simplest terms, [he] would like to see doctors paid to keep their patients well, rather than paid when their patients get sick. The scheme is technically known as budget-holding... Critics claim it will lead to cost-cutting – or “underservicing” in health jargon – as doctors skimp on treating their patients to stay within budget. Worse still, they could keep profits for themselves, like the insurance companies that dominate the U[S] health system. The minister] accepted that the underservicing argument needed to be tackled... He was more reserved about the other big possible change in health raised by the P[M] last week. The PM] suggested state spending on health and other social services should be targeted to those who could not afford to pay their own way. [The PM’s] speech implied that those who could afford to buy health insurance would have to do so, as the state concentrated on looking after the poor. [The minister] played down the prospect of more targeting. But in doing so he emphasised that scrapping user-pays for health services meant there was less money to make those services go further.

...More money would be available for surgery and other health needs if the Government were not paying for two key N[Z] First policies, says the Minister of Health... [He] listed free doctors’ visits for children under six and scrapping the superannuation surcharge – estimated to cost \$465 million a year between them – as two obstacles to spending more on the country’s most urgent health needs... He said... yesterday that if people wanted more than the health system provided, they would have to pay for it. That might be by way of an extra health tax, he told a meeting on health issues in Dunedin.

...The Government has been dealt a double blow in the latest... opinion poll which confirms public disquiet over health policy and places a question mark over the coalition’s credibility. The poll... found 33.2[%] of committed voters pinpointed health services as “the most important issue in the country at the moment.” Government, leadership and the honesty of politicians was the only other issue that reached double-figure support, scoring 27.3[%] of voters... Urban dwellers are more anxious than rural people, and only the “very wealthy” (earning over \$67,000 a year, many of them with private medical insurance) do not see health as their... concern.

...THE ALLIANCE yesterday became the first political party to officially support the health referendum... The Public Health Referendum group’s petition was lodged with the Clerk of the House last week... It asks the Government to increase its annual spending on health to at least 7% of [GDP], funded if necessary from income tax... [T]he move would mean health spending was increased by \$1124 million a year... The organisations supporting the... Cancer Society... campaign include Age Concern, the Arthritis Foundation, Hospice N[Z], IHC, Plunket, the Multiple Sclerosis Society, the Stroke Foundation, the Alzheimer’s Society, the Asthma and Respiratory Foundation, the Nurses Organisation and the Consumer’s Institute... Under the National Government, government spending as a proportion of GDP seems to have slipped significantly. Exactly how much is open to debate – the statistics can, as usual, be variously interpreted – but Health Department figures suggest a slide from 6.1% of GDP in 1991 [(after rising from ‘4.6% in 1986’)] to 5.7% in 1995. OECD figures suggest a steeper fall, to 5.4% in 1995... Present spending is about 6%... The actual total is bigger because the \$5.9 billion does not include the Government’s annual bailing out of CHE losses... Private spending is excluded. So is health spending by ACC and various other Government departments, such as education spending on the health needs of disabled children at special schools... We rank 17th out of the 25 developed countries of the OECD on overall health spending and 19th on public health spending. In 1995 our public health spending of about \$NZ1300 a head was converted into a “purchasing power” (allowing for different prices around the world) of \$US942... about \$200 less than the average... The US spent \$1853 a head even though its citizens paid more than half the bills themselves.

...Taxes would have to rise substantially to fund the level of health spending specified in a proposed referendum, the Minister of Health... said yesterday... [H]e had been advised that [to achieve 7%] a family on an income of \$30,000 could need to pay an extra \$15 a week... [However,] an umbrella body of health groups, Public Health Referendum, chaired by a former auditor-general... said the increase being sought... was less than next year’s planned tax cuts.

...eight out of ten N[Z]ers say they[’]d give up their tax cuts for better health services. About the same number fear the public health system will fail them if they or their families need medical help... More than half... were very concerned about getting treatment if a serious medical condition affected them or their families... In other words, most people want the Government to spend more on health, so that sick people do not suffer. In particular, we want to see people on hospital waiting lists get their operations. So if we give up the \$1.1 billion we have been promised in tax cuts next year, will the people we care about get the medical care they need? Maybe. The answer depends on a string of hard questions... At the start of the Health in Crisis series this week, the N[Z] Herald spoke to [a 44-year-old] who is crippled by severe degenerative osteoarthritis in his left hip. The pain is so intense that he can no longer work... He has been off work a year, sustained by an invalid’s benefit of \$415 a week... He sits or lies stranded in his house, watching television for most of the day. Despite his clear medical need for an operation – and the equally clear benefit to society of having him fit and working again – he will... have to wait at least three years for a hip replacement. He is one of 24,370 people waiting for orthopaedic... operations as of March 31 this year, including 6600 who have been in the queue for more than two years... [He] finds it hard to accept... especially since his benefit costs the country more each year than a hip operation, for which he has been quoted \$14,000... Doctors say he loses out because he still has one good hip. Most top priority patients have lost the use of both... Rather than exclude anyone, you could try to treat everybody. Health planners estimate it would take... \$280 million to clear the waiting lists in one hit, plus up to \$160 m... a year to stop a backlog building up again. The problem is that other areas of health need the money just as urgently... Financial pressure has forced hospitals to check how they spend their money and find better and cheaper ways of treating patients. For instance... Auckland Hospital discovered last year that it... could halve the cost of pre-operative tests by giving patients a “one-stop shop” based on their needs, rather than the[needs] of the hospital bureaucracy... South Auckland Health will soon carry out minor surgery on many patients in one day at a new \$25 m... high-tech superclinic in Manurewa, saving on costly overnight stays at Middlemore Hospital... All these savings could... be used to pay for more operations... Other efficiencies take longer to arrive... The Minister of Health... talks enthusiastically about the next step, which is coordinating hospital and community services...

Public outrage at health cuts has forced the Government to unveil plans to return community representatives to the boards of hospitals throughout the country... Details of the package – not expected to contain any new money for health – are under wraps...

Two seats on hospital boards will be reserved for members of the public under the coalition Government’s health reform agenda – but they will be appointed rather than elected. The move, which was announced yesterday, is little more than a polite nod to the coalition agreement’s undertaking to “consider” restoring some form of elected community representation and falls well short of N[Z] First’s campaign policy to return to majority-elected boards. Labour attacked it as window-dressing... that would not deliver anything like democracy... [The] appointments would

begin [next] April. Pay would be in the \$15,000 to \$24,000 range as for other directors. Smaller boards would be expanded to accommodate the community representatives, but the Government would wait for vacancies to arise on the larger ones.

...Local body leaders are taking a national stand against health cuts – just as the Government appears to want their input on [CHE] boards. Civic leaders nationwide have voted overwhelmingly for a coordinated initiative against the erosion of public health, despite reservations from some metropolitan mayors... The national initiative was organised by Local Government N[Z] after 45 of the 86 local authorities requested [one]... The initiative comes as the Government acts on a coalition agreement commitment to return community representation to the boards... [The] Minister of Health... refused to comment yesterday on suggestions that the coalition had rejected the idea of elected public representatives in favour of asking councils to suggest local people... But local government officials were concerned they might be co-opted on to [CHE] boards and be too closely associated with unpopular decisions.

...Finally the Government has got people who will give it the advice it wants, because they have no stake in the health care system and they never have to look in the eye of the sick, weak and old on whose lives they so readily pass judgment. Consequently, they are happy to work within restraints pre-set by Treasury, and they will never make themselves unpopular by pleading for more money... Spending on health should not be... [linked with] government spending in other areas. Let's start rationing elsewhere, before we do so in an area as life-threatening as health.

...Within the space of a decade this country has been transformed from a sleepy backwater to a wannabe player in the global economy... In my own field of health delivery, the nature and pace of change have had ruinous results for the people of N[Z] and created among the medical community a culture of mistrust that will take years to overcome... [H]ealth care delivery is... [being] driven by ideology rather than by practicality... We have wasted several billions of dollars on new structures, new people, new committees, new commissioners, new career paths... The politicians argue that our problems are not unique, and are seen throughout the OECD countries. They state confidently that the "blowout" in health expenditure is due to increasing numbers of elderly patients who are inexplicably sicker, and to the increasing costs of technology. But there is little evidence to support the first point. On the second, it depends on how that technology is used and whether we are looking at short-term costs or long-term savings. Their slavish adherence to a rhetoric of crisis is really just a political and ideological ploy which says more about the relevant priorities of the politicians than about the real issues. The demand for increased health expenditure throughout the OECD is in large part the result of years of chronic underfunding and social neglect that has been a central part of the governing philosophy of many western countries.

...The Government announced a transitional health authority yesterday to replace the boards of the four existing authorities... The new centralised board... will run the four [RHAs] until... a new funding agency is... set up... [The] head of the new central health funder said... [more] changes will be needed to the way hospitals deliver services... Further cost savings could... be achieved... [but] changes would not mean lower quality hospital services... Previously, [RHAs] had followed different guidelines, resulting in an uneven level of access to health services... He said the... regional bodies were supposed to use competitive tensions to contain costs but gradually policy changes and other pressures had muted the competitive element "to a point where I believe we got the worst of both worlds." ...[the transitional authority has] the freedom to make choices available to patients, by purchasing health services from non-public providers under strict guidelines and to remove high-price, low-quality contracts... It... also... could do better in a non-competitive environment... [The changes] have been dismissed as meaningless tinkering by health lobby groups and Opposition parties.

...The new structure is expected to look very like the present system but with only one corporate office in Wellington... [The] Associate Minister of Health... said... staff and infrastructure of the four[existing] authorities would probably stay. But he said they would work co-operatively... [now that the Government] has abolished market rhetoric – "profit," "competition"... – [from the provision of health services]...

But the concept of "profit" was never central to the health reforms. [CHEs] were created as State-owned Enterprises principally so that they could ultimately be sold off, like the railways or Telecom... The health reforms created a market in health with competition between providers. This had no greater purpose than the belief that competition is a pure good in its own right and that "the market" should be the prime means of human organisation. Improved health status for N[Z]ers hardly came into it. Allied to this, National wanted to disentangle itself from the state provision of public services... Publicly provided healthcare was destined to become a welfare service, a safety net reserved for those too poor to pay. Hence the tills set up at the doors of public hospitals. Hence the running down by costcutting of public health services so that anyone who could afford it bought health insurance out of fear... The coalition agreement does not stop this flow of public money into private providers' hands.

...The Transitional Health Authority is employing a public relations agency at \$18,750 a month, despite having 13 fulltime communications staff on its payroll... [Furthermore, the former] heads of the four [RHAs] have received golden handshakes... [that] represent an average payment of about \$72,000 each... But yesterday [one of the four, who is] now the ACC chief executive, said... [all] the chief executives would have gained a payout at the end of their contracts anyway, as part of the normal commercial package for such a job... [before adding that,] judging by the \$324,000-a-year salary paid to... [the] head of the [THA], he and the other executives had been underpaid.

...One of the country's top health bureaucrats has attacked the system he works for as penny-pinching and damaging to the health of N[Z]ers. The maternity manager for the T[HA]... says a short-sighted fixation with saving money in individual areas is costing the country more in the long run. The public comments are highly unusual for an official whose job is to buy national health services within a limited Government budget. Unlike hospital heads who have a vested interest in opposing spending cutbacks, [the THA manager] is one of the health system's game-keepers who normally try to cut costs... The manager of National Women's Hospital... said[the] comments on false health economies were refreshing to hear.

...The health reforms have not worked properly because hospitals... had upset health reformers' theories by using savings... [on] treating extra patients... instead of staying within budget... says the... chairman of the... new[ly formed] 'Health Funding Authority, which is spending about \$7.5 million on offices and furniture as it completes its restructuring'... The former head of Treasury told the Association of Salaried Medical Specialists that the Government had deliberately underpaid [CHEs] to make them break even... The... [chairman then indicated that rural communities] face further health cuts next year as more services are centralised in the main cities.

...Public hospitals are finding it difficult to plan for next year with four potentially large pools of unallocated cash dangling before them. They have been sent funding indications... but the figures could change markedly in coming months... [To make matters worse, the] Government has signalled that it will no longer pay the deficits of enterprises which run over budget.

...taxpayers, mute in the face of evidence of catastrophic health management overspending, look like rabbits mesmerised in the shooter's spotlight. They can't think what to do, so they just sit there and take it... They read about the purposeless paper-shuffling... absurdities like the [now-disbanded THA], an unnecessary layer of managers perched on top of the already teetering pile of CHEs and RHAs... packed to the doors with thousands of busy men and women in power suits with business administration diplomas, cellphones at the ready, striding happily from the purified water gurglers to car parks filled with new... [cars,] but healing not a soul... From Napier an eye specialist reports: "Five years ago in Hawke's Bay we had five managers and made \$3 million a year profit, with a nest-egg of \$17 million for future development. Now there are 88 managers with 140 cars, and \$27.5 million in the red." ...The expression "the mind boggles" was invented to cover such situations, in which millions of dollars disappear without trace, without one sick patient made well, and nobody taking a blind bit of notice... What do you do when there's no boggling capacity left? ...[but at least the] profit focus will be removed from [CHEs] by July 1 next year[, and local]... offices would try to arrange long-term contracts with health providers, who would no longer have to compete with each other.

...The long-running scrap between the two health ministers is heading for meltdown, with the National Minister of Health... accusing staff in the office of his N[Z] First associate... of leaking information.

...High level attempts are under way to stop scrapping between the Minister of Health... and his associate[minister] before their relationship becomes irreconcilable. Both the P[M]... and his deputy... made strenuous efforts yesterday to downplay the escalation in hostilities in one of the most crucial areas of their coalition... [The Deputy PM described] the row as media speculation and rumour, but said "in any working arrangement there will be people who have different interpretations."

...the man who sardonically called A[US] "the lucky country" and had to stand by while the phrase was pinched by a generation of advertising copywriters – had the measure of those who think they are born to rule. "Politicians," he concluded, "cannot help being clowns. Political activity is essentially absurd." If he's right (and who will argue with him?) we should probably stop hoping that the two biggest clowns in the Beehive... will kiss and make up. But in the interests of national harmony... I sought professional advice about how to get the Minister and Associate Minister of Health to sort out their differences. Sad to say, there is little comfort to report... [T]he professional services manager for Relationship Services (what used to be called Marriage Guidance), says that the essence of resolving disputes in any relationship is for "both parties to say how they feel and what's going on for them and have the other party really listen to them." That process requires a mediator who is independent, "without any vested interest in the outcome, who doesn't have an alliance with either party," she adds. Thanks a lot, but we are talking about Wellington. "The other party" isn't in the habit of listening down there and the Beehive is not the sort of place you find people without a vested interest. So can[a] sports psychologist... give us a few tips? Bad news there, too. Faced with a team where two players weren't working together, he says, he'd expect the captain to act. "In any team, you have to empower your players," he says, "get them to run by the rules. If they won't, you've got to intervene. If it's to the detriment of the wider team, then one of them's got to go." Sensing that the PM would want to keep sport out of politics, I ask a serious peacemaker... [T]he head teacher at Ponsonby Kindergarten, says that the children in her care seldom fight over toys because "it's very rare that there's only one of anything." But we have only one health system to destroy, I explain. "Then I would try with a little gentle persuasion to tell them that something else might be just as fun," she suggests. Brilliant... "I would suggest that maybe they could play with something together," she says. "Or when one has had a turn the other one could have a go." Of course, these two men know all about taking it in turns to have a go, if only at each other. But if the experts can't sort them out, maybe the ministers could drop in on the sick kids at Starship or sit for an hour in a busy general practice in South Auckland. That way they might remember why they are where they are, and what they are meant to be doing.

...Feeling puzzled by the trench warfare between the Government's two health ministers? The row between National's [Minister of Health and NZ First's Associate Minister of Health] goes well beyond claims of dirty tricks by rival press secretaries... The argument between the two men is based on fundamental differences about the Government's role in providing health services... [The associate minister], a former Waikato Health manager, is committed to preserving a publicly owned and operated health system, with clear boundary lines fencing off the private sector... [The minister], a former Treasury staffer, likes to describe his health policy as the "no-model model." Translated, this means health professionals should generally be left alone within a broad framework of rules to provide services in the way they think fit. The public will then decide which service it wants to use. State funding will go to that service, whether it is public or private... [T]he underlying philosophy is basically unchanged from National's reforms since 1990... About the only thing the two ministers have in common is a genuine interest in health and a desire to fix the problems they see there – with their own very different solutions. They have been on a collision course ever since the coalition agreement last December... As... [their] war rumbles on, N[Z]ers will probably continue to feel the everyday consequences [from] dilemmas like the examples listed above.

...[the Associate Minister of Health's] brief ministerial career ended at 10.05am yesterday... when the 41-year-old father of four, sacked from his beloved health job, relinquished his other portfolio of Customs and took a \$50,000 drop in salary to become a backbencher... [He] was stripped of the associate health job... [for] seemingly ignoring the "explicit instructions" of his leader... not to talk to the media ahead of a meeting yesterday where [the PM and Deputy PM] were to try to resolve the[health ministerial] impasse... An orchestrated campaign by the Minister of Health and others in the National Party was the real reason... says... [a political adviser, who also said the minister] had "got off scot-free" while [the associate minister] had lost his job for trying to uphold the coalition agreement on health... He said similar tactics were used in 1991 against the... [now Deputy PM,] then a National MP, before he was sacked from cabinet. "I remember... being a member of the National Party caucus and watching the same sort of gang bang... I'd hoped that [the Deputy PM] would remember that... there are principles worth fighting for."

...The ruling coalition is likely to take out insurance against the possibility that N[Z] First's sacked minister... might become an independent MP by quietly shoring up support from United... and Act N[Z]... If he becomes an independent, the coalition's 61-59 majority in Parliament would become a 60-60 deadlock. A tied vote is deemed lost, making the coalition more reliant on United's sole vote or the eight votes belonging to Act... Act appears willing to trade support for influence on policy but will not be seen to be making deals with N[Z] First – and vice versa... His N[Z] First colleagues are unsure what he will do... Wise heads in N[Z] First... are now keen to cool things in recognition of ...h[is] value... to the party and the way he was seen to make a difference within the coalition. Given its paucity of talent, the party knows it may need his skills again next year when N[Z] First will take up extra ministerial posts as allocated under the coalition agreement... Neither... [the PM] nor his deputy... has begun seriously to work out how to allocate... [the two vacant portfolios. The Deputy PM] remains adamant he had no choice but to sack... [the Associate Minister of Health. But the former associate minister] claimed... his sacking had been done in collaboration with [the PM] because he was resisting the creeping privatisation of the public health system... [He said the Deputy PM] had asked him to become "a house-trained, neutered National Party poodle."

...[in the parliamentary elections the sacked Associate Minister of Health] captured almost 4000 votes, and took a seat in the House because he was 12th on the N[Z] First list... The N[Z] First Associate Treasurer... said he believed [the sacked associate minister] would either stay with the party or resign from Parliament. "[He] is a very moral sort of person. He believes very deeply in everything he does. That is probably one of his difficulties." ...[the sacked associate minister] yesterday spoke as though he would stay with N[Z] First... "I'm here to battle for the coalition agreement. I will stand up at every opportunity... I'm not going... [to] watch the National Party roll over and walk away from their obligations."

...Fears were mounting yesterday among [the 41-year-old's] supporters that his removal would leave a devastating void... The political battle lines in health have shifted significantly in the aftermath of the sacking... The Minister of Health... has taken full control of [CHE] monitoring and ownership under responsibility changes made public yesterday... [The sacked associate minister's] rapid fall... is being mourned by child lobby groups who hailed him as a prized fighter for the small and powerless. But others in the much-divided health sector welcome the sudden dumping of a man they say was politically green... Another group that may not be sorry to see [him] turn in his warrant is the imported car industry. As the Minister of Customs, [he] was conducting a much-publicised campaign to uncover the extent of odometer "clocking" and revenue avoidance.

...Although 68 vehicles have been seized in a customs crackdown on fraudulent odometers and many more are still under investigation, progress was now in the hands of the Attorney-General's office, the chief executive of Customs... told the foreign affairs, defence and trade committee. No prosecutions had yet been taken and if one was to be considered in any particular case it would probably require evidence to be obtained from Japan... Diplomatic and legal delays could mean it would be three to four months before a customs official went to Japan to gather evidence... [Of] the 12,000 vehicles inspected in June, about 550 were considered to have suspect odometer readings and were set aside for further inspection. Of those, 325 were held for more extensive checks... The next stage was to check documentation in Japan.

...The cabinet has moved swiftly to quash the inquiry set up by [the] former customs minister... into how the Customs Department handled investigations into odometer tampering. The Acting Minister of Customs... would also make changes to a special task force which has been investigating imported vehicle fraud... However, [the former Minister of Customs] made it plain on Tuesday that he would continue his crusade against odometer fraud by issuing a press statement headed "Worst Fraud in N[Z]'s Recent History." The statement said he was "ever hopeful" that the cabinet would approve an independent and public inquiry into the actions of the Customs Department since 1991. "Without doubt the odometer tampering issue ripped off both consumers and the taxpayer to an extent much greater than the winebox transactions." ...He estimated that on average each person who bought an imported used car from Japan might have been defrauded of \$3000... The assistant director of investigations at the Serious Fraud Office... told a parliamentary select committee yesterday that the office was prosecuting three people for odometer fraud after targeting fewer than 10 motor vehicle dealers in three main centres "to make an example of the problem."

...[a] Labour MP... plans to use the cloak of parliamentary privilege this week to name N[Z] importers who, he claims, put in orders for clocked cars in Japan... [The MP] also claimed to have evidence from a Japanese exporter which backed up other claims that between 80 and 90[%] of imported Japanese cars had been clocked, and which he said made a mockery of [the Acting Minister of Customs]'s decision to cancel an inquiry called for by [the former Minister of Customs]... into "speedogate."

...The chief executive of Customs... is taking action against increasingly strong attacks by the former [Minister of Customs]... of corruption in the department... Over the weekend [the former minister] continued his efforts to get an inquiry... claiming that... he will produce evidence to the Acting Minister of Customs... "that will add substantial weight" to his claims that [C]ustoms turned a blind eye to large-scale odometer fraud... Customs files proved that the department had been a "silent witness to massive odometer fraud." ...[he also] claimed the fraud was now touching \$1 billion – which contrasted sharply with a figure quoted by [the acting minister] of several hundred thousand dollars... [The acting minister] said he had not seen, nor did he plan to see, any of the documents which [the former minister] alleged showed how Customs handled investigations... [He] said he was satisfied with the department's work. "I have been advised that since 1991, the service has inspected more than 80,000 imported cars – around 13[%] of all used vehicle imports." ...[a Labour MP who] supported calls... for an inquiry into the handling of odometer fraud by Customs... said [the acting minister]... was paid a substantial salary to find out what was going on and it would be a dereliction of his duty not to look at the papers... "You have to ask if [the acting minister] is being a National Party neutered poodle on this matter... The public want to be confident what they buy is what it says it is, and the industry wants to make sure public confidence is restored,"... An action group was being established by the [Licensed] Motor Vehicle Dealers' Institute [LMVDI]...

The... Minister of Customs [from 1991 to 1996] released seized imported cars "in the face of departmental advice," [said] a Customs prosecutions officer... at the time... The concerned officer... said in a letter of complaint to his supervisor in September 1994 that [the minister] was "sympathetic to waiver applications." He said there "seems to have been some ministerial pressure brought to bear on head office to couch their reports/recommendations in such a manner that enables the minister to return the goods, even though they had good reason to recommend otherwise." His complaint is about the minister allowing five cars suspected of having their odometers wound back to be returned to a dealer... [The prosecutor] alleges that head office acted unlawfully. Another letter, from the director of Honda N[Z] to the 1991-96 Minister of Customs, says a S[FO] investigation into odometer fraud should identify "Government officials and ministers whose departments had not only failed to curb it but also actively encouraged it." [The 1991-96 Minister of Customs] strongly rejected the claims last night saying the new-car companies had their own vested interests and had made extravagant claims. Diverting officers to check used cars made it easier for smugglers of drugs, pornography and endangered species. The Comptroller of Customs exercised a sense of proportion about the resources he allocated to the various tasks. [The 1991-96 Minister of Customs] denied having sympathy for waiver applications and said most of the waivers he approved were for innocent third parties like "nice old couples who brought in their dream car." ...[the sacked Associate Minister of Health and now former Minister of Customs said the 1991-96 Minister of Customs] predecessor... had a much stauncher line in attacking the fraud and had been responsible for the introduction in 1991 of the import prohibition order to tackle the problem. [He] said documents... showed the order was strongly enforced for the first four or five months until [the next minister] took over... Customs meanwhile... said paperwork on the full-scale check in June... had yet to be completed in Japan.

...The chief executive of the Customs Service went on the offensive in the odometer winding war yesterday, saying attacks on the service were politically motivated... [He] said a former customs officer who told a *60 Minutes* documentary crew that the service turned a blind eye to odometer winding had never worked in sections dealing with vehicle inspections... [He] had no doubt that customs had handled the imported car issue properly. "The way some people talk you would think they had the impression that customs had wound the odometers back." He said people who criticised the service had no idea of the volume of work involved in inspecting every vehicle "and absolutely no idea of how difficult it is to obtain the evidence to prove that an odometer has been tampered with." ...He said wholesale seizing of vehicles for full documentation checks penalised innocent importers in an industry which relied on cash flow. With shipments of 1000 cars at a time "you've got to put in a huge amount of effort to get those cars inspected, documents checked and off the wharf fast enough to stop the importer complaining that you are putting his business at risk. The month we were doing every one of them we had the innocent waiting alongside the guilty, and I'm not sure that N[Z]ers would tolerate that for too long." ...The service was working closely with the Serious Fraud Office in investigating the odometer tampering and was establishing protocols on evidence gathering with the Japanese authorities and the Imported Motor Vehicle Dealers Association [IMVDA]. The association's chief executive... said every customs service in the Western world based its border enforcement on risk – "assessing what is important, who is important, what kind of transactions should we be interested in, and intelligence." ...[● The] Government plans to puncture the mounting pressure for an inquiry into odometer fraud by releasing a big bundle of its own [c]ustoms documents.

...An estimated 3000 pages of customs documents were tabled by the temporary Minister of Customs... in a move to silence... calls for an independent inquiry into the department's handling of odometer fraud. Some of the papers, which are yet to be thoroughly assessed, contain allegations from customs officers that the service inspection fell short of what was acceptable. [The temporary minister] said such claims were healthy. The documents would show "some tremendous diversity of opinion among officials." [However, he]... acknowledged that they were not all the documents the Customs Department held on odometer fraud. But they were... copies of... the documents upon which... allegations... had been based. He would not be requesting further documents "at this stage. The Customs Department like most other departments has hundreds of thousands if not millions of pages of other documents and I'm not going to waste departmental resources to ferret those out. In the end I can't get away from the fact that threequarters of a million cars have come in and I believe that the... majority of people who bought their cars are very happy with them."

...Cross-party warfare over odometers picked up yesterday as the Labour leader... and the Minister of State Services, each produced documents to add to the 3000 pages... And inter-party warfare on the issue is equally bitter in the NZ First caucus... [The] Minister of Customs from 1991 to 1996, was [the Labour leader's] target. She accused him of favouring someone "alleged to be a former Young National" in considering the return of two similar cars seized by Customs. She produced an affidavit from the Hamilton owner of a BMW... whose application for a waiver of forfeiture had been turned down. He cited a waiver for another BMW imported by the same agent for another person, which had been approved. In other developments... the... P[M said that of]... 456,000 used cars imported... from 1991 to April 1997, Customs had seized 300 vehicles, 161 for false odometer readings and the rest for false valuations. It had received 125 applications for waiver... of which 50 were approved, 60 declined and 11 deferred pending court action... [A] Labour MP... claimed he had met people who had seen a document telling customs officials to "lay off"

imported cars... The Speaker... turned down a request for a snap debate on the cancellation of a review, saying that, according to [the Minister of State Services'] statement, no review had been instigated in the first place.

...The hopelessness felt by some customs officers about their ability to prevent a flood of clocked cars flowing through N[Z] ports is summed up in a 1995 memo. In it, Customs' senior technical officer... suggested the department revoke a 1991 order to seize motor vehicles with incorrect odometers. "The enforcement of the order has involved a considerable resource commitment by the department for little or no return." He wanted the order written into the Fair Trading Act – as was intended when it was introduced in 1991; Customs to stop seizing... vehicles with incorrect odometers, and the Commerce Commission to act as referee between buyers and used-car dealers. "The public are aware that imported used vehicles may have had their odometers wound back. This is obviously being taken into account when the vehicles are purchased." ...In August 1995, [he] produced figures showing that at Auckland and Lyttelton ports just 1[%] of... vehicles were examined for odometer tampering. This caused considerable tension at the ports of Napier, where 70[%] of... vehicles were checked, and Dunedin, where 95[%] were checked. The controller of customs in Napier... said his port was concerned about a loss of cargo to Auckland owing to "lax cargo/entry checks being undertaken by Customs at that port," a view also shared at the Tauranga and Wellington ports. The controller of customs in Dunedin... complained to head office stating that: "I'm not prepared to stand by and see Port Otago lose trade because we're doing our job properly." He blamed [Lyttelton], which "is obviously not undertaking its responsibilities in terms of the import prohibitions seriously." [He] was outspoken towards the actions of his own department, writing to [the senior technical officer] in February 1995 describing the import prohibition as an "absolute farce and no longer properly enforceable... [A] person buying a Jap import would have to do so on the realisation that the odometer is... probably false... [It] is my opinion that consumers be warned accordingly. To do otherwise is to mislead the[m,] ...particularly if they wrongly believe that Customs and the import prohibition is effective and can be relied upon." In another document, the Ministry of Commerce was made aware of the problem by a Gisborne car dealer... The dealer, who asked for anonymity, claimed that not only were clocked cars entering N[Z] in large numbers but driving schools' cars, taxis and badly smashed cars that had been done up were... sold to unsuspecting buyers. He also said... some Auckland importers... had changed their trading names so they could continue trading and not be liable for previous discrepancies... The Acting Minister of Customs... sought to divert interest from odometer fraud yesterday with primed parliamentary questions about Customs' recent haul of the drug Ecstasy.

...staff from throughout the Customs Service have been pulled into the crackdown on imported used cars... leaving other potential threats to the border unchecked. "Basically we are doing nothing but cars," said one customs officer, who did not want to be identified... [However, the] Auckland regional collector of customs... said anyone planning to import drugs should not assume they were more likely to get away with it. Sniffer dogs were still at work. "Dogs aren't much use in examining motor vehicle odometers."

...The Bill of Rights Act stopped Customs detaining Japanese imported cars suspected of having been clocked, according to the Comptroller of Customs... [T]he low number of seizures was because of the need to... satisfy the "beyond reasonable doubt" requirement of the courts... [V]ehicles were seized only when Customs could produce corroborating evidence, such as service (log) books and stickers revealing a higher distance travelled, or the independent advice of an automotive instrument specialist.

...Odometer specialists in Auckland have found evidence of tampering in... 62[%] of the 280 vehicle odometers... checked since June[. 'The clocks on some cars have been wound back as many as 300,000km']...

Business is booming for car instrument technicians as more motorists seek evidence of odometer tampering on their vehicles... A Hamilton odometer specialist, Waikato Automotive Instruments, had been swamped with concerned motorists referred to the firm by local garages... A spokesman for Auckland Speedometer Services confirmed that... [three] of the four odometers checked by the firm in the past five days had evidence of altered readings... The manager of [another firm] in Auckland... said about 40[%] of the distance recorders inspected by his company so far appeared to have been interfered with. "Basically what we do is take them out and strip them down to look for things like missing screws and marks on the assembly." The inspections, which included removing the speedometer from the vehicle, took about two hours at \$50 an hour. Some of the firm's customers included car dealers who agreed to have odometers checked as a condition of sale... One or two had even asked to have their car odometers wound forward after records showed they had false readings, not realising that altering the distance reading either way was illegal... Meanwhile the Japan-based, N[Z]-owned shipping firm Kiwi Car Carriers is to increase freight charges for privately imported Japanese used cars from \$900 to \$2500. Commercial importers will continue to pay \$900 for each vehicle. The Isle of Man-registered company hopes to discourage private individuals from competing unfairly with licensed dealers and genuine wholesalers. Private... buyers had four or five other shipping firms to choose from if they did not like Kiwi's stance... said a spokesman for the company.

...After 10 years of odometer winding allegations, the Government is wasting no time investigating the adequacy of consumer protection for buyers of imported used cars. The Acting Minister of Customs... yesterday approved the establishment of a working party to consult motor industry representatives before reporting back to the cabinet next month. He said the working party, made up of officials from Customs and the Ministries of Commerce and Consumer Affairs, would consider the Government's role in policing the importing of used cars and its effectiveness in safeguarding buyers. Other issues to be looked at included... [restricting] the importing of secondhand vehicles to members of the [IMVDA].

...Setting up a working party... appears to have been welcomed within the trade. The founding chairman of the [IMVDA]... is positive about the move. He said the industry will continue to flourish, although some people involved would be forced out of business... After 35 years in the trade, [the]... Auckland car dealer... cannot see a return to the days when prohibitively priced new cars forced motorists to keep old wrecks running with bits of fencing wire... Stopping the flow of used imports was not an option... He said used imports had dragged the cost of new vehicles down to more realistic levels to the point where a new four-wheel-drive Daihatsu could be bought for \$20,000. "It would have been worth \$40,000 if there were no used imports – I'm selling cars now cheaper than I was in 86. The used car market indirectly triggered inflation down, because that's the main component of cost for the average household. You take the imports away tomorrow and you will trigger inflation away again – that's why the Government is so keen to keep them... It would be the worst thing that could ever happen to the consumer, because new car people will just put their prices up again..." ...[he] said the new car industry is intent on destroying its competition and provides financial backing to the industry's knockers... The Government, which collects at least \$1500 duty on each car plus GST on the sale price, has found the trade as lucrative as the dealers, pocketing an estimated \$1.8 billion.

...Vandals have attacked an Auckland car yard for the second time in a week after the owner defended the imported used-car industry on radio... [S]taff arrived at his Greenlane yard yesterday to find intruders had forced a security fence to break windows on 10 cars, seven of which had only just been repaired after the first attack... Repairs to the vehicles, which were insured, are expected to cost more than \$15,000. Nothing was taken from them. [The dealer], a founding chairman of the... [IMVDA], said recent heart surgery had prevented him from speaking out earlier against attacks on the imports trade... Auckland used car dealers are offering \$15,000 for information leading to the conviction of those responsible... In another development... the[sacked Associate Health] Minister... yesterday... said the State Services Commission had cited the Government's exposure to liability as a key reason for opposing his plans for an independent public inquiry... when he was... [the Customs Minister. He] raised the prospect of a class action against Customs... [for] not clamping down on odometer fraud.

...[of]ve[r]... 300 people will take action against the Customs Department... says [an]Auckland car-clocking campaigner... [T]he action would also be against the [LMVDI], and legal advice was being sought on whether it was possible to take action against... the [guy who was]Minister of Customs for five years until last year's election... [The campaigner] had so far helped duped car buyers to recover \$500,000 in compensation from dealers...

Most motorists are satisfied with their used Japanese imports regardless of the furore over... 'Speedogate'... says the Automobile Association. The association's secretary-general... said there had been little adverse reaction to used imports among the association's 770,000 members, who now had access to a wider range of later-model cars. "A vehicle is no longer an investment, it has become a disposable item."

...The Motor Vehicle Disputes Tribunal has cleared an 85-year-old widow accused of winding back ...he[r] odometer... The claim was made by... [a Greenland car yard. The widow] complained that the Nissan Bluebird she bought there three years ago had been "clocked." After a five-hour hearing, the tribunal found that the odometer was probably tampered with before it was sold in Japan... Meanwhile, a reward for information leading to the conviction of those responsible for vandalising vehicles at [the Greenlane] car yard this month has been increased to \$50,000.

...Taxi drivers using devices to stop their odometers are under investigation by Government inspectors, amid claims that the practice is widespread... The devices were usually put in new vehicles... One Auckland man... who imports and installs taxi meters... said yesterday that he was regularly asked to add such switches... [He] had put such a switch in a cab "only once," as a favour. "This guy went shooting his mouth off and the... Land Transport Safety Authority [(LTSA)]... came and read the riot act to me... I was told I could be fined \$10,000 if I get caught." [He] said that whenever a taxi driver asked him to install a switch in his or her cab now, he would do so but would charge \$10,000. Cabs travelled, on average, between 75,000km and 100,000km annually, but he had worked on cars three years old that had just over 100,000km on the clock. [The] national secretary of the Taxi Federation, said he had heard of such tampering only once in the past few years.

...Several Auckland taxi drivers are likely to face fraud charges... This follows a police crackdown on the tampering, which is designed to avoid road taxes and defraud used-car buyers... Many of the taxis had diesel engines and... pay road-user charges, which were calculated on the mileage travelled... Squad members found at least 10 cabs fitted with the switches... [A] Sergeant... said the use of the switches was more prevalent than police had expected. [In related news, the 'British tabloid the *Sun* reports that an 83-year-old of Tewkesbury, Gloucester, is selling a Morris Marina with just 24km on the clock. He paid \$4500 for the new 1.8-litre Super Delux model in 1973 and has driven it just once. He now wants \$16,000 for it.]

...like many in the industry, the president of the Motor Industries Association (MIA) and the managing director of Mazda NZ, wants to see an age-ban on used imports, to address safety and environmental issues. "With 72,000 of last year's used imports being built between 1988 and 1992, the reality is that many of them are coming from the scrapyards of Japan. These vehicles do not meet the higher safety standards introduced in Japan in 1994 and are far short of the safety standards NZ now has for new vehicles. We are allowing vehicles that are near their use-by date to proliferate, and using this as an excuse to delay progress on the introduction of mass-transport systems."

...NZ is unlikely to run out of used imports from Japan, despite increasing demand from other markets like the UK. Each year more than three million vehicles are scrapped in Japan – and NZ takes only 3% of them.]

...Legal action by the American automotive giant Chrysler to prevent unauthorised sales of its vehicles in N[Z] could signal the beginning of the end for the imported used car industry. The company says it has the sole right to import, distribute and market its vehicles in N[Z] – and will target importers to protect its position. Chrysler has a team of international lawyers investigating cases of so-called parallel imports with a view to taking civil action in the courts. The move follows similar action by the Ducati and Kawasaki motorcycle companies, which recently succeeded with High Court actions to uphold their legal rights to the registered brand names, preventing others from importing their products. The general manager of Chrysler Jeep-Astre N[Z] Ltd... warned yesterday that his firm's aggressive policy would apply not only to commercial importers but also to individuals who brought Chrysler vehicles into the country for profit. The chief executive of the M[IA]... said the Chrysler distributor's bid to protect its franchise would be watched closely by other automotive manufacturers... [who] are looking at doing the same...

Japanese car giant Toyota is using the Copyright Act to ban N[Z] used car dealers from importing its late-model vehicles. The company has lodged a notice with the Customs Service seeking notification of any unauthorised imports of Toyota vehicles manufactured or first registered in the country of origin since January 1 this year... Toyota was acting to protect its new car sales. "It is not a case of a multinational company preventing people getting access to Toyota used imports."

...JAPANESE car makers [were] so scared of gangsters they... told their N[Z] subsidiaries not to take legal action to limit used vehicle imports. N[Z] car makers have known for years that trademark and copyright laws give them powers to act against secondhand imports, but have been frustrated by the "hands off" ruling from Japan. However, earlier this month, the local importers of Chrysler and Jeep vehicles, which are made in the U[S], began legal proceedings to stop the used imports. The implications of Yakuza... involvement in used car importing have been raised at meetings of the M[IA], which represents all new vehicle assemblers and importers. Car company executives acknowledged the situation, but declined to be named. One said: "The companies regularly pay protection money to Yakuza, who have been active in advising the companies not to do anything to stop or slow the trade in used imports. Executives and their families are directly in line for pressure from Yakuza extortionists. It seems no one in Japan is willing or likely to challenge the Yakuza because there are immense amounts of money involved in this trade and their foundations in crime and extortion are just too strong." ...A S[FO] investigator has been in Japan following leads on used imports scams. Under the influence of the Yakuza, and with the co-operation of greedy N[Z] importers, mostly unlicensed, abuses such as odometer rewinding and undervaluation of cars for duty assessment have flourished largely unchecked. Once Chrysler Jeep announced its moves... [the recently resigned] Customs Minister... revealed four out of five imports randomly checked were undervalued by an average of \$1700 each... [A] Customs taskforce... estimated... tax evasion on imported vehicles... [is worth] \$100 million... The... [IMVDA] said legitimate importers of Japanese used vehicles were unable to compete with the rogue importers who bought high mileage cars cheaply in Japan, had the odometers rewound so they would appear good value, and underpaid duty... Meanwhile, a small player in the imports trade has moved independently on the abuses issue, filing a writ in [Auckland's] High Court... alleging that Customs and the [LMVDI] breached the provisions of the Fair Trading and Consumer Guarantees Act by failing to adequately police legislation on odometer rewinding and (in the case of the department) not collecting the correct duty.

...[Licensed car dealers have demanded that the Government crack down on blackmarket used-car traders – including a ban on anyone apart from licensed dealers importing cars for sale. The IMVDA yesterday placed full-page ads in two Sunday newspapers criticising the Government for not doing enough to enforce laws to stop the illegal sales, estimated at 55,000 in the last year. But the Acting Customs Minister said dealers were not blameless. "Customs is currently intercepting about 10 dodgy cars a week. The majority of importers in those interceptions are licensed dealers. Dealers should be careful about blaming everyone but themselves for what they call rip-offs and shady practices. People who live in glasshouses shouldn't throw stones." The minister said some of the association's concerns were valid but the Government was already acting to bring in new laws to deal with the problem. A discussion document proposes replacing the Motor Vehicle Dealers Act with a new act focusing more generally on all vehicle sales, other than private sales. A new Motor Vehicle Dealer Disputes tribunal was also proposed. It would cover disputes under the Consumer Guarantees Act and the Fair Trading Act and would not be limited to vehicles sold by licensed dealers. Motor vehicle dealers would have to meet strict criteria for registration under the new proposals, including a clean sheet on convictions for dishonesty, fraud and odometer tampering. A list of people banned from any involvement in the trade was also proposed. The IMVDA's chief executive said he backed the Government initiatives but asked why the law as it stood could not be enforced immediately.] Incidentally,] the... glut of used imports, particularly at the cheaper end of the market, has seen dealer indifference when these have been offered at auction. Many are now being offered at car fairs, which are flourishing as other owners also try to get the best price possible for their vehicles.

...LICENSED car dealers – under pressure from a sales slump, over-keen pricing and odometer tampering jitters – are preparing to prosecute sell-your-own car yards for alleged breaches of the Motor Vehicle Dealers Act. The yards, which are springing up in many parts of the country,

have grown from the popularity of weekend car fairs, where private sellers display their vehicles and deal directly with potential buyers... While there is nothing illegal in this, [the LMVDI] director... said many of the yards had gone beyond that by employing salespeople on behalf of sellers and receiving a commission if they made a sale. He said that put them in the realm of unlicensed dealers, and liable to prosecution... Under the Act, fines of up to \$10,000 can be imposed... In 1993 there were just over 1800 licensed dealers, but this had climbed to 2258.

...Motor vehicle dealers are stepping up action against unlicensed dealers, but believe they are only scratching the surface of illegal trade. About 40 alleged illegal car dealers will be prosecuted by a firm representing the [IMVDA]... The dealers' association chairman... said up to 20[%] of imported second-hand cars were sold by unlicensed dealers... It was hard to know how big the problem was but a four-month survey revealed 950 suspicious cases involving 3700 vehicles... People selling more than six vehicles a year for profit had to be licensed... The institute had taken 70 prosecutions in the past 10 years, all but one of them successful... Although the dealers would prefer police to investigate the illegal traders... they understood the pressures police were under. [The] Police Assistant Commissioner... said it was within the right of anyone to prosecute privately.

...Private investigators say an Asian couple have... [emptied] their bank accounts... [and fled NZ] during inquiries into a backyard car-dealing ring which sold more than \$2 million worth of vehicles in Auckland over the past two years. [By the way, the person who 'is acknowledged as the world's No 1 car salesman has been inducted into the US Automotive Hall of Fame. He once sold 18 cars in one day.'

...a contest-winner 'was given his gleaming \$27,000 prize on Tuesday night after almost seven months of wrangling. The Papakura resident threw a paper dart into a box from about 15m in the competition for a gold-coloured Toyota Corolla, which was organised by the Papakura District Business Association but run by the Papakura Lions. However, he was denied his prize, put up by Papakura Toyota, when insurers Sports and Events Marketing, the NZ agent for American marketing company Golf Marketing, said the throw breached conditions because it was wind-assisted. In a goodwill deal, Papakura Toyota, Toyota NZ and Sports and Events Marketing finally agreed to split the cost of the car – which was presented during filming for last night's *Fair Go* programme – but the business association voted not to put any money in. The association's president said lawyers had told the group it was not legally responsible and he believed the insurers should have paid out in full for the car. The wind had been swirling around and did not aid the throw, he added. Papakura Toyota's chief executive said his company had not decided whether it would take legal action against the business association.' Also undecided about taking legal action is the contestant who entered a competition where the person that kept one hand on a car the longest amount of time won it, but was 'disqualified after temporarily removing his hand in order to take a break that an official mistakenly said he was entitled to have.'

...an Auckland car dealership that misled customers about trade-ins has clocked up more than \$33,000 in fines. Enterprise Motors Group and its Panmure dealership were ordered to pay the fines by the Auckland District Court yesterday after pleading guilty to breaching the Fair Trading Act. The company had advertised a "minimum trade-in of \$4000" in television commercials. One commercial had claimed that it would pay "\$4000 on your old bomb" and that there was a "huge selection available", but the Commerce Commission's lawyer told the court that a customer had gone to one of the company's yards asking for the trade-in, only to be told his Bedford van would not fetch more than \$3000. On top of this, the trade-in could only be used on half the vehicles in the yard. The commission said that of the 122 sales under the trade-ins scheme, only 46 customers received the full \$4000, with some customers being paid nothing at all. The Panmure subsidiary was also convicted on four charges of breaking the law in advertisements in a mailout to 300,000 Auckland homes. These advertisements promised a "guaranteed minimum buyback." This was not an offer to buy back cars but actually a large final payment by customers to get full ownership. Enterprise Motors did not spell out that customers would not sign a purchase agreement but a leasing agreement'.]

...A... "destination auto mall"... will be the main feature of a... \$25 million development... on 5.25ha... between the Ellerslie-Panmure Highway and Mountain Rd... [which is] set for completion by... [the middle of next year. In] addition to being a single centre for automotive shopping and service, the site would have children's entertainment, public transport facilities and good security for extended trading hours.

...[the] country's largest vehicle financier, Motor Trade Finance[...], has recorded]... a record \$40.5 million tax-paid... [annual profit, which is 30.6%] higher than the previous year... During the year new loans accepted... fell 17.8[%] from \$467 million to \$383 million[... while loans]... under administration fell from \$639.4 million... to \$599.5 million... [and total] assets fell by \$172 million to \$146.9 million, reflecting the securitisation of loans... The securitisation programme of [MTF] entails the issue of short term Euronotes into the European and U[S] markets. Profits]... were not reduced commensurately because the profitability of [MTF] largely reflects levels of business accepted in the past... [By the way, the] president of Mazda in Japan... says... [flooding the N[Z]... market with used car imports will have a negative effect...

A glut of cheap imported used cars has sparked savage discounting among car dealers... The number of [used] imports by dealers jumped from 2541 in 1987 to a staggering 117,025 last year... Dealers say the gap between new and used prices is likely to narrow further – meaning the bonanza for buyers is set to continue... The cost of bringing used vehicles into the country has dropped in the past year as the N[Z] dollar has strengthened against the Japanese yen, cutting importation costs by about \$2000 a vehicle... The price reductions on used vehicles is also putting pressure on the cost of new vehicles, with one major brand advertising 1997 new vehicles at 1993 prices. The chief executive of the L[MVDI]... said the "dramatic" rate at which new car prices had dropped in the past year had surprised the industry... Six or seven years ago 50[%] of new cars were sold to private buyers – now about 80[%] of new cars were sold to commercial buyers for fleet vehicles and work cars.

...Yesterday Honda N[Z] followed other car companies in announcing price cuts on its vehicles. [The] general manager of marketing for Honda, said the company had reduced prices by about 10[%]. He said the reductions were not because of imports or currency movements but were refining a strategy to make new cars more affordable. "We want more people driving new cars." ...He did not think there would necessarily be further reductions: "We do not want to get into a price war. There are plenty of other car companies here that are bigger than Honda." ...[he] said there was some concern about the increased rate of depreciation on new cars because of the flow of used imports... [New cars in NZ 'currently depreciate by 37% of their price in the first year.' The] rapid fall in car prices had left dealers holding stock they bought at "yesterday's prices." Dealers were having to sell those vehicles at a loss to get some cash to buy cars at today's lower prices to stay in business. Private car owners paying off vehicles may be even worse off. The rapid decline in car prices has also reduced trade-in prices, leaving many car owners owing more money on the vehicle than what it is worth. Dealers said car owners had yet to accept a market that had reduced the value of their vehicles so rapidly. "They come on to the yard with unrealistic expectations about the value of their vehicle and then call us a bunch of rogues when we quote them the market price," said one dealer. "We just tell them to go away and see how much anyone else will give them." ...[In related news,] other countries such as Russia and Ireland have cottoned on to the attractions of importing used cars...

The British car industry is trying to come to terms with used Japanese imports coming into mainland Britain via Ireland... "...the European Union is getting a bit excited about it... But, of course, once the cars have been accepted into Ireland they are part of the E[U] – they can go into any country." ...But the appearance of the imports on car yards in Britain is not new. [What's new is that some manufacturers – including 'VW, Volvo and Mercedes-Benz – have been buying up and stockpiling tens of thousands of used fleet cars in order to "fix prices".' In further news from Britain, 'Ford is to restructure its European operations next month and the first to feel the pinch will be workers at its Dagenham assembly plant. Ford is expected to announce that the plant will close after the output of existing Ford Fiesta models ends next year. Dagenham employs 7000 workers. More than 1300 were made redundant when the company switched to single-shift production. Ford is building about 400,000 more cars than it can sell in Europe.'

...Daewoo's award-winning city car, the Matiz, is coming to NZ to flaunt its Latin looks and cost-effective charms. The Korean-built five-door is Europe's bestselling car in the "city car" segment. This is for teeny-weeny cars, those designed for an inner-city lifestyle and parking spaces hardly big enough to swing a cat in. The category is popular in European cities, where many people live above alleys and avenues. Since its launch the Matiz has won

all sorts of international awards, including Best Value Small Car from the BBC's *Top Gear* people. The British gong was for a car costing £7145, or nearly \$23,000, with standard items including power steering, central locking, driver and passenger airbags and electric front windows. Air-conditioning was an optional £350 extra. But for the NZ market Daewoo has thrown in air-conditioning – and priced the car at \$15,000. How can it do that, sell the same car for \$9000 less than in Britain? Because the British Government imposes duty on imported cars and still heavily subsidises its car industry']...

“The Government intends for N[Z] to be a leader, rather than a follower” in the process of trade liberalisation, said [the]Commerce Minister... Tariffs on motor vehicles will be an immediate focus. The current regime will lower motor vehicle tariffs from 25% to 15% by July 1... with annual 2.5 percentage point reductions until July 1, 2000... The post-2001 regime is to be reviewed and the Government expects this to result in “a swift move” to zero tariffs soon after. “This will mean even cheaper cars for all N[Zers,” the minister] enthused. The other side of the coin became clear the next day... the removal of tariffs would make the local industry unviable. The local car assembly industry’s output would be replaced by imports... [and] jobs would be lost. Too bad. There’s not much benefit in N[Z] producing cars, said [an economist]... Consumers are paying in excess of \$300 million a year in motor vehicle tariffs – that works out at around \$180,000 a job in the assembly industry... And the industry doesn’t fit into the long-term economic strategy set out in the National Government’s *Towards 2010* document.

...the Government... has brought forward a review of the tariffs to later this year at the request of vehicle assemblers... Only Toyota, Nissan, Honda and Mitsubishi still make cars in N[Z] following the closure of the Ford-Mazda Manukau factory in March... 29,727 vehicles were assembled locally last year, less than half the total in 1989... At present the... Mitsubishi... plant built to produce 22,000 units a year is running at less than one-third capacity... In Thames, home to Toyota N[Z]’s assembly plant, the district mayor... said that if the early review suited Toyota he was in favour because it helped remove uncertainty for the community.

...The Government has taken away the survival option for the local motor vehicle assembly industry, the managing director of Toyota N[Z]... said in Christchurch yesterday... “Toyota will accept the Government terms of reference but these basically say the assembly industry has no future.” Toyota sells more new motor vehicles in N[Z] than any other make... The company... expects new vehicle sales this year to total 74,000 – down 6.5[%] on last year... [A] decision would be made about the future of the Thames assembly plant later this year... The Thames plant... has been running at about 50[%] capacity this year. “There are many spin-offs from the local assembly industry in terms of manufacturing and components. It’s not just a matter of jobs,” [he said. The situation means that the new ‘Avalon sedan, the biggest car in Toyota’s lineup, will be built at its assembly plant at Altona, Melbourne, and come into NZ completely built-up. Although the Avalon was designed to cater for American large-car tastes, Toyota NZ expects its design, quality and roomy interior will appeal in NZ. It is powered by a 3-litre, quad-cam, 24-valve V6 engine and will be aimed at the Holden Commodore and Ford Falcon. The large-car market now represented about 13% of total new-car sales’ in NZ.

...‘sales of large cars in NZ are zooming ahead. They were up 20% last year’ ...

‘December sales figures from the US show the popularity of sports utility vehicles. Americans wrapped up last year by buying less cars than vans, utes and pick-ups’. Speaking of which, ‘a Ford F150 passed me on the motorway the other day. Big, powerful beast it is, too. But the fire-breathing model is the SVT F150, rare as hen’s teeth in America even. *Auto Motor and Sport* on Friday takes a look at the muscle-bound pick-up, powered by a 265kW 5.4-litre V8. The television show also checks on the progress of ‘the recall of 6.5 million Firestone tyres. So far 3.7 million of the recalled tyres have been replaced.’

...‘French tyre maker Michelin has apparently signed to provide tyres for the new Ford Explorer. The contract comes after accidents involving the current model Explorer in America forced supplier Firestone to recall more than six million of its tyres. Low inflation pressures recommended by Ford apparently contributed to the tread separation. The estimates of deaths in the tyre-related accidents stands at 101.’

...‘Ford’s tyre woes with its four-wheel-drive Explorer continue. American authorities are investigating reports that anti-roll bars on 1995 and 96 Explorers have been failing, says Britain’s *Autocar* magazine. This after a *Washington Post* probe which concluded that, even though Ford executives insist the Firestone tyres were at no fault in roll-over accidents, the Explorer itself may be contributing to crashes. Ford’s president had said the higher centre of gravity in four-wheel-drives meant they were more susceptible to roll-overs when tyres failed. But safety authorities say Ford must accept some of the blame for the tyre problem because it recommended that the Explorer run on lower inflation pressures than those advised by Firestone.’

...‘fallout from the Ford Explorer tyre problem means production at Bridgestone plants in the US has been cut and about 2000 workers could be laid off. The 40% fall in demand for Bridgestone tyres has been blamed on bad publicity by the recall of 6.5 million tyres, mostly fitted to four-wheel-drive Ford Explorers. Both companies are still trying to find out why the tyre failures have been linked to more than 100 deaths in America alone. Ford Explorers in NZ have not been affected.’

...‘Firestone has replaced hundreds of tyres in NZ – mostly found on Ford Explorers imported since 1996 (1500 vehicles might have been imported here with the problem tyres; there have been no problems with NZ-made tyres) – amid reports of a growing international death toll from blowouts and tread separation. The Japanese-owned company has already recalled over 6.5 million tyres internationally as investigators probe over 130 deaths in the Americas.’

...‘Ford has announced a huge recall of 13 million Firestone Wilderness AT tyres on its vehicles at a cost of \$US2.1 billion – the latest salvo in a bitter war with the tyre maker over who is to blame for accidents in which at least 174 people have died. Ford said it had lost confidence in the ability of Firestone tyres to keep Ford customers safe.’ In local news, NZ] is in the grips of a tyre price war that... is likely to get even more competitive before it ends.

...Firestone NZ turned in a net loss of \$1.88m for the six months to June, compared with a \$2.18m profit last year. It blamed cheap imports.

...[an] Auckland importer of used Japanese tyres said yesterday that he was not worried about what he saw as an attempt by local tyre manufacturers to put used-tyre importers out of business. Yesterday Firestone N[Z] launched a range of budget tyres... and stopped making passenger tyre retreads... This will mean the loss of 28 jobs... though the company says the introduction of the budget tyre range will create about 30 new jobs at Firestone’s new factory... South Pacific Tyres, a joint venture between Dunlop and Goodyear, will also introduce a budget range of new tyres this week, though it will continue to make passenger tyre retreads, says its chief executive... “We have to match what Firestone are doing,” he said... but... thought Firestone had “made a big mistake getting out of retreads. There are a lot of motorists who can only afford to run retreads on their cars.” The general manager[of] sales and marketing for Firestone... said making passenger retreads was no longer profitable. Firestone market research showed that motorists preferred imported tyres, he said. [He] estimated that 665,000 used tyres would be imported into N[Z] this year, rising to 800,000 next year... [The] co-owner of Japan Tyre Co and Japanese Tyre Co, both of which import used tyres from Japan, said... the budget-priced Firestone tyres were of inferior quality.

...Firestone says it will take legal action against used tyre importers making “false and malicious claims” about its new budget tyre... “You don’t have to be a brain surgeon to work out why the competition is so hell-bent on trying to undermine confidence in our new product,”... the company’s marketing manager... said... “A survey Firestone did on the prices of used tyres found some priced as low as \$10. Now there’s got to be something wrong with a tyre selling at that price.” ...there was talk some rivals would counter Firestone by importing new tyres from Indonesia, for example. “But in many cases the compounds used in tyres made for concrete roads in Asia are torn to bits on the volcanic chip roads of N[Z]. Often the sidewalls are thin, the tyre is less resilient and the oils used in them can cause them to crack under our harsh ultra-violet sunlight. Storing them for too long can also cause them to crack, and the inferior oils used in making these tyres dry out.”

...[here's 'a couple of facts from Dunlop tyres: "The tread pattern on a tyre disperses water on a wet road and helps keep the rubber in contact with the surface. Tests at 100km/h on a road covered with 2mm of water show that a tyre with 1mm of tread depth has just 11% of the tread in contact with the road, compared with a new tyre at 79%. Obviously, with that little contact, emergency stopping distances and tyre grip during cornering are dramatically reduced." The law in NZ says "tread must be 1.5mm or more deep right around the tyre and over three-quarters of the width of the tread pattern."'

... 'tyre companies are constantly talking about the importance of having sufficient tread on tyres. About 4 out of 10 NZ drivers don't listen to them. These are the people a Dunlop executive wants to reach. "The thought that about 40% of cars passing in the opposite direction at 100km/h on our highways have one or more bald tyres must be a worry to all road users." Easy to visualise, isn't it?']

...Goodyear Tire and Rubber Co said it plans to produce for mass distribution tyres that eliminate the need for spares on passenger vehicles. Goodyear said it is "aggressively converting" all of its replacement-tyre manufacturing to production of its so-called extended mile tyres. The tyres can be driven for 50 to 200 miles at 50 miles an hour when flat or low on air and still be repaired... [Incidentally, u]sed tyres will start to cause environmental problems if disposal solutions are not found soon, says... Firestone. Since import restrictions were relaxed in the late 1980s, used tyres have flooded into N[Z]... About 1.5 million tyres are being sent to scrap each year... Saturation point will be reached by the end of this year, as uses for old tyres can no longer be found. "That's when we will start to face the sort of dumping problems that have become prevalent in the U[S and AUS], where mounds containing large numbers of tyres are piled up in the countryside,"... says... Firestone[s] marketing manager... Previously, 98[% of NZ's] used tyres ended up on farmers' silage heaps, but this market is limited. Tyres with good casings are sold as retreads... Firestone suggests one use[for bad casings] is to mix the ground rubber with bitumen for road-making. Technology has also been developed for burning old tyres in cement production kilns. Neither of these options has been proved for large-scale tyre disposal in N[Z].

...In Auckland... old tyres are piling up at the rate of about 1.2 million a year... – a similar number per head of population as in the U[S]... What to do with worn-out tyres has always been a problem... Although non-hazardous, used tyres are one of the most difficult items in the waste stream to deal with... Some European countries put them through a giant shredder and use the pieces to cushion the ground around school jungle gyms. Ford's solution is to turn tens of thousands of the things into ergonomic floor matting for its factories. [■ What is Ford doing with the 13 million Firestone Wilderness AT tyres it recalled after the rollovers of its Explorer four-wheel-drive? Most of the tyres have so far been shredded or burned for fuel. Of the 273 million tyres discarded in the US last year, fewer than 36 million were recycled, with most thrown in landfills or burned.]

... 'An Iraqi-born scientist believes he's found an unlikely use for old tyres. The Auckland University researcher, who emigrated from Basra in 1996, says tyre-derived activated carbons could be used to remove contaminants from the water of creeks and streams. "There are companies in the US using tyres to create gas and liquids, but no one has been using the solid waste." Tyre disposal is an international problem. Most old tyres end up being shredded']...

Tyre shops, garages and anyone with an eye for a cleaner landscape will welcome what appears to be the first real solution to a longstanding waste problem. About three million old tyres are sent to scrap each year[in NZ] – most have ended up on farmers' silage heaps or in landfills. But the farmers can't keep up with the supply, and local authorities are increasingly banning tyres from landfills. Their bulk causes problems, because oxygen and methane build up in tyres, causing them to rise to the top and break landfill surfaces... [NZers] may have to get used to forking out money to get rid of their old car tyres, as well as paying to buy new ones. But... that[is] a small price to pay for a clean environment... [says the man who] has just imported the country's first tyre shredder. From his west Auckland base, he is buying used tyres from two big contractors, shredding them into 30mm long pieces of rubber... [in t]he \$1 million... machine... and then selling them as capping material in landfill. Later on he hopes to import a bigger shredder that will reduce old tyres to crumbled rubber, which can be mixed with bitumen when making roads... [His] company... charges \$1.40 to collect a used car tyre, \$2.80 for a light truck tyre and \$4.20 for a truck tyre... But it is not difficult to see new disposal costs being built into the price of tyres[, although]... tyre retailers claimed that to pass the charge on the customers would make them uncompetitive. And manufacturers said a tax on new tyres would disadvantage them in competition with imports... Greenpeace has said tyre disposal – and presumably its costs – should be the responsibility of tyre manufacturers or retailers.

...[an 'environmentalist found 8000 illegally dumped tyres on his property when he returned from a trip to Peru. Now he's battling bureaucrats to have the tyres taken away and could be forced to pay up to \$30,000 to remove them. "I am the victim – yet it appears I could be the one expected to pay for the crime," he says. "The situation is farcical." After three weeks of night and day surveillance, he cornered a man unloading tyres from a truck and adding them to the pile. A neighbour took photos. Police are now interviewing the truck-driver over the Albany dumping but have yet to lay charges.]

...an 'environmentalist is angry at the sentence handed down to a man caught unloading used tyres on his property. In the North Shore District Court on Thursday, a 43-year-old, whose business is disposing of old tyres, admitted adding 250 tyres to the rubber mountain of illegally dumped tyres but escaped conviction on condition that he remove the 250 tyres and pay the environmentalist \$100 reparation. The 43-year-old told the court he was driving along the highway with a load of tyres, when somebody stopped him and said they wanted the tyres and would show him where to dump them. He did so, instead of taking the tyres to his usual dump in West Auckland. He later learned that the unidentified person had no authority for the dumping at the disused tree nursery on the Albany Highway. He told the court he retrieved the 250 tyres he put on the pile, which, police estimated, contained 5500. The environmentalist said he would refuse to accept the reparation. "It's an insult when the cheapest quote I have for removing the dump is \$8500." The council had threatened to prosecute him under the Resource Management Act if he did not remove the tyres by January 31. He refused and the council did not carry out its threat. The environmentalist said he was angry that the police had chosen to prosecute the 43-year-old under the Litter Act, which carries a maximum penalty of \$500. He had asked the council to instead prosecute under the Resource Management Act, where acts of pollution carry fines of a maximum of \$200,000. The authorities' reaction to the problem was "the last straw" in a string of unsatisfactory dealings with officialdom. "NZ is a filthy, moral-less rat-hole. We crow about how clean and green it is, yet if everybody behaved like NZers there would be no planet left." The council's environmental protection manager said the council was frightened of an environmental disaster if the pile of tyres caught fire. But it was sympathetic towards the environmentalist because it realised he was caught up in a problem that was not of his making. The council could not have prosecuted the tyre-dumper because dumping occurred on private property. It was a criminal offence which had to be handled by the police. However, under the Resource Management Act, removal of the tyres was the landowner's responsibility. Any move to force the environmentalist to remove the tyres was on hold. But the council could not remove them at ratepayers' expense because it set a precedent for any further cases of illegal dumping. Ideally, residents would promptly report any dumping they might suspect was unauthorised.')

...West Auckland roadsides are becoming... dumping grounds for... rusting car wrecks... Most vehicles were left parked on urban... streets, some were dumped on quiet rural roads and a few were pushed over banks... [In the past year, more] than 3000 cars were inspected and their owners tracked down so arrangements could be made for removal or disposal. That was roughly double the number inspected in the year to June 1996 – an increase probably best explained by the tougher warrant standards and rust guidelines introduced that month... [However, many] vehicles were... unregistered... 900 abandoned cars have been towed away by the Waitakere City Council in the past 15 months and the removal cost is mounting.

...[the] Alliance... says the costs of removing tariffs in the motor vehicle assembly industry far outweigh the benefits. A cost-benefit analysis by the party has estimated a \$128 million a year gain, "under the most favourable assumptions," but puts the costs... at between \$241 million and \$862 million a year... A[US is] keeping tariffs at 15[%] until 2005... Hong Kong, Singapore and Japan are the only... countries which have no tariffs on cars. [● 'Only a few of the over 2000 Trekka utility vehicles – a blend of Skoda mechanicals and a NZ-designed steel body – built in NZ from 1967 to 1973 remain.']

...when the Government... [decided to remove] protection for local car assembly... there was no word of compensation for anyone... But... workers will be on the streets[and their communities will be] devastated... It seems... fair that if the Government – that is, all of us – cause that much damage to people's lives then we should pay whatever is needed to minimise the damage. We should pay for relocating and retraining people, as well as providing an adequate income until they find new jobs. And we should offer to buy not just the car plants themselves but any other businesses and any home in Thames or elsewhere that relied on the car industry, at whatever those properties were worth before the Government's announcement. When we on-sell them, we should be prepared to take big losses. Unless we are willing to pay that kind of compensation, we have no moral right to change the rules on people as suddenly as the Government has done... The irony is that removing the car industry's protection makes sense.

...The Coalition Government is expected to tell the motoring industry next week that zero tariffs on imported cars will be introduced [earlier]... The cabinet recommendation is expected to... [reduce] duty... by 0.5[% a month from July 1]... 2000... until it no longer applies, which is expected to be July, 2002... But should assemblers... shut their plants before 2000, zero tariffs would be introduced almost overnight... The four remaining assemblers... are expected to announce early next year how they plan to phase out their plants... [If they all close, it will mean] the loss of 1500 jobs... A further 4300 jobs in the car component industry are also shaky... In theory, the end of car assembly need not kill off the manufacture of car parts. Nimble producers could sell to assembly plants abroad... Between 1989 and 1994, exports of N[Z] motor components rose 45[%]... to \$170 million... This year, Ford has exported alloy wheels worth \$60 million... almost exclusively to the U[S. Hella NZ Ltd also]... announced a \$25 million U[S] car parts deal which involved exporting up to 30,000 high-level stop lamps a month... But the hurdles are high. First, they are losing their local links with the multinational car companies. Keeping up with technology... and contacts in the customer companies will be harder... Given these difficulties, it would be logical for parts producers to move their operations close to their customers. The Victoria state government, for example, might offer a N[Z] parts maker incentives to move its operations near to Melbourne's Toyota plant. All this suggests a de-skilling of N[Z]'s manufacturing work-force... The axe is[also] hovering over hundreds of clothing, textile, footwear and carpet companies and their 25,000 employees[– but some people in the car sales industry are looking forward to further tariff reductions in the hope that cheaper prices will encourage people to buy cars, thereby saving their jobs]...

There will be fewer new and used vehicle dealers when tariffs are removed, says the president of the M[IA]... "There is already a shakeout of dealers... [However, I believe the] new vehicle market under zero tariffs will be boosted long-term... [because the] cheaper price of new cars will... take some of the market away from used imports... But... the knives will be out and the car buyer will be the winner... Honda has shown the way... by taking on the used import industry with aggressive pricing. It sees the life of its cars in the market at more than just three years, more like four or five years." ...But consumers should not bet on benefiting... Exchange rates, the machinations of multinational production, the consolidation of dealer networks and other factors could deny them the savings... Four Mitsubishi dealers... have closed down in recent months. Others, mainly second-hand dealers, are closing all the time.

...Mitsubishi N[Z] will close its Porirua small-car assembly line in May... next year... Between three and five hundred workers from the... plant... are heading to Parliament this morning to protest against government policies...

Businesses in Thames closed for an hour yesterday in a protest against planned tariff cuts which would see the town's largest employer shut down. The Minister of Commerce... told a hostile rally that the town had to start planning for life after the death of the Toyota vehicle plant.

...Referring to the company's Thames plant which has run for 30 years... Toyota N[Z]'s boss... said the... team of workers there were the best in N[Z]. "But at the end of the day, all that good work by more than 300 good people cannot overcome the Government's policy settings that are stacked against the... local assembly... industry." [He] says it is ironic that as N[Z] is discussing the possible closure of vehicle assembly, Vietnam is planning a new vehicle assembly operation with 10 assemblers[already] supplying vehicles to a market smaller than N[Z]. "We are not suggesting that this formula should apply for N[Z], but it does demonstrate that N[Z] is one of the few countries in our region to be slavishly following a zero-tariff plan with any urgency." ...and he said Ford's own multi-million dollar restructuring of its[now-closed] vehicle assembly operations in conjunction with Mazda made it clear the company was convinced the automotive industry had a place in... N[Z]... History records that N[Z]ers have been building other people's cars since the earliest years of motoring... [without] designing and building our own viable alternatives.

...[NZ Motor Bodies Ltd took over a small concern that had been established at Petone in 1926. In March the following year, the plant produced the first all-steel truck cabs made in NZ. The plant closed in 1984, the same year that General Motors closed its plant at Petone.] 'General Motors was the first big carmaker to set up an assembly plant in NZ. It started production on August 31, 1926, at Petone. Petone occupies an important place in GM history: it was the first overseas plant to be owned lock, stock and barrel by Detroit. Before then, GM had leased its offshore buildings. The carmaker's decision to build the first plant in 1926 was "an act of faith at a time when NZ was at the beginning of its industrial development and when motor vehicles were fewer than horses." With the arrival of WW2, production switched to munitions, including 1100 bren gun carriers made almost entirely from NZ components. In addition, 900 war-damaged Army trucks were reconditioned and put back into service.' 'In 1936 the Ford Motor Co of NZ Ltd was incorporated. Vehicle production began at the company's new assembly plant at Lower Hutt. During WW2 the Ford Lower Hutt plant produced 10,323 vehicles as well as huge quantities of munitions. In 1970 Todd Motors acquired the Mitsubishi franchise. Todd Park, the largest vehicle assembly plant in NZ, opened in 1975.'

...The US Government has launched a case against Toyota's American subsidiary, seeking as much as \$US58 billion in fines from the car maker. It accused Toyota of equipping 2.2 million cars since 1996 with faulty emission-control monitoring systems. Toyota last week rejected an out-of-court settlement under which it would have paid \$US100 million in civil penalties. A spokeswoman for Toyota NZ said the company did not know if the issue affected it (NZ does not have specific environmental standards to control motor vehicle emissions, although they are our main polluters). In another motor vehicle case – that comes three days after a Los Angeles jury awarded a record \$US4.9 billion to six people who were severely burned when their Chevrolet exploded in a rear-end collision – a jury in Ceres, California, has awarded \$US295 million to the family of a couple and their son who were killed when a Ford Bronco rolled.]

...A breach of the Commerce Act cost Toyota N[Z] \$260,000, the Commerce Commission said yesterday... The case related to Toyota's fleet sales assistance scheme during 1992 and 1993, under which Toyota helped its franchised dealers with discounts on sales of new cars to fleet owners. [The]Commission chairman... said the operation of the scheme had acted to limit discounts Toyota dealers might offer... This was a contravention of the resale price maintenance provisions of the Commerce Act... Toyota had stopped the practice before the investigation and had co-operated with the commission. Toyota agreed to having the judgment entered against it and the... \$250,000... penalty... had been accepted as appropriate...

In the traditional sales battle between industry leaders Ford and Toyota, Ford just pipped its rival for total sales [last month]. However, the big news for the month was the 14[%] slump in new-vehicle sales compared to... [the previous month, and 30[%] fewer than the number sold in [the corresponding month] of last year. THOSE figures make sobering reading for many people in the vehicle industry – but Porsche does not seem to mind... While there is little doubt [the vehicle industry] had an horrific year – sales were down by about \$750 million... [-] the... recent arrival of 10 brand-new Porsche Boxsters is the largest single shipment of new Porsche sports cars to land in this country for more than 10 years. The most pleasing aspect for the importer... is that all of the cars were pre-sold... By the end of this year, [the importer expects] to have delivered approximately 50 new Boxsters to N[Z] owners, despite retail prices starting at \$125,000. [By the way, 'Porsche has grabbed plenty of the Paris Motor Show headlines with a stunning new sports car study which could become reality by 2003. Conceived as an ultimate performance road car, the 1250kg Carrera GT is based on pure racing car technology. Porsche predicts a top speed of over 330km/h and acceleration from 0 to 100km/h in under 4 seconds.

Acceleration from 0 to 200km/h will be achieved in under 10 seconds. Use of carbon fibre as the body's base material combines optimal strength and safety with a minimal vehicle weight. The Carrera GT also uses the new Porsche Ceramic Composite Brake technology now available as an option on the new 911 Turbo.' 'The technology – which will bring a high-speed Porsche to a stop quicker than anything else the carmaker has used – marks a revolutionary step in the future of car brakes, says Porsche. The downside of traditional metal discs is that once they get hot they lose their stopping power. But with the new technology brake temperature is no longer a crucial factor in stopping distances.'

... 'a typical 3-litre Formula One car weights about 600kg with the driver, has a top speed of 350 km/h, and accelerates from zero to 100 km/h in a touch over 2 seconds, two-and-a-half times faster than the latest lickety-split Porsche 911. Drivers experience loads of up to five times the force of the most extreme emergency stop in a road car. McLaren-Mercedes says its car will travel from zero to 160 km/h and back in 6.6 seconds.'

... 'GERMAN carmakers Mercedes-Benz, Audi, BMW and Volkswagon have an unofficial agreement: they electronically limit the top speed of their premium production models to 250 km/h, or 155 mph. Porsche isn't a party to it. The Japanese have a similar agreement, but with more red tape. It limits not so much the top speed of high-performance cars but the engine's power. The industry standard in Japan is around 205kW (275bhp), give or take a kilowatt or two. For example, lickety-split cars like the Subaru Impreza STi, the Mitsubishi Evo VI and the VR4 Galant stick to the standard. The Nissan Skyline GT-R – named Godzilla for the way it demolished everything in its path on racetracks in the early 1990s – sneaks past the standard, producing 206kW. So does the luxury Lexus LS400, with 209kW. Now there's another car with 206kW. It's Godzilla's stablemate, the two-door Skyline GT with four-wheel steering. Nissan NZ launched it in the rain on the roads around Rotorua the other day, a year after it made the GT-R available by special order. The GT-R costs \$129,995 – the GT costs \$64,495 for the five-speed manual and \$65,995 for the four-speed automatic'...

'THE WORD quickly went around the car industry: half-a-dozen Lamborghinis from the Sultan of Brunei's stable of 5000 exotic cars were under wraps in Auckland. The story seemed to fit. News had only just broken that the world's richest car nut had just pulled \$15 billion worth of investments out of London and \$3 billion out of New York. The cash was needed at home. He had just told his spendthrift brother – a layabout playboy who named his personal yacht Tits and its tenders Nipple 1 and Nipple 2, to curb his spending or find new digs. The younger prince did as he was told. And to help bolster the family's petty cash he put the word about that he wanted to flog off a few of his own exotics. Some of these are expected to crop up on the international second-hand market. But the right-hand-drive Lamborghini Diablos that go on sale in Auckland this week aren't second-hand – and they have nothing to do with the sultan's collection. "They are all unregistered cars with a factory-recorded 200km on the clock," said the managing director of Clark's of Parnell who landed the Italian supercars the other day. The Diablos were bought in Asia – where the economic meltdown has reduced demand for exotics – and approved for sale in NZ by Lamborghini's distributor for this part of the world. "The confusion about them coming from the sultan's collection probably came about because the cars came from Asia. But I bought them from an authorised Lamborghini dealership. The only person who has driven them is Lamborghini's test driver. Each one comes with a 12-month factory warranty." Until a few weeks ago, Lamborghini was owned by an Indonesian company. Now German car-maker Audi owns Lamborghini. It bought it for an undisclosed sum. It has been said that Audi, part of the Volkswagon group, will continue production of the Diablo but will fit smaller-capacity and lighter turbo-charged engines. The existing Diablo is powered by a 5.7-litre all-alloy V12, producing a neck-snapping 363kW at 6800 rpm. The director, a passionate Lamborghini lover who owns a 1988 25th anniversary Countach, bought in four Diablos – three four-wheel-drive VTs and a two-wheel-drive SV. A yellow VT was sold the day it arrived. The SV doesn't have the top-end speed of the VT (307 km/h against 327 km/h) but its close-ratio five-speed gearbox catapults it from zero to 100 km/h in 3.6 seconds, about half-a-second quicker than the VT. The SV and a 1995 silver VT are retailing for \$395,000. The top-range Diablo, a 1997 purple four-wheel-drive Roadster, is priced at \$495,000. "I have wanted to bring Lamborghinis into NZ for some time. Lamborghini could have arranged to ship these cars to Britain for sale immediately. The factory only makes 220 Lamborghinis a year. 50% go to America and 20% go to Germany. These are the last of the handbuilt supercars. There has never been a Diablo in NZ. There are so few made in right-hand-drive."

... 'Now here's a novelty: a Korean car that costs \$110,000. Meet the SsangYong Chairman, a super-luxury sedan being imported in limited numbers. If you think the Chairman looks a bit Mercedes-like, you're right. A technology licensing agreement between the three-pointed star and SsangYong allows the Korean maker to use the underpinnings and 161kW 3.2-litre powertrain from the previous-generation E-class as a base for its luxury limo. Now here's the catch – SsangYong's agreement with Mercedes forbids it from selling the car in certain markets, including Europe and America. NZ gets the thumbs up, but the distributor isn't allowed to advertise the car for less than the price of a new Mercedes C320 – hence the hefty price-tag in the window. The distributor says he expects to sell four Chairmans this year.'

...There were 6309 new vehicles sold [in NZ last month, down 15.6%] on the same month last year according to the [LTSA]. Sales of used imported vehicles were down 18.4[%]... Toyota had 17.7[%] of the new vehicle market, Ford 15.4%, Nissan 11%, Mitsubishi and Holden 10.1[%] each, Honda 9.2[%], Hyundai 6% and Mazda 3.7[%]... Meanwhile, as the Government moves towards introducing zero tariffs, which will mean the end of vehicle assembly in N[Z, Toyota AUS] is expected to push output at its Altona plant, near Melbourne... from 80,000... up to 140,000 cars a year after 2000, making it the biggest car plant in A[US]. The increase in capacity will be part of an all-in capital investment of more than \$1.2 billion between now and 2005... Included... is a new research and development centre, Toyota's third outside Japan.

...Toyota's plans to celebrate 10 years as market leader in N[Z] are on target, despite sales of[its] new vehicles being down 9.6[%] on last year... Fifth placed Holden... is counting on the new VT Commodore to boost its [sales]. Demand for the new model has reportedly been strong since its launch in N[Z] last week.

...Holden claims its new VT Commodore will be the safest family car on N[Z] roads... Holden's manager of advanced engineering, believes only the luxury S-Class Mercedes-Benz is safer... He says General Motors has spent millions of dollars in developing the... new Commodore VT...

Developed at a cost of \$A600 million, including plant investment, the new VT series Commodore is expected to earn increasing export dollars for General Motors Holden in the expanding Asia-Pacific region. Longer, wider and slightly heavier than its VS predecessor, the completely new model is the first A[US]n-made car to be produced in right and left-hand drive. N[Z], which has traditionally been the largest export territory for A[US]n cars, will soon be overshadowed by bigger markets. Holden is to start exporting the Commodore VT to lucrative markets in the Middle East and Brazil next year. The car marks a turning point for the A[US]n motor industry, which has had a reprieve from a lowering of tariffs on fully imported cars until the year 2005. The new Commodore is being built at Holden's Elizabeth plant in Adelaide... Increased robotics at the Elizabeth plant meant that 80[%] of the welding was now totally automated. The managing director of Holden N[Z said his company]... was keen to see the Commodore return to the number one model position which it held in N[Z in 1995.

...General Motors has announced that it] will cut initial production at its new plant in Thailand by at least half because of Asia's economic slump... However, the cutback... from the planned 80,000 to 100,000 vehicles... capacity... does not mean GM will reduce the size of the plant, originally projected to require an investment of \$[NZ]750 million... The plant will be opened in mid-99, about three months later than initially scheduled... 80[% of its output has]... been earmarked for export. [In related news, 'GM was the biggest carmaker in the US last year and not just in terms of production. It spend nearly \$4 billion on advertising, compared with DaimlerChrysler's \$2.6 billion and Ford's \$2 billion, says Detroit's *Automotive News*.'

... 'GM spends more than \$80 million a week on car advertising in America alone. GM Holden averages \$112,896 a week on advertising in NZ']...

Holden Commodore has just set the standard by becoming the number one selling large car in N[Z]. (Probably due to all the standard features...)

...Ford Falcon goes on a diet to make Commodore sweat... Ford has been stung by the success of Holden's VT Commodore, which makes Ford's existing Falcon look very old indeed. Ford wants to redress the balance and has targeted the Commodore's weight gain of 130kg over the previous

VS model's 1420kg. Ford engineers are said to be trimming the Falcon so it tips the scales at about 1440kg. The weight saving should bring significant improvements in fuel economy and acceleration. Ford's stylists have... also... dipped into the global parts bin, opting for large head and tail lights... and... the... new shape cuts wind noise significantly.

...Common sense does not always prevail. If your idea of driving pleasure is a quiet drive on Sundays, that's fair enough. However, if pin sharp handling, fat feet, leather rimmed steering wheels and all that kind of stuff make your eyes light up then the Tickford enhanced XR Falcon is for you. We almost hesitate to tell you that the output of the legendary Windsor 5 litre V8 engine has been upgraded to crank out 185kW of power, and 16[-inch] five spoke alloys are now standard. All of which, to a quiet, sensitive, politically correct, new age person like your good self, should make an inordinate amount of sense.

...I REMEMBER writing a road test on a car in which I predicted that if cars kept improving at the same rate, before long there would be no need for motoring writers. Having recently driven the new Ford Mondeo, I suspect that prediction is coming true faster than I thought possible. That doesn't mean the Mondeo is the greatest car in the world – because it isn't. What it means is that year by year, new cars are becoming more... vice-free. They don't rattle... don't have torque steer anymore, the extremes of understeer and oversteer are long gone, and their brakes are seldom anything short of superb. Computer-aided design and engineering has helped car builders iron out the technical kinks to a point where in most cars there's little at which to aim criticism anymore – constructive or otherwise. Sure, there are differences. Some are more exciting than others. Some are bigger, some are more powerful. The demands of global, big-business car building means that there's no room for a mass-market manufacturer to make a "lemon" anymore, however. If a car is to sell large numbers across dozens of different countries, as Ford intends the Mondeo to, nor is there room for eccentricity. A big-selling car has to be easy to drive, fault-free, relatively unadventurous, and not quirky in any way. It has to be easy for its manufacturer to build and its owners to maintain, and it has to make sense economically... Back in the early 90s some motoring writers bemoaned the fact that the new luxury Lexus model was so quiet, so luxurious, so fuss-free it was almost boring. They were quite rightly whacked around the ears by Toyota, who ridiculed the inference that maybe they should have built in some deliberate faults, just to satisfy the critics!

...['What does the world's richest man, the Microsoft boss, drive to work? A Rolls, Bentley, Jaguar, Cadillac? Nope. A Lexus LS400, says the newspaper *USA Today*. □' A Lexus] GS300 sports sedan will be launched[in] February. It has more computer power than it took man to land on[the] Moon.

...Holden has risen to second place in passenger car sales... [B]oosted by its new Commodore VT[, t]he brand took 14.2[% of the NZ] market, behind leaders Toyota with 19.6[%].

...The new Holden VT Commodore has missed out on A[US]'s most influential motoring prize, the NRMA Best Car Award. The rejection this week has shocked A[US]ns. The NRMA (A[US]'s equivalent of N[Z]'s Automobile Association) picked Toyota's new Camry ahead of the Commodore and two other A[US]n-built cars... The judges said Toyota delivered a better product at a cheaper price. In N[Z], the V6 Camry starts at \$42,000; the V6 Commodore at \$39,845. However, specifications differ.

...Toyota, rated the best in product quality in the world motor industry, wants to do even better. The... car-maker has begun a 20[%] expansion of its global manufacturing capacity, with all expansion taking place outside Japan... Toyota's automated engine plant in North Wales is expected to be a principal supplier... for a 100,000 a year... 4 billion franc... small car plant... [in] France... due to commence production in 2001... Toyota Motor Corp says its pre-tax profit has risen 26[%] to... \$NZ4.35 billion... as growing exports to the U[S] and Europe and a weak yen made up for slack sales at home. The results were in line with forecasts... [But it] could take another 25[%] out of the cost of building new vehicles, according to... the company's managing director of finance... Toyota intends... cutting costs... gaining market share... and... doubling operating profits...

Each new US Accord is expected to earn Honda Japan around \$4000 – a sharp rise on the \$2000 profit for the outgoing model.

...The German car industry is reaping the rewards of years of painful restructuring, with its global standing intact and sales climbing. Industry organisation VDA said... although the sector still faces major difficulties, car and truck production this year should rise... to 5 million vehicles. This growth... is a victory for an industry which earlier this decade saw sales and profits dive on the back of high labour costs and weak economic growth... Stung by the poor performance of those years, German car companies undertook massive cost-cutting, slashing jobs, developing new relationships with suppliers and developing cars that are cheaper to produce. Over the past three years, the industry has invested ...\$NZ49 billion... in products and equipment... The VDA report follows half-year financial reports from companies such as Volkswagen and Mercedes-Benz, many of which reported double-digit profit rises.

...Mercedes-Benz... believes some producers of expensive vehicles will face problems. More competitors are fighting for a steady level of demand. In 1986 seven car-makers were competing in the top luxury segment, but ten years later there were 15 wanting the same business... Because of lack of growth at the top end of the market, Mercedes decided to "move down the pyramid" by introducing the new small A-Class... Meanwhile, in N[Z], new cars costing more than \$50,000 are taking a larger slice of the market. This year they account for 15[%] of total new car sales compared with 8... in 1992... [However, total sales] of new vehicles were... down... 16[% on last month, and down 2% on the same period last year]...

MERCEDES-BENZ buyers[in NZ] can't have heard the news. Sales figures say the new vehicle market is running on empty, but the luxury German marque is selling more new cars[here] than ever. Last month, 47 N[Z]ers bought a new Mercedes-Benz. Another 40-odd are going to buy one... this month... And already 65 have paid deposits on the company's new four-wheel-drive M Class – which doesn't get here until August [1998]. As a result of the demand, 'the luxury S-Class Mercedes-Benz range will soon be joined in NZ by its premium S600 model, which comes with everything that opens and shuts for \$279,000'... "I don't want to sound like we are boasting... But we are getting record inquiries and record sales. The sign-up rate for us at the moment is fantastic. The company puts the demand down to... the exposure the products are getting worldwide... But[previously] we haven't had the cars regularly available. Now that we are getting them we can be very competitive against the likes of Audi and BMW."

...['without doubt, the great Egyptian pyramids are testimony to a truly superior form of intelligence – the same can be said of the new BMW'.

... 'stands at the Detroit Motor Show change overnight so that there are always new displays next morning to keep America's television networks coming back. European shows stick to the script – what you see on the first day at Birmingham, Geneva, Paris or Frankfurt is pretty much what you get for the week.' Incidentally, i]nternational companies can hit problems when their slogans are translated into local languages. Bosses at G[M] couldn't figure why their Chevy Nova wasn't selling in South America – until they discovered that No Va in Spanish means "it won't go." And in Taiwan the Pepsi slogan "Come alive with the Pepsi generation" was transformed into "Pepsi will bring your ancestors back from the dead."

...Mercedes-Benz surrounded its stand... at the recent Tokyo motor show... with wooden poles with words of welcome written down them in various languages. But to most Japanese... the stand looked like a graveyard... [T]he poles were similar to burial messages used by Buddhists.

...German]'s Chancellor tried]... out Daimler Benz's new two-seat Mercedes Smart car during the opening of the Frankfurt Motor Show... [However,] Daimler Benz said it would delay the launch of its Smart mini-vehicle until October 1998, due to quality problems. The Smart, like the A-Class, tipped over during testing.

...Mercedes-Benz is showing its controversial A-class to potential N[Z] buyers – and assuring them that the car won't roll over at 60km/h as it did in Sweden recently... The car turned over when the driver performed a Scandinavian "moose" test – a quick, evasive turn to avoid a large animal or obstacle... The factory in Stuttgart has slowed production of the car so it can upgrade suspension and tyres and include as standard equipment an anti-skid system, which was going to be optional... [The] general manager of Mercedes-Benz in N[Z], said... the moose test... "...is a violent manoeuvre which isn't used as a benchmark. But since the modifications, the A-Class passed the test. It did so at more than 70km/h." ...The rolling... by five European motoring writers[, who all]... escaped injury... is the worst sort of publicity a car-maker could imagine. German

newspapers plastered pictures of the smashed A-Class across their pages... Subsequent tests... revealed that the tyres used on the damaged vehicle were too soft for extreme evasive manoeuvres... “We therefore immediately stopped using this make of tyre, and we[’ll] change the tyres on... about 1500 cars in all...” ...Industry analysts in Britain and Europe said that as long as future tests do not reveal similar problems, the A-Class should survive on the strength of Mercedes-Benz’ safety record and doubts about how the Swedish test was conducted... [A] Mercedes-Benz spokesman... was earlier quoted as saying the format used by the motoring writers, where the car was put through evasive lane-changing manoeuvres at about 60km/h without braking, was unrealistic. “You never drive like that in normal traffic,” he said... Last year, 10 Swedes died in road accidents involving elks and 5500 elks were killed in collisions with cars[(last year it was announced that ‘10 million birds are annually killed on British roads’)].

...The Trabant, a spluttering two-stroke... car with 1950s technology, has passed with flying colours the “moose-avoidance” test that a high-tech Mercedes-Benz model famously flunked... With about 20 horsepower, the Trabant may be the slowest car in Europe with top speeds of just over 100km/h... It was the world’s first mass-produced car with a plastic frame. East Germans had to wait up to 15 years for delivery of the cars, which have long since become a symbol of identity for thousands of easterners nostalgic for the communist past. Three million Trabis... were produced between 1957 and 1991, when the state-owned car factory closed... There are about one million still running... The... Trabant... [was] long derided as a mechanical joke... But in Stuttgart, headquarters for Daimler, not many people were laughing.

...If you are sufficiently brutal, it’s possible to turn any car on its side[so]... it would be sad if the recent publicity about a Swedish journalist managing to capsize the new A-Class... were to impact badly on a vehicle which is, on all the evidence, an outstandingly safe small car... The A-Class, with its canted engine designed to slide under the passenger compartment in a crash, incorporates many other safety features new to the small car market.

...Daimler-Benz AG said cancellations of orders for its... A-Class Mercedes subcompact[have] doubled to 2000, although analysts said the car... would likely weather the storm of negative publicity. The German automaker said on Tuesday it was suspending delivery of its A-Class... until February and would spend 100 million deutsche marks... this year and 200 million next year to relaunch a modified version of the car.

...[while independent sources were publicly stating that ‘production had been stopped due to major design faults because Mercedes cut corners from the start and existing models were to be recalled in order to be modified’, Mercedes was ‘humming over the latest crash test which rated its A-Class model the safest car in its class. It passed everything they threw at it.’

...‘The Opel research centre in Germany has started using the first of a new bunch of IBM super-computers for simulating crash tests and investigating vehicle dynamics. Each computer can perform more than 500 million calculations a second. Opel parent GM was so impressed that it will install its own in Detroit.’ By the way, a ‘two-year study found evidence that drivers were becoming ill when they drove their new cars. The study by AUS’s Commonwealth Scientific and Industrial Research Organisation found high levels of toxic emissions in cars for up to six months after they leave the showroom. The emissions include the cancer-causing toxin benzene, acetone, a mucosal irritant, ethylbenzene, a systemic toxic agent and xylene isomers, a foetal development toxic agent. “Sitting in a new car can expose you to levels of toxic emissions many times beyond health guideline goals. To avoid some exposure to this toxic cocktail, people who buy new cars should make sure there is plenty of outside air entering the vehicle while they drive, for at least six months.”

...‘Honda is recalling more than 500,000 passenger cars sold in Japan for defective audio equipment and a flawed engine oil seal. An electronic part of the audio unit supplied by Alpine for six models could heat up and cause speakers to catch fire. The oil seal flaw affects the Odyssey people-mover and American-made Accord. The recall doesn’t concern cars Honda NZ has sold new here, but it does affect used Honda imports.’ ● As if to prove that anything Honda can do it can do better, [t]he Ford Motor Company is voluntarily recalling more than one million vehicles in the US for safety-related defects.

...[Ford] is recalling 23,000 Galaxy people-movers in Germany. The reason? Rodents are wreaking havoc with the... under-bonnet insulation... [T]he silicone aroma attracts mice, which nibble at the insulation and scatter debris over the exhaust manifold. So far [4] fires have been recorded.

...The Euro-NCAP motor vehicle crash test... to determine the structural strength of a car’s bodywork... is again under fire from motor manufacturers... “We believe the test could actually lead to more people suffering serious injuries in road accidents than is already the case,”... says... [a] Daimler-Benz... board member... [Normal] road accidents often involve vehicles of different size and weight... Because of this, Mercedes-Benz believes larger cars need to have a more flexible structure... to absorb more impact energy... than a smaller vehicle... in order to provide adequate survival space in both vehicles... [But] NCAP tests do not take into consideration the effects of all vehicles in accidents involving two or more... In the NCAP test a car is driven against a reinforced barrier constructed from different material at high speed. Mercedes knows what has to be done to make all its vehicles compatible with the NCAP test. “That’s not the problem... If we were to simply comply with the test’s criteria, then Mercedes vehicles would doubtless excel in such tests, but more people would suffer serious injuries as a consequence.” Saab agrees. The Swedish company says it can either design and build safe cars or design cars to pass the NCAP test.

...The technical head of the A[US]n New Car Assessment Programme... (NCAP, which is jointly funded by state governments and automobile associations, [and] is based on American and European models; Japan began a similar programme in 1996)... – whose work consists of buckling in crash-test dummies [(‘that are close to a reconstruction of the human body and can cost up to \$1.5 million each’)] and sending them hurtling into immovable objects at around 60 km/h – says there are no accidents, only crashes. [He] says the NCAP has one simple aim: to make crash safety information available to consumers, which in turn gives consumers the right to make a choice and to choose safer cars. He would like to see A[US] and NZ] entering a mutually beneficial arrangement to share the expensive-to-obtain data[because]... it would make sense for the two countries to be close on safety standards... At present the information gathered by NCAP programmes is... of limited use because there is no single standard... If consumers in N[Z] are likely to be in for a long wait before any joint standards are achieved, [he] says NCAP has observed that some manufacturers in A[US] are now actively involved for the first time in “looking at crash safety and they have started to learn about what is happening to their product in the market place.” If car manufacturing trends are indeed becoming increasingly global, this can only be good news for those shelling out for what they hope will get them from A to B as safely as possible. In the meantime, [he] says, the best approach for consumers is to ask as many questions as possible of car dealers and to read whatever material is available on car safety. [Editor’s note: Material on car safety has been available since the year 1938, when the forerunner to Audi – ‘Auto Union AG – introduced front and side collisions, as well as rollover tests.’]

...Radical engineering, mixed with flair and a high level of safety have resulted in the arrival of the most significant small car in almost 40 years... [T]he man behind the \$3.75 billion A-Class project which includes a new plant, said it was a trend-setter for the future of car development... and would be regarded as an icon alongside the Volkswagen Beetle and the Mini. While expensive... [at] around \$45,000... in N[Z]... it would have more prestige than other small cars.

...Buying and running a new Mercedes-Benz in N[Z] now costs less. Since 1989 the price of a C-Class sedan has dropped by 22[%]; the E-Class is down 16[%] and the S-Class 15[%]... Parts prices have also taken a tumble... Assembly time for the... A-Class is down to 10 hours – 20 fewer than it takes to build the company’s larger models.

...Described as the most advanced car production facility in operation, the Mazda Hofu plant in western Japan has the largest metal press in the world... Mazda says producing a car now costs less. Previously it took ten months to change a manufacturing system for a new model – now it requires little more than three months... Three models can be produced on one body line and the overall production line has been halved in length...

Even though the assembly line runs slower than when the plant opened in 1982, efficiency is measured in terms of people and quality. Fewer staff are needed to operate the facility. Compared with most plants, Hoku uses three times as many robots... The body shop is now 100% automated. The... entire manufacturing process takes just 16 hours... All cars are[then] tested on a road circuit... [Speaking of car tests, there has been m]ore fallout from the prestigious NRMA... awards in A[US]. Holden is questioning NRMA... test procedures after its... all-new Commodore... failed to win the best family car award last week... "Perhaps the NRMA criteria do not match what the market is looking for in cars." But the NRMA fired back that its test procedures were exceptionally thorough. "Each car we drive covers a minimum distance of 1500km and is also performance-tested to very high standards," said a spokesman.

...Holden and Melbourne's Monash University have been studying the effects on the human body of car crashes for some years. The two recently turned their attention to the effectiveness of seatbelts. Now they are going on to bigger things – joining the A[US]n Government in a nearly \$2 million project to design the world's safest car.

...if you want what European NCAP tests say is the safest steel chariot to have a head-on crash in, you're going to have to start saving now for that Volvo S60.

...[NZ's Volvo distributor, Scandinavian Motors Ltd, has been inviting the country's movers and shakers – those people who are driving Audis, BMWs or Benzes and can shell out \$110,000 for a posh set of wheels – to drive the carmaker's new flagship, the S80 T6. A T6 has been parked at a marina south-east of Auckland. Potential owners were flown from the city by helicopter, given a drive around Maraetai Beach and Clevedon, and choppered back to the city.]

...[Volvo is appealing a decision by a German judge fining it more than \$50 million and preventing it from continuing to use the letters S, C or V to name its models. Mercedes-Benz brought the case to court, claiming it was the first carmaker to use the three letters and that customers could be confused if Volvo was to do so as well. The ruling applies only in Germany. The case brings to mind Peugeot's clever international patent many years ago enabling it to exclusively use the number "0" in the middle of three digits. That's why it has called its models the 203, 404, 405, 504 and so on. Porsche was one of the first carmakers to find out how secure Peugeot's patent was. It wanted to call its 1963 model the 901 but was forced to change it to the 911.] By the way, l]uxury convertible roadsters are as safe in a crash as big four-door sedans, says Germany's *Auto Motor und Sport*. The magazine crashed a Mercedes SLK, a BMW Z3 and a Porsche Boxster in 70km/h offset frontal accidents. The Boxster did best overall, while the Z3 fared worst.

...THE pace of advances in vehicle safety is so swift that it's only realistic to note that the average... motorist in a car seven or eight years old is at significantly more risk in an accident than the relatively few fortunates in a new or near-new vehicle... Every model launched makes significant gains on its predecessors. Anti-lock brakes, enabling the driver to steer while making an emergency stop, have become commonplace; passenger airbags now generally join driver's airbags even in cheaper models; the use of special steels and the computer analysis of vehicle structures makes today's passenger compartment... stronger but without weight penalty, while the controlled deformation of front and rear "crumple zones" to soften the initial impact of a crash has become even more sophisticated... Honda, the first Japanese company to use seatbelt pre-tensioners, has now come up with one of those "why didn't I think of that?" innovations... Its "air belt", which inflates across the chest and shoulder of its wearer upon impact, further cuts seatbelt slack, reduces pressure on the chest, serves as a cushion reducing head movement, and also absorbs kinetic energy as the inflation gases are released during deflation... [A]lready arriving... are BMW 5 and 7 Series models fitted with no less than eight air bags. While Volvo led the way in introducing side airbags, BMW now also has special airbags mounted in the A-pillar which upon side impact inflate diagonally across the side window to protect against head injuries... [T]horax bags to protect the chest are standard both front and rear... Saab... has also targeted the high incidence of neck injuries in crashes. Its new 9-5 premium class saloon incorporates a novel head restraint which upon impact moves forward to take up any space between the restraint and the passenger's head, reducing the potential for the excessive head movement which causes whiplash. Saab, 50% owned by G[M], joins Holden in concentrating... its safety research on answering the problems posed by the "real-life" accidents... [- such as] two Saab 9-5s[saying] hello... at 60km/h... [-] upon which they have extensive databases, rather than what they regard as some of the more questionable crash testing practices. The results of Holden's research[were] incorporated in the latest VT Commodore... which the company believes is at the leading edge of safety performance. [In related news, 'an Italian firm has invented a \$1500 jacket for motorcycle riders. The jacket has three airbags to cushion crashes.']

...BMW's C1 scooter is to go into production... The... company... will build up to 15,000 a year. The German Government has said riders will not have to wear helmets, thanks to the C1's roof and seatbelt. Government's in countries with poorer road safety records might not be so generous. [Meanwhile, 'sales for beleaguered carmaker Rover slumped by more than a quarter in Britain last year, according to latest figures from the Society of Motor Manufacturers and Traders. Rover, which has struggled since BMW took it over in 1994, sold 143,343 units, a drop of just over 26% on the previous year. The numbers give Rover just 6.25% of the 2.2 million new cars sold in Britain last year. The disappointing statistics came despite the launch of the new Rover 75 and 25 models, which company executives said earlier were notching up encouraging sales figures. Last June, BMW pledged about £3 billion over the next five years for its investment in the British auto sector in return for a Government grant of £50 million, conditional on the German company rescuing an ailing Rover factory in central England. The Government grant is being investigated by European regulators.']

...the good news for Rover is that its parent company, BMW, is committed to future development. The bad news is several thousand Rover employees and product suppliers in Britain will lose their jobs. The British carmaker has been haemorrhaging money for years, certainly since BMW bought it from British Aerospace for more than \$2 billion.']

...The Rover Group is on target to become Britain's largest export earner... [by] the year 2000[, overtaking]... British Aerospace... Booming Land Rover sales are set to take another leap with the arrival of the Freelander which goes on sale in Britain this week... Freelander is a £450 million investment – the largest expenditure for a Land Rover model... The five-door Freelander was the first real evidence of BMW and Rover cooperation. Rover... is understood to be in the running to buy Rolls-Royce, but... [the] corporate affairs director of the Rover Group... would not comment on this development. He also said there was no truth in the rumours that Chrysler in the US was about to acquire the Rover Group. "We have a joint engine development with Chrysler for the next generation Mini but beyond that we have had no discussions with Chrysler..."

...Chrysler importer Astre (NZ) Pty Ltd has been fined \$10,000 in the Auckland District Court for making misleading claims about Jeep prices. The company admitted two charges laid under the Fair Trading Act by the Commerce Commission... [In international news,] Rolls Royce posted net income of £96 million... in the first half, compared with a loss of £179 million after one-off charges a year ago. Earnings per share rose 40%...

Word] from Britain is that Rolls-Royce [- 'the ultimate British status symbol' –]will almost certainly be sold to a German car-maker... Rolls-Royce owner Vickers, the British defence company, says it can no longer afford to invest in new models... Ford... says it isn't a player... Favourite is BMW, which has an engineering agreement to supply engines to Rolls-Royce from next year... But industry watchers haven't ruled out Fiat and VW... Key bidders also include Mercedes-Benz and Toyota. Even a Saudi prince is said to be interested... [Incidentally,] Swiss newspapers reported yesterday... [that the] Saudi Defence Minister... hired 100 Mercedes for his 300-person entourage... [while] recuperating from a knee operation at a Geneva clinic... The cars were for ministers and other top brass who flew into Geneva on Saudi planes to comfort the 72-year-old prince, the brother of Saudi Arabia's King... The Mercedes fleet was brought in on trucks directly from Germany and most of the gleaming vehicles never even left the airport parking lot.

...[the merger of Daimler Benz and Chrysler Corp resulted in a lot of things, one of which was dual head offices. So, DaimlerChrysler has leased an Airbus 320 jet to ferry employees between Stuttgart and Detroit three times a week. The plane has room for 50 passengers. Each one travels first class.]

...*Even more EXCLUSIVE* ROLLS-ROYCE Silver Seraphs and Bentley Arnages fitted with BMW engines seem likely to become two of the most exclusive cars ever made – for the wrong reasons. The parent company, Vickers, this year sold Rolls-Royce to Volkswagen, and in the wake of that BMW has announced it will discontinue supply of the V12 and V8 powerplants. Unless that decision can be overturned, the BMW-powered V12 Seraph will be the shortest-lived Rolls-Royce model ever, having started production only this year. This would make the few hundred Seraph and Arnage models that have come off the Crewe production line in England this year collectors' items. The three NZ businessmen who will soon take delivery of their right-hand-drive, \$550,000 Seraphs are presumably very happy indeed. They now have not merely a luxury car, but a gilt-edged investment. Three BMW-powered Seraphs is all NZ will get. Reports say that under its contract with Rolls-Royce, BMW can cancel the engine deal within 12 months, which may leave VW insufficient time to build new powerplants. However, if this happens VW may consider using its upcoming new V12 motor, first shown in the VW roadster, for the Seraph. Another alternative, and one it has hinted at, is to get British engine-specialist Cosworth to build new motors. Cosworth is part of the Vickers group and comes with the sale. "It is going to be interesting to see what happens," says the person who is responsible for Rolls-Royce and Bentley in NZ. "Whether BMW can actually cancel the contract with Rolls-Royce to supply the motors will obviously be a point of litigation." VW also faces some last-minute hurdles with other companies. It still has to reach an agreement with Rolls-Royce plc, the aircraft-engine manufacturer, which owns the famous marque's brand name. Rolls-Royce plc and BMW are partners in a jet-engine venture. Whatever it does, VW is sure to increase Rolls-Royce and Bentley production from the present 2000 cars a year to 10,000. It intends to build a cheaper Bentley, smaller than today's model'...

Jaguar's foray into the smaller luxury car market could well be a success, but analysts have warned that pressure to build... abroad could tarnish its image as a pedigree British carmaker. A debate is currently raging between Jaguar Cars Ltd and its U[S] parent Ford Motor Co over where to build the X400... as part of a... [plan to] double output to 200,000 by the year 2000... "If it's not built in Britain, it could be a marketing disaster..." said[the] head of European research at LMC International... But... [most analysts] were betting that Ford would win the argument to build overseas on the grounds of cheaper costs... A likely possibility would be to use an existing Ford car-building platform, which would be cheaper than building a new plant... The... decision to invest "hundreds of millions of pounds" in another new model marked Ford's confidence in Jaguar's turnaround from years of losses. Ford paid \$US2.5 billion... for Jaguar in 1989.

...[in a 'decision that echoed Renault's purchase of a 36.8% stake in Nissan Motor last year', 'GM took a 20-odd per cent share in Subaru some months ago. It said the agreement would allow both carmakers to share technology and cooperate on new models. The first of those models has been confirmed. It will be a four-wheel-drive people-mover based on the Subaru Legacy stationwagon. Expect to see it in some markets in about three years.' Meanwhile, 'German-US car giant DaimlerChrysler has knocked down the price for a stake in Japan's Mitsubishi Motors. However, DaimlerChrysler would still have a tough job making it pay, say analysts. The cost of its 34% stake in Japan's fourth-largest car maker was dropped by 10% to 202.4 billion yen on Friday as Mitsubishi became mired in a cover-up scandal. Despite the gloom, Mitsubishi Motors' stock rose 20 yen to close at 404 yen on the Tokyo Stock Exchange on Friday, partly on hopes for a better management. The task ahead at Mitsubishi was formidable, experts said. Mitsubishi's passenger car operations were very weak. Its European and AUSn sales were also sluggish. It had reported a group net loss of 23.33 billion yen in the year to March 31. Big obstacles lay ahead, said an auto analyst at Merrill Lynch Japan. For instance, Swedish truck maker Volvo AB, which has a 5% stake in Mitsubishi Motors, was in direct competition with DaimlerChrysler in the truck market'.

...Mitsubishi Motors will face criminal charges over a car defect cover-up that stretches back 20 years, the first time a carmaker will be charged for a recall violation in Japan, say Government officials. Since last month, Mitsubishi has been forced to recall 620,000 vehicles for defects, including failing brakes, fuel leaks and malfunctioning clutches. The recalls came only after Government inspectors found documents about car defects hidden in a company locker room. Last week, the company submitted to the Government its internal investigation that found workers and managers had knowingly and systematically filed away customer complaints about car defects. The embarrassing disclosure strikes a stunning contrast with the image of the nearly perfect cars, disciplined autoworkers and technological innovation that has been the pillar of Japan's carmaking reputation both at home and abroad. US federal car safety officials have also asked Mitsubishi to vouch for the quality of cars it has sold in the US. About 45,000 of the cars affected by the recent recalls were exported to the US. Consumer activists say the Japanese Government has too little muscle in cracking down on recall violations. For example, the Transport Ministry is considering filing a complaint demanding from Mitsubishi Motors a fine for up to 1 million yen per recall case. But the ministry is including only 4 verified violations. An additional case would seek a separate, one-time fine of 200,000 yen against the company for filing false reports. The ministry also says that since the violations were systematic, they have no plans to prosecute any individual Mitsubishi executives. Only one other company, Fuji Heavy Industries, has been penalised for not reporting a recall. Fuji was reprimanded but never criminally charged. Mitsubishi sales have not taken a hit from the cover-up so far. Protests against product liability are rare in Japan, boycotts even rarer. Lawsuits common in such cases in the US are drawn-out, painful processes that most people try to avoid. A 28-year-old software salesman who owns 2 Mitsubishis, shrugged off the scandal. "It's probably happening at the other automakers," he said. "But something is rotten at the core of big companies," said the secretary-general of the grassroots Consumers Union of Japan.')

...South Korea's Kia Group has asked a Seoul court to freeze its loan payments and keep its executives in place as it digs out from under... debt. The action came one week before a grace period on its debts expired... Kia is the first victim of South Korean car-makers' zealous expansion in the face of a global glut in car production and a slowing domestic market. Things will get worse over the next three years, as Samsung gradually adds the capacity to make 500,000 cars a year. By 2001, South Korea will have the capacity to make more than 6 million cars, but not much more than half of it is likely to be used... This looming over-capacity has already forced car-makers to slash prices in South Korea. Firms are suffering because they no longer enjoy cheap, hard-working labour. Factories are heavily overmanned: a South Korean car-worker assembled, on average, 26 cars last year, while somebody working at Nissan's British plant made nearly three times as many... Many analysts think that by 2000 South Korea can afford to have only two or three car-makers at best, compared with today's five... [P]oliticians want Kia to be taken over by Samsung... The prospect makes its rivals, Hyundai and Daewoo, shudder... Kia, however, would rather recover on its own.

...A Seoul court has frozen the assets of South Korea's third-biggest car-maker, Kia Motors, and two other firms in the group – Kia Steel Co and the trading firm Kia Intertrade. The decision protects the assets from creditors. The group has debts of about 9.5 trillion won.

...The South Korean creditors of Kia Motors Corporation and Asia Motors Co say they will put the sister companies into court receivership by the weekend, bringing a conclusion to a crisis... Their decision followed an announcement by[the] Finance Minister... that the Government wanted the two car makers put into receivership to... calm financial markets.

...Only a few years ago... [the company's] chairman and CEO... was known as "Korea's Iacocca", lionised for having taken Kia Motors from near-bankruptcy in the early 80s to glory as South Korea's second-largest carmaker... No more. [He] has stumbled, rather grandly... [from] star to scapegoat. In October, the Government finally stepped in, pushing Kia into receivership and [its chairman] out of a job. But by then the damage was done. The confidence of the world's investors was shattered... It is an ignominious end to a career that started at Kia 40 years ago, when [he] began work making bicycles. Kia's founder wanted the company to become a carmaker... Kia's record is miserable. But with eight large conglomerates having collapsed in South Korea this year, there is plenty of blame to apportion. In the wreckage, South Koreans will look for a new approach to business... Had [its chairman] known when to slow down and when to leave, Kia might have pointed them in the right direction. Instead, the stubborn [chairman] has come to stand for South Korea's difficulties. His downfall might have made reform remoter than ever... [●] Ssangyong Motor Co says it and its creditor banks have agreed on a takeover by the giant Daewoo Group. Two trillion won... of its debts would be transferred to Daewoo, with the remaining 1.4 trillion won staying with the Ssangyong Group.

...[‘at a union office of Daewoo Motors, just outside of Seoul, a big “wanted” poster hangs on a wall. It promises a \$US500 reward for information on the whereabouts of the company’s former chairman. Next to a picture of the white-haired former chairman is a list of his alleged misdeeds: bribery, embezzlement of \$US20 billion, destruction of family lives and paralysis of the national economy. Daewoo Motors is bankrupt and up for auction, and the union blames the former chairman of the sprawling conglomerate. Daewoo was South Korea’s second-largest company before becoming swamped by debt. This week prosecutors investigating Daewoo’s collapse indicted 34 former executives and auditors – but not the chairman. They said that because they did not know where he was, it was impossible to request extradition. The news did not go down well with Daewoo workers – 1750 of whom were laid off last week. On Tuesday they hurled firebombs and set ablaze police buses blocking a march by 1000 protesters at the main plant. Since the 65-year-old former chairman fled South Korea, he’s been seen only a few times – once at a mansion in Nice, and more recently at a golf course in Florida. Glimpses of the former chairman living the good life infuriate Daewoo’s workers and a three-man “arrest squad” has flown to Paris to search for him. “We will search the whole world to find and punish him,” says a union leader. Three years ago a group of business professors heaped praise on him in a book, describing him as “a visionary with passion and belief.” The former Daewoo patriarch is, in some ways, the classic fallen hero. Until recently, he and his company were a huge success story – a symbol of Korea’s dramatic transformation from an impoverished, war-torn economy into a world powerhouse. The chairman’s story is legend. In 1967 he started a small trading house in a Seoul back alley with little money and five employees. Thirty years later, Daewoo had grown into a global empire with 320,000 workers in 110 countries. But Daewoo proved to be a house of cards. It was a *chaebol*, a favoured conglomerate nurtured by the South Korean Government with contracts and cheap money. The chairman built the company through acquisitions, borrowing heavily to buy troubled companies that his management team could not turn around. His strategy of building market share, rather than profits, failed. And he never learned to say no to a deal. Even when both Daewoo and the Korean economy were sinking, the chairman bought the ailing Ssang Yong Motors. It was \$US2 billion in debt. By the time the game was up, Daewoo’s debts totalled \$US80 billion. To cover the red ink, prosecutors believe the chairman conspired to inflate Daewoo’s assets (and reduce its liabilities) by \$US40 billion – which, if proven, would be the largest book-keeping fraud in history. The word Daewoo means “Great Universe.” Daewoo made everything from cars to TVs to ships and computers. Watching his empire and his reputation grow, the chairman may have come to believe he was invincible. Renowned for his work ethic, he travelled constantly and made Daewoo a major corporate force in Russia and China’]...

Production of cars in China is expected to jump from the current 200,000 units a year to 1.5 million within the next decade. By the year 2010, [annual] sales of new motor vehicles in China will have risen to 3.5 million units.

...[‘Malaysian carmaker Proton, looking at the enormous growth potential in China, notes that China has 11 million millionaires.’

...‘so you think world vehicle production is confined to a handful of countries, eh? A French survey shows that 28 countries build passenger cars and commercial vehicles. 50% of them build more than 1 million vehicles annually, with the top four being the US (11,773,082), Japan (10,049,792), Germany (4,952,000) and France (4,517,900). AUS (285,200) was placed 22nd.’]

...New car sales in A[US] this year are expected to top 710,000. The market is as buoyant as it’s ever been. Hyundai, Honda, Subaru and Kia... all [reported] a record... The N[Z] market will struggle to reach 62,000 new car sales in 1997. Point to ponder: A[US] has about five times NZ’s population and nearly 12 times our new car sales.

...[‘*Love American Style* A columnist recently said that the automobile is the “handiest tool ever devised for the pursuit of that unholy, unwholesome, all-American trinity of sex, speed and status.” Which leads us to the latest American bumper sticker: “You’ll Get Me Out of My Car When You Pry My Cold, Dead, Foot from the Accelerator.” Americans sure love their cars. There are more than 200 million in the US, and more cars registered in Los Angeles than people.’ Speaking of car registration, w]e still have x, y, and z to go but the present letter-number combinations of [NZ’s] number-plates are running out fast. Transport officials calculate that combinations in this series of vehicle number plates will be exhausted at the turn of the century. The most likely successor to the two-letter and four-number combination is a switch to three numbers and three letters. This will make ZZ9999 the last plate in the line and... subject to legislative approval... AAA1 the first of the new series... [It] will create 17 million new plates, which should last for about 30 years... But those hoping to reserve ZZ9999 or AAA1 for themselves are too late. They were both sold for about \$300 the year after personalised plates came on the market, in 1987... The existing plate series – which is now at the WLs – was introduced in 1962 and since then six million plates have been issued... for cars, trucks and buses... at an average of 200,000 a year... and about two million of those are still on the road... That rate is expected to increase to about 250,000 a year... The... three-letter configuration is bound to create some interesting words, but... the Motor Registration Centre... would have the right to withdraw anything that was offensive or deemed unacceptable... And when the new number plate series runs out? It’s not something... the centre’s general manager... plans to be around to worry about. “They’ll last a lifetime... and then someone else can figure it out,” he said. [● ‘40 years ago, just 38,000 NZers owned motor vehicles.’ Today, ‘NZ is in the top-10 of car-owning countries. Lebanon heads the list, with 732 cars for every 1000 people. Brunei comes next with 576, followed by Luxembourg (566), Italy, (528), Germany (506), AUS (488), Iceland (487), the US (487), NZ (470) and Switzerland (469). Britain, despite its huge new-car market, has just 371 cars for every 1000 people, behind Slovenia with 384, Finland with 378 and Japan with 376’ – despite its huge carmaking industry. ‘The distribution of cars worldwide has changed over the years. In 1950, the US had 75.7% of the world’s cars, Europe had 18.8%, Canada 3.7%, Japan 0.3%, and the rest of the world 1.5%. In 1990, America had 20.1%, Europe 38.9%, Japan 27.8%, Canada 4.0% and the rest 9.3%.’ ‘Auckland’s vehicle fleet is growing at 5% a year’.]

...Next time you sit in an Auckland traffic jam, ponder the fact that the world’s car population will soon reach 500 million[(up from ‘250 million in 1970’)]. And this excludes trucks, motorcycles, tuk-tuks and rickshaws. When... nations like China and India adopt Western-size vehicle fleets, car numbers will double – and the environment will be threatened. - 1997

Auckland motorway traffic increased tenfold between 1989 and 1994 and [the Auckland City Council manager of transport planning] says that traffic is “threatening the quality” of the city’s life and environment.

...Long-standing plans for a new four-lane highway in eastern Auckland have run up against a 500-strong lobby group... Schemes for a highway from Tamaki Drive to Panmure, following the railway for much of the route, have been on the planners’ books for 30 years... Much of the land needed for the route, worth about \$16 million, is already owned by the [Auckland City C]ouncil or the Government. The council has sought to preserve the route, which crosses Hobson Bay, Orakei Basin and Purewa Creek, with a roading designation in the district plan but the[lobby] group has appealed to the Planning Tribunal. The two are also arguing before the Auckland Regional Council, whose proposed coastal plan, if not altered, would upset possible reclamation in one of the waterways to be crossed. The highway would need a new reclamation or more likely a concrete pile structure, beside the railway across the waterways... The[lobby] group is also concerned about the noise and visual pollution of a road, and the environmental damage its reclamations or concrete pile structures would cause to waterways... However... the road had strong support... [because building it is] essential to ease traffic congestion, improve road safety, and to help the area’s economic development. These issues outweighed the environmental concerns... At peak times, motorists faced delays of up to 20 minutes on Kepa Rd, Orakei. Residents were particularly concerned about heavy vehicles through the area, although counts showed trucks make up less than 2[%] of the 22,000 vehicles using Kepa Rd daily. Existing main roads could not be widened sufficiently... [The Auckland City Council’s transport planning manager] believes the road, if it proceeds, is at least five years away... The Auckland City Council recently watered down its resolve to get on with the \$120 million job... Although it would ease congestion through the eastern corridor... it would boost the rush-hour crush at the city end by 40[%].

...About 300 people attended a... Stop the Eastern Motorway... meeting last night... The meeting... chairman... wanted a “death blow” dealt to the... 8.6km, four-lane road... for reasons including the environmental damage it would wreak on the waterways it crossed, its escalating cost, and the disincentive it would be to the development of public transport... [By the way, a NZ] First spokesman wants... to tackle a big infrastructure project – such as a four-lane motorway running the length of the North Island... [Such a] motorway would not only mean more efficient transport and jobs but would also “excite people about N[Z] technological prowess.” ...the[party’s] associate spokesman on finance and revenue... also suggested a tunnel between Wellington and Marlborough.

...A proposal for a \$40 million... 650m bypass... tunnel to relieve traffic congestion in Newmarket has been scrapped. It was dropped by an Auckland City Council committee despite a recommendation by traffic planners that a \$100,000 study be carried out... The Mayor of Auckland... said the proposal would be fraught with difficulties – it was expensive, there was nowhere for traffic to go once it emerged from the tunnel and it would meet hefty opposition from affected property owners... [However, the] way for demolition of [an] old corner pub was cleared yesterday by a... Council decision to iron out the dog-legged intersection at Symonds St and Khyber Pass Rd. The city’s traffic planners say traffic flow will be improved for 12 years before it is clogged again by cars. But if nothing is done, commuters could have to wait at the lights for 15 minutes. The decision came in spite of last-minute pleas from local business and residents’ groups, public transport campaigners and the Auckland branch of the Historic Places Trust for the council to wait until a public meeting had been held on the issue... The local groups say the council’s plans for eight lanes east of the intersection[that leads to Newmarket] will create a motorway and destroy the character of the area... [V]ehicles now waited at the intersection for 1m 20s... The new design aims for a 43s delay... A senior traffic planner... said the solution was also relatively cheap at \$3.5 million, with an application to Transfund expected to recoup half of that.

...A \$6.5 million blow-out in the Auckland City Council’s roading budget has led to 12 projects being deferred... The largest was the \$3.9 million fixing of the under-strength Sylvia Park bridge at Great South Rd, which must be done to handle traffic from the new south-eastern arterial... More than half of the cost overrun is the result of a \$3.4 million increase in this year’s budget for the south-eastern arterial route... because of inadequate monitoring of the project’s cashflow. Overall, the arterial will cost \$2 million more than the expected \$37.5 million, with additional management costs accounting for \$1 million... The council also has not received roading subsidies it expected from Transfund, according to a report to the works and services committee.

...Transfund, an arm of Transit N[Z] dedicated to purchasing roading and transport services, told... the Minister of Transport... in briefing papers that the possible growth in urban traffic requires serious consideration... Traffic volumes could increase 50[%] in urban areas in the next 20 years... if present fuel prices and traffic growth remain the same in real terms... and cities would not be able to cope...

N[Z]’s... under-funded and... overused... transport system... works like this. The Government pays[for] the cost of state highways. If they need repair, the Government fixes them. But the moment that state highway veers away and an intersecting road heads off in its own direction, the local ratepayers are responsible for the wear and tear. More than that – they have to pay to build it in the first place. Central government will subsidise part of the cost. An example of this is the Ewen bridge, recently constructed a little south of the Hutt City centre, across the Hutt River. The Government paid less than half of the cost. However, forty thousand vehicles a day stream across [i]t... I haven’t stopped every car in a day and quizzed the drivers to find their home address but I know that many, perhaps most, of th[em]... came from outside the rating area for Hutt City.

...A second Auckland harbour crossing has been put on the “back burner” for too long, says the Mayor of North Shore City... [B]ecause of the problems involved, it had been put in the too-difficult basket... But [he] said now was the time to begin thinking about options... With the strong sustained growth of the North Shore and Rodney County, the situation would be critical 10 years from now... He had asked Transit N[Z] to look at the Birkenhead-Meola Reef route as a “serious option” because it could be the cheapest and could be linked to the North-western Motorway[(which leads to the upper-harbour or Greenhithe Bridge that is, technically, a *second Auckland harbour crossing*!)]... Getting the necessary consents could be an uphill battle... Apart from the cost of a new bridge (which... would be between \$800 million and \$1 billion), there would be the environmental cost... [The mayor] foresaw two to three years of public debate before even a willingness arose to undertake the project... [The first harbour] bridge is not the problem. It has a peak capacity of about 10,000 vehicles an hour, theoretically even higher... About 8800 vehicles an hour cross the[eight-lane] bridge during peak times and that has not changed since 1987. A yearly traffic growth of 2.5 to 2.6[%] is met through a lengthening of the traditional peak period... It is the bridge approaches which cannot cope. No more vehicles can get through... “spaghetti junction” at peak times... In the morning, city-bound... queues back up five or six kilometres... Last year the regional land transport committee decided a second crossing would not be built until at least 2011.

...The North Shore City Council was told yesterday that traffic congestion and delays would become unacceptable to motorists without the proposed northern “super highway.” ...The... \$135 million State Highway 1 realignment project... is to begin at the Northern Motorway interchange at Greville Rd, south of Albany township, and extend 26km to... the Puhoi turnout... Transit N[Z]... managers said the existing highway and the Greville Rd routes could not cope with the present traffic congestion and delays would increase rapidly... The most substantial delays... occur during holiday periods when queues extend for several kilometres and it takes motorists up to five hours to get through... [The situation isn’t helped by the fact that] the existing routes had poor accident records, particularly in the case of State Highway 1 where the rate was twice the national average. The new road would be significantly safer... The... four-lane road is expected to meet the region’s needs for 25 years... [T]he entire project will be finished by 2001-2002... Once the new road is complete, the existing State Highway 1 will continue to be used as a local road... The Environment Court is expected to take up to four weeks to hear the appeal of an Orewa farmer... against the highway’s proposed route along the boundary of his farm... [Meanwhile, r]apid progress is being made on the 6.8km Pokeno-Mercer State Highway 1 realignment... Transit’s regional highways engineer... said the job had run into huge problems because of the weak, wet terrain the four-lane highway was being built on... Because of the terrain problems the cost is now expected to be about \$23.5 million. The highway begins at the bottom of the Bombay Hills[south of Auckland,] and the Pokeno bypass leg should be completed by[next] March or April... The divided highway would replace a section of State Highway 1 on which there had been many fatal accidents... The realignment project is also changing the character of the region, with a lot of old established small enterprises fearful that the loss of passing traffic spells the end of business[for Pokeno].

...A Mt Wellington road was closed for two hours yesterday morning after a truck carrying containers of toxic chemical lost part of its load. About 30 litres of a dilute mixture of chromic and phosphoric acid spilled for 75m along Sylvia Park Rd, in an industrial area of the east Auckland suburb. A witness to the spill... said the 20-litre plastic containers of acid began dropping off the truck as it came through a roundabout... The truck’s driver was alerted to the spill by the driver of a truck behind, who blocked the traffic and helped to pick the containers off the road... [B]oth drivers and a passenger were taken to hospital as a precautionary measure after handling the leaking bottles. They were later discharged. The acid, used to treat metals, can cause nausea and skin irritation. The Otahuhu Fire Service used a pumice-like material to absorb the acid, which was then swept up to ensure it did not enter the stormwater drains. Police said the driver of the truck was charged with failing to secure a load. The charge carries a maximum penalty of \$2000 and possible loss of licence.

...Heavy trucks account for virtually all the damage inflicted on[NZ] roads. Yet on local roads they pay only about half of that cost in the form of... road user charges... So... ratepayers are subsidising... the truck operators... It seems to me unfair.

...After three rounds of talks aimed at breaking a deadlock, the... French Government said yesterday that a mediator should be appointed to help to end a six-day protest by truck drivers... In the meantime, unions called on truckers to continue staging blockades across the country. The

companies have agreed to allow truckers to retire at 55 instead of 60 but they want the state to foot the bill. Unions said talks were stuck over... working hours and payment for all working hours, including time spent loading. The P[M]... has called on both sides to end the dispute quickly.

...France's economy faces a further battering after the breakdown yesterday of Government-mediated talks between striking truck drivers and employers to end an 11-day dispute... And snow and sleet in several areas of northern and eastern France, including some Paris suburbs, brought new misery to motorists trying to find a way around the truckers' blockades on main roads and at key industrial sites... Truckers have demanded a pay rise of up to 23[%] but employers have offered only 1[%]... The truckers vowed to maintain... about 250 roadblocks around the country... The roadblocks have forced some factories to close and cut supplies of perishable goods ranging from fish to fruit... Farmers reported shortages of animal feed as grain shipments were hit. The strike has also disrupted mail deliveries... Barricades around petrol depots and 12 of 13 refineries across France have closed up to 2000 of the country's 18,000 petrol stations... School buses stopped running in the south-eastern Drome department because of lack of fuel... Petrol rationing was imposed in some areas so supplies could be maintained for fire engines and ambulances. Tempers flared when frustrated motorists saw official cars drive up to petrol stations and receive precious fuel while they were denied... The police were called to several petrol stations where irate motorists refused to allow emergency vehicles, including doctors' cars, to jump queues... The strike and a parallel one in Denmark[have] caused problems in other European countries... The Danish truck drivers are fighting for higher allowances for working outside of Denmark. They receive 150 kroner (\$36.72) a day, a sum which is scheduled to be abolished on January 1, 1997.

...British police yesterday diverted about 800 freight lorries into holding areas near the ports of Dover and Ramsgate because the French truckers' strike had spread traffic chaos across the channel. The trucks entered the ports only as places became available on a ferry. Police put the delay for freight leaving Dover at 12 hours... [● A British lorry driver has been] charged with five counts of death by dangerous driving after [the arm of a] digger he was transporting swung out and sliced tops off oncoming cars[(a similar accident has killed a girl walking along an Auckland footpath).

...an] 11-year-old girl die[d and 3] people were injured when [a 7]-tonne truck crashed into their car at [a]toll booth on [the]M25 near Dartford... TRUCK drivers lifted most of their roadblocks across France after unions signed a deal with employers... to end a 12-day strike... 2 1/2 hours after talks ended at the Transport Ministry, the number of roadblocks had fallen to 46... "Our feeling is that our profession has won dignity and recognition in these 12 days of struggle," said[a] spokesman for the biggest union, the Socialist-led CFDT... Negotiators for the truckers had signed five agreements covering retirement at 55... for drivers with 25 years' service, sick pay, travel expenses, union rights and a ban on Sunday driving... The unions said that[the agreements] would be equivalent to at least a 10% pay rise... [P]olitical commentators said [the strike had highlighted the PM's] weakness, with both sides leaning on the government to sign cheques to settle the dispute. The state made most of the concessions in the private sector dispute by agreeing to cut payroll taxes on employers and help finance early retirement for truckers. It also had to step in to resolve the working hours issue by decree... The strike in the crucial pre-Christmas commercial period cost European food and haulage industries tens of millions of dollars a day, prompting protests from France's neighbours. It stranded up to 14,000 Spanish trucks and left about 90% of Portugal's total truck fleet idle. Belgian ports were clogged by British-bound lorries avoiding France... [The PM], calling for a rapid return to normal, said: "I am happy that the efforts made by all negotiating partners are now apparently crowned by success. I think a balanced solution has been found." But even as the truckers began going home, unions for oil industry workers said they would consult their members about staging their own disruptions at refineries across the country to press their demands over pay, retirement age and job cuts. That came as... the... industry ministry said up to 10,000 petrol stations... had run dry or were about to close and it would take two to three days for supplies to resume fully... [In local news, a]most half the ambulances in the central North Island have been struck by engine failure following the change to unleaded petrol. St John Ambulance staff believe the same problem will gradually affect about 300,000 car owners – 15[%] of all motorists – who use a recommended additive called Valvemaster to replace the missing lead. But oil companies and Valvemaster said last night there was no evidence that the ambulance engine failures had been caused by either unleaded petrol or the additive, although BP said it was willing to investigate further... The Valvemaster project manager... said if anything the detergent properties of Valvemaster would help to prevent sticking... About 30 Bedford ambulances in St John's Midland fleet have been affected by valve sticking, which has caused engines to misfire and has bent the rods which push the valves open. The volunteer ambulance organisation estimates it has spent \$5000 fixing serious... push-rod... damage... in three ambulances and installing \$340 fuel-conditioning units in all the Bedfords to stop the problem. The Midland fleet manager... said... "Our vehicles are quite high mileage – 5000 or 6000km a month – and that's probably why we've struck the problem first in comparison to someone having an old HG Holden out in his shed. It'll catch up for sure with people who are running older cars. It might be[next] year, it might be the year after but once they start knocking up some miles it'll start to show." Continuing problems with unleaded petrol have also affected jet boat operators around Queenstown, who are lobbying the Government to allow them to use a mix of petrol and aviation fuel. Kawarau Jet Services said yesterday that two jet boat engines had been wrecked by high speed detonation problems in the new fuel. The company's workshop and development supervisor... said the boats were now running on two-thirds petrol, one-third aviation fuel. St John Ambulance and Kawarau Jet Services are served by Mobil, which could not be contacted for comment last night.

...Like drivers everywhere, Queenstowners travelling long-distance often put up notices in backpackers', offering rides on a share-petrol basis. But enforcement officials are determined to stamp out the practice – as demonstrated by the revelation this week of an undercover [']God Squad' sting which cost an unsuspecting Queenstown man \$1,300. The police commercial vehicle investigation unit (CVIU) sting... could have been worse – his car could have been confiscated. CVIU went to great lengths to entrap the Queenstown, who had a permanent card on noticeboards around town offering a fortnightly ride to Invercargill for \$12. According to the Queenstown man – who won't be named, to protect his reputation – the elaborate charade started with a phone call from an unknown man wanting a ride for "his niece". But when the "niece" was dropped off in Invercargill, the driver got a sudden tap on his window. "You're busted, buddy," said a plainclothes cop wearing a police cap. The man claims this undercover policeman – and another – had tailed him all the way south, a drive of more than two hours... [H]e was "devastated and stunned" by CVIU's action. He can't believe they went to such lengths to entrap him for a victimless offence. If he'd been approached and told he was breaking the law he'd have stopped immediately, he told *MOUNTAIN SCENE* this week. [The s]enior constable... in charge of the Invercargill vehicle unit who made the arrest, says CVIU got a complaint from a reputable Queenstown organisation about the offender touting for business[, and]... the only way police could prove the case was to put someone in the vehicle for the ride. "What it (the law) is designed to do is keep the rat-bags out of the industry." ...Christchurch police said drivers who accepted ANY offering at all from passengers could theoretically be prosecuted. Asked by *MOUNTAIN SCENE* if accepting even a bag of lollies in return for a ride would be illegal, [a Christchurch]... senior sergeant... said that could be considered charging for freight. "It depends on how far you want to take it to the extreme," he said... "Yes, we look after the local operators – you bet. We've got to protect the tourist industry and the licensed operators..." Other Queenstowners this week described the CVIU sting as smacking of Al Capone tactics. [A]Queenstown backpacker pioneer... says he was incredulous on first hearing the driver had been convicted and fined without a warning[, while a]... Queenstown tour operator and prominent conservationist... said he thought it was justice gone wrong. For as long as cars have been on the road, drivers have shared fuel costs with passengers. This wasn't a case of a commercial business, more a car pooling arrangement, [the operator] said. Some local authorities, including Auckland, encouraged pooling. The use of police resources – the woman in the car, and two officers tailing the unsuspecting driver for two hours – was "absolutely pathetic,"... [Speaking of tailing drivers, in Britain three people have died following a] hundred-vehicle pile-up at [the]junction of M1 and A11...

[British] police blame speeding drivers for mayhem on M42 at Alvechurch in which three die and 62[are] injured in fog.

...[‘one person died and about 80 were injured in a 150-car pile-up in thick fog in eastern Spain’. In further news from overseas,] Calcutta rickshaw owners are to stage a one-day protest strike tomorrow over attempts to ban their vehicles from the city’s roads. The Marxist state government has proposed to outlaw the slow-moving vehicles, a symbol of the... Indian city, because... [the] estimated 30,000-plus rickshaw pullers... clog up traffic.

...Ponsonby residents upset by a planned \$45 parking permit have been urged to consider creative solutions to street congestion. Property owners in the fashionable Auckland suburb face parking restrictions under an Auckland City Council plan designed to accommodate residents and visitors to Ponsonby Rd cafes. The plan covers the length of the busy road... and a short way into St Marys Bay. Residents near the main roads would be required to buy... annual parking permits. One permit a household is proposed, and the fee will cover council administration costs. The system already operates in [three Auckland suburbs] and parts of Wellington. The chairman of the Western Bays community board... accepted yesterday that the plan created problems for households with more than one vehicle... [Being an old suburb, many of the roads are narrow with little or no off-street parking, and a lot of Ponsonby houses contain groups of flatters instead of families – although families are just as likely to possess more than one car. The chairman] thought ideas could emerge from consultation over the plan... “It might not be a perfect system but we have to start somewhere.” ...Council officials say the use of permits is the fairest solution in a neighbourhood with limited off-street parking. They argue that households with two or more cars may be taking parks from neighbours[, and]... that Ponsonby residents were getting off cheaply... Auckland University studies suggested that the land value of Ponsonby parking spaces could be as much as \$10,000. A fairer annual rent for space would be closer to \$1000[– which is approximately the price of a new bicycle (and accessories), an inner-city congestion solution.]

...A West Auckland cycleway which ends abruptly at a busy motorway off-ramp poses a death threat to cyclists. Many motorists whizzing down the Waterview off-ramp are unaware that cyclists might be crossing at the bottom of the hill [in order to] continue along Great North Rd... Work on the cycle way stopped two years ago and plans for its completion are in limbo. Auckland City Council’s senior transportation planner... says the cycleway... was never completed because of reconstruction of the motorway off-ramp. [The planner] says the council wants to use nearby Unitec land for the cycleway but the tertiary institution is stalling... Unitec’s director of facilities... says the tertiary institution is not being “deliberately obstructive.” Unitec administrators are concerned that the proposed cycleway would require making a hole through an existing wall and would take cyclists close to a recreation area used by students. Others suggest the institution’s main concern is that access through the north wall will increase the risk of psychiatric patients from the Mason Clinic escaping into Unitec grounds. The other option is for the council to build a cantilevered pathway over the off-ramp for cyclists and pedestrians... the cost[of which] is estimated at between \$100,000 and \$500,000. Nothing is likely to be done before the council produces a cycle and pedestrian strategy at the start of next year... “The underlying thing is to encourage cycling and to provide safe opportunities around the city,” [the assistant planner] says. Meanwhile, cyclists will continue to risk their lives at the Waterview off-ramp. The debate over the Waterview cycleway reflects the general state of planning and design for cycling in Auckland. No one is prepared to take the blame for Auckland’s lack of user-friendly cycle routes; everyone is quick to criticise others. Motorists tend to hate cyclists, cyclists hate motorists, and cycle lobby groups blame local authorities... Local authorities try to appease all parties – and fail... Cycle Action, says no consideration is given to cyclists’ needs... [T]he solution Aucklandwide is to make lanes wider so that cyclists can travel safely[, but]... Auckland’s traffic lay-out makes it difficult... [The ARC] is trying to produce cycle-friendly maps... [A cycling] network should provide as direct a route as possible for cycling commuters. Recreational bikeways are likely to be away from roads... Before Auckland starts developing any strategy it would do well to look at overseas experience... In other countries, like Germany, millions of dollars has gone into building cycle routes[(‘bike lanes run parallel with footpaths all over the wide streets of Munich – they even have their own traffic lights’). Several AUS]n states are streets ahead of Auckland in promoting cycling... Victoria puts \$NZ2.25 million a year into recreational cycle routes and \$1.12 million into cycle routes along Melbourne roads. Melbourne-based organisation Bicycle Victoria is lobbying for the metropolitan fund to rise to \$7.86 million... Around 50[%] of adult Melburnians own a bicycle... Cities like Brisbane (which has more than 300km of cycleways) have bike routes alongside their rivers... [and land b]eside motorways is ideal for building a comprehensive cycling network... INTERNATIONAL groups like Critical Mass have opted for confrontational methods to show motorists that cyclists are legitimate road users. The group raised the heckles of drivers in March when Mass riders took up lanes in central Auckland in the evening rush-hour.

...[‘Dirty war waged on cyclists “Wild westies” and teenage hoon drivers are out to get cyclists on Waitakere roads. In just one weekend last month, two cyclists ended up at North Shore Hospital with injuries relating to road rage. One had a hunting slug pellet, fired by a passing motorist, surgically removed from his backside. The other had gravel extricated from his buttocks after leaping out of the way of a car. The manager of Hedgehog Bikes in New Lynn often heard of cyclists out west having cans of fruit thrown at them. A senior salesman at Pins Cycles in Kelston knew of cyclists in the area who had been knocked off their bikes. Some of the cyclists had recently started taking down the numberplates of dangerous drivers. But Henderson police said they did not get many complaints from cyclists about motorists’ behaviour. Waitakere City Council’s road safety coordinator was also unaware of the cyclists’ concerns. An Auckland cycling club president said he did not believe cyclists in the eastern and southern parts of Auckland were being targeted by motorists.’]

...IF safety is your concern don’t cycle on Auckland’s roads. More than 1000 cyclists are injured every year on the city’s roads – a high number given that around 15,000 people are estimated to bike to work or school regularly. Children are twice as likely to end up[in] hospital after an accident. Last year 154 children aged between 5 and 14 were admitted to Auckland hospitals after falling or being knocked from bikes. Eleven cyclists were killed in N[Z] last year and around 340 made injury claims totalling more than \$1.2 million. The Accident Compensation Corporation is concerned. In 1994 it issued bumper stickers to cycle retailers, cyclists and motorists as part of its Look 4 Bikes campaign. Last year the corporation launched another campaign... aimed at ensuring cyclists’ helmets fit snugly. It’s against the law not to wear a helmet. Failure to do so incurs a \$35 penalty and serious infringements can result in a district court fine of \$500. A 1995 [ARC] survey shows 86[%] of Auckland cyclists wear a helmet. Apart from the law, you’re mad not to wear one. Most fatal accidents are the result of crashes between cars and cyclists. Cyclists’ injuries tend to be severe – around 50[%] involve head injuries. - 1996

Most cycle helmets are being worn wrongly, four years after publication of a [LTSA] booklet detailing how to wear them, says a safety campaigner... [T]he figure of 90[%]... of... school pupils... wearing them wrongly had not changed since 1994... This is keeping the number of cyclist head injuries high... She wants retailers trained in her fitting method, which she says is backed by medical specialists, scientists and school principals. Police should also be trained to teach schoolchildren... [how to wear their helmets correctly. Incidentally, j]obless people in Whangarei are being pushed to get on their bikes[by an] Employment Service... scheme[that] will see... new bicycles handed out... To qualify for one of the \$370 bikes, the person must first prove that mobility is a major obstacle to full-time employment. Those who qualify are issued with a bicycle once they start work, but if they leave the job within three months they lose the bike. Otherwise it is theirs to keep... Cyclists are also provided with wet-weather gear, a cycle helmet and spare chain. They are... taught road safety... and... shown how to maintain their bikes[, although a]... bicycle shop has... offered free monthly maintenance checks... [T]he service’s Whangarei branch came up with the idea because about 30[%] of the city’s 2400 unemployed claimed lack of transport was their main barrier to getting a job... The... pilot programme[, which] is on trial in the city for 10 months... has funding for 100 bikes... and, if successful, could be extended to other parts of the country.

...Auckland transport planners are aiming to cut the danger factor in cycling around the city... The council's strategic plan says it is committed to developing walking and cycling as modes of transport and recreation... Auckland City's works chairman... said 50 years of dominance by the car had reduced cycling and walking levels in the city to insignificance compared with vehicle use and the council wanted to redress the imbalance... 2[%] of the 315,000 population... [in] Auckland City... (in 1991) cycled to work and 7[%] walked... There is 19km of cycleways. Of this, 14.4km is shared with pedestrians and only 7.5km is feasible for commuting. There is 2312km of footpaths... About \$720,000 would be spent on walkways and \$120,000 on cycle measures in the[plan's] first year but no estimates have been prepared for future years... Several "strategic link" paths for cycles and pedestrians would in future years cut across and around the city, often through green areas, or beside railways and motorways, and they would have lights. "Regional links," proposed along arterial roads, would be the frame of the cycling network. They would have wide kerb-side lanes, cycle advance lines, smooth gutter edges, and regular road sweeping... The Automobile Association, however, said local authority proposals in several areas to improve cycle safety and allow cyclists to move more quickly through built-up area[s] raised serious questions about the safety of other road users. One was who would have the right of way when motorists or pedestrians were using the same section of road or crossing a cycle route... 83 cyclists and 183 pedestrians were injured in accidents[in Auckland City] in 1995.

...Four pedestrians have been killed on the Southern Motorway near Papatoetoe... since the Manukau City Council closed a subway... An Otara woman whose 12-year-old son was killed in October[last year] trying to dash between high-speed traffic to visit a friend in Papatoetoe wants the council to reconsider... [and] has gathered about 2000 signatures on a petition... In November 1994, the council's resource management committee narrowly voted to shut the subway, amid accusations of racism. Some Papatoetoe residents saw the subway as a source of crime and vandalism in their suburb. People on the Otara side regarded it as a vital accessway, particularly for children attending Papatoetoe High School. The alternative crossings involve diversions of several kilometres. Since the death of [the 12-year-old]... Transit has installed barbed wired-topped fences around the subway but children can easily bypass these by climbing across the lower fences of neighbouring properties... [By the way, the] child in Social Welfare care who was hit by a... four-wheel-drive vehicle... while wandering on an Auckland motorway is the sister of another girl critically hurt in a similar accident almost four years ago. Both children are intellectually handicapped. The child hurt on Sunday is mute and, although she is 12, has an intellectual age of 18 months... [She] left Starship children's hospital yesterday... The... girl and her nine-year-old sister... were left behind when their parents returned to the Cook Islands to study theology in 1991... [The younger girl] was taken back to the islands by her father after her accident... [The older] girl... was living with an aunt... but... ran away... on Sunday...

A schoolgirl aged 12 has played a major part in securing safer roads outside rural schools in the Western Bay of Plenty. The district council will spend \$80,000... this financial year... [after the girl] presented a 600-signature petition... Her stand was in memory of her close friend Sammi-Ann Rikihana, who was killed last year while walking near Te Puna School.

...Community Support Road Safety Ltd has been contracted by the Safer Streets Trust, which funds school visits by police education officers. The... Auckland fundraising company... was criticised by the... Consumers Institute... for a road safety telemarketing campaign it ran in April, when homes and businesses were phoned and asked for donations towards road safety equipment for schools. At that stage the schools knew nothing about the fundraising plan undertaken in their name – and the institute said the drive was unnecessary anyway because equipment was already supplied free through a joint police-Caltex initiative... [Furthermore, the] institute says it found no evidence that Auckland schools lacked... safety equipment. It also advises people to "think twice about donating to any 'charity' which refuses to say what proportion of funds will go to the cause." ...About... 90 South Auckland and North Shore schools... are still waiting for equipment to be distributed from the telemarketing campaign. A company co-ordinator... said \$10,000 worth of exercise books, flags and first aid kits would be distributed this week. He would not say how much of the money went to the trust... [In related news, a] court battle is looming between the Manukau City Council and the Ministry of Education over a \$180,000 pedestrian crossing for children at a new Howick primary school. The traffic lights-controlled crossing on the busy intersection of East Tamaki Rd and Kilkenny Drive will be installed in just over two months through a special loan raised by the council... The four-lane [East Tamaki Rd] is a 70km/h zone and "very busy" most of the day... Point View School, located about 25m from the intersection, opened two weeks ago. Construction is yet to be completed but classes for 145 pupils are already running... [T]he school could cater for 260 pupils when completed. The row over who foots the bill for the crossing has been going on since building began in June last year... Manukau believes that since the ministry developed the school it had to pay "fair and reasonable" costs for the crossing... The ministry does not think it should pay for the crossing but has offered... \$53,333 towards the cost... Council officials are seeking legal advice with a view to taking the ministry to the Environment Court.

...Robert... [was] attacked following a road accident on Saturday night. He had stopped after hitting a woman in his car on a Glen Innes pedestrian crossing and when he went to her aid he and a man at the roadside got into a dispute. As his wife looked on in horror, [Robert] fell and cracked his head on the road, entering a deep coma... At 7pm, surrounded by... family members, the life-support machine was turned off and [Robert] died within minutes. Tears flowed freely at... [Robert's] family home in Glen Innes yesterday as they remembered the machine operator "with a heart of gold." ...[his] brother... said Robert abhorred violence and would "sooner run the other way than get involved in a fight." While the family accepted he might have faced charges after the crash they are still grappling with how a trip to the stock car races turned to tragedy... Robert and... his wife... had recently separated but were hoping for a reconciliation. [His wife] is distraught that they will not have that second chance... The woman pedestrian was[also] taken to hospital, but her injuries are not thought to be life-threatening... A 35-year-old Glen Innes man appeared in the Auckland District Court yesterday charged with assault and was remanded on bail. Police are considering more serious charges.

...The death of an Auckland woman crossing a busy central city street has prompted a police warning that the battle between motorists and pedestrians is putting lives at risk... Jaywalking by pedestrians and impatient motorists at traffic lights are an ongoing problem, say the police... The traffic-signalling system meant pedestrians and motorists faced each other in the middle of central city streets at the same time. [The s]uperintendent... of the Auckland police traffic division, said that when the wait signal flashed[to walk] pedestrians were already launched on to the crossing. At the same time motorists got a green light, but they were supposed to give way to pedestrians. The Auckland City Council traffic signals manager... said the signalling system was copied from A[US], but the council was considering making changes to improve safety. "There should also be more education for drivers that they must watch for pedestrians."

...The Minister of Transport... has signalled a hefty increase in fines for people caught driving causing harm or death and tougher action against repeat offenders. [The minister] told a driver education conference in Wellington yesterday that the measures would be in legislation to be introduced by the end of the year.

...[our correspondent 'in Sydney reports on AUSn and British driver education initiatives. We take advice from investment planners and are coached by sports experts. We learn to cook from qualified chefs. Personal trainers show us how to exercise. Yet something as important as teaching a young person the difficult and dangerous task of controlling a motor vehicle is often left to those steeped in incompetence – dad, mum, friend or sibling. To ensure motorists have the competence to stay out of trouble, a new licensing law comes into effect in AUS on July 1. Before gaining a provisional licence, applicants are required to complete a computer-based driver knowledge test, a minimum of 50 hours of learner driving in different conditions (recorded in a log book on the honour system) and the usual too-easy on-road ability test. Hopefully, the tougher demands on L-platers will produce better-prepared young drivers, although many experts say the new system does not go far enough – because, with inexperienced instruction, the wrong attitudes and bad habits of one generation are still passed on to the next. For city people hoping to give an L-plater some quality driving time, finding deserted streets in the suburbs is nigh impossible. Picture the fraught scenario of a raw novice in a frightening and foreign environment attempting to use a complicated device for the first

time with other traffic coming from every which way. No thanks. A far safer and less stressful alternative in Sydney is the old St Ives police driver training facility, now used by Honda Australia Roadcraft Training for learner and post-licence defensive training. Learners can concentrate fully on coming to grips with the mysteries of operating the clutch and accelerator pedals in some unison, without being concerned about a Mack truck looming large in their mirrors or dad yelling at them. Instructors gently ease the learners into the demanding task ahead. Useful classroom lessons with a whiteboard involving hypotheticals at red lights and T-junctions serve as an adjunct to the one-on-one practical work. Back in the car considerable emphasis is placed on reversing because it's inherently unsafe and difficult. Did you know that the first motoring incident for most people is reversing into a small pole? The student, at the wheel, also learns about stopping distances. Finally, after showing competence in the basic tasks, the learner is taken on to the driving track to develop observation skills while steering, braking and changing gears. For parents it's an investment in stress avoidance and there can be no better way of equipping a learner with the fundamentals. Meantime, road safety authorities in Britain cite ample evidence that many new drivers learn unsatisfactory techniques. Too many ill-prepared drivers are taking the licence test and less than half of drivers pass first time. In one in 10 tests in Britain, examiners have to intervene physically on safety grounds – by grabbing the handbrake or steering wheel, or using dual controls. A tougher, more realistic driving exam will soon be put in place. It is currently possible to pass the British driving test, as it is in AUS (and NZ) without ever having driven in the dark, a fact that shows up starkly in statistics on young driver crashes. The new exam will also place more emphasis on taking greater social responsibilities towards fellow citizens, particularly those who are more vulnerable. Another priority is to foster a culture that values on-going driver education. British safety authorities now concede there could be a wider role for advanced driver courses in fostering this culture. In AUS literally anyone can set up in the business of advancing skills.']

...Driving instructors fear bad learner drivers could pass their licence tests with flying colours under plans to privatise licence testing. The Government is considering a proposal to hand driver's licence testing from police to private companies... [S]chools would have to form a separate company if they wanted to examine drivers too... Already, 30[%] of tests are done privately in Auckland and the Waikato... [The] Drivers Institute fears driving standards could drop if the police pull out... [Its] chief executive... said there was... potential for corruption in a competitive market... The Automobile Association – which confirmed it is one of 118 organisations which wants to examine learner drivers – also fears licences could be tarnished under privatisation... [The] AA... chief executive, said... “...someone who is teaching a bad driver... may be tempted to pass them because they've spent a lot of money on their course... No one should get into licence testing because they're motivated by profit.” ...[Incidentally, a] German road safety expert... says... [15] years of age is too young to hold a driver's licence... [The] engineering vice-president for Mercedes-Benz, believes the legal driving age should be 18, despite the fact that drivers aged 18 to 21 fall into the danger category. “The older you are the more responsibility you have,” he says... [D]river training has a major role in road safety. In Germany learner drivers need to spend about \$NZ3000 for tuition before they are allowed to sit their licence.

...[the] legendary German rally driver... [who] is in Auckland this week, showing Audi owners how to become better drivers... still likes testing his 50-year-old reflexes at speed – but the... man who won four world rally championships... believes... N[Z]'s... legal driving age... is too young to be behind the wheel. “These young guys, they don't realise how dangerous it is to be on the roads. The legal driving age in Germany is 18. There is no way in Europe we would... make it younger.” [‘18 is also the age limit in Denmark, Finland, France, Holland, Norway, Sweden, and Victoria (AUS). The minimum licensing age is 17 in Britain, Israel, New Jersey (US), NSW, QLD, WA, Tasmania and the ACT; 16 in SA, NT and most of Canada; 15 in NZ and the US states of Hawaii, Idaho, Montana, New Mexico and Sth Carolina. In Sth Dakota (US) people can drive at the age of 14’. ■ The state of California has issued six drivers' licences in the name of Jesus Christ.']

...Several states, concerned at statistics which show more young people are killed in the US by car crashes than by the combined total of Aids, drugs and firearms, are introducing tougher driver-training measures... Novices get a learner's permit at 16, an intermediate licence six months later (this requires a passenger 21 years or older to be in the car) and a full licence at 18. Michigan's graduated licensing law, introduced in April, requires 50 hours of practice driving with a parent or guardian, at least 10 hours of night driving and a period where participants must not have crashed nor be[e]n... booked before a full licence is granted... The programme... called Licensed to Learn... contrasts sharply with... the... NZ Government's move to increase the minimum driving age...

First-time drivers will be most affected by Government plans to toughen driver licensing... [The] Minister of Transport... yesterday confirmed that the driving age would be lifted from 15 to 17 if new licence plans proposed by transport officials are accepted... Raising the age to 17 was “a compromise.” It would save \$86 million in road crash costs a year. But the change would have an impact on young rural drivers in particular... Both the [AA] and driving instructors argue that the minimum driving age should be set at the school-leaving age – at present 16... Under the sweeping restructuring plans, more than 70,000 new drivers a year will have to pass two separate driving tests – after three months and again a year later – before they can graduate to a full licence... “This should mean drivers are more competent on the roads[– although, ‘under the proposals, a NZer who is 15 years and 9 months old will still be able to get behind the wheel of a car’].” ...all learner drivers – including for the first time those over 25 – will be banned from drinking alcohol while on a restricted licence. All [learners will also] have to attach “L”... or “R”... licence plates to their vehicles... If the plans proceed unamended... more than two million... N[Z]ers will have to carry their licence with them and will be slapped with an instant... fine if caught driving without it... Admitting that some of the plans would be controversial, [the minister] unveiled plans to discard the paper lifetime licence and introduce a plastic, credit card style licence with a barcode and photograph... costing about \$35... Drivers will have to sit an eye test every 10 years to renew their licence. But because of the cost they will not be forced to sit further tests once they have a full licence. Older drivers will be exempted from retesting until they turn 75, but they will find it harder to retain their licences after that, facing tough tests every five years.

...Every N[Z] driver will have to find \$60 to pay for a new credit-card style, photographic driver's licence, as part of a new Government road safety plan... Legislation due in Parliament later this year will begin the reform of driver licensing, the biggest since “lifetime licences” were introduced 10 years ago. The new licence will come into force in the first half of 1999... The plastic card will last 10 years and carry a signature... The chief executive of the Consumers Institute... said... that the \$60 fee seemed high and the Government should justify it... An industry source said while manufacturing such a card would cost around \$20, putting in a national system for processing and holding the information would make up the rest... Fears that the new cards would be used for data matching between Government departments were quashed by the Minister of Transport... who said they would only carry licence details... [The] Assistant Commissioner... said police were “thrilled”. “We have been enforcing the law with one hand tied behind our back,” he said... Among other changes, the licence age limit will increase from 15 to 16, and will be tougher to get. Police will be able to... [stop] drivers for up to 15 minutes for an identity check... [and impose] a \$55 instant fine for not carrying a licence... Licences will be suspended for 28 days when: • Drivers refuse to supply a blood sample. • Tests show more than twice the legal alcohol limit. • Drivers exceed the speed limit by more than 50 km/h. To effect the 28-day suspension, police will seize the driver's licence and send it to the [LTSA]. The driver will be issued a temporary licence valid for seven days and a suspension notice... Police [can also] impound... cars for 28 days if the driver is disqualified or unlicensed... Overseas [licences will be] valid for three months (down from one year) before a N[Z] licence is needed.

...Every 10 years, N[Z] drivers who wait until the last minute may have to spend their birthday getting their licence renewed... But experts[also] want all N[Z]ers to sit a driving test, either practical or written, to check their road knowledge every decade. This happens in nine American states... [The LTSA] says it would be costly – at \$4.8 million a year, or \$20 a test – and would not necessarily save lives. [In addition, the LTSA's] policy manager... says overseas research found that drivers often swot hard before each exam “and then they forget everything they've learned.”

...However... a member of the W[HO]... argues: “Every fatal accident costs \$2.4 million. The[refore the] cost of retesting drivers is a small price to pay.” ...[Furthermore, he believes the minimum age] should remain at 15. He says the most dangerous drivers in N[Z] are aged 20 to 24... [H]e fears that by raising the age to 17, new drivers will have less time to perfect their driving skills before they hit the risky age bracket... A newspaper survey last year found that 80[%] of the 50,000 respondents wanted the minimum driving age raised, while 86[%] said photographs should be placed on licences.

...[photo driver licences enable easy and effective roadside identification of drivers, which makes it much more difficult for disqualified and unlicensed drivers to flout the law and put innocent lives at risk. This group of drivers was responsible for killing 52 people and injuring a further 250 last year alone].

...it ‘was revealed yesterday that police caught nearly 130 unlicensed or disqualified drivers every day – or 36,000 unlicensed and 11,000 disqualified drivers in the past 12 months. These categories account for 10% of road deaths last year’]...

A disqualified driver caught driving a carload of other disqualified drivers told the police it was his turn to drive... The man had eight previous convictions[. It is estimated that ‘there are 8000 disqualified drivers who reoffend.’ Last year ‘a judge in the Whangarei District Court told a man facing his 27th conviction for driving while disqualified that he wished he could confiscate the man’s vehicle – but he did not have the power to’].

At least one in 10 cars in parts of Auckland and Northland is on the road illegally, despite major vehicle licensing changes aimed at making enforcement easier... The last big [LTSA] survey, in 1995, found 16,908 expired warrants of fitness and 10,681 unregistered vehicles among 579,000 stopped over four weeks... but... a... [recent] survey... has dismayed safety officials... Of 836 vehicles at three South and West Auckland shopping centre car parks, 82 vehicles lacked valid... certificates – an average fail rate of 9.8[% compared with the LTSA figure of 4.8%]... Twenty vehicles in 164 at two Whangarei car parks set a sorry 12.2[%] fail rate... the Road Safety Trust[’s chairperson]... said such “sad” findings showed a need for more policing “so driving becomes a privilege again and not a right.” ...Unwarranted and unregistered cars were predictably more common in poorer areas... Drivers face fines of \$150 for having no inspection certificate and \$200 for no registration... At present... the... registration fee... is... \$157.75[for 12 months for standard cars, or ‘about \$60 more for motorbikes under 50cc or less; \$70 more for motorbikes greater than 50cc’]...

A loophole where motorists could reregister their vehicles months after the expiry date for a further 12 months was closed on Monday... [In related news, old] cars will have to limp along for warrants of fitness only... once a year, instead of every six months... if new [LTSA] proposals are accepted... The authority also proposes that owners of new cars will not need to renew their warrants for three years. However, the longer time-span between inspections means safety checks will be more vigorous.

...N[Z]’s biggest-selling car company has taken aim at insurance companies which fit second-hand parts when repairing damaged vehicles... Toyota N[Z]’s managing director, said last week he was disturbed at the number of insurance companies adopting this practice. “One insurance company even has a substantial shareholding in a company set up to import these crashed or suspect parts... One can only wonder if customers are aware that this is happening to their vehicles... We wouldn’t argue with the sale of a second hand mirror, but we do have concerns about the sale of second hand parts for body or mechanical repairs, particularly where the part is safety related and may have come from a crashed vehicle or be to an incorrect specification... Any accidents caused by unmatched suspension specifications or by parts previously cut out of a... wreck and spliced on to the family runabout are unlikely to be recognised in an accident report. They will be put down to bad luck or bad driving... In the aviation industry it is generally illegal to fit imitation or second-hand parts for obvious safety reasons. But in N[Z] on any one day there were 100 times more people travelling by car than travelling by plane. While I don’t expect a law to force motorists to fit genuine replacement parts, we would expect insurance companies to be more responsible to ensure standards are maintained.”

...OWNERS of some family cars and wagons face higher insurance premiums – depending on the make and model – because of the widely differing prices vehicle manufacturers charge for spare parts. Insurance companies say some parts prices are excessive... [but] made it plain they regarded the cost of all new car parts as too high... [Y]ou could buy for around \$500 a new clothes drier, which was a sophisticated piece of technology incorporating electronic sensors, several cabinet panels, a motor, heater and a fan. “But all you would get from the car makers for the same price is a bit of bent metal or plastic. Spare parts are one area which must be very, very profitable for car makers.” ...However, [if you agree that the price of spare parts (and insurance premiums) are excessive for cars, be thankful you don’t own a ‘quarter million dollar 40-tonne truck.

...each day is a real-life catwalk for the thousands of truckers who ply NZ roads. They’re competing in a rolling beauty parade. “It’s simple really, good looking trucks get business,” says Provincial Freightlines’ managing director, who explains that this is the reason behind the country’s top beauty contest for trucks – the NZ Trucking magazine-Bridgestone/Firestone Top Truck Award. The winner of this year’s grand prize – \$10,000 worth of commercial tyres, the trucking equivalent of a cosmetic makeover – spends countless hours grooming his two-year-old Mack CH600 Elite. Eye-catching features of the big red Mack powered by a 454bhp V-Mac engine are alloy wheels, extra lighting and a host of chrome additions. The winner is a self-confessed truck fanatic driving 110,000kms each year on air suspension between Auckland, South Waikato and the Bay of Plenty, and taking his 40-tonne “baby” home at weekends to work on it – he even landscaped his driveway to accommodate its five-axle step-deck curtainsided B-train.’

...the term ROAD-TRAINS is given to a series of trucks or vans, equipped to travel on roads. They are used for the movement of stock (each can carry a thousand sheep or several hundred cattle), and sometimes merchandise, in remote parts of AUS where railways are not available. A typical road-train consists of a diesel-powered prime mover of around 110 kilowatts, equipped with hydraulic brakes, and three or four trailers with Westinghouse air-brakes. Trailers can be double-decked and divided into compartments for even load distribution. Large pneumatic tyres are used to help prevent stock damage in transit.’ However, while stock animals are protected, the road-trains ‘run over many wild animals while driving through the NW Territory dessert at night.’

...‘They lumber along our highways and are sometimes hard to get past, but trucks are still the backbone of our transport system. About 80% of NZ’s freight goes by road so plans to make trucks even bigger are expected to make most businesses happy even if other road users aren’t. The LTSA last week released a discussion paper on the size of vehicles allowed on NZ roads. It includes a proposal from Transit NZ to increase truck sizes on selected routes by 5 metres and 18 tonnes – creating 62-tonne, 25m-long trucks (current limits on axle weight mean a large truck can carry only around 20 tonnes, or half its weight; a 62-tonne truck could carry 30 tonnes). For many firms the benefits are obvious. A logging truck could take another 12 tonnes of logs. Introducing bigger trucks to NZ’s roads could boost the economy by almost \$1 billion and create 33,000 new jobs, a parliamentary select committee has been told. But the Automobile Association condemns the idea saying the extra stopping distance and overtaking room required by the trucks would make them dangerous.’]

...a third of logging trucks on N[Z] roads are dangerously unstable when carrying a full load of short logs, and police are attending an average of three accidents a week involving the vehicles. Many trucks are rolling and losing their loads, and amid fears for public safety, police and the [LTSA] have given the forestry industry a week to fix the problem or the trucks could be taken off the road... There were about 650 logging trucks on the country’s roads and... [the] head of the commercial vehicle investigation unit, said one in 11 of them would roll each year. “That’s quite frightening.”

...[‘a Northland truck driver has been convicted of dangerous driving causing death after his overloaded trailer rolled and spilled its logs as it was going through a curve. Alan Jackson, who was driving home from work in the opposite direction, was killed instantly when his car was crushed. A witness following the truck estimated it had been driving at more than 100 km/h with a load that appeared unstable. However, Mr Jackson’s widow said she did not blame the driver. “I don’t want to see him jailed. He didn’t deliberately set out to do anything wrong.” She hoped the verdict would make logging truck drivers and companies more cautious.’]

...‘a guilty verdict against the truck driver whose load of logs crushed four Auckland women in their car brought tears of relief and anger from relatives yesterday. In the Tauranga District Court, the judge found the driver, aged 55, guilty of four charges of careless driving causing death, two of careless driving causing injury and one of making a false entry in his log book. He was remanded until June 9 for sentencing. The judge said he was satisfied the truck would not have rolled if it had not been travelling at more than the legal 90km/h speed limit. Old school friends Joyce Corless, Patricia Audain, Meryl Spencer and Patricia Towers, all in their late 60s, were crushed when the fully laden Rotorua Forest Haulage Ltd B-train – a tractor unit towing two trailers – rolled on a gentle left-hand curve on State Highway 2 at Apata, between Katikati and Tauranga, last May 25, spilling logs onto their car. Two Waihi men travelling in another vehicle suffered minor injuries. The widower of Patricia Towers – who was driving the car – said the verdict made the family feel better, but nothing would bring the lives back. “That’s something we’ve got to live with. But the Government has got to do something about 60 logging trucks overturning in one year.” A daughter of Patsy Audain said her family were upset that neither the driver’s family nor his company had apologised to the dead women’s families. “We’ve been sitting in court with them all week. Not one of them has offered us an olive branch. That hurts us.” The driver’s family declined to comment after the verdict. The driver had got up about 4 am to start work in Rotorua an hour later, and had travelled that day to Te Kuiti, Kawhia, Pokeno and Hunua before heading to Tauranga with the load of logs. The false entry in his log book meant police had not been able to determine exactly how long he had been driving that day. But it was clear he had been awake for more than 13 hours when the accident occurred.’ Truckies are only ‘allowed to drive for a maximum of 5 1/2 consecutive hours (after which they must have at least a 1/2 hour break away from their truck), and a maximum of 11 hours driving – or 14 hours on duty – in a 24-hour period.’

...the ‘Rotorua father of four daughters whose logging truck rolled and killed four women has been sent to jail for six weeks and disqualified from driving for one year. The maximum penalty on the driving counts is three months’ imprisonment, a \$4500 fine and mandatory disqualification for six months. The judge said the driver, who has previous driving convictions, was before the court on a specific charge. A more serious one entailing greater penalties had not been laid. However, his carelessness was “at the upper end of the range.” On the log book charge, he imposed a \$200 fine and an additional one month’s disqualification. Later, Mrs Corless’ son said he did not think the driver should be made a scapegoat for the whole industry but said the LTSA “and the rest of those people” should be held accountable. He called for the removal from roads of “dangerous” B-trains which were classed in the worst 2% of the logging fleet. They roll on average once a week.’ ● There were ‘118 truck-related deaths in NZ in 1995 – a 15-year high’...

‘Cornerstone rule of driving: stick to the left unless passing. A truck and trailer carrying building-site huts and hurtling along what is popularly known as the fast lane at 100 km/h caused some anxious moments on the Southern Motorway the other day. The truck’s load appeared so insecure that drivers following him backed off and those in the centre lane dived towards the inside. Two deaths on the motorway this year have involved trucks travelling in the fast lane. The LTSA says that next year highway patrol officers will be cracking down on trucks hogging the fast lane. Why not force trucks on a multi-lane highway to use the inside lane where they would have traffic on only one side? AUS, Britain, Europe and America do this. The only exception in Auckland’s case would be the Nelson St off-ramp, probably the only exit off a fast lane in the developed world.’]

...Speeding truck drivers are in the gun from the police following a damning parliamentary report on the high number of crashes... The police and the [LTSA] have implemented or are looking at all 74 recommendations put forward by the transport select committee’s report... [U]nder review is maximum speeds for heavy trucks. Limits... are[currently] 80km/h... for eight-axle trucks and trailers... or 90km/h [for all other trucks]... Some truck drivers want the limit to be increased to 100km/h – the same as for cars... A national survey of... trucks found that 30[%] were unsafe. The faults included inadequate brakes, steering faults, worn tyres, insecure loads and overloading.

...YOU may not be able to get the police around after your house has been burgled, but if you drive a truck that weighs too much, watch out. Police are taking to the roads to crack down on commercial vehicle offences. It may seem an anomaly, but according to Police National Headquarters, it is not... “Police recognise that the transport industry has a huge impact on N[Z], from damage to the roading network from heavy trucks, to public safety. The chances of a motorist in a car surviving a smash with a truck are very slim – we need to make the industry as safe as we can.” ...An extra 21 officers joined the unit during the past financial year, and another 20 officers were set to join this year, taking the number patrolling the commercial trucking routes and weighbridges to 85. And while penalties of about \$1 million a month were dished out... the extra staff had led to a big reduction in offending. In the first quarter of the 1996-97 year, the unit stopped 17,293 commercial vehicles and detected 5013 offences – a rate of 28%. In the past quarter... 69,555 vehicles were stopped and 7987 offences detected, an offending rate of 11.4%... The unit was charged with monitoring driving hours, the transportation of loads and dangerous goods, passenger safety, road user charges and appropriate licenses, vehicle fitness and weight limits. It also investigated crashes involving commercial vehicles... Today, the unit’s annual share of the police budget was \$10m... compared with \$35m for drink and drug driving offending... [The head of the unit] said there were three groups of commercial vehicle offenders – the inadvertent, the blindly indifferent, and the deliberate. One operator clocked up 130 offences in the past 12 months... The new staff were introduced to address the high level of unpaid road user charges, estimated to be between \$40 million and \$80m.

...The Government will next month issue options for how[the country’s ‘92,000km of’] roads should be funded and managed, says the Minister of Transport... The options range from creating a new state-owned enterprise... to manage state and local roads, a mix of local authority trading enterprises... and state enterprises, [or]maintaining the status quo... [A] study raised the option of putting an end to paying for roads through rates. Home and landowners pay \$300 million towards the roading network... The study had concluded that on various classes of road, users should directly pay the proper costs for their road use... [The minister said:] “It’s fair to say that some of the options are likely to lead to an increase in road-user charges and petrol tax, but the overall economic effect may well be small if we are prepared to take out the roading component of rates.” ...If the Government adopted all the suggestions... Aucklanders would... pay more than their country cousins...

A major issue facing urban transport around the world and one that is likely to confront Auckland motorists is that of pricing. If motorists had to cover the full cost of car use – including the cost of pollution, parking, and other external costs – commuters may well opt for residential work that reduces the need to travel... AUCKLANDERS’ perceived right to drive to and from work is likely to be challenged by the findings of a Ministry of Transport report evaluating alternative... funding methods. The report, due for release next week, will attempt to quantify the true social, economic and environmental cost of commuting and examine ways of recovering those costs from motorists. Measures are likely to include regional petrol taxes, parking taxes and road tolls... Unacceptable motorway congestion – defined [when traffic speeds average] less than 46km/h – has increased tenfold since 1984 and will, according to traffic planners, get worse as Auckland adds the equivalent of Dunedin’s population every few years. A recent joint Government and Auckland taskforce review of Auckland transport concluded that the city is grinding to a halt as increasing numbers of commuters abandon public transport in favour of cars. It was unanimous in its findings that urgent action must be taken to reduce congestion, and that the best way to achieve that may lie in recovering the true costs of congestion from motorists. [The ARC] environment manager... says there is no one solution to Auckland transport woes... In a recent paper to a land transport conference in Wellington, [he] said the seeds of Auckland’s transport crisis were sown in the 1960s and are strikingly similar to problems now experienced in many cities in the U[S]. And that, he says, is not surprising given that Auckland’s transport plan came straight off the drawing boards of American transport engineers. After... W[W2, the US] embarked on a freeway building programme of unprecedented proportion, linking one end of the country with the other. Two decades later, the wisdom of freeways was being challenged. Freeways... were not solving problems but creating them... [The Auckland] decision to pursue the motorway option was based in part on the prediction that employment in the central business district would reach 100,000 by 1986. It never came close. The number employed now in the CBD is roughly 54,000, or 12[%] of the Auckland workforce. In Auckland, car ownership is growing at twice the rate of population with one vehicle for every two people in the region. By 2021 it is expected there will be one car for every 1.5

people, and that, says [the ARC environment manager], is a real concern... “Present trends are not sustainable and hard decisions will have to be made if Auckland is to maintain a reasonable quality of life.” [He] says Auckland’s low density urban housing has produced inefficient travel patterns and increased reliance on cars... On a global scale, Auckland represents one of the worst cases of urban sprawl in the Western world with just 14 people a hectare compared to Los Angeles with 20 and Sydney with 19. “We can’t find a city in the world that has a lower population density than Auckland. If we said Auckland was more spread out than Los Angeles, and by a whole third, we would be laughed at. But it’s a fact.” [He] says recent traffic studies predict traffic congestion in Auckland will double in 15 years, a reality that means a one-hour peak-time drive from the city centre to the airport will become a two-hour drive... “Problems in the past have stemmed from inadequate funding which has led to band aid solutions. Under-investment must not continue. We need funds to modify our growth – and we need them now.” ...The Keep Auckland Moving campaign for better road funding estimates road congestion on Auckland’s motorways now costs the regional economy \$185 million a year... mainly in transport and manufacturing industries...

Motorists may have to wait longer than expected for a four-lane expressway from Auckland to Cambridge if present funding policies continue, says Environment Waikato. Transit N[Z] has set a 2026 completion date for the project, but the council’s annual report on the regional land transport strategy indicates that target is unlikely to be reached. Environment Waikato says the funding of the roading system is inadequate and the system of allocating money flawed... [However, Transit NZ] has again delayed its decision on which side of Hamilton... [the] expressway should run. It is backing a \$70 million eastern bypass, but said yesterday that it would ask for public feedback on an alternative \$185 million western route through the city’s industrial suburbs... [Incidentally, last] weekend... a man was struck... by a rock... throw[n from a]... motorway overbridge... The man, aged in his late 50s, had just driven under the Market Rd overbridge towards central Auckland, when the bowling ball-sized rock went through the windscreen and hit him in the throat... The man was knocked out immediately... His late-model Ford Fairmont[, which] was in the fast lane travelling at about 100 km/h... hit the median barrier as his wife tried to take control. Three other northbound vehicles were hit as she steered the car towards the left-hand shoulder... [A s]ergeant... said youths throwing stones or rocks on to the motorway were a regular problem for police. He was unaware of anyone being arrested for throwing dangerous objects at cars because they usually fled, but he said Saturday’s incident showed the consequences could be serious.

...[four US high school students have been arrested in Germany on suspicion of killing two women by dropping stones on to their cars from a bridge. The four, aged 14, 16, 17 and 18, were arrested in Darmstadt. Police said the group would be officially charged with murder and attempted murder today. Police had earlier said that the rocks, some the size of baseballs, were dropped on cars from a footbridge that crossed over a highway. Two women, one aged 20 and the other aged 41, died within minutes of each other when rocks shattered the windscreens of their cars. Four other cars were hit by the projectiles. Five people were injured.’ In local news, m]otorists travelling across the harbour bridge and on the Shore complained of jammed roads... yesterday morning... without any apparent obstacles to traffic flow such as accidents... Police traffic control staff reported several minor accidents, but officers thought the abnormal congestion was more likely to be the result of... more people using cars because it was a wet morning. A further reason for choked roads was suggested by the... North Shore City Council[’s]... traffic planning manager... who said the Scat computerised traffic control system failed to function for some of the peak time. The system assesses traffic volumes and changes traffic lights to allow a steady flow. “All I can say is for motorists to sit back and enjoy it, because it will never get any better, because more traffic is coming on the roads every year. It may be the norm in the future.” ...North Shore traffic is growing 2.5[%] a year.

...The prospect of another Auckland harbour crossing has been revived with \$100,000 committed for an official investigation... The initiative comes about a decade after a series of studies... looked at possible tunnel and bridge options for crossing the Waitemata Harbour. The new work will focus on traffic impacts on the Auckland City side of the harbour which the earlier research did not examine in detail... And next month Transit N[Z] expects to issue a report on a \$7 million addition to the [existing bridge’s city-side arterials]... The bridge carries about 125,000 vehicles a day – about the same as the San Francisco Golden Gate Bridge. Research a decade ago suggested a new bridge could... have a significant environmental impact. Indeed... the council’s... transport manager, concedes that an outcome of its new study could be a finding that another crossing could pose such unacceptable effects that it could not proceed.

...If Aucklanders want a second harbour bridge they will have to pay for it... [or] call... in... international investors... – that was the hard-hitting message from the Minister of Transport. Aucklanders got more than their fair share of roading funds, the minister said... at a conference in Timaru at the weekend... before releasing a road pricing study today. Far more roading funding went to Auckland than the city contributed, she said. Aucklanders paid a very small percentage of their rates to roading while many other areas around the country paid up to 65[%]. However, the minister’s... comments “flew in the face” of the information collected for the roading pricing study, said a spokesman for the [ARC’s] transport committee. The committee chairman... said: “Aucklanders are paying well in excess of what they receive back in funding for roading.” The minister’s “parochial” comments appeared to be tailored for her South Island audience, he said... The city’s roads carried 27[%] of all N[Z]’s traffic, despite having only 8[%] of the roads.

...The Auckland region gets... \$158 million from the Government’s \$743 million roading allocation – 21.3[%] of it... Statistics N[Z] reckons that the Auckland region it measures is home to 1,068,645 of the 3,618,302 N[Z]ers it counted on census night. That is 29.5[%] of the nation’s population. Is 21.3 verses 29.5[%] fair? Consider the traffic ratios. Nearly 649,000 of the more than 1.97 million cars, trucks, buses, coaches, rental vehicles and taxis in the country are registered in the Auckland postal district, sandwiched between the Whangarei and Hamilton districts... Is 21.3 verses 32.9[%] fair? Certainly drivers based in the Auckland area do venture beyond the Bombay Hills just as cousins come to town to explore its streets and motorways. True, there is a lot more road length outside Auckland... Certainly some big distances can be run up travelling long rural routes, but many Aucklanders average big workday mileages in their home region. And remember... [that Auckland’s] local governments, like those in other regions, spend rates on their own roading programmes... The debate should be more about what users pay... The Government has forecast these revenues... for funding the \$25 billion roading network... this year: Petroleum fuels[tax,] \$729 million; road-user charges, \$443 million; motor vehicle fees, \$155 million (total \$1327 million). What happens to the [\$584] million left after deducting the [\$743 million] from the \$1327 million of revenue? This is the question that needs to be asked[both here and in Britain (where ‘motorists pay £116 billion in taxes each year, but less than a fifth is spent on roading or improving the lot of the driver’)] when people start suggesting there should be higher fuel taxes and road-user charges to pay for more regional roading and transport services.

...*Auckland v the rest in battle of transport*... A war is raging between Auckland and the rest of the country over who should fund transport projects... to ease the region’s traffic logjam... The Road Transport Association has told Aucklanders to fund their own “grandiose” transport plans... [Its chief] executive... says... drivers... should not be forced to pay more to ease congestion on roads they do not use... But [Auckland’s] local bodies have hit back... [The ARC], says: “We can argue that Aucklanders are funding under-used roads in other parts of the country.” ...Sitting on the fence is the Government... [– a]lthough the... Transport Minister... says the Government is keen to work with Auckland to find a solution.

...More than a decade after tolls were scrapped on the harbour bridge... [they] are likely to be reintroduced in Auckland under a Government proposal to shake up the roading network... [The] proposal for tolls has won support from a local government transport task force and the National MP for North Shore... [The MP] said tolls could fund new transport projects. A second harbour crossing would likely need to be partly funded through tolls. He said North Shore people appeared to support a \$1 toll if that was what it took to get a second crossing... Tolls would have to be introduced on both harbour crossings to reap about \$60 million a year... [T]he Government has... also... suggested that motorists could... be

charged more to drive at peak times to cut traffic congestion... New technology meant that Auckland drivers could be tracked as they drove on congested roads... and billed accordingly... through electronic tolls which would debit money from drivers' bank accounts... Vehicles would be fitted with sensors, linked to a central control unit, which records information as soon as a car passes through a zoned area... The chairman of the... [ARC,] who also chairs the Keep Auckland Moving Campaign, said... "It might be that if you want to use the road during peak-hour traffic, it will cost \$2 at 7.30 am and 20c more half an hour later,"... [He] said Auckland "might do quite well" out of proposals to commercialise roads and put them under the control of a state-owned-enterprise... The Minister of Transport... said in unveiling the proposal that international investors might build an Auckland-to-Hamilton toll highway in opposition to State Highway 1... The Minister... has described private investment in roads as inevitable... Another matter for debate, [the minister] said, was whether more of the money collected from the petrol tax of 30.2 cents a litre [- '32.885c when all local authority, ACC and petrol monitoring levies' are added -] could go on roading. At present 9.4c of this tax... was spent on roading with the remaining[portion] going on associated costs... The AA... said that [all of the money] raised in petrol tax should be put... back into improving roads.

...[an 'AA survey has found that the total average cost of travelling a kilometre is 54.2c for a car below 1200cc, compared with 92.8c for cars over 2000cc.' In related news, district and regional councils, environmentalists and transport sector stakeholders are figuring out how to respond to a Government transport initiative which has turned out to be something of a surprise. While the "options for the future" paper includes long-awaited relief for sea and rail freighters, who for decades have been labouring under a roading regime which gives trucking an unfair advantage, other aspects of the paper may endanger the ability of regions to plan for the future. When the various chapters of the land transport pricing study were released in 1995 and 1996 there was some hope that the ability to calculate the true costs of transport to society would prompt a more realistic way of charging car and truck users. Many submissions focused on the environmental chapter, agreeing with the plan to charge users directly for local air pollution, carbon emissions, toxic water runoff from roads and noise and adding to that the cost to society from congestion, the social dislocation effects of new roading and the burden of increased traffic on neighbourhoods. Other submissions focused on the chapter about charging a rate of return on the value of the roading network... What the Government produced was a series of options about corporatising road-funding administration in N[Z] with a view to borrowing to build more roads while still relying on the widely discredited benefit-cost ratio to decide what roads are to be built. The main problem is that the land transport pricing study has moved far away from pricing to concentrate on changing the road ownership system. Essentially, the preferred Government option seems to be to set up a state-owned enterprise and a series of local authority trading enterprises, each charged with running the roads in their area as a profitable business... At the lunatic end of the spectrum there are even suggestions that... every pedestrian and cyclist must carry an electronic chip. These chips would activate a toll meter on street corners and the bank accounts of pedestrians and cyclists would be automatically debited for the use of footpaths and roads. This may be carrying user charges to the extreme, but private toll roads are a common occurrence overseas - with two... Hills Motorway and Transurban... listed on the A[US]n Stock Exchange - and they may become a more regular feature in N[Z]. At present the country only has one major toll road, the... Tauranga Harbour Bridge... One of the unique features of the... 20km M2 motorway in Sydney between the North Shore and Baulkham Hills to the north-west of the city... is the Electronic Toll Collection system which allows motorists to pay the toll without stopping at the toll plaza barriers. The M2 motorway opened a few weeks ago and early usage is disappointing with only 39,000 cars a day compared to a forecast 72,000. Nevertheless, investors in Hills have doubled their money since listing at the end of 1994... [By the way, a] four-lane motorway across Hobson Bay is still on the list of options for the Auckland City Council's eastern corridor.

...Drivers using the \$128 million proposed eastern highway may have to pay for the privilege. The Auckland City Council transport planning chief... said tolls were one option to help pay for the highway. But as no decision had been made to proceed with the four-lane road through the Orakei Basin, no decisions had been made on finance... Auckland City Council transport planners have begun sifting through about 3000 submissions... [If the] highway goes ahead... [the] remains of eminent N[Zers at]... Purewa Cemetery in east Auckland... may not rest in peace... [The proposed] development narrowly bypassed the graves of... former P[M] Sir Robert Muldoon[, former NZ] Premier Sir William Fox... and[a] former Auckland mayor... The[current] Mayor of Manukau... said a four-lane highway would have a "profound and devastating" impact on Pakuranga, where heavy traffic generated by the road would affect residential amenities in the suburb.

...[opponents will] draw swords tomorrow over a \$32 million highway to ease congestion between central Manukau and east Auckland. A panel of commissioners will hear submissions on the 7.8km, four-lane highway... The Manukau council has pushed the project... since 1980... [Incidentally,] Greenhithe residents are threatening court action if the North Shore City council does not improve the rural area's roading before opening it up to urbanisation... [T]hey fear the roads will not cope.

...Plans for two roading projects have sparked fears of urban development in the green belt between the North Shore and the Hibiscus Coast. Routes proposed for the Albany to Puhoi State Highway 1 and a motorway access road for the Whangaparaoa Peninsula run through the extensive buffer zone... [They] would fuel enormous pressure for development because it brought the North Shore and Auckland City within easy reach.

...Residents groups fear the Rodney District Council is rushing towards a decision on building a tollway for a second link to the Whangaparaoa Peninsula... [The] groups are opposed on environmental and social grounds to [the] \$35 million road crossing the Weiti River to link the eastern peninsula with the new Northern Motorway. The link, to be accompanied by a \$16 million widening of Whangaparaoa Rd, is one of four strategies offered by council consultants in a final report on ways to ease traffic congestion on the rapidly developing peninsula. Other suggested strategies include... widening Whangaparaoa Rd for \$56 million and containing growth; and containing growth and not building the Weiti crossing. Consultants... favour a package of options. The council received the report 10 days ago. Last night groups said in statements that they had understood no decision would be made on an appropriate strategy within three months. But they had learned that the matter would be decided at a special meeting of the council in three to four weeks. The Stillwater group president... said the full report, which sells for \$426, had not been seen by the public. Six to eight weeks should be allowed for proper... consultation before a vote was taken... The council... [had] received 440 submissions, which raised 1600 issues. The Weiti bridge option was supported by 337 submissions and opposed by 108.

...The Rodney District Council[has] opted for... a new route across the Weiti River at Stillwater and widening of Whangaparaoa Rd... The council's decision at a 50 minute special meeting stunned residents... whose farmlets will be affected by the bridge's link to the State Highway 1 motorway. "We will fight it," said the president of the Stillwater Residents Association... "We love the river... and we want the opportunity to bring our children up in an unpolluted environment as people before us have." ...The only vote against the Weiti option came from the meeting chairwoman... She said the Weiti crossing would encourage traffic growth... Further [decisions] will include whether the council should build the project and charge a toll of \$1.50 each way to cover costs, or let a private company build and run it as a toll way, with \$9 million to \$15 million contributed by ratepayers.

...Why ratepayers should not have to fund roads... Ratepayers by and large are a liberal lot. We fund many good works, from swimming pools to sewage systems, art galleries to green belts. As well, we provided \$265 million (1993 figures)... [or] fully \$1 of every \$7... to pay for local roads, saving road users from having to pay their way for the damage which their vehicles inflict on tar seal and asphalt. We are, it seems, exceedingly generous with our rates, because this figure was... about \$30 m... more than that paid on local roads by all road users combined... The extent to which roads should be funded by rates... is a serious issue, particularly in rural areas. Thirty-wheeler logging trucks and big tourist buses pounding country roads should not be the business of farmers and householders to subsidise... So what happened to user-pays? Rates have been

diverted into funding roads for so long that it has gone largely unquestioned at a time when generally N[Z] thought it had outgrown the subsidy philosophy... The present system has no logic and is a hangover from our history. Last century, the first roads were often laid by the people who used them to gain access to their properties and after 1852 were paid for largely by property rates collected by roading networks. Society evolved and roading networks grew. Rate funding was supplemented progressively by provincial or national taxes. Eventually, there was a partial movement to different forms of road-user charges... We[']ve gone part of the way towards user-pays; let's complete the process... There is plenty of evidence that heavy motor vehicles cause virtually all road surface damage. Their activities are governed by physics, explained in an equation called the fourth power rule. It states that pavement repair costs increase 16-fold when the axle weight is doubled... The Ministry of Transport has conducted the land transport pricing study which, for the first time, gives us an idea of what our roads are worth and how much money we'll have to put aside to maintain, repair and expand them. This pricing study will decide Government policy for many years to come. It is important to get it right because it will also allow us to decide what level of fees to charge users of these assets so that the network is self-funding. In an ideal world the land transport pricing study would tell us what road users needed to pay to fund their activities fully and Transfund would spend those funds on our roading network... In the world we have Transfund contributes the full cost of state highway construction and maintenance but just half towards the cost of so-called local roads... If local authorities can't afford their half share of the cost of [a] roading project it doesn't happen.

...Transfund... wants... the 75 organisations... [it funds] to build and maintain roads... cut to six... [In related news, the] \$6.2 million Orewa replacement bridge should be built in time for the... holiday rush... Traffic flow will be further improved when traffic lights are installed this month at the intersection of State Highway 1 and Red Beach Rd.

...[plans for a \$70 million, 1.5km elevated highway to reduce traffic holding up Stanley St and The Strand prompted about 100 people to turn up at a public meeting in Parnell last night. Unfortunately, there were more questions than time allowed. Many of the participants were grumpy at being refused the chance to voice their views on the Transit NZ scheme. Most worries about the viaduct related to noise and the visual impact it would cause, its impact on property values and the possibility Parnell would be cut off from the city. Many in the audience were not impressed when an official of Transit said it was not possible for his agency to foster rail to get container trucks from the port off the roads. Transit would fund only the most cost-effective means of transport, and that was by road. Questioners wondered why a tunnel was not possible, given that Wellington and Christchurch had them. They also wondered whether the viaduct would be used to foist the eastern motorway on people, affecting the sensitive environment of Hobson Bay'...

'What about the environmental impact the proposed eastern highway would have on Auckland's oldest remaining mangrove forest at Purewa Creek? The mangrove trees grow twisted and slow – the oldest are about four metres high, and up to 100 years old – along the banks of the creek. The silence is immense. Mangroves seem so obviously to be at the beginning of things and are "the most biologically productive ecosystems on Earth." As well, mangroves prevent erosion by trapping silt, and improve the outer harbour's water quality. Mangroves have clung to Auckland's shores for 10, maybe 15 million years, and Auckland is the southernmost city on Earth inhabited by mangroves. Current estimates measure about 475ha of mangroves in Manukau Harbour, and 950ha in the Waitemata'...

'Residents fighting to save a swathe of green space along Oakley Creek hope the 170 native trees they will plant on Saturday will not be uprooted in a few years for a motorway. Ten kauri are among the natives the Auckland City Council has provided for the Harbutt Reserve between Avondale and Mt Albert. The reserve, Oakley Creek and another public park, Alan Wood Reserve, are all at risk from a possible link between the Hillsborough-Manukau motorway (State Highway 20) and the North-western Motorway. The connection would ease traffic problems between the west and south and allow north-south traffic to bypass the inner city. Transit NZ has already designated an extension from State Highway 20's current endpoint, at Hillsborough Rd, to Richardson Rd. A further extension is not yet official but the Springleigh Residents Association is preparing for a battle with bureaucrats. The association points to Oakley Creek as an astonishing rural sight in the middle of Auckland City. Its waterfall is the largest in the region outside the Hunua and Waitakere Ranges. The association says the area is a sanctuary for busy locals and the reserves contain sought-after playing fields. "Aucklanders have spent millions on motorways over the past 40 years and all it has produced is gridlock. Motorways cause congestion. They don't solve it."

... 'more motorways are part of Transit NZ's plans to get west Aucklanders moving. Transit's Auckland regional manager says the western ring route is the highest priority. This involves completing the SH20 corridor, including the Avondale extension, to connect the southern and northwestern motorways, upgrading the northwestern and creating the new Upper Harbour motorway – SH18. The new SH18 through Hobsonville to Greenhithe will cost \$140 million and be completed by 2004. The Avondale extension is estimated to cost \$72m and will be completed by 2009. Transit is still investigating options for the Avondale extension connection from Richardson Rd to the northwestern motorway. Plans for upgrading the northwestern motorway include widening the section between Great North and Te Atatu Rds to eight lanes and creating six lanes between Te Atatu and Hobsonville Rds. Widening the lanes will take place between 2004 and 2009 at an estimated cost of \$38m. Among Transit's plans that will affect the west are an extension of the northwestern motorway to Brigham Creek Rd by 2004. That will be extended further north toward Kumeu by 2009 at a total cost of \$40m.'

... 'Twenty homes stand in the path of motorways planned for the northern rural fringe of Waitakere City. This was revealed yesterday when consultants gave Transit NZ preferred routes for new sections of State Highways 16 and 18. Option SH18C is preferred to replace Hobsonville Rd as the link between SH16 and the Upper Harbour Bridge. The SH18C option had the lowest capital cost of four options as well as the least impact on use of rural land and the least social and noise nuisance. It affects 43 properties, compared with 40, 37 and 108 for the other options. A Trig Rd couple was relieved when they heard about the preferred option. Another option would have put the highway through their home of 20 years. "This one misses us and puts the road in a deep cutting, so we should not hear too much traffic noise."

... 'one of NZ's largest construction companies is soliciting support from the AA in pushing a scheme for a second crossing of the Waitemata Harbour. Mainzeal aims to overcome residents' opposition to crossing proposals by tunnelling under suburbs to build the approach roads. "The greatest public good to both residents and vehicle drivers will be achieved by erecting a second bridge with four lanes that adjoins and replicates in shape the existing bridge," says Mainzeal's chief executive. The bridge would go into a tunnel on the southern side, running underneath Herne Bay. Such a short tunnel would not need mechanical ventilation. Two more tunnels, one under Westmere, the other under Pt Chevalier, would limit the need to knock down houses. The new motorway would be above ground at Western Springs and Cox's Creek and link with the proposed western extension of the Hillsborough-Mangere motorway. Regardless of what crossing was decided, private money would be used to build it and a toll would be used to pay off the debt. An exact cost of the Mainzeal scheme is not known, but it is likely to be between \$500 million and \$1 billion. The ARC has made no commitment to a new harbour crossing and has asked for public submissions next year. It has said that such a costly project may never get off the ground.'

... 'details of the ARC's proposed \$939 million tunnel linking the harbour bridge with the north-western motorway have been revealed. Twin tunnels would slice into the St Mary's Bay cliff face and run 50m underneath Shelley Beach Rd, Ponsonby Rd, Great North Rd and join the north-western motorway, and eventually SH20, near the Western Springs on-ramp. Between three to five air vents the size of two-storey commercial buildings would need to be built along the route. The tunnel project would be built in conjunction with a second harbour crossing near the existing bridge, but not for another 20 years.'

... 'up to 30 people may have been killed when a truck carrying flour and margarine caught fire, turning the Mont Blanc tunnel through the Alps into an inferno, tunnel operators said yesterday. The fire had still not been brought under control yesterday, despite firefighters battling for 30 hours. Questions have been raised about safety in the tunnel. Chamonix's mayor said the tunnel had safety installations dating back more than 20 years. The French Transport Minister earlier said the tunnel would be closed for several weeks. An inquiry has also been ordered to establish the cause and responsibility for the blaze.'

...‘80 people were missing in the Gotthard road tunnel through the Swiss Alps after a fire started by a truck crash killed at least 10 people. Rescue workers were battling intense heat to reach the site where two trucks hit head-on, setting off an inferno in the two-lane tunnel. Toxic fumes caused by burning tyres loaded on one of the trucks killed some people in their cars and others as they tried to flee to nearby emergency shelters, authorities said. Authorities fear the Gotthard toll will worsen once they reach vehicles trapped in the collapse of the roof in a 100m stretch of the tunnel. The accident renewed questions about the safety of Europe’s Alpine road tunnels. A fire in the Mont Blanc tunnel between France and Italy killed 39 people. Two months later, 12 people died in the Tauern tunnel near Salzburg, Austria, after a truck ploughed into the back of a car, setting off a chain of explosions. Yesterday’s fire closed one of Europe’s most important North-South road routes indefinitely (at 17km long, the Gotthard was the world’s longest road tunnel until Norway opened its Laerdal tunnel last year). The traffic chaos worsened last night when the main alternative Alpine route – the San Bernardino pass – was shut after a fatal accident between a truck and a minibus’. ● The number of fatalities is unclear after ‘fire swept through vehicles caught in a motorway pileup in British fog’.

...‘high speeds combined with dense fog were blamed for a 74-vehicle chain-reaction crash that killed two people and injured 51 others on Highway 99 in California’s Central Valley. The 1.5km pile-up, about 300km southeast of San Francisco, closed about 40km of southbound highway for nearly 12 hours.’

...during ‘rush-hour in Auckland on Friday night a motorist driving along the northbound outside lane of the southern motorway was on a cellphone going under the Penrose roundabout and was still on it going past the Nelson off-ramp – all the while sitting at 80 km/h with traffic banked up behind him. (A driver who did something similar in Sydney recently was fined \$A1200.) A short while later, in the outside lane near Takapuna golf course, another chap was sitting at 90 km/h in a Mazda MX6. Flashing the headlights – a universally acknowledged sign that you want to pass – provoked an abusive, two-fingered response and a deliberate slowing of his speed. We hope Transit NZ’s new motorway aids encourage drivers to make more use of the inside and middle lanes and less of the outside. The outside lane on three-lane motorways should largely be an overtaking lane. Driver education would help.’]

...New signs pointing to offramps along the Southern Motorway follow the first major review of motorway signs in more than 40 years... A traffic safety engineer... said motorway signs had not changed since 1953 when the first Auckland motorway opened... Transit... was quick to claim yesterday that the planned \$6.5 million overhaul of Auckland motorway signs – based on the American system and aimed at visitors and tourists – would not confuse the city’s drivers. However, it urged them always to carry a map in their cars... “Gone are the days where Aucklanders can fly by the seat of their pants and expect to arrive somewhere. Drivers must plan their trip. They must check a map first.” ...If the new system is rubber-stamped... a quarter of signs pointing to suburbs along urban motorways will be replaced by pointers to local streets... [The] Papatoetoe/Otara sign will change to East Tamaki Rd... New numbered exit signs would not run in consecutive order but would measure the kilometre distance from the start of the motorway. For example, Water St, Otahuhu will also read Exit 47, as it is 47km from the start. The next offramp, East Tamaki Rd, is 3km along so will be signposted Exit 50. “They found overseas that this is particularly valuable for truckies... It’s a long-distance navigation tool and it’s... introduction is useful to self-drive tourists not familiar with the English language or those unused to our difficult place names.” [Speaking of tourists, someone has suggested that ‘NZ change all of its roads from being left-hand-drive as a solution to the accidents caused by visitors from the US and Europe who forget that they are no longer in a right-hand-drive country’!

...‘This is how the motoring world works: 77% drive on the right-hand side of the road; 23% on the left. Of the 56 million cars built last year, 12.8 million went to lefties like us. Sweden drove on our side, too, until 1967 when it smoothly swapped sides.’

...‘Why does half the world drive on the left, and the other half on the right? At last, the answer to this burning question is within reach. “We do not know which side of the road the Romans drove on. There just isn’t evidence either way,” says an expert on Roman archaeology at the British Museum. But a member of the Association for Roman Archaeology says he does know, and his argument is very persuasive. Though the straight roads built by the Roman Empire still define the routes of many modern roads in Europe and the Middle East, they have been rebuilt so many times over the past 2000 years that little original material remains. And since Latin literature did not go in for stories about the lives of cart-drivers, which side they drove on was unknown – until this year, when the member found the track into the old Roman quarry at Blunsdon Ridge. The track was used only for bringing stone from the quarry to a major Roman temple being built on the nearby ridge (near Swindon in England), then fell out of use, so it is very well preserved. And since the carts went in empty and came out laden with stone, the ruts on one side of the road are much deeper than they are on the other. The conclusion: Romans drove on the left. Why they chose to drive on the left remains a mystery. Perhaps it dated back to earlier times when travellers on horseback preferred to keep on the left when encountering strangers, so that their sword-hand was free in case of a problem. (Most people everywhere are right-handed.) But at least as far back as Roman times, it seems clear that wheeled traffic in most of Europe and the Mediterranean world kept to the left. So why does all of Europe (except the British Isles), all of the Western Hemisphere (except some former British possessions in the Caribbean), and all of the Middle East drive on the right? That seems to be Napoleon’s fault. In the long Dark Age after the fall of the Roman Empire, and even in the Middle Ages, there would not have been much need for the drive-left rule, since what little wheeled traffic there was travelled mostly on narrow tracks. But when you met somebody else on narrow tracks both parties had to veer either left or right, and in that sense the Roman rule seems to have survived: mostly, people swung out to the left. In early modern Europe, with the volume of road traffic rising steadily, the old Roman customs of driving on the left was the likelier candidate to become the new legal system – as it did in Britain, Sweden and in various other places that Napoleon never reached. But wherever the French Emperor’s armies invaded, they imposed a new rule: driving on the right. Why? Napoleon never said, and subsequent historians have mumbled half-explanations about his need to impose traffic discipline on European road traffic so that his armies could get through. But why did he go against the existing custom? Probably precisely because driving on the left was the custom. Napoleon was a product of the French Revolution (however he was far from the ideals of the original revolutionaries) and the whole ethos of the revolution was about the breaking of the old rules and the creation of a new, rational world. The year 1789 became Year One and the new era and even the months were renamed. Driving right is no more rational than driving left, but it is more “revolutionary.” Because Spain ended up driving on the right, that meant all of the Spanish and Portuguese colonies in the Americas ended up driving on the right. So did the infant US, presumably because it felt closer to fellow-revolutionaries in France than to the former British oppressor. British North America (now Canada) eventually switched to the right because it made no sense to drive on different sides of the road along the world’s longest land frontier. And the Middle East drives on the right because the Ottoman Empire, which used to rule most of the region, was heavily under the influence of the right-driving French and Germans at the critical time when its Army laid down formal traffic rules in the latter half of the 19th century. But in most of sub-Saharan Africa, except for former French colonies, people drive on the left because of the British influence. They do the same in almost all the countries from Pakistan and India to AUS and NZ; only ex-French Indochina and the Philippines, a former American colony, drive on the right. Even Indonesia (which was briefly occupied by the British two centuries ago) and Thailand (which was never colonised at all) drive on the left. So does Japan, though nobody seems to know whether this is due to 19th-century British influence or whether it is as deeply rooted in Japan as it was in post-Roman Europe. Korea now drives on the right, but only because it passed directly from Japanese colonial rule to American (and Russian) influence at the end of WW2. And I just don’t know why China now drives on the right, or if it ever drove on the left. By making the “wrong” side his standard, Napoleon has left us a world permanently divided between the countries that drive right (about 3.5 billion people) and those that drive left (about 2.5 billion). Napoleon was a great admirer of the Roman Army. If only he had known which side the Romans drove on, it might all have been different.’ By the way, ‘there are 68 standing committees for transport across the Auckland region’...

‘Only the Lord knows if anybody will ever succeed in solving Auckland’s transport problems. Faint hope springs eternal, of course, but five minutes at an ARC transport committee meeting is all one needs to understand that this committee will spend the bulk of its term trying to get its head around the nightmare. The committee conceded that the public itself had more or less abandoned hope of ever understanding precisely how its transport-planning

authorities proposed to lead Auckland out of its transport shambles, short of blowing the motorways up and giving everybody a bike for Christmas. The ARC group manager of transport planning hit the nail on the head when he noted that the public increasingly felt that transport-planning authorities like the regional council were good at dreaming up ideas, "but not so good at putting them in place." A councillor hit the nail again when he noted that the public was increasingly struggling to understand any idea that transport-planning authorities came up with at all. "I think there's a real problem with understandability," he said. I certainly found real problems with understandability when the manager began to explain how the regional council, territorial councils and the agencies spawned from Government roading reforms might jointly give birth to a regional transport strategy. Councillors looked at each other in desperation, clearly wondering who these other bodies were and how they were going to pull the programme the manager had in mind out of the bag without killing each other. There will be fewer problems with understandability all round when we finally work out whether national, commercial or regional interests are leading the transport-planning charge.' □ Councillors in Hamburg, Germany, formed a committee to work on solving traffic problems in the city. Only one man turned up on time for the first meeting – the others were held up in traffic.'

...Traffic on main arteries in Britain is becoming so congested (the average speed of London traffic in 1996 was 12mph) that the Government is looking at a plan where drivers would book space on a motorway before setting out on their journey. Those in a hurry would pay extra to use designated fast lanes. Those who didn't want to pay anything would be confined to the slow lane. Opponents ask, "How would this be policed?"

...In New York, drivers pay \$1.50 to drive across a tolled bridge in off-peak and \$3 at peak times. In other parts of the city drivers have to buy a car sticker to enter congested areas. • In San Diego, drivers pay \$40 for a transponder in their car, which sends a signal picked up by an electronic device overhead or on the side of the road. San Diego has dedicated car pool lanes on its motorways, where charges are graded depending on passenger numbers. • On Highway 407 in Toronto, Canada, the number-plate of every vehicle is videotaped and motorists are later billed for driving on the road – a more costly system than a debit card or transponder.'

...some] **\$3 billion worth of...** [satellite] **tracking systems and electronic transponders** [for cars, which are linked] **to a central billing house** [computer, are currently]... **being installed in at least 20 countries.**

...[the Government this week opened the door to the commercialisation of road funding and ownership, and new companies – publicly owned – will be able to instigate a sliding scale of tolls intended to reduce clogged arterial arteries – called "congestion-pricing." Drive in peak hour when the roads are congested and you will pay a higher price than if you are driving at 9 pm. Those with memories long enough to know what "Nippon clip-on" means or who have experienced the highways of Asia, Europe and the US will grumble at the prospect of fiddling around on the dashboard looking for coins for the tollbooth – but that's not how it's going to be. It's high-tech but low-cost, we're told. While nothing has yet been decided, it looks likely we will go down one of two roads, so to speak. We could follow the Singapore model where roadside or overhead computer technology "reads" from a display unit (or card) mounted in your car and the appropriate amount is deducted from your account or card. Naturally this comes with its own language: the thing in your car is called a transponder (from the Latin: "trans" meaning tax, and "ponder" meaning one more damn thing you have to think about). Or we could simply go the whole card route. That means you can simply buy a credit card-sized card for your windscreen, with charges automatically deducted. There are numerous privacy issues here, of course. But as the Ministry of Transport's policy general manager points out, privacy hasn't been an issue in the US where people seem alarmingly litigious. And anyway, our privacy laws are stringent. The police would need a search warrant to monitor or trace vehicles. The information the companies hold can't be on-sold either, which is doubtless good news for those conducting affairs on the far side of town. Lending cars to friends isn't a worry, either. If you forget to give them your card, your vehicle's picture is taken automatically and you get a letter. The current egalitarianism of our highways may be changing. Where once we all shared the same potholes, inconvenient chicanes and holdups when the two nuns in a Mini didn't notice the lights had changed, now there may well be a tiered system of motorway travel. In Los Angeles, the SR91 freeway charges by lane. If you want the guaranteed congestion-free lane it costs around \$5 for about 17km of hassle-free driving. Then there's a cheaper lane not guaranteed to be clear. And the cheapest lane is free. This system isn't quite the social hierarchy it looks. The LA experience indicates that those who want to get somewhere fast are people for whom time is money (plumbers, electricians and the like). The rich, who have cellphones and laptops, don't mind sitting in traffic because they are still getting their work done. Is this going to be expensive, then? According to the manager, the technology is getting cheaper by the day.' Incidentally, **in three-to-five years, Aucklanders with a personal computer may** [be able to] **call up closed-circuit television cameras monitoring motorways to pinpoint traffic jams...** [Such] **systems already operated overseas... in American cities.**

...Transit... **plans to test a computerised traffic management system on the Northern Motorway...** [The trial] **will see signs placed along the motorway telling motorists when there is a crash or incident ahead...** [and is designed] **to gain experience with an advanced traffic management system before it was extended over the entire Auckland motorway system...** [– if] **funding is approved...** **A highway advisory radio station giving traffic information would also be part of the system, which is expected to cost between \$2 million and \$4 million...** **The project manager... said "non-recurrent delays," caused by crashes and incidents, cost Auckland \$27 million in 1994.**

...The police respond to an average 30,000 incidents on overloaded Auckland motorways each year... a motorway system that is approaching gridlock... Since Auckland motorway delays cost an estimated \$63 million a year, Transit... is working with the police, the [LTSA] and others to achieve... [faster ways of] **getting to accidents or problem spots... and removing damaged or broken down vehicles...** **It wants to install an advanced traffic management system, already used overseas, to help return traffic flows to normal quickly. The nearest most advanced system of the type operates in Melbourne, where there are about 100 television cameras on motorways to spot breakdown or accident problems** [('morning snarl-ups in Melbourne, Sydney and Brisbane dwarf Auckland's congestion; Auckland's average per-kilometre delay in the morning rush-hour is 35.4s, compared with 42s in Melbourne, 48s in Sydney and 52s in Brisbane')]. **Transit... has made a start... here. It has installed "electrical induction loops" just below the surface at 11 sites on the Northern, Southern and North-western Motorways. Two video imaging cameras have also been placed on the Auckland Harbour Bridge. The loops and cameras do the same job – they are part of a computer monitoring system that measures vehicle numbers, speeds, vehicle classification and lane occupancy. The manager of the project... says the key objective of this detection system is to build up profiles of traffic conditions and travelling times over critical sections of the motorways. When the management system becomes operational this "historic" data will be used for comparison with "real-time traffic flow rates." Any change in the flow will be relayed to a command centre, where operators will visually scan what is happening on the motorway through a network of closed-circuit television cameras such as the seven which watch harbour bridge traffic now. In perhaps 12 months a pilot of the full scheme will be run... Transit... hopes that construction of an Auckland-wide motorways management system will begin in late-1999. It will cost at least \$10 million...** [Meanwhile, a] **final coat went on the outer northbound lane of the Harbour Bridge yesterday. Resealing of a second lane is due to begin shortly...** **The project is part of a \$7 million plan begun two years ago to replace asphalt with polyurethane. Standard asphalt has not bonded properly to the steel plating of the bridge.**

...[Transit has announced that] **officials will regularly ban trucks from the outer lanes of the... Harbour Bridge during high winds now they have the latest computer simulations which show the effects of wind and earthquakes on the structure...** [L]arge trucks travelling on the clip-on lanes in gales caused problems both for the bridge and motorists. Trucks could be blown around, and if a breakdown caused a long line of heavy vehicles to stop, a high wind gust could knock the clip-on lanes into the main bridge structure, causing damage... But Transit yesterday assured motorists that the bridge is safe, and there is no risk of the clip-on lanes falling off... \$166,000 had been spent on specially designed brackets used to brace beams in large boxes under the bridge... It was not clear what the next stage of... Transit's study of the Bridge's earthquake damage risk... would recommend, but the work would be a bigger job, perhaps costing up to a million dollars... The outside lanes were last closed... when gusts reached 143km/h. [In related news, 'the big traffic jam last Friday cost Auckland more than \$2 million, say truck operators. The Northern Regional Road Transport

Association, which represents truck owners, says the cost could be as high as \$5 million if associated problems are included. The association's general manager said costings were based on 28,000 vehicles being trapped in northbound lanes of the Southern Motorway and 20,000 in southbound lanes after a truck lost its load of printers' ink on the harbour bridge early in the afternoon. Half an hour after the accident, traffic was at a standstill on the Newmarket Viaduct. Transfund uses a formula of \$25 an hour productivity loss for each light vehicle and \$40 for heavy trucks. The association believes a loss of \$40 an hour is too low and puts the figure closer to \$80. But some local politicians say trying to establish a true figure is difficult and potentially meaningless.']

...Trucks blocked the Northern Motorway... for five hours yesterday. Witnesses say the crash happened when a police officer stopped to speak to a hitchhiker[who was illegally] standing on the side of the motorway. A truck following the police car stopped behind it, but a large truck-and-trailer unit ploughed into a concrete truck in the other lane, which in turn slammed into the stationary truck, flipping it. The driver of that truck... said he got a "hell of a fright"... [N]o one... was injured. [One car was also involved but 'it only lost a wing-mirror.']

...IT is 5pm on Monday evening... and all hell has broken out on Auckland's streets. Commuters are in for the long haul as motorway traffic backs up bumper to bumper through whole city blocks. There are no shortcuts. The city has ground to a standstill... How it happened: • 1.31 pm: North-bound vehicle hits median barrier on Grafton motorway off-ramp. • 2.11 pm: Truck rolls on car on Southern approach to Auckland Harbour Bridge. • 4.03 pm: North-bound two-car collision near Ellerslie on-ramp. • 4.30 pm: Two breakdowns reported on lane two of the North-western Motorway. • 4.40 pm: Bus collides with car on Symonds street off-ramp. • 6.01 pm: Car hits median barrier near Ellerslie off-ramp on Southern Motorway. • 6.15 pm: Two-car collision near Penrose on-ramp to Southern Motorway... Whether they realised it or not, commuters were given a glimpse into the future... And the experts' opinion? Get used to it.

...The social cost of traffic crashes in the Auckland region dropped substantially last year but that is no cause for complacency, warns the [LTSA]... The social cost takes into account all costs to the community following an accident... In Auckland last year the figure was \$748 million – down \$283 million on 1995. The figures are revealed in a series of road safety reports... which analyse trends over the past five years. Traffic crashes in the Auckland region... have fallen to the lowest levels for a decade. Marring this, fatalities on Auckland roads are up. Figures for the year to Tuesday show 71 people died compared with 58 at this time last year. A problem described as being of "epidemic proportions" is motorway drivers who follow too closely to the vehicle in front... Intersections also pose a major problem for drivers in Auckland... The multi-laned roundabout near the Panmure shops is way out in front when it comes to the number of intersection crashes... Over the past five years the busy intersection has seen 152 crashes, 67 more than the second-worst accident black spot, the intersection at New North Rd and St Lukes. ['Accidents at intersections cost NZ \$28 million a year.' • 'Unreported car accidents are costing Waitakere City at least \$62m a year in road repair handouts. Councils cannot gain funding from Transfund for road repairs and upgrades without accurate crash statistics – and that's where the unreported prangs become an issue. Figures show only 0.23% of all accidents are reported. This is because there is no law that requires non-injury crashes to be reported to the police.']

...A third of all fatal accidents this year involved only one car and happened when the driver lost control, the [LTSA] said yesterday. Alcohol was a factor in more than half the accidents and speed in a third of them. Three-quarters of the accidents happened on the open road. The authority said 47 lives could have been saved if the victims had worn seatbelts... [as they are legally required to (all 'front-seat passengers must wear a seatbelt in NZ, and back-seat passengers must wear one if available; new cars are all required to be fitted with front and back-seat belts'). Though] seatbelt wearing... is high in central Auckland, rear seatbelt use has fallen significantly... • Drivers are responsible for making sure children in their vehicles are safely restrained. Failure can mean a \$75 fine. ['Passengers aged 15 and over are responsible for themselves if they get caught not wearing a seat-belt.'

...a] Pukekawa man... made sure he buckled his 3-year-old daughter... into a child carseat... It probably saved her life. But... the 37-year-old father of seven... neglected to buckle himself up and was killed instantly when he lost control of his car on the way to his... [son's] first birthday party... [and] his car crashed through a fence. The impact threw him out the car's back window and he ended up lying on its roof. His daughter walked away unscathed.

...A U[S] Government report says... [only 68%] of occupants in America wear belts. If everyone was belted in it would save \$US14 billion...

['Big, big Americans say they are becoming uncomfortable about the fact that carmakers in the US are apparently obliged to make seatbelts only to safely fit people under about 100kg. The author of *Largely Happy*, and chairwoman of the International Alliance for Size Acceptance, e-mailed us to say: "We have people who simply cannot fasten the belts, and those who can but would suffer in a crash because the belt would not hold them."']

...motorists] round the country are being declined vehicle warrants of fitness because of faded seatbelts... The [LTSA] has told testers that a seatbelt should be failed where the effects of ultraviolet light has bleached most of the colouring from any part of the webbing... [U]ltraviolet damage... eventually broke down the weave. The problem was in judging when the discolouration was significant enough to refuse a warrant... Some testers say the advice is unacceptable because it is not specific enough[. By the way, 'the odds of getting hurt in a head-on road smash have just doubled. Researchers have found there are in fact two points of impact in many front-on crashes. The first impact is the collision itself while the second happens when the car rears up high into the air and lands with a very large thud. With only the rear suspension to take the shock, the landing can often be the source of secondary injury'. The researchers didn't say if such secondary injuries could be averted by air bags...

'AIRBAGS have come a long way since Henry Ford II said they were a "lot of baloney" and pressured the 37th US President to delay for five years a proposed law to gradually introduce the safety systems in American cars. Carmakers largely didn't want to know anything about seatbelts or airbags until the late 60s, when research from Volvo was too revealing to ignore. The manufacturers feared installing safety devices would undermine the American public's confidence in their products. The Swedish company – the first to install seatbelts in cars – came up with a study involving 28,000 accidents. Of those in which driver and passengers had worn lap/sash seatbelts, there were no deaths in impacts at below 100 km/h. But unprotected drivers had been killed at speeds as low as 20 km/h. This research was one of the reasons the 1976-80 Administration passed a law that required all large cars produced in the US after September 1, 1981, to have automatic restraints (seatbelts and airbags). GM, Ford and Chrysler had used seatbelts and airbags, and while there were arguments for and against, they were collectively against legislation that made them compulsory. They tried to sabotage the legislation and found an ally in the 39th President's successor. In one of his first speeches after taking office in January, 1981, the 40th President told the National Auto Dealers Convention that "this Administration opposes regulations." He appointed a lawyer who had a reputation as an anti-environmentalist to head the National Highway Traffic Safety Administration and told him to revoke the automatic restraint law. The lawyer did so just as it was about to come into effect, but supporters – including the all-powerful insurance industry – sued the safety administration to have the law reinstated (the Supreme Court eventually found against the safety body and the carmakers). The author of the book *Crash*, wrote that in the 80s: "The standard of manufacturers was then so low that one out of every five cars sold was the subject of an NHTSA recall request with which the manufacturer refused to comply. The NHTSA gave in – over such scandals as faulty transmissions on more than 20 million Ford cars that jumped from Park to Reverse." This fault was responsible for 500 deaths before the head of a powerful consumer body pressured Ford to recall and redesign the transmission. The delaying tactics by America's Big Three from the early 80s, when the 39th President's automatic restraints proposal would have come into effect, until 1990, was estimated to have cost about 60,000 lives on American roads. Today's carmakers, like the public, are better educated about safety and design. Now the education of the airbag reaches new heights with what Honda calls the first "smart" airbag in a luxury car. The new system is standard in Honda's facelifted Legend, which goes on sale next week at \$NZ75,000, up \$6000 on its predecessor. Honda calls it the i-SRS, for intelligent Supplementary Restraint System. It is designed to ensure maximum protection with minimum risk, something top-10 seller Honda will push publicly in the US, which largely remains twitchy about airbags. The smartest part of the Legend's technology is the front passenger's seat, where sensors provide information on the size, body and head positions of the occupant. This allows the system to recognise when a child is in the seat. In this instance the seat-mounted side airbag, which is in line with the child's head, is disabled.'

...‘An airbag decapitated a one-year-old Idaho girl in an infant seat in a low-speed collision between two cars in a parking lot yesterday. “Otherwise it would have been a minor traffic accident,” said a police officer. The accident triggered the passenger-side airbag in a VW Jetta driven by the girl’s mother.’

...‘An Ohio man was sentenced to two 12-hour jail terms after his two-month-old son was killed by a passenger-side airbag. He will serve the terms on the son’s birthday and the anniversary of the crash, which was caused when he ran a red light in his pick-up and collided with another vehicle. His son was in a rear-facing child seat and died from injuries caused by the airbag bursting from the dash next to his head. Obviously the father didn’t know what carmakers have been saying for years: never put a child seat in the front seat of a car equipped with a passenger-side airbag. Since 1990, airbags have caused the deaths of 121 people in America, nearly all of whom weren’t wearing seatbelts. The same research says airbags have saved about 3600 lives.’

...‘French carmaker Peugeot is recalling more than 40,000 of its 206 model from European and worldwide markets. The German weekly *Focus* reported that there had been at least 60 cases of the car’s airbags inflating in mid-journey for no reason.’

...‘it can cost thousands of dollars to replace an airbag that has deployed in an accident. But the Automotive Recyclers’ Association of America is short-circuiting the process by buying second-hand airbags from wreckers for about \$450.’

...‘undeployed air bags are a serious hazard to rescuers and accident victims, says the NZ Fire Brigades’ Institute. Air bag systems would activate only during head-on collisions, or collisions within 30 degrees of a head-on, the institute’s president said. The circuits controlling the bags were independent from other car circuitry and also had a safety capacitor back-up charge, making them operable even if the vehicle battery source were destroyed in the crash. “There is no way of disarming an undeployed air bag other than to remove the battery terminals and allowing the backup capacitor to discharge from the system, which could take up to 30 minutes.” The bags – which could be present on both sides of the front compartment, although they might not be obvious – were activated “in the blink of an eye” with a great deal of force. “They could cause very serious injuries to a rescuer or victim.” Furthermore, seatbelt retractors were often connected to the air bag circuits and tightened the seatbelt when the bag deployed. “This could have the effect of snapping the seatbelt tight against a trapped victim, aggravating back, neck and other injuries.” Rescuers should cut the seatbelt first, stay away from air bag areas during rescues, disable them, if possible, and never place tools between an undeployed air bag and themselves, or a trapped victim. There had been no reported cases of rescuers being hurt by such bags in this country.’]

...**Air bags are the biggest advance in motoring safety since the seat belt laws of the seventies, according to Holden’s manager of advanced engineering...** [T]he man who put so much into the Commodore air bag system, claims Holden is the only motor manufacturer who developed an air bag system for people who wear seat belts. And he is concerned most people only talk about the effect of air bags on road deaths. “It’s not simply about reducing fatalities which is where all the media focus is... The air bag’s big contribution is the reduction of serious irreparable, non-recoverable injuries to... the... face... brain... neck and... chest.” He says this benefits thousands of people beyond the relatively small number of fatalities... According to data from the state of Victoria, half those people from road accidents who end up in hospital suffer brain injury.

...**Road accidents cost...** [NZ] \$3.1 billion last year, about \$3 million down on 1995... The [LTSA]... attributed the decrease to the drop in the road toll, which fell from 581 in 1995 to 515 last year... the lowest since 1964... An authority spokesman... said that the social cost was based on fatalities, serious injury, minor injury and non-injury crashes, and took into account all costs inflicted on the community, from loss of earnings to clean-up costs... emergency services[and] medical expenses... the average cost to the community... for someone killed in a road accident... was... \$50,000... compared with... \$4.5 million... for [treating a survivor] with brain damage... “I think it’s a tremendous drain on the country,” [an LTSA spokesperson] said... “It’s just unnecessary carnage and there is something we can do about it.” ...The LTSA spends about \$33 million of its overall... budget on road safety initiatives... [The] number of people dying on N[Z]’s roads has dropped by 35% in the past 10 years, down from 796 in 1987... [but N[Z]... still ranks poorly alongside other developed countries... 15th of 26 in the OECD listings. N[Z] recorded 2.5 deaths per 10,000 vehicles and 16.5 deaths per 100,000 population. That’s well behind A[US] with 1.8 and 10.9 respectively], but is ‘comparable to the US (15.8 deaths per 100,000). Icelanders boasted just 3.7 deaths per 100,000 in 1996 – although there aren’t a lot of roads there’...

NZ] rates a mention in... **The World’s Most Dangerous Places... Not as a dangerous place as such but our death wish on the roads puts us in the top 14 countries... India gets top billing at 34.6 deaths... for each 100,000 people.**

...[“□ By 1990, with at least 500,000 people being killed yearly, traffic accidents were listed as the world’s ninth-biggest killer. □ The first pedestrian death occurred in 1896; the first driver was killed in 1898. □ The car has claimed an estimated 30 million lives in the past 100 years.’

...More NZ]ers have been killed on the roads than in any of the wars the country has been involved in, a Rotorua District Court judge told a man convicted of dangerous driving causing death... [The judge fined the 46-year-old] \$3000, to be paid to the deceased’s family. He was disqualified from driving for 12 months. The jury had heard that... [the] forestry consultant... had overtaken a logging truck-and-trailer unit. This... caused... John Takapuna Ratapu... who was driving an oncoming car, to collide with... [another car, injuring its driver and]... causing the death of... Mr Ratapu...

[He ‘was driving his van near Milford when he was hit head-on by a Ford Falcon – and he reckons his bullbar saved him. During the smash, in 1993, the Mitsubishi L300 van’s bullbar seemed to spring the vehicles apart, stopping the van’s driver from having his legs crushed. “I wouldn’t be without bullbars on vans even if the law is changed. It would be civil disobedience.” But the law could change. In AUS, calls for a ban on bullbars have sparked fierce debate between pedestrian lobby groups, who say they are dangerous, and rural folk who say they are essential for “roo strikes.” A country author said: “I don’t have a problem with banning them in cities. They only pose a problem there. But it would be a disaster if country people couldn’t have bullbars. It’s not until you hit a kangaroo that you realise how much damage they can do.” However, the Pedestrian Council of NSW blames 14 out of every 100 pedestrian deaths on bullbars: “A bullbar is designed to knock an animal under the vehicle – well, humans are animals.” Our own safety regulators are watching the debate closely, and a draft safety standard is being drawn up for both countries. Apart from killing pedestrians, opponents say bullbars cause more damage in smashes and make impact-sensitive airbags deploy too quickly. They are especially irked by bullbars on urban 4WD vehicles cruising Ponsonby Rd.’]

...Thousands of car owners will have to remove dangerous bullbars next year, as part of new vehicle safety rules announced yesterday... **Dangerous bullbars, mirrors and spoilers are technically illegal at the moment, but the new rules will standardise regulations and enforcement. Other rules relate to collapsible steering columns, safe door locks and hinges, head restraints and car interiors. The group manager of the [LTSA]... said the new rules, effective from January 1, brought N[Z] car safety standards up to the world’s best practices... The director-general of the AA... said that while he supported the new rules, the restrictions on bullbars did not go far enough. “It is our view bullbars should be restricted to vehicles used in the rural sector... We do not support bullbars being attached to passenger cars... or [any] vehicles that are used on public roads.” Bullbars nearly always increased injuries to pedestrians, could break away and injure the car’s occupants, interfered with airbag sensors, and if fitted to unsuitable vehicles, increased risk to the drivers. [Furthermore, the risk of injury to occupants of other vehicles is increased if they are hit head-on or side-on by a bullbar-wearing vehicle – which is a major issue in the US at the moment.**

...‘for American visitors, who are used to driving the multi-lane, divided inter-state highways which criss-cross the US in homage to the car, our SH1 often comes as a surprise. “It’s a death-trap,” said one such driver, recently interviewed on the perils of driving the topographically challenging route between Auckland and Whangarei. On American, European and AUSn highways, there is generally no getting on or off except at carefully sculpted official exit points, the only way to go from one side to the other is over a bridge, and on-coming traffic is separated either by a wide, flat strip of grass, or a median barrier. In this country, except for the motorways out of the main cities and occasional stretches elsewhere (e.g., passing lanes on hills), our main highways are far less forgiving. Yet how many NZers know either what they are missing, or recognise the inherent dangers in driving at speed on main

roads mostly little more than glorified two lane streets; where all that separates drivers from a head-on smash is a strip of white paint and the combined skills of the drivers with whom they share the road? The way the LTSA's chief executive sees it, "travelling on an undivided highway has to be seen as driving along a 100 foot chasm, represented by the white line. Move over that chasm, and you will die." He agrees the fact NZ has comparatively few divided or multi-lane highways "has a considerable contribution towards the effect and incidence of road crashes". On the divided Hume Highway between Sydney and Melbourne, completed after 25 years in 1994, AUSn authorities reported a halving in road deaths. While the national road toll in NZ last year was the lowest for 30 years, LTSA figures show it is virtually no safer to drive on any of the 10,500 kilometres of state highways than on any of the rest of the country's 80,000-odd kilometres of public roads.'

...Auckland's] road toll... is the highest in five years, despite a steady decline in... most of the rest of the country. By this week, 101 people had been killed on roads in the Auckland region, up from 85 for the same period last year. Road deaths in the Waikato were up 14... to 76... [Incidentally, dozy] Auckland motorists are about to get a wake-up call. New "rumble strips" are being installed along 40km of the city's motorway system as part of resealing work to alert drivers who begin to veer off the road... Embedded with glass beads, the... reflective [strips] are standard fixtures on European motorways... Transit... hope[s] they will stop 15% of crashes. About]... 400 vehicles run off the motorway system each year...

[A survey estimates that '60 deaths on NZ roads each year are caused by sleep deprived drivers.']

...Police believe... fatigue and inattention, during what is traditionally a stressful time of year... may have contributed to a spate of fatal crashes on Waikato roads... The... message to drivers... [from the] head of traffic safety for the Waikato... was, "Just try to take life a little bit easier..."

...[NZ] drivers are proving much pushier than those in Europe. High speeds and tight tailing here are too much for European traffic control software being introduced to help solve motorway jams.

...Auckland police are tailing tail-gaters in a motorway campaign running until November 16. Police say half last year's 2000 motorway accidents were caused by motorists following too close, not signalling or making unsafe lane changes. They say cars should be five-to-six lengths [(or 'two seconds')] behind the vehicle in front. The instant fine for following too close is \$75... [In international news, t]he republic of Georgia has waived diplomatic immunity for a Washington-based diplomat implicated in a car crash that killed a teenager. Police said [the diplomat] had been drinking and could have been speeding...

[A son's battle for his beloved mum The police made a mistake when they told a son they would not bring charges over the car crash that killed his mother. They said it would be "frivolous" to prosecute the other driver and indicated that Pauline Van Syp was to blame for the head-on smash on SH1 near Te Kauwhata 18 months ago. So the son began his own investigation. Last week a Melbourne businessman was found guilty in the Hamilton District Court of careless driving causing death. Now police will formally apologise to the son, a Tauranga father-of-three, for the mistakes in their investigation. "I really knew something was up when all of the witnesses said the same thing even though they had never met each other. They all said they saw the businessman's rental car drift slowly into the southbound lane and hit my mum. There were just so many inconsistencies. I went back to the police and pointed them out but they just blew me off." However, the case was referred to the Waikato complaints review manager, who decided the case should be reopened. Charges were eventually laid against the businessman eight months after the crash. The 53-year-old was fined \$3500 and disqualified from driving in NZ for one year after hiring a top NZ lawyer for his defence and flying in a crash specialist from Melbourne as a technical witness. The businessman, who is a member of a family featured in AUS's *Business Review Weekly* Rich List between 1989 and 1994, said through lawyers this week that he did not want to comment about the accident or trial. The son said the businessman's punishment was inconsequential. The fine was small and the disqualification was a waste of time because he lived overseas. "To his credit, he came up to me afterwards and apologised and I appreciated that. He said he only pleaded not guilty because the technical evidence said he was not in the wrong." The judge said the witnesses were more convincing than the technical evidence from crash analysts.')

...A young woman convicted... [in] the New Plymouth District Court last month... [for] causing her mother's death by careless driving has had her conviction quashed in the High Court... The accident occurred... when [their] car... went over a bank and flipped... [while] travelling from Auckland to New Plymouth... The... [District Court judge] decided that the car had entered a bend where there was a 55 km/h warning sign at too great a speed... to control it properly in the conditions. He fined her \$1250, disqualified her from driving for a year and ordered her to pay \$100 witness expenses. But the High Court... said [the District Court] had not sufficiently considered the evidence of a technician who had examined the car and found a large amount of moisture in the brake fluid... [He believed that] might have been a contributing factor... "The appellant's own statement is that she was aware of the limit recommended for the corner and had applied the brakes to achieve it." ...[the High Court judge] had also come to a different conclusion to that... reached [by the District Court judge] about the degree of difficulty posed by the corner... After the accident, a new signpost, which warned that the road was slippery near the corner, had been put up. [(Editor's note: Some rural NZ roads become slippery near or at corners because of bad engineering – e.g., insufficient roadside drainage where a corner cuts into the side of a hill can cause rainwater cascading down the exposed bank to run across the road's surface.)]

...THE accident toll at one of N[Z]'s worst crash blackspots has dramatically reduced... [The] curve under the Petone underbridge on SH1 was described by the A[A] as "very dangerous when wet"... Since 1984, there had been more than 200 crashes on the curve, 40% involving injury... Then Transit... and the [LTSA] tested a skid retardant. The... new surface was effective in the wet because it contained bauxite, a synthetic aggregate imported from South America that resisted polishing. Bauxite stones had sharper edges than traditional greywacke stones, allowing them to break through the film of moisture and make direct contact with a vehicle's tyres – resulting in greater grip... The innovation costs \$45 a square metre, compared to \$10 for traditional surfacing but... [the] LTSA's Wellington regional manager... said it was worth the expense, estimating the cost of past crashes at the site at \$2 million a year.

...[the president of Rodney Federated Farmers said road dust costs farmers dearly in production lost from roadside paddocks, but anyone complaining about dusty roads is being offered a bitter pill by the Rodney District Council – a bill for \$475. That's the charge – additional to roading rates – for spraying 100m of road with a substance that locks up dust particles. The council is offering the service through contractors at cost price to try to avoid residents pouring waste oil on roads to stop dust drifting to their properties. Waste oil is frowned on by the ARC because it is washing off into waterways in regional parks, says the council's roading operations manager. Council trials showed several non-polluting alternatives were available, such as a substance made from wood pulp. Rodney has 877km of unsealed roads, many of which carry more than 250 vehicles a day.')

...motorists... ignoring the 30km/h speed restriction... are turning... a stretch of roadworks on S[H]1 north of Puhoi... into a stone-chip war zone... [Rodney] glass companies have repaired scores of windscreens damaged by stones flicked up by other vehicles. The manager of Warkworth Glass Glazing and Auto Glass... said his company had repaired 68 windscreens in less than a week.

...Coroners have the authority only to note and recommend action. They have no power to follow up their suggestions... This is clear under the Coroners Act and from personal experience, according to the Auckland coroner... who has been conducting inquests for more than a decade. "I sometimes draw attention to a cause of death which should be attended to, such as a camber on a road where a fatality has occurred... I did just that in the case of a motorcyclist who died near Warkworth some months ago through no fault of his own. He did everything right but still became a tragedy. But whether that camber has been fixed... I have no way of knowing and I can't be expected to know. I'm just one individual, like all coroners, and we have no investigative or follow-up role – and no time to do it anyway..." To try to ensure more reaction in future, particularly by Government agencies, six officials who attended the first national conference of coroners last weekend have been appointed as a strategy group to work on ways to get recommendations acted upon. They include the Napier coroner... who is concerned that after two years nothing has been done

on recommendations he made on the safety of old vehicles turned into house-buses. Eight people died in one house-bus crash into the Mohaka River which he investigated. While the occupants had hot-wired the bus after police took the keys from them, the main reason for the accident was the vehicle's substandard condition. [He] said there were similar vehicles still on the roads and they are a menace. It is only within the past 10 years that coroners have been licensed to make comments. That privilege arose from the campaign of the former Auckland coroner... against drink-driving, which he called "road murder." His forthright approach was described as "too tough" by some lawyers representing drink-drivers and they sought to curb him... However the general rule, particularly in a Government department, is that comments are "noted for action," according to the Department for Courts which is responsible for coroners... Napier[']s coroner for the past nine years, said he found that where... professional bodies... were... involved, they were "quick to respond and behave in a proper... way. But seemingly, and I'm very much generalising, where you've got the awful blankness that a Government agency represents, there tends to be a 'this is not my problem I don't want to know about it' approach... I think we [coroners] should have the ability to insist that we be taken seriously. The comments come after a pretty full inquiry and evidence from the police, so they can hardly be said to be a light-hearted matter. You should be able to be confident that, in many instances, something is being done to prevent a similar happening and save a life... [A]n area of much concern[] is auto-suicides. The public should be made more aware that... [some] people out there[] are prepared to take their cars and use them as a means to end their lives – and possibly take you with them."

...Using cellphones while driving poses great safety risks, according to the results of recent Japanese experiments. Accidents occur while drivers are talking on phones because of a narrowed field of vision and reduced attentiveness. Rear-end collisions studied in 1996 were up more than three times over the previous year, said the survey. The experiment monitored police drivers wearing miniature cameras which tracked the movements of their eyes. Drivers not using phones observed a wide area and maintained an awareness of their surroundings. But, when simultaneously driving and talking on cellular phones, drivers tended to focus on just one point in front of them... [Incidentally, t]hings are not what they seem to be in Santiago's affluent eastern suburbs. Two Chilean policemen stopped 49 motorists for using cellphones while talking and were amazed to discover that a third were talking on fake phones in order to create an impression. "I was only doing it to look better," said one of the culprits. Another said that in Chile you have to show off to get ahead, and using a fake phone was much cheaper than the real thing. It was not clear if the penalties for using a mock phone while driving were the same as for a real one.

...[A 'Beverly Hills 90210' actress is facing a real-life drama of her own. The star of the movie *Urban Legend* has been charged with vehicular manslaughter for an accident that killed a 9-year-old boy crossing a Los Angeles street. Witnesses claim the actress was talking on her cell phone and ignored other cars that had stopped for the boy. If convicted, she faces up to a year in prison and a \$10,000 fine.' ■ 'In some US states, people can't be prosecuted for causing deaths after using a cell phone while driving because it's not illegal to drive and use cell phones at the same time' ...

'TEXT-messaging while driving could be banned after a spate of road deaths. British authorities are considering outlawing the practice after a truck driver was jailed for five years for dangerous driving causing death. He was sending a text message to his girlfriend when he crashed and killed another motorist. It was the 16th fatal accident on UK roads in the past 10 years involving drivers using a cellphone. A young woman pedestrian was killed as she tried to send a text message while crossing a road. And a policeman died when he drove into a tree while reading a text message on a cellphone. The LTSA said it would look at overseas studies of text-messaging causing accidents on the road. A spokesman said: "We urge people to pull their car over if they make a call on their cellphone. If it's crazy trying to drive while using a cellphone it is even more crazy to try and drive while texting, which requires you to look at a small screen instead of the road and to use the fingers of a hand that should be on the steering wheel.'"]

...MOBILE phones are becoming a deadly accessory for motorists on N[Z] roads. The number of accidents caused by drivers making or answering a call behind the wheel have risen sharply... Yet in N[Z] it remains perfectly legal to dice with death by juggling a phone in one hand and trying to negotiate a sharp corner with the other. While the use of mobile phones has caused one of the biggest increase in accidents, it is by no means the most common cause of distraction among motorists. The latest[] LTSA figures... reveal that in 1996, 228 accidents, including five deaths, were caused by drivers trying to light a cigarette or fiddle with their radio. Passengers who distracted the driver caused 124 accidents, including six deaths... [O]ne person died after being put off by an animal... However, it is the use of mobile phones in cars which is causing the most concern in some quarters... "The use of cellphones should be banned," said... [the] Auckland City Council road safety co-ordinator... The local authority allows employees to use only hand-free sets... Using a cellphone while on the move is considered a motoring offence in Britain. In N[SW] and Victoria using a hand-held phone is punishable by a fine. A University of Toronto study issued this year concluded that drivers are four times more likely to have an accident while using a phone... "Here people can drink, eat and talk on the phone while driving. We are living in crazy land."

...[a traffic safety study shows that more than 20% of the 6.5 million car accidents each year in the US are caused by drivers who are talking on a mobile phone, drinking or eating. One woman was eating a bowl of cereal in her four-wheel-drive when she lost control and collided with an oncoming car, killing the driver.' In local news, 'NZ's number one rule on the road – "always give way to the right" – may need to change, say transport officials. The LTSA has told the Minister of Transport that work will soon start on new road rules. "Consideration will be given to changing the left turn/right turn give-way rule, as NZ is the only country where motorists drive on the left-hand side of the road with this rule," says a briefing paper to the minister. In other countries, such as Britain, the car turning across the line of traffic must give way. NZ's give-way rule has been criticised by visitors as confusing and has sometimes been blamed for car accidents involving tourists. However, politicians have previously steered clear of changing it for fear of creating even more confusion and a backlash from angry motorists.']

...All road rules will be reviewed over the next two years... said... [a LTSA] spokesman... In 1976 the road rules were changed to make it compulsory for drivers turning left to give way to those turning right. Before that, those turning left had right of way. N[Z] is now the only country to have such a rule.

...Frustrated motorists making right turns cause more accidents in Auckland than drunken or speeding drivers, new studies reveal. Motorists misjudging gaps in oncoming traffic streams... were involved in 10 fatal accidents and 900 reported injury crashes last year... [The LTSA] regional manager, said motorists' failure to yield right-of-way was a major problem in Auckland traffic. The right turn required skilled judgment of traffic gaps and awareness of approaching vehicle speeds... Overall there were... 4000 intersection accidents in the past five years... The total cost between 1992 and 1996 for intersection accidents was \$323 million... [The chairman of the ARC's] land transport committee, said while safety measures and intersection design could help to cut the right turn crash toll, drivers had to take responsibility themselves... A University of Auckland behavioural psychologist... said because many intersections were ambiguous and frustrating, some drivers could become aggressive and take risks. Ambiguity arose because drivers were not always certain what to do at intersections. "Hence research finds that the longer people wait, the smaller the gap they are willing to pull out into." ...Studies suggested some considered red lights "obstacles" to driving and that intersections presented challenges to compete with others behind the wheel... She also noted that young male drivers tended to be over-confident in their driving skills, less tolerant of frustration and more impulsive... [In related news, police] want the power to confiscate vehicles of young hooners who drag race on roads while crowds... of up to 500... onlookers egg them on. Cities countrywide are blighted by the after-dark activities of organised groups that taunt police or roar off when the law arrives. "Nine times out of 10 they generally leave for another location,"... In some cases, spectators were injured – one fatally in Auckland several years ago... [– but] street racing was not a straight traffic offence... Currently police can confiscate vehicles from repeat drink driving and driving while disqualified offenders[], or... charge drivers with a range of offences, including careless driving and dangerous driving, but they are often no deterrent. "Officers make about 50 prosecutions on a Friday night but the same names keep cropping up,"...

Auckland police are lobbying for a law emulating legislation recently introduced in N[SW]... which allows police to impound vehicles for up to three months... But... [the] Assistant Commissioner... was unsure if a new law would help, saying: "It's a phenomenon of youth. However, there are legitimate ways of pursuing this excitement with car clubs and legalised drag racing,"... The Manukau City Council can fine motorists \$500 if their vehicles are caught on selected streets in industrial south Auckland after certain hours.

...NIGHT time in a deserted industrial area of Auckland. A black panel van, registration plate Evil 8, idles lumpily to the middle of the road. The motor roars, the wheels spin and smoke soon envelopes the vehicle. As it moves slowly through a series of screeching circles the acrid odour of burning rubber fills the air. In drag-racing parlance this is a "donut" and judging from the hoots of spectators it is a good one... "That's a real driver, man. I've not seen any male do better than that,"... [says one spectator. T]he driver and owner... at 22... is... a veteran of eight years attending these unauthorised gatherings of petrol-heads. Her car, with its 5.9-litre engine, commands its own respect... [The] 1972 XA Ford Falcon GT panel van, she tells me, is one of three in the country. It may have been bought for only \$2500 but these obsessions don't come cheap. She estimates more than \$15,000 has been lavished on improvements. This is where her spare money... goes. Burnouts, it seems, are[also] an expensive habit. "I was spending \$240 a week on tyres (but) I was earning \$750... so I could afford it,"... Her ambition is to become the fastest woman over a quarter mile... at Meremere drag strip... But for now she is much more likely to be found... in the south and east of Auckland. By spreading the word – usually by cell phone – 200 cars can descend on a quiet cul de sac... where they do the burnouts and donuts that are not allowed at drag strips, presumably because of the damage they do to the road surface. Although the meetings are referred to as illegal drags, it is rare for cars to race... Racing, however, is popular with young Asians who have their own sessions in East Tamaki where, she says, big money can be bet on the outcome... [Furthermore,] \$150,000 BMW M3s can be seen racing Toyota Supras (\$100,000) and Nissan Skyline GTRs (\$75,000). "These guys are all 18 or 19... I don't hold it against them that their parents bought them (the cars), I just hope they work for them later." ...Drivers consider the gatherings, which have gone on in some form for more than 20 years, to be harmless fun... Not all agree... Police recall one death. [The 22-year-old] remembers it too... a passenger, who was swinging from the window ledge, died after falling from a car during a drag race... [She] doesn't see that blame should be attributed beyond the victim's own stupidity. But clearly it can be dangerous. [She] tells of her own close call when her car's drive-shaft dropped out while racing. Had its tip dug into the road it could have acted like a pole vault on her car. "That was my near death experience... I didn't touch the car for a week, I was in a major state of shock. Then I thought, 'No, I'm alive, might as well go out and tempt fate again'." ...Then there's the horror story she tells of a driver who injected nitrous oxide (laughing gas) into a car's fuel to increase power. He lost control... [She and others] reckon most drivers would go to an authorised venue if one was set aside, but police don't believe them... "If you had an area with supervision I don't think anyone would come because half the fun is to take the mickey out of the police. It's the illegality that appeals." [She] rolls her eyes at the comment and tells of her own efforts... arranging a venue with Waitakere City Council and police only for it to be squashed by the police hierarchy. Both sides agree that violence and tension is increasing. The police tell of lone patrol cars facing barrages of flying bottles, while the dragsters complain of having been strip-searched when held on charges of dangerous driving or unlawful assembly.

...The squeal of street racing tyres proved the last straw yesterday for a South Auckland man who turned to a mean machine of his own. The resident gunned a digger down sleepy early morning streets, allegedly ramming several cars with his front-end loader and provoking a response that left suburban Wiri resembling a riot zone. Police said the Wiri resident was woken by the racers' racket about 4am and decided to put a stop to them. His digger allegedly turned over one car with four people in it. [A]Senior Sergeant... said the man was then chased home by members of the group, who pelted his McLaughlins Rd house with rocks, breaking most of the windows and terrorising his family inside... [He] labelled the behaviour of both sides "disgusting,"... Police have arrested 46 people, aged between 15 and the mid-40s, on charges of breaching the peace and unlawful assembly... The land where the attack took place is being developed into an industrial park... [N]umerous batteries had been taken from earthmoving machines on the site, hydraulic lines cut and diesel stolen, which the racers poured on the road to aid burnouts. One of the racers... aged 20... yesterday said he could understand the frustration over the thefts but said the digger attack was the most dangerous thing he had ever seen... [The] digger hit his Honda CRX, which he estimated had cost him about \$27,000... The petrolheads regularly spin around McLaughlins Rd, with up to 300 cars... from wider Auckland and beyond... revving through the early hours.

...Auckland authorities are moving to clamp down on illegal drag races in city streets which they have so far been unable to stop... Persistent, resource-heavy police campaigns – even undercover operations involving covert video surveillance – and individual prosecutions had only moved races to [a]new location... Police may go as far as seeking a law change to prevent people from gathering for the races... [L]egislators in N[SW] had passed the Traffic Amendment (Street and Illegal Drag) Racing Act last year. The Deputy Mayor of Auckland... said the... Auckland City Council... should lobby Parliament for such a law[, and]... suggested that the council should also respond with a bylaw, possibly confiscating cars involved. [He believed that t]aking half a dozen cars each weekend would soon put a dent in dragsters' activities... A... council report said the most promising solution was to ban parking during problem times to force spectators to move on. This had been tried in Quay St... but the sign vanished.

...Four Great Barrier Island families now have vehicle access to their properties... but bureaucrats on the mainland are unimpressed. Previously, the residents faced a tough 10-minute walk to get to the nearest road... But last week... one... resident... had to return a borrowed bulldozer and said the only way to get it out was to cut a track over the last 100m section of a "paper" road, across a slope. The rough track can now be navigated by a four-wheel-drive vehicle but the chairman of the Auckland City Council planning committee... understands that an abatement notice will be served to stop further work on the road... In 1995 the council declined resource consent for the road because of environmental concerns... [The chairman] said... "I'm very unhappy about this[act of vandalism]... People go through a process and then don't accept the decision and take the law into their own hands." ...[By the way, c]ompanies like Mercedes-Benz and Lexus... are studying the projected growth of four-wheel-drive vehicles... [A] record 220,000 off-roaders were sold... in the U[S]... in May. The same companies are also looking[at] buyer profiles. One that perhaps doesn't apply to N[Z] is that the average Grand Cherokee owner in the U[S] has a household income of about \$150,000.

...LET'S not muck about. There are... grown blokes... that love the smell of mud in the morning. They will roam miles in fearsome four-wheel drives to find it. They will take turns to motor madly through it, spraying their brothers with ooze. They relish being stuck in, then towed from, the mire... More than 90 [4WDs will] spend upwards of 10 hours careering through a swampy Coatsville quarry... and kicking up dust and dirt in Riverhead and Woodhill forests... [during] the North Shore Four-Wheel Drive Club's annual "safari" through the nether parts of Rodney District...

[While 'Otago farmers are complaining about the serious damage being caused to their access roads by Dunedinites going for joy-rides in 4WD vehicles', environmentalists and wildlife enthusiasts are complaining about damage '4WDs cause to sand dunes and bird nests on Canterbury beaches']...

Local politicians, the police and a community group have joined forces to stop off-road vehicles damaging... the volcanic cone... [of Auckland's] Mt Wellington in nighttime escapades... There were... suggestions that... residents set up neighbourhood watch groups to monitor the mountain... The Tamaki Community Board is promoting a number of measures[, including]... notices around the mountain banning off-road use of four-wheel-drives and the spreading of litter and glass... [which] it thinks will stop illegal joyriding.

...[the] Minister of Consumer Affairs... has told off her daughter... for joyriding with friends in a ministerial car. The police caught... [the] 17-year-old[, who had taken] the car without her mother's permission or knowledge, says a spokeswoman for the [minister. Incidentally, 'rescuers took an unconscious toddler from a car after he was discovered overcome by heat in Masterton yesterday. The 2-year-old was found alone in the car by a passer-by, who alerted staff at the BNZ branch in Queen St at 1.40 pm. They took the toddler from the unlocked car into the bank, removed his clothes and wrapped him in cold towels to cool him. Ambulance staff took him to Masterton Hospital for observation and he was discharged last night. A Senior

Sergeant said it appeared the child was in the care of a babysitter while the parents were at work. He said police were investigating why the babysitter had left the toddler alone in the car, and how long the boy was unattended. A decision on whether to lay charges would be made once that investigation was complete. An emergency consultant said young children should never be left alone in a car. "A young child shouldn't be left unsupervised anywhere." Young children were especially sensitive to changes in temperature, but were not able to take off clothes or wind down windows to cool down. In Sydney, 2-year-old Leo Nguyen was discovered dead in the back of his mother's car last week after being overcome by heat when abandoned by thieves who had stolen the vehicle.'

... 'A 26-year-old drifter will today face manslaughter charges over the tragic death of Leo Nguyen in the 50-degree heat of a stolen car two weeks ago. The drifter was arrested in Canberra's sprawling Tuggeranong shopping mall on Monday after a hunt involving the AUSn federal police and NSW crime agencies. Police allegedly found his fingerprints on the black BMW belonging to Leo's mother. The drifter was taken to Sydney yesterday after unsuccessfully fighting an extradition order, required because the ACT is a separate jurisdiction from NSW. The arrest brings to a close the widespread hunt launched after a death that shocked AUS. Leo's mother and her sister had stopped briefly to buy noodles at the largely Vietnamese shopping centre at Cabramatta. The two women left the sleeping Leo in the car with the engine running to keep the air-conditioning going. The drifter spotted the car, jumped in and fled. The car was driven just a few blocks before being abandoned, the engine off and the windows wound up. Police began a desperate grid search of the area but, unable to call in a helicopter, did not find the BMW for 2 1/2 hours. Despite mouth-to-mouth resuscitation by police and treatment by paramedics during a frantic dash by ambulance through rush-hour traffic, Leo died of a heat-induced heart attack in Liverpool Hospital.'

...the person who is responsible for 'a bizarre case of road rage in California has a price of nearly \$US110,000 on his head – thanks to contributions from infuriated animal lovers. The money is earmarked for anyone giving information leading to the arrest and conviction of the man who allegedly killed Leo the Bichon Frise after a minor traffic altercation outside San Jose International Airport last month. The owner of the 10-year-old fluffy white dog lightly bumped a car in front. The driver of the car, a sports utility with Virginia licence plates, stormed back and began hurling abuse at the owner. She says when she opened her window to reply he reached in, grabbed Leo by the collar and threw him into three lanes of oncoming traffic. Local newspapers, radio and television stations took up the story, transforming Leo into a cause celebre that has touched people as far away as Norway and AUS. This week police released a composite sketch of the suspect, described as white, aged 24 to 28, of medium height and wiry build.'

...an] investigation into causes of road rage and possible solutions is expected to take another six weeks. Police are studying a growing number of N[Z] and overseas cases, trying to find a link between drivers and the nature of their crimes. The term "road rage" was coined in Los Angeles during the 1980s after a spate of freeway killings... [A] psychologist... explained road rage by saying being in a fast-moving vehicle in lanes of traffic seemed to bring out "some kind of primal urge" in people... "People, especially men, seem to change when they get behind the wheel. They suddenly have this enormous power and a chance to be aggressive and release stress, and they get incredibly frustrated by anything which inhibits or delays them. If someone cuts in front of you, forget it. Let it go. You don't need to be aggressive and retaliate. A simple toot of the horn or a two-fingered sign might be tempting, but it could lead to injury or even death,"... Auckland's regional traffic co-ordinator... [agreed] men were the main offenders. "We usually find the most outrageous reactions come from people who would normally resolve their conflicts that way... They would have the same response on the sports field, a drinking establishment or the family home – it's just the way they conduct themselves," he said.

...MOTORISTS convicted of road rage offences will be used by the A[A] in the fight to change the attitude of N[Z] drivers. People punished for their part in road-related physical altercations will be asked to explain their actions at a road safety conference at Wellington in November. [The AA's] chief executive... said current driver-awareness programmes were not as effective in reducing the carnage on our roads as they needed to be... Changing inconsiderate attitudes was the key to more harmonious motoring but road rage was becoming more prevalent. [He] thought it may be time to use lighthearted signs, similar to those used in Britain, to encourage drivers not to take bad driving so personally. "We seem to concentrate on graphic road trauma. It might be time to use humour."

...Tougher penalties for traffic law breakers will bring down the road toll and save millions of dollars a year... [the] Chief Commissioner of Police for Victoria... [said] yesterday at the Local Authority Traffic Institute conference on the Auckland North Shore... [He] said drivers must be put in a position where they feared to go over the speed limit, street-race or drink-drive. If drivers felt comfortable with fines and penalties they would be comfortable breaking the law... Victoria has won accolades from around the world for its road safety strategy, which has brought down the state road toll by a considerable margin... [It] was not until Victoria recorded a horrific road toll of 1061 in 1970 that the decision was made to get tough. Vehicles owned by road-rage drivers were forfeited, repeat offenders were liable to be jailed, drink-drivers lost their licences on the spot and heavy fines were imposed on speeders. More than \$5 million w[as] poured into random breath-testing programmes and speed cameras were introduced... The state has maintained a figure of about 400[road deaths] every year since the mid-1980s... Each fatal crash cost the community \$700,000, he said, and each injury requiring hospital treatment cost more than \$100,000. The new strategies have saved an estimated \$2 billion. [The commissioner] said warning drivers about speed camera zones was counter-productive. "Sure, I believe in civil and human rights, but the rights of the individual must come second to the rights of the community." ...[Speaking of putting oneself second, how about the] one-year-old Belgian shepherd dog... [who pushed a] six-year-old... boy out of the path of a speeding car... as the car raced down an alley outside... [their] home... While experts disagree as to whether Missy knew what she was doing, [the boy's] stepfather... was clear that Missy took her role as a watch dog and protector of his six children and stepchildren very seriously... "...She jumped in the air and her front two paws pushed him to me." [Unfortunately, at] about the same time, [the] car struck Missy's hindquarters... Rest in peace, Missy.

...Residents in a city street besieged by speeding cars have won their battle against bureaucracy – but their peace of mind comes with a \$45,000 price tag. The North Shore City Council says it cannot afford to put judder bars into Arran Rd, Browns Bay, but has told residents they can have them if they foot the bill. North Shore police say the street is one of the most dangerous in the area, with cars travelling at up to 117 km/h[in the 50 km/h zone ('research shows that pedestrians hit at 30 km/h have a 5% chance of dying, compared with a 70% risk of death if hit at 60 km/h and 95% if hit at 70 km/h')]. The officer in charge of traffic control on the Shore... said police had spent a lot of time issuing tickets in Arran Rd but could not afford to continue. The organiser of a petition... said the once quiet neighbourhood had become a thoroughfare for cars heading to and from the Northern Motorway. "People are too scared to let their children walk to school on their own in case they are hit by a car." Another resident... said the council had refused to take the matter seriously until he offered to contribute \$1000 towards the cost of the judder bars. Residents were trying to raise money through sponsorship but wanted the council to pay half the cost. But[one] councillor... who lives in Arran Rd, said judder bars were a waste of time and money. "You just transfer the problem to another street. We'd end up having to put them all over the North Shore, and who'd pay for it?" ...Speeding was a problem throughout Auckland and one that local authorities would have to address eventually...

['Auckland's motorists are facing a new, none-too-subtle hint about their speeds. Drivers on Portland Rd, Remuera, last week had their speeds flashed to them and fellow motorists on a radar-controlled electronic sign in an Auckland City Council trial. The machine will also be tested at Forrest Hill Rd and Glenfield Rd on the North Shore this week. While errant drivers do not receive tickets, road safety campaigners hope they will heed the warning to keep their speed down. Both councils will study the equipment's lasting effect on motorists before deciding whether to buy the \$24,000 mobile machine.'

... 'There is no conclusive evidence, to our knowledge, that speed cameras save lives. But what they certainly do is earn governments money – more than \$20 million, or \$385,000 a week in NZ last year. Therefore, the government will probably do its damndest to prevent the appearance here of a British device called a Backflash. It's a \$600 unit which fixes to the front of a car. It fires its own flash when it detects either the light flash or radar of a speed camera and over-exposes the speed camera's film. British police are looking at ways to ban it so it must work.'

...‘a British fellow who received a £40 speed camera fine and a photo of his car sent back a photo of £40. Police then sent the man a photo of handcuffs. He paid the fine.’ In local news, the Government is ‘planning to fine everyone caught exceeding the speed limit by 10km/h instead of just the top 15%’]...

The \$75.6 million collected from speed camera fines should be used for road safety and the police, says[a] Labour MP. The cameras were not supposed to be revenue-gathering devices... [Incidentally,] Christchurch ratepayers have paid \$90,000 for 23 speed cameras. Police believe the Christchurch City Council is the only local authority in the country to fund speed control.

...[a motorist has managed to get off a speeding fine after he convinced a Christchurch court that ‘speed cameras are sometimes unreliable – because they can pick up outside interference if not positioned carefully. One test in the US found a tree moving at 85 km/h’!]

...‘MOTORISTS snapped by mobile speed cameras are being advised to get out their protractors before they pay their fines. The advice comes from a Hamilton sales rep who has twice beaten fines after arguing the cameras that snapped him were set up illegally. They were set up at an angle to the road of more than 22.5 degrees. Speed cameras in the back of cars must be mounted so the radar only catches vehicles in a 22.5 degree arc – the maximum allowable for accurate speed measurement. The sales rep, who drives more than 60,000km each year, was twice snapped at 115kmh in 100kmh areas – but was sure he wasn’t speeding. Now the salesman is wondering how many others paid up for illegally recorded fines. Each year more than 800,000 speeding tickets are issued’ to drivers photographed by speed cameras.

...nationwide, about] **1300 blackspots have been identified and marked on the roads w[ith SPEED CAMERA AREA signs to warn that] cameras may be located[nearby]. While the police rotate only 31 cameras round the country, the uncertainty they create helps keep speeds down.**

...A hidden speed-camera trial in the upper central North Island has led to a fourfold increase in the number of drivers being snapped... on designated sections of highway... from 3.59... every hour... last year to 12.53[or a total of]... 30,000 drivers... in[the] four months... since the trial began... “We anticipated there would be a sharp increase in the number of photos per hour as we picked up those speeding when they thought they were safe from detection,”... [the] Minister of Transport... said... Since speed cameras were introduced in 1994, speeding drivers have paid more than \$75 million in fines. [The minister] said the covert camera trial... was aimed at improving road safety... “Any driver who objects to contributing to the Government’s revenue through speed-camera fines has the solution in his or her own hands. If they don’t exceed the speed limit, the Government won’t get an extra cent,”...

[A] promise to look at putting money raised from speed camera fines into road safety programmes is on the back burner, despite the Minister of Transport... telling Parliament... it would happen soon... [In related news, the] latest “radar/laser jammers” will not enable motorists to get away with speeding... say police... They warn the public that the... Phantom and Lazer radar jammer and scrambler... devices have “no scrambling capacity whatsoever, and are very poor detectors... [T]he performance is the worst of any detector... including those costing one-fifth the price.” ...Police National Headquarters paid out \$572.62 for their own Phantom and Lazer devices and tested them against their speed cameras and the Hawk radar speed trap... Radar Protection Ltd, the company which imports the devices, yesterday stood by its products... “Hundreds of satisfied customers,” showed they were effective. The police criticism of them was “a PR exercise...” ...and police just did not want people to buy them.

...[a speed camera maker, ‘Rocky Mountain Radar, has what it calls the Phazer, a device which detects both radar and laser sensors and causes them to register no speed at all. The company is so confident about its Phazer that it says it will pay the fines of anyone caught speeding using the device.’]

...The importer of a device that helps motorists avoid speeding fines says police are powerless to stop its use. The Rocky Mountain detector temporarily jams speed cameras, laser guns and the Hawk detector... The head of the police safety branch... said yesterday that he had not seen the device. Although radar devices were legal, he said any jamming device that transmitted a signal was not... but he suspected... the Rocky Mountain detector... was “just a radar detector with bells and whistles.” He said jamming devices had never been used in N[Z], and he has not heard of their use in other countries. The device was developed in the U[S] by a company specialising in military technology... A spokesman for the importer... said... [the] company... had sold more than 500 of the \$599 devices in two months. Travelling salespeople were the best customers. Meanwhile, another tactic to avoid speeding fines failed for... drivers travelling south on State Highways 1 and 3 on Friday. Police issued \$200 fines to 17 motorists who had removed their front number plates, hoping to avoid speed cameras. [● ‘The Minister of Police was let off with a warning when he was stopped by police about 9.30 pm last Saturday for exceeding the 50 km/h limit in Wellington. It is understood he decided to go public yesterday only after a journalist found out about the speeding incident and began making inquiries. Hard on the heels of the minister’s admission came an assurance from the head of traffic, the Assistant Commissioner, that it was common for police to issue verbal warnings instead of tickets to traffic offenders in appropriate circumstances. The head said the minister was clocked speeding just short of a 100 km/h speed change sign in Petone as he approached the SH2 motorway. The head refused to say how fast the minister was driving but the NZ Herald understands it was about 70 to 75 km/h. The hapless minister – who has taken a hammering this week for his handling of police restructuring – said that he very much regretted his lapse. “As Police Minister, I am very aware that excess speed is one of the prime causes of death and injury on the road. I can assure the public I will be more careful in future.”]

...‘Speeding police officers are clocked breaking the law almost every second day. Figures obtained by the Herald reveal that at least 886 officers driving police vehicles have paid speeding fines after being caught by the force’s cameras since February 1994. The Police Minister admitted last night: “It’s not good news,” and added that the police should set an example to motorists. 3449 officers were let off speeding tickets because they were legitimately carrying out their duties when caught by speed camera. Explanations were accepted from a further 175 and the tickets were dropped. In a further 287 cases, the tickets were transferred to the individual officers’ names, but the records do not show whether they paid or fought the charges.’

...‘NZ policemen are certainly getting speeding tickets, but they are not crashing too many official vehicles – unlike many British bobbies, who have been forced to resit their driving tests because they are hopeless drivers. In London, police cars have an average of 21 crashes every week.’

...‘Wealthy drivers will pay more and poorer drivers less, if a recommendation to means-test traffic fines is adopted in Britain. A Department of Transport report concludes that fines related to incomes would be a more effective deterrent in the war against speeding motorists. But one critic said: “Means-testing is a minefield. At what point does a fine actually become a deterrent? Should a chap of obvious means doing 160 km/h in a new Porsche equipped with the best brakes and tyres pay more than one on a below-average income doing 160 km/h in a 1989 hatchback with worn brakes and tyres? Is the Department of Transport saying that the wealthy should know better, therefore they should pay more?” The ruckus continues.’

...‘A dot-com millionaire in Finland was fined \$100,000 for driving his Ferrari 360 Modena dangerously. Traffic fines in Finland are linked to income.’

...‘Nine Belgian drivers who turned up in court to answer speeding charges instead found themselves charged with unlawful sexual intercourse. A computer made the mistake.’ By the way, ‘an Italian study found that men who receive a kiss just before getting behind the wheel of a car drive more safely. Kissing is said to release hormones in men’s brains which makes them less likely to drive aggressively.’

...‘An American Automobile Association study of California highways has found that fatal car crashes declined after speed limits were raised. On the other coast, authorities in New York found the same thing – fatalities were down 29% on roads where the speed limit increased from 88 km/h to 105 km/h. The number of crashes on the same roads fell 4% and the injury rate dropped 5%.’]

...Decisions by 12 states in America to raise speed limits... to 112km/h... on interstate roads and freeways cost the lives of 500 Americans in the last nine months of last year... Some states, such as Texas, raised speed limits even on two-lane highways... The... Insurance Institute for Highway Safety... estimates a 12[% increase in highway] fatalities... and a 6[%] increase on all roads in the 12 states concerned... The institute study coincides with an article in Time magazine last week which looked at Montana, a state where legislators have done away with a numerical speed limit during the day for car drivers, instead telling motorists the daytime legal speed limit can be defined as “reasonable and prudent” speeds. Trucks driving in Montana have to keep within... 104km/h... and at night, all vehicles are restricted to that speed... But... Montana’s decision not to post a numerical

speed limit is again under review... *Time* reports that cars frequently travel through Montana at speeds of more than... 160km/h... and police there have clocked drivers at... 241km/h... In the U[S], many people frequently dispute the idea of the police and safety legislators that "speed kills." However... "It reduces the time drivers have to avoid crashes, and increases the likelihood of crashing and the severity of crashes that do occur,"... says... the institute...

THE faster you go, the bigger the mess. This is the message at the sharp end of a major anti-speed campaign launched today... [by] police and the [LTSA]... If you crash, you are twice as likely to die when travelling at 120km/h than... at 100km/h... 130km/h means you are four times as likely to die... Apart from bolstering road patrols a series of hard-hitting television advertisements will also be screened, starting tonight.

...[The faster people go, the bigger the fine. 'The minimum is \$30 (for exceeding the speed limit by up to 10km/h) and the maximum is \$490 (for being 45 to 50km/h over the speed limit). Exceeding the limit by 50km/h is regarded as being a serious offence' and, therefore, offenders are sent to court instead of receiving an instant fine. '1800 NZers a year are nabbed breaking speed limits by at least 50 km/h.']

...Police chased a 14-year-old girl driving a stolen car at speeds of up to 150 km/h through mid-Canterbury for 25 minutes early yesterday.

...[HOT PURSUIT (7.30pm, TV3) is a special looking at the officers who make split-second decisions to chase criminals in high-speed pursuits. Each year there are more than 20,000 high-speed police chases in America.] ● 'In Munich, Germany, a bank robber gave police cars the slip after a 180 km/h chase through the streets. But when he drove on to a high-speed toll road and queued to pay his way, they caught up and penned him in.'

...[British police are looking for a high-profile patrol vehicle, one so intimidating that no one will consider trying to outrun it. They favour the rally-bred Mitsubishi Evolution VI.] Hopefully the move won't simply mean there is 'another high performance car with a low performance driver' on the road!]

...Police are using high performance sports cars in a new speed enforcement campaign which began yesterday. And they are under strict instructions not to become involved in chases... "There is no way in the world we will be chasing cars around at the top speeds of these vehicles..."

...police in the four areas where the cars were being used... had been told to return them in showroom condition... The Nissan 200SX has a top speed of 235km/h, but[the] Assistant Commissioner... said it was the car's power in acceleration that would be most important... [The car] could go from zero to 100km/h in 6.5 seconds, making it ideal for catching speeding motorists quickly. He said that in almost all cases motorists ordered to pull over did so without having to be chased[. ● 'In the US, one person a day dies as a result of high-speed police chases – one-third are innocent bystanders.' Many more are injured.

...[The police used road spikes to stop a stolen car yesterday morning. The car, stolen from Paeroa, was chased through Cambridge about 10 am, reaching speeds of 180 km/h, often travelling on the wrong side of the road and forcing on-coming traffic nearly off the road. A sergeant said the car passed several vehicles on blind corners. The spikes were set up 2km north of Tirau and punctured both front tyres of the car. It stopped a kilometre further on, and a 17-year-old female and four juveniles were caught. A 14-year-old was to appear in the Hamilton Youth Court on charges relating to the incident']...

Hastings police... used road spikes... yesterday... to stop a 14-year-old driver in a stolen car... after the boy failed to stop... Police reported a quiet Labour Weekend overall... with most vehicles travelling at sensible speeds. But one officer, surprised at the high speeds recorded on S[H]1 near Tokoroa, blamed Aucklanders... unaware of the district's emphasis on enforcing speed limits. Yesterday morning, in his first few hours patrolling, he apprehended two... "white-collar workers"... [- one] travelling at just over 160 km/h and one at 155 km/h.

...Seasoned traffic enforcers have been horrified by speeds recorded on Auckland roads as irresponsible drivers get behind the wheels of powerful, late-model cars. Police recently stopped a car which was clocked travelling on the Southern Motorway at 220 km/h... "He was going so fast, officers had to abandon the pursuit and he was eventually caught in the Waikato," said... the head of the Auckland police motorway section... Other horror stories in recent weeks include... [a] car reaching 148 km/h on the Auckland Harbour Bridge... [and a car that] was snapped speeding six times in 80 minutes... The highly publicised programme using slick Nissan 200 SX pursuit cars has been extended until Christmas[. In related news, 'McLaren is looking at building a model to compete with the best from Ferrari. Something less than \$500,000, or \$1.5 million cheaper than the McLaren F1, the world's fastest road car it gave us a few years back.'

...[McLaren's F1 three-seater road car is in danger of losing its title as the world's fastest production car to a Swedish convertible called the Koenigsegg CC. The V12 F1 speeds from zero to 100 km/h in about 3.6 sec and has a top speed of about 375 km/h. The Swedish challenger, powered by a supercharged V8 engine producing 480kW, gets to 100 km/h in 3.2 sec and charges on to 385 km/h']...

Car makers can now build cars with lower top speeds dictated by built-in computers... But would Governments ever encourage them to do so? The first appearance of the motorcar in England last century so inflamed fears of pedestrians being run down by the "horseless carriages" that the law required runners to jog ahead of the car to warn of its progress. But to a fascinated public its potential uses outweighed its risks and the car and its noisy internal combustion engine quickly left runners and law-makers behind. Soon cars were running every which way. Sometimes they ran into each other. One of the first recorded collisions between cars happened in France... The story went that both drivers were so captivated by the sight of each other that they simply met head-on. Hand in hand with the new source of power and motion came the need for more power. More power meant more speed. More speed meant more risks, new challenges... Enter the racing driver, a new breed of daredevil. Crowds in Europe lined rough-and-tumble roads to watch early rallies and races. Spectators and drivers were killed. Never mind... Man's desire to go faster and farther was insatiable. Nothing has changed. Nearly 100 years down the road, [a] Royal Air Force pilot... goes 1227 km/h – 20 times faster than the first official land-speed record of 63 km/h set in 1898, not in a petrol-powered car but an electric one... BMW, Mercedes-Benz and Audi buy into... an agreement... [that] they limit their cars to 250 km/h... But what happens if one day... [Governments] move in, telling the car industry that speed kills and to go full circle and build cars limited to, say, 100 km/h...? ...car makers would not have to build them as strongly to withstand crashes.

...Police cars are crashing off the road at a rate that is alarming police chiefs, who say they do not have the money to repair... them... or... to buy a new car when one was written off. Police did not have insurance for vehicles because premiums would be too high... The situation is critical in Auckland, and officers will be forced to walk... if more money is not made available... About seven cars had been damaged and taken off the road in the past seven weeks in South Auckland alone. None would be replaced... The Auckland director of the Police Association... said he had supervised nine staff at Papakura station recently and they had only one car among them. Three staff went out on a job and when reports of a motor vehicle accident came through, six staff were available to attend but they had no car. A community constable's sponsored vehicle had to be seconded for the job. The Auckland region police commander... admitted more cars than usual had been damaged recently... [He] said the increased number of crashes might have something to do with the driving skills of officers, but there was plenty of training through the police college and in each region... It was vital that officers took care when driving, particularly during pursuits... he said... While the lack of money was a concern, N[Z] still had a higher ratio of cars to staff than many other countries, including A[US] ('NZ has 2506 police vehicles, or roughly one for every 1590 people; in the past 12 months, 531 of these vehicles have been replaced, at a cost of \$17.7 million'). By the way, a]... television advertising campaign targeting speed as a killer on the roads has been airing for 10 days. In that time, 33 people have died on the roads... Of 29 fatal crashes, more than half involved vehicles travelling at excessive speed. Half of those killed were not wearing seatbelts... Crash attendants estimated that eight... would have survived if they had been belted in... The campaign is... [financed] by an \$8 million allocation from the Government[. Despite the apparent failure of the campaign, the LTSA estimates that 'every \$1 spent on advertising seatbelt use, anti-speed and anti-drunk driving messages eventually saves the country \$28.' 'Based on a 1991 valuation, taxpayers are considered willing to pay an extra \$2.25 million on a project for every additional life it could save']...

Police have received more funding to crack down on speeders and drunks behind the wheel at accident hot spots around Auckland. But there are fears that a lack of officers specialising in traffic will make it difficult for police to reduce the road toll in some areas... [Police] in Auckland and

Northland have received about \$40 million of the \$146.6 million traffic safety fund from the [LTSA] – up 5[%] on last year... But... Wellington police have been told to reduce their road safety work this financial year and a local body is taking action over this funding cut.

...The Wellington City Council is taking legal action in a bid to get more police enforcing traffic safety in the city. Council lawyers say it should sue the Government for breaching a 1972 contract between the council and the Ministry of Transport. That agreement binds the Secretary for Transport to provide a certain number of dedicated traffic enforcement officers based on the population... Legal action... would cost the council \$20,000, plus GST. [■ An Italian traffic cop has been suspended after giving his former wife's divorce lawyer hundreds of fines and parking tickets. Another traffic cop, this one from Varkaus, Finland, wrote himself a ticket for driving on an expired licence and was fined \$500. "It wouldn't be fair to give others a ticket and not myself," he explained.]

...Motorists are beginning to snitch on bad drivers... Two weeks ago, 300,000 forms were sent out, encouraging people to fill out the registration details of dangerous or inconsiderate drivers. More than 200 have been returned and those targeted will receive a warning letter from police. The scheme, called Community Roadwatch, will initially run for six months and follows a similar four-week experiment in 1995-96, during which 2684 forms were returned. During that period, 30% complained about dangerous overtaking, 21% about careless driving and 12.8% about slow drivers holding up traffic. Police followed up how many reported vehicles were later involved in an accident. The offending motorists were four times more likely than others to be involved in a crash.

...Unemployed people will soon be dobbing in motorists who run red lights. The Wellington City Council road safety subcommittee yesterday approved a 12-week pilot scheme in which unemployed people will stand near traffic lights and note the registration of every car which ignores red lights. The chairwoman of the subcommittee... said the working party still had to finalise details, including the number of spotters, where they would be based, at what times, and how much training would be needed. The spotters could be... available for work three days a week and receive up to \$20 a day on top of the dole to cover travel expenses... Motorists face a \$75 fine for running a red light.

...Motorists have been slapped with almost \$20,000 in fines after being caught on video running red lights through Auckland intersections. Plainclothes police officers began filming intersections... six months ago to battle an epidemic of red light jumping in the city... The... hand-held... \$2000 video camera... would operate until the end of the year, when the strategy would be reviewed. Up to five cameras would be bought if it helped reduce intersection accidents... [In related news,] Cantabrians could face a walk home from their summer holiday in Nelson because of an aggressive campaign to recoup unpaid fines. The courts will watch popular holiday spots for offenders' vehicles and seize or clamp them until outstanding debts are paid.

...The wheel clamp proved a successful pay-up reminder to vehicle owners, as part of a Wellington Department for Courts blitz on unpaid fines at the weekend. The department's district collections manager... said... 13 collectors went door-knocking to try to reduce the city's \$14.8 million of unpaid fines. Fourteen vehicles were seized and \$9000 of fines paid.

...Police chiefs have left the door open to other agencies wanting to join them at random road blocks to catch bad debtors. Fuelling the fears of privacy watchdogs, police top brass yesterday backed moves made in Auckland to allow bailiffs to tag along during traffic checkpoints... Lawyers and the Opposition were outraged. "What next? Perhaps N[Z] on Air staff could get in line behind bailiffs and collect television licence fees at the same time," said the Labour justice spokesman... He was reacting to news that the Department for Courts joined police on the North Shore during a series of checkpoints at which bailiffs trapped nine unsuspecting motorists who owed unpaid fines. Vehicles were initially checked by police constables who viewed registration stickers. Any cars which were not registered were pulled to the side for closer examination and further checks from bailiffs. The Privacy Commissioner... warned that the operation was on shaky ground and that he would be watching closely. "There is definitely an issue that needs to be sorted out. It illustrates the danger that always occurs whenever there is an incursion [on privacy] for apparently good reasons." ...The president of the Criminal Bar Association... said he believed the presence of outside agencies at police roadblocks was tantamount to information sharing between departments, and therefore a breach of privacy legislation... But the Attorney-General... told Parliament that he hoped all MPs would support the idea... "I would have thought most MPs would consider this was a very effective way of collecting fines and I would say to members of the House that driving a car is a privilege. And if you are driving a car and you haven't paid traffic fines then the authorities should be able to haul you up and ensure you pay those fines... that was sensible action."

...Police and court bailiffs are now formalising plans to catch fine dodgers at random road blocks after... \$12,500 had been recovered in overdue fines from nine unsuspecting motorists during the half-day trial... [The] North Shore police area controller, said the joint venture at road blocks should happen more often as... [obtaining] information... from the Wanganui computer and reminding people about fines absorbed police time.

...[charges] for unpaid fines will increase from the beginning of next month. The Department for Courts has announced that... infringement fines, such as speeding or parking tickets, would have a \$25 charge added when they were passed to the court for enforcement. The current charge is \$15. Overdue fines would have a \$100 court enforcement fee added – currently \$90... A department spokeswoman... said... people... who found it difficult to pay in full could apply for time to pay...

[A] taxi driver... is without her taxi – the family's only source of discretionary income – [after it was] seized by the Lower Hutt District Court... fines-collection unit... because[her] 27-year-old son... had unpaid fines of nearly \$1000. [The mother] was devastated as the car belonged to her, not her son, although he sometimes drove it for her. To try to get her taxi back, [she] must file a notice of interest at the court, get a judge to hear the case and determine if the seizure was correct. But a judge will not be available to hear the case in Lower Hutt [for over a month]. "We can't wait that long. My husband's job only covers the mortgage and food..." ...she was[also] angry the court did not notify her that the taxi had been taken... [Her] lawyer... said seizing a vehicle from another family member had ramifications for anyone who had a relative with fines... [By the way,] police will use roadblocks to catch mobile burglars in a plan which a leading lawyer claims is unlawful... It infringed people's right to go about their business, he said... Burglary squad police will join traffic police [at] roadside checkpoints as part of a crackdown in the Auckland inner-western suburbs on burgeoning burglary rates... which averaged 400 a month... "The specialist traffic unit will be checking cars and we will be there to see if these vehicles have stolen property in them or if there are people we want... Innocent people have not got anything to be worried about." ...[a] civil liberties spokesman for the Auckland District Law Society, said yesterday that random road stopping was being abused... "Unless the police have reasonable cause to suspect that a burglary has recently been committed, they don't have the right to stop people." ...the Auckland police media office, said the burglary squad would have to get warrants to search vehicles if suspicious drivers refused to cooperate... The squad is also appealing to the public to do in known criminals. It has set up a special phone line for people to phone in anonymously with information.

...Stopping drivers at random... has brought police unexpected bonuses in Sicily. Eighty-three drivers have been arrested for fraud. All were drawing social security because they were registered as blind. One optimist claimed he'd been cured two days earlier at Lourdes... [In local news, a] police chief has ordered his staff to drop a plan to catch burglars at roadside checkpoints after finding out it was unlawful. [The]Assistant Commissioner... said the squad had not viewed it as unlawful. "I don't want to be hard on my staff but, having said that, they have to work within the law..." ...Present legislation allows police to stop motorists only for traffic offences, or when officers have reasonable grounds to suspect an offence has been committed... [A] Masterton court ruled last year that stolen property was inadmissible as evidence because the alleged burglar's vehicle was stopped and searched "illegally." ...The head of the burglary squad... said many members of the public had called to support the planned operation... [T]he Police Association... president... said: "Criminals are still empowered, not police. The power should be transferred back to police... We can drive past a burglar, know it's a burglar, but be unable to search his vehicle... Good burglars know they can't be stopped..."

...Although most drivers are stopped on average once a year, nearly half still think there is a good chance they can drink and drive, yet not get caught... [LTSA] research shows that despite the millions of dollars being spent on advertising and police checkpoints, 42[%] of drivers think there is a low risk of being caught drink-driving. This is in the face of 800,000 drivers being stopped at checkpoints in Auckland and Northland in the past year. Of male drivers in the Auckland region, 38[%] said they had driven drunk in the past 12 months... [Despite the findings of its research, the LTSA's] advertising manager... said the... \$8.7 million... advertising campaign... [– which meant that t]he authority was the fourth biggest television advertiser last year... [–] had been successful... [However, r]esearch overseas had shown immediate penalties, such as taking away a licence from a drunk driver at the roadside, could be more effective.

...[Parliament will consider next week whether to give police the power to automatically suspend drivers' licences for up to a month under tough new laws targeting drunk motorists.]

...The courts will overflow... if tough new drink-driving penalties are introduced, says an Auckland traffic lawyer... [He] predicted more people would plead not guilty, because of the fear that police could impound their car after a second conviction and seize their licence if caught again... The Government would also have to deal with hundreds of impounded cars that convicted drink-drivers could not be bothered paying to collect... "Most of these people drive old bombs. Do you think anyone will pay \$300 to recover a \$500 car they are disqualified from driving? [The police have] backed a decision last week by a Whangarei district court judge to sentence a first-time drink-driver to 14 days jail... Jailing first-time drink-driving offenders may be the short sharp shock needed to get the drink-driving message through... say police... who are fighting rising numbers of drunk drivers.

...At a time of rising crime and low police numbers... officers are being pulled off crime work to screen rush-hour motorists in a bid to enforce Government-imposed breath-testing targets... North Shore police have to ask about 50,000 drivers to take breath tests this financial year, recording their registration numbers as evidence. "We are finding it's a real imposition to achieve those numbers,"... [a] Takapuna... Inspector... said... [He acknowledged] large-scale checkpoints at peak times did, however, get the message across to N[Z]ers that drunk-driving was a crime... The strategic policy manager for the... [LTSA said asking] police to screen a specific number of people was effective as the number of alcohol-related deaths had dropped from about 40[% to 30% of the total number of road deaths 'over the past ten years'. This mirrors the trend in the US where, 'last year, there were 16,189 alcohol-related traffic deaths, or 38.6% of the total. In 1982, alcohol-related deaths made up 57.3% of the total.'

... 'In 1986, 1.782 million drivers were arrested in the US for drunken driving compared to 946,000 in 1970. The arrest rate per 100,000 drivers rose from 729 to 1,130. The arrest rate was highest (2,075) among 18 to 24 year olds but remained high for other below 40 groups as well. Of drinking drivers involved in fatal accidents, 25 to 30 year olds constituted almost one-third.'

... 'American police are testing a portable eye-scanner called a SafetyScope, which will reveal whether motorists are too drunk or tired to drive. The device analyses eye movements and displays its findings inside 90 seconds.' Such a device would, however, be too slow for use in NZ – where l]arge-scale drink-driving blitzes will become more common despite complaints from rank-and-file police... staff[, who] are concerned that the road toll is dropping while crime is rising... [The] Minister of Police... and the Commissioner of Police... came out in support of full-scale checkpoints yesterday... The [LTSA] also had a meeting with police to ensure the drink-driving checkpoints were worth the \$35 million spent on them. And police bosses agreed to meet their contract to breath-test more than 1.5 million drivers – 450,765 hours of checkpoint work.

...Police are targeting drink-drivers in the wrong places and at the wrong times with number-crunching checkpoints... [according to] a road safety expert... [who] says large-scale blitzes before 10 pm miss hardcore drinkers and waste police time and resources. Half the alcohol-related fatalities happened between midnight and 5 am... He was speaking after revelations that overworked police were screening motorists in dense traffic to meet breath-testing targets. The Minister of Police... plans to consult officials about the style of checkpoints... after... 90... North Shore... police stopped rush-hour motorists... from 5 pm on Friday to test as many drivers as possible in one hit... [The minister] said forcing police to fill quotas might not be the most effective way of targeting drink-driving... Of the 9778 drivers who were breath-tested on the North Shore, only 12 were found to be over the limit... [T]he Auckland police media unit, said police realised that drunks were more likely to be on roads after midnight. But... "For the huge majority of people, we want to tell them that, 'Hey, we're out there.' There's 1[%] of the population who, no matter how hard we try, they will always drink and drive."

...I remain puzzled at the gesture of the Auckland Police, the Friday before last, of mounting, at five in the afternoon, and at, of all places, the northern end of the Auckland Harbour Bridge, a blitz on drink-drivers. According to one report, 12,000 vehicles were checked. Five drivers were apprehended after failing breath tests. I am all for driving drink-drivers off the road. Over the years, relatives and friends have been killed in collisions. But the timing and the place for the blitz surely demonstrated that, for once, the [police]... were off their rockers... [A] great many of the inhabitants of... the[North] Shore... work, as their forebears did, on the south shore. By Friday evening every one of... [them] has had a gutsful (no other word is so expressive) of working in the city and has one ambition – to make the bridge crossing as fast and as safely as possible. I am thankful I did not hear the cursing as one shorebound car after another was stopped and checked. I doubt the police copped one kind word from what was surely an idiotic exercise.

...[Nearly 5000 motorists were breath-tested during a Friday night blitz on Melbourne's expressways which caught 73 drink-drivers – including a naked man wearing lipstick. When police approached the car they discovered the man was alone, with his clothes strewn over the front seats. Driving naked was not an offence in Victoria, said the Acting Superintendent, but "before he was taken to the booze bus he was asked to dress himself."

... 'How do you get off a drink-driving charge? Send the court a fake death certificate. A fellow in Germany did it twice – once for a heart attack, the second time for yellow fever. But a copper who booked him for the first offence later recognised him – and said that police would probably want to revisit the drink-driving charges now that he was alive again.'

... NZ 'POLICE admit the Intoxilyzer 5000 breath testing devices can be unreliable, despite having fought a legal bid to challenge their accuracy.'

... 'a judge has thrown out a drink-driving case because a blood-testing kit was incorrectly labelled. The label does not say the kit had been approved by the "Science Minister." Instead, it refers to the "Minister of Research, Science and Technology." The Auckland lawyer and drink-driving specialist who argued the case for his client on this point in the Auckland District Court said police could not appeal to the High Court as the time limit had expired. His 25-year-old client had been caught driving in Auckland with a blood alcohol reading of 95. The legal driving limit is 80. The lawyer said the case raised an important issue, and had not simply been thrown out on a minor technicality. The law made it quite clear blood-testing kits must be approved by the "Science Minister" so police could not just use any old device. Governments kept changing the name of their ministries, but the law was written in a particular way to ensure that things were done properly. The suspect labelling could cause hundreds of drink-driving cases to be thrown out. About 25% of drunk drivers are convicted on the basis of a blood sample rather than an evidential breath test. The Police Minister said he would be immediately asking for a report. "Some of those in the pipeline at the moment may get away with what they normally wouldn't have, and that's always a concern with drink-driving."']

...A MOTORIST who exceeded the drink-drive limit has exploited a legal loophole by successfully arguing a police advertising campaign was misleading. Charges against the man were dropped at an Auckland District Court hearing last week after his counsel... claimed a billboard proclaiming "Anyone, Anytime, Anywhere" was not true. [The lawyer] said the hoarding gave the impression police could demand a breath test at all times, even on private property, although the Transport Act 1962 says this is not always the case. He claimed his client, who registered 729

micrograms per litre of blood (the legal limit is 400 micrograms[– although ‘measurements taken from a trial group of people consuming the same amount of alcohol found that some were at the limit, some were above and some below’!]), would not have agreed to a test at his home had he known he could have refused. “...because of the advertising my client presumed they were entitled to be there. They had no right to demand a test – it is misleading advertising.” Police said the man was tailed after his vehicle was clocked travelling 110 km/h in a 50 km/h zone. [The lawyer] said his client was first charged with dangerous driving but the offence was later scaled down to exceeding 50 km/h. His client pleaded guilty and was fined \$200. Police pursued the excess alcohol charge but after considering the defence argument, [the]Judge... ruled the test results inadmissible. A 1992 amendment to the act allowed for police to carry out tests on private property but only if certain criteria were met... A police spokesman said officers who tested the man had not claimed jurisdiction under section 66a – they maintained the breath screening was carried out in a public place – “We said the test was on the footpath; the defendant said it was up the driveway.”

...[‘A court in the US has upheld a police decision to confiscate a man’s four-wheel-drive after he was found drunk behind the wheel, listening to music. He was in his own driveway and had bought the car that day.’

...‘A South African judge, caught drinking and driving, has resigned. He wasn’t convicted but police checks found he was driving home from a party celebrating the conviction of a drinker-driver.’ In local news, a] **Hamilton labourer was sentenced to... three years’... jail after being caught drink-driving for the sixth time in the past year... He was also disqualified from driving indefinitely and had his 1981 Holden Commodore confiscated...**

Drunk, disqualified and dangerous drivers will be hit harder than ever under legislation introduced to Parliament yesterday... Maximum fines for some offences have been doubled or tripled and prison sentences extended. But views differ on whether the stiffer penalties will work.

...[‘New transport laws giving civilians the power to stop cars and arrest drink drivers have alarmed civil libertarians, lawyers and the police union. The Police Commissioner could now save money by appointing security guards as “enforcement officers” to staff checkpoints or stop cars at night. Critics say the move opens the way for the privatisation of powers previously held only by sworn police and traffic officers. The Police Association president said: “To give those powers or have that done by non-trained police would be setting a very dangerous precedent. What’s next? Giving people the power to arrest for minor street offences?”’

...‘A Timaru driver stopped at the weekend had what police believe is one of the highest breath-alcohol levels ever for a NZ motorist. The 46-year-old, who had driven several blocks when he was stopped outside his home on Saturday night, recorded a breath-alcohol reading of 1952 micrograms. Earlier this year, an Auckland man appeared in court after giving a breath-alcohol reading of 2000’]...

Auckland motorists have returned the country’s worst drink-driving record... [T]he ratio of drink-drivers was nearly twice the national average... Of the 34 people caught over the limit on Saturday night, 38[% had previous] convictions for drink-driving.

...**Drink-drivers in Kawerau** [– ‘trumpeted 50 years ago as NZ’s first truly model town’ –]will rob schoolchildren under a new scheme. The six schools in the timber town will share \$20,000 in June next year if drivers stay sober. The fund was established by the [LTSA] and Kawerau District Council. From Monday, the fund will be docked \$70 for each over-the-limit driver caught by the police. The scheme was introduced because of Kawerau’s abysmal drink-driving record. Had the scheme been run last year, the fund would almost have been wiped out. A... Senior Sergeant... said one in ten drivers stopped by Kawerau police was over the limit, compared with the national average of one in 40.

...The first blow to a \$20,000 fund for Kawerau schools was delivered into a breathalyser yesterday. A 33-year-old mother had a breath-alcohol level allegedly more than twice the legal limit when stopped at 11.15 am... only 33 hours after the start of the scheme...

AS STUDENTS go, they’re not exactly in line to become rocket scientists. In fact, Christchurch police reckon they must be two of the stupidest scarfiest they’ve come across... The pair were initially spoken to by a police patrol car called to a disturbance outside the student union bar at Canterbury University. One had driven to the function, but it was quickly clear to the law he was no longer functioning. He agreed with police advice to walk home. After sorting out the disturbance, police decided that for [the] second student’s own safety they would give him a lift home themselves... But on the way the patrol spotted a car being driven erratically with its front grille smashed in. They stopped it. Behind the wheel... was the student who was supposed to be walking home. They determined he’d damaged the car – his father’s – by crashing into a traffic light. On the way to the central police station to process the student for drink driving, the other student, whom the officers were still to drop off at home, remarked in view of what had happened he’d never go near a car after drinking. Famous last words. Later, when the same police returned to measure the crash site, they spotted another car being driven erratically. Behind the wheel this time was the student they had dropped off earlier. He was incapable of walking then, and his driving skills weren’t much better now. His explanation? He was hungry and needed to get to a hamburger bar for a late-night snack.

...A husband and wife were both picked up for drink driving in the same car near Manchester, England, this week. [The man, aged] 56, was first to be caught after he collided with two cars. Then it was the turn of [his wife, aged] 52, who also collided with two cars. She was fined £300... and banned from driving for 18 months. His case was adjourned for pre-sentencing reports after the court heard he was more than three times over the legal limit... 16[%] of fatal accidents in Britain involve drunk drivers.

...[during the past 12 months, ‘540 people died on British roads from alcohol-related crashes. 540 people died on NZ roads – 153 were alcohol-related. However, if NZ had Britain’s 63 million population, 10,800 people would have died – 3060 of them in accidents in which alcohol was a factor. Which is why the Government is looking at lowering the drink-drive limit to 50 milligrams. Britain is about to do the same.’

...‘A British man who was drunk when he drove his car into another vehicle, killing six people – the three occupants of the other vehicle and three of his friends – was jailed yesterday for 15 years and banned from driving for life. Prosecutors said the man, who had consumed 7.4 litres of beer during a bar-hopping expedition, was not supposed to be driving on the day of the accident because he was still serving a previous four-year driving ban for driving while drunk. He fled the scene of the accident near Sheffield, and later lied to police that one of his three dead passengers had been behind the wheel. “I did not feel out of control or drunk. I felt sure of myself and safe,” he told the court.’]

...**The family of a 17-year-old Napier girl killed when she was hit by a car as she tended an injured dog were too traumatised to attend the sentencing of the driver yesterday.** [The driver], aged 40, was sentenced to three years imprisonment and disqualified from driving for five years... Six months of his sentence were taken off through mitigating circumstances which included pleading guilty to driving with excess breath alcohol... of 774mcg... and causing the death... The crown prosecutor... told the court [the driver] had three previous convictions for drink-driving... [However, t]he defence... described the accident as a momentary lapse and said [the driver] had shown “profound remorse” and would have to live with what had happened for the rest of his life... [Incidentally, the] **Kawerau... Dollars for Sober Drivers scheme... is now down to \$16,570...**

POLICE are finally winning the battle against drink-drivers. As the... party season gets into full swing, motorists are being convinced to leave their cars at home... Taxi companies are reaping the benefit... Last weekend saw the launch of the national festive crackdown and so far only one in every 250 motorists stopped had tested positive... The change in society’s attitude is put down to a number of reasons. Pubs now offer a wider selection of food and low-alcohol drinks, while this year many companies are laying on free taxis for staff... parties. According to the Alcohol Liquor Advisory Council[, the]... average male... should drink only six beers in an average session and women four... Three years ago, a record was set when one man was caught over the limit by six times with a blood alcohol reading of 480mg... per 100ml of blood... That’s the equivalent of drinking seven-and-a-half pints of average strength beer and then 13 doubles of spirits... The legal limit in N[Z] is... equal to countries like Great Britain, Germany and Canada, but far more relaxed than Hungary or Turkey which ha[ve] a zero limit. In A[US] and Japan the figure is 50mg...

An Auckland woman is furious after a dial-a-driver company crashed her car, refused to pay the bill, and then told her she should not drink alcohol... [The woman thought] she did the right thing after drinking and called Corporate Dial-A-Driver to take her and her car home safely. A couple picked her up from a party in Otara, then the man drove her in her Mitsubishi Mirage while his partner followed behind in their Toyota Hilux. At an intersection the Hilux crashed into the back of the car, leaving it badly damaged but drivable... [T]hey told her to get a quote and they would pay for repairs, but when she sent them a panelbeater's estimate for \$705 they wanted more quotes. When those came in at \$888 and \$1620, Corporate Dial-A-Driver... said they could get the job done for \$300 and that was the most the company was prepared to pay... Other dial-a-driver companies said their drivers were liable in the event of any accidents and were told to take out insurance... The [LTSA] said dial-a-driver operators did not have to have public liability insurance, although the authority encouraged it.

...[AUS plans to introduce a gadget which means convicted drink-drivers have to pass a test before they can start their car. The scheme enables them to get their licence back earlier, but they have to pay the cost of the gadget (about \$2000/year).] In related news from Britain, 'families of crash victims are protesting about Government plans to pay cash bonuses to tow-truck owners who clear damaged vehicles in less than 30 minutes – so traffic can quickly flow again – because doing so could hinder police investigations into the cause of crashes and lead to fewer drivers being prosecuted.'

...[People think towtruck] drivers can be tough in N[Z] but few would go to the lengths of a pair in Nimes, France. They removed an ambulance from a no-parking spot. And the crew had to carry the patient nearly 1/2km to hospital. [By the way, 'two weeks ago at a South Auckland shopping centre I noticed a Porsche parked in the "Disabled" parking space. This vehicle displayed no "Disabled" sign and was parked there from when I first saw it at 9 am until late in the afternoon. This week it was there again. I decided to investigate, inquiring at several shops to find who it belonged to. Finally a woman said she knew whose it was. She left her shop and to our amazement went along to the after-hours doctor's surgery and berated the doctor on duty, who, after much arm-waving and pointing, eventually moved his vehicle. We frequently find vehicles displaying no signs parked in these spaces and think of the driver as being either inconsiderate or illiterate. But for a doctor to treat his own clients or potential clients in this manner is beyond our comprehension.'

...[Auckland City is among the first to act on an amendment last month to the Transport Act allowing maximum penalties to rise. Traffic safety offences such as double parking or parking on a dotted yellow line will climb from \$40 to \$60, as will other offences such as inconsiderate parking, parking on a clearway, near an intersection or a pedestrian crossing. Motorists will also be hit harder for overstaying their welcome. Fines for parking meters are being raised to the maximum. The present charge for overstaying more than four hours increases from \$34 to \$42, for more than six hours, \$57. The council's parking services manager said fines had not risen in eight years and an increasing number of motorists were deciding the risk was worth taking.'

...[The PM has copped a \$60 ticket for parking on a broken yellow line for more than an hour in Auckland yesterday. The PM's late-model ministerial car was parked in Upper Queen St for the launch of a NZ on Air initiative promoting local music. Asked who would pay for the ticket, one of the PM's press secretaries said: "It might not be a question of it coming to that." However, he rang back five minutes later to say he was certain the ticket would be paid. "We don't want to give the impression that we would get away with not paying when anyone else would have to front up." He said there "wasn't necessarily a ready-made park outside every venue the PM attended." The parking warden who featured in the *Herald's* story yesterday about parking problems at Auckland University, was again the man on the spot. "It doesn't matter if it's the PM or the ordinary guy. You can't park there unless in an emergency," he said.] • [The House of Lords in London has scrapped plans for a \$7m upgrade of its carpark. Peers decided the upgrade could spark a wave of protest.'

...[p]arking meters in some cities in Britain now accept credit cards... [T]he rates were so high that most people didn't carry enough change. Some traffic authorities complained that a normal day's business was jamming the meters – they weren't big enough to hold all the money. The move will foil crooks cutting off the meters to take them home to get coins. [(Editor's note: 'parking meters were first introduced in Oklahoma City in 1935.')

...[A grandmother in Ohio was jailed for feeding a stranger's parking meter. The 62-year-old was charged with obstructing official business and disorderly conduct after a police officer saw her put coins in an expired meter.'

...[A California Highway Patrol officer has been suspended for revealing in a book that a colleague tore up parking tickets in exchange for sex.'

...[Motorists in the Hungarian city of Monor applauded the vandal who injected every parking meter in the city with plastic cement.] In local news, [t]he Auckland City Council [has installed] electronic meters on several hundred parks in a bid to crack down on what it sees as freeloading by students... ignoring signs restricting parking... to three hours... The Auckland University Students Association describes the move as "disastrous" and says parking is already a major problem in the university precinct[, especially for the many students who are]... forced... to use cars but... could not afford to use [- or arrive too late to find room in -]the \$5-a-day university car park. [But someone has already 'vandalised the meters by pouring acid into them.')

...[Some downtown Auckland firms are paying more than \$100 a week for top executives and directors to park in their building, and the premium for on-site parking is widening. Rents for parking spaces in buildings a block back from Queen St are also rising... But... the high price of city parking was not yet at the peak in the late 1980s. The... car park in the... building at 151 Queen St commanded more than \$500 a month in 1989 and the average rent for on-site leased spaces in the [CBD] peaked at \$450 a month. New tenants in the main towers on Queen St – the National Bank twin towers, the BNZ Tower and 151 Queen St – were paying up to \$110 a week... at the end of last year. In the second tier, in buildings just off Queen St, parking spaces were renting for \$75 a week a year ago... Recent negotiations have been around \$90 a week... The parking rent rise has come on the back of a steady increase in central city employment figures – a rise of 8000 in three years... [The] premium for on-site parking had historically been about 25[%]. "But over the last three years that's widened to about 50[%]." ...[Landlords could extract big parking rent rises while "in relation to an executive's \$100,000 salary, it doesn't matter whether carpark costs are \$75 or \$100 a week,"... a national research manager for [a]property consultancy... said. But the same does not apply at the lower end of the scale. Workers who paid for their own parking were being forced outside the CBD... A Bayleys parking study last month found inner-city tariffs for public spaces had risen from an average \$6 a day in 1995 to \$9 last year and would soon rise to \$12... [In related news, as a] Kaikoura parking warden... walked towards her car she noticed the driver's window was broken. Then she saw a mass of blowflies, and discovered 20 litres of stinking[shellfish] guts and rotten eggs... spread all over the seats and floor... Damage to the \$6500 Ford hatchback is extensive, in what police believe is a work-related vendetta... The Mayor... said he was shocked by the incident. "Obviously people out there hold personal grudges for the work these wardens do... Sure, in a small town it is hard to take someone telling you that you can't park where you are used to parking, but we must all accept that."

...[Parking-meter inspectors, like everybody else, need love and respect. But in Norway they also need higher education. The city of Kristiansand... has introduced a plan that requires parking-meter attendants to take a four-year university level course, at a cost of 70,000 kroner (\$[NZ]16,082). Until now, three night courses of instruction were thought sufficient for inspectors to identify incorrectly parked cars and issue tickets... [N]ow they need in-depth knowledge of... traffic signs and legal aspects of parking... protection against robbery and fires... as well as... first-aid...

[A car received 'numerous tickets for being parked illegally while not one warden noticed that the driver was sitting dead at the wheel'! In further news from Europe, a 'Paris traffic warden thought the car she was writing a ticket for looked familiar – it was her own, stolen two days earlier.'

...[NZ] POLICE are hoping to slash the number of cars being stolen and trashed with a campaign that advertises the age of the driver. A prominent "25" sticker on the vehicle indicates its owner is aged 25 or over... If police see a car with the sticker being driven by someone obviously younger than that, they can stop them and check their details. The Catch a Car Thief scheme is to be trialled in Christchurch, where 3517 vehicles were stolen last year, mostly by offenders 24 years and under. The idea came from... England, where research has shown the scheme halved the

risk of cars being stolen. [The scheme has the support of NZ's insurance companies who 'are disturbed that instances of teenagers setting fire to stolen cars have doubled in recent years' ('in the past 11 months, there were 923 car fires in the Auckland region, and although figures do not show how many fires are related to mechanical faults, firefighters say that "it would be reasonable from our experience to say that the majority are stolen and burnt"').]

...Insurance companies approve of the latest anti-theft device in Britain. It's the auto equivalent of the stun-gun. The \$450 [device] emits a 120-decibels warning – and five seconds later zaps the thief with a 50,000-volt low-amperage shock. It's not fatal but will cause spasms.

...[A new weapon against car theft which can pin-point the scene of crime the moment it occurs and take action to deter or trap the thief is about to be launched in Britain at a basic price of about £500 plus tax, excluding the cost of installation and line rental. SkyNet 2000 monitors an owner's vehicle 24 hours a day, transmitting information by satellite to human operators at a central bureau. At the heart of the system is a small computer which can be hidden almost anywhere within the vehicle and which communicates automatically with the bureau (it will also summon help if the vehicle is involved in a crash').]

...[Skilled thieves average two minutes to break into a parked car. Nissan was dismayed to find with its top model in Britain, the Almera, the average was six seconds. To boost security, it has sent questionnaires to jailed car thieves – asking them to describe tricks of the trade.]

...[A car-thief turned insurance-investigator once told the Good Oil that he could break into, start and drive off in most cars inside 60 seconds. The throwaway boast was made a few years before the better electronic locks appeared, like those used in the Lexus IS200. A security test run by Britain's *What Car* magazine found the Lexus IS200 the most difficult car to steal. Almost as difficult was the BMW 3-Series and 7-Series. Easy-peasy was the Peugeot 206. Testers took just two seconds to open the doors.]

...[When a woman in Britain reported her car stolen, police dialled the cellphone she had left on the passenger's seat and told the thief they got the number from a classified ad and wanted to buy the car. They arranged to meet and the thief was arrested.]

...[Is your mobile phone charger beside your bed? It might be if a new car alarm system arrives here. Two Japanese mobile phone companies have developed a car alarm that automatically warns the driver by telephone if the alarm is set off. It also flashes the car's lights and sounds its siren. In Japan, it costs about \$1300 plus a monthly fee.]

...[have you ever wanted to go joyriding in a stolen car but lacked the courage? If so, just go to any car sales yard and pretend to be a prospective customer! Incidentally, 'three weeks ago a local was trying to tow his boat out of the sea at Kennedy Bay when his Izuzu Bighorn bogged down in the water for nearly 15 minutes. But just two weeks after being paid \$20,000 by his insurance company and the vehicle was written off, he saw a curious advertisement in the newspaper. Same number of kilometres, same type and size of vehicle, but selling for only \$16,000. His interest piqued, he took a trip to the Kumeu car yard where, sure enough, his once-water-logged wagon was up for sale. He asked the dealer why the vehicle, now reregistered with new licence plates, was so cheap. The salesman did not tell him it had been in the sea just three weeks earlier. The car-yard owner said yesterday that he would always tell a genuine customer this fact, but this weekend visitor (the vehicle's original owner) had not been genuinely interested in it. The car-yard owner said he was told the vehicle had been in seawater when he bought it from Turners Car Auctions, but felt his visitor was a troublemaker. "I can tell genuine people when I see them and we had a turkey in on the weekend. Because of his attitude I told him nothing because I knew he was just there to be a problem to me." The vehicle was a four-wheel-drive, designed to go through water anyway, and the wiring had not been affected, he said. An LTSA spokesman said if a vehicle had been deregistered, it needed to go through a rigorous inspection to prove it was safe.]

...[A Henderson Valley Rd car yard has been stung by a scam that transfers identification from written off cars to stolen vehicles. The owner of Fast Lane Autos says he ran all the usual identification checks before buying a station wagon and selling it on. The new owner – a lady with a disabled child – had the car repossessed by police. "I felt really terrible when police confiscated it and she was left without a car for a couple of weeks." The car yard owner, who has refunded the woman but is now out of pocket by \$20,000, says AA Insurance sold a written off car with all its identification and registration papers. A car was then stolen to order to match the identification. Under the Transport (vehicle and driver registration and licensing) Act 1986 insurers are required to deregister written off cars. The motoring product manager from AA Insurance says the car should have been deregistered and puts it down to human error, saying it was "an uncharacteristic mistake. An outside assessor hasn't spotted that the car needed to be deregistered, the claim manager didn't see it was structurally unsound from the photographs, and even the auction house didn't spot it." The LMVDI executive director says he hears about dealers being scammed "quite often" because insurers don't deregister cars. "Less than honest" people also do up cheap written off cars for a couple of hundred dollars, and sell them on for thousands, because they haven't been deregistered. "Then the new owner gets hit by another car and because it isn't structurally sound, the car literally falls apart." He says it is in insurers' best interests to maintain standards as they are having to compensate owners of vehicles stolen to order because of the identification scam.]

...[Forged chassis numbers and parts from Subaru motor vehicles stolen in Auckland have been used to re-identify and rebuild unroadworthy vehicles imported from Japan. The scam, involving more than 50 cars imported by Penrose company Access Sub Spares, has been revealed in the Auckland District Court. One of the company's directors, aged 39, of Bucklands Beach, yesterday pleaded guilty to 18 charges of receiving, forgery and obtaining documents with intent to defraud. At least 20 Subaru cars were passed off to the LTSA as genuine Japanese imports. The prosecutor said many of the imports were Subaru "test" cars that had been kept aside by the manufacturer in Japan to ensure that vehicle assembly quality and standards were being maintained. Subaru never intended the vehicles to be used on the road and cut the chassis numbers from their firewalls to prevent the cars being sold. The cars were supposed to be sent to a wrecker yard for destruction but the 39-year-old's company managed to buy them for as little as \$1000 and ship them to NZ.]

...[An Auckland company director has been sent to prison for 2 1/2 years for his part in a stolen car ring specialising in Subaru vehicles. The Crown prosecutor said the director's contacts had "given the operation a level of professionalism and expertise not previously seen in NZ." While the director was probably not the prime mover, he was directly involved in altering vehicles with forged chassis numbers. Three other men associated with Access Sub Spares have pleaded not guilty to similar charges and will reappear in court next month. The LTSA is seeking to remove certification from the engineer who had approved one of the test cars, because he was one of two car inspectors who had agreed to sign off each other's vehicles without looking at them.]

...[A corrupt Customs officer accepted cars, overseas trips and took about \$200,000 in bribes for helping Singapore gangsters sneak luxury stolen cars into NZ. In 18 months, 257 top-end vehicles worth \$3.8 million entered this country. The Customs officer's activities came under scrutiny after Singapore investigators informed NZ police. The Customs officer admitted his role when questioned by the police. His job was to shortcircuit the Customs system by handwriting delivery orders with bogus numbers and authorising the records with a Customs Service stamp. Another method of bypassing the system was to alter data on private import declarations, removing references to motor vehicles. His 12 years experience with Customs gave him the in-depth knowledge and opportunity to commit the large-scale fraud. The officer in charge of the police investigation said the Singaporean importer had voluntarily returned to Singapore to face serious charges there, but had disappeared after being granted bail. Despite that, a local judge agreed to remand the Customs officer on bail for sentencing next month so the married man, who has a young family, could get his affairs in order. The Customs Service national manager investigations, said yesterday that procedures had changed since the officer was caught. As far as the manager knew it was the first large-scale fraud involving a Customs employee. The offender's actions were an isolated incident and did not indicate any erosion of the high standards of integrity and professionalism in the service. Customs says it has tracked down most of the stolen cars and is sorting out ownership issues with local buyers.]

...[A customs official who helped to sneak more than \$4.4 million worth of stolen cars into NZ has been sentenced to jail for four years.] The official said 'gangsters had threatened his family.' By the way, '80s rockers the Beastie Boys used to wear a VW badge on a chain around their necks. Adoring fans copied them by pinching VW badges from cars. Angry owners complained and VW worked hard on replacements. Now Honda owners in Los Angeles are facing a similar problem. A notorious LA street gang has taken to wearing Honda's "H" badge as a signature sign.]

...‘Toyota lost 11 gear knobs from its cars at the Sydney Motor Show last month, twice as many as it expected. A few buttons from radios went walkabout too. Kia reckon its new Mentor must have been a hit – five gear knobs hit the road. An admirer of the new Audi TT struck early. Its coveted gear knob was stolen between Germany and Sydney. Audi had to quickly fetch a replacement.’ • The car which tops the thieves Top 10 list in AUS is the VN Holden Commodore of the late 80s. It was built before immobilisers were common.]

...Car thieves in Detroit, the auto capital of the U[S], are, if nothing else, patriotic. The top-10 list of stolen cars is all-American... In 1996, 1.4 million cars were taken in the US, a 5[%] fall from 1995. [There were ‘32,000 cars stolen in NZ in 1996 – one of the worst rates in the world’ per capita.]

...They say that a car is stolen in Auckland every 11 minutes. That at best is mildly interesting until the thieves turn their attention to your car... I stood there in the middle of the road gawking at the place where I had left my car. I was absolutely dumbstruck. Unable to believe my worst fears I checked my other parking [space]...

Imagine you’ve had a night out on the town and returned to your parking space just in time to watch your vehicle belting off down the street. You quickly grab your cellphone, punch in a code and the stolen car comes to a standstill, windows wound up, doors locked, thieves secure inside until the police arrive. Now that the idea has been patented around the world and a working prototype developed, Auckland company Network Technology is seeking to take the Secure-Net Unit (SNU) device to the world... [While the] satellite-based... global positioning system... [or] GPS is ideal for the wide-open spaces, it falls down in built up areas because of building density. “Our system is ideal for cities because there are a lot of cell sites...,”... said [the company’s director, who]... has been working with the electrical engineering department at Auckland University for the past four years to try to perfect the SNU – essentially a cut-down Nokia GSM cellphone... The phone looks at cell sites and always talks to the strongest one as it hands off from one site to another... [T]he development team are now keen to improve the accuracy of the device beyond the current 150m.

...[‘Lend an ear as car-audio freaks crank it up. A Hawke Bay baker’s rumpy old Vauxhall Viva is faster than a tall building – when being pushed by the lads in his support crew – more valuable than a speeding bullet and almost as loud as a jumbo jet. The secret to the noise factor is a \$6000 stereo system, which dominates most of the interior of the car and which hit an ear-splitting 142.9 decibels at the sixth national car audio sound-off finals yesterday in Penrose. His stereo proved itself the fifth-loudest in the country, but his vehicle fell somewhat short of the gleaming examples owned by other audio buffs at the show. The 19-year-old splashed out just \$300 six months ago for the car. Late yesterday he was asking \$50 for the Viva, but was eventually forced to sell for just \$5. The drop in value occurred quite suddenly on Friday evening as the baker began his trek from Hastings to the finals, held at Turners Car Auctions. The Viva’s drive shaft deposited itself on the highway as its colleague, the differential, seized. Fortunately, the baker was being escorted by a dozen of the lads in support vehicles. They took turns towing the Viva to Auckland – a trip that took nearly 13 hours. Many people wonder at the appeal of spending thousands of dollars on a car stereo that is too loud to listen to while actually sitting in the vehicle, but the baker has a revealing answer: he has no idea why he does it. Others in the show seemed equally obsessed by their hobby, but for the person who smashed the Australasian loudness record with 163.9 decibels, the \$30,000 spent on his Ford Escort van and sound system is a business. He said he often hired the van to beach partygoers for up to \$800 a night. The winner was stoked at setting the record, and was sure he could crank even more noise out of the 16 sub-woofers, each measuring 30cm. The event organiser said the number of car-audio hobbyists had exploded in the 1990s and he estimated yesterday’s crowd at 3000. Thirty finalists competed in six events for sound quality, while another 12 vied for loudness. Some had spent \$50,000 on their systems. Most of the noise fanatics will return next year to challenge for the coveted loudness trophy, the Wooden Bogan.]

...Reliance on the private car is socially, ecologically and environmentally the worst transport alternative we could have devised, says... an emeritus professor of the University of Auckland... When nearly a million people choose to live on a narrow isthmus environmental problems can become expensive... In Auckland, with virtually no flat land for treatment sites, human waste disposal is one such problem. But Auckland’s worst environmental problem today is passenger transport, with no way round the periphery, only strangled roads bringing through travellers or commuters into the crowded centre. However we decide to tackle it, Auckland transport will bring substantial costs that, in one way or another, we shall all have to pay... The problems have been so long argued, and so unanswerably, that the only talk today must be about solutions.

...Thirty years of data on Auckland air quality has revealed a shift in the kinds of pollution poured into the region’s atmosphere. Traditional industrial pollutants, such as sulphur dioxide from oil-fired boilers and lead from old-style petrol, have given way to other contaminants – domestic fires and car exhaust emissions. The data, collected by various agencies between 1964 and 1995, has been put together... by the A[RC] as air quality monitoring becomes a priority. The ARC is already measuring the region’s meteorological conditions to track pollutants in the atmosphere... and is working on a visibility study on Auckland’s orange hazes in the west and south and brown hazes in the north and [CBD]. The region’s subtropical climate provides relatively windy conditions resulting in good ventilation – breezy fresh air adding to the quality of life in Auckland. But not all the pollution is blown away. While the pattern at various places in the region shows carbon monoxide peaks corresponding with morning and evening rush hours, monitoring in Queen St shows consistently high levels even later at night because of the [CBD]’s “canyon effect.” “Monitoring shows we have relatively high carbon monoxide levels in Auckland compared to urban areas overseas,” said an ARC air quality scientist... About 300,000 tonnes of carbon dioxide are discharged into Auckland’s air annually... Experts hope that... new vehicles will at least have... clean technology... 90[%] of petrol-fuelled cars produced last year were fitted with catalytic converters. This severely cuts emissions of carbon monoxide...

The ARC wants catalytic converters on and certified emission standards for all new cars and an investigation into more environmentally friendly fuels... Brown hazes in winter and drifting clouds of photochemical smog in summer... are a growing hazard, the council heard yesterday... The smog was first detected in the late 1970s... Under the Resource Management Act the ARC has the responsibility of managing the effects of motor vehicle emissions in the [Auckland] region, but with no national policies it has limited powers to introduce measures to cut emissions... N[Z] is the only country in the [OECD] which does not have emission limits requiring catalytic converters. The devices remove unburned hydrocarbons, including cancer-causing benzene, and up to 90[%] of poisonous carbon monoxide from exhausts... A report by the [British] Automobile Association shows that total pollutants have fallen by 25[%] since 1992, the year before catalytic converter exhaust systems became compulsory in Europe.

...An aircraft will test Auckland’s air in the next six weeks to find out what causes brown summer haze, often blamed on vehicle exhausts. The aircraft being used in the National Institute of Water and Atmospheric Research project flew for the first time yesterday but it was not the best of days to detect smog over the city. It was too cloudy, meaning there was not much ozone being produced by sunlight reacting with pollutants in the air. Equipment in the aircraft detects ozone, an indicator and main component of photochemical smog, and cause of various respiratory and other health problems. Fine particulates in the atmosphere, of growing concern to health authorities, are also being detected by the aircraft... A recent study in 50 of the most polluted cities of the U[S] estimated that 66,000 deaths a year were caused by people inhaling fine particulates. The W[HO] specifies there is no safe level of fine particulates which when inhaled can penetrate deep into the lungs carrying a payload which can include carcinogens such as dioxins and acidic compounds. In Auckland sources of fine particulates include dust from incomplete combustion of burning petrol and diesel fuels and gas and smoke from domestic wood fires, industrial air discharges and sea salt in the atmosphere. Levels of fine particulates in the atmosphere have been within ARC guideline[s] since 1992 but it is doubtful whether the trend will continue because for most of the time Auckland’s weather has been influenced by El Nino conditions, causing good dispersion of pollutants... In N[Z] the health cost of air pollution has been put at \$700 million and while the accuracy of the figure has been questioned most of the cost will be borne in Auckland and Christchurch where maximum exposure to polluted air occurs. N[Z] has no effective motor vehicle emission standards or policing of smoky vehicles but policies are on the way.

...Smog alerts for Aucklanders are a step closer after the completion of a major investigation into the pollutants which affect metropolitan Auckland's air. The investigation findings give environmental managers a powerful tool for forecasting harmful photochemical smog formation in Auckland and for formulating and evaluating regional growth policies impacting on air quality. The findings, contained in the Auckland air emissions inventory prepared for the A[RC] by the Victorian Environmental Protection Authority, remove any doubt over what causes air pollution in Auckland, its increasing brown hazes and photochemical smog. The major cause... [is] motor vehicle emissions... On an average summer day, based on 1993 estimates of emissions from motor vehicles, marine engines, rail, shipping and aviation operators, Auckland produces 117 tonnes of volatile organic compounds, 87 tonnes of nitrogen oxide, three tonnes of particulates... 764 tonnes of poisonous carbon monoxide and 6800 tonnes of carbon dioxide... The manager of the centre for air quality at the Victorian EPA... presented the inventory to the ARC yesterday describing it as state-of-the-art and, because it was so up-to-date, better than any similar work carried out by the centre for A[US]n cities. She described as unique Auckland's motor vehicle fleet and its contribution to air pollution. While the impact of new vehicle registrations would ordinarily signify an improvement in emission levels, many new registrations were of imported cars up to five years old... In the early 1980s the region had about 12 days a year of smog... Melbourne has about 21 days a year on which classic Los Angeles-style smog occurs[, but the EPA manager]... said that... new regulations... in A[US]... were helping to reduce smog-forming chemical emissions. In Melbourne, the EPA dealt with 12,000 smoky vehicles a year after motorists were caught driving vehicles which produced more than 10 seconds of visible smoke through their exhausts. Drivers who fixed the problem escaped penalty. But in Auckland, like the rest of N[Z], there were no effective controls on the ageing motor vehicle fleet.

...A report showing air quality would improve if car and truck owners were made to pay more for the roads has been kept secret... "...because making private users pay for the damage they do is contrary to Government policy..." says[an] Alliance list MP... The report, written by the Institute of Economic Research and commissioned by the Ministry for the Environment, comments on the effects planned roading reforms would have... The manager of the ministry's environmental policy directorate... said the report had not been "buried"...

The belief car emissions are choking air quality in cities is not backed up by scientific analysis, the Ministry of Transport says. No nationwide carbon monoxide problem has been found, says the Secretary for Transport... However... the... Alliance spokeswoman on transport... said... long-term monitoring... indicated significant air problems in certain parts of the country, yet the ministry was playing down the problem "to justify [doing] nothing."

...It is estimated that the social cost of water-related environmental degradation attributable to road usage in Auckland is about \$100 million a year, and the cost of air pollution \$250 million... "Our transport system already produces close to two million tonnes of CO2 each year... Pollution at major intersections has, on occasions, already exceeded W[HO] levels..." ...Unlike other cities around the world, where traffic causes high emissions of nitrous oxides, Auckland traffic produces greater quantities of carbon monoxide, reflecting its ageing and poorly tuned motor vehicle fleet. Cars and trucks account for 90[%] of the carbon monoxide in the Auckland air... Khyber Pass Rd has shown that consistently high levels have been occurring... at the site. Readings for March show an unusual feature for the time of year... air quality guideline safety levels for carbon monoxide were exceeded for 10 hours between 10.50 am and 8.50 pm... Carbon monoxide levels around Auckland traditionally rise during winter... The gas, when inhaled, diminishes the oxygen-carrying capacity of blood... Most healthy adults will not suffer greatly from exposure to carbon monoxide at the levels recorded. But to people who spend all day driving or moving about on pavements next to busy roads, or to people in fragile health, the levels could cause problems such as headaches... [Incidentally, p]olice yesterday ordered four washers from the Symonds St-Khyber Pass Rd intersection.

...window-washers may face stiff fines if they continue to approach motorists with their squeegees on Auckland city streets. A bylaw banning window-washers from working on the streets will be considered by the Auckland City Council today after complaints of intimidatory behaviour. The council refused to pass a similar bylaw last year. But, after strong public and police pressure, it will again consider raising the present \$10 fine to a maximum \$500... [The council's] special projects manager, said... "[Roadside window-washing is] a great tax-free income and at the end of the day, it's a service that people don't ask for." ...the planned law should remove "the diehards" and stop the expected influx of students over the summer. "We have a real problem with young ones out there - 10 and 11-year-olds who turn up on the roads during the school holidays. They will cause an accident if they're not stopped... We've[also] had sides of cars kicked in if people refuse to pay. We've had fights which are territorially-based when a window-washer sees someone else on his intersection. We've had all sorts of problems with them and we don't need it. This only adds to traffic congestion," said... [the] head of the police traffic safety branch.

...[the] squeeze was put on Toronto's squeegee kids by a new Ontario provincial law that came into effect yesterday. The Safer Streets Act, passed last December by Ontario's ruling Progressive Conservative Government, changes the Highway Traffic Act to make begging on streets and other aggressive soliciting illegal. It is part of the Government's campaign to clean up the streets after protests from motorists badgered by aggressive squeegee kids. "Our Government believes that all people in Ontario have the right to drive down the road without being, or feeling, intimidated," said the Attorney-General. Toronto, Canada's largest city and the hub of the country's booming industrial heartland, has long been a magnet for squeegee kids. The Attorney-General believed that the outlawed squeegee kids would now have the opportunity to look for more permanent employment. The new law gives Ontario police power to arrest people for the designated offences and for courts to impose fines of up to \$C1000 with a jail term of up to six months for repeat offenders.')

...Auckland police are set to be given wider powers that will let them arrest... car window-washers... people who tag along uninvited on parades, sniff glue in public places or drag race illegally. The move comes after police complaints that they have "no teeth" to enforce city council bylaws. Proposed changes will give police the right to demand the name and address of anybody suspected of breaching the regulations. They can then prosecute offenders, or arrest them for obstruction if they refuse to provide the information. Police sought the change after trouble controlling a group called Information on Ireland at parades to mark St Patrick's Day in Auckland. The group was protesting against the British Government role in the "Troubles" in Ireland. [An] Inspector... said they provoked a great deal of animosity from crowds... [However, a] spokesman for Information on Ireland... said the move was "retaliation" against the group for lodging a complaint with the Police Complaints Authority after police refused to let the organisation's float join this year's parade. The 30 supporters marched with banners instead. He denied the group had caused trouble and said crowd antagonism was directed at the police...

The police now have more clout to clamp down on bylaw breakers in Auckland. A controversial bylaw amendment giving police the right to demand the name and address of anyone suspected of breaching local laws was passed at an Auckland City Council meeting last night... Civil libertarians are likely to contest the bylaw in court. Some councillors believe it is an issue... [that has consumed more of their time] than... it's worth...

Few affairs have been more passionate in the 20th century than that between man and his motorcar... [T]ruly, it has revolutionised people's lives. The car is not just an aspect of modernity; it is a precondition for it. Owning a car remains a goal for millions of poor people in every part of the world... Unfortunately[, for]... years people have understood that the car was a cherished but dangerous thing. As one British inquiry put it in the 1960s: "We are nourishing at immense cost a monster of great potential destructiveness." The truth of that warning is all too apparent in the horribly polluted and congested streets of European, American and Asian cities. Road transport accounts for about a quarter of the man-made gases that may be contributing to global warming... Cars in the U[S] may be 90[%] cleaner than they were a generation ago, but this improvement has been largely wiped out by growth.

...*World war against car pollution* Car mania in Asia and Latin America threatens to swamp any gains made in protecting the world from automobile pollution. Most new petrol-powered cars no longer pump out killer gases, [but] they still spew ever-increasing amounts of carbon dioxide, the main greenhouse gas. A U[N] meeting in New York to discuss progress since the Earth Summit in Rio de Janeiro in 1992, has hinted that, if the environment is to be protected, a firm grip must be taken on the ubiquitous automobile. "Worldwide there's going to be a problem because there are just too many cars coming..."

...In... big Asian cities, growing wealth has unleashed a flood of cars... and... trucks... that foul the air with exhaust and snarl the streets with traffic jams. Yet even as Singapore has matched their growth, it has escaped the curse of their traffic congestion. Its air is clean... This happy situation is no accident. It is the work of a traffic-control programme that... [makes] this South-east Asian island nation one of the costliest places in the world to drive. At the heart of the system lies an unusual tool that has become a badge of middle-class success: a permit to own a car. Sold at monthly auctions in limited numbers, the 10-year licences command prices of up to \$NZ110,000. Add sales tax and import duty totalling 195[%] of a car's value... before hitting Singapore's tidy, pothole-free streets. On top of that, Singapore charges drivers... \$2... to enter downtown on weekdays and is getting ready to impose tolls on all major roads. Heavily taxed petrol is kept expensive to discourage driving... [Singaporeans pay] \$1.18 for a litre of unleaded, compared with 60 cents a litre in neighbouring Malaysia. To prevent drivers from slipping across the causeway just to fill up, cars are barred from leaving Singapore with a tank less than half-full... Police use closed-circuit television to co-ordinate stop lights and manage traffic flows. Stores, churches and other owners of public parking spaces are taxed for each space to discourage them from offering free parking... But Singapore's approach can't be easily reproduced. The government party has been firmly in power since 1965 and is so sure of its control that it can ignore resistance that might make other governments back down. It helps, too, that a car isn't a necessity in a country so small that a cyclist can pedal from one end to the other before lunch.

...[There are over 5,000 deaths & 70,000 serious injuries a year on British roads alone. Not only do we kill with cars but we are slowly killing our planet because of them. Although the car gives us tremendous personal freedom & mobility, such gains must be balanced by the damage to the environment that their ownership entails. It has been estimated that the cars in use worldwide together produce about 10,000 billion cubic metres of exhaust fumes annually. If it were not for the fact that most of the poisonous fumes rise up into the atmosphere, we would be suffocated by them & life would be annihilated.]

...Benzene levels in Auckland and Christchurch exceed international safety guidelines for air quality... [I]n Christchurch... Manchester St was 5.2 and Riccarton Rd, on 12, was more than three times the... safe benzene levels[of] between 2.5... and 3.24... mcg per cu m... [B]enzene, which causes leukaemia, and other aromatics have been boosted in petrol since the Government banned leaded petrol... last year... At the time, Labour's environment spokesman... said the ban should have been accompanied by a reduction on the limit on benzene in petrol from 5... to 3[%]... A Ministry of Health report... found poisonous lead levels in the air have dropped but... benzene[is] emerging as a deadly hazard... [T]he report estimated up to three deaths from leukaemia... a year could be attributed to benzene. Motor vehicle exhaust was the main source, although smokers tended to get more benzene from cigarettes than from cars... Owners of the Marsden Pt oil refinery had put \$150 million aside to upgrade the facility with an isomerisation unit, which would have allowed compliance with the lower limit[of 3%], but kept the money when the Government decided not to tighten the regulations... [In related news, researchers] at Kyoto University in Japan have... isolated a hydrocarbon... in diesel... which produced the highest score ever recorded when subjected to a standard test of cancer-causing potential. The team also showed that the chemical exists in the air above Tokyo. - 1997

...[during] the Victorian Age... a close cousin of the petrol engine... brought new levels of efficiency and reliability, and made its inventor a household name across the globe – yet hardly anyone has ever heard of him. The very first glimmer of this extraordinary engineering concept can be found on a note he scribbled in the margin of his book when he was attending at the Munich College of Engineering way back in 1878. 'Study whether it isn't possible to achieve the isotherm in practice'... [A]t that moment the diesel engine was conceived. And he was only 19 years old at the time... Rudolf Diesel... was a driven man who throughout his life excelled at everything he did... [T]he secret of the diesel engine [was that you can] simply inject fuel into compressed hot air and, bang – the explosion powers the engine. No need for a spark plug, so it's much simpler and therefore more reliable than the petrol engine. Clever Rudolf knew he was on to something big... When people saw [his] babies running, they realised what a fantastically economical and hard-working engine it was going to be – and it was enough to get him a world patent. And old Diesel absolutely cleaned up... Everyone in the world wanted one... not surprisingly, which is why Diesel became a frighteningly rich man very quickly. But, you know, [he] deserved to – I mean, he didn't invent the Smurfs, so to say... Anyway, the money began to roll in. He bought the most expensive plot of land in Munich, and built an enormous house on it... Hats off to Rudolf, I say... Diesel's personal story ended tragically. He slipped off a ship at sea and drowned... there's not a lot of doubt that he killed himself. Suffered from depression all his life. He was a classic great man brought low... But then, look what he's left us.

...*Diesel's Day* Keep an eye on the progress of diesel engines, now that new technology has made the engines exciting. Citroen and Peugeot were the first to import oil-burners into N[Z] in any numbers back in the late 80s and early 90s, when turbochargers gave the cars new life. Both French carmakers still dominate diesel sales here. BMW is now having a look-see and has imported two 3-Series models, the 320d and 330d...

We mentioned recently that BMW N[Z] is testing two 3-Series Diesel models. Now we learn that BMW A[US] is testing a 7-Series diesel, powered by a 3.9-litre twin-turbocharged V8... What's with this interest Down Under in oil-burners? Is it because they are more fuel-efficient than petrol engines and... sales figures in Europe are difficult to ignore? Diesel has 25[%] of new car sales in Germany... 45[%] in France and 55[%] in Austria.

...Oil company Shell is to sell a diesel fuel in Britain with an ultra-low sulphur content. It says its Pura Diesel contains 90[%] less sulphur than standard diesel, lowering emissions of soot-like particulates and producing less smoke. Some of the dirty, smelly diesels which leave a trail of particulates around Auckland could do with Pura Diesel.

...The Waitakere City Council will encourage motorists to boycott Mobil Oil for refusing to reduce the sulphur content in its diesel... "We are at war with Mobil, make no mistake about that... We have one oil company that just won't come to the party to reduce the diesel sulphur content. For the first time in a 100 years you are seeing the oil cartel squabbling among themselves..." ...The council endorsed the call for an immediate cut in sulphur in diesel to 100 parts per million and urged continued efforts to reduce it further to meet the U[S]'s goal of 15ppm by 2005-06.

...Diesel manufactured in India is 250 times dirtier than the world's best. It is estimated that 50,000 people die each year in Indian cities as a result of vehicle pollution-related illnesses.

Air pollution contributes to 400 deaths in Sydney each year and will worsen, says the state Health Department.

...Joggers wear face masks; children at the US-run American school play inside a giant glass bubble; a clear blue sky is front page news... On bad days, the Government warns residents to leave town or stay inside their houses with the windows shut. It dispatches extra staff to city health clinics to meet the crush of patients and it bans use of motor vehicles, industries and gas stations. "No end to pollution misery," screamed a recent... newspaper... headline... as – barely two weeks into the year's most intense air pollution season – city officials issued five consecutive days of emergency alerts. It was the longest continuous period in the six years of the warning system. The alerts close industries and cut back car usage when pollution is 2 1/2 times the maximum considered safe by the... WHO[, which]... has ranked the air of Mexico City, with its gumbo of pollutants belched from motor vehicles, industry and millions of rooftop cooking-gas tanks, as the most contaminated in the world. In each of the

six categories of pollution – from ozone to suspended particles – Mexico City's levels are at least double those considered safe for human habitation. The next closest cities are Los Angeles, Jakarta and Sao Paulo. As a measure of just how bad pollution is here, the WHO says humans shouldn't breathe air with more than 100 to 120 parts per billion of ozone contaminants for more than one day a year. Last year, residents breathed that level, or more, for 321 days, according to city officials. The impact on the health of the city and its residents is devastating. Two weeks ago, when readings rose above 250 parts, or points, city hospitals and clinics reported a deluge of 400,000 pollution-related patients and 300 deaths during the five-day emergency. Health officials estimate that one million residents have permanent breathing difficulties, headaches, coughs and eye irritations. And new studies have suggested that children living in neighbourhoods with the worst air could develop cancer later in life... - 1996

France banned half of all cars from the streets of its capital yesterday in an unprecedented assault on eye-stinging air pollution smothering the city... [A] noxious brownish haze of... fumes has built up in hot, still air after days without rain... [The] AirParif monitoring agency said nitrogen dioxide, largely a product of car exhausts, had increased pollution to "level three," the highest on its scale and reached only three times since 1992... About 1000 extra police ticked off drivers defying the rules at road checks and handed out leaflets explaining the rules. In theory, offenders risk fines of up to 900 francs (\$240)... The cars banned first were those with licence plates ending in an odd number. But police cars, fire engines, ambulances, and electric or liquefied gas-powered cars are exempt. Cars transporting at least three people are also allowed, along with hearses, removal vans, refrigerator and newspaper delivery trucks. Some in the opposition centre-right denounced the ban as technocratic and badly prepared. Others express fears that people will buy a second car to let them drive every day, as has happened in Athens where similar measures are enforced... Public transport was free in the entire Paris region under the crackdown, bringing... fewer tailbacks on the roads in the morning rush-hour. [● A 'carless day scheme and ban on weekend petrol sales was temporarily introduced to NZ in 1979, but only as a method of petrol rationing'.]

...PM sets example as Paris battles pollution [France's P]M... swapped his usual car for a tiny two-door electric model when Paris banned half of all cars in an unprecedented attack on stifling air pollution. [The PM] was driven to a weekly cabinet meeting in a diminutive blue-green Peugeot 106, forsaking his powerful Peugeot 605. Four other ministers also turned up in electric vehicles. [The PM] said the car was "silent... it went along smoothly and I found it rather pleasant." But he... found it rather cramped and... his security guards complained there was no space for them. They trailed in a large Peugeot, fuelled by low-pollution gas. Paris commuter traffic was bumper-to-bumper again yesterday after the... capital lifted its one-day emergency traffic curbs imposed to fight record levels of air pollution. Yesterday the smog was back to an acceptable level. Public transport was also back to normal after the free fares... Parisians, who are fond of stretching the law if they can get away with it, appeared to have generally complied with the Government-ordered ban. In a poll for the daily *Le Figaro*, a surprisingly high 83[%] of those canvassed approved the idea of alternately banning cars with even and odd licence plate numbers when smog hits dangerous levels. The evens were banished from Paris roads on Wednesday. [93%] said the ban, which reduced the traffic in central Paris by about 20[%] and reminded many of quiet summer days, did not bother them. Asked what they liked most about the traffic ban, the most frequent response – in 39[%] of the cases – was the fact they could participate in the fight against pollution. Lighter traffic and free public transport followed with only 18[%] each. The enthusiasm the normally anarchic Parisians showed for the restrictions – only about 5[%] of the cars on the road on Wednesday were even-numbered – was so surprising it was still headline news yesterday... [The rest of the headlines were devoted to the] French truck drivers demanding higher pay[who] have set up some 80 roadblocks around France. The roadblocks were set up after last-ditch wage talks failed... Truckers claim many employers failed to pay a 3000 franc bonus negotiated after a 12-day strike that caused similar chaos last year... British trucks ended up in queues of up to 18-hour waits at Belgian ports, having tried to avoid French roads; the British Road Haulage Association said it was losing the equivalent of \$2.7 million a day.

...[police officers across NZ] are refusing to issue traffic tickets for minor infringements as they take part in unofficial industrial action designed to cost the Government tens of thousands of dollars a day. They are incensed that seven months of pay negotiations have produced only a "paltry" pay claim from their union and are vowing to leave traffic infringement books in lockers when they go on patrol. Police bosses are bracing themselves for action and warn officers caught will be disciplined. [The]Assistant Commissioner... said: "[Such]... action... would be totally unacceptable and unlawful. This goes to the heart of our profession." ...[However,] messages showed the action has widespread support... In Temuka, one officer wrote: "A substantial pay increase is needed immediately, especially when labourers and forklift drivers at the cheese factory are getting heaps more than us. No tickets works for me." ...[In international news, a]s negotiators struggled to resolve the French truck drivers' strike yesterday, pressure came from other European nations who are feeling the economic effects of the strikers' blockade... In Spain, officials estimated that about 8000 Spanish trucks have been delayed, trapped by roadblocks or forced to take alternative routes. Spanish farmers have threatened to boycott French goods if the strike continues... An estimated 350,000 French truckers are involved in the strike.

...Money and working hours were the core issues. By the time the largest union signed a deal with employers at the weekend after a seven-day blockade, the drivers had won an immediate 6[%] rise for long-distance... Looking to the future they also were promised a 20[%] increase by the year] 2000 with a guaranteed monthly salary... for 200 hours of work... [Meanwhile,] Indian truck... owners... [have] vowed to continue their action, which has kept two million vehicles off the road since Tuesday, until the Government agreed to scrap a planned transport tax and rise in insurance premiums... [The] nationwide strike... left the usually congested national highway... quiet.

...Road and rail traffic ground to a halt across much of Bangladesh yesterday as jute and textile mill workers began a two-day transport blockade in protest at Government privatisation plans.

...Bangladesh was yesterday gripped by a strike called by opposition parties to protest against a pact to end a 22-year insurgency in southeastern hill districts. The strike went ahead despite appeals to defer it since it coincides with an annual immunisation day for 20 million children.

...Police used batons and teargas in running battles with opposition activists during a general strike that kept transport off the streets and shut businesses across Bangladesh yesterday. Clashes erupted in the capital, Dhaka, and its suburbs after activists exploded dozens of home-made bombs to scare away the few people who ventured on to the streets... Police arrested nearly 20 activists... Witnesses said that... four people died and... up to 50 people were injured... The day-long strike was called... to protest against a recent increase in fuel prices. Last week the Government raised prices per litre of unleaded petrol to 23 taka from 14.65[and] leaded petrol to 21 taka from 13.7... The Government said the price hike was necessary to reflect the decline of the taka against the U[S] dollar. Government officials said only the small proportion of the population who had cars and minicabs would be affected. Other categories of vehicles such as lorries and buses used diesel[, which only rose]... from 12.7... to 12.95[taka. The ruling party]... said the... main opposition Bangladesh Nationalist Party... was using the price rise as a "pretext to intensify its anti-government campaign."

...[British drivers are being urged to support a one-day boycott of petrol stations next month to protest the rising price of fuel. The organisers also want the British Government to cut fuel tax, which is 75% of the pump price.]

...NZ motorists] would face an immediate increase in the dedicated petrol tax from 9.4c a litre up to 16c under plans revealed yesterday... Earlier this month, a Government advisory group report... recommended that petrol rise by up to 12c a litre over three years as part of a move to user-pays for roading funding... Petrol might rise [a further] 3c a litre if the Government moves early next year... to fully fund ACC... [Incidentally, 'criminal gangs in Britain are trying all sorts of ways to beat the rising price of petrol, now approaching \$2.50 a litre. One scam is to fit two fuel tanks to

cars – then fill up and drive off without paying. The extra tank of petrol is sold at a discounted price on the black market. British police report that the number of drivers doing a runner at petrol stations is up 250% in two months.’

...in the US, ‘an Alabama petrol station owner chased a customer, who filled up without paying, for more than 200km. The garage man gave up the chase when his car ran out of petrol.’ ■ Motorway service stations in Britain are renting old police cars and parking them on the forecourt in a bid to stop motorists “doing a runner” and driving away without paying for fuel. Station operators report that the ruse has cut non-paying by 70%.’

...‘For years people in the UK thought they were better off than many of their Western counterparts. Now, though, they are slowly waking up to the depressing fact that they work longer hours, earn less money and their cost of living is among the most expensive in the world. The news will come as no surprise to thousands of NZers who have gone to Britain in recent years, and been shocked by the high prices. And with a poor exchange rate meaning fewer pounds for their dollars, more and more travellers are ditching the traditional destination of London, now officially the most expensive city in Europe – but still significantly cheaper than the world’s most expensive city, Tokyo – in favour of other continental capitals. It is no wonder. Catching a movie at a London cinema will cost £7 (\$22.21), and the 10km taxi ride will come in at £9.40, excluding the expected tip. The rest of the country may not be quite so expensive, but pity those who have to stay permanently in what is now commonly referred to as “Rip-Off Britain.” This week it was revealed that an average family pays £4421.33 a year more to live in the UK than on the Continent. The Rip-Off Britain issue is threatening to become a major battleground at the next general election. For nearly a decade there have been mutterings about the rising cost of living in Britain. But nothing more. In the past year though, there has been a dramatic sea-change in attitudes. Earlier this year, Britain’s major banks announced plans to charge customers up to £1.50 for using an ATM machine. A massive public outcry erupted. The banks backed down. It started last year when a European Commission investigation found significant discrepancies in new car prices. Britain was the most expensive market with some popular models costing thousands of pounds more than in other parts of Europe. Buyers have since flocked to the Continent to buy cheap cars, and new discount retailers have opened up to cash in. As motorists virtually have boycotted traditional showrooms, some established dealerships are struggling to survive. Attention is now turning to other areas where Britons say they are being ripped off. Today petrol costs between 85p and 90p per litre – three times more than in America. Food, clothing and leisure goods are also dearer, as are utilities such as phone calls and electricity. Manufacturers claim Government taxes on everyday goods push prices higher. Almost 80% of the price of petrol, for instance, goes straight into the coffers of the Chancellor of the Exchequer. That has prompted a consumers’ Dump The Pump campaign which urges motorists to boycott petrol stations every Monday until prices drop significantly.’

...‘For a few days Britain stared into the abyss, and the very fabric of a modern, first-world society began to unravel. Hospitals were put on a state of emergency. Schools closed. Supermarkets introduced food rationing. Business leaders warned that the economy was in danger of collapse. A nation ran out of fuel and fell to its knees. Not even the royal family were immune from the troubles. The Prince of Wales cancelled engagements because he had no fuel. And all because nine days ago 150 well-organised farmers and truckers decided to protest against petrol prices by blockading the country’s oil refineries. If nothing else, this week’s crisis has hammered home just how reliant people are on fuel, and more chillingly, just how quickly everything falls apart without it. Britain has seen nothing like it since the notorious Winter of Discontent in 1979, when rubbish remained uncollected and the dead unburied. But while the 1979 strike was highly emotive, it was a culmination of months of union-inspired unrest. Contrast that to the lightning speed with which this latest uprising has plunged Britain into chaos. Yet at the height of the blockades, opinion polls showed public support for the protests running at anything between 70 and 90% of the population. A salesman echoed the views of millions when he said: “Sure, it’s no fun sitting in a queue for hours to fill up your car. But I’m right behind the truckers. It’s an absolute disgrace how much we have to pay for our fuel.” The protesters were fully aware that the most important goal was to keep the public on their side. Yesterday, just 24 hours before it was predicted that most people and businesses would completely run out of fuel and the nation would lurch even further into crisis, most of the blockades were lifted. However, the protesters have warned that fuel duty must be cut within 60 days – or they will return to the refineries.’

...‘Slowly but surely tankers started restocking Britain’s empty fuel stations yesterday. But the nation was warned that it would be several days, and possibly weeks, before the situation was restored to normal. Yesterday just 300 petrol stations were back on line and no more than 20% of Britain’s total of 12,500 were expected to be operating today. The Petrol Retailers Association said the industry faced a “massive logistical problem” to restock. In a move that underlines the Government’s anger with the oil companies for recent price hikes and allegedly colluding with protesters, the *Independent* has learned ministers are planning to force the industry to set up a watch-dog. The new regulatory body would prevent “profiteering,” excessive price rises and help ensure future supplies are not disrupted by any repeat of this week’s protests.’

...‘The first wave of Europe’s oil shock appeared to be receding this weekend after a turbulent fortnight that saw two of the world’s largest economies crippled by truckers angered at the spiralling cost of fuel. Petrol supplies in France were returning to normal, while in Britain tanker trucks fanned out to replenish filling stations. In Belgium, truckers lifted a ring of steel from around the heart of Brussels and in Germany, blockades remained limited despite angry noises from the freight industry. But tensions remained high in the Czech Republic, Denmark, Ireland, Italy, the Netherlands, Norway, Poland and Spain, where truckers have threatened to jam roads, stop access to oil refineries or stage go-slow convoy protests to voice their anger at high fuel taxes. The action began two weeks ago after French trawlermen blockaded their country’s Channel ports. They, and the French truckers and farmers who emulated them, wrung \$NZ880 million in fuel tax cuts and social charges from the Paris Government. Within a couple of days of these concessions, the protest movement caught fire in Britain and France’s neighbours. Using mobile phones, fax machines and the internet to identify their targets and rotate shifts on the picket lines, the demonstrators caught the British Government on the hop. Stunned by the emergence of this unlikely army of ill-shaven, tubby men, the authorities have made a show of firmness, leavened with a promise or hint of concessions, that appears to have won them breathing space. The Labour PM stared down the protesters, accusing them of mounting illegal blockades and inflicting human suffering. In Germany, the Chancellor flatly refused to scrap a detested green tax on fuel but suggested that corrective measures could be found within the social system to help the worst affected hauliers. The Belgian Premier declared the public’s patience is running out, as he put forward a compromise, accepted by the protesters that involved cuts in road taxes, insurance levies and social charges amounting to \$165 million. The president of the European Central Bank has warned against any fuel tax cuts that weakened budget discipline or wage concessions that drive up inflation. Against this background, the mood in Europe is one of helplessness mixed with hope that oil costs will quickly ease, averting a second bout of turmoil.’

...‘EUROPE is becoming deadlocked by fuel protests as more countries join the growing chaos. Truckies in Spain, Ireland and Poland have launched their own protests as Britain and Belgium struggle to recover from a week of fuel blockades. Irish truckers have clogged major roads around five cities with a 24-hour go-slow protest after the government rejected demands to cut diesel fuel taxes by a third. In Poland, columns of slow-moving trucks snarled city traffic, mirroring action in Germany and the Netherlands in the past week. Norway – which has some of the highest fuel prices in Europe – is also threatening to take strong action. Angry Norwegian truckers said they would block five oil terminals at key ports from Monday after their government refused to make any promises to cut fuel taxes. If they go ahead, southern stations will run dry this week. In Italy the government bowed to truckers’ demands for fuel discounts, avoiding protests.’ Incidentally, a new product, ‘PS23 – which reduces engine friction by over 90%’ – has just been released on the local market.

...[the] promoter of an engine additive is being investigated by the Commerce Commission after the A[A] tested the product. The petrol catalyst, known as Fuelstar[, was proclaimed to]... allow cars that formerly needed... 96 leaded... petrol to run just as well on... 91 unleaded... The product, pellets made of 70[%] tin, is installed in the fuel line. Performance is said to be improved after fuel flows through the pellets... The AA... believed the tests[, which were performed] at an A[US]n university laboratory... showed that[the] Fuelstar promoter... had breached the Fair Trading Act by making misleading claims. It was originally also claimed Fuelstar helped save petrol, though those claims were withdrawn... [by the promoter.

However, in regard to the university's test results, he said they] were "ill-founded, inconclusive" and had not been conducted to the proper standard... [Meanwhile, NZ 'oil companies have received another 1096 complaints about unleaded petrol. Of the previous 2636 performance complaints about the effect of high levels of aromatics on rubber components in the fuel systems of some cars (as well as petrol station pumps), 94 included fires. So far the industry has settled 1124 claims at a cost of \$373,575.']

...The health risk posed by new unleaded 96 octane petrol may be seriously underestimated, say Auckland University environmental scientists. The first evidence tracing harmful aromatic hydrocarbons in motor vehicle exhausts to mutated cells in oysters was... revealed at a public lecture at the university yesterday. In his inaugural lecture, the... Professor of Environmental Science... said studies centred on the Southern Motorway in Auckland traced the link between exhausts and contaminated oysters growing in the Pahurehure inlet of the Manukau Harbour alongside the motorway. While air upwind of the motorway was found to be relatively clean, downwind air contained elevated levels of aromatic hydrocarbons, including... benzene and harmful toluene and xylenes. "[The]... surprisingly high levels of these contaminants... in air adjacent to the Southern Motorway... suggests the estimate of human health risk may be seriously underestimated," [the]Professor... said. The health risk referred to by the professor was the Ministry of Commerce calculation that the benzene content of the new fuel posed a one-in-a-million chance of someone contracting cancer over a lifetime... The Ministry of Commerce has estimated the new fuel would increase tailpipe benzene emissions 71%. By the way, the... Minister of Energy... wants to see supermarket chains selling petrol[- as i]s common in Britain, France and Japan, and was starting to happen in A[US]... There was evidence, he said, that the profit margins on petrol and diesel were rising. The Ministry of Commerce says only four industrialised countries have higher petrol prices, excluding taxes, than N[Z] and is engaged in "please explain" discussions with the oil companies.

...Oil companies are making more profit on petrol[in NZ] than before the market was deregulated, according to Ministry of Commerce figures... As a result, the 5c a litre price cut that deregulation initially delivered has been eroded completely... The figures suggest an opportunity for a new importer to bring in petrol, in competition with the four oil companies. Supermarkets, however, yesterday poured cold water on a suggestion by the Minister of Energy... that they should be the ones to do it. Woolworth's marketing director... said there were too many petrol stations here already... [while] Foodstuffs, said the N[Z] market was too small... The ministry regularly compares N[Z] pump prices with the price of refined petrol from Singapore - the main source of N[Z] imports of refined oil. Since 1990, the gap between the two prices has steadily widened... The difference is known as the importer margin. In the second quarter of 1990, it dropped about 5c to 15c but has since increased to 21c. Out of that margin, the importers must pay for transporting the fuel and other costs, as well as make their profit... The oil companies argue that the ministry has not made the right comparisons. A spokeswoman for BP Oil... said[only] about a quarter of N[Z]'s petrol was imported refined. The rest was imported as crude oil and refined at Marsden Pt. "The margin between crude prices and pump prices since deregulation has remained pretty much the same," she said. Over the same period, the gap between the Dubai crude price and the Singapore refined price had shrunk because demand for refined petrol had been weaker than for crude oil.

...Oil companies have been accused of pumping \$100 million a year out of the economy through excessive petrol prices. The Economic Research Institute says N[Z]ers are paying \$160 million a year more than they should for petrol and most of the money - after the Government gets its tax - is going overseas. The institute suggests that increasing margins indicates "at least tacit collusion" and raises the question of... breaches of the Commerce Act. The Ministry of Commerce... issued the institute's report on petrol prices to back the assertions it made this month that the four oil companies are charging about 6c a litre more than they should be for petrol. Last year the ministry asked the four to explain why prices here were significantly higher than in A[US] and the institute was asked to assess their responses... The companies... argued that the ministry used the wrong data, that there are more benefits from fleet discounts here than in A[US], that prices are in line with other OECD countries and... A[US's] oil industry is unprofitable. The institute did not support any of those arguments. It argued that if there were true competition, margins would be squeezed over time, not increased.

...['PETROL rage is hitting the forecourts as motorists are driven to anger by price rises.irate customers are blaming staff at petrol stations. "We had one guy go mental at us over the increases," a Caltex petrol station owner told *Sunday News*. "He was furious and I thought he was going to hit me. I'd be surprised if someone didn't lose it sometime soon. Most people are philosophical about it and realise we only sell the stuff. But nobody is happy." The increases have hurt Kiwi consumers but NZ still has some of the lowest prices in the world. Shell figures from last year show only America, Canada and AUS have cheaper petrol. Britain's and Norway's is the most expensive, costing 2.5 times more.']

...in Europe... petrol costs three times as much as it does in the U[S]. Petrol usage in American cities is 4.5 times higher than in European cities.

...Fuel consumption in the U[S] is running at record levels. July figures show Americans used 1.35 billion litres a day[or about 5 litres per USer]. That's nearly 500 billion litres a year... [In local news,] Aucklanders are subsidising the rest of N[Z]'s petrol prices, say the oil companies... The costs of coastal shipping to the main ports are equalised regardless of their distance from the Marsden Pt oil refinery outside Whangarei... As a result, Auckland, Wellington, Christchurch and Dunedin have identical pump prices - 90c a litre for 91 octane and 95c for 96 octane... The price of petrol varies only away from the ports. For example, motorists in Hamilton... were yesterday paying an extra cent a litre. More remote areas charge more again... The companies have acknowledged that historical agreements, made up to 20 years before deregulation of the petrol market in 1988, are still in place... They are under scrutiny by the Ministry of Commerce, which has questioned how cross-subsidy arrangements can exist when the four companies are supposed to be in competition... Shell "would probably agree" that the arrangements were an anachronism but it also had its other customers to consider... A Shell spokesman... said that if the pricing agreements were discontinued, Aucklanders would pay marginally less than they do now, while most other centres would pay more... More than a third of the fuel market is in Auckland, which gets most of its petrol from the Marsden Pt oil refinery by pipeline... The level of subsidy, which the companies will not reveal, is likely to be increasing every year, because the Auckland market is growing faster... A Caltex spokesman... said Auckland subsidised other parts of N[Z] in other ways, including income taxes and road taxes. That was hard to avoid when one city was so large and fast-growing in a country with a small, low-density population.

...Concerns about high petrol prices in N[Z] have led the Government to investigate the barriers to further competition. The International Energy Agency said yesterday that N[Z] had among the highest pre-tax petrol prices in the developed world.

...Oil companies appear to be operating a cartel in N[Z] and it should be broken, says the president of Federated Farmers... He said there was no difference between each company's retail fuel prices and all were too high... [P]rofit margin increases and no new competition showed that the four oil companies - BP, Caltex, Mobil and Shell - had the market "pretty well stitched up." ...But the chief executive of the Consumers' Institute... said he doubted that a Government study looking at how to increase competition in the oil industry would lead to lower prices... Only draconian Government regulation could break their dominance and that would fly in the face of Government free market thinking... A four-yearly review by the International Energy Agency, released on Monday, said that the dominance of the four big oil companies and high petrol prices in N[Z] relative to elsewhere, suggested a lack of competition... [However, the] oil companies argued that competition was fierce... [Indeed, despite the oil companies' profits, around] two-thirds of petrol outlets are barely profitable and[, according to]... the head of Caltex N[Z]... many may be forced to close[if] new competitors enter the market...

Three... oil companies have been charged with price fixing by the Commerce Commission. The commission says Mobil, Shell and Caltex arranged to withdraw free car-wash offers within a few days of each other in June last year. The oil companies were offering the free car washes to customers who bought \$20 or more worth of petrol at more than 50 stations in Auckland. The commission said the free car wash, which usually

cost \$2, was effectively a discount on the price of petrol... All three companies said they would vigorously contest the action. The public relations manager for Caltex... said the companies had simply reacted to each other's moves in a competitive market... [The commission] said the other oil company, BP, removed its free car-wash offer some time later and there was no evidence that it was involved...

BP Oil has been ordered by the Court of Appeal to pay \$1.75 million to the suppliers of its Lucky Can recycling machines... for failing to promote the machines sufficiently and not keeping them in good repair. The scheme to recycle aluminium cans started in 1991 but public interest waned after a child was injured in 1992. [In related news, 'a High Court judge has found that Caltex, Mobil and Shell illegally colluded when they simultaneously ended free car-wash offers in Auckland in mid-1996. And he said representatives of the oil companies lied to the court and the Commerce Commission over the matter. He also noted that people with key roles in the decisions to stop offering free car washes were not called to give evidence by their companies. The court will hold another hearing at a date yet to be set to decide what penalties to impose. The highest penalty so far is the \$1.5 million which North Island meat companies were fined for colluding over prices. The highest penalty is \$5 million for companies and \$500,000 for individuals. A spokesman for Mobil said the company was disappointed and was considering its position. Caltex said it would decide whether to appeal once it had reviewed the judge's decision. Shell declined to comment.']

...Shell, with its Fly Buys promotion, has made significant gains in market share recently at the expense of BP and Mobil. BP remains the leader with 29[%] of all petrol sales, followed by Shell (27[%]), Mobil (25[%]) and Caltex (19[%]).

...BP Oil N[Z] is negotiating alliances with supermarkets and fast-food outlets to increase its retail petrol sales... BP's newly-appointed managing director for N[Z], said... "We have to look at any way we can expand our retail presence... It is supermarkets that will have to react to what we are doing." ...So far this year the company had spent more than \$20 million establishing so-called BP Express stores in 32 key locations... Of the 32... 21 were refits, four were rebuilds... and seven were entirely new developments. The revamp in N[Z] was part of a global strategy by BP to turn its petrol stations into merchandise outlets. "We still like selling petrol but we have recognised people want convenience shopping..." ...About 3000 lines of goods[will be] sold at the new stores... The wide range of goods being sold meant more staff were needed. A BP Express outlet employed 20 to 30 people, compared with just 2 to 3 at an old-style petrol station. The development of the chain had so far created more than 300 more jobs within BP N[Z]. The network would be expanded to about 120[outlets] in the near-term... There has been widespread speculation recently about the prospect of a new petrol retailer coming into the N[Z] market to compete with BP and the three other organisations that make up the Big Four oil companies here... "If another company enters the market, BP will compete with them as vigorously as we do with our existing competitors," [the managing director] said. He suggested any new entrant would have to offer a wide range of outlets and products to attract customers, and therefore setting up an operation would be expensive.

...A few years ago, most N[Z]ers would have had to be on the brink of starvation before they would have contemplated entering the nearest service station for a hot meal... [They] could have expected to find a pie warmer of dubious hygiene, and some home-made sandwiches with their edges curling up... The coup de grace, of course, was the sight of a mechanic straight from the lube bay sauntering over to serve the food... You only have to look around at the service stations nowadays to realise there is a quiet revolution going on in the convenience store market. The oil companies are pulling out all stops to design stores that dispel any notion that oil and food can never mix successfully. BP has its Express stores, Shell its Select brand, Mobil the newly named On the Run chain, and Caltex the StarMart. Judging by the advertising emerging from the oil companies, much of their branding is being directed through their convenience stores, rather than through the petrol they sell. There are at least two reasons for this. Firstly, petrol margins have been falling... making petrol sales a far less profitable part of the service station than it used to be. Secondly, we have long stopped believing that the petrol sold by one oil company is fundamentally different to that sold by another... [B]randing themselves through the quality of their fuel no longer has the same impact... [for] the oil companies... Through their service stations, the oil companies already have the prime locations needed to establish the stores, and given that many service stations are open 24 hours, they are perfectly suited to run a modern convenience store... Not everyone is delighted at these developments. When a new BP Express opened in Howick recently, there was much comment in the local press and elsewhere from people who complained that you could now get a great meal at the service station, but you would be hard-pressed to get a tyre changed or buy a fanbelt there. "It's a fact of life that service stations are now selling food rather than servicing cars," says... [the] BP Express... marketing manager of reseller products... Some serious advertising campaigns will be needed to drive this growth... BP... has kept a high TV profile for its Express stores... Caltex showed how serious they were when they appointed [a high-profile company] as the agency handling StarMart as a separate brand, despite having [a different company] as their main agency in charge of their overall advertising. The StarMart advertising account, however, reverted to [the usual agent after the other agent] announced it was dropping the \$1.5 million account only three months after winning it because it conflicted with another... client... All this is bad news for the local corner diary and convenience store, which have already seen their market share drop from around 37[%] in 1990 to 24[%] by 1995. That is a trend that is likely to accelerate next year, when the service stations begin developing their store brands in earnest, and start backing it with aggressive advertising.

...FOR motorists fed up with petrol stations where they have to pump their own gas, help may be on the way. Do-it-yourself petrol tank filling could become a thing of the past along with traditional pump attendants – if the Shell oil company gets its experimental robotic petrol pump developed. Promising to "radically alter the gas station experience" Shell in the U[S] has begun field tests on its smart pump. This automated fuelling system could... dispense fuel without the customer having to get out of the car. It is being field-tested in Sacramento, California... Shell's smart pump identifies the make and model of the car by reading a barcode transponder fitted to the vehicle. It then positions a robotic arm to open the fuel tank flap and dispense fuel through a special cap... Shell N[Z]'s corporate relations man, is not certain whether the smart pump will be used here, but... it looks as though the technology will work. "It's not about to reach into your car and take your child's ice cream or fill your dog with 91 unleaded," he says... Shell in America is saying the smart pump is already proving reliable, simple to use, safe and "environmentally friendly." The company says the possibility of spills and drips is reduced and that petrol vapour emissions are minimised. According to the company's research, motorists in the U[S] want to spend less time at the gas station, and have protection from the weather without petrol fumes. Along with the automated pumps, the company is also field testing a new easy-pay system that will eliminate the need to fumble for cash or the right credit card. Instead, the customer will use a personal electronic key chain device with a tiny computer chip inside. When the customer waves the key chain in front of the pump, the system automatically identifies the customer's credit card number, activates the dispenser and records the charge. Shell may offer an optional vehicle-mounted electronic device to be used in place of the key chain and motorists will be able to use the same system for car washes and food store purchases. There are a few drawbacks to the robotic fuel dispensing system now being tested. Each car that uses it must have a "retrofit" fuel cap to replace the car manufacturer's original cap. The new cap, which can also be used for conventional fuelling, has a spring-loaded slot in the middle, which means the robot does not have to unscrew it and hold on to it as humans do... Unfortunately... cars which have fuel filler caps mounted in unusual places – including the Mazda MX5... the Chevrolet Corvette, Ferraris, certain Jaguar and Maserati models, along with some Peugeots, Renaults and Rolls-Royce[s –] are not compatible with this dispensing system.

...First there was vodka. Now the Russians are trying to sell another high-octane product to the U[S] – gasoline. AO Lukoil Holding, Russia's largest oil company, opened a gas station yesterday in Altavista, Virginia... the first of 100 outlets planned for the U[S] this year and 2000 in coming years... [However, Russian tankers won't]be lining up to unload oil in U[S] ports. The new Lukoil station will use gasoline from local suppliers... The Russians celebrated the grand opening with gifts and bargain-price gasoline at US99c a gallon... But Lukoil said it would not start

a... war on prices... Many U[S] oil companies are reducing their downstream operations or merging with others to cut costs, discouraged by excess capacity...

A Government-commissioned study by A[US]n consultants... has concluded that there are no effective barriers to entering the N[Z] petrol market, for anyone with \$100 million to spend. [The study] estimated it would cost \$25 million to establish a port terminal and \$75 million for a retail network. That assumed the retail sites would be developed by the new entrant... If existing retail outlets or supermarket sites were used, the cost could be as low as \$30 million. The costs of setting up a service station are high... the land could cost between \$600,000 for a suburban site in the main centres to \$4 million for an Auckland CBD site and \$5 million for one in Wellington. The costs of buildings, tanks, fit out and so on would add \$1.3[million] to \$2.2 million. But... [an] independent might opt for less-than-prime sites and skip facilities like car washes, reducing development costs to \$1 million. One way of avoiding high start-up costs would be to take advantage of existing retail sites becoming available as independent dealers came off contracts with one of the oil majors. Only about 20[%] of... this country's 1900... service stations are managed directly by the oil companies or by agents who take a commission per litre of fuel sold. Another 20[%] are operated by dealers who lease the service station from the company whose product they sell. The other 60[%] are classified as independent, though they sell one of the majors' brands. The dealer owns the station or leases it from someone other than the oil company. Typically, supply agreements with the oil company have five-year terms with roll-over provisions... [Unfortunately,] extensive land holdings by the oil companies at ports would make it difficult for a new entrant to set up suitable terminal facilities. [The study] concluded that the port of Auckland would be a hard nut to crack, but not Tauranga, Wellington or Lyttelton. The pipeline owned by the four oil companies, which runs from the Marsden Pt refinery to Wiri, is also... seen as a barrier, especially to the Auckland market, but the pipeline is fast approaching its maximum capacity. The cost of carrying petrol along it was about 0.9c a litre... Getting it from Wiri to Auckland service stations would be about another 0.5c a litre. The cost of transporting motor spirit from the port of Tauranga to Auckland service stations was estimated to be about 1.7c a litre.

...Petrol prices are rising for the first time in a year. BP, Caltex, Mobil and Shell all increased their pump prices 1c a litre this week. The last increase, also 1c a litre, was in October last year but in March prices dropped 1c. Since then the Government has been concerned about the increasing margin oil companies are charging on the cost of fuel imports. The Minister of Energy... welcomed suggestions of a new player preparing to move into the petrol retailing business. However, apart from some secretive purchases of prime Auckland real estate sites, the newcomer... has not raised its hand. The latest increase has been blamed on rising crude prices and a weakening NZ dollar.

...[following] months of speculation that a fifth player in the retail petrol market was behind the purchase of up to 30 properties[, a still]... mysterious challenger to the dominance of N[Z]'s four petrol barons[has announced] plans to launch its new chain from two prime sites in Auckland and Hamilton... [The] newcomer has lodged planning applications for a central Hamilton site overlooking the Waikato River... opposite the Anglican cathedral... and a Western Springs, Auckland, site which is believed to be a block of shops opposite the Museum of Transport and Technology. The Hamilton City Council yesterday confirmed a Tauranga firm had lodged an application on behalf of an unnamed oil company... The Hamilton petrol station would have a "clean and inviting innovative design" with a peaked fabric roof, resembling a sail. "The clean, sweeping curves of glowing white material will have a less commercial effect. The curved shape and use of open lattice trusses would set a new environmental standard," the application said. Discrete planting would create a "pleasing and uplifting" visual effect... Challenge refused to confirm it was behind the \$850,000 purchase of the prime block of land... [in Hamilton. A spokesperson] said the company was still investigating whether it wanted to enter fuel retailing and would not announce a decision for several months... [Challenge] would have to supply its stations with imported fuel, as the Big Four... control production from N[Z]'s only oil refinery at Marsden Pt.

...The Marsden Pt oil refinery will shed 72 jobs over the next two years as part of plans to save up to 25[%] in costs. The... redundancy bill is likely to top \$6 million[, but]... the... refinery's annual wages bill is expected to drop from \$40 million to \$29 million... [Incidentally,] Challenge is moving into petrol retailing, a Hamilton city councillor revealed yesterday. The councillor... said [Challenge] had told him in confidence that it was behind a proposed service station in the city's main road... [He] said he breached confidentiality with [Challenge] because he believed this might stop the development. He said the acting mayor... was keeping residents in the dark over the site... A [Challenge] spokesman... yesterday refused to confirm or deny the claim.

...A petrol price war is on the way with plans by an A[US]n discounter to muscle in and cut pump prices by 10c a litre. Liberty Oil yesterday confirmed it intended opening at 35 sites within six months... The service stations would be large by N[Z] standards, with big forecourts and 200sq m convenience stores operating under the Time Saver banner... A 10c price cut would have a significant economic impact, reducing costs not only for private motorists but for taxis, couriers and other transport companies. Liberty may not be the only newcomer... Challenge said last night it was still considering its options... By heavily discounting prices Liberty has snatched 8[%] of the A[US]n market in just three years. It now has about 270 outlets. It imports fuel from Asia as well as buying from A[US]n refiners... "We do not have the overheads that all the major companies have. We don't have great glass towers, we do it simply and that cuts the overheads back." ...However, continuity of supply might become an issue if it did not have sufficient transport and storage facilities... It is looking to have storage units in Tauranga and Wellington... Liberty is a Melbourne-based company owned by... [two men], both of whom have featured in the list of A[US]'s 200 wealthiest people... in a large part thanks to the actions of their major oil rivals. Just after [they] opened their first petrol discounting outlet in 1970... they struck a supply deal with Mobil. That deal turned out to be exceedingly generous because it established a fixed price for unlimited supplies. Then along came the first oil price shock. While their big sister rivals were forced to pay substantially more for the crude oil they refined, Solo outlets got their tanks filled at bargain basement prices. It was the sort of break which allowed the Solo chain to expand rapidly, eventually snaring 5[%] of the total A[US]n market by 1989 when the... entrepreneurs sold to Ampol. That deal... worth \$A200 million... made them both very wealthy... but they were forced to sign an agreement that they would not compete in the oil retail industry for 10 years. However, when Ampol and Caltex merged their operations in 1994, the Trade Practices Commission would only agree on the basis that independent operators were not disadvantaged. The non-competition agreement was scrapped, giving [the pair] their second big break at the hands of their rivals. Since re-establishing themselves back in the petrol discounting game with Liberty in 1995... [the company has quickly grown to] a \$A700 million-a-year... business... Liberty pumps in excess of one billion litres each year and it aims to double that amount this year... Earlier this year, Liberty expanded into the Perth market and said it wanted to have 40 outlets in that city by the year's end... [It is also] looking at setting up in Tasmania, a state which Liberty says has unacceptably high petrol prices thanks to the lack of independent petrol retailers. Not satisfied with their success in A[US], the pair have also laid plans to take their brand... into Thailand, Cambodia and China... By[A[US]n] law, the big oil companies have to supply any discounter at fair market prices. Discounters are also able to import cheap petrol through facilities they do not own. That means they do not have to service vast sums of capital tied up in refineries, ships or oil terminals. An irony behind Liberty's success in A[US] is that its single largest source of product now is Ampol.

...LIBERTY OIL'S expansion into the N[Z] market could be financed by a public float of shares and a Stock Exchange listing. The Melbourne-based company has confirmed it is considering the float option as it prepares to take on the big four...

LONG-SUFFERING shareholders in[a] furniture maker... can look forward to a resumption of dividends following the acquisition of a majority stake in the company by the two Wellington businessmen... who have formed a joint venture with... Liberty Oil...

Petrol prices may be forced down by up to 15c a litre, says price discounter Liberty Oil... Its chief executive... said from Melbourne that the cost would depend on how much the existing oil companies responded to the threat of competition... Disgruntled service station operators had been

flocking to Liberty hoping to change their allegiance to it from one or other of the existing companies, he said. So far 15 franchise holders had made direct approaches. One operator told... yesterday that he expected to be able to make a bigger margin than the 3c to 4c a litre he got now.

...Big petrol price cuts planned for Auckland and some other North Island cities by Liberty Oil will not be enjoyed by the rest of N[Z]... Liberty... said yesterday its strategy was based initially on the North Island and on Auckland in particular... Auckland's size, and the pipeline connecting the storage facility at Wiri with the Marsden Pt oil refinery, make it the most lucrative market for the oil companies – and the most attractive target for a new entrant... [But its] managing director... hoped Liberty would eventually become a nationwide supplier. A BP spokeswoman... said last night... that South Islanders, particularly, may face higher prices as a result of the A[US]n discounter entering the North Island market. Centres such as Whangarei, Tauranga and Hamilton, which now pay the same or similar prices as the four main centres, will benefit from the price cuts only if Liberty opens outlets. Rural[North Island] areas and towns in which Liberty does not open... may pay more than now... In Wellington yesterday, the Minister of Energy... welcomed Liberty's move... [and] he warned the[other] oil companies against colluding to sell below cost and stave of the competitor... "I will be keeping a very close eye on any predatory behaviour oil companies may wish to adopt or think they can get away with to try to force competition out," the Minister... said... Predatory pricing involves an incumbent firm dropping its price to below cost to drive a rival out of business. As none of the oil companies is individually dominant any one of them is free to sell below cost if it wants to, but they cannot get together to agree to do that without contravening the Commerce Act. While the incumbents are liable to be in trouble if they sell below cost, Liberty is expected to... Liberty had made a substantial investment already and had indicated to him that they were there for the long term and would do whatever[is necessary] to establish themselves in the marketplace. "I assume that means competing at a loss in the short term at least,"... [The minister] expected it would cost between \$50 million and \$100 million to set up the Liberty network. Another area the regulatory authorities will watch closely is misuse of the Resource Management Act process. Objections by competitors on trade grounds are not permitted under the act, but it is argued that firms sometimes exploit the act by raising environmental issues, perhaps through another organisation.

...Oil companies may find it much harder to build petrol stations in Auckland City residential areas after a landmark Environmental Court decision. The judgment gives [Auckland City C]ouncil-appointed planning commissioners much wider powers to reject applications for new service stations because they must consider a range of matters under the district plan. The ruling could have repercussions for the intended new entrant into N[Z]'s petrol retailing scene... Liberty Oil... The council believes Auckland is adequately served by the 135 petrol stations located along main arterial routes on the Auckland isthmus, 13 of them in residential zones[*The Telephone Directory Auckland 1997* lists almost 250 petrol stations in the four cities]. Manukau and Waitakere cities have indicated they may follow Auckland's stance... The court case followed an appeal by Caltex...

Oil companies began a round of price-cutting and special discounts for Auckland motorists yesterday amid a growing climate of petrol sales competition. Caltex and Shell followed the lead of BP in dropping wholesale prices to all their service stations between Wellsford and Huntly by 5c a litre – although it is up to retailers to pass this on. The price cut was greeted with "deep suspicion" by the Minister of Energy... A spokeswoman for BP... said the company had decided to drop its prices to service stations in the region for a limited period rather than "compete with another promotional activity this month." She was referring to the Mobil offer of \$1 petrol discounts posted to every household. A Mobil spokeswoman... said the promotion had been extremely successful. "We are puzzled as to why competitor response has only taken place in Auckland, given that Mobil's promotion went to all households nationwide."

...A computer glitch has left Mobil searching for 21 people who were overcharged for petrol in Auckland. They are among 25 customers who paid twice as much tax as they should have from the... station in Karangahape Rd in the past two days. Four have already been tracked down. Only customers taking advantage of electronic banking services available on the station forecourt were affected... Eftpos payments at the petrol pumps were closed temporarily yesterday when a vigilant customer spotted the error on his receipt... Mobil is still investigating how the computer system at the K Rd site was altered... [By the way,] BP Oil last night rejected a claim that the rest of N[Z] was subsidising Auckland's 5c a litre petrol price cut... A spokeswoman for BP... said... that was "definitely not the intention." ...The company also warned the cut might be short-lived, lasting days rather than weeks... N[Z]ers buy 2.7 billion litres of petrol a year, or 52 million litres a week[, or approximately 2 litres per NZer per day], and the Auckland region makes up just under a third of that market. Every 1c price movement is estimated to cost (or save) motorists \$27 million a year, so the 5c a litre price cut would save[Aucklanders] about \$43 million if it continued... Meanwhile, a union expressed concern that service station workers could suffer as the price war heats up... The Engineering, Printing and Manufacturing Union, which covers some service station attendants, is concerned a... war will put increased pressure on workers' pay and conditions.

...Independent Shell service stations are bitter at having to fund the oil companies' 5c a litre petrol price cut in the Auckland region out of their own pockets. Caltex and BP have ensured their operators are not disadvantaged... [by giving] a 5c rebate for every litre sold. Mobil simply cut the wholesale rate. Shell, however, had[only] given independent dealers rebates of between 2c and 2.5c a litre.

...Aucklanders no longer have cheap petrol themselves. BP extended its cut-price petrol promotion to Christchurch at the weekend and the other three oil companies quickly followed suit... A BP spokeswoman... likened the price cut to happy hour in a bar... As with the Auckland promotion, it would last days rather than weeks...

Motorists in Auckland and Christchurch are saving \$150,000 a day as a result of the oil companies' 5c a litre price cut... Meanwhile, Caltex has announced that 61... staff had accepted voluntary redundancy.

...Auckland's relief from high petrol prices was short-lived. Most motorists would have filled their cars no more than once in the 6 1/2 days the BP-led promotion lasted. BP... [said] it had been very successful but could not be sustained with present international oil prices and the N[Z] dollar's value. The other three oil companies, which copied BP by cutting prices last week, followed it back up yesterday. Caltex said it has ended "our promotion," Mobil said it has "matched" the latest price rise, while Shell said it was "restoring" prices to pre-promotion levels.

...BP Oil's... 5c a litre... petrol price-cut promotion moved to New Plymouth, Nelson and surrounding areas last night... Caltex, Mobil and Shell [stations in the region] immediately moved to match the lower prices. BP canned its promotion in Auckland on Tuesday... but was continuing Christchurch's promotion into its eighth day...

['Businesses are already counting the cost of the closure of Whenuapai's service station. They say trade in the small, closeknit community has dropped off since the station on Brighams Creek Rd pumped its last drop of gas 10 days ago. "Economic reasons" are cited by longterm lease holders Shell NZ as the reason the company was not prepared to spend the \$100,000-plus to upgrade the tanks required. The service station has been in the township for more than 40 years. Local shop owners and residents alike have been angered by Shell's decision to turn off the pumps. As well as the inconvenience, local retailers are worried the closure will affect business in the area. The owners of Shree Superette say they're already feeling the pinch at the checkout.]

...Supermarket customers in the North Island may soon add petrol to their shopping lists, in a move which is expected to further fuel petrol price wars... Liberty Oil and [Challenge] Energy... were talking to supermarket operators about potential deals which could eventually see petrol pumps set up in supermarket car parks... Deals between supermarket operators and oil companies have already sparked fierce petrol price wars in Britain and A[US], as the line between grocery shopping and petrol retailing becomes increasingly blurred... In Britain, petrol sales have proved profitable for supermarkets... driving many independent garages out of business... Britain's biggest supermarket chain, Tesco, is now responsible for about a quarter of all retail sales of petrol... Across the Tasman, Woolworths A[US] is so far the only supermarket chain selling petrol. However, it has already prompted BP to test a joint promotion in Canberra with an independent grocery chain. Both... offer a discount of 2c a litre on petrol to customers who spend \$30 or more on groceries... [The] Big Four oil companies operating in N[Z] were coy yesterday about the latest threat to their

empire. BP would not say whether it was considering a similar deal here to A[US]. Shell and Mobil also declined to comment. But Caltex said talks with supermarkets were not planned at this stage... Liberty Oil confirmed yesterday that it planned to meet... Progressive Enterprises and Woolworths NZ, early next month. Progressive[, which]... owns the Foodtown, Countdown and 3 Guys chains... has been looking at petrol retailing for some time and is believed to have already had talks with Malaysia's state-owned oil company, Petronas. The other major player in the grocery market, Foodstuffs, said yesterday that it did not have room at most of its sites for petrol pumps, and therefore was not yet considering any deals... [Challenge] would say only that it had been talking to "a number of people" for some time.

...Challenge has reaffirmed its strong interest in moving into selling petrol. The chief executive... said... [Challenge] had done a... three year... feasibility study on petrol retailing... [and the company] was the "most logical next participant" in the market because it was already producing oil in N[Z]... "There is a value lift for us in using our crude and condensates in the N[Z] market,"...

Challenge Energy has moved a step closer to selling petrol by launching an extensive marketing campaign for a business that only partly exists. The company has begun a series of television advertisements lauding its oil and production activities in N[Z] and overseas.

...Challenge Energy is teaming up with other companies to speed its entry into the petrol market... The vital link in the petrol plan is a contract for supply of bulk refined products from the Asian division of Japanese oil giant Mitsui... [Challenge] got to know Mitsui through marketing arrangements for its Taranaki oil and gas fields. At Taranaki, [Challenge] operates an oil tank farm and will extend that to include storage of up to 30,000 tonnes of petroleum products... But it will not be doing the local distribution itself. That will be handled by listed transport company Owens Group. The arrangement is potentially a huge deal for Owens, which recently sold a small business with about five tanker trucks that was involved in rural and home delivery of fuel for BP. The transport company has already begun building new trucks... Those trucks will carry fuel to the 20 initial service stations [Challenge] intends to own and operate by itself. They will also carry fuel to other outlets... but... what these other outlets will be is being kept secret[, although the]... Warehouse is tipped as a possible partner... [Challenge] is likely to be pumping gas before A[US]'s Liberty Oil... The first... Challenge... station is likely to open in the new Albany Stadium retail area. [The company] has already installed fuel tanks at a site beside its Placemakers building products store there... [Challenge] has the potential to become the strongest and most profitable of the oil companies operating in this country... [and expects to at least] secure about a fifth of all fuel sales. That represents an \$800 million bite of N[Z]'s \$4 billion fuel industry... At the processing end of the fuel chain, the Marsden Pt oil refinery... faces a challenge. The refinery is already suffering declining sales in large part due to new and efficient refineries in South-east Asia coming on stream. [Challenge] will import its fuel from those very refineries. The N[Z] refinery is slashing costs in an effort to compete more aggressively, but that alone might not be enough to make it competitive. As luck would have it, [Challenge] wants to use Marsden Pt to process crude oil extracted from its Taranaki fields. It is prevented from doing this at present because the majors have a contract to use the refinery exclusively. This despite [Challenge] owning a 14[%] share in the facility. [Challenge] intends to test those exclusive arrangements... N[Z] Refining is keen to discuss... Challenge's fuel requirements, but in the short term has no refining capacity available to sell... At the retail end, owners and operators of small petrol stations... also... face a battle... [because Challenge] intends to... pump fuel in large volumes... [at] key outlets. This will give economies of scale that small petrol stations don't have.

...Bulk users of fuel such as bus companies... are set to benefit from the entry into the N[Z] market of... Liberty Oil... "We believe there is a very large opportunity for us in the commercial market and we will be attacking that market with... gusto..."... [the] local principal of the A[US]n group... said yesterday... - 1997

The bus originated in Paris in 1827. It was originally a horse-drawn vehicle, known as an omnibus (= 'a vehicle for all'), with the entrance at the rear. Later versions were motor-driven, first by petrol engines and then... diesel engines...

The tram (or tramcar, *US* streetcar), was invented in New York in 1830 by John Stevenson, an Irish coach-builder. Trams were originally horsedrawn... and then steam power was used so that they were either self-propelled or hauled by cables using stationary engines. The great expansion in their use came with electric traction in the 1890s, with current collected either from overhead wires or sometimes from a conductor rail beneath the road surface. The rise of the motor bus and the electric trolleybus with their greater flexibility of the course caused a decline in the use of trams in both Britain and the USA, but some transport planners forecast a return to the tram on grounds of economy and ability to use electric power rather than the oil fuel needed for buses.

TRAMWAYS came into their own in NZ when they began to be powered by electricity, first in Auckland (1902), then in Dunedin (1903), Wellington (1904), Christchurch (1905), Wanganui (1908), Invercargill (1912), Napier and Gisborne (1913), and New Plymouth (1916). During the second and third decades of the 20th century, electric trams were the main means of public transport for the citizens in the cities and the large towns of NZ... By the end of W[W2]... 220 million passengers a year were carried on all the systems: nearly half in Auckland (100 million)... Trams were gradually superseded by trolley buses... during the 1950s...

Trolley buses replaced trams on Auckland's Herne Bay run on Sept 24, 1949, spelling the end for trams... Auckland's first trolley-bus service began when the Farmers Trading Co offered shoppers free transport from Wyndham St to Hobson St[on]... *Dec 19*... 1938... The company had started a free tram service from Beresford St two years earlier.

Children's discount fares and many subsidised school bus services are under threat in Auckland. The [ARC] transport committee voted this week to reconsider its \$5.9 million involvement in providing the subsidised services and public transport discounts. The surprise shift was prompted by the council chairman... who said later that ratepayers should not be subsidising school transport. It should be a central Government responsibility... An estimated 30,000 of 180,000 Auckland school pupils travel to and from school on public transport... Children under 15 and secondary school students over 15 qualify for a 40[%] discount on the adult fare. Council officers said the rationale for subsidising school transport was that it reduced peak-hour traffic congestion as fewer parents drove their children to school, and that public transport was safer than walking or cycling. The president of the Auckland School Trustees Association... said scrapping the subsidies would increase the strain on family budgets. He urged the council to retain them unless the Government agreed to pick up the tab. The Ministry of Education manager of school transport... said of... the Government paying: "I don't see it as a goer." He said 5000 Auckland pupils rode to and from school on 104 bus services[already] funded by the ministry. A partial transport subsidy was paid for a further 750 pupils and 1500 children with special needs were provided with transport.

...Auckland's traffic mania affects everyone, from families taking their children to school, business people struggling to meetings, manufacturers getting orders delivered on time, shoppers getting to Queen St. Having recently returned from a fact-finding mission to England and Scotland, I... [-] a director of the Yellow Bus Co... [-] am convinced that the quickest, cheapest and most flexible way of reducing Auckland's congestion is to improve bus transport... Auckland could incorporate many of the successful innovations seen overseas. They would not inconvenience the motorist... Overseas, local councils and transport operators have formed partnerships to improve public transport and its image. The transport operator agrees to supply modern systems... while the council agrees to make special investments. Many of the changes required[in Auckland] fall within the council's domain, such as developing shelters and facilities for the travelling public, park-and-ride facilities and priority lanes... The cost

of the park-and-ride is no greater than the parking cost in town... and[customers] are picked up by the bus for travel into the city along the priority lanes... Transport priority lanes on roads should be a “win-win situation.” ...[they] can... be altered easily if traffic patterns alter... Depending on the daily traffic flow, some lanes can be available for all traffic during most of the day and designated public transport lanes at peak periods... The travelling public is soon educated as to which lanes can be used... They need to be well policed,[however,] especially against delivery vehicles... [and cars carrying less than three people. ● The first Auckland trial of] a... traffic lane... [which] only buses, cyclists and private vehicles with at least three occupants may use... [was instigated in 1982 along] Onewa Rd, Northcote.

...[Yesterday, the] group manager, transport, for the [ARC]... said that the existing harbour bridge could take an “awful lot more people” if buses carried more people... [Unfortunately, t]he public might have to pay to get information about Auckland public transport services in future, if the chairman of the [ARC]... has his way. The Yellow Bus Company, which is owned by the Auckland Regional Services Trust[and made an \$8.3 million profit this year], intends dropping its... [free-call phone] information service in early December. The service handles about 2000 calls a day. - 1996

Auckland's Buz a Bus service has been saved by court injunction from an 0900 phone service... better known for providing sexual fantasy... phone services and pornographic videos... [The owner of the pornographic 0900 service] thought he was on to a good thing last November, when he read... that [the ARC] chairman... thought it was time to sell the bus information service... [The ARC chairman] said it was the era of the user-pays 0900 call – and [the 0900 man]... saw a perfect opportunity. He promptly arranged listings in Telecom's 1997 Auckland directory and Yellow Pages... due out in April, offering a 24-hour 0900 service. Suddenly the company which runs the... free 0800 phone information service, Transportation Auckland, wanted to protect the asset it ditched... for its Rideline service, which [covers 'bus, train, ferry and carpool information']... It sought a High Court injunction after [the 0900 man] applied... to register his double-zed Buzz A Bus as a trademark... A High Court hearing this week... showed the service cost \$1.3 million in 1996, with a \$1.2 million forecast for this year[, and the ARST]... decision to ditch the Buz a Bus calls showed it put a zero value on its service... [However, the judge said the 0900 man] could only use his 0900 bus number if a precise Telecom diversionary message was installed... [The judge] found the... service was evidence of passing off – trading on the established goodwill of the local government name – and ordered an injunction restraining [the 0900 man] from using his double-zed or similar trade name... Transportation Auckland, meanwhile, was going through its own trademark registration, winning a trademark for its single-zed name... after applying back in 1994... [The 0900 man then] terminated his use of the number, after [the judge] told him court costs of \$1500 were not “unreasonable” for the injunction hearing and could be imposed if he chose to take the matter to a substantive hearing.

...[as a result of court action, Aucklanders have ended up with a '24 Hours 7 Days 0900 BUZZ-A-RIDE service costing \$1.75+GST/min' and a free Rideline service that is operated for a maximum of 15 1/2 hours each day. Incidentally, 'Swanson bus company Ritchies has been fined more than \$50,000 for allowing its bus washing system to discharge detergents into a local stream. Company directors were also fined \$4000 each. The company holds a discharge consent which allows a discharge of excess wash water during high rainfall into the stream, but not detergents, degreasers or solvents. The consent also bans the washing of the underside of buses. A court hearing last week heard that last year, pollution control officers visited the site several times and gave warnings. "In light of our continued warnings being ignored," says an ARC councillor, the council had little option but to proceed with legal action."']

...[On the corner of Vermont Avenue and Wiltshire Boulevard, in the teeming heart of Los Angeles' Mid-City district, ordinary commuters were massed outside the shuttered underground train station, praying for a miracle on the fourth day of a public transport strike. All were poor, desperate to get to work, without cars and utterly stranded. Then the miracle happened – at least for some of them. Dilapidated pick-up trucks and rickety old cars swooped by, their drivers shouting out directions and prices in Spanish. The cars and trucks filled up, like service taxis on the outskirts of Cairo or Tirana, four or five people crammed on to back seats, and they were off. Elsewhere in the city, cars stopped to offer rides to janitors, cleaners and restaurant workers marching incongruously down the long, straight pavements of a city where, in theory, nobody ever walks. It is easy to forget that in LA, a city built on freeways and private enterprise, almost half a million people struggle daily against the whole ethos of the city because they cannot afford to drive cars. The transport strike has made this vast underclass visible to all, and in a city notorious for its lack of civil sense or neighbourly good feeling a wave of solidarity has taken hold. The drivers of the city's 4000-odd buses walked off the job after their bosses asked them to take cuts of up to 15% in pay and overtime. The rationale was a crude one – the Metropolitan Transit Authority is mired in debt after wasting billions on a subway system that does not begin to cover the span of the LA basin, and now it has to make cuts wherever it can. Since the drivers are already on wages little better than the house-cleaners, nannies and menial workers they carry on their buses each day, their dispute has triggered a wave of sympathy. But the strike's economic toll is beginning to be felt. People are spending so much time, energy and money getting to and from work that they have no time or cash to go shopping. The strike began on Sunday (NZ time), initially amid chaos. Old women waited for hours at bus stops, apparently unaware of the strike. Yellow taxis fleeced passengers of their whole day's wages to get to jobs they could not afford to risk losing.]

...[an Auckland mother] is furious that the Yellow Bus Company is charging more for her children's fares... The bus fares have risen from 80c to \$1.20 per trip, with a 10-ride concession ticket costing \$10 instead of \$7.20. That means [the mother] needs to pay \$30 for bus tickets each week, instead of \$21.60... As a protest, the West Auckland mother is driving three of her four children to Massey High School each morning. She lets the children catch the bus home after school... [She] blamed the price rise on the Yellow Bus Company taking over West Auckland bus services from the Whenuapai Bus Company. Until Monday, the 4km ride to school from [their] home in Massey was one stage. However, the Yellow Bus Company... has made the journey two stages. The chief executive of the Yellow Bus Company... said... “The fares that are being rearranged are consistent with the sorts of fares being paid in other parts of Auckland.”

...[Bus fares could jump... if a push by operators to covers costs succeeds... Bus operators... asked the [ARC], which regulates fares, to approve a price increase... [F]ares were unlikely to rise more than 10[%]. A one zone fare, covering inner-city travel, would then be \$1.10... [The] chairman of the Auckland Bus and Coach Association[(BCA)], said bus prices had been static since 1991, when the industry was deregulated, but the [ARC] had continually cut the subsidy... However, the Campaign for Public Transport said it would fight any fare increase. Its convener... said bus fares should not rise unless the service improved. “If they had a bus service that was delivering people to work on time and was of a high standard, then that would be acceptable, but they don't.”

...[I'm a bus person – been one for 10 years. There's nothing like relaxing in a Flyer, cruising along... the Northern Motorway every morning, book open. That half hour or so of peace is worth the grind of the homeward journey when the slower Express trundles up the East Coast Rd, picking up noisy teenagers in school uniforms. But it wasn't worth it last week. And it hasn't been worth it several times this year. The bus was late (only seven minutes) and, amazingly, it was full with two people standing – at 3.20.[Some drivers won't stop if they already have standing passengers but, fortunately, this one did.] Off we chugged, around the curve of the approach to the Harbour Bridge and at the very beginning of the climb, the yellow thing died – simply crawled to a halt astride the white line. The chuckles (or sniggers) were of no surprise. Yellow Bus travellers have been down this road before. The driver, amused resignation on his cheerful face, tried the starter button and then reached for his RT. We settled in for a wait... Rush-hour traffic was beginning to build and horns tooted at this hulk in the middle of the road. Another bus pulled up in front of us but on viewing our load, went on its way... The replacement came nearly half an hour later and we tramped outside like grateful lambs protected from the traffic by a line of red cones and a policeman. More chuckles and snide comments as we realised this[replacement] vehicle had been painted many

colours before it became a yellow bus. And more delay as the driver pushed buttons and turned knobs as he tried to shut the doors. "Never mind!" roared the frustrated policeman. "Get that thing out of here." Off we lurched, to a volley of backfires – towards the next surprise. At the Tristram off-ramp our disoriented driver swung a left, instead of a right to East Coast Rd. It seemed anger was beyond this good-natured band of travellers: they exploded in a roar of helpless laughter... That driver is the fifth this year who has gone the wrong way, and that's the second bus to break down on the way home. Lateness may be excusable but twice the bus has left from the city five minutes early. I'm still a bus person, but I understand why many aren't.

...If only the buses... worked cheaply and efficiently, then motorists would leave their cars at home. All the evidence, sadly, suggests otherwise. One European study found that halving bus fares would reduce car use by less than 1[%]. Drivers are so wedded to their cars that they will be deterred only by higher motoring costs or regulation.

...[a study has found that '50% of local car rides in NZ last less than 10 minutes.' By the way,] community groups have stepped up their campaigns against building an eastern Auckland motorway... [An] Auckland City Council study... of the Panmure-Tamaki Drive route says public transport options are unlikely to attract sufficient passengers to offset expected increases in traffic. But Stem, the Stop the Eastern Motorway group, dismissed the report, which it claimed had a predetermined outcome and was based on the assumption that Aucklanders were "hooked on cars." A Stem spokesman... said the figures had been skewed to the extent that the motorway option, detailed in the report as environmentally damaging and expensive, came out on top. He also attacked the "inadequacies of the environmental analysis" in the report. It failed to explain the long-term effects of a motorway carving through the inner-city's last wetland habitat for wading birds, marine life and mangroves.

...The Minister of Transport... signalled her support for a second Auckland harbour crossing yesterday[after] touring the Auckland motorway system with Transit officials and local MPs... She said the Government would decide later this year on how the roads would be paid for and managed... [M]oney could be borrowed forward, instead of new roads and bridges being fully paid for once opened, as at present.

...[Question: When is a tax not a tax? Answer: When it's an excise duty. And that's how the PM ducked "hypocrisy" claims last week after government slapped 4c a litre on petrol to sort out Auckland's shambolic road problems (protesters against the hike remembered how the Deputy PM stomped the country branding fuel companies as "greedy" for raising their prices; now it seems it's OK for government to do it – if you call it a tax by any other name').]

...solving Auckland's "transport crisis" will require a co-ordinated hands-on approach by regional and central Government and the political will to adequately fund vast improvements in public transport... "Funding for public transport is not a matter of subsidies, it's a matter of making necessary commercial decisions." ...Statistics paint a gloomy picture, particularly those which show the number of people using public transport dropped from 14[%] 10 years ago to just 7[%]. Adversely, the number of commuters driving to work increased from 53... to 80[%].

...[Significant patterns of travel to work at the 1991 Census related to male-female differentials in means of transport. Males – who made up 64% of the then 1,073,743-strong full-time labour force – showed a much greater tendency than females to drive company vehicles (138,150 v 16,665), or ride motorcycles, powercycles or bicycles to work (62,733 v 14,832). Females, by contrast, tended to make greater use of the public transport system (21,951 v 28,065), drive private vehicles (310,362 v 217,881), travel as passengers in cars, trucks and company vehicles (39,294 v 41,625), and walk more than their male counterparts (46,635 v 30,342). This male-female structure of transport use reflects a combination of demographic and economic variables including living arrangements, household composition and income, number of household income earners, access to household vehicles, distance travelled to work, occupation, industry and employment status.] • The ARC] has given a clear signal of support for local councils' efforts to clear the way for buses on congested streets... The regional council is funding the trial of an Intelligent Transport System... beginning in the city next month. The chairman of the committee... said: "We can't build our way out of Auckland's traffic problems... We need to look at moving more people rather than more cars." ...And next month Transit N[Z] expects to issue a report on... ways to push more people, rather than vehicles, across the[harbour] bridge using a priority lane on the Shore for buses and cars carrying three or more people.

...[a Californian] judge... fined a driver for using a car-pool lane reserved for cars with at least two people, although the man had four passengers. He was a mortuary worker transporting frozen corpses. "The dispensation," ruled [the judge], "doesn't apply when all the passengers are dead." ...[In local news, a]n \$18 million plan to get more people through the Auckland Harbour Bridge jam in fewer vehicles was unveiled yesterday. Transit N[Z]'s three-year scheme involves the extension of the North Shore bus shoulder lane, a new park-and-ride bus station at Constellation Drive and a bus terminal at Smales Farm. Transit believes its solution... could save commuters 20 minutes a trip... Included also are new priority lanes for southbound traffic heading for the harbour bridge in the morning peak hour... and, on the south side of the bridge, an extra lane through St Marys Bay and over the Victoria Park viaduct. The \$6 million viaduct widening would involve an extra 6m of roadway and a new row of supporting piles in Victoria Park... However, Transfund needs to approve the project before it gets the go-ahead... A second, \$25 million stage would involve changes to the Onewa Rd interchange, [and] a separate dual carriageway between the new bus stations... The Transit report also argues for... an extra lane between Hobson St and the Khyber Pass Rd on-ramps... The regional state highway manager... described the Transit plans as economically and socially responsible but cautioned that they would not cut queuing on normal motorway lanes: "The benefits of the priority-lane system will only become apparent when a significant number of commuters choose to forgo the single-occupant car." ...[but] he believed that Aucklanders would sooner than later change their travel habits and switch to buses when the advantages became clear.

...Forty new buses which "crouch" beside kerbs for easier passenger access are being bought by the Yellow Bus Company for use on Auckland arterial routes. The \$9 million investment follows a trial of the low-floor buses... The buses use hydraulics to drop [themselves]... Part of a fleet modernisation programme, they are intended to complement the push by regional planners for public transport.

...Using mathematical principles, [a] Professor... developed the theory of "the mating habits of buses" that explained why after waiting an age for a bus, two always seemed to arrive at once... [He']s spent his life applying mathematics to transport problems... He formulated the theory that if the first bus gets slightly behind schedule, more passengers arrive at each stop, slowing it even more. The second bus has fewer and fewer passengers to pick up at each stop, enabling it to travel faster and faster. (The theory works best in countries where buses do not pass each other.) ...Now he has turned his experience to Auckland, where [buses do pass each other. But instead of being concerned about passengers missing their bus because its driver wrongly assumed they intended to board a bus already parked at the stop and, therefore, drove straight past,] he has looked at [another] bane of the commuter's life... Traffic lights are a particular challenge to the mathematician, who says that proper systems, developed logically, can make a big difference in easing traffic flows in a congested city... He does not approve of diagonal pedestrian crossings, such as those on Queen St, as they close down intersections to traffic for too long. Auckland has, however, increased the number of intersections controlled by advanced, computerised traffic lights. A senior traffic engineer... said 187 Auckland intersections were now controlled by the systems [the] Professor... studied.

...Little grey boxes attached to buses could get passenger loads through traffic lights... faster than usual. The [ARC] has agreed to fund a \$150,000 trial to fit four buses with devices which turn lights green... [by signalling] the approach of the bus to traffic lights... at selected intersections. It is part of an Auckland City Council plan, called "Buses First," to give buses priority on Great North Rd... A manual study conducted over a week[last] November showed that 10[%] of buses on Great North Rd changed the lights a minute sooner than normal, with another 30[%] snapping them to green 10 seconds early. "The results were wonderful,"... a transport planner at Auckland City Council... said. "We were slightly worried it would congest traffic in other lanes but that didn't happen." The council hoped to eventually have bus-sensitive traffic lights in most parts of Auckland. They would not work in heavily congested intersections... or in traffic snarl-ups... Asked whether the council

would try to stop motorists sitting behind buses to fast-track through the lights, he said: "That has been raised as a concern. We're not sure whether it will be a serious problem but we'll keep checks on it." What would happen when two buses going in opposite ways came to the lights at the same time? [The planner] said that would be worked out during the trial... [The] equipment being tested – including electronic loops in roadways and a central computer – would give full and late buses priority over other buses. Eventually it would allow bus companies to flash timetable information to passengers waiting at bus stops... [The] chairman of the Auckland [BCA], said bus companies were excited about getting priority at traffic lights. Savings from speeding up travel time were likely to cover the cost of fitting the devices... The technology for the trial is based on the successful Brisbane system, and it has also proved a success elsewhere overseas.

...Little grey boxes attached to buses to signal traffic lights to turn green begin trials in Auckland this week. Four buses have been fitted with transponders... The... project is... a... joint [effort between the ARC], Whenuapai Bus Travel and [the] Yellow Bus Company... The "Bus First" trial will run for up to four weeks using the traffic lights at the Pt Chevalier Rd and Great North Rd intersection. The four buses will be marked "not in service" and will not pick up passengers.

...Buses and cycles may become kings of the road on two of Auckland's busiest arterial routes – Dominion Rd and Mt Eden Rd. The Auckland City Council... has invited public comment on short-term options for relieving congestion on the two isthmus roads... The bus priority option would give buses and cyclists exclusive use of [one of two city-bound lanes] during morning peak traffic hours and [one of two out-bound lanes] during the evening rush-hour. Buses would get a further jump on private cars with traffic lights giving them pre-emption at major intersections... But the Mt Eden Business Association... yesterday challenged the council's view that the bus lane would relieve congestion... [The] association's chairwoman... said the three minutes the council estimated bus travellers would save on a city trip was not enough to convince people to use public transport... Cars in peak-hour traffic carry an average 1.3 passengers and buses carry between 20 and 25 passengers. Traffic planners believe buses could carry 30[% more passengers (although there is seating to carry between 140 and 200% more!)]... Traders fear a loss of business and... are unhappy because 200 car parks would be lost during rush hours on Dominion Rd and up to 100 on Mt Eden Rd... Shop owners want more parks – not fewer.

...Buses will take control of two of Auckland's busiest roads when priority lanes are introduced in January... Along with the no parking, bus-only lanes heading north in the morning and south in the afternoon... [on] Dominion and Mt Eden Rds... the Yellow Bus Company has promised newer buses, improved stops and a more frequent service. The council has modified some of the original plans, agreeing to shorten the hours priority lanes are in operation... [They] will remain at the current [1 1/2 hours]... The scheme is initially on a trial basis, with six-monthly reviews planned. These will include pedestrian interviews and surveys of bus patronage. The... plan[s] will cost \$360,000 to set up, and \$21,000 a year.

...Buildings along Dominion Rd and Balmoral Rd face demolition if a new \$60 million road widening plan gets Auckland City Council approval. The plan, which would see more than 4m added... [along] only one side of... the key arterial roads... [that currently] have an average width of 20.1m from fence to fence... provoked an outcry last night, with one property-owner declaring it would fail... Balmoral Rd would... [have] rush-hour lanes exclusively for buses and vehicles with three or more people.

...Motorists' abuse of bus lanes has reached "epidemic" proportions, say bus operators. The president of the Auckland B[CA]... said bus lanes were jammed with cars that should not be there. And cheating motorists were paying only a small \$50 fine when the abuse was policed. "There is no use building these lanes unless they're enforced,"... [The] North Shore police area controller... said yesterday police had not patrolled the Onewa Rd bus lane for about five weeks because the officer in charge was on holiday. "We don't regard it as a priority at the moment because we've been so busy,"... Police usually watched it every day and fined about 10 motorists caught creeping across to the wrong lane. "If motorists see a clear lane, then I guess it's either ignorance that prompts them to use it or they're frustrated because there's so much traffic and they try to cheat,"... Birkenhead Transport... [i]s pushing for a law change to raise the fine as it was not a sufficient deterrent. In Adelaide, for example, motorists were slapped with a \$200 fine if caught in a bus lane.

...[The North Shore City Council wants its parking officers to take over enforcement of bus-only lanes from police to make sure the job is done properly. It is seeking Government permission to extend the parking officers' powers. Only the police can stop moving vehicles and issue offence notices. The council says it also needs Government support to pay the \$140,000 a year extra cost that a beefed-up parking operation would cost. North Shore is the only city seeking to extend its powers from dealing with only parked-vehicle offences. But staff of the ARC and Auckland and Waitakere Cities are also interested in stopping misuse of bus lanes. They joined North Shore in discussing enforcement of priority lanes for buses and carpools with the Ministry of Transport']...

People driving in bus lanes will soon be sent tickets just like those caught by speed cameras... Due to be presented to Parliament before the end of the year, the plan would allow local authorities, or whoever looks after a stretch of road, to send a ticket to the registered owner of a vehicle seen illegally using a bus lane. At present drivers have to be physically stopped and issued with a ticket at the time of the offence.

...Police are set to crack down on boozing on buses. They have warned bus charter companies they will be prosecuted if they allow alcohol to be drunk on their coaches... [T]he operators... could be fined up to \$10,000... The head of operational planning for the Auckland police... said the growing use of charter buses for sporting and entertaining events often resulted in patrons being refused entry because they were intoxicated on arrival. "The issue has become one of health and safety... Such behaviour is a hazard for drivers whose task it is to get passengers safely to and from the venue." ...But bus companies have warned that enforcing the law will put more drunk drivers on the roads... [and the BCA] executive director... said drinking on charter buses rated fairly low on the scale of criminal activity... "The police have got sufficient to do... protecting us from drunk drivers in private cars..." ...For groups such as sports teams travelling long distances, chartering a bus was the only sensible option... The manager of The Party Bus company in Auckland... believed the move was "just another way of gathering revenue for the Government." ...Bus companies could apply for temporary liquor licences at \$55 each if they want to continue carrying drinkers... [The Party Bus manager] said police groups were among the worst offenders. Participants in a police stag night last month smashed a bus window and tore out a seat during a five-hour drinking binge. "They were just terrible... but how do you tell 60 cops 'no booze?'" ...[By the way, t]wo elected Auckland bodies are in dispute over... bus-subsidy savings... A meeting is being set up to discuss the matters.

...Auckland ratepayers should get a \$20 million rates cut because of savings by the publicly owned Yellow Bus Company... [the] chief executive of the [ARST]... says... A Yellow Bus spokesman... explained yesterday that the company now received about \$20 million a year from the [ARC] for passenger service contracts, compared with about \$40 million in 1991. But the council transport manager... said the savings were less than claimed since subsidies for passenger service contracts were now provided separately from concessionary fares. In 1991, when the company was created out of the council buses division, they were all rolled up together. He added that the savings were ploughed back into expanding public transport services... Transport spending was forecast in the draft annual plan to decline from \$55.4 million this year to \$51 million next year.

...Many Auckland students may pay more for bus fares under plans to bulk fund school transport in the region... [as the ARC tries] to make school transport more market-driven... [The] council's transport committee wants to discourage pupils from taking long, expensive trips to schools of their choice... Ratepayers spend about \$4 million a year transporting Auckland children to school, at an average of \$2 a trip... "Expensive school trips will be maintained if parents are prepared to pay," a report... says... Subsidies range from 30c up to \$7, depending on how far pupils travel... Parents would have "a greater appreciation" of the true costs of school bus services if a flat subsidy was set... However, those on short trips at off-peak times might pay less. "It might be that some children could travel free, although I doubt that bus operators would do that."

...[following calls for buses to have seat-belts, the LTSA has confirmed that u]p to 12[% of NZ]'s 8000 buses are unsafe... More than a quarter... pose a high risk to passengers and drivers... A further 25[% a]re operating with minor defects... The authority's national co-ordinator of vehicle compliance... said figures gathered during the past 18 months, based on stopping buses and trucks on the roads and depot inspections, showed only 10[%] of buses had no defects... The figures include all types of buses... [About] 5000 buses were used by commercial operators. The other 3000 were courtesy buses, or used by rugby clubs, schools and as house buses... N[Z]'s figures were on a par with those of Britain, Europe and A[US].

...school buses that fail to meet Ministry of Education age limits could soon be used by any school that wants to save money, says the [BCA. Its] chief executive... said yesterday... any bus with a ministry contract could not be more than 26 years old, [but this] could easily be avoided by schools that organised their own transport... [because schools] have the option of "direct resourcing" their transport, with the ministry giving them the money... [and] owners of older buses had usually paid them off, so could charge less to schools. [He] said the association supported the maximum age limits, although replacing about 950 school buses would cost between \$50 million and \$100 million... The Minister of Education... said he would ask the ministry to investigate the issue.

...The Yellow Bus Company is indemnifying its drivers against civil lawsuit after brakes failed to respond correctly on two new Nissan Scorpion buses... [N]ylon air hoses serving the brakes and the mechanism that made the buses "kneel" at stops had overheated and prematurely failed. Warning buzzers alerted the drivers, and the two buses still had their emergency brakes... The problem... was being remedied... Mechanics[will] work... through the night to modify... 13... buses before the morning rush... "and they will be safe,"... The president of the Auckland Tramways Union... said drivers [had been] concerned that they [could] be held liable in the event of an accident caused by mechanical defect.

...The New Delhi Lieutenant-Governor... said... a "speed race" between two school buses... led to the crash that killed 30 schoolchildren... About 60 children were injured... The bus that crashed had been carrying about... 120 schoolchildren... [-] double the number of passengers legally permitted... Students[had] cursed the driver for driving too fast... [before t]he bus apparently skidded on rubble, crashed through the barrier of... the Wazirabad bridge... and dived 10m into the Yamuna river. The driver and conductor survived... [In local news, a] shortage of bus drivers in Auckland is forcing companies to recruit inexperienced drivers. New routes [are due to start next month but] Cityline and the Yellow Bus Company are still searching for... drivers... The Tramways Union is concerned that if bus drivers are inexperienced passengers will be at risk. It claims improved pay and conditions will solve the driver shortage. But both firms say their drivers are not allowed on to the road until they have passed their full bus licence and are safe... Cityline stresses in its job advertisement that new drivers do not need a bus licence as it will provide training... New drivers on learner licences were put through six to eight weeks' training before they were allowed on the road, he said... And the [LTSA] has no concern about their safety record... [However, the] president of the Tramways Union and a former bus driver, said it took about four months to train a bus driver to be safe behind the wheel. "Drivers are having to get to grips with... [negotiating] their way through pretty thick traffic... [in a large] vehicle which is carrying up to 60 people at a time..."

...A Yellow Bus Company bid to cut staff pay packets... has had its effect on the balance sheet... [A]n Appeal Court ruling on staff compensation payments over its 1992 employment contract w[il]l... cost the company about \$4.69 million. The case involved five workers getting compensation for the company's "harsh and oppressive" actions during a pay dispute. The deal was later extended to other staff... [A] report notes that the last employment contract was settled without disruption – "a tribute to the progress made in relations between the company and its employees." ...The size of the liability meant the company made no final dividend. However... its... balance sheet is strong, with shareholder equity up \$1.63 million to \$58.65 million.

...From Wellington, the Minister of Transport has directed that Aucklanders must sell the Yellow Bus Co... [- NZ]'s largest public transport company... [-] by November 30 next year... Commercial and democratic logic argues that any decision for sale should be driven from Auckland by the company's owners and managers. But this sale is motivated by politics, not economics, and driven by an ideological belief that public bodies should not hold assets that the private sector wants to invest in. The bus company is a commercial success... perform[ing] as well as or better than other large bus companies in private ownership... This sale is disruptive when the company is trying to improve patronage and decrease congestion.

...The public will have no direct say over the privatisation of the Yellow Bus Company. Nor is it likely to be an election issue at the October 1998 civic polls, says[the] chairman of the Auckland Regional Services Trust... [H]e favoured a complete sale but if the divestment unit recommended selling, for instance, only 75[%] of the shares, "I would support that." This would be in recognition of what he perceived as the public mood on asset sales... The use of sale proceeds has not been settled as the trust's future is being reviewed by the Government... [An] Alliance MP... who as a broadcaster in 1992 led the successful opposition to the sale of the 80[%] stake in Ports of Auckland now held by the [ARST], said the bus company should stay in local body ownership. It belonged to the region, she said, and its dividends... should continue to benefit the region. "It's anti-democratic to hock it off and it's ridiculous."

...[Scene: The [ARST]'s boardroom early this week. The members are all well-dressed, unsoiled by the rain or muggy heat, fresh and smiling having arrived in their late-model cars, now in privileged parks in the basement of the building.] *Chairman:* [The Minister of Transport] has demanded we privatise the Yellow Bus Company. So I move. Do I have a seconder? (Several Citizens and Ratepayers, lackeys to contemporary ideology, shout "Yes" to get their names in the minutes.) *Independent member (IM):* Having been to Bangkok recently, I think we should be very careful about allowing public transport to leave the control of the people. *C and R Person (CRP):* People? People? What the hell do they know about it? That smacks of democracy, man. Don't be an anachronism in today's climate; the market will sort this out, as a policy consultant explained recently at length... *IM:* I'm sure we can find another consultant to say the opposite. And what about the curtailment of free use of private cars in Paris recently because of smog? We don't want that to happen, do we? *CRP:* This isn't Paris, in case you haven't noticed. Privatisation has worked well in Wellington. *IM:* And this isn't Wellington in case you haven't noticed. What about the traffic jams we have now? And we don't personally use buses. Don't you think we should consult ordinary people who do? I'm sure they would oppose the sale. *CRP:* Of course they would; that's the point. They don't know what's best for themselves. *IM:* But wouldn't it be democratic to consult? *CRP:* Democracy's all right in its place. But you can have too much of it as [the PM] warned recently when he said politicians shouldn't be swayed by public opinion against taking hard decisions. *Another CRP:* You mustn't over-estimate the intelligence of the average slob... er, person. Their asininity is extraordinary. I use the word asininity advisedly because so few people can say it with precision. I can because I was a television news reader for years. Did the average person listen to my dulcet tones? Yes. But did they understand what was going on? Of course not. They loved my voice but they're stupid; wouldn't know a vowel from a sibilant. *Yet Another CRP:* What's a sibilant? *Chairman:* One's brother or sister. But let's not digress, let's take our lead from the coalition Government whose motto is, "You can't fool all of the people all of the time but it's worth a try in the short term." The Minister of Health, for example, has decided to have public representation on the CHEs. Will there be elections? Of course not. Appointments. As he pointed out, they want people with special skills, by which he means accountants, old National Party hacks, real estate salespeople or car dealers. Democracy's all very well but it's slow and sloppy. If we are going to compete in the global economy with regimes that are corrupt but efficient and where citizens are poor but pliant then that's what we need here. All those in favour... Good.

...The [ARC] supports the Government directive to privatise the region's publicly owned Yellow Bus Company and does not want Aucklanders to have a say in the sale. At its monthly meeting yesterday, the council voted eight to four against public consultation on the sale.

...Privatisation of the... Yellow Bus Company won the support of the Auckland City Council last night. Councillors voted 13 to 9 against a motion... to oppose the sale.

...A deal has been struck over the Yellow Bus fleet that could lead to the public being offered shares... The options now involve a sharemarket float alongside a tender process to get the best price and separate property sales, such as the Gaunt St bus depot... But a float would be an expensive method of sale due to expenses such as having to produce a prospectus... There is also some concern about the potential for losing the premium that buyers would be prepared to pay for control of the company through a complete sale by tender.

...The Auckland Yellow Bus Company is likely to end up in overseas hands... Scottish-based Stagecoach, which runs 90 Cityline buses in Auckland and buses in Wellington, has confirmed it wants to buy the Yellow Bus fleet, which runs two-thirds of bus routes in Auckland city. Another British company showing interest is First Bus... The[ARST] chairman... said... he knew of no potential N[Z] buyers able to pay the \$70 million to \$100 million the company was worth... [The Yellow Bus Company] has a book value of \$61 million and assets, including 500 buses, valued at \$70 million... The Tramways Union said it would fight privatisation of the company. The union's Auckland president... said Aucklanders owned the bus fleet and it should not end up in foreign hands... The convenor of the Campaign for Public Transport... said Auckland would be ripped off by a sale... Fares would inevitably rise if the company was sold off... "To sell the Yellow Bus Company would be a mistake because the value of the business will increase markedly once bus priority measures, bus lanes and busways are implemented in the next few years." ...[The Minister of Transport] was obviously intent on making life as difficult for Auckland as possible... an Auckland MP and the public transport spokesman for Labour... said, as privatising the bus company would add to the region's transport woes... A new lobby group, Bus Stop, [was] launched... yesterday to oppose the impending sale... But the Citizens and Ratepayers' chairman of the [ARC]... yesterday said privatisation was long overdue. "The company has been functioning as a commercial entity for a number of years so the move to privatise is nothing significant in terms of its operation. It makes sense to unlock the value of the asset and return it to the public," he said. "The proceeds of the sale should be used to help alleviate our transport problems." ...The company was making an annual profit of \$6 million to \$10 million.

...A few of Wellington's traditional red buses can still be spotted on city streets. It's not just their colour that stands out, but the grating roar as they arrive and the puff of black diesel smoke that follows. They were as synonymous with public transport in the capital as Auckland's yellow fleet, but these days the "big reds" are an endangered species... Stagecoach entered the fray here in 1992 when a cash-strapped Wellington City Council sold its bus fleet... Stagecoach has since taken over... 75[%] of the capital's urban services... From a consumer viewpoint in Wellington, even transport lobby groups agree that passengers are getting an improved service... [Routes have been] extended... fares... have not increased since May 1990, and in some cases Stagecoach has reduced prices... [Most] agree that the company's financial muscle and international experience has brought a modernisation of the capital's ageing fleet beyond the resources of a council operation. The managing director of Stagecoach N[Z]... said the company had spent \$25 million on 110 new lower-emission diesel buses for Wellington, out of its total capital fleet of 200... The capital's two transport lobby groups... both agree that Stagecoach has done a relatively good job, particularly with innovative fare deals... But both also say much of the credit for expanding routes and keeping a lid on fares lies with the regional council. The real threat to the service, they say, is the year-to-year insecurity over the council's transport funding from the Government. The Tramways Union in Wellington... says[the] improvements would have occurred anyway with a council-run operation. The Wellington union secretary... said he could see no reason why a commercialised, council-owned company would not have brought in similar fleet modernisation and returned profits to ratepayers. He said the union had also been in a constant battle with Stagecoach to regain the wages and conditions cut in 1991, and said its management style was aggressive and fixed on short-term profits. [Stagecoach] rejects those claims, saying... about 12,000 of the company's 20,000 staff... [in] Britain... had shares in the business.

...A British stockmarket darling plans to overrun Auckland bus routes. Its foot-down style has produced run-ins with regulators but the man at the wheel isn't stopping... N[Z] is where he] now goes shopping for those bolt-on acquisitions which have built the... company into one of the most highly-rated in Britain... Floated in 1993, with a market value of just £134 million... Stagecoach is now capitalised at a jaw-dropping £1.64 billion... Turnover last year grew 48[%] to £501.2 million. Stripping out acquisitions, it grew 22[%] and operating profit from continuing operations grew 42[%] to £56.4 million... What started off as a two-man band with three buses is now a business with a total British fleet of 7147 buses... and operations that span Malawi, Kenya, Sweden as well as N[Z]... Much of the growth has come from aggressive expansion, as Stagecoach snapped up pieces of Britain's National Bus Company[when it was] broken up... The company's appetite for gobbling-up smaller rivals did not go unnoticed by British competition authorities... The company has been the subject of some 20 Office of Fair Trade investigations. One Monopolies and Mergers Commission report two summers ago, criticised Stagecoach for anti-competitive behaviour in the British towns of Darlington and South Shields. Its activities... were described as "predatory, deplorable and against the public interest." Stagecoach rejected the MMC's conclusions, pointing out that bus passenger numbers had risen in South Shields and that market research indicated it was the "best-rated" operator in Darlington. "They ignored empirical evidence... supplied by us and relied instead on anecdotal evidence supplied from small operators,"... [the company's chairman] said in 1995. The MMC responded that it had no "vendetta against Stagecoach. Every case is judged on its own merits." ...[Stagecoach's chairman] will surely go down in British corporate history as the most unlikely looking of the captains of industry. The 42-year-old evangelical Christian, who neither drinks nor smokes and worked on buses to help pay his way through Strathclyde University, has a 15[%] stake in Stagecoach... His fashion statement is a pair of red kicker shoes... and he usually carries his belongings with him in a plastic bag... And for all his thick-skin at the various brickbats he has received from the competition authorities, he is very sensitive to any criticism that his networks are providing a less than impeccable service. Reflecting on... a spate of... cancellations earlier this year, [the chairman] said recently: "We have always been associated with a good product. But the last few weeks have been like swallowing poison. You are only as good as your last trick and our last trick was not very clever." ...As for Stagecoach's debt pile, forecast to rise to over £700 million for 1997, one analyst reckons the cash-flow from buses is so strong that the company could pay it off in just three years if it stopped investing in new buses.

...The Yellow Bus Company is putting new white buses on inner-city streets which will take people from one side of the central city to the other for just \$1. The Link service, which starts on Monday, will run in a loop through the central city, Ponsonby, Newmarket and Parnell. Buses will run in both directions around the loop every 10 minutes during the day and every 30 minutes in evenings and weekends... The marketing manager... said an across and around town service had long been debated for Auckland. The... company planned to extend the service in three months to link up with North Shore ferries... "Our objective in all this is simply to avoid the procrastination of previous times and get on with building a modern, reliable... system that actually meets the changing and growing needs of public transport users around the Auckland region."

...Where have all the Yellow Buses gone? ...There are buses masquerading as mobile phones... [or] a chocolate drink carton... Appearances to the contrary, there are just 15 bus billboards on Auckland routes... The impression that the dressed up buses are all over town suggests that the mobile advertising approach has impact... For advertisers, the appeal lies in getting a message to loads of consumers in a relatively brief time. Buses... can spend the morning in the eastern suburbs and head over the Harbour Bridge for the afternoon... Allovers, as the decorated buses are known, rent for about \$1500 a month... The look costs up to \$30,000 and is achieved by stretching a special film over the bodywork... For some jobs, the actual yellow paintwork is stripped back and the advertisers' colours applied... The company, however... draws the line at liquor and tobacco products[, and]... is quick to point out that while it may be for sale it has no intention of turning over its distinctive chariots to the ad agencies... [One] bright idea... that got a Wellington bus firm in trouble... involved the rear end of a bus dressed up to resemble the front, complete with a "driver" behind the wheel. The coming and going bus confused other motorists and has been withdrawn.

...Stagecoach Holdings has applied for clearance from the Commerce Commission to buy[the] Yellow Bus Company... [S]ubmissions need to be in by January five with a sale expected sometime in February... [Meanwhile, Auckland's] bus operators have negotiated the right to raise their fares

for subsidised services by up to 10[%]. Accountants who]... checked costs of the Yellow Bus Company, Birkenhead Transport, Howick and Eastern Buses, Whenuapai Bus Travel and Cityline Auckland... concluded that costs had risen by 10.65[%] since July 1991, mainly because of wages, new bus costs and inflation... Each of the five operators will now decide how much of the increase, rounded to 10c increments, will apply in their areas. About 70[%] of passengers travel on unsubsidised services. Their fares may be increased without regional council approval. Operators are likely to put up fares for both subsidised and non-subsidised services at the same time to avoid confusing passengers... The new Link services... would stay the same price... [However, the] service... has been so popular... up 206[%] on predictions... it has made some bus routes unprofitable.

...[Auckland bus tickets aren't normally transferable – which means that a passenger who travels 3 stages on one bus currently pays \$2.70, but pays \$3 if it travels one stage (or within a stage) on three separate buses. However, passengers can purchase an 'all-day pass that, for a cost of \$9 (\$4.50 for children), gives the holder unlimited travel on any Yellow Bus after 9am until the last buses' – which leave the central city prior to midnight – or a 'family day pass that costs \$14 and can be used by 2 adults and 4 children, or 1 adult and 5 children.' Commuters can also purchase an 'all-zones monthly pass for \$99 that includes ferries.' Incidentally, the proposed fare increases, rounded to 10c increments, mean stage 1 and 2 fares will rise by exactly 10% to \$1.10 and \$2.20 respectively, while stages 3 to 8 increase by 11 to 12% (taking them to \$3, \$3.80, \$4.50, \$5.10, \$6.10 and \$7.20 respectively), and the central-city fare of 40c becomes 50c – a 25% increase!

...the 10%] price rise... will lead to delays for customers, a transport lobbyist said yesterday... "It will be irritating dealing with shrapnel and it holds up drivers," he said.

...[a commuter from] Mt Wellington didn't think twice about paying for her bus fare to Newmarket with... [a] dented... \$2 coin yesterday morning. But she was stunned when the Yellow Bus Company driver wouldn't take it... She said the driver told her the money-counting machine at the depot would reject it. [The commuter] thought it was legal tender, and a bank has since confirmed it, but she said the driver wouldn't budge and she had to go home to get more money... making her late for work... "It was very, very bizarre and I was taken aback by the whole situation." She alleged the driver also refused to give his name and bus number, which [the] Yellow Bus Company marketing executive... said was very unusual. [However, he] had spoken to the driver, who said [the woman had beco]me abusive and got off the bus before he could accept it. The company is investigating the incident before deciding whether an apology is necessary.

...Police were speaking to three people last night after a Yellow Bus Company driver was punched in the face and his cashbox stolen in St Heliers.

...[after 'a Wellington bus driver phoned his base one Saturday night in order to inform his supervisor that he'd just been robbed and beaten for a few dollars, he was told that his pay would be docked' – to cover the missing money – 'and he would have to make his own way home because the company wasn't going to pay for him to catch a taxi'! In related news, the] popular Link bus service is increasing its night and weekend frequencies. The white bus fleet... will now operate every 20 minutes... Two-thirds of... [the] one million passengers... [the] service... has carried... [since it] was introduced... have used the bus instead of their cars.

...Aucklanders are increasingly likely to leave their car at home, according to an A[RC] passenger transport survey. The study shows... buses... experienced a 36[%] rise in patronage... during the... last year... The survey also showed that the public transport operators were offering more trips. The arrival of the LINK bus service brought a 9.7[%] rise in the number of buses travelling around the central city.

...[The last link in a grand master plan for Auckland has been decided. For the past six months, transport planners and local politicians have been working on a plan to secure commuter transport corridors across the region. The corridors would provide the platform for heavy trains, light rail or buses to travel at high speed and often enough to get commuters out of cars and on to public transport. Engineers, planners and politicians all say not enough commuters will use public transport if they have to share the roadway with other traffic.]

...The Minister of Commerce... a Waikato farmer, has a solution to Auckland's traffic nightmare – sell the port company, airport, and shares in the Yellow Bus company and Mercury Energy. "Then Aucklanders might get real transport infrastructure improvement." ...he wondered if Aucklanders were happy being banked up in heavy traffic in order to experience the "warm fuzzies" of owning a bus company or a big building. He was pleased that the Minister of Transport... had ordered the privatisation of Auckland's bus company and that "finally the Auckland ratepayers are not going to continue to be asked to invest in, and take the risks of owning, yellow buses... By selling assets Auckland could then invest more in its internal transport system and also gain the other benefits from reducing their public ownership interest." The National minister was giving a "personal" view that the size and role of government in N[Z] was still too big and should shrink... to about 20[% of GDP]... Local and central government should only perform absolutely necessary core functions... "We need less government... and more private enterprise," he said.

...Auckland can readily achieve the public transport system it demands and deserves... It requires only the involvement of transport operators... in the network and services arena... Under today's regime operators... with their first-hand experience... have little say or direct input into the structure of public transport... Public transport was deregulated in 1991... [but] I cannot think of one other industry where a business has so little control over the products it offers for sale and which is so constrained by regulation from developing the products and services that it knows its customers want... Auckland needs a customer-driven public transport plan... that puts public transport where customers want it and will use it.

...[a] recent article asked "Why isn't Auckland's public transport doing the job?" It would be tempting to turn that question... on to the public transport operators. After all, the competitive environment in which they operate gives them considerable scope to decide their own direction. However, I believe we need to look at how the [ARC's] public transport planning and the commercial imperatives of bus, train and ferry operators can be coordinated to improve the system. Under legislation introduced in 1989 regional councils are responsible for strategic planning of their transport systems through the preparation of regional land transport strategies. In Auckland our strategy emphasises the movement of goods and people rather than vehicles. The regional council no longer owns or operates buses. Our role is now to let contracts to bus, train and ferry operators when public funding of services is needed. We must ensure that the public receive value for their funds. To date this has mainly been achieved through the specification and tendering of services. Increasingly, however, the council has recognised the need to move towards funding which gives incentives for operators to act in ways which meet our strategic objectives. These are efficient transport and combating traffic congestion. Passenger transport clearly has an important role. In some respects, however, legislative requirements for a competitive passenger transport market have not helped us to achieve some of these objectives. Until recently, the focus of the key players has tended to be on market share rather than market size... We need to recognise, however, that as long as the price signals for motorists are inadequate there will be a need for some public funding to ensure adequate public transport is provided. So far we have done this by letting contracts for services we ourselves have planned... We... need to separate the "social" and "commercial" elements of fares. Hence our moves in recent years to introduce concessionary fare schemes which reimburse operators for concessions offered to groups such as the elderly and schoolchildren... The council has also... [been] recognising that if buses travel faster... [by giving] buses priority lanes... more people will use them... Faster buses also mean that operators can run more services with the same number of buses... Can we go further? Undoubtedly yes. But we must remember that the objectives of the regional council do not always coincide with those of public transport operators who are concentrating on running successful business ventures[, and]... we must remember that the major competition for public transport is the private car, not operators.

...the present... Auckland... motorway system was designed by American engineers... in the early 1960s. Their report advocated a two-pronged approach, a motorway network and a substantial rail upgrade, including a subway running from the existing railway station to the Civic Centre[, situated near the middle of Queen St]. Auckland's development over the next 30 years was primarily influenced by the decision to pursue the motorway and ignore rail, a factor [the ARC's environment manager] says created urban sprawl and Auckland's transport crisis. It is also a factor,

he says, responsible for the fact that in the 1960s there were 76 million public transport trips in Auckland a year servicing a population of 500,000. The figure now is just 35 million trips a year[servicing twice as many people]... - 1997

Major legislative and financial difficulties stand in the way of Auckland getting to grips with its increasing traffic chaos, says Auckland City Council's manager of transport planning... Auckland has "no direct ability to ensure that the required public transport improvements will indeed occur,"... The decisions about where money is spent are made nationally through the... Transfund arm of the Government. This body should implement bulk funding, says [the planning manager], so regions can make their own decisions. The [ARC] does not even have the legal power to designate and own land for public transport projects. The lack of legislative teeth has prevented the regional council from putting[projects] in place... Some of the problems and the conflicts inherent in the existing legislation are illustrated by the difficulties in implementing the... isthmus passenger transport strategy, initiated by the Auckland and Waitakere City Councils, the regional council and Transit N[Z]. This aims to design a public transport system which better meets the needs of existing and potential public transport users. It involves better cross-city routes, a simplified route system, higher frequencies in some areas and more use of the rail system. Buses are to feed rail at appropriate centres in Waitakere and the eastern suburbs. Yet, says [the planning manager], bus operators have shown little enthusiasm for the feeder system and have yet to accept an integrated ticketing system. The regional council feels it has little choice but to accept the status quo. [He] says that local authorities seem to be left in the position of being unable to ensure that the public transport system will support strategic land use policies, particularly in introducing higher density residential and mixed-use development around selected railway stations. "It bodes ill for future major investment in passenger rail, requiring an integrated, complementary public transport system to be fully effective." In the shorter term the lack of legislative teeth may result in a more conservative approach to decision making. In the longer term, he says, there is a risk that continuing delays in public transport improvements will force an emphasis back on roads and cars.

...When we climb into a car... it is because we want to go shopping, go to work, travel the world, or whatever. Surely then, we should first find out what people want to do, then design transport systems which help them do it... The private motorcar is truly "private" because we own it and we don't have to share it; it is a mobile extension of our own home. The private motorcar has allowed us to organise our trips to suit ourselves... [while o]ur "New World" cities, built since the advent of the motorcar, have been shaped to suit our individual, and ever-changing, needs. While the average citizen has taken to this idea like a duck to water, this freedom of the motor age has long offended those who want to control the way we live... Lenin once said that "It is true that liberty is precious – so precious that it must be rationed." Most central planners feel the same way about motorcars... The problem is that transport networks require substantial investment in public facilities. We may drive our own car, aircraft or boat, but we have to share the roads, landing strips and wharves. These facilities cost large sums of money and so they are usually built and maintained by public bodies. The result is that major transport investments are driven by political interests and pressure groups rather than by public need... Up until the 1950s, Auckland City was the centre of the Auckland region. Aucklanders shopped... worked... drank... and courted there. The trams were the main form of transport and delivered Aucklanders where they wanted to go – which was downtown, where Queen St ruled. But the winds of change were blowing. The rapid rise in private car ownership which followed the war led to... [a] wave of decentralisation. The first suburban malls were built and it was clear that the harbour bridge was about to spawn a host of new "suburban cities" in the North. So the Auckland City Council decided to design a transport system to deal with Auckland's needs until 1986. They commissioned... [a report], which proposed a motorway network with on-off ramps around the ridges of Ponsonby, Karangahape Rd and Newmarket. Its "spaghetti junction" was located over a large piece of open land just behind Grafton. The proposal horrified the city councillors of the day. Even this meagre decentralisation was intolerable. The other mistake was that the large "open space" on the planning maps turned out to be the grounds of the Auckland Grammar School. The young engineer was sent back to San Francisco and a more senior partner arrived to soothe the ruffled feathers. He quickly designed a new [system] which ensured that all motorways led to Queen St. This scheme was much smaller in every way and many asked how it could cope with the projected flows? The shrewd engineer replied: "Build a rapid transit system as well." Auckland's love affair with trains began. Every politician and pressure group in Auckland City demanded that the rapid-rail be built – always at someone else's expense. None of the city's own traffic planners or transport engineers would have a bar of it and were banned from saying so. But surely [the] vision of "rapid rail" has been proven right – spaghetti junction really is seriously congested. But the[spaghetti junction] system was designed (and badly designed at that) to cope only until 1986. Here we are in 1996 and we have not built the Dominion Rd motorway, the South-eastern Motorway to St Heliers or the Grafton junction bypass. Most importantly, we have not built the outer ring motorway to connect Massey-Henderson with Penrose-Otahuhu using the railway land which is sitting there waiting. Given that 50[%] of the traffic on spaghetti junction has no interest in Auckland City but is heading for points north and south, this ring would dramatically reduce congestion on both the junction and the Auckland Harbour Bridge. We have built the upper harbour crossing at Greenhithe to connect to it – and it sits there near empty and waiting to be used. How come the system still works at all? It works as well as it does only because Auckland decentralised anyway, and no one could have stopped it. Here we are in the 1990s. Once again, Auckland City is facing a second wave of decentralisation of work and lifestyle. Once again Auckland's mayor and councillors are determined to stop it... If light rail comes up as their answer it can mean only that they are asking the wrong questions – questions set by the agenda of Auckland City rather than by the region as a whole. The Britomart proposal is no more than a desperate move to lock us into the central business district's agenda before wiser heads prevail... Britomart and light rail are to the 1990s what spaghetti junction and rapid rail were to the 60s.

...International interest is sought for the building of an enhanced Auckland public passenger rail system – despite the funding not being in place. The[ARC] transport committee yesterday approved an \$877,250 budget to cover the cost of seeking interested parties that are prepared to build, own and operate the... system... Both the council and the Auckland Regional Land Transport Committee favour a light rail transit system, but interested parties will not be limited to that... [The] council was looking for a system which embraced [Auckland's existing heavy]southern and western railway lines with links to Queen St. In May, a steering committee identified three options... [-] light rail, heavy rail (diesel multiple units) and a mix of light and heavy rail. Depending on the option chosen, the cost was expected to be from \$170 million... with the light rail option costing an estimated \$386 million. The programme was heavily dependent on the early resolution of the funding issue and getting access to the Tranz Rail-leased railway system. The company has already said it would not be happy if light rail were adopted... [Previous] ambitious plans to upgrade Auckland rail services have always failed because the Government refused to share the cost... Auckland transport planners say the Government's method of allocating transport funding, based on comparing the costs and benefits of particular projects, has an inbuilt bias towards building more roads... The Regional Land Transport Committee[also] favours having light rail in the eastern corridor. It would use the existing rail tracks...

A light rail transit system for Auckland would be "extravagantly expensive" and hurt Auckland ratepayers in the pocket, according to the [BCA]... The \$385.95 million system would cost each Auckland household \$1080 to build and an additional \$48.75 a year to operate, the association says in a submission to the Auckland Regional Land Transport Committee. The committee meets today to consider submissions on light rail options. The... association... said that light rail would cost either the Auckland ratepayer or the N[Z] taxpayer \$9.21 a journey... Buses carry 9.8 million unsubsidised passengers a year and a further 21.35 million at a subsidy of \$1.15 per trip... [but] the light rail proposal required subsidy-free bus services to be prohibited along rail corridors. Passengers are also expected to transfer from buses to rail, something which is "doomed" to fail, the association says. Experience has shown that people do not like this and will opt instead for the convenience and comfort of the car. To make the

system work, rail patronage must be increased by almost 400[%] to 6.66 million passengers by the year 2001, 45[%] of which would come from subsidy-free bus patronage... Compared with light rail, it says, the region's bus operation is cost-effective, efficient, flexible and low risk... Meanwhile, a private consortium which has proposed a \$230 million light rail system for Auckland called Superlink says that what is needed from the council is leadership and prompt implementation... The network it envisages will, it says, be able to compete effectively with buses as long as the regional council does nothing to improve bus services along main-haul routes...

Both Tranz Rail and the Road Transport Association have been lobbying hard ahead of the August 31 deadline for submissions to the Ministry of Transport's land transport pricing study... "It seems to us that the influence... of Tranz Rail is becoming insidious within the transport industry,"... the chairman of [a major] trucking company... said. He declined a subsequent opportunity to expand on that view. However, the managing director of Tranz Rail... denied the railway company was acting behind the scenes to influence road-user charges. Tranz Rail was completely open about where it believed N[Z]ers' long-term interests lay, he said... Tranz Rail... believed... [there] was no logical reason why motorists and ratepayers should subsidise one sector of the transport industry... [A] report on this issue released by the Institute of Economic Research last December showed that trucks were being cross-subsidised by ratepayers and motorists. According to that report... road-user charges paid by trucks should double to produce a level playing field. The chief executive of the Road Transport Association... said that Tranz Rail's greed was almost unbelievable. Tranz Rail was the single largest recipient of taxpayer subsidies in N[Z]'s history. Taxpayers poured between \$10 billion to \$20 billion into building the railway system, which the new owners bought for \$328 million... [A trucking company] chief executive... said that Tranz Rail had a monopoly position in rail and paid \$1 a year in rental for the land on which the tracks run... Truck industry figures suggested that increases in road user charges could be worth up to \$50 million a year in extra profit for Tranz Rail and its shareholders, many of whom were based overseas. And any increase in road user charges would have to be passed on to customers... [because] the trucking industry was very competitive.

... "We have another five years before gridlock starts to turn off investors and Auckland becomes uncompetitive with other cities on the Pacific rim," writes... [the] chief executive of the Auckland Regional Chamber of Commerce and Industry... Auckland is now a mid-sized international city... and a cost-effective commercial "hub" of the South Pacific. But growth pains are emerging... Business is facing increased costs of moving goods, services and people as a result of traffic delays, extra travelling time, missed appointments and late deliveries... It is imperative that we invest properly in the infrastructure required to maintain Auckland's... business efficiency, and attractiveness as a place to live, well into the next century... Action to establish light rail cannot come fast enough... Ensuring that we have an efficient, effective light rail system capable of taking the overflow on our roads has become a test of our collective resolve and leadership to do what we know in our hearts is inevitable... Light rail must be introduced under a purposeful and far-reaching strategy and not be a last-minute panic response to the growing congestion... While not wanting to overstate the sense of urgency, I believe that Auckland must learn from... [overseas examples of] transport chaos... and do everything practical to avoid a repetition, even on a reduced scale, when the city hosts the America's Cup defence, spin-off events from... the... Olympics... [in] Sydney 2000, Apec and other major global events... But the real urgency is not for these one-off events, it is for routine use over the next half century. If we don't act now, future generations will wonder at our selfishness and lack of leadership... As with large cities overseas, successful light rail will need to be integrated with all other transport modes, including... harbour ferry services and bus and private vehicle usage...

Businesses in the Britomart precinct have joined forces to fight their eviction to make way for the... underground transport centre. Most tenants are on notice to leave by November if their landlord... decides to go ahead with the... biggest commercial development in N[Z]'s history.

...Auckland is about to buy a... one-way ticket to Britomart. The decision to climb aboard belongs to the 24 Auckland City councillors and the mayor, who are only weeks off making the vote on... the... development [project for]... an estimated \$1.5 billion of hotels, office towers, apartments and [a] shopping centre. The council's motivation is an underground transport centre which will put rail, bus and ferry services close together, right at the foot of Queen St. With greater Auckland growing fast... it is surprising it has not been done before now. The Auckland City Council has been working on it for close to a decade, producing a \$17 million plan in 1993 which, after a re-think in the city's property department, re-emerged as the current plan. [The original plan] was a "no risk, no cost to ratepayers" transport terminal... Is [the new plan] a good idea? The controversy has simmered for two years. The believers say Auckland is about to be... persuaded into a new era of public transport. The non-believers say Auckland is about to be stuck with a well-intentioned but ineffective Think Big monument on its waterfront. The most cynical picture private companies laughing their way to the bank. And after two years, the nitty-gritty of the deal is to be made public on November 1. Britomart's supporters would not contribute to this article before then, and the council is locked into an agreement that any information releases must be scrutinised by parties in the property deal. This cloud of confidentiality has been the theme of the criticism that has dogged the project since its conception. In recent weeks groups such as... the Building Owners and Managers Association (BOMA) and the Auckland Regional Chamber of Commerce have repeated their concerns about the project. Can the council prove that Britomart is a good deal? ...three questions determine whether [it is]... They are: how it helps public transport; whether it is financially sound; and, environmentally, should there be such intensive development... The environmental questions are as curly as the financial ones. Britomart is [going to be] a highly intensive use of the area – five levels below ground, 11 building sites above ground. The buildings have to be big enough to be profitable enough to help pay for the terminal (beyond the council's contribution). The hole below has to be so deep so there is parking for the buildings above... The council has not said how high the towers will be, perhaps still smarting from the backlash from an early artist's impression of the development which showed a glass tower, Buck Rogers' backdrop style of skyline – an image rejected but not replaced by the council... The... Chamber of Commerce chief executive... has [asked]... whether Britomart will clog the CBD more than the public transport terminal will help... Could the... [money] be better spent elsewhere in the city? Who will carry the financial risk? What is the value of the assets? ...The council plans to sell its Britomart properties for \$57 million and buy back the terminal, public spaces and underground shopping centre for \$100 million. With other projects such as drainage improvements, [protecting] heritage buildings and turning Quay St into a tunnel, the council's net investment is \$104 million... BOMA estimates the value of the land is about \$100 million, a claim supported by the city's former property chairman... Assessing Britomart's value-for-money is extremely murky territory because most financial and contractual arrangements are still... known [only] by a selected few... On the information available, [the BOMA and Chamber of Commerce] are unwilling to take the leap of faith and trust what the Britomart believers tell them. In BOMA's case, taking a punt at what the project could cost ratepayers brought threats of legal action... The power brokers who have driven the deal are the council's harbour edge committee chairman... the city's former property manager and now Britomart consultant... and the proposed developer/financier of the project, NatWest Markets A[US] Ltd. City councillors will be briefed before they vote on November 4. They have been kept in the dark so far because of the commercially sensitive negotiations... Some councillors feel extremely uneasy about the lack of information. They learned what the council would spend from reading this newspaper. A poll of councillors this week shows most want to take a good look in the mouth of what was supposed to be a gift horse. But Auckland City councillors are known for voting in the safety of homogeneous agreement, usually following a cabal of senior Citizens and Ratepayers councillors. Following the usual voting pattern, combined with an overwhelming feeling that something needs to be done about public transport, Auckland City ratepayers can expect the development to go ahead, taking the equivalent of half the rates paid this year... Whether Britomart is a good deal depends on whether Aucklanders will get out of their cars. Sceptics say the boost to numbers on buses [and] trains will be from blotto to bugger-all. But Britomart is a vision, one compared with the building of the harbour bridge. Its champions admit it cannot solve the region's transport problems alone, but will at least provide some basic infrastructure. The simple theory is that the transport

centre is a building-block towards a future public transport system which will help untangle the roads and motorways. It would allow people to move across the region, transferring from rail, bus and ferry with relative ease. Provision has been made so light rail could be added later... The... [BCA's] president... says Britomart is not a good deal for buses city-wide... [Buses] en route to the North Shore, Whenuapai... Remuera... [and many other areas] do not leave from Britomart. "It's a concern that so much emphasis is being put on one terminal..." he says... Other BCA concerns are that buses will not be given priority over cars entering and leaving the four levels of [underground] car-parking, and that tourist and coach services which now take passengers on Queen St have been ignored. Something desperately needs to be done about the "grotty" [bus] terminal at Britomart now, says [the president], but that alone does not justify the amount of money being spent. The [ARC]... thinks Britomart is a good idea. The ARC is not paying for it... Bringing rail into the city will boost patronage – a previous study estimates there will be 2.8 million trips done on rail each year instead of 2 million if the [central] station stays where it is [– about a km from Queen St]. Britomart is the best available site for a terminal... given that the ideal [mid-city] site on the corner of Victoria and Queen Sts is an impossibility – though a second city terminal will probably be needed.

...The "Auckland disease" is a condition well known to students of this city's development. It refers to the chronic inability of public authorities to reach decisions about major projects of civic improvement and bring them to fruition... The disease has ravaged no enterprise more than the provision of a modern rapid transit system. Until the 1950s an excellent street electric tramway network served most of the isthmus, but not a thriving and expanding hinterland. The first serious investigation of that problem, in 1925, recommended that the suburban rail lines be electrified and run in a central city tunnel. Political and financial difficulties stymied action, as they did when the issue was regularly revisited, though the original conclusion was inevitably endorsed. Ironically, a "master transport plan" of 1955, the genesis of Auckland's motorway network did proceed, rather rapidly. Since 1980 there has been a remarkable resurgence of the once-despised tramway in the form of light rail transit. With steel-wheeled vehicles powered from overhead wires and running on steel rails, it may be loosely described as "the tram modernised." ...In 1989 the [ARC]... adopted a policy of constructing light rail along the southern and western rail corridors. In 1992 expressions of interest were sought from possible developers, which then included N[Z] Rail, but legislative and financial barriers intervened. Instead, a 10-year contract was concluded with N[Z] Rail for running the three suburban rail services using Rex-Perth diesel multiple units.

...[People are remembered for some offbeat reasons. Example: Italy's unmourned dictator Benito Mussolini. He intended history to mark him as a modern Caesar. Instead, he is more often labelled as a posturing clown. But, and it's a big *but*, he did get the notorious Italian trains to run on time. We need a Mussolini. We've got a terrible train service – old rolling stock, late leaving and arriving, even not arriving at all because they've broken down. Lack of detailed planning has produced the worst possible image. Not that this is anything new for the veteran trains. Before Perth scrapped them and unloaded them at bargain rates on to Auckland, they had been such a disaster that station staff there stood at exits handing out letters so workers could explain to their bosses why they were late again. And staff at Perth's David Jones store brought the "please excuse" letters in so often that management refused to accept them. The Aussies at Perth's Westrail overcame the crisis by scrapping the trains and bringing in a brand new fleet. We bought the discards off the sidings where they had languished for months.' Auckland also had to modify many of its railway facilities (eg., stations, bridges and tunnels) in order to accommodate the oversized carriages. However, the gamble that Auckland's commuters would be more accepting of transport delays than Perth's appears to have paid off, because –] suburban train patronage [in Auckland has] virtually doubled between 1991-92 and 1995-96. Passenger numbers went from 1,057,395 to 2,065,856 and the biggest part of that increase came since there was a doubling of services in July 1994]. Unfortunately, the nation's public transport patronage figures remain a source of concern – of the '1,432,443 people aged 15 and over who were classified in the 1996 national census as being employed, only 60,000 rode to work on public transport – and 47,637 of them used a bus (143,280 walked, jogged or biked to work, while the mode of transport was not specified by an additional 53,805 people, and 158,100 people worked at home')].

The only parties to take the Auckland City Council to the Environment Court over the Britomart development have lost an appeal against noise limits during construction. Two corporate bodies representing the occupants of two buildings containing residential apartments wanted lower limits than the council proposed. The occupants have to live and sleep during the three-year construction period... [but t]he court agreed with an expert witness that community expectations of noise in such an area were quite different from suburban locations... A spokesman for the body corporates... said the result was disappointing and that there were no avenues for further appeal... [In international news, 15] rail commuters died in a station stampede yesterday after security guards with electric cattle prods tried to prevent ticketless passengers from boarding early-morning trains... at the main station in the Tembisa township north-east of Johannesburg... "Apparently it was a misunderstanding between commuters and ticket inspectors," said [the] Metro Rail area manager... [Meanwhile,] 1.6 million commuters... took buses, drove cars, pedalled bicycles or walked through snarled traffic... as striking drivers demanding reduced working hours again halted London's underground rail network.

...After two years planning the underground Britomart transport centre, the Auckland City Council has not sought environmental approval for a rail tunnel allowing trains into the five-level... complex. The city council has also failed to apply for resource consents to underground Quay St which, together with the rail tunnel consent applications, will take months to sort out... The [ARC] water resources manager... confirmed yesterday that the city council had only last week approached the ARC to find out what consent applications would be needed... The ARC has since July been assessing the consent applications for the construction of the centre itself, a job still not over. The underground tunnel work will require similar applications to be lodged to permit water discharges and other work with a potential impact on nearby buildings... [However, t]he ARC has still not determined whether the consent applications for the... construction should be publicly notified opening up the question of Britomart to more objection. A Western Bays councillor... said last night the lack of applications for the tunnel work showed the council had not planned Britomart well. "These consents are essential and if declined could stop the project." A spokesman for the council said approval of Britomart could be conditional on the consents being granted... In another development late yesterday, the chief executive of the Yellow Bus Company... distributed a hard-hitting letter to councillors saying th[at like 'a \$9 million bus station in Hong Kong which had to be redesigned – buses wouldn't fit under its roof' – t]he underground station would not work for bus transport and ran "the risk of being boycotted by both bus users and bus operators."

...B[ritomart] critics point out[that] Tranz Rail has yet to agree to use it, [while] bus and light rail operators [also] have problems with it... Detractors say its 2900 underground car parks will contribute to traffic congestion – the very thing the scheme is supposed to counter... *We asked the people who will use it what they think:* ..."Auckland needs some sort of transport centre, but I don't know about the car parks that are also planned. Don't they defeat the purpose? ...You used to be able to get easily to town and back on the trams." ..."I don't think it'll alleviate transport problems in Auckland. All it's providing is a link between the railway station and the centre of the city..." ..."At the moment, public transport is centralised to go into town. There are a lot of people coming from east to west but they have to go into town first. If we're going to spend money then we should have a grid system – that would work better."

...When the Britomart underground transport centre was unveiled to the public in December 1994 it came as news to a majority of Auckland City councillors, the Historic Places Trust and even council transport planners. The project almost immediately sidelined a plan for a rail extension to an upgraded surface Britomart terminal costing \$17 million which had Transit N[Z] funding of \$7 million and which was due for completion by December last year. The December 1994 proposal was however described as the most exciting development in Auckland's history providing a new world-class underground transport terminal and a new commercial heart for downtown Auckland... [T]here was no evidence which suggested the centre was anything other than excellent from a public transport view. In August [1995] it was clear council publicity on the proposal was misleading... The University of Auckland real estate research unit described the project as "simply too large, too speculative and too risky." ...Concerns over the scale of the scheme continued along with concerns over its impact on heritage buildings... The local body elections loomed in

September[1995] and the majority group on the city council, the Citizens and Ratepayers, promised in its manifesto no final decisions would be made until full public consultation had been completed... [– although the] proposal remained on track with the chairman of the harbour edge committee... proclaiming that public consultation showed overwhelming support. But 500 signatures contained on petition-like forms, many written in the same handwriting and including large family groups, were included among 921 submissions received. Names of the petitioners were not verified and many came from outside Auckland City... Britomart was seen as a key issue in the local elections pitting pro-Britomart C and R against anti-Britomart Alliance candidates and the pro mayor against his anti opponent... The election resulted in C and R strengthening its hold on the council, routing the Alliance in a poll described... as showing support for Britomart and the vision of C and R. In December[1995] behind closed doors the council vetoed a proposal from [the mayor] for a referendum on the scheme.

...A possible alternative to the... development has been produced by the Auckland Institute of Architects... The institute's scheme, roughly costed at \$50 million, would bring trains at one level underground and put buses and light rail at ground level... Meanwhile, the Auckland branch of the Engineers for Social Responsibility has joined groups asking the Mayor of Auckland... to defer the decision on Britomart...

The financial risk to the Auckland City Council and its ratepayers cannot be fully eliminated in the Britomart property deal, say documents made public by the council yesterday... The Mayor of Auckland... said he still considered the project to be “no cost to ratepayers” because rates would not rise as a result of the development, because the cash the council needed for the deal could be raised from the sale of commercial property, and because the total value of the council's assets would rise by almost \$30 million. - 1996

The Mayor of Auckland... and his council are almost certain to commit more public money to fighting for the besieged Britomart project despite a surprise knockback and damning report yesterday. Three independent commissioners appointed by the [ARC] refused resource consents for the... development. They gave as their main reason the city council's failure to show that pumping groundwater out of the site would not damage nearby buildings through land subsidence... Some of the uncertainties on technical matters... were of “vital significance,” said the commission's 26-page report. This despite more than two years' work on the controversial scheme by council staff and consultants at a cost to ratepayers of \$13 million... The ruling was disappointing and surprising, [the mayor] said, “considering we presented evidence from the best engineers in N[Z].” The evidence would be “double and triple-checked” for... an appeal to the Environment Court... and he expected to get a “tick” from the court. The council was having no second thoughts about... Britomart, he said. The appeal was “purely a technical matter.” He admitted the delay would increase the project's cost to the council but he could not give figures... [He also] ruled out a redesign... The council faces a second penalty payment of \$375,000 on November 30 to NatWest A[US]... for the delay to the project, which was meant to begin last January. [Ironically, although ‘the mayor says that objectors have delayed proceedings and added to council costs, the council voted 8-6 on Thursday against pursuing Britomart opponents for about \$750,000 in court costs. “That, coupled with the decision by the council not to fully resolve all of the resource consent issues before signing the Master Development Agreement, has meant that there has continued to be a great amount of controversy surrounding the project.”]

...The proposed Stock Exchange listing of the... Britomart project... has added to the controversy of the massive upfront profits being taken by the promoters. Over the past few years, the Auckland City Council has bought most, but not all, of the undeveloped and run-down properties in the block between Customs St and Quay St and between Queen Elizabeth II Square and Britomart Place. The total area is 3.215ha. These properties were accumulated with the primary objective of establishing a new bus and rail underground transport centre for Auckland. But the city council has gone further than this and has decided to promote the above-ground area as a massive development of high-rise commercial, hotel and apartment buildings. If the above-ground developments go according to plan they will contain... more than 300,000 sq m of space. The above ground developments represent the bulk of the project as the underground transport centre is valued at only \$125 million, compared with the total estimated value of the completed Britomart... of \$1800 million. Because the city council did not want to undertake the development risk associated with the project, it scoured the world for a developer. But it met with little success because of the huge risks involved. Finally, last year, it struck a deal on its own doorstep with... the 34-year-old new controlling shareholder of the small listed company Parapine Timber. On December 20[, 1996], the council signed an agreement with [the 34-year-old] and NatWest Markets A[US] to sell all the properties and development rights included in the Britomart block for \$56 million. Settlement will be 45 days after the council has received all resource consents. The purchase will be funded by a \$56 million interest-free, three-year loan from the council. Subsequent to this agreement, [the 34-year-old] was granted full purchase rights and he has introduced a number of new investors to his consortium. These are mainly Asian or Asian-controlled companies. The new float – Pacific Capital Assets – will buy the Britomart properties and development rights from [the 34-year-old] and his associates for \$126 million. Effectively, on the same day as [the 34-year-old] buys the assets from the council... he will on-sell them... to the new listed company. This will be an immediate after-tax profit of \$70 million, or 125[% for the 34-year-old] and his investor consortium... Pacific Capital will then own the properties and development rights of the Britomart project. The company will be obliged to undertake the stage one (underground) development and will have a strong incentive, but no obligation, to proceed with the stage two (above-ground) scheme... The transport centre will be sold to the council for \$125.33 million, leaving Pacific Capital with ownership of the 2900 car parks and 11 foundation pods as its main asset from the stage one development. These new car parks will increase the number of spaces in downtown Auckland by approximately 16[%]. The company expects 2400 of the car spaces to be taken up by the occupiers of the commercial properties, hotels and apartments which form part of the above-ground stage two development... Pacific Capital will need to undertake a number of the above-ground developments in order to generate momentum and to create value for the four-storey underground car park... [The] expected after-tax profit on these development sites will be \$81 million and Pacific Capital's directors have agreed to pass on \$70 million of these anticipated profits to [the 34-year-old] and his consortium... The directors believe that [the 34-year-old] is entitled to this reward because he established Pacific Capital and has been largely responsible for arranging and structuring most of its complex contractual and financial arrangements... The \$70 million profit is based on an assessment... of the land value of the 11 foundation pods on the ground level and five historic buildings following completion of the stage one development.

...The Audit Office has accused the Auckland City Council of using one-sided publicity to promote its Britomart project... The publicity – a supplement in the council's *City Scene* newspaper – fell short of Audit Office guidelines for local government and was confusing about Britomart[s] projected finances... The council was unaware of any disadvantages in its Britomart scheme that needed to be listed in the supplement... [the] councillor overseeing the council's involvement... said. Among the specific criticisms of the publicity listed by the Audit Office were... [the council] did not indicate there would be no rates from the Britomart site during development or that revenue would be foregone from the sale of \$62 million of other council property to partly fund the council's Britomart costs[, and a]... diagram refers to a “standby takeout facility” but it was not mentioned in the text. “Given that the facility is for up to \$230 million – which is considerably more than any of the other sums mentioned – we would have thought it a material feature of the deal.” The facility carried some risk but it was [also] not explained.

...The owners of two downtown buildings have withdrawn consent for the Britomart project after fresh evidence has revealed a risk of serious damage to the ageing structures... The... excavation and de-watering process... could shear off the buildings' pile foundations, which would require major and costly repairs involving manoeuvring a pile driver in at ground level, digging the floor and repiling... The buildings stood between two big excavations sites – the main Britomart construction area and that for the proposed Quay St underpass. An old valley running through the western end of the excavation area had been identified which would be significant in terms of damage to buildings... [The owners] originally consented to the project because they were led to believe any damage would be of a minor nature such as cracks in the plaster and walls.

...Motorists face 18 months of inner-city traffic jams as thousands of cars are diverted around the Britomart project... during the construction of an access tunnel... says a traffic engineer... [M]ost developments had to provide for vehicle access and movement on-site but Britomart appeared to be seeking to use the street network for that purpose. It could easily use conventional graded driveways for access on Gore, Commerce, and Britomart Sts, and therefore avoid having to construct the Quay St tunnel, he said. The Quay St closure would force 29,000 vehicles a day to find alternative routes, adding pressure to roads and intersections that were already at capacity... Customs St... would be hardest hit... Quay St and Customs St provided the main east-west route through town and few alternative routes existed... Buses forced out of the downtown area into lesser streets would add to congestion and the loss of short-stay, on-street parking... would affect work and shopping opportunities... While motorists modified their travel times and routes during events such as the two-day Commonwealth Heads of Government Meeting in 1995, it was unrealistic to expect them to do so in the long term... the... consulting engineer... claims... in a statement of evidence for an Environment Court appeal hearing into Auckland City Council's bid for resource consents... Auckland City Council staff would not comment on [his] evidence until after the Environment Court hearing [next February. One councillor]... said there was widely differing technical evidence being submitted on the impact of the development and ultimately the court would decide its future.

...[the majority of respondents] supported an urban boundary using the metropolitan urban limits, which the [ARC] set and fought to base future development on in an Environment Court case and High Court appeal concerning Okura, at the top of the North Shore... [In general,] respondents felt the limits should not be used, as they had in the past, to regulate the orderly release of land for urban development, but should be a set line... Businesses have[also] shown a clear preference for a compact city rather than see Auckland forever-spreading on the periphery... [Incidentally, the] opening of a new light rail system in Sydney may help people to envisage a similar system in Auckland... The council transport planning manager... said Auckland could learn a lot from the mistakes and successes of that project... However, stage one of the Sydney line runs for less than 4km, and has cost \$65 million. Estimates for the much bigger Auckland system run to \$400 million. Sydney's light rail was funded by a mix of private money and the N[SW] government using federal funds. Funding for an Auckland system remains unresolved.

...The [ARC] will spend up to \$700,000 more on preparations for light rail despite there being no guarantee the multi-million-dollar project will get off the ground. The council's transport committee has agreed to allocate[part] of its transport capital budget to prepare a tender process... although... [the] committee says it will not know until the end of the year whether light rail can be paid for. And the project team is still trying to get access to Tranz Rail's tracks. In a light rail progress report discussed behind closed doors at the last... committee meeting, transport officials say there is "a temptation to pause" while these problems are sorted out. But they say this would be risky. The project would lose impetus and it might cost more, and take longer to build. A councillor... who also chairs the finance committee, said ratepayers should not have to pay more for light rail investigations... when [the council] had "no idea" if Auckland would be able to afford the project. "It's like driving around Auckland searching to buy a house, even though you don't have a cent in your pocket," he said. However, the chairman of the committee... said [its members] overwhelmingly agreed to press ahead.

...Civic politicians argued yesterday over whether tenders should [have been] called for light rail before the funding is certain. Some members... feared they could look "stupid" if the tender process had to be halted because of funding doubts.

...EXPECTED arrival: a decision to end our paralysis of many decades on the future of rapid rail for Auckland. The [ARC] promises a major announcement in the next couple of weeks. Until then, commercial sensitivity veils the tendering process begun last year... No such shyness surrounds one light rail proposal which was not part of the above process, but is claimed to be stunningly cheap and cost-effective. Has this scheme missed the train? Probably. But its creator... [-] a 57-year-old design engineer... [-] is still optimistic... His FLIER (for Free Light Integrated Express Railway) really would be free if costs could be kept within the current subsidy of \$4.50 a passenger trip. "If I could be part of the current tendering, I would win it. I could be building this thing by Christmas, and be in operation by the next local body elections in October." ...[However, covering] the full route from South Auckland to Albany, with harbour tunnels, would take about 10 years... The vehicle he has designed is a light-weight train along the lines of a bus on rails – "it will have a little 100hp diesel singing away just like a bus... It will have standard bus components and cost less than \$600,000 to build, whereas a traditional [rail] unit costs around \$6 million... No one has faulted my system except everyone in political terms. You don't give something away for free. Politicians and engineers are at opposite ends of the spectrum with a vast communication gap. The engineer has a multi-path mind, and if one thing goes wrong he corrects it. A politician takes a single, critical path to a solution. If something goes wrong he throws out the baby with the bath water. I've spent 20 years being deferred by politicians who've always chased the \$400 million option while overlooking the[funding] reality." ...This interest in light rail, which has cost him \$10,000 so far in patent fees and taken a chunk of his life, began when he was enraged by the way the rail option was made grandiose and untenable in the [1970s]... "They were talking about 1000hp trains in tunnels with overhead power lines, that shook buildings. It did not need to be like that. They were forgetting that the old trams, which had two 50hp motors, used only one of them to get up the 1-in-9 gradients at the top of Queen St." [By the way, 'Auckland's trams were removed in 1956 because they were deemed too expensive'! The trolley buses that replaced them utilised the same overhead electronic wire system. However, the trolley buses were themselves phased out for the same reason – 'the last one being driven in September 1980. The cost of the system was considered more expensive than buying diesel buses – although, not in the long-term.' Another motive put forward for their removal was that 'increased use of private cars created problems for the trolley buses' (whose movements – because of their connecting poles – were restricted). Ironically, members of the 'Auckland Tramways Union had designed a trolley bus system which would have been similar to the Link bus service introduced this year. New power poles, buses, etc., were purchased from Italy – but the plan was scrapped and the equipment was eventually sold to Wellington for a \$6 million loss.']

...A nationwide campaign to promote the use of public transport and rail freight as a means of easing air pollution was launched in Auckland yesterday. The Eco-Transport Campaign, [was] initiated by the environmental group Friends of the Earth[, which]... has operated in N[Z] for 25 years... The organisation's director... said the Government had never taken transport pollution seriously enough, nor had it acted swiftly enough to find solutions to counter it. "The environment movement in N[Z] has for some years needed an initiative of this sort and 1997 looks like a watershed year for transport planning and funding. We could not have picked a better time to start making people aware of the environmental effects of their transportation choices."

...The Mayor of Auckland... has criticised the leaking of documents revealing that big changes are being considered for the Britomart project... as the Auckland City Council tries to extricate itself from an engineering nightmare... One[suggested change] is to reduce the size of the five-level, underground carpark. The lower three levels would be sacrificed at the western end... [by about 75m, slicing] about a fifth off the length of the three lower floors. About a quarter of the 2900 carparks would be lost, raising questions about the deal between the council and the private sector Britomart Developments company... The chairman of the council's harbour edge committee... would not confirm yesterday that the smaller Britomart plan was being considered... [However, he] said... Auckland City councillors are unlikely to get a say over... [any changes. T]he council wanted a transport terminal and related developments, "and that's what we will get." There was therefore no need to go back to any committee or the full council. He also understood there would be no need to renegotiate the development agreement.

...After five days without trading, Pacific Capital's share price dropped... to 37c yesterday. The managing director... reiterated that the company's future did not rely purely on Britomart... It has secured... a tollway project in China.

...[after a train company] director... saw a similar scheme in operation in Hong Kong[rail]... commuters heading to London from eastern England are being offered a chance to work as part-time train guards on their way to the office... Great Eastern, the private train company which took over

routes to Essex and East Anglia six months ago, said it decided to make the offer to regular passengers because of a very disappointing response to its recruitment drive for part-time workers... [However, the] general secretary of the National Union of Rail, Maritime and Transport Workers, called the plan “the most bizarre proposal I have come across in nearly 40 years in the industry.” Great Eastern agreed that it was an unusual recruitment method but called it a “mould-breaking work-to-work scheme.” [The director said that although “m]ost commuters prefer to relax, read the paper or sleep[, others]... use the journey as part of their working day, so there is no doubt this could be a lucrative way of spending the journey.” The part-time guards would swap their office clothes for blue uniforms for the journey. Their duties would include making announcements on platforms, checking that train doors are slammed, and giving a signal to the driver to set off – before jumping on the train themselves. Great Eastern said those recruited would be given the same safety training as full-time guards. But... [the] general secretary of Aslef, the train drivers’ union, said the plan was a “safety nightmare.” “This half-baked scheme is yet another example of safety being seriously compromised – and on crowded, rush hour services,”... - 1997

I’m sitting in the Glasgow Central Hotel reading about this train crash that happened last night. ‘A train from Glasgow... ploughed through buffers and... the platform into a row of shops.’ It said ‘nobody had time to panic.’ So that’s good, isn’t it? ...also somebody’s complaining... [‘cause] ‘no announcement was given.’ “We are just about to tear up the platform and run through the ticket office!” Oh, and there’s another train crash here. ‘Wigan to Liverpool commuter train went into the buffers at Line Street Station.’ [That’s] a bit worrying... [I also worry about] what’s going to happen when they sell off the railways. Suppose nobody buys... [the unprofitable lines?] It must be difficult to make a profit on a line that’s mainly used by documentary film-makers and suicidal livestock. I mean, it’s going to be like being picked last for the netball team. Everybody will want the [attractive lines] like Network South-east and Intercity. Lines like [Thurso] will end up pretending they don’t mind... holding everyone else’s jumper... I had a wander around [the city] before I caught this train, and it was filthy. You could hardly breathe because of the traffic pollution. We need to stop using our cars. We need good, fast trains that connect with other trains that are affordable, reliable, safe, with proper food on them[and]... clean toilets. There’s no point calling us customers and smiling at us with walkie-talkies if we can’t ever buy a ticket at our local station, or book over the phone for a journey that involves two different railway companies. They could do through-ticketing a hundred years ago but they can’t do it now! ...[is] through-ticketing... something you could forget how to do, like ploughing? - GREAT RAILWAY JOURNEYS

The last time I travelled the main trunk line... [the train] chattered through the darkness... Things have changed a bit in the last quarter century... Beyond the double-glazed window is a seldom-seen N[Z]. The country that primps its roadside face, painting fences, mowing yards and weeding gardens, lets its guard down on the back as we often peer into the backstage clutter of provincial and suburban life. It can be a sobering sight, not least because it can show us the side of provincial N[Z] that the promulgators of the economic miracle don’t like talking about. The industries of the heartland that has stopped beating grew up along the railway that transported its output to distant markets. And the decaying remnants of that enterprise are everywhere: factories sit glumly with windows shattered and boarded up, empty warehouses are hangers for sparrows, heavy machinery rusting in the long grass by the trackside... With every passing kilometre, it becomes more obvious that the romance of train travel is something to be found in third-world countries with third-world wages. It would be nice to sit in a dining car and watch the countryside blur past as we dined off white linen... [Instead, a] cabin crew of two... serve... pallid liquids in... flimsy disposable cups and hand... out cellophane-wrapped biscuits in a ritual that generates sacks of unrecycled rubbish... Stations are silent and windswept now, like large city bus stops... [However,] it’s hard not to feel smug as the road traffic has to stop and salute us at level crossings.

...Passengers stranded at a California railway station had more than the usual bureaucracy to blame... The... 30-minute... hold-up... to board a train for Seattle... was caused by none other than Microsoft’s chairman, who] has three railway carriages and his own engine and... requested that the tracks be yielded to him. [In further news from the US, after becoming ‘driverless a train pulling hazardous chemicals continued by itself for an hour’.]

...Rescue crews used cranes to move mangled, smouldering pieces of metal as they searched for victims of one of the U[S]’s worst train wrecks – a fiery collision with a truck loaded with steel bars. At least 14 people were killed and 119 injured. Investigators at Bourbonnais, Illinois, questioned how the truck moved into the train’s path on Tuesday night (NZ time) despite crossing gates that apparently were working. The driver... aged 58, told investigators he did not see the train as he approached the tracks and that lights started flashing after he had started driving across. [However, the Wisconsin Governor who is] chairman of rail corporation Amtrack, charged that [the driver] was trying to dodge the crossing gates, thinking the oncoming train was a slow-moving freight train instead of a faster passenger train. “The engineer said he saw the lights flashing, he saw the barriers down and then he saw the truck stop and try to get around it...” Authorities also said [the 58-year-old] was driving on a probationary licence after receiving three speeding tickets within a year. He sustained only minor injuries. As many as 216 people were on board the City of New Orleans when it hit the tractor-trailer at a rural crossing near a steel mill 80km south of Chicago... The crash sparked a fire that burned for more than five hours. The train’s two engines and leading cars were scattered like burned, broken toys over 400m. One engine punched through a double-deck sleeping car that had been three cars behind it before the derailment. All of the dead were found in the sleeping car... Four to six people were[still] missing and feared dead in the wreckage.

...A JLTED... PHILADELPIA[N]... used his vehicle to push his ex-girlfriend’s car into the path of a freight train. He chased the woman and both stopped at a crossing... A witness said the second car revved its engine and shoved the first car... Candice Wertz, her two-year-old son, another woman and a six-year-old girl were killed. Wertz made a 911 call on her cellphone and was talking to a dispatcher when her car was struck by the train... Police are still looking for the man.

...from the files of the N[Z] *Herald*... 100 years ago... A lamentable accident took place yesterday afternoon at the Kingsland railway crossing, which resulted in the instantaneous death of a well-known and esteemed lady... It appears that Mr and Mrs Battley had been in town on business and on getting near the railway line, the driver of their... trap... saw the train, which whistled. [The driver] jumped down and held his horse by the head, but it got quite unmanageable and reared up... [T]he frenzied animal[then] made straight for the passing train... As the [trap] neared the passing wagons it was struck by one of them... causing the vehicle to tilt towards the moving train and Mrs Battley, who was sitting on the near side, was shot... under the wagons. Her dress became entangled in the wheels and her body was carried 60 feet and terribly mutilated... Mr Battley was also thrown towards the train and got several contusions on the head from the passing wagons.

...*The family of Katie Connolly, killed crossing a railway, fear a coroner’s warning about pedestrian safety has fallen on deaf ears*... [Katie’s mother] stands on the bare asphalt of Glen Innes railway station, clenches her fists and toughs it out. This is the first time in almost three years she has been to this barren, uncared-for place where the wind whistles down the platform and the pedestrian subway is so shadowy and threatening it is considered dangerous, even by locals. Back then, [the mother]’s life was different. She had two talented, high-achieving children, a successful barrister husband, a job as a secretary of day surgery at the Adventist Hospital in St Heliers and a comfortable home only a kilometre from the beach. Katie, her 16-year-old, clever and loving would-be actor daughter was a special delight. Mother and daughter were close. That morning Katie had left early for a doctor’s appointment to check a suspected virus before the pair were to head into the city to collect her new... dress for the Kings College ball. [The mother] will never know exactly what Katie was thinking as she hopped off the suburban DMU train... and headed across the track that runs down the other side of the station. As... the woman who walked behind her, and [the] Silver Fern driver... would testify,

Katie's head was down, as if deep in thought, as she headed towards the crossing that led over the east-bound tracks that she used every day. It was 11.50 am on June 18... nearly the shortest day of the year. The light was flat and Katie did not see the steely Silver Fern railcar, merged against the overcast sky like a shark in a shadowy sea, as it rounded the bend 300m away on her left on its trip to the Westfield Train depot in Otahuhu. Nor, above the noise of the suburban train as it roared and tooted out of the station and the nearby timberyard, did she hear the almost silent railcar as it slid down the tracks at 80-odd km/h. Although [its driver] tooted his whistle too, she kept on walking. And the train did not slow. Only at 15m – that is half a second before impact with the slight figure in her grey and maroon school uniform – did [the driver] squeeze on the Silver Fern's brakes, causing the empty railcar to stop 218m down the track. But by then Katie was dead. As her mother says now, "Why weren't there bells and flashing lights to warn Katie a train was coming? Why didn't he brake earlier – just to slow down in case Katie hadn't heard him? ...Why didn't the lady walking behind her call out?" Last week, Auckland's coroner... released his report into Katie's death and echoed [her family's] frustration and anger. His findings, especially around Tranz Rail's attitude to passenger safety, were damning. "While it is enshrined in the legislation that a train track is the exclusive corridor of rail traffic, nevertheless I consider that there should be a duty... towards pedestrians using pedestrian crossings." Meanwhile the toll on Katie's family has been harsh. Almost three years after they laid their beautiful daughter to rest at the Purewa Cemetery in Meadowbank, [the parent's]... happy marriage is under pressure as they grapple with the pain and despair that comes from losing a child on the edge of her prime... Says [the mother] through the tears that most of the time sit behind her eyes and tremulous smile, "I'm still angry. There's been no justice for Katie." While [the mother], with help from... Katie's brother... wrote to [their local MP, the]... then-Transport Minister... and [the] Minister of Justice[the father]... worked on the safety and risk aspects of Tranz Rail's performance. [The mother] also put together two meetings – one at home with the Land Transport Safety Authority... the second in the Bledisloe Building with the Auckland City Council, the LTSA, Tranz Rail, Occupational Safety and Health. And as she says now, except for being stunned by the attitude of a Tranz Rail safety analyst who, when asked why the driver didn't brake, replied, "No evasive action was required," nothing happened. "I organised all those meetings, wrote all those letters and we came away with nothing." By the time the inquest into Katie's death came before the Coroner's Court on September 21 last year, the [family's] evidence was substantial, rigorous and had cost them thousands of dollars – most of it in time and sweat. Their argument was clear. Since Wisconsin-based Tranz Rail... took over our rail service... there have been 65 level-crossing deaths, 291 car crashes on railway crossings, and 16 rail workers have lost their lives while working for the company – five of them in the past seven months. Tranz Rail, which has had plenty of practice in inquests like this over the past [few] years, was also well prepared... [The] Wellington-based... lawyer... who acted for Tranz Rail over the case of a six-year-old... who was blinded and lost a leg when a Tranz Rail handrail gave way, acted for Tranz Rail... Ten exhibits were produced and 11 statements read to [the] coroner... Then, for three harrowing days, both parties slugged it out... The evidence and information, teased and squeezed out of witnesses, paints a disturbing picture... [The] safety manager for Tranz Rail and the company's liaison point for the Transport Accident Investigation Commission... and the LTSA, informed the court that Glen Innes station (although used by... Kings College and other students plus workers every day) is not considered busy enough to meet the company's formula for "active" pedestrian warnings such as bells and flashing lights, let alone an overhead bridge. Tranz Rail installed its pedestrian crossing because pedestrians tended to avoid the tunnel and had routinely broken through the fence to cross the tracks. [The safety manager], who could not produce a safety budget, either for N[Z] or Glen Innes station, did not have accurate knowledge of pedestrian numbers at the Glen Innes crossing and, under cross-examination, revealed that the decision to build it was taken without "undertaking any sort of investigation in terms of safety issues." While Tranz Rail argued that local pedestrian level-crossing collision rates are very low, international comparisons revealed an appalling death rate. Figures showed [that] fatalities at level crossings in N[Z]... average... almost 10 a year, compared with three fatalities in Britain ([which has more than 17 times NZ's] population...)... U[S] data showed similar anomalies: America has only half the number of fatalities that we have... per capita basis. Part of the problem is that Tranz Rail has no designated safety manual and is protected by the Railway Safety and Corridor Management Act – an act drafted for a safety-conscious Government department rather than a profit-driven private company which, in the year of Katie's death, won the Roger Award for "the worst transnational corporation in... N[Z]." The act enshrines in law that "rail service vehicles have the right of way" and is backed by the company's operating rules which state: a locomotive engineer who believes the line may be obstructed must only sound the whistle at a sufficient distance to give ample warning of the approach of a train. Trains are authorised, indeed encouraged, to pass through... any busy commuter station... at 100 km/h to meet their operating schedules. Nor is Tranz Rail under any legal obligation to provide warning systems at public level crossings. When it does so, it shares costs with local authorities and Transit N[Z] on a 50/50 basis. The costs of safety measures, when compared to the estimated cost of loss of a human life – which is put at \$2.3 million – seems trivial. The price of an overbridge over one track at Glen Innes was estimated at \$85,000 to \$135,000. To span both tracks the cost rose to \$100,000 to \$140,000. Warning bells and lights are estimated to be worth from \$15,000 upwards. Most chilling is the evidence of [the] train driver... who, [when the parent's]... lawyer... questioned him about his attitude to a perceived problem, when he had been able to see Katie approaching the rails 200m away... [said]: "...There would be no difference to being in a car and expecting people to keep off the road... I can't drive predetermining what members of the public are going or not going to do, but just assess the situation. In this case it wasn't until the last minute I realised that something was going to happen – by then it was too late... If you slowed down for everybody you saw on the track, we'd never go anywhere." When asked if he would have braked had he personally recognised the child, he was staunch. "No – a pedestrian's a pedestrian." ...[the coroner], who had been personally shocked by the silence of the Silver Fern approaching Glen Innes station during his three fact-finding missions... recommend[ed that]... when trains round the bend down the 380m straight that they reduce speed from 80... to 25 km/h. "By doing so the train would be losing eight seconds in its schedule instead of a possible life." Tranz Rail's answer to the coroner's recommendation... was dismissive... Slowing trains to 25 km/h through the station... was anathema: "That would actually build a delay into the N[Z] transport network." ...Meanwhile, Glen Innes station remains resolutely unsafe. Over 30 minutes one afternoon this week, 18 schoolchildren and workers used Tranz Rail's pedestrian crossing and only one stopped, looked and listened... [T]he larger warning signs, erected after Katie's death, are beginning to fade... [A Tranz Rail] spokeswoman... said that the company might scrap the crossing and force people to use the... underpass which is still long, gloomy and threatening... Says [Katie's mother] wearily, "Tranz Rail are not obliged to be responsible for their own passengers. I hope this serves as a wake-up call for N[Z] and Auckland in particular... There is no doubt about it, nobody was held accountable for Katie's death."

...Tearaway kids are dicing with death around railway tracks – and it's not only their own life they're putting at risk! Tranz Rail is fed up with school kids booby-trapping lines with stones and pieces of timber to get a quick thrill as trains smash over them. "It's a... very old game but it's a dangerous one – nobody should be playing on a railway line period." ...the New Lynn Community Board chairperson... says she recently saw two girls, aged about seven, waiting to hear a train's whistle near Fruitvale Station (near Titirangi Rd) before racing down to lay stones on the tracks... "I tried to yell at them but I was too far away." Luckily the girls got away but it could easily have turned to tragedy... ■ [In Britain, a]... couple have been convicted of the manslaughter of two girls in their care who were killed by a train when they played on a railway line... [T]he mother and stepfather of 7-year-old victim Sophie George... had taken the children for a picnic near their home near Aberystwyth, West Wales, a year ago. Sophie and her playmate, Kimberley Allcock, aged 8, were struck by a 100 km/h train as they played on a railway bridge.

...THE driver who sparked a fatal rail crash near Selby in February has been charged with causing the death of 10 people by dangerous driving. They died when the Land Rover driven by [the 36-year-old] ran off a motorway on to a railway track and derailed a train that was carrying 100 passengers. It was sent into the path of an on-coming freight train carrying 1000 tonnes of coal... An interim report in March described the... crash

as... “wholly exceptional” and said the rail industry could have done nothing to prevent it... There was only a minute between [the 36-year-old] calling the police on his cellphone to warn that his car was on the track and the train hitting it... [How the car] left the road... was unknown.

...The family of a man whose Land Rover crashed on to a British railway track in a disaster that caused the death of 13 train passengers denied yesterday that he fell asleep at the wheel[. If the Land Rover driver], aged 36, is found to be responsible for the crash, it could produce what papers have described as Britain’s biggest car insurance claim. If no one is blamed, then victims and their relatives might not receive compensation.

...Rescuers predict the death toll from the collision of two packed commuter trains near Paddington could be as many as 90. They resumed their search of the wreckage last night (NZT) and almost immediately found a body, bringing the number of confirmed dead to 27... Thirty-five people were killed in a crash at London’s Clapham Junction in 1998. [The latest crash] was the second tragedy on the same stretch of line in two years, sparking renewed concerns about safety on Britain’s rail system, privatised by the previous Conservative Government... [The] deputy editor of *Railway Gazette International*, said... lessons had not been learned from... the... collision at Southall, which killed seven... because two years had been wasted in pursuing court cases. A key point of the investigation will be a signal controlling a crossing where there have been eight instances of red lights being missed in the past six years. The Chief Inspector of Railways... said investigators would examine the... possibility of human error... Both drivers were thought to be among the dead... ■ Britain has had 17 fatal train accidents in the past 25 years... The country’s worst train crash was on May 22, 1915, when a wooden troop train and a passenger train collided at Gretna Green between England and Scotland, killing 227...

A SIMPLE warning system could have prevented London’s horror train crash... on Tuesday... The first official report on the disaster, released last night, has revealed a warning system – due to be installed in 2003 – would have stopped one of the trains from passing through a red light... The... outgoing Thames Trains service... smashed almost head-on with the heavier Great Western train... At least 30 people, including two NZers... have been confirmed dead... with 127 commuters still missing...

Travelling in different trains, Matthew MacAuley and Allan Stewart did not know each other. But the common link was a ticket to support the All Blacks in this morning’s [rugby] test against England. A minute’s silence was held before the test... Matthew... would have celebrated his 27th birthday today watching the... game. Last night his father... visited the spot where his son was killed... “He loved being active, doing things that were exciting... Yet this terrible thing has happened when he was sitting down...” Emergency workers identified MacAuley by the Maori carving he wore round his neck. He also had his test ticket with him... The death toll following Tuesday’s tragedy is at least 40 – with 64 people still missing.

...The company which maintains Britain’s railway network, Railtrack, will be stripped of its responsibility for passenger safety in emergency legislation which follows last week’s horrific London crash... With the scale of the tragedy still unfolding, there was alarm among ministers that the Government would be deemed to have failed to live up to its commitments made in opposition to putting safety ahead of savings... A new independent safety authority will be created to impose higher standards on rail operators and Railtrack itself. In future, Britain’s individual train companies will not have their franchises renewed if they are deemed by the Government to have a poor record, such as on drivers passing red signals[. There are ‘at least 22 sites where drivers ignore red lights’]... The plans emerged as two masked pathologists began the grim task of raking through human ashes in coach H of the express train into London’s Paddington, where most of the unaccounted victims perished... It has emerged that... some of the carriages involved in the disaster had been salvaged from the Southall crash. The disclosure that passengers were riding in coaches which had been damaged and repaired after a fatal accident prompted fresh anger. Rail unions said the death count might have been lower if new, undamaged rolling stock had been in place. One of the most alarming features of Tuesday’s crash was that some carriages concertinaed on impact, leaving passengers trapped by metal. [● ‘The most tragic rail accident in NZ’s history occurred on Christmas Eve, 1953. 151 people died when the northbound Auckland Express was swept off the Whangape River Bridge. A sudden discharge of water from Crater Lake on Mt Ruapehu was responsible. A huge wave carried thousands of tonnes of ice, ash and boulders down the river, striking the railway bridge only moments before the train arrived. The concrete piers gave way, 46m of bridge fell and the locomotive crash-landed across the gap on to the opposite bank. The first five coaches nose-dived into the flood waters and one of them was swept nearly two km. The sixth car teetered on the edge for a time before it also fell into the river. The coaches were torn to pieces, then with uncanny swiftness, the flood waters subsided. Darkness added to the horror and greatly hampered rescue work until the Army arrived with lights. Twenty passengers have never been found.’]

...An independent expert investigating the head-on collision between two... trains in Auckland is still trying to figure out what went wrong... He will examine possible causes, including human, computer, signalling and mechanical error. The two commuter Tranz Metro trains – one carry 35 passengers and the other only a driver – crashed at Ellerslie on Thursday just before midday. A Tranz Rail passenger service officer suffered minor head injuries and a 77-year-old passenger a cut leg. The crash happened after one of the trains broke down at the Ellerslie station about 11.30 am. Its passengers were taken by taxi to their destination. A railcar was sent from Otahuhu to retrieve the stricken train, which was on tracks for northbound trains only. The railcar hooked up with the train and then travelled south. At the same time, the next northbound train rounded a bend. Its driver braked, but was unable to avoid hitting the other train, which was already stopped... The drivers have been stood down from duty.

...The head-on collision of two freight trains near Christchurch on Friday was not caused by a failure of the track warrant control system, says Tranz Rail. The company’s nightmare year continued when three workers were injured in the dramatic collision, which happened about 4 am when a heavily laden train that had just left the Middleton shunting yard ploughed into a stationary locomotive, derailing several carriages and closing industrial Annex Rd for six hours... Two cranes worked for hours to stabilise, then free, the jack-knifed wagons. All traffic along the Main South Line was cancelled for the day... Friday’s crash has again raised the spectre of the company’s dismal health and safety record... When Dunedin train driver Graham White, aged 53, died in a head-on crash at Waipahi, South Otago, on October 20 last year, a report said Tranz Rail contributed to the accident by choosing not to adopt recommendations made in 1996 about its track warrant control system... [In international news,] Indian authorities who cleared the last of the wreckage from a two-train collision on Thursday have declared a final death toll of 208. Eighty bodies were yesterday still unidentified in a Patiala mortuary, north-west of New Delhi.

...500 people were last night thought dead and 1000 injured after two trains collided at... Gaisal station, near New Jalpaiguri... At least 14 wagons and the engines of the two trains had meshed together in the crash. Rescue workers are facing a tough time in pulling out bodies trapped inside the carriages... The trains were the Assam-Awadh Express, bound for Guwahati in the... state of Assam, and the Delhi-bound Brahmaputra Mail. First reports said there had been an explosion at the site. Officials later ruled out a bomb, although the BBC reported that one of the trains was carrying explosives... The accident is expected to affect trade in the region, compounding problems caused by the bombing of a rail track in the area by Assamese separatist guerrillas on Saturday. The crash could be the most serious in a series of train accidents in India in recent years. About 340 people died in a collision on August 20, 1995... in... Uttar Pradesh.

...A white elephant railway running thousands of kilometres through the Siberian wastes was given a final touch at the weekend as engineers finished boring a tunnel they began 25 years ago. The 3400km Baikal-Amur railway, one of the former Soviet union’s most grandiose projects, was built on and off from the 1930s to 1984 but was widely seen as a waste of time. The 15km tunnel was plagued by bad planning. Workers would find themselves flooded by water, often freezing or even scalding from geothermal activity.

...The twisted and gutted chassis of a “fireproof” train lying in an Austrian alpine tunnel was being examined by investigators last night, after the deaths of as many as 165 people, many of them children and teenagers. The chassis was all that remained of the 30m train, which caught fire while

being drawn on a funicular railway to an Austrian mountaintop. Flames engulfed the train, packed with skiers and snowboarders, when it was 600m into the tunnel... Experts believe the "chimney effect" of the tunnel sucked in air from below, making the flames spread quickly and producing dense smoke and lethal fumes... Only a dozen people escaped with their lives: they broke a window at the rear and fled to the lower entrance of the tunnel, avoiding the fumes. Others who fled up the tunnel were asphyxiated, as were three skiers waiting at the stopping point near the top... There was disbelief when it emerged last night that there was no fire-fighting equipment in the tunnel or on the train... [T]he railway's security director, said: "We never thought it was possible that a fire could break out." ...One early suggestion was that... [w]hen it was built in 1974... the materials[used] were not as fire-resistant as they should have been... Police had noted the names of all the 2500 people who had been on the mountain to establish who was missing. "Now there is the painstaking work to establish who is among the victims,"... 85 of the victims had been identified... Most... were... young Austrian and German skiers who had decided to go up the mountain on the spur of the moment, on the first day of the skiing season in the area. But... among... the victims had been... three Americans... and... 10 Japanese...

Japanese electronic games-maker Nintendo is toying with the idea of fitting its Gameboy consoles into new London Underground trains. Nintendo has drawn up plans... to have the normally hand-held consoles fixed to vertical handrails.

...London Underground is removing fire extinguishers from its train carriages – despite fears raised by last week's Austrian ski train inferno... It says the move has been prompted by repeat vandalism of firefighting equipment... [L]ast year... officials found that deliberately damaged equipment forced 400 trains out of service each year... London Regional Transport said it was satisfied passengers were not at risk and had no plans to carry out further safety checks... [But t]he move has caused unease in the wake of... a spate of British rail crashes in recent months culminating in a major derailment near London last month that killed four. The aftermath of a fire that swept through King's Cross underground station in 1987, killing at least 31, is still seared into the public memory.

...On February 28, 1975, London's worst underground rail smash claimed 43 lives and injured more than 100... IT was a trip veteran... driver Leslie Newson (56) had done many times. He was at the controls of the six-carriage 8.37am train from Drayton Park in the Highbury extension of the Northern Line to Moorgate. The station is a major terminus for workers in the city and is only a stone's throw from the Bank of England. As usual, the train on this Friday morning was packed with commuters. But this trip would end in disaster. Instead of coming to a halt at platform nine at Moorgate – one of the oldest stations on London's underground network – the 8.37 ploughed on, through a 20-metre over-run, across a 12m long sand-drag designed to stop over-shooting trains and into a wall at the end of the platform. Newson had driven the train into the wall at an estimated 65km/h and he died instantly. Behind him, carriages telescoped into a shuddering mass of tangled metal. The first two were crushed to less than half their normal length by the impact. The front 15 seats of the first coach were compressed into half a metre... As the first two carriages crumpled like concertinas, the third was forced into the air, wedging itself between the tunnel roof and the top of the second carriage... Although no firm evidence could point the finger at a cause, the Moorgate crash led to the introduction of a number of safety measures on the extensive London underground network of 410km of track and 270 stations. The main improvement was a device which stops a train automatically if the driver does not follow standard and regular safety procedures. It's called "the Moorgate control".

...Tunnel... tragedies in Europe in the past 25 years include: February 28, 1975: A driver's error in a tunnel in the London Underground at Moorgate station... October 28, 1995: A fire in the underground at Baku, the capital of Azerbaijan, killed 337 passengers trapped between stations and injured at least 270. [November 18, 1996:...]

FIVE people were injured, one seriously, last night when fire broke out on a Channel Tunnel freight train carrying lorries from France to England. Another 28 passengers were transferred to a car shuttle in an emergency evacuation from the middle of the tunnel to the French side... The evacuated passengers were moved to safety through the service tunnel, which was designed to cope with the sort of emergency encountered last night... A fire brigade officer said: "It is our worst nightmare come true. We have had a few fires break out on vehicles at the terminals before entering the tunnel, but nothing like this has happened inside the tunnel before..." A Eurotunnel spokesman said that the fire had broken out on a truck... The cause was not known. The fire was the second in a Channel Tunnel train, but the first to cause injuries. In December 1994, shortly after the tunnel opened, a car caught fire on *Le Shuttle*. Freight trains are equipped with two fire detection systems and three fire extinguisher systems to meet stringent safety requirements that Eurotunnel had to meet before getting its licence. Once detected, the fire would have been immediately drenched by halon and water foam, and the tunnel fans directed to blow smoke away from other trains.

...CHANNEL TUNNEL services could be disrupted for months after the train fire on Monday night, which burnt for nearly 20 hours and left nearly half a mile of devastation in the Folkestone-bound tunnel. As three inquiries were launched into the incident... Eurotunnel executives said they hoped that services would be back to normal within four weeks. But... engineers thought the repairs would take "months rather than weeks". Six people were kept in hospital overnight after inhaling smoke... all were released yesterday. They were among 31 passengers and three crew rescued by emergency crews who yesterday spoke of hellish conditions in the tunnel. Chunks of concrete from the tunnel roof had rained down on them as they worked and the 6in thick reinforced concrete lining was said to be so badly blistered in one place that chalk was showing through. The fire, thought to have reached temperatures of 1,000C, also destroyed miles of wiring and cabling, and buckled part of the track. The undamaged half of the train has been pulled out of the tunnel, but the burnt-out section is still on the track. No trains ran through the tunnel yesterday because of the high levels of carbon monoxide, but the company hopes to begin a limited service through the undamaged north tunnel this morning... [T]rains will be able to bypass the damaged section of track using two cross-over tunnels a third of the way from the entrances. This means that services will run normally entering and leaving the tunnel, but will have to share a single track along the middle ten-mile section... [● On April 8 this year, *The Times* published a letter which went:] Sir, Our daughter, a slightly apprehensive traveller, insists that we play the hymn *Eternal Father, strong to save*, whenever she crosses the Channel by ferry. We wondered what we should play when she flew to Germany recently and eventually selected *He who would valiant be 'Against all disaster* reinforced by *All my hope on God is founded*. Is there a more appropriate hymn and also one which would be suitable for the Channel Tunnel, should she brave its perils in the future?

...THE fire on Monday night is the latest of many blows to Eurotunnel[– 'the largest underwater tunnel ever built (100% privately funded, it took six years to complete with 15,000 construction workers, 12 of whom lost their lives during construction), the complex has two rail tunnels, one primary service tunnel plus nine smaller service tunnels' –]whose shares peaked at £8.67 in June 1989. Construction delays and financial problems brought the price down to less than £1, and yesterday they fell 3 1/2 p to close at 88p. Analysts agreed, however, that while the fire was bad for the company's image, the disruption expected in the coming weeks would do little damage to long-term cash flow. Last week Eurotunnel announced a 70[%] increase in its three-month turnover, and that improvement has helped to secure further backing to tackle the company's £9 billion debt. A refinancing package has yet to be sealed by a consortium of 225 banks, but it is thought unlikely that the fire will prompt any of them to pull out.

...[‘damage to the Eurotunnel will cost \$US100m to repair and one tunnel will be closed for over 6 months’. Seven people have died on level crossings this year. - 1996

Tranz Rail Holdings may need to tap capital markets to sustain its expenditure of between \$70 million and \$75 million a year to maintain its existing rail network. Other major capital expenditures required... [include] the cost of revamping freight handling capacity at Middleton, south of

Christchurch, estimated at \$28 million... \$15 [million to \$]20 million needed through the 1999 financial year to eradicate the year 2000 bug... \$130 million over a 20-year period to meet changes in requirements for transporting coal from the South Island's West Coast to Lyttelton[, and]... the replacement of the Wellington ferry terminal, costing up to \$35 million over the 1998-2000 financial years... Tranz Rail has net cash flow from operating activities of \$123.99 million but has net outflow of \$113.19 million from financing activities. Its cash balance at the end of the financial year ended June was \$6.87 million... [However,] Tranz Rail is expected to see modest improvements in its operating efficiency over the intermediate term... This was the conclusion of Moody's Investor Services... which gave a Prime 2 short-term rating for Tranz Rail... Moody's said that since US Wisconsin Central bought Tranz Rail, the N[Z] company had accelerated several of the restructuring plans started before its privatisation.

...[yesterday] Tranz Rail said it had established an unsecured committed \$180 million five-year cash advance facility that is expected to be syndicated to a group of commercial banks... [The company also] sees significant earnings potential from its foray into A[US]'s rail network earlier this year. Tranz Rail... holds a 27% stake in the consortium which... bought Tasrail, a freight operator in Tasmania, for about... \$NZ27 million...

[AUS's P]M... has honoured an 86-year-old election promise by announcing \$A100 million... in federal funding for the 1410km Alice Springs-to-Darwin railway.

...Trains are staging a comeback in A[US] as privatisation and huge new projects promise a transport revolution... In recent weeks, the federal Government has sold the A[US]n Railways Commission, pledged... [funding] for a... Alice Springs-Darwin railway and pushed negotiations for a... \$2 billion-plus... Sydney-Canberra 'Very Fast Train'... Interest has been received from France, Germany and else-where in Europe for tilt-trains, magnetic levitation and speedtrains able to reach 450 kph on dedicated tracks[('the fastest train in the world is the French TGV – in speed trials during 1990, this train reached an amazing 515 kph')]. The even more ambitious Melbourne-Darwin railway plan also remains on track, its chief promoter... said. [His] dream is for a railway which travels through south-eastern A[US]'s wool and wheat areas, north to the N[SW] coalfields, through Queensland's sugar and coal districts, to Mount Isa's base metals mine before ploughing through the Northern Territory's goldfields and on to Port Darwin. Backing has been committed by finance houses in London, New York and Tokyo... [while accounting] firm KPMG has declared a \$5 billion single-line track profitable... The sell-off of A[US]'s railway system is based on the logic that the business sector will offer services and control work practices better than government. This the Government has learned from entrepreneurial truckies who have left the railways standing still over the past two decades. In 1975, rail carried... 60 billion tonne-kilometres against 34 billion by road, 101 billion by sea – the main route for bulk commodities – and 0.11 billion by air. By 1990... trains carried... 87 billion tonne-kilometres against road's 91 billion, sea's 94 billion and air's 0.08 billion. City passenger transport shows similar trends, with road and air passenger kilometres rising strongly but rail's falling, to 2.5 billion in 1990 from 6.1 billion in 1971. Car use over the same years motored to 137.5 billion from 6.5 billion...

[The recently merged Bovis Lend Lease has won the management of the \$A1.4 billion Parramatta Rail Link project in Sydney, a key element of the NSW 10-year transport development programme. It will link Chatswood in Sydney's northern suburbs with Parramatta in the west. A total of 27km of twin-track will be laid for the link. Of this, 19km is underground, with 12 stations to be built along the way. Bovis managed the development of a redesigned Sydney Airport, a \$A500 million project, and has also been busy on the Olympic Games site at Homebush. Bovis, owned by AUS's Lend Lease Corporation, earns \$A3 billion annually, making it one of the world's top 10 global project management, design and construction companies.' In related news,] an Auckland City Council report... outlines seven transport options to link Orakei with Panmure. [One is the *four-lane-highway* already being considered, while t]hree options involve variations of light rail... • Light rail on existing tracks with park-and-ride and bus interchanges... overhead power lines, station upgrades, 10 light rail units and a new station at St Johns. Cost: \$121 million • A two-lane arterial road-light rail combination, with 10 light rail units. Cost: \$219 million... • Light rail options at Mt Wellington quarry, which becomes a rail station, along with St Johns and the Auckland University Tamaki campus. Cost: \$45-59 million. [Another option involves upgrading] existing heavy railcars, [while providing] better stations, bus transfers[and] park-and-ride systems. Cost: \$61 million.

...An Auckland City Council team studying the eastern corridor transport system overestimated the cost of enhancing the existing rail network by \$12 million... At a public meeting in Parnell last night red-faced city council officials and consultants said the cost was, in fact, \$49 m... Officials also revealed... they had overestimated the costs of the... light rail options relating to the Mt Wellington quarry site [by about \$20 m]...

Tranz Rail last night suggested the Auckland City Council had further bungled its estimates for enhancing the eastern corridor... The council team... said that 10 new diesel carriages would be needed to provide a train every 10 minutes. However... Tranz Rail officials said the revised figure should be slashed by a further \$20 million, because only six new train units were needed to provide a frequent service between Panmure and the city... [for] 3300 passengers every hour. The present half-hourly service catered for only 550 passengers an hour. A council transport spokeswoman... said estimates in the initial report were never intended to be final – and cost was not the only factor the public had to consider.

...Auckland City Council consultants last night stuck to their assessment that 10 new diesel train units will be needed... [A principal of the] consulting engineers, told a Panmure meeting... that "we've agreed to disagree" with Tranz Rail...

The debate over... Auckland rail services has taken a new twist with Tranz Rail being accused of short-changing commuters... "Residents have been lobbying Tranz Rail for several years about a new[western] service but the company won't do anything unless regional ratepayers pay for it,"... [an] Auckland regional councillor... said. The company had not responded to an offer by the regional council to apply for funding to set up a trial service... [to] Helensville, Huapai and Kumeu[, where about]... 18,000 people live... and several large housing developments are under way... More than 400... residents say they would take a train to work instead of their car if the rail commuter service was extended... [But Tranz Rail] says it is struggling to cope with demand for the core service and extending the service to Kumeu... and Helensville is a low priority... Crush-capacity loads have forced Tranz Rail and the regional council to double the size of peak-hour trains from Waitakere to Auckland central in a new service which began on Monday... The... general manager... said setting up a trial would involve two extra units at a cost of around \$8 million. "I don't believe the ARC would set up an economically marginal trial with that sort of capital outlay for the benefit of relatively few people." Research had shown that demand for additional rail services was higher in[South Auckland and] Pukekohe than rural West Auckland.

...A mass pickpocket operation that went wrong on a crowded Tokyo commuter train yesterday led to 65 people being taken to hospital after the thieves sprayed teargas on passengers. The incident triggered panic as passengers feared they were involved in a repeat of the 1995 sarin nerve gas attack on Tokyo's subway system which killed 11 and made thousands ill... A fire department spokesman said the man who sprayed the gas was arrested... Most of the gang escaped.

...[an] Auckland teenager 'has been arrested and charged with breaching the Railway Safety and Corridor Maintenance Act, which carries a maximum \$20,000 fine and/or six months in prison. A second teenager, who will spend tomorrow in hospital undergoing plastic surgery for extensive burns instead of flying out for a year-long Rotary exchange in the US, has yet to be interviewed. 45% of his body was severely burned by an arc of current from 25,000-volt overhead powerlines when the pair climbed on top of a stationary train in Ohakune early on Tuesday. Together with five friends from Mt Albert Grammar School, they had travelled to the second teenager's parents' chalet in Ohakune to celebrate his 18th birthday and say goodbye before the star goalkeeper in the school's second XI soccer team left on his overseas journey. But his plans changed in a flash of blue and green light when the electric shock set him on fire and sent him flying 4m to the ground. He is expected to be in Middlemore Hospital for another two months while he undergoes skin grafts and heals from the burns, mainly on his lower body. He will need physiotherapy to help the muscles in his legs recover. His father said he would ask

Rotary in the US if his son could start his exchange in the middle of this year. The father said the family had been upset by the accident but were thankful their boy was alive. The father was outraged at suggestions that his son had been skylarking and might be prosecuted. It had not aided his son's recovery. The father said his son was adamant that he went up to retrieve a cellphone that was thrown on top of the train. "He has been made out to be an irresponsible idiot." The father added that his son would not be alive if it were not for his friends. The friends put out the fire, and one resuscitated him while another ran to call' 111]...

Passengers stuck in a train in the Rimutaka tunnel for two hours yesterday were angry that a communication breakdown delayed the call for help... Tranz Rail is urgently reviewing its communications system after the incident, which stranded 61 passengers in the Masterton-Wellington train a third of the way into the 9km tunnel... It meant the guard had to run the 3km to the... end of the tunnel before he could use his cellphone... Tranz Rail said a minor fault at its Wellington train operations centre meant the telephone system in the tunnel did not work... Passengers were initially told the driver had stopped because of a possible engine fire after his cab filled with smoke, but the problem was later identified as electrical arcing... A Carterton woman... wrote a protest letter in the dim emergency lighting and other passengers signed it... "If it was a serious fire situation we would be dead," said one passenger[. 'Emergency equipment problems were also identified after Eurotunnel's fire last year']...

Electronic grids, one of several devices designed to keep animals out of the Channel Tunnel, have broken down. Water from road spray dripping off lorries as they travelled through the tunnel caused a short-circuit in the electrified cattle grids. Officials were content that video cameras and perimeter fences, which are working normally, were enough to keep animals out of the tunnel... [Meanwhile, the latest] survey shows one-third of [the] British public remain convinced[that the] Channel Tunnel is still unsafe for passengers following [the] fire in November...

The French and British Governments[have] agreed to extend Eurotunnel's lease to operate the Channel Tunnel by 34 years to 2086 but in return will take 40[%] of after-tax profit[, which is]... more than Eurotunnel had expected.

...Eurotunnel's] chairman... said the company will beat its own forecasts for first-half profit and urged shareholders to approve a £8.5 billion... debt reorganisation. Eurotunnel lost £685 million last year as interest payments on its debt, mostly accumulated in building the tunnel that opened in 1994[for a 'cost of £10 billion', overwhelmed a 71[%] increase in revenue.

...[Ailing rail – it's all dark at the end of the tunnel Pssst, wanna buy a railway? If you think your summer hasn't been the greatest so far, spare a thought for the people trying to present a positive image of our national rail company as a dynamic, caring and professional business. Barely a day has gone by without some aspect of Tranz Rail's activities hitting the headlines, invariably for the wrong reasons. Train crashes, derailments, stranded passengers, job losses, line closures, safety inquiries, power struggles for control. So it is hardly surprising that the two major shareholders want to sell most of the company. They are Wisconsin Central, with 24%, and FR, with 14%, making a 38% controlling interest. Up for sale are all the passenger train services, both the long distance Tranz Scenic and the Auckland and Wellington suburban Tranz Metro businesses, the track and train maintenance divisions and the refrigeration business comprising trucks, containers and wagons. The plan is that within two years, 85% of the 4000 employees will no longer work for Tranz Rail. They will have a new employer or employers, depending on how many pieces the business is chopped into, or they will be laid off. Bids for Tranz Scenic closed two months ago, and about five companies, including Transdev of France and West Coast Railway of AUS, are said to be interested. What further complicates the issue is that FR and Wisconsin Central want out altogether. Before they even approved the management plan to radically restructure the business and boil it down to its most profitable component – freight including the inter-island ferry service – both had, apparently independently, already decided to put their shares on the market. But that did not become public until later, and it is not even clear that senior managers were aware of it when they announced the restructuring. As a result, many observers, and no doubt prospective buyers, are asking how good the restructuring plan is. If the aim of increasing profitability and the share price is expected to be achieved, why sell now? FR is not saying. A company spokeswoman said: "It's a private company with private interests. If they make a decision to sell, they're not under any obligation to say why." Wisconsin Central was itself bought by Canadian National Railway for \$US1.2 billion last month, and the Canadians are said to be just as anxious to sell its Tranz Rail shares. Interestingly, many NZers still think of the railways as something we all own. In reality, all NZers still collectively own is the rail corridor, the land the 3904km of 1067mm-gauge track runs along, and even that is leased to Tranz Rail for a token \$1 a year until the end of 2030, with a right of renewal for a further 40 years. Some, notably the Greens and Alliance, are wondering whether the Government would not be better off buying back in rather than helping the ARC lease the rights to the Auckland suburban rail network. But why would the Government want to buy a business rendered dysfunctional by years of neglect just when it has started making losses again?' 'Prior to selling NZ Rail, the Government wrote off \$1.2b of debt (the network was losing \$1m/day plus lots of cargo – even an entire train'!).

...AUSn transport group Lang Corporation, in aggressive expansion mode, is being touted as a potential buyer of a 38% stake in Tranz Rail. On Tuesday, Lang's managing director outlined a range of growth opportunities for the company, which has a war chest of \$A400 million for acquisitions with more than that in reserve. He said that the company might bid for AUS's National Rail and/or Freightcorp, either alone or in a consortium. A Lang spokeswoman said any opportunities in NZ were more likely to be in stevedoring than rail. Tranz Rail's share price closed 15c higher on Friday at \$3.80, which means that a 38% stake is worth \$175 million.'

...Tranz Rail locomotive engineers have threatened to put a ban on more than half of the company's fleet – a move that could cripple it as it tries to sell its intercity passenger service, Tranz Scenic (which incorporates the Northerner, Overlander, Bay Express, Tranz Coastal, Tranz Alpine and Southerner routes). The 482 engineers say that 70 of 114 diesel-powered Dc locomotives in service are badly corroded and must pass safety checks by next Friday. Failing that, they will refuse to drive any of them faster than 50 km/h, and a fortnight later will refuse to drive them at all. But Tranz Rail said last night that it was "quite confident" there were no safety problems with the engines, which are all more than 50 years old. However, the Dcs fared particularly badly in recent derailments. When a milk train went off the rails north of Wanganui in November, the cab of the engine came off, said the general secretary of the Rail and Maritime Transport Union. Fortunately, the driver was in a different engine. Another driver, who gave evidence at last year's ministerial inquiry into Tranz Rail health and safety, told how he fell through the rusted floor of a Dc and cut his leg. Repairs to that locomotive cost nearly \$50,000'.

...7 small towns lose train service in a bid to cut the Auckland to Wellington travel time.' Incidentally, 'a British train company left passengers standing on platforms on the day it pledged all services would arrive on time. Stunned passengers watched the train from Ramsgate to London sweep through four stations without making scheduled stops, because it was running late. "We couldn't believe it," said one stranded commuter. "There's no point in running trains if you don't pick up passengers." The company said: "It is a standard operational decision taken to avoid longer delays to more passengers."'

...the world's longest suspension bridge at almost 4km is due to be completed in 1998, providing the final link between Japan's four main islands'...

The 'Crown Princess of Sweden and Crown Prince of Denmark yesterday inaugurated a bridge linking their countries for the first time since the two were landlocked during the Ice Age 7000 years ago. Wearing construction hard-hats, the royals watched a floating crane put in the last section of the 16km Oeresund Bridge, named after the narrow strait separating eastern Denmark and southern Sweden. When the \$NZ4.2 billion link opens to traffic next July 1 after four years of construction, it will take just 10 minutes to travel between Denmark's capital Copenhagen and the southern Swedish city of Malmo. That compares with today's 45-minute fast-ferry ride. The bridge, built partly across an artificial island, has a four-lane motorway, a dual-track electric railway and an undersea tunnel. Traffic volume is projected at 11,000 motor vehicles daily in the first year. With expected annual growth of 1.7%, bridge tolls should repay the investment in about 30 years.'

...a] planned 95km... 36-metre-wide... bridge linking Indonesia and Malaysia across the Malacca Strait will cost \$[NZ]3 billion and take at least five years to build.

...Macau has proposed to build a \$HK14.1 billion... bridge to link the Portuguese enclave with Hong Kong and the... Chinese city of Zhuhai.

...the world's longest rail and road suspension bridge [will be opened]... in Hong Kong today... The 2.2km long bridge... was built by an Anglo-Japanese consortium...

Hong Kong gave full rein to its party spirit on Sunday by celebrating the opening of a spectacular new suspension bridge in extravagant style, barely a week after a suspected sabotage attempt... Anxiety about security ran high after cables at the bridge were cut... earlier this month... As the shadows lengthened, the former British P[M]... who signed the 1984 treaty governing the handover of Hong Kong to China, declared open what she called "an impressive and inspiring entrance to this modern city." ...Fireworks and lasers lit up the sky... [as curtains] of fire dripped down from the bridge-deck – a pyrotechnic special effect created especially for the \$HK5 million (\$[NZ]933,000) display... For Hong Kong, the \$HK7.2 billion bridge... marks more than just an engineering feat... The bridge links Hong Kong to a new airport taking shape on the island of Lantau... due to open next year... The completion on schedule of [the] vital... component in the \$US20 billion... airport project represents a practical victory over the political row that dogged Sino-British relations... China denounced the project as extravagant and accused the British of trying to squander Hong Kong's wealth. The bickering dragged on for more than five years before agreement was finally reached in 1995. But in the meantime, the Hong Kong Government quietly got on with the work.

...Back in the first heady days of his term as Hong Kong's last British governor, [he] declared he would make his final departure in 1997 from the huge new airport his administration was determined to build... whether China liked it or not. As it turns out, [he']s catching the royal yacht Britannia rather than a plane out of Hong Kong. But he is leaving behind the magnificent airport he promised to build... For years, the British and Chinese wrangled over whether or not the airport should be built and later how the total cost of \$HK156 billion would be met. The Chinese were deeply suspicious that the whole thing was a... plot to drain Hong Kong's coffers of its vast reserves and repatriate that money via architectural, engineering and building contractors to Britain... The Tsing Ma bridge... which will carry the estimated 35 million visitors expected to use the airport every year... was opened this April... [The] bridge is... satisfying Hong Kong's obsession with superlatives. Hong Kong people love to boast of having the world's longest outdoor escalator, the world's busiest container port – although it's only 'the world's third largest container port' – [and of holding the record for the greatest number of Rolls-Royce cars per head... [Hong Kong also 'has several restaurants claiming to be the world's largest'] There is another record in the offing the airport authorities are less proud of. According to the disgruntled airlines the new airport's landing fees will be set much higher than those for Kai Tak airport and will make Chek Lap Kok the world's most expensive airport outside Japan. - 1997

Take about 40[%] of... the N[Z] economy... and you've got the amount the Hong Kong Government has spent on transforming two islands into a state of the art airport... For that sort of money you would expect to produce some amazing trivial statistics – and there are plenty of those. For example... the... terminal is the biggest building in Hong Kong[. it contains]... 6.5km of sheet glass[, and]... the wool used in the 135,000 sq m of carpet... would stretch all the way to the moon – and part the way back – if unravelled... Its baggage claim area alone fits five Boeings wing-to-wing... marine operations to reclaim... 938ha of land... for the airport moved the equivalent of an Empire State Building every five days... the entire reclaimed island is the size of Kowloon peninsula... Few would question Hong Kong's need for a new venue. The lack of space surrounding the old Kai Tak airport in the central Kowloon peninsula – which had become the world's third busiest for cargo – limited its development and constrained capacity. An estimated 15,000 flights could not be accommodated in 1995, costing Hong Kong 2.5 million passengers and billions of dollars in tourism receipts. Chek Lap Kok, on the other hand, has excess capacity. Once the second runway is completed... Chek Lap Kok, which unlike Kai Tak can operate around the clock, will be capable of handling almost 80 movements an hour. Kai Tak could handle only 31. Chek Lap Kok will also have an ultimate capacity of 87 million passengers and nine million tonnes of air cargo a year... [However,] charges at Chek Lap Kok... have come under much scrutiny from airlines – placing a cloud over hopes the airport will become a regional hub. The charges are to ensure the Hong Kong Government gets a 5[%] return on its investment of \$HK50 billion. There seems an unwillingness to buy into the argument that the Government should offset its cost by using the proceeds it stands to get from the sale of land at Kai Tak, estimated to be worth \$HK240 billion... The director of corporate development for Cathay Pacific (Hong Kong's flag carrier)... felt the airport charges[, which are]... about 30 to 40[%] above Kai Tak's]... were "unrealistic" in the current environment... Cathay has more at stake in the airport's succeeding than most, as it is the largest private sector investor, having shelled out \$US1 billion. With hindsight, [the director] admits Cathay had not needed as big a facility from day one... Airlines are not the only ones affected by the high airport charges. Duty free retailer King Power Alpha pulled out of its contract, leaving 12 shops empty at the airport on day one. The blow came despite the Airport Authority appeasing retailers about a month ago by granting them a 50[%] rent reduction for the first six months. For tourists, departure taxes have been cut in half... [to] \$HK50. Travel to and from Chek Lap Kok... [on the] Airport Express train... [that takes] 23 minutes... to[reach] Central HK... has been reduced by 30[%]. Even so, the new airport... adds at least \$HK500 in costs for a family of four holidaying in Hong Kong... Despite the spellbinding... price tag and apparent meticulous preparation, its first days of operation have been marred by problems. Cancelled flights, passengers stranded on the tarmac, software bugs blanking out flight information and misplaced luggage were among the things that went wrong... [By the way,] Kansai International Airport, with its 1.6 km long terminal building with 92-metre high glass ceilings, is the only man-made structure, other than the Great Wall of China, to be visible from space.

...The administrative capital of Malaysia is being progressively moved from Kuala Lumpur to... Putra Jaya, 25km to the south. The new airport – which has cost nearly \$5 billion – is close to this area. A high-speed rail link between Kuala Lumpur and the airport is planned. The journey by road takes between 35 and 40 minutes. The site occupies 100 sq km. The airport has 80 gates and the capacity to handle 25 million passengers a year. When another two runways are built, this is expected to increase to 60 million in 20 years' time... Some parts have been designed to cope with loading "double-decker" jets – super-large passenger planes still at the computer design stage... All domestic, Singapore and mixed flights are served by a pier connected to the main terminal, and all other international flights arrive or depart from a satellite building on the main parking apron. An automated shuttle train takes passengers between the main terminal and satellite building.

...EVEN the elk have been taught how to avoid trains on a high-speed rail link to Oslo's new airport which opened last week. Food has been laid out to lure them to safe underpasses... [A] collision between a train and an elk could spell long delays and missed flights[, although]... most of... the rail track... [is] fenced in to avoid collisions... Human travellers may have a tougher time adapting to Gardermoen airport almost 50km north of the capital... Getting to the airy wood, glass, stone and steel terminal will be the biggest problem. A 14km rail tunnel north of Oslo is unusable because of leaks that have drained lakes from forests above, meaning trains will have to take a long, slow detour. That may prompt travellers to use cars or buses on the already clogged highway between the city and the airport... [However, in] a bid to keep traffic off the roads, the cost of parking a car at the airport will be as high as \$35. And a taxi ride to the airport from Oslo is likely to cost \$135 – almost double the rate between Stockholm and Arlanda airport which is almost an identical distance... Passengers are likely to grumble about long distances in the 819m terminal, despite the distractions of works of art, including... one sculpture widely compared to a penis. The baggage system has crashed repeatedly for charter passengers who have been trying out the \$2.8 billion airport... Officials dismiss the problems as teething troubles. Dubbed "circus Gardermoen" by one television documentary, officials ascribe much of the media doom-mongering to reluctance to give up the convenience of the existing Fornebu airport, just 10km west of the city centre. Fornebu, with one runway to Gardermoen's two, is being closed because of lack of capacity and... Boeing 747 Jumbo jets are unable to land there. Travel is surging in Norway... Air traffic has[risen] from 4 million in 1980 to 11.8 million[, making]... Norway... one of the biggest per capita markets in the world. The country is cut by fjords and mountains, making air the first choice for many.

To keep pace with the rapid growth in tourism, air travel and air freight, Auckland International Airport Limited has spent millions of dollars improving facilities since it [took over the management of NZ]'s primary gateway airport in 1988... Faced with forecasts of twice as many passengers using the airport in the early years of the 21st Century, including a predicted four-fold increase in the number of people who require processing at peak times, [AIAL] has embarked on an even larger project, the complete redevelopment of the International Terminal.

The \$150 million expansion to the international terminal at Auckland Airport is more than two-thirds of the way towards completion. Begun in August 1995, the project is on target to be finished by the end of this year... The airport company's corporate affairs manager... said that the project would double the size of the terminal... Work is almost finished on the ground floor and is about to start on the first floor, where there will be 30 shops – around twice as many as at the existing terminal... She said a difficulty of the expansion was that it was like remodelling a house while still living in it... It was prompted by the 50[%] increase in the number of passengers using the terminal between 1989 and last year.

...Soaring air passenger growth through Auckland might soon out-strip the capacity of a \$150 million airport terminal expansion, Manukau City councillors were told yesterday... Meanwhile... [the] chief executive of [AIAL]... told a planning hearing that... use of the new eastern road access had risen to 12,000 vehicles a day just four months after opening – up from an initial projection of 7000 vehicles – and he suggested a dual carriageway might be needed. - 1996

A commercial “code-sharing” arrangement has been established between Air N[Z] and American airline giant United Airlines... with the two airlines planning to share customers and operational facilities on flights between the U[S, AUS, NZ] and the wider South Pacific region... It is predicted that this will increase the number of passengers flying between North America and N[Z]... The total number of US passengers arriving in N[Z] through Auckland International Airport for 12 months to October 1996 was in excess of 250,000.

Auckland International Airport sees approximately 50 planes arrive from or depart for Los Angeles every week, making it the airport's second most popular international route next to Sydney, which averages about 40 planes per week each way (while approximately one plane a day flies from Auckland to Los Angeles via Sydney). ‘In 1996 the total number of passengers who travelled through the airport was up 7.1% to 7,494,783 (4,452,479 were international travellers); aircraft movements were up 4.5% to 135,762 (23,564 international); cargo totalled 193,004 tonnes (153,262 international).’

On current predictions, passenger movements through Auckland International Airport could increase nearly six times to as many as 18 million a year by 2010. [AIAL] is ready to meet this growth through its Strategic Development Plan which foreshadows an investment in airport facilities of over \$1 billion... Planners are already seriously considering the next major steps – including a new domestic terminal and provision for a second runway to the north of the present runway... - BEYOND 2000

Half a million bags have now been sorted by the new automatic baggage sorting system which was “switched on” in December[1996]. When bags are checked in at the International Terminal they are given a tag with a bar code... A bar code reader reads the baggage tag before selecting which lateral conveyor the bag should follow to be put into a container with the other bags for the same flight. The bar code reader works in a similar way to the bar code reader used at a supermarket checkout. However[as]... the system is automated, there is no operator to check that the baggage tag is in a position in which it can be easily ‘read’. To minimize the potential problems that these difficulties could create, the bar code reader has eight heads which search for the bar code from above, beside, in front, behind and... underneath the bag. If for some reason the bar code can't be read, the bag is directed to a loop where an operator enters the bag's details into the computer... We've come a long way... In just 30 years Auckland International Airport has grown from a small regional operation to... a significant contributor to N[Z]'s economic growth and development... Auckland International Airport today is the home of 28 international airlines, 8 domestic airlines, 6 commuter airlines, 5 cargo airlines, 7000 employees... and over 150 companies... But still we're building for the future... And, in the next 30 years the sky won't be the limit... we're looking to create an airport... that offers greater prosperity and exciting opportunities for our children, and their children after them. - AIAL

A Papatoetoe school fed up with lessons being disrupted by low-flying aircraft from nearby Auckland Airport is seeking compensation. The principal... said noise from planes landing and taking off... disrupted all out-door events, from school assemblies to sports activities... [He] said a new school hall would go part-way to solving the noise problem – and he reckoned the airport should foot the bill... The scream from the jet engines was also a problem inside classrooms, where teachers had difficulty making themselves heard. The nuisance appeared to be getting worse... and the school feared disruptions would increase when a second runway was built. The Manukau City Council is considering setting noise tolerance zones in its 10-yearly district plan and restricting aerial access to the new runway... According to a submission to the council by Residents Against Airport Noise, the school is exposed to “undesirable” average noise levels of 60 decibels... [T]he average noise level was taken over 24 hours – a single aircraft overhead produced a maximum noise level of about 80 decibels to those on the ground. Noise levels could range from 30 to 40 decibels in the council debating chamber, to 90 decibels from a domestic lawn mower. The residents' submission said[four] other primary schools in the area[are] exposed to similar noise levels...

Auckland aviation chiefs went down “on their knees” to Manukau civic leaders yesterday against proposed constraints on a future second runway... A[IAL]'s chief executive... said a ban on using eastern approaches to a parallel runway, expected to be built in 10 to 15 years about 2km north of the existing one, would place a severe and unreasonable limit on a facility of critical importance to Auckland and N[Z]... He confirmed a willingness, however, to accept no or only limited night flights over Papatoetoe from or to the second runway. Pressed by council members, [he] said he did not want to exclude special cases such as emergency landings. Manukau planners say about 60,000 people would be adversely affected by aircraft noise if carte blanche was given to operate the runway from any direction. Their preference is for noise restrictions forcing aircraft to use only the second runway's western approach – over harbour waters – and taxi to the existing one if needed to take off into easterly winds. This would affect only 36,000 residents. The proposed district scheme also required new houses, schools and hospitals in specified zones under the existing runway's flight path to be insulated against noise at the owners' expense.

...Manukau City councillors won a guarded indication from the Auckland airport company yesterday of help in insulating homes from new runway noise. The company's chief executive... initially told a council committee that costs of land-use controls such as insulation must be treated as a “community-wide issue.” He said the company and airlines were investing heavily in new airport facilities and quieter aircraft to the economic benefit of the community at large, so it would be unreasonable to have to foot more costs. Questioned by the committee, however, he left the door open to assisting established home-owners in Papatoetoe and Otara who might need insulation. Manukau planners have proposed noise tolerance zones up to 14km east of the existing runway, where future homes would have to be insulated... The Manukau planners do not believe they can force existing home owners to install insulation retrospectively.

...[‘concern about aircraft noise is a common problem for communities that are situated near an airport. Managing that noise is a challenge for airports worldwide. In a bid to be more proactive and sensitive to community concerns about noise levels, AIAL is a member of the Airports Council International

– the worldwide association of airports, which advocates the need for more stringent aircraft noise and engine emission standards. Its aims are to encourage manufacturers and airlines to produce and operate quieter and cleaner aircraft engines. The likely overall impact of aircraft noise on the environment is measured by a number of factors that take into account: aircraft type and age, landing and takeoff times, flight paths and overall weather conditions.’

... ‘After two years of battling, three trees intruding into Rotorua Airport’s flight path will be cut down to allow Boeing 737-300s to land and take off. Two-thirds of the runway cannot be used because a 4500-strong forest of Kahikatea trees is too high. To meet international safety rules passengers and luggage have at times had to be offloaded to make planes lighter. But the move has angered some Maori. The local Ngati rangi Teaoere hapu argued trimming or felling the Kahikatea would damage the forest and the airport – which the group has a Treaty of Waitangi claim over – should close instead. 400 trees might have to be trimmed or felled to ensure planes could land safely, said the Rotorua Regional Airport Authority chairman. Kahikatea had been cut down in the past, including by the owners – the Ngati Rangiteaorere trust – who chopped down 100 that were shadowing their homes, he said. While the airport authority plans to extend the runway, a report said all planes would be grounded if the 400 trees continued to grow at their current rate and the runway wasn’t lengthened.’]

...TROUBLED air traffic control company Airways Corporation... advertised yesterday for 18 trainee air traffic controllers, twice any previous intake, and also asked the applicants to pay tuition fees for the first time... [The corporation’s operations] manager... said the tuition fee of \$12,000 or \$10,000 if paid in advance, was not excessive when the potential earning power of the job was taken into account. “We can’t guarantee the jobs but it’s our intention that anybody that completes training will get a job,” he said... [while adding that] there was no staffing shortage at Airways Corp... Last week, the *Sunday Star-Times* revealed that Auckland International Airport was without air traffic controllers for a 20 minute period because of a staff shortage. On Wednesday, [the]Transport Minister... ordered a Civil Aviation Authority investigation into the incident. Wellington has also been affected with aircraft being ordered to fly at a separation of 12 miles, rather than nine, during a short staffed eight-hour period on Thursday. The extended separation caused delays for an unknown number of travellers in and out of the capital. Despite the problems, Airways Corp claims N[Z] has an excellent air traffic system and safety is being maintained rigidly, which sometimes disrupts services... During the last 12 months, [it]... has brought controllers from South Africa and Canada. The 10 Canadians had worked out well but three of the eight South Africans had returned home... Meanwhile, flight operators are threatening to withhold tens of thousands of dollars in fees until air traffic control improves.

...Air traffic controllers claim that the Airways Corporation has ordered them not to tell pilots the cause of holdups at airports... When flight delays are expected at an airport controllers have to send out a Notam – notice to airmen – warning of delays and advising the carrying of extra fuel. The Notam lists the reason for the delay. A July corporation memo tells controllers to leave the reason off the list. It says: “A perception has developed that any or all traffic delays are caused by staff shortages.” The controllers’ advocate... said the shortages led “to a curtailment of services from one end of the country to the other.” The Airways Corporation was sufficiently embarrassed by the shortage that it did not want them to be known any more and would prefer not to publicly acknowledge them, he said. The corporation’s operations manager... said... [it] was important for pilots to know the effect of the delays but not the reason behind them. It might be useful for pilots to know that lightning had struck and knocked out a navigation aid, but knowledge of internal operations would be of no use. Meanwhile, a controllers’ internal information bulletin says reduced controller numbers are becoming “the norm” at Wellington Airport. It was claimed that at the weekend one radar controller covered the work usually done by three...

Friday 13 could be a black day for some travellers, as air traffic controllers have called another strike. The controllers... had already given notice of a strike on[the preceding] Monday... Minutes before the strike notice was given, an embarrassed Airways Corporation admitted it bungled its lockout plan for the first strike. It intended suspending the staff for 21 hours after the strike but it failed to deliver up to a third of the lockout notices in time. Two weeks’ notice is legally required by either party for strikes or lockouts... The Airline Pilots Association, which represents the controllers, said the corporation had not told it the lockout threat was withdrawn.

...Air travellers face a morning of frustration today – and no sign was to be seen last night that a further strike by air traffic controllers on Friday will be averted. The three-hour stoppage will bring national and international airports close to a complete halt from 7 am to 10 pm, the peak commuter period... [7] international flights will depart, mostly from Auckland, and none will arrive... Between 10,000 and 20,000 travellers’ plans have been disrupted for the third time in 10 months... Controllers struck for three days from December 4 and for four days from December 12.

...Air traffic controllers say they will strike again after yesterday’s three-hour stoppage. However, the school holidays are likely to be unscathed. The controllers are angry that they have been unable to renew their collective contract with the Airways Corporation. They want a 7.75[%] pay rise but have been offered about 3[%]. At strike meetings yesterday morning they rejected a plea from the corporation to cancel a fourth strike scheduled for Friday and instead discussed the timing of further action... One long-serving controller said that at the Auckland meeting there was considerable frustration. Many of the controllers wanted to hurt the corporation and its management. “There’s no trust any more. There’s so much stress, it’s not a particularly nice place to work.” ...“It’s got nasty, now it’s going to get personal,” another controller said... Controllers did not want their names published. They say they will be sacked if caught talking to reporters.

...Airlines are disappointed that aviation regulators will not relax contingency flight restrictions this morning for another three-hour strike by air traffic controllers... The contingency plan meant reducing more than 400 flights to about 36...

The Airways Corporation and air traffic controllers will return to talks today to try to resolve the pay dispute. Controllers went on strike for the fourth time yesterday, walking off the job at airports throughout the country for three hours from 7am. A repeat of Monday’s action, it affected... about 10,000 travellers. Only the four main centres were part of the Civil Aviation Authority-approved contingency plan and fog closed Christchurch for much of the strike... [A] spokeswoman... said the cost of the strikes to the corporation was significant... An Air N[Z] service clerk said international passengers checking in for domestic flights had been angry, but on the whole passengers had handled the delays well.

...Air N[Z] ground staff have given notice of a strike that could cripple the airline on October 9. About 700 baggage handlers, administrators and receptionists threatened to walk off after pay talks broke down... A strike would ground most of the airline... but an Air N[Z] spokesman... said: “We aren’t of the view that everything comes to a halt.” ...caterers and maintenance engineers, covered by separate collectives, wo[n’t] be involved.

...Air N[Z] maintenance engineers will meet next week to consider lifting a 10-week-old overtime ban, but more than 2000 other workers remain intent on striking... Maintenance engineers backed by two unions began industrial action... against a company proposal to make any pay rise conditional on removing a requirement to give 14 days’ notice of shift changes. Since then Air N[Z] has sent three aircraft overseas for maintenance and there has been some delay to scheduled flights.

...Air N[Z] has upset unionists by looking at opening an Indian accounting office with... salaries starting at \$5000 a year for computer operators, rising to \$10,000 for supervisors and \$30,000 for senior managers... Accounting staff facing job cuts in Auckland are outraged... “Here is a company returning \$200 million-plus in profit seeking to use cheap labour from overseas... It is our national airline – where is their commitment to our country if they are going to sell our jobs to India?” ...A Service Workers Union spokesman... said accounts workers had already been told to expect deep job cuts as part of a company-wide savings project after a \$35 million decline in profit... last year... Air N[Z] saw British Airways, a company with a record of “outsourcing” work, as a model of operating efficiency. British Airways has a large reservations office in Bombay, where clerks linked by computer lines to London take bookings from passengers thousands of kilometres away... Unionists would seek a guarantee that the airline did not intend sending jobs to where workers were paid 20[%] of NZ salaries. By the way, a[... contract to clean Port Vila’s Bauerfield

Airports was awarded to a company which has made political donations to Vanuatu's UMP party, the country's ombudsman... says... The significance of this "dubious transaction" was that the new five-year contract was worth five to six times what it cost the Department of Civil Aviation to do the job themselves, she said. The tender is therefore a needless and reckless misuse of the public's money. She recommended that the politicians responsible pay for the losses they had caused the Government and the people.

...Air N[Z] and Ansett are among airlines considering lifting fares... after a recommendation by the international aviation body for a global rise of 3[%]... This follows an emergency conference of the International Air Transport Association in Geneva over a 43[%] increase in the price of fuel in the past year – 37[%] since June. Prices have rocketed since the renewal of tensions in the Middle East ruined an agreement to bring Iraqi oil back on to the world market... The international organisation... says fuel accounted for an average of 10.9[%] of total operating costs last year... Qantas confirmed that it would raise A[US]n domestic fares by 2.5[%] today... But British Airways, which raised fares by 1[%] several weeks ago, says the strength of the pound sterling[– and a cheaper salary bill, perhaps? –] means it is unlikely to go to the full 3[%]... A Ministry of Transport spokesman... said there were several bilateral agreements between N[Z] and other countries which required airlines to apply "at both ends" to introduce new fares. Aside from these, Air N[Z] and other international airlines operating through this country could apply as a group for an exemption from Commerce Act restrictions against pricing arrangements, and factors such as fuel costs would be considered.

...engineers at Air N[Z]'s three maintenance bases have lifted a three-month-old overtime ban after reaching a deal which a union spokesman said involved a 3.5[%] salary rise now... 2.5[%] next year... and payments of up to \$180 a day had been agreed to for shift changes required by the airline at short notice... [Incidentally, u]sers of Ardmore Airport... are aghast at plans to boost some landing fees by more than 1000[%]. The South Auckland airport's new private owners have provided its 600 users with a proposed fees schedule which some fear will drive them out... Ardmore Airport Ltd, which bought the airport from the Government last year for \$3.42 million, will not discuss the plans before holding a meeting with users in two weeks. A consultation paper sent out this week, however, discloses charges for final landings of 1.35c plus gst for every kilogram of an aircraft's maximum takeoff weight and 0.67c a kilo for "touch and go" manoeuvres. The airport company inherited landing fees of only about \$3.50 for most aircraft, which users acknowledged yesterday were unrealistically low. These are in addition to an air traffic control charge of \$7.31 but have been unchanged since 1987. Users also accept that the company was trying hard to smarten up the 54-year-old airport, which had been neglected in its last years with the Government. But they were shocked to discover the size of the proposed charges, which will vary from about \$11.50 for light Cessna aircraft to \$192 for every landing made by Ardmore's 52-year-old Catalina flying boat. The 12.7 tonne Catalina, owned by a trust of about 100 enthusiasts, now pays about \$18 a landing... Also hard hit will be charter aircraft such as the three-tonne Chieftain air ambulance which faces a charge of almost \$50 compared with \$3.50 now. Its owner... said there were minimal facilities at Ardmore and he accepted having to pay \$40,000 to upgrade his taxiway but the[airport's] new owners "can't have it both ways." ...One industry source suggested flying schools were already looking for grass airstrips nearer Auckland to practice landings instead of facing "touch and go" fees, which... were not charged elsewhere... The general manager of Ardmore Flying School... said the fees would add \$900 to the cost of obtaining a private pilot's licence, \$3500 for commercial tickets and \$5000 for advanced multi-engine instrument ratings. "We are astounded at the magnitude of the increases." His counterpart at the Flightline Aeronautical College... feared the "ridiculous" extra costs might drive students to cheaper airports such as Hamilton or Tauranga.

...Users of Ardmore Airport... have won a compromise over contentious landing fee proposals but are warned of more rises next year... Although the fees are substantially increased, the company says they are generally below an average of charges imposed by 14[similar] airports and this means it must delay some upgrading plans, including those for runway resealing. It describes them as interim only, saying... [the company] will spend the next 12 months formulating future charges aimed at recovering all costs. Missing from the interim scale are fees for "touch and go" practice flights, which would have fallen hardest on flying schools... But the airport company's chief executive... indicated yesterday that these would be reconsidered once ways of recording all aircraft movements had been streamlined. [In related news, 'chronic jet lag causes a part of the brain to shrink and impairs mental functions, including memory. A study compared the size of the brain's temporal lobes of two groups of flight attendants who had different amounts of time to recover from jet lag. MRI scans found the group who had less time between flights had smaller right temporal lobes.']

...Overworked airline pilots on long-haul flights routinely fall asleep at their controls, an aviation industry report has revealed. A Combination of Human Factors Incident Report leaked to[London's] *Sunday Express* newspaper found pilots on transatlantic routes complained of inadequate rest periods between flights. One British pilot reported that... colleagues[are] given just 24 hours' rest on a return flight from the U[S] to Britain... According to the report, pilots complain 24 hours' rest is insufficient to recover from jet lag. Another British pilot said: "The constant three-day transatlantic trips are totally fatiguing. Now I have catnaps of up to one hour on the west-bound portion, as well as the night sector back." ...Flight crews on Qantas aircraft flying the Kangaroo route between A[US] and Britain have two to three days' rest in London before a 12-hour journey to Bangkok or Singapore. They would usually have another night's rest before the final flight back to an A[US]n destination and be given a week off after the nine-day, 35,000km journey to and from the U[K]... Despite aircraft having autopilot systems, the flight crews have to be alert for any sudden incident such as the loss of cabin pressure or turbulence which could destabilise the plane.

...Air travel could become so dangerous if safety standards are not improved that in 10 years the equivalent of 400 passengers on a jumbo jet will die every week in crashes around the world, pilots warned yesterday... at the British Airline Pilots Association's annual conference... [An] emergency resolution to the conference... noted with "regret and dismay" the "worldwide increase in air accidents during the 12 months since last year's conference." The resolution went on: "So far this year there have been 81 fatal accidents resulting in 2376 deaths – which is equal to a 70[%] increase over the whole of 1995." Balpa, the pilot's union, called on Governments, airlines and aviation agencies to "take all possible measures to reduce this appalling accident rate." The conference delegates... were particularly worried about "critically deficient" air safety in Africa... The warning... comes in the wake of the mid-air collision in India between a Saudi jumbo and a Kazakh aircraft in which 350 people died[(in 'the world's worst aviation disaster, 583 people were killed when two Boeing 747s collided on the ground at an airport on March 27, 1977'). However, 'flying is still safer than driving on the road. US National Safety Council statistics from 1986-95 reveal 23,371 car deaths per 100 million miles of travel compared to 125 airline deaths. But it is even more dangerous than either air or car travel to take an after-dark walk in New York']...]

For the second time in as many days, a piece of an aircraft has fallen out of the sky on to a New York street. Police in the Howard Beach neighbourhood of Queens, near John F. Kennedy International airport, said a resident found a 2.8m long forward wingflap... "There is about an inch and a half depression gouged out of the road and there are other little parts of metal in the area... it appears it fell from a great height...,"[a] police detective... said. On Wednesday, a Delta Air Lines jetliner was forced to make an emergency landing because of an engine failure that ejected a 25cm piece of metal from the engine on to two houses and a car in Flushing, Queens. No one was injured in either incident. On Thursday, a fuel tank from an F-16 fighter jet crashed through the roof of a house in San Antonio, Texas. No one was injured.

...[a] '25-year-old Auckland builder knows all about being dropped right in it. He was at a south Auckland building site when a deluge of human waste and chemicals soaked him and splattered the house he was working on. He thinks his unwelcome shower came from a plane discharging effluent before landing at Auckland airport. An AIAL spokesperson said she'd be surprised to find a plane's toilet system – which keeps waste in storage tanks until it can be pumped out – malfunctioned, but wouldn't rule it out. However, the builder doesn't need convincing. "We're right beside the airport and there's planes flying over all the time. Furthermore, where we're working is a wind tunnel so any discharge could have blown this way. At first I thought it was just bird

droppings but there was too much of it. It really stunk – I was dry-retching all afternoon from the smell.” It took several washes to get the smell out of his clothes. He doesn’t know what airline was responsible but says he’s come to see the funny side of it now. “It’s lucky I wasn’t looking up open-mouthed.”

...A ‘Helensville resident believes he can shed light on the mystery brown muck raining down on homes throughout the country – including Huia, where a plumber says his home was splattered with faeces last weekend. Some suspect the waste comes from aircraft. But the resident says ducks are the culprits.’

...*Flying toilet-class* An American had no need to fasten her seatbelt on a flight from Scandinavia to the US after a high-pressure vacuum flush sealed her to the toilet seat of the transatlantic airliner. The American had pushed the flush button while seated. The American had to wait until the Boeing 767 landed so that ground technicians could free her. The American complained to Scandinavian Airlines System after her ordeal’. In local news,] **Kiwi International Airlines** will announce a major “re-focus” this week, after the chief executive said his company “may have bitten off more than we could chew.” ...Kiwi would review its operation following six weeks of problems which left hundreds of passengers irate at flight delays and cancellations. [He] said the airline’s problems stemmed from a mixture of Mt Ruapehu’s volcanic activity, Hamilton fog and a “ridiculous curfew” the Civil Aviation Authority imposed on Hamilton airport. The [CAA] ruled last month that Kiwi and its rival Freedom Air could land at Hamilton only between 10pm and 6am if provided approach control by the Airways Corporation. But Airways did not have enough staff for round-the-clock coverage. After Kiwi took court action, a judge ruled that it could land before 6am, but the plane would have to be empty... [Passengers] on a Friday shopping trip to Sydney did not arrive back in Hamilton until 5am on Saturday, after landing in Auckland and being bused home... to Hamilton...

Passengers... are no longer insured for losses if... Kiwi... collapses... Travel agents were told yesterday that [the company] which offered cover for Kiwi... had withdrawn its service. The company said it would not cover airlines which were not accredited members of the International Air Transport Association... or had not been operating for three consecutive years. Kiwi Air passengers who buy travel insurance must now sign endorsement forms to acknowledge that they are aware of the exception to their policy... [The insurer] has been the only company offering cover in the event of Kiwi’s collapsing since August 9 when Commercial Union amended its policy to rule out non-IATA airlines... The director of travel for... [the insurer] said the company had not singled out Kiwi Air by changing the policy, although it was the only airline affected by the change. The Kiwi rival Freedom Air is covered because it is a subsidiary of Mount Cook Airlines... The Kiwi Air chief executive... said... the company... is not in danger of folding, and... he was not concerned by the withdrawal of the insurance firms.

...Two years ago this month, a 28-year-old former Air N[Z] pilot stunned the nation with the offer of flights to A[US] for less than \$400. [The] chief executive of Kiwi... said he could cut trans-Tasman airfares by half, and fly people out of airports never before considered international gateways. Within months Kiwi... was a name on everyone’s lips, and thousands of travellers sacrificed the in-flight meal and alcohol for the “peanuts and cola” fares to A[US]. Yesterday... the... chief executive... admitted he had got it wrong. He announced a major company restructure at the cost of 91 jobs. Kiwi’s two years in the air have been turbulent and the problems started before day one: 11 days before takeoff, Polynesian Airlines backed out of an agreement to lease Kiwi an aircraft. The theory behind Kiwi was simple: lots of flights at low prices, and at first it was a winner. Within five days of the announcement of the \$349... fares to Brisbane, 3000 people had booked a ticket and expansion into Dunedin and Sydney followed quickly. Air N[Z] was not perturbed... A spokesman... said Kiwi’s popularity would be monitored, but the company would not follow in its footsteps. But the newcomer could not easily be ignored and a year later Freedom Air – which is still Kiwi’s only competition in the cut-price market – was launched in Hamilton, offering flights to A[US] for the same cheap prices. Freedom is a... distant cousin to Air N[Z]. Flushed with its early success, Kiwi announced in September 1995 it would fly into[the Cook Island’s capital of] Rarotonga – a plan that attracted plenty of attention but never got off the ground. Two months later the airline was grounded altogether when two tyres burst during a landing at Sydney. A few days on the ground forced the cancellation of several charter flights – and cost the company \$500,000. But that was quickly overshadowed by the announcement of a \$1.2 million profit, before tax – double what the company had forecast. [The chief executive] hinted at more expansions, but no plan saw the light of day. Freedom meanwhile announced the lowest-ever fares – \$299 to Sydney [(including ‘theatre tickets’ or other types of extras). Kiwi’s chief executive]branded the move as a deliberate attempt to put Kiwi out of business, and said his company could not afford to match the fares. But with almost the next breath, [the company did and he] announced more expansion and aimed his nose at Perth and Melbourne. The new schedule which started in July, brought the number of Kiwi flights to 30 per week. In the next few months Kiwi’s plans to run a domestic schedule and to fly into Asia were both curbed, as were [his] own political aspirations – he shelved plans to stand for N[Z] First in the Hamilton West electorate. In April 1996 the first hints of major changes for Kiwi began to eventuate. The airline’s 757 jet was recalled by its owners, and replaced with a smaller plane. Three quarters of the people booked to fly with the airline in May were suddenly out of a seat. Chaos followed as passengers demanded their money back or rescheduling... But Kiwi ploughed on and in May a new plane – the A320 Airbus – touched down in Hamilton ready for service, instantly doubling the airline’s capacity. Bookings were steady and the airline was running smoothly until... the ash clouds [started]billowing out of Mt Ruapehu. The airline – like all others – had to reschedule, postpone and cancel flights. Airports were closed and the costs of transporting passengers to their original destinations escalated. Then came a C[AA] announcement it would inquire into Kiwi’s use of check-in staff as cabin crew, which was soon followed by the authority’s decision to put a curfew on flights between 10 pm and 6 am... [Kiwi’s chief executive] threatened to pull his airline out of... [Hamilton Airport (which – largely for the benefit of Kiwi – had invested in an upgraded terminal)] if the problem was not resolved, but backed down when the CAA offered a flight by flight coverage. But the solution came too late to avoid disruption to the travel plans of hundreds of passengers... Kiwi’s new focus is solely on its provincial regions. The Christchurch operation has been scaled down... Kiwi will no longer land in Auckland or Perth, and one of the two planes has been returned to its owner. Its 30 flights per week have been reduced to 14. The days of the \$299 fares have also gone, and “this company will probably never offer flights at that price again,”... The standard fare will remain under \$400 however, which... was a “fair price, and a sustainable one for Kiwi.” Luckily... the [airline’s]support... in Hamilton has not waned despite all the problem[s it]s passengers have faced... Day after day for the past two years the *Waikato Times* has printed a string of letters to the editor, praising [Kiwi’s chief executive] for choosing Hamilton as a base. His popularity has also spilled over to the wider community. Last month [he] was voted resoundingly onto WEL Trust – the community trust holding 40[%] of the Waikato community’s power company and in March he was judged Waikato Entrepreneur of the Year. He may have a vote of confidence from the community, but things look a little different at work. This week one of [his] fellow company directors, and[a] close personal friend... walked away from Kiwi, citing “differences” as his reason. The company lawyer... was “terminated” – his own word – recently, while another company director... is soon to shift to Brisbane... The fourth member of the original shareholders... resigned last year because of a conflict of interest. That leaves [the chief executive] alone on the flight deck. “You can’t read anything into that though,” he says. “There are various reasons for those things that don’t actually point to company problems.” ...his resolve to turn Kiwi around has hardened. He said the decision to reduce its operation and cut staff was the right one, and Kiwi will now start over. “But we’ll still be here... in five years, probably bigger and better. I have every confidence that I’m going to pull this off.”

...While Kiwi retreats back to the regions to regroup and lick its wounds, others are moving into the gap already. From a Brisbane base, Central Pacific Airlines will offer Brisbane/Auckland return trips on Fridays and Saturdays... Central plans to follow the Kiwi model in offering \$359 cheap seats with a boxed lunch and no free booze. But[a Central] spokesman... who is well aware of the Kiwi story, says his plan is to provide a solely travel agent-based service. Forget the big advertising campaigns. In A[US], he says, agents sell 60[%] of airline tickets. [Central] will also test the underdog theory, but... has no plans to move further afield. “Staying put is the way you keep your costs down, and you get to keep your

regional loyalty,”... While Central Pacific will stay well away from Sydney (which... is over-served by airlines) rumours are wafting over about a little aviation company based there with a brand-spanking new overseas operator’s licence and an eye on Auckland – city of aviator’s dreams... The news that Kiwi... is limiting its operation to the provincial gateways of Hamilton... and Dunedin comes as no surprise to those within the industry. Many say that in straying from its regional corners Kiwi lost its way – and Kiwi is not the first little airline in the world to take that particular wrong turning... [An] aviation analyst... has had her eye on Kiwi... since its inception. She says most start-up airlines fail, mainly because they are undercapitalised. Look at the difference in shareholders’ funds between Kiwi and Freedom Air (a subsidiary of Air N[Z]), she says. Freedom... has... funds of \$1.2 billion. [She] understands that Kiwi started out with about \$750,000 – “which is not adequate really.” ...Competing against the big, rich and powerful airlines was always going to be a problem... Still, she says, things were looking healthy for the airline, but only if nothing went wrong. Things went wrong all over the place [– including the same ‘engine start-up fault occurring three weeks in a row at Sydney’ – and] Kiwi was also forced to take part in a price war which... was not necessarily of their own choosing... But all of these factors are standard problems, she says, “and the reasons many small start-up airlines are grounded.” [However, she] stresses that while she thinks the company “...moved a bit too fast, none of this means they’re going to go bust.”

...Around 3000 passengers were stranded last night on both sides of the Tasman, as Kiwi... came to an abrupt halt, grounding both its planes... [A]ccountants began a post-mortem examination of the Hamilton-based Kiwi yesterday, following the announcement the airline was going into voluntary liquidation... [The] founder of the two-year old airline... admitted defeat yesterday, and blamed a legal wrangle with the owner of one of its planes – Region Air – for “hammering the final nail” in Kiwi’s coffin. Kiwi was forced to take court action against Region Air three times last week, after the Singapore-based company terminated the lease on Kiwi’s A320 Airbus without warning. The Queensland Supreme Court finally ordered Region Air to continue with Kiwi’s flights last Monday night. Kiwi... filed a multimillion-dollar claim against Region Air for damages incurred in the three days the plane was grounded in Brisbane. But the grounding cost Kiwi almost \$3 million – costs that [the chief executive] said were not likely to be recovered without a “long, drawn-out court case. In the end we just could not wait for that, we just did not have the cash on hand to keep running.” He said the public lost confidence in the airline, “and at the end of the day, that’s the final blow.” He said he was sure the liquidators would continue to “aggressively” seek damages, and said the amount sought was left open to incorporate the losses following the liquidation. The liquidators... said it was too early to comment on the amount of debt owed by Kiwi. Passengers who were already in transit would be offered flights home by Qantas, Air N[Z] and Freedom for a further \$150, but passengers who booked and paid for flights from today onwards have become unsecured creditors. Travel agents were bracing themselves last night for an onslaught of calls from passengers... Auckland travel agents were already busy fielding calls from would-be Kiwi passengers wanting other seats across the Tasman. Kiwi’s 259 staff in Hamilton, Dunedin and Brisbane have all lost their jobs and are unlikely to be paid redundancy money. But they have refused to criticise their employer, and many stayed on at Kiwi headquarters yesterday to help with incoming calls, despite the liquidator’s insistence to lock up the building. In Hamilton, staff applauded [the chief executive] after being told of Kiwi’s liquidation, and sang *How Great Thou Art* in Maori. “They said they don’t blame me for what has happened. They are... very loyal... I could not have asked for a better team to go to battle with,” [the chief executive] said. The staff will be told by the liquidators later this week if they will receive their final pay.

...Some redundant Kiwi... staff say that they were surprised the collapsed airline lasted as long as it did, and had expected yesterday’s news that they would not be getting paid. The... liquidator... explained that staff fell into two groups: unsecured creditors, who were “highly unlikely” to see their money, and preferential creditors, who he “could not guarantee” would be paid. The first group was owed bonds, redundancy, notice of redundancy and sick pay, while the preferential creditors were awaiting wages and holiday pay. Workers in Kiwi’s Christchurch office, who had not been formally told of the liquidator’s announcement, said they had been “kept in the dark” about the airline’s collapse all week. One of the check-in staff... said she was told on Monday – the day the airline went into liquidation – that she “might not be needed to work the next day.” ...“That’s the risk you take with any job I suppose. We don’t blame anyone, it’s just one of those things.”

...[when asked whether the Government intended to introduce legislation to give air travellers greater protection following Kiwi’s collapse, the PM replied that ‘it isn’t the Government’s responsibility to sort out the problems of the free market’]...

Two travel insurers are set to pay \$2 million to passengers booked on the failed airline... The manager of Commercial Union Travel Insurance... estimated the company would lose close to \$1 million in payouts... for bookings made before August 9... [T]he loss to the company was its biggest in several years... The travel director of the... last... insurance broker... to pull the plug on Kiwi... would have to pay around \$700,000 but he estimated the final figure would be closer to \$1 million.

...Around 12,000 Kiwi... customers holding unused tickets are most unlikely to get any money back, the liquidators said yesterday... [while confirming] that tickets issued and paid for, but not used, had a face value of around \$5 million.

...Kiwi Air liquidators are seeking a court injunction to prevent \$US2.5 million of spares and equipment used by the failed airline from being taken out of N[Z]... However, the counsel for the aircraft leasing company Region Air Ltd... said most of the equipment belonged to third parties who had not been given the opportunity to be heard in court. She said only about \$US400,000 of the assets were owned by Region Air... Kiwi’s lease liabilities were far higher than the \$US1.1 million deposit it had paid Region Air. She said the evidence before the court suggested Kiwi was “totally insolvent.” ...In an earlier hearing yesterday, [a judge]... rescinded a High Court order he made 12 days ago preventing Region Air from repossessing the A320 Airbus it leased to Kiwi and upholding the contract between the two companies... [The judge] said he would not have made the order if he had known Kiwi’s financial position at the time. Meanwhile, one of Kiwi’s liquidators... was unable to say what assets the airline had... “Quite honestly, at this stage it is unlikely that there will be much recovery for creditors...,” [he] said...

The failed airline Kiwi International has left debts that could total more than \$8 million... [The AUS]n Customs Service is also understood to be a major creditor, having lost about \$1.2 million in departure tax... A[US]’s Federal Airport Corporation was owed at least... \$209,000... and Qantas A[US] about... \$581,000... for ground handling fees... Another creditor, Air Services A[US], seized one of Kiwi’s former aircraft... after it landed at Brisbane about 2 am yesterday. A source said the aircraft was to have refuelled at the airport after leaving N[Z] for Europe, but was impounded by Air Services in lieu of the... \$381,000... it says it is owed for two months of unpaid airport fees... Kiwi’s other jet... leased from... Region Air Ltd, had also been impounded for unpaid airport fees but was now back in Singapore. Meanwhile, the airline’s liquidators have failed to obtain an injunction preventing Region Air from taking... \$3.6 million... of aircraft spares and equipment... out of N[Z]. The... High Court... dismissed the application, saying... [under] the terms of the lease Region Air was entitled to deduct more than... \$2.9 million... in costs, the biggest of which was a... \$1.275 million... cancellation fee payable to the owner of the... plane. Other expenses included... \$381,000... paid to Air Services by Region Air on behalf of Kiwi after the Airbus was impounded at Brisbane.

...The \$70 million A320 Airbus, owned by a Dublin-registered Japanese company... was leased to... Region Air Ltd for a total of \$US375,000 a month. Region Air in turn leased the aircraft to Kiwi International, supplying aircrew... Kiwi agreed to pay... an initial... security deposit... of \$US920,000 and six monthly instalments of \$US65,000. Kiwi was also obliged to pay a minimum rental of \$US907,500 on the 12th day of each month... Region Air representatives visited... Kiwi... on August 18 after [the airline] failed to pay its monthly security deposit instalment. [Kiwi’s chief executive] blamed various problems for the airline’s failure to meet its obligations... [and] asked for a later payment date for the monthly rental... In a letter faxed to Region Air... he... said... “Kiwi now finds itself in a difficult position. We hope that with your help we can work our way out of this problem.” ...On August 26 Region Air told Kiwi it would not agree to defer the monthly rental but indicated it would accept a

change in monthly payment dates provided all accounts outstanding were paid in full within five days... The next day Region Air gave formal notice of its intention to terminate the lease on the Airbus.

...The Sultan of Brunei... has given one of his daughters an Airbus A340, worth about \$US100 million, for her 18th birthday. It is being painted grey, black and green, her favourite colours... [In local news, only 2700 pre-paying Kiwi International passengers did not get their fares refunded by banks or insurance companies after the airline's liquidation, the] airline's former chief executive... said yesterday... "At the end of the day only \$1.5 million was lost by the travelling public, although for anyone to lose anything was very regrettable and for that I am very sorry." ...[a further \$1.2 million is owed to AUS]n Customs and \$700,000 to Qantas A[US]. The national manager of A[US]n Customs passenger processing... yesterday confirmed Customs was owed \$1.2 million and it was still deciding if any civil action could be taken to recover the money. Although it ended up as a major creditor, at one stage of Kiwi International's operation Qantas was negotiating to form an alliance with the Hamilton airline. In [the former chief executive]'s book about Kiwi, titled *Dogfight*, which went on sale this week, he explained how he spend two weeks working with Qantas' N[Z] and Pacific operations manager... on the possible alliance... Kiwi would deliver passengers from Hamilton to Sydney, where they would board a Qantas flight to a further destination in Europe or Asia. The talks came in August as Kiwi tried to work out a "recovery plan" after finding the airline was heading for a \$500,000 loss. "The possibility of Qantas and Kiwi having a full alliance was so exciting, it was beyond words," [the former chief executive] said in the book. But Qantas decided not to go through with the alliance... *Dogfight* will be officially launched in Hamilton next week, and the proceeds of the book will go to the liquidators.

...The founder of failed Kiwi [Air]... will take a figurehead role in a new transtasman airline, set to fly from provincial airports from next July. [He] said yesterday that he had accepted the position after negotiating with the airline to fly 2700... no[n]-refunded... Kiwi... passengers for free... But the establishment of the airline depends on whether [he] can persuade an MP to introduce a member's bill... modelled on legislation similar to that used in Britain... giving 18 months' protection to the first airline to fly to a particular destination. The bill would prevent existing airlines, or their subsidiaries, flying to the same destination, but would allow new airlines to compete... [Kiwi's founder] would not reveal the identity of the new airline, but said it was a "relatively well known UK airline." An unnamed N[Z] investor would also be involved in the new company... Its accounts would be managed by a unique trust system that would prevent money from pre-paying passengers being used until the day after the passenger had flown... [Kiwi's founder] would not have shares in the company or be on the board... An investigation by the Companies Office into the actions of [its founder] and the other directors of Kiwi International is... under way. - 1996

Directors of... Kiwi were "reckless and careless" to keep operating after they were told they were heading for a loss of \$2.8 million, says a Commerce Ministry report. But the report also says there were "justifiable" reasons for Kiwi to keep trading in the short term after July 1996, when it was told by its advisers... it was insolvent. The report... gives causes of failure as: • Inadequate accounting systems. • Inadequate management reporting systems. • Mismanagement of pre-paid ticket income. • Inexperienced and under-resourced accounting staff. • Under-capitalisation. • Lower yields and loading resulting from competition from other airlines... • Inexperience of, and mismanagement by, directors... [Although the airline's] board... tried to find an urgent solution... in July... they did not take legal advice from Kiwi's then lawyer... to put passenger deposits into a separate trust fund... [The] founder and chief executive... faces six fraud charges relating to the airline's 1995 application for an international air licence.

...the founder of collapsed budget airline Kiwi... has switched from plying the airways to selling the airwaves. After completing... study at the Waikato University law school, [he] has taken a job as national marketing manager for Auckland-based cellphone and technology company ROCOM Communications Ltd... A director of ROCOM... said the company expected the appointment, and[a] continuing court battle, to bring both good and bad publicity... This year [the Kiwi founder] was committed for trial in the Hamilton District Court... He has successfully applied to have the depositions hearing re-opened next month so he can have new evidence presented. He will then ask the judge to dismiss the charges.

...[the Kiwi Air founder's] parents testified in court yesterday as part of... [his] fight against five fraud charges... The case against him centres around statements he made about his financial situation while Kiwi was evolving from a charter service into an airline... The prosecution alleges [he] misrepresented his own financial position, and that of two other airline shareholders, in a bid to raise money required for the air services licence. Yesterday a banking consultant... told the court that statements of financial position produced as evidence of the alleged fraud were "inadequate" as credit application forms. The crown prosecutor... said [the consultant's] testimony was irrelevant because evidence given at a... depositions hearing made it clear the documents had the potential to be used fraudulently.

...[Yesterday Kiwi's founder was found 'guilty on four counts of fraud.' The airline was estimated to have lost in total 'close to \$35 million.']

...The liquidators of Kiwi... are taking court action to recover money they claim the collapsed... company's four shareholders owe... The claims relate to drawings on the company's shareholders' current account... [A] lawyer for the liquidators... said the amounts sought ranged from about \$16,000 to \$200,000... [He] said the hearing was likely to be adjourned until[early next] year because not all the shareholders had been served with notice of the action.

...Air N[Z] has] admitted that the cost of flying the Tasman would keep climbing without Kiwi International to hold fares down. The company's chief executive... indicated that the days of "unsustainable" return fares of \$399 to A[US] were well and truly over... He indicated that the standard fare might climb back to the pre-Kiwi level, which... was \$649... His confession was decried by the Consumers' Institute as sad news for travellers. Its chief executive... recalled comments from Air N[Z] after Kiwi's collapse... that this would not influence the larger airline's own pricing structure... Several Auckland travel agents were yesterday offering \$529 return fares... and one quoted \$505. The lowest quoted return fare was for \$435 with Thai Airways, which flies across the Tasman three times a week... Freedom Air, which Air N[Z] formed to compete with Kiwi, is offering fares ranging from \$459... Air N[Z]'s chairman... said Freedom would continue to have a place serving a secondary market... [The chief executive] said at a briefing held to discuss a 43[%] drop in Air N[Z]'s overall profit for the six months to December that it had cost a substantial amount to match Kiwi's "irrational" pricing. He would not say how much, but the airline has reported a \$3.9 million revenue drop on A[US]n routes over this period... [of] unprecedented transtasman travel.

...Air N[Z] may announce redundancies next week as part of Project Save, which aims to save the company \$100 million a year in operating costs. The airline would neither confirm nor deny when the announcement would be made. It was reported before Christmas that Air N[Z] could lay off as many as 1000 of its 10,000 staff early this year and was considering contracting out services such as baggage handling, catering and ticketing. Unions representing staff at the company have not been advised of the announcement. Analysts, who had predicted \$200 million in annual profit for the airline, have lowered their forecast to \$180 million.

...Air N[Z] has quietly slashed 800 jobs... under its "Project Save" cost-cutting drive, and hundreds more might follow. The airline disclosed yesterday that it had paid \$25.4 million in restructuring charges... mostly as compensation to redundant staff, and slimmed its workforce to about 8500... The project had already yielded \$15 million in cost cuts and would reach its annual savings target of \$100 million this financial year... [T]he airline had "liberated" capital from non-core business by selling its catering for a \$6 million profit, passing the management of its Auckland computer centre to IBM and merging its Christchurch engineering operations. It had also removed duplication of tasks. All but 50 to 100 catering staff are believed to have been re-employed by the new owner, Cater Air, though unionists say they are on lower pay.

...Former Air N[Z] in-flight catering staff protested yesterday against the... refusal of their new employer, Caterair, to allow Service and Food Workers' Union officials access to staff in the workplace... 60 staff and supporters rallied outside the... company... premises... at Auckland Airport.

...An American firm which took over Air N[Z]'s in-flight catering business has been accused of using heavy-handed tactics to keep a trade union away from its staff... A union official... said that on two previous occasions union organisers had been refused access to the site despite giving written notice of their intention... Cater Air management had told her she would not have access to staff in the workplace until the contracts came up for renegotiation in 2 1/2 years... [The official] said the union had filed a claim in the Employment Court to have employment contracts offered by Cater Air to its... staff struck out on the grounds that they were harsh and oppressive... And the Labour Department has been chided for giving... Cater Air, an employment award... A department manager... said Cater Air's award was for hiring 44 unemployed people. But... [the union organiser] said the Labour Department's employment service had failed to recognise that Air N[Z] had made all the 380 catering staff redundant when it sold the business, which allowed Cater Air to re-employ some of them on reduced wages and conditions... [while] between 70 and 80... former staff... were struggling to find new jobs... She... [also] said that in the U[S] Cater Air had violated labour laws by withdrawing recognition of a union, refusing to bargain with the union and sacking workers for striking. It had been forced to pay about \$4 million in backpay, bonuses and interest to 235 Teamsters Union members.

...The Government will not withdraw the employment award it gave to Cater Air... the Minister of Labour... said... in Parliament yesterday...

Cater Air's anti-union actions were illegal now but could become legal if the Employment Courts Act were altered, says [a] Labour list MP... He said Cater Air... was obliged to allow unions access to members... [but] it was ominous that the removal of a worker's right to be represented was a law change being considered by the Minister of Labour...

[U]nder a decision just issued by the Employment Court... [the] former leading-hand catering assistant at Auckland Airport stands to gain... [compensation] from... Air N[Z] after being consoled over his mother's death and then sacked moments later... [The] 51-year-old Mangere man said... [he] was sacked with a week's pay in lieu of notice for what Air N[Z] said were his frequent sick days off, often unpaid, from a chronic disease of the pancreas. But the court noted that he ought to have been entitled to bereavement leave during a period in which his manager... said he had taken too many days off... [The] Judge... accused the company of "improper considerations" in deciding to dismiss [the leading-hand] before making hundreds of catering workers redundant... These considerations were... dismissing him on a week's notice instead of making a redundancy payout[, that]... the airline was wrong to blame workers for losing catering contracts... and... criticism of managers at a staff meeting... The judge has left it to the parties to work out the exact amount, but said [the leading-hand] would have received more than \$30,000 had he been made redundant... Air N[Z] may decide to lodge an appeal.

...Two of Air N[Z]'s regional airlines will be hit by pilots' strikes on Monday, after... [the] company failed in a bid in the Employment Court in Auckland yesterday to gain an injunction... [Members] of the Air Line Pilots' Association... intend stopping work for 18 hours at Air Nelson, their second strike against that airline, and for eight hours at Hamilton-based Eagle Air... About 81 of Eagle's 101 pilots will take part in the industrial action, and about 130 of Air Nelson's 155 pilots... Both airlines say they have contingency plans to minimise disruption to passengers. Air Nelson hopes to move all booked passengers with non-union pilots and some help from chartered aircraft... The pilots' action is the result of stalled contract negotiations, some of which have been going on for months... The company had offered a 3[%] wage rise for this year against a range of increases the pilots claimed – as high as 20[%] for first officers on Saab aircraft... Ansett N[Z] pilots are planning a 24-hour strike...

Negotiators for Ansett N[Z] pilots will meet the airline in Auckland today for more talks aimed at heading off a... stoppage... [by] 140 pilots...

A one-day strike by Ansett N[Z] pilots planned for Friday has been called off. They said a year-long settlement had been agreed to and a "mechanism for working parties to address a number of difficult issues" put in place.

...Ansett N[Z] has reported a 23[%] fall in operating profit to \$7 million for the year[, a result which was]... better than the company expected... Ansett NZ, which is 100[%] owned by... News Corp, turned in revenue of \$264 million. Passenger numbers grew 7.7[%] to give the company a 36[%] share of the local market. On the main trunks, Ansett's share has risen to some 50[%]. The airline's chief executive... said... News Corp... was happy with the performance of Ansett NZ for 1996/97. He declined to comment on speculation that News Corp was looking at a leasing or franchise arrangement with Qantas, or selling Ansett NZ to N[Z] investors. Another option reportedly being considered as a way out for News Corp was a float of the airline, which has accumulated losses of over \$200 million since 1987[– when the airline was formed and built a terminal next door to Auckland Airport's existing domestic terminal, which is predominantly used by Air NZ]. - 1997

Air N[Z] is prepared for... [an increase in business today as s]triking pilots... force... Ansett N[Z] to cancel another 100 flights... The pilots, all members of the Airline Pilots Association (Alpa), are on strike from 4 this morning till 4 am tomorrow. [However, t]he chief executive of Ansett NZ... said the strikes were "only hardening management determination to secure the changed work practices the company is looking for. We have had enough of the out-moded industrial tactics used by the union." Today's is the second 24-hour strike by Ansett pilots in less than a week, and stems from stalled discussions over a new employment contract... An Alpa spokesman... said the company wanted to... lay off 30 to 35 pilots out of a total of 146... and... extend pilot flying hours[by '16 hours a month. Currently, Ansett NZ pilots fly a total of 82 hours a month'. Their]... present flying and duty times are almost identical to Air N[Z]'s.

...Ansett has closed its bookings for next Tuesday and is bracing for further industrial action after a second pilots' strike yesterday... [An] Ansett spokesman... said passengers were transferred to Air N[Z] or had their flights changed before the strike... The pilots are striking in protest at new contracts which... [are designed to] save Ansett \$5 million a year.

...The third 24-hour strike this month by Ansett pilots is set to halt 100 flights today. An A[lp]a spokesman... said the strike would go ahead unless the company negotiated the pilots' contract... [But] Ansett management has refused to discuss changes to the... contract it has drawn up.

...After losing \$2.25 million from three days of strike action, Ansett N[Z] says it will offer a new employment contract to its pilots.

...The travel plans of about 1000 people were disrupted yesterday when 25 of Ansett N[Z]'s 146 pilots called in sick and 50 flights were cancelled. Similar numbers are expected to be hit today after Ansett decided last night that it would cancel at least 15 flights. More may be cancelled depending on how many pilots declare themselves unfit for work. The dispute has spiralled out of control since the threat of lockout notices was made this week... [and b]oth sides say they will not budge... Previously, the pilots had held three one-day strikes, in each case giving the fortnight's notice required in "essential" industries... A fourth strike is planned [in a fortnight's time] and, if the collective contract is not settled three days later, Ansett says it will lock the pilots out... The airline has been trying to recruit pilots on short-term contracts.

...The International Federation of Airline Pilots is telling foreign pilots to stay away from strife-torn Ansett N[Z]. NZ's Alpa is part of the federation, which covers about 100,000 members. Ansett N[Z] has issued lockout notices to its striking pilots and has been trying to recruit overseas pilots on short-term contracts to keep its planes in the air... [Alpa] asked the federation to blacklist the airline after learning that Ansett was advertising on the Internet for pilots from A[US]. The federation's executive director... said last night that it could not enforce the ban, "but it's effective to the extent people do not want to become scabs." Ansett's spokesman... said the company had not been told officially it was on a federation blacklist so would not comment... [He] continued to refuse to discuss how many pilots had been recruited or if they had begun training. Fourteen flights were cancelled yesterday because of pilots calling in sick.

...**STRIKE-BUSTING** foreign pilots are expected to start training with Ansett N[Z] this week as its industrial row escalates. The pilots – including some from A[US] – will receive classroom, simulator and cockpit training over the next month, under a veil of secrecy and security.

...Foreign pilots... will be barred by immigration rules from flying to Ansett N[Z]'s aid. The pilots would not meet the work permit requirements needed to take up short-term contracts during the lockout because Ansett pilots were still available for work, said [the]Immigration Minister... in reply to a query from [a Labour MP]... However, the ban does not apply to A[US]n pilots, who do not need work permits. Ansett... locked out 125 pilots last week in the dispute over a new contract, [which six]... pilots are now believed to have signed... [An Alpa spokesman] said the remaining staff were still determined to fight.

...*Judgment renews Ansett dogfight*... Another bitter argument between Ansett N[Z] and its pilots started yesterday over an Employment Court decision, despite the judge's hope it would calm the industrial waters. [The j]udge... granted an interim injunction preventing the airline from contacting employees direct about their industrial dispute, but then both sides launched into another argument[over] whether it extended to all 146 pilots or just the six named in the papers... [Alpa had] complained that Ansett N[Z] breached the Employment Contracts Act last month by sending a copy of its contract directly to the pilots, thereby undermining its role. [The j]udge... said in her decision that relations between both sides could hardly be worse...

DANGEROUS things, advertising slogans. One moment they're a statement of intent – perhaps even of fact – and the next day they can sound like a fiction dreamed up by some deranged marketing imagination. Take Ansett N[Z]'s motto: "Our People Make Us Ansett." It comes as no surprise, as the airline's lockout of about 130 pilots enters day 17, that the phrase rings hollow for those on one side of the dispute's industrial divide. "That slogan's absolute bullshit now," says one locked-out pilot who we'll call Bob (he, like every other Ansett pilot, cannot give his real name because his expired employment contract says he can't talk to the media). What is surprising, however, is the tone of surprised bitterness in Bob's voice. Since joining Ansett less than five years ago, he and his partner... freely admit they have been well and fairly treated by the country's second domestic airline. So much so, [his partner] says, that friends who are pilots with other airlines have been jealous of the relationship between Ansett and its pilots. But that was then and this is now. In just a few weeks they, and most of Ansett's other 146 collective-contract pilots, have been humming a different tune. The reason: a loss-making Ansett N[Z] wants to be more competitive for its owner... News Corp, and, claim the pilots (though the airline strenuously denies it), to make it a more tempting purchase for a new owner. To do one or both those things, Ansett needs to save \$4.7 million a year. To do that it needs pilots on a new employment contract, make 35 of them redundant and have the rest flying longer hours. No deal, the pilots and their union... told Ansett. They believe the new contract will compromise professionalism and passenger safety. No choice, said the airline... News Corp has a reputation for being tough-minded in its approach to industrial relations, says... the... industrial editor... [for the] *Sydney Morning Herald*... It is... the company which, along with TNT, helped to see off the pilots and their union in A[US] during the campaign against Ansett A[US] and AUS]n Airlines over pilot pay demands a decade ago. Out of the 1600 workers involved in that dispute, about 350 were taken back by 1990 and 50 have since returned. About 400 pilots have retired, or accepted that they will not fly again and taken other jobs. But the bulk of about 500 moved overseas to fly – the largest single exodus of A[US]n labour – and now call themselves "exiles"... So was there any other option for Ansett N[Z]? An airline spokesman says he's not aware of any... "We tried to get a meeting of minds on this. We've offered them the opportunity to have their accountants go through the books to satisfy them that what we've been saying about the financial position is correct, but they've declined that... At the end of the day, when you get to a position when people are not only not prepared to listen but not prepared to hear, then you are left with very few options to where you can go next." He says the length of the dispute is now immaterial, and that Ansett is prepared to spend money now... to secure what it wants: a profitable future. "It will be resolved, to the company's satisfaction." [So far the dispute has 'cost the company twice what it planned to save']

...*The 28-day lockout has ended, the planes are to fly again but the battle has left scars*... "I feel betrayed by the pilots who came in from the outside. I think factory workers would have stuck together. Scab is a nasty word, but it's one that will be heard around Ansett for a long time." That is an emotive burst from a pilot, more usually a disembodied voice from the cockpit telling airline passengers the altitude or weather conditions at the flight's destination. The 130 pilots' decision to go back to work has come none to soon for some people, including tourism operators in Queenstown whose businesses have been hit by the reduction in flights. "There is urgency for Ansett N[Z] to give priority to restoring those services quickly so business can return to normal," the Tourism Industry Association's chief executive... said yesterday. "Normal" it will not be for the pilots... One said: "This is not even the same contract we were offered back in July. It's got worse... I've lost about \$30,000 in pay and superannuation benefits, a fifth of my annual leave and all medical insurance provisions. Sick leave is now a quarter of what it was. We used to have three months because of the nature of the job. If you have a cold or blocked ears, you can't work." Another pilot, a veteran of more than 10 years with Ansett, said: "It has been financially stressful, but the fact that I thought they valued me as staff and then to find out that they didn't hurts even more... Ansett... kn[ew they could] get away with giving us a good kicking. They will rebrand, remarket and carry on... The public have short memories. They will buy the cheapest ticket." ...How did the[pilots] survive almost a month with no pay? Some flew part-time for other companies. Others relished the chance to spend the school holidays with their kids. Money was growing tight for some. One picked lemons. Another rented out his house and moved his family in with his parents. Many sought mortgage holidays from their banks... Any regrets? "None at all. It's been a fight worth fighting... Who would sign a worse contract that has not one common clause with the one you had without a fight?" A[third pilot] said: "The perceptions of pilots as rich, lazy bastards is really insulting. I've been working in this industry for 20 years and averaged a salary of \$47,000 a year. The job can be quite lucrative if you take an international job, but I've always wanted to stay in N[Z]." His 20 years led to a salary of about \$60,000. Yes, the "top tier" can earn over \$100,000 but the average is \$70,000 to \$80,000 at a guess... [● Earlier this year t]he *Sunday Star-Times* revealed... [that] Qantas was again interested in buying Ansett N[Z] from News Corp, provided Ansett sorted out its employment contracts, which it says are a throwback to the 1980s and no longer sustainable. Ansett has lost more than \$250 million since starting in 1987.

...Qantas is looking closely at setting up a domestic service in N[Z]. Sources in the A[US]n airline say it may forget about buying the... troubled Ansett N[Z] and start an airline from scratch... Qantas ha[s two further] options: ...operating with local investors; or doing nothing... Qantas wants to establish domestic services here to boost its international flights from Auckland to A[US], the Pacific Islands, South America and the U[S]. By the way, Qantas has been ranked 'the 15th largest airline in the world. Air NZ is in 39th' place...

'Air NZ has a new shareholder, an American investment company. Franklin Resources, which has also bought a 6 1/2% share of Trans Rail for about \$70 million, paid Qantas more than a quarter of a billion dollars for an 11% stake in our airline.'

... 'Air NZ, which spent most of 1996 tightening its operations, is forecasting clearer skies ahead: a net profit of \$200 million for the 1998 financial year. The profit forecast would mean a 33% rise from the \$150.2 million reported for the year just ended, compared with a 33% fall in profits from last year's \$225 million. Revenue for the year just ended fell 2.3% to \$2.93 billion. The airline's chairman told a media briefing that a softer NZ dollar and lower fuel prices in the second-half of the operating year were not sufficient to offset declines in the first half due to slower tourist growth and heavy discounting on the Tasman route, hence the lower profit. But company officials said the company turned in a very creditable performance in a tough operating environment. The recent currency turmoil in Asia is the wild card. Last year, solid traffic growth from South-east Asian markets helped the company. Qantas Airways predicts a decline in business from Asia. "Approximately 6% of the company's total revenue passenger kilometres are inbound to AUS from this region," the airline's chairman said while announcing a 2.6% rise in earnings to \$A252.7 million, on sales of \$A7.83 billion. Signs of flatter

Asian growth had already led Air NZ to tighten some capacity for Asian routes this year. However, next year Air NZ expects a softer NZ dollar to attract more tourists over the Tasman. The company also expects international alliances will mean lower economic risk in accessing international markets.' Such alliances share 'planes, baggage handling, marketing, promotions,' etc.

...Air NZ] is already seeing benefits from its participation in the Star Alliance... [- t]he airline network for Earth... – before it formerly joins. The grouping of international airlines will this week launch a multi-million dollar media campaign in all member countries to announce the... entry of Air NZ and Ansett A[US]... The existing Star Alliance members are: Air Canada, Germany's Lufthansa, Scandinavia's SAS, Thai International, American carrier United Airlines and Varig Brazilian Airlines. Japan's ANA will join in October... and Mexicana will become a member next year... Ansett A[US]... expects... immediate... benefits. Its executive chairman... also... told the A[US]n *Financial Review*... [that j]oint purchasing would be a future trend. "I suspect that in five years' time, alliance members will be negotiating with manufacturers and suppliers collectively rather than individually." In May... Air Canada, Lufthansa and United formed a new company called AirLiance Materials that buys and sells used, spare engine and aircraft parts. The airline industry spends more than \$US10 billion on spare parts annually and such a company would help AirLiance cut costs. A competing alliance, one-world... [- comprising] American Airlines, British Airways, Canadian Airlines, Cathay Pacific, Finland's Finnair and Qantas... [-] was announced last October.

...oneworld revolves around you... Now there's an alliance that makes international travel easier, and more rewarding, than ever before. With worldwide recognition on five of the world's finest airlines. Access to even more lounges. Smoother transfers. And the ability to earn and redeem frequent flyer miles to even more destinations. All, with over 220,000 people at your service to help you enjoy every trip.

...Deregulation of the airline industry has resulted in open skies around the world and the phenomenon of mega-alliances. To meet market demand, the air transport industry is gradually transforming through the formation of these alliances. The Star Alliance is the most well established and largest of the global alliances. It... services more than 700 destinations in more than 110 countries, has more than 7900 daily departures and a fleet of more than 1600 aircraft. It is expected as aviation laws are increasingly liberalised the number of global families operating under brands such as the Star Alliance will converge into a few major partnerships... Fares... are... coming down because of alliances. A University of Illinois study... concluded that non-alliance carriers on the Atlantic had prices 36% higher above those of alliance partners... [Incidentally, a]n informal survey of people who fly for business, sport or a passion for travel (including those fonts of all flying knowledge, flight attendants), has come up with the following golden rules for getting through long flights in good shape... *The preparation:* Try to get a good night's sleep before a flight. Be organised so you are not rushing to the airport... [and causing yourself] last-minute stress... *The flight:* Don't... sit on your wallet (common cause of back pain)... Eat lightly, preferably only one meal a flight... Don't worry if you can't sleep – 45-minute cat-naps have been shown to be as effective as longer sleeps on long flights... Drink plenty of water... Fluid replacement is the health issue affecting all passengers. People don't actually get dehydrated on flights but fluid pools in the legs and feet, starving the organs and blood vessels and causing symptoms like disorientation. To prevent this, [the]... medical director of Auckland's Worldwide Travellers and Vaccination Centre... recommends a fluid intake of 750ml to one litre for every eight hours of flying. While others preach on the evils of alcohol at altitude, he's refreshingly realistic. "Alcohol is essential for any flight because it's free," he says... "Provided people remember that, firstly, it's two to three times more potent at altitude and secondly, they follow it up with glasses of water every hour." ...MANY travellers believe airline cabins are fetid places, swarming with viruses and bacteria. But... constant recirculating and effective filtering actually makes cabin air relatively sterile. So why do so many people suffer colds and flus after long flights? The most likely, but not scientifically proven, explanation is that the stress, fatigue, temperature and time zone changes which go hand in hand with travel temporarily weaken your immune system – making you more vulnerable to any bug which crosses your path.

...international... business trips and tourism carry diseases quickly around the globe. Today there are about twenty times as many international travellers as in 1950. - 1996

United Airlines net operating profit leapt 200[%] in the first quarter compared to the same period last year.

...Deutsche Lufthansa has reported a trebling of first-half earnings... to 397 million marks... [In local news, n]early 90 Air N[Z] domestic cargo handlers were given redundancy notices yesterday.

...[Redundancy notices will soon be heading to the homes of some Air NZ administration staff now that the airline has signed] an estimated \$20 million outsourcing and personal computer purchase deal with Wang N[Z].

...Ansett Holdings is looking to divest non-core assets, including the sale of its hotel business, to help boost its bottom line... A two year cost-cutting programme to reduce bills by... \$NZ170 million... a year has also been put in place... Air N[Z] and News Corp each own a half share of Ansett[AUS. Air NZ]'s stake is \$540 million and analysts are keen to see what returns the company would get out of its stake to help Air N[Z] reach its targeted... profit in this year... For the financial year ended June 30... Ansett[AUS] brought in \$17.6 million to Air N[Z] in the form of earnings. This was despite Ansett A[US] reporting a net loss of \$35 million ([compared with a] profit of \$57.4 million in 1996) on a 1.1[%] rise in revenue to \$3.3 billion. [In further news from AUS, 'two NZers are among eight men who died after their plane flew 3000 km across the continent without a pilot before crashing in flames. Investigators believe the pilot and everyone else on board lost consciousness soon after takeoff from Perth when a loss of cabin pressure starved them of oxygen. The ghostly flight ended five hours later when the plane plummeted into the ground near a cattle station in remote north Queensland. The eerie flight is similar to one last October in which champion golfer Payne Stewart died after his Dallas-bound Learjet took off from Orlando, Florida, and flew across five US states before crashing in South Dakota, 2414 km later.' The 6 people on board that plane also 'died from oxygen deprivation. After trailing the jet for 4 hours Air Force fighter crews could only watch helplessly as it ran out of fuel and spiralled into an empty field.'

...Passengers on a Canadian charter airliner are hailing their survival as a miracle after the plane's engines failed over the Atlantic. They owe their lives to the pilot, who managed to keep gliding long enough to land on an island in the Azores. The Air Transit Airbus carrying 304 people burst its tyres as it hit the runway, slightly injuring 10 passengers. The drama began after a fuel leak developed. It was the second repeat problem with an Air Transit plane.'

...The CAA has issued its third warning in two years about Fairchild Metroliner aircraft and has told airlines to urgently repair a wiring fault. The authority's emergency airworthiness directive warns that frayed wires found near fuel tanks in some of the twin-engined aircraft could arc, sparking an explosion. In another aviation mishap yesterday, a London-bound Air NZ 747 was delayed at Los Angeles International Airport after its wingtip smashed into another plane as it was being towed. The 404 passengers and 17 crew had to wait for more than two hours for repairs to be made.' ● 'The Boeing 747-400 that entered the Air NZ fleet in 1990 is the most fuel efficient airliner in commercial operation. Its range capacity of 13,600km is a 2080km increase over the 747-300. It consumes 9 to 12% less fuel than the -300 model, and improved performance of up to 25% a seat over the older 747s. The 747-400's range makes possible nonstop service with typical full passenger, three-class payloads on such routes as London-Tokyo, Los Angeles to Hong Kong, Singapore-London and Los Angeles-Sydney and Auckland. An optional 12,490-litre fuel tank in the horizontal tail can boost the 400's range by 645km.'

...Some 5000 planes have been grounded in AUS for safety during an aviation fuel contamination crisis, launching a \$A100 million class action against Mobil, the fuel supplier.'

...The RAAF grounded three Caribou planes yesterday because they had been exposed to contaminated aviation fuel. The revelation came as the Acting PM told Mobil Oil to immediately compensate those affected by the problem fuel, though the company failed to reach a deal in a meeting with owners and pilots last night. The grounding of nearly 5000 civilian planes worth \$A600 million this week is said to be costing the industry \$A5 million a day. And a

test to detect which grounded aircraft have dirty fuel will now not be ready until at least the middle of next week. The Acting PM said: "The Government will be formally contacting banks and other financial institutions urging them to show flexibility in dealings with aviation customers." Airservices AUS said yesterday that it would extend payment times on air traffic control accounts and interest would not be charged.'

... 'Seven million litres of contaminated aviation fuel that has led to the grounding of thousands of light aircraft could be cleaned and used in cars, says Mobil in AUS. The chemical that caused the contamination would be removed.' The contamination hasn't affected NZ directly]...

The... resignation of the A[US]n Minister for Transport... [due to] the... scandal over MPs' travel rorts... has shaken N[Z] negotiators inching towards an open-skies agreement. [The minister] had hinted he was leaning towards considering a new deal, although he was saddled with the arguments that had prompted the former A[US]n Labour Government to end the accord and make it harder for N[Z] airlines to pick up passengers in A[US] on flights to Asia and other big markets. He still faced a mammoth task in shifting the opinion of Liberal colleagues, but N[Z] at least had a foot in the door... [H]is replacement will become a key concern for N[Z] negotiators trying]... to insert an open-skies wedge into the language of a new air-services treaty, which both sides see in place early next year. The agreement will be more an administrative update than a significant advance on the agreement that allowed trans-Tasman airlines to fly freely in each other's domestic markets – and which set Air N[Z]'s beyond rights at existing levels.

...N[Z] and Malaysia had agreed on an open-skies pact... the Minister of Transport... said yesterday.

...A[US]'s International Air Services Commission has approved code-sharing by British Airways and Qantas on... route flights through Singapore... [In related news, Air NZ] and Singapore Airlines are planning direct flights to Malaysia by the end of this year...

The Cabinet has approved a new air services agreement between Singapore and N[Z], paving the way for what could be the world's most liberal aviation agreement. Under the new agreement, airlines in each country are allowed to operate over any route they choose, subject to third-country agreement, and with as many flights as they see fit. Another key point... is that airlines in the two countries need not seek approval from the authorities for fare or tariff changes. The new... agreement also removes foreign ownership restrictions... [and] gives "seventh-freedom" traffic rights for cargo to each country. This means a Singapore company is free to establish a cargo-only airline in N[Z] and third countries with no requirement that the aircraft touch Singapore. Similarly, a N[Z] company would be allowed to do the same.

...As a result of joining together, the airlines would take cargo and passengers to more than 200 destinations in 47 countries. "Singapore Airlines is now a truly global network,"... said... its deputy chairman... [at] the airline's recent 50th anniversary celebrations... [Furthermore, it] is the world's first airline to offer[a] global inflight telephone service... Singapore's Communications Minister, said the Singapore Airlines Group was a major contributor to the Singapore economy, contributing \$S6 billion... in foreign earnings last year... Since its 1972 split from a merged entity called Malaysia-Singapore Airlines, the company has transformed itself into a modern, shrewd operator... [while helping] to make Singapore the aviation and tourism hub of South-East Asia... It has made a profit every year in the past 10 years and consistently increased spending every year... Its 83-aircraft fleet is... only 5.1 years old on average... [and the airline] has placed firm orders for 43 new aircraft... with options on 48 more... [However, now] other countries in the region – Brunei and Taiwan – had signed "open skies" deals with the U[S], Singapore Airlines faced] tougher competition... as passengers... had more travel options...

[An] Aucklander... is among the victims in the... crash of a near-new Boeing 737-300 airliner in Indonesia. Mr Ward, aged 23... was first officer on the SilkAir plane which was 50 minutes into a flight from Jakarta to Singapore on Friday when it disintegrated, falling into a river with the feared loss of all 104 on board... Indonesian divers found a large chunk of the plane's fuselage in the Musi River... in southern Sumatra, on Saturday. But they fear tidal currents from the sea have shifted the wreckage... Divers have... recovered only some body parts, clothing, luggage and documents... A British immigrant to N[Z]... was among the passengers. It is understood he was to have made a connection flight in Singapore for a flight... to Auckland early on Saturday, to join his wife and children... and a brother in N[Z]... Airline officials were unable to contact the wife... before she reached Auckland International Airport to welcome him... as there was no reply at the contact... telephone... number... provided when he made his travel bookings... Police and Singapore Airlines representatives had to seek out the wife and two children... at the arrivals lounge... They took her aside to break the news... Mr Ward went to Asia about four years ago under a training deal between Massey University's aviation school and the Indonesian national airline, Garuda. After his two years with Garuda were up, he returned home with a completed aviation degree before starting work in September last year for SilkAir... His older brother... said yesterday that [Mr Ward] had enjoyed flying in Asia but saw it... as a stepping stone to an airline job based in N[Z]. The former student of St Kentigern College in Pakuranga had first become interested in aviation watching old Warbirds aircraft at Ardmore airport. He learned to fly after enrolling at Massey straight from school... Massey's chief flying instructor... said the aviation school had sent up to 50 students to Garuda to accumulate about 1500 flying hours each on Boeings. Mr Ward had been one of its top performers. "He was a very quiet and very competent and capable student,"... Several other former students were still flying for SilkAir, which is... the regional arm of Singapore Airlines... The crash was the first air disaster to befall SilkAir or its parent company... [and] was the second major air disaster in Indonesia in three months... SilkAir officials say they are mystified why the 10-month-old plane with an experienced pilot should have crashed in good weather... The pilot... was identified yesterday as a former member of an elite aerobatics team of the Singapore Air Force with 6900 hours of flying experience... The airline... said the pilot[– who allegedly also 'had a history of erratic behaviour in the cockpit and was unfit to be in command of a plane' –]made no distress call but radio contact was lost a few minutes before the plane went down. Some witnesses said they heard one or two explosions before the Boeing plunged into the river, causing a huge wave that sank several fishing boats. An explosives expert is included in a team of U[S] inspectors who have left for Indonesia, but the National Transportation Safety Board described this as a routine measure... Air N[Z], which leases a Boeing 737-300 to Freedom Air, said it would be following the investigation into the crash very closely... The Boeing company is also sending investigators to Indonesia. A spokesman... warned against making any comparison with the crash of TWA Flight 800 off New York last year – ...in which a spark... [from] bundled... high voltage electricity... wires... is believed to have ignited the central fuel tank... causing the blast that brought down the jet, killing all 230 on board... Tests to replicate conditions in the centre fuel tank... show the tank was ripe to explode, according to an expert witness at a hearing[. • In '1967 a blaze aboard the giant US Navy aircraft-carrier Forrestal (at three blocks long, the 76,000-ton carrier with a crew of 4400 was the largest ship ever made) struck as the ship was preparing to launch planes against North Vietnam. 134 crew were killed and at least one-third of her 85 planes were reported destroyed. Many more planes were damaged. The fire was caused when a fuel tank dropped from one of the planes and was ignited by a hot stream catapult (initially, authorities had tentatively blamed a freak back-fire from a jet fighter for starting the fires). Fire-fighting teams rushed to action as the blazing kerosene, racing across the deck, turned waiting clusters of bomb-laden jets into balls of fire. Four 750-pound bombs exploded on one aircraft, blowing gaping holes in one part of the deck. Repairs cost some \$135 million; plane losses \$75 million. The worst naval disaster since WW2' led to the practice of 'training all crew for fire-fighting and the development of a less flammable jet fuel']...

A jet fuel used by the U[S] Navy could increase civilian aviation safety drastically if it was produced in sufficient quantity, an expert has told a Baltimore, Maryland, hearing into the TWA Flight 800 disaster. Investigators suspect an electrical fault ignited vapours in the plane's main tank.

...['An independent panel of experts has lambasted the results of an official investigation into the 1996 fatal TWA Flight 800 crash, and maintained its theory the plane was downed by a missile. The Flight 800 Independent Research Organisation said the official investigators had concealed crucial pieces of information in their findings. The report is expected to argue that the crash was most likely caused by an explosion in the plane's central fuel tank. But FIRO claims 13 witnesses had seen an object strike the plane. ']

...The FBI agent in charge of the TWA Flight 800 investigation acknowledged for the first time yesterday that the plane could have been brought down by a shoulder-fired terrorist missile... He noted that similar missiles have been used to down more than 25 commercial planes over the past two decades... But so far, there was no evidence to prove that theory, [the agent] said.

...A French magazine has published radar images it says support a theory the U[S] Navy accidentally shot down... T[WA 800]... – despite renewed US denials. *Paris Match* said yesterday the images from a radar videotape from John F Kennedy airport showed an unidentified plane, which it said was a US Navy Orion P3 surveillance aircraft, and another blip that it said might have been an intended target for a missile... *Paris Match* said... [a] former US presidential spokesman and television correspondent... believed the US Navy had fired a missile from the sea, perhaps from a submarine, and that electronic equipment aboard the TWA plane lured the missile off course to hit it... [By the way, Air France's] chairman... has quit after losing a battle with the new left-wing Government over the privatisation of the airline... [The chairman said] he had been forced to quit after four years of pulling the airline from virtual bankruptcy to its first profit this decade. The resignation came less than 24 hours after [the Socialist PM told the chairman]... he would not sell the airline. But later, the Government said it would partially privatise Air France but retain a controlling share. The previous government pledged to privatise the airline in return for a 20 billion franc... capital injection from the European Commission... Air France... and Aeroflot... [have been] laying foundations for an alliance, for which privatisation is considered important.

...according to Air N[Z]'s annual report... [our privatised 'national airline made a bottom line loss of \$600.1 million for the year, with a \$786.2 million one-off accounting charge obscuring an improved operational performance.' Benefits paid to its chairman] amounted to \$76,000 while another director... pocketed \$63,500 in fees and benefits. Other directors... received \$41,000 each... The... managing director... received total remuneration of \$1.06 million... A total of 110 out of 115 of Air N[Z]'s management team received remuneration ranging between \$110,000 and \$250,000... [while the other 5 were in the] \$250,000 to \$530,000 range... Over 80[%] of the aircrew and overseas employees had remuneration exceeding \$100,000 but beneath \$250,000... [Incidentally,] Air Force pilots will have to sign up for 10 years from now on, in the military's battle to keep enough aircraft aloft. A return of service obligation reflecting the almost \$1.5 million spent training each recruit to fly combat, transport or surveillance aircraft has been extended from eight... years after a pilot's basic "wings" graduation. This follows acute staff shortages caused by heavy recruiting in 1995 by international civilian airlines and air forces in the Gulf. After losing 30 flyers that year, the Air Force offered \$45,000 to about a quarter of its pilots and navigators to stay two more years after their contracts expired. The loss eased to 19 last year, leaving about 160 pilots, while the latest annual graduation yield was up five recruits to 23. But the Air Force is still about 60 short and fears recruitment drives by airlines offering... four times its top pilots' pay of no more than about \$60,000 a year... The Air Force's chief of personnel... said yesterday that it took pilots 10 years to get... to a military operational level, thereby ensuring the survival of the Air Force's skills base.

...Survivors of an Ansett Dash 8 airliner crash may have to wait until next year to find if they can sue for damages. In the High Court at Auckland yesterday the airline asked [the judge] to throw out[the] compensation claims by 12 survivors and the estates of three men who died when the aircraft crashed while approaching the Palmerston North airport on June 9, 1995... Each of the plaintiffs seeks unspecified damages under the Carriage by Air Act 1967 for pain and suffering, injuries, loss of income and medical costs as a result of the crash. They also claim alternative damages of \$150,000 each for the airline's alleged negligence and disregard for their safety, and \$42,000 for economic losses and medical costs... If successful, the case could open the floodgates to court action for damages in addition to accident compensation payments... Ansett's lawyer... said section 14 of the Accident Rehabilitation and Compensation Act 1992 provided a statutory bar to the plaintiffs' claims for damages from the airline[which]... sought to strike out the claims on the grounds that they had no reasonable cause... and the plaintiffs' pleadings... were an abuse of the court process... He said it was obvious Parliament intended the act to provide a no-fault compensation scheme which prevented those who had suffered personal injury from suing for damages. The right to sue was abolished by the 1972 Accident Compensation Act and the ban remained in subsequent legislation, which... over-rode any other statutes which provided for such legal action. [However, the] passengers' lawyer... said... the claims related to contract provisions set out in the air tickets sold by Ansett. He submitted that establishing the intent of Parliament in the 1992 act required a more extensive examination than possible in a one-day strike motion hearing. [The judge] reserved his decision and told the court he would try to deliver it by the end of the year. [● 'Last year, 674 people were killed in passenger air crashes, well below the average of 1326 since 1990. With just two minor non-fatal accidents in the last 12 years, Air NZ is ranked 20th in terms of safety, according to a table that lists 500 airlines under a risk-assessment system revealed in Brussels this week. Air Canada comes out on top, its passengers having only a one in 1.3 million chance of being involved in any kind of accident. By contrast, those on the Eastern European Air Georgia have a one in 333 chance. Ansett NZ was 128th following its Dash 8 crash']...

Victims of the Ansett Dash 8 air crash have lost an unprecedented court bid for compensation but are pressing ahead with punitive damages claims against the airline. They have also filed a lawsuit in the U[S] against the manufacturer of the... aircraft over its undercarriage and its ground proximity system. Ansett N[Z] is not cited as a defendant in that case.

...[a 'former Ansett pilot is to be tried on manslaughter charges over the deaths of four people from the June 1995 crash of Flight 703 near Palmerston North. A judge ruled yesterday, after seven days of depositions in the Palmerston North District Court, that there was sufficient evidence supporting the prosecution case to bring the matter to trial. The pilot, who will stand trial in the High Court, has pleaded not guilty. He was remanded on bail at large. "What I wish to make abundantly clear is I'm not determining guilt or innocence as far as the pilot is concerned," the judge said. The key issue was whether the crash and the subsequent injuries had been the result of a failure by the pilot to take reasonable care and precautions to avoid the dangers inherent in operating the aircraft under his control.' The charges won't please the country's pilots, who are already upset about the police's attempts to gain access to the plane's cockpit voice recorder – or black box – in order to use it as evidence ('for security reasons, voice-boxes are not carried on military aircraft').

...The former Ansett NZ pilot walked from the High Court at Palmerston North a free man yesterday after being cleared of all seven charges. The decision to prosecute him angered the Air Line Pilots' Association, which fought police efforts to obtain the cockpit voice recorder. The association president said pilots around the world would welcome the decision. "Sanity has prevailed. There would have been a hell of a lot of angry pilots if there had been a guilty verdict." In related news, 'the controversial report that accused Air NZ of "a predetermined plan of deception" after the Erebus crash, is to be officially tabled in Parliament by the Transport Minister. The report by the one-man royal commission of inquiry was never tabled – because the late Sir Robert Muldoon "flatly refused to allow it" – which means the only official account of the crash remains that of the Office of Air Accident Investigations, which concluded that pilot error caused the disaster. The minister told the Aviation Industry Association conference in Dunedin that it was time to acknowledge the debt to the report's author, the late Justice Peter Mahon. "Muldoon commissioned the inquiry but he wanted Mahon to rubber-stamp what the chief air accident inspector had said. But Mahon decided there was more to it than a pilot making mistakes and he kept drilling deeper and deeper." The Mahon report became famous for its accusation that airline officials were guilty of "an orchestrated litany of lies." Air NZ challenged the finding, which the Court of Appeal overturned after it found that Mahon had exceeded his terms of reference. Mahon resigned. 257 people were killed when the Air NZ DC-10 crashed into Mt Erebus in the Antarctic on November 28, 1979' – 'NZ's greatest air disaster and the fourth worst crash in the history of aviation.'

...The temperature in the cinema seemed to drop a few degrees as the 90-year-old images flickered on the screen. The film, *90 South*, was of Robert Falcon Scott's doomed expedition to the South Pole, and when the first shot of Mt Erebus flashed up, the silence became dense. Rightly or wrongly, I fancied that everyone else felt what I felt – that it was eerie to see that Antarctic mountain without the DC10 wreckage carving an ugly black scar on its

flank. Before November 28, 1979, most of us didn't even know its name. Now, the word brings the images flooding back and we feel again the stab of the shock we felt when we first knew 257 people had died there. The disaster had other victims, including Peter Mahon, then a High Court judge who was the one-man royal commission of inquiry into the disaster. The Appeal Court later ruled that his findings had overstepped the bounds of natural justice. Valuing his name more highly than his career (and you can't help thinking immediately of judges in recent times who should have quit and didn't) Mr Mahon resigned so he could take the matter to the Privy Council. In the end, the Law Lords didn't back him either, but history has. Mr Mahon said at the time that the Privy Council finding – which included the memorably inane injunction that those involved in the matter should “let bygones be bygones” – was “a clumsy patchwork designed to placate Air NZ management and smooth the ruffled plumage of the Government.” Time, of course, has sided with Peter Mahon, although he did not live to see it. And this year the Transport Minister will complete the vindication of that judicial warrior when he tables the Mahon report in Parliament. The then PM, Robert Muldoon, had wanted, expected, demanded that the disaster be attributed solely to pilot error. But Mahon saw it this way: if a pilot is instructed to follow a course which leads him to crash into a mountain he can't see, and if he follows that instruction and does crash, it's not his fault. Seems simple. But it is the concept underpinning that finding that makes Peter Mahon a hero and a man we should silently thank every time we land safely in an aircraft. The Mahon report pioneered the idea that when something goes wrong in a big organisation, it will never be the fault of an individual. His analysis drilled deep to find that catastrophe is always the end result of a long series of errors. He knew the destruction of flight TE901 began in Auckland hours before it took off. But he also knew – and he stood on the side of the mountain on the first anniversary of the disaster – that the Antarctic landscape can deceive the eye so the land and the sky can merge. That's why I still shiver to read the final paragraph of his report, when he lamented that the airliner had been “unerringly” guided to that place by sophisticated navigation systems, “only to be destroyed, in clear air and without warning, by the malevolent trick of polar light.”

...*'Pilots must share blame for Erebus'* It is highly regrettable that controversy still surrounds the Erebus tragedy. The recent tabling of Justice Mahon's report in Parliament and publicity of the accident have rekindled former polarised positions on the cause of the crash and its aftermath. Sadly, a one-sided portrayal of events has re-emerged, seemingly at the behest of those determined to rehabilitate the Mahon report despite its serious imperfections. The other side of the story – less dramatic, better balanced and unimpressed by the excesses of the Mahon report – should not be forgotten. Controversy over the cause of the accident stems mainly from the fact that there were two official investigations which arrived at different conclusions. Common to both investigations was the finding that, shortly before the flight, there had been a change to the McMurdo position on the computer-produced Antarctic flight plan provided to the crew before departure. The change had the effect of shifting the flight plan track from a route over the flat sea ice of McMurdo Sound to one that passed overhead the highground on Ross Island, including Mt Erebus. Both investigations found that the flight crew had not been informed of the change. The airline officials responsible for the change testified that they believed it to be minor, representing the difference between the geographical coordinates for Williams Field at McMurdo (as the southernmost flight plan position on earlier Antarctic flight plans) and those of the nearby Tacan radar facility chosen as a replacement position. This difference was thought to be some 10 minutes of longitude (or about 2 miles) and thus made no appreciable difference to the topography of the intended inbound track across Ross Island. In fact, the change amounted to 2 deg 10 minutes (or about 27 miles), the extent of which did not become apparent until after the accident. The change in coordinates was to have fatal implications. The cockpit voice recorder revealed that on approaching McMurdo, the flight crew had been advised by local air traffic control that there was a low overcast in the area, with a cloud base of 2000ft and visibility of about 40 miles. Contrary to the airline's instructions, the pilots had accepted an offer of a radar-assisted let-down through cloud to 1500ft. But this proved impossible because, before reaching McMurdo, they could not establish radio contact with the radar controller, nor were they positively identified on radar. Instead, the captain elected to carry out a visual descent from the minimum safe altitude of 16,000ft in an area true north of both McMurdo and Ross Island. The chief inspector of air accidents found this descent to have been in a cloud-free area, but in contravention of the operator's briefing, and outside the sector approved for visual descent below minimum safe altitude by the Civil Aviation Division and the airline. On completing descending orbits, the pilots recaptured the inbound computer navigation track along which they continued their descent towards McMurdo, eventually levelling off at 1500ft. In his report in June 1980, the chief inspector found the probable cause of the accident to be “the decision of the captain to continue the flight at low level toward an area of poor surface horizon definition when the crew was not certain of their position and the subsequent inability to detect the rising terrain which intercepted the aircraft's flight path.”

...*'Two air disasters involving US bombers at Whenuapai during WW2'* feature in the *Secret New Zealand* television programme on Monday. Both aircraft were involved in secret missions and crashed on take-off. Although they were among the worst aviation disasters in NZ, killing 26 people, both incidents were hushed up. NZ's obligations to keep military operations secret prevented the truth being told for more than 50 years. In June 1942, NZ still faced imminent threat of a Japanese invasion and there were plans to abandon Whenuapai and demolish facilities to prevent Japanese use. The first crash – in which a B-17E Flying Fortress went down near State Highway 16, killing all 11 on board – came a month after the Japanese Navy suffered defeat in the Coral Sea, and was hushed up because NZ was planned as a base for US combat aircraft, as the country was the last remaining Allied base between AUS and the US. The second bomber crash involved a B-24 Liberator. An engine caught fire on take-off and while trying to turn back the plane hit mudflats near Herald Island on August, 1943, killing 15 of the 30 people on board. The dead were mainly Japanese women and children, the families of diplomats heading for a rendezvous with Japanese authorities in an exchange for US diplomat prisoners of war who had already landed in Sydney. A 6-year-old Japanese girl was found dead a day later, buried up to her neck in mud without a mark on her. Survivors were taken to the Whenuapai Base Hospital and their treatment kept secret. Those killed were taken at night to the Waikumete Crematorium. The plane's remains are buried at the Hobsonville dump.

...*'Coverup claims in air-crash inquiry'* Claims that mobile phones may have brought down a Thai Airways jet have muddied the waters of a crash investigation already dogged by rumour and intrigue. Flight TG 261 plunged into a swamp just outside the southern Thai airport of Surat Thani in December after making a third attempt to land during driving monsoon rains. The crash killed 101 people, 45 others survived. Speculation about the cause of the disaster has been fuelled by competing Thai aviation agencies who are determined to clear themselves of any blame. The latest among numerous theories about the cause of the crash was outlined in the English-language *Nation* newspaper. The paper quoted unnamed investigation sources as saying that after the third failed landing attempt there was a flurry of phone calls from passengers to tell relatives that the plane was being diverted. It is alleged that the phones may have caused a malfunction in the aircraft's altitude adjustment equipment and a Thai accident probe panel had asked Thai Airways if this was possible. The Transport Minister, whose sister died in the crash and whose ministry oversees Thai, has said he was not aware of the phone theory. So far the dead pilot, Captain Pinit Wechasilpa, has borne the brunt of the blame for the crash. Survivors and air traffic control tower staff and the Aviation Department said he should not have made a third attempt to land when visibility was so poor. Thai's senior executives have defended the pilot, his record, the condition of the aircraft and the company's safety record. In turn, the Aviation Department has been attacked for the state of its airport. Only 50% of the runway lights were working and instrument landing gear had been removed six months before the crash to allow the runway to be extended. In possibly the most bizarre claim so far, one Thai newspaper said a Thai MP for Surat Thani may have been in the cockpit at the time of the crash pressing the pilot to land the plane against his better judgment. Thai has strenuously denied the allegation and aviation analysts consider the scenario unlikely.

...*'Singapore Airlines says Friday's air crash is its fault.'* The company has accepted full responsibility for the crash at Taipei airport which killed 81 people. The company said pilot error led the Boeing 747-400 down the wrong runway where it hit a barrier and exploded in a fireball. Two Kiwis were among the 98 survivors.

...*'Investigators probing the crash of a Singapore Airlines jet in Taiwan are focusing on why the pilot tried to take off from a closed runway.'* Aviation experts in Taiwan said the Los Angeles-bound Boeing 747-400 lined up on the wrong runway during a typhoon. The airline accepted full responsibility for the first fatal accident in its 28-year history. But the airline and investigators were also looking at whether Taiwan's Chaing Kai-shek International Airport

took adequate safety measures, and the part that strong winds, rain and poor visibility played in Tuesday's disaster. The director-general of the Civil Aeronautics Administration, which runs the airport, defended its operations and said it was clear that human error led to the disaster. "The three pilots must shoulder all responsibility," because the captain and two first officers knew the runway was under repair, and should not have entered it. The crash has struck a sharp blow to Singapore's national pride and relatives have lashed out at the airline for not divulging information quickly enough. The airline has offered \$US400,000 in compensation to relatives of each of the dead, and will meet medical expenses of those injured and discuss compensation with them. The compensation package is worth \$US32.8 million, but the airline is also likely to face lawsuits.'

...Survivors say flight attendants on a Singapore Airlines jet that crashed in Taipei directed some passengers into a burning cabin then fled before everyone could be rescued. A report in the *Weekend Australian* also said some flight attendants failed to help passengers open emergency doors and rescue attempts were hampered by the weather – an inflatable escape ramp was blown back into the crashed aircraft by an approaching typhoon, while fire-smothering foam was blown away. The airport's fire chief said the wind meant it took 40 minutes to extinguish the fire, instead of the usual 15.'

...the *Asian Wall Street Journal* says there were several indications suggesting that the recent SilkAir crash could have been caused by pilot suicide.' However, other sources proclaim that the crew had been 'allowed to fly a faulty plane, and that air inspectors knew of the problems but didn't act. A stabilizer was missing rivets, which could have caused a catastrophic loss of control, and the rivets may have been missing since the plane was built.' In local news, the trial of an Opotiki man charged with causing the deaths of two men in a helicopter crash in 1995 by having counterfeit parts fitted to the aircraft began in the High Court at Rotorua yesterday... The trial is expected to take about three weeks.

...In a case believed to have been a world first, [a 50-year-old... [was] jailed yesterday for three years over two deaths caused by bogus helicopter parts... The judge... also ordered him to pay restitution of \$22,500 to the families of... [the dead men. The judge said it] was a classic case in which a businessman deliberately put the lives of others at risk for financial gain. He had shown an arrogant disregard of known risks... [while] making himself a \$67,000 profit... Calling for a long jail term, [the crown prosecutor... compared the case to that of a man sentenced to seven years' prison for knowingly infecting five women with the HIV virus... A Rotorua jury found [the 50-year-old] guilty a fortnight ago of causing the men's deaths by... fitting... blades... [he obtained] from a backyard workshop in California... [that had been] "remanufactured" using... damaged[parts] from a U[S] wreck... The two 27-year-olds who went to school together and were trying to make a living in the competitive venison-recovering business, had bought their Robinson R22 helicopter from [the 50-year-old] two weeks earlier and had flown it for only about 30 hours... It was on their return from a deer-recovery operation that one of the counterfeit tail rotor blades... disintegrated in mid-air... In an expensive trial, 17 overseas witnesses took the stand. Of the other 59 called for the prosecution, many were from the South Island. It was a "logistical nightmare," said [the detective]... who spent 16 months working on it. Aided by[a] civil aviation investigator... he travelled the country gathering evidence. The pair spent a month in the U[S] piecing together parts of the jigsaw. For... [the detective,] Operation Blade was "the ultimate inquiry" – a case involving homicide, international intrigue, large-scale fraud and deception, elements of laundering... and the chance to work with top American investigators... Experts described the tail rotor blade-making attempt as extremely poor... leaving the blades basically held on by rivets... The families of the two crash victims were relieved at the outcome and happy the true story had come out at the trial. Attempts to blame the crash on pilot error had upset them.

...Work is under way to find the buried wreck of the R22 Robinson helicopter that crashed... says the wife of the man jailed over the accident. [The wife] hopes an examination of the wreck will prove her husband is innocent... [of causing] the deaths of pilot Christopher Michael Midgley, aged 27, and hunter Ross George McMurtrie, 26, both of Opotiki... [She is] disputing a Civil Aviation Authority finding that the cause of the crash was a "bogus" blade which disintegrated in flight... She had a "rough idea" of where the wreck was... The chief executive of the Opotiki District Council... gave the go-ahead 10 days ago but police stepped in on behalf of the families of the dead men. When the police were unable to come up with a legal case to prevent the excavation, the council allowed... [it to continue. The chief executive] said it was understandable that the families... of the dead men... were likely to be distressed by the matter.

...[after 5 days of searching, the helicopter's remains still haven't been found.] In international news, US authorities] are investigating a fight between two air traffic controllers that erupted in the control tower at New York's La Guardia airport. The altercation apparently did not delay aircraft or cause safety problems. [A]Federal Aviation Administration spokeswoman... said: "We have absolutely no tolerance for this type of behaviour..."

...THE BIBLE MAY TEACH THAT HUMAN LIFE IS PRICE-less, but [a 'General Motors memo compared the cost in human life against the cost to fix a gas tank problem' and]in my early years as Inspector General, I heard rumors that a U.S. Federal Aviation Administration study assigned a worth to the average passenger who might die in a plane crash. In its cost-benefit analysis, the rumor went, the FAA easily determined that the value of those lives didn't amount to much compared with the hard, cold billions that saving them would cost in aircraft-safety devices, in beefed-up monitoring of planes, pilots and air traffic, and in airports hermetically sealed against bombs and hijacking. Curious and incredulous at the macabre implications, I frequently asked about these elusive valuations and talked to many people who had heard about them or knew someone who knew someone who had heard about them. Yet I never met anyone who had actually seen the official figures, much less helped compile them. In many meetings, FAA officials argued as if they had those figures on the tips of their tongues – "losses," they would explain patiently, from the small number of crashes and even smaller number of attacks on planes just did not justify vast airline investments in safety and security. After all, as the FAA's associate administrator for civil-aviation security... would tell me, the terrorist bombing of Pan Am Flight 103 over Lockerbie, Scotland, cost \$[US]1 billion. Trying to prevent another Pan Am 103 would cost \$5 billion over 10 years. Couldn't I understand? The numbers just didn't add up. "We regulate by counting tombstones," an FAA official told a journalist a few years ago. The nickname's origins are unknown, but... agency officials, government bureaucrats, staff on Capitol Hill, aviation lobbyists, airline representatives and journalists all understood the irony of the nickname. The FAA will not do anything until people die. It was a sad, bad, inside joke. Only the public never knew how much truth was in it... In August 1990, I... became the watchdog of the FAA. The FAA, in turn, stood guard over the airlines. But that role could be interpreted two ways: as policing the airlines to ensure safety at all costs or as protecting the airlines from any opposition or criticism. During five years as Inspector General, I came to realize that the FAA believed that statutes ordered it to champion the aviation industry. Time and again, my office uncovered practices that would shock the public: sloppy inspections of planes, perfunctory review of pilots, lax oversight of airline procedures, disregard for bogus airline parts, sieve-line security at airports, antiquated air-traffic-control systems. Only with a major crash, only with people dead and sobbing survivors filling television screens, does the FAA step up to the plate and make changes. I found the FAA's complacency toward accidents difficult to accept. IN 1994, 68 PEOPLE DIED WHEN AN AVIONS DE TRANSPORT RE-gional plane, flown by American Eagle, crashed into a soybean field in Roselawn, Indiana. A design flaw made the French-Italian plane become violently uncontrollable in cold weather. Pilots and aeronautical engineers knew what the problem was: the deicing boots on the ATR wings were not big enough... But the FAA determined that lengthening the boot would cost too much money. It took three plane crashes... before the FAA ordered extension of the deicing boot and limits to ATR flights in icy weather. It also took a fatal plane crash for the FAA to heed... evidence showing that the distance between planes landing at an airport should be increased. For years, the National Transportation Safety Board... told the FAA to increase the distance between jets... but the FAA refused... The board studied 51 accidents caused by wake turbulence from 1983 to 1993. Twenty-seven people had been killed, and 40 planes had been destroyed or damaged... It would be three years more before the FAA ruled that the separation between heavy and lighter aircraft should be increased. Since 1982, the NTSB has urged the FAA to order airlines to install better black boxes... All the NTSB wanted was black boxes that

can continue recording for fractions of a second beyond a catastrophic explosion or massive electrical failure aboard an airplane. European airlines have used such advanced black-box technology for years. That means many American planes flying to Europe have the advanced boxes. But the FAA did not want to *compel* airlines to install improved boxes. No, the agency declared, the new technology would cost the airlines too much money. The NTSB was especially keen to have the boxes installed on Boeing 737s. Investigations of two accidents involving B-737s – one outside Colorado Springs, Colorado, in 1991 and the other in Pittsburgh, Pennsylvania, in 1994 – have been seriously hampered by the lack of this information... [I]n the days after TWA Flight 800 crashed into the Atlantic Ocean, the public, politicians, investigators and grieving family members waited tensely while scuba divers searched for clues. Eventually the recorder was found, its body remarkably undamaged. But it played back only a millisecond of a mysterious loud noise. The box was one of the old models... The FAA regularly told the NTSB that it couldn't have anything on its wish list of safety measures because of cost considerations. It told the same thing to the Inspector General, Congress and the White House. It reassured the public with the mantra "Accidents are not happening; planes are not falling out of the sky." Yet they are, and the danger is growing. In one meeting I attended, the FAA said that... we can expect a major crash every week or so after the turn of the century. Stunned, I wanted to study the data... I asked the FAA to send me the graphs and any supporting research. The reply was swift: no such data existed, I was told... In fact, no such research had been done, no such conclusions reached. But I'd seen them, I argued; I'd held them in my hands! That didn't matter; suddenly none of the officials knew what I was talking about. Over the next years, I learned firsthand that, sadly, withholding information was routine for the FAA... **IT WOULD TAKE THE DEATHS OF MORE THAN A HUNDRED PEOPLE** aboard a ValuJet plane that burst into flames, smashed into the Florida Everglades and sank in a murky swamp to expose chronic weaknesses in the FAA. The 110 souls on board that flight probably never knew what caused the fire that... *probably asphyxiated them*... *before they were swallowed by the swamp*... At first, government investigators could not pinpoint the reason for the disaster, either. [It was later found that the fire was apparently caused by dangerous oxygen generators loaded into the cargo bay without being carefully handled according to regulations.] But the tragedy would expose what the FAA had long known: ValuJet was primed for a major crash; its maintenance was slipshod; it had an accident rate 14 times as poor as those of its peers; its managers were out of their league; and the FAA's own inspectors had wanted ValuJet shut down months before the Everglades disaster. Atlanta-based ValuJet was a phenomenal success story. In just three years, it had leaped from two planes on eight routes... to 51 planes with 320 itineraries. Founded in 1993, the discount carrier saw revenue soar to \$368 million in 1995. But i[n]... 1995, when ValuJet bid for a contract to ferry U.S. Defense Department personnel, Defense specialists had scrutinised ValuJet's books, inspected its facilities and talked to its pilots, mechanics and managers. The Defense Department had complaints about virtually everything, and its report was breathtaking in the scope of its condemnation. The answer: No contract. ValuJet is not good enough to fly our people. If the FAA had properly regulated ValuJet, its rapid growth might not have led to disaster. But that February in 1996, all that seemed clear to me was that the FAA simply did not know what to do with ValuJet... As I probed, I learned that FAA inspectors had looked at ValuJet planes nearly 5,000 times in the three years it had been flying yet had never reported any significant problems or concerns. What are the odds of that? ...Spurred by the gruesome deaths[in the Everglades] and public outrage... the carrier was grounded within weeks... ValuJet agreed not to fight its grounding and paid \$2 million toward the FAA's cost of reinspecting planes. It was not a penalty; in fact, the airline bought itself a virtually clean slate... *ValuJet was grounded for more than three months... [then was] returned to the air, although reduced in size*... "The FAA agrees that, except for violations of regulations concerning hazardous materials and civil aviation security," the consent order said, "it will not pursue any civil penalty for any violation of the regulations known by the FAA as of the date and time of the execution of this agreement." How could it? The FAA could hardly go back and find the faults without admitting that it was to blame for missing or ignoring them in the first place. Yet... ValuJet was not alone. Shoddy inspections were an FAA plague. Exposing them had occupied me since my first year on the job... *In the wake of [my] campaign, Congress has changed the FAA's mandate to make safety its primary mission.*

...[h]oliday plans have been disrupted for thousands in AUS by the Ansett crisis that has brought an unwelcome spotlight on to the management of Air NZ, which is now the sole owner of the airline. Ansett has been ordered to ground its fleet of 10 Boeing 767s and given three weeks to improve or risk losing permission to fly. The AUSn Civil Aviation Safety Authority (Casa) imposed the three-week deadline to get the 767s fixed after it found that an Ansett plane had flown eight times in three days with none of its escape slides in the operating position. This came just a week after cracks were found in the pylons joining the engine to the wing of four 767s (there have been two fatal crashes in the past 20 years caused by similar cracks) and it was revealed that Ansett had missed by more than six months a deadline issued by Boeing to check them. Reports from AUS show the airline has coped fairly well with re-booking passengers, but many individual travellers have been forced to hurriedly change holiday plans or delay flights. Air NZ has pulled one of its own planes off transtasman duties to help its beleaguered subsidiary, and Ansett has been forced to charter jets from its arch-rival Qantas. The groundings did not make Ansett an unsafe airline, but the public perception of it being so would be hard to shake. It came at a time of intense competition in AUSn domestic aviation, and Ansett would have an extremely difficult job regaining its market share. AUSn engineers are calling for a parliamentary inquiry into Ansett's safety culture, which they say has deteriorated due to the preoccupation of successive owners to 'extract a maximum amount of profit from the' '\$A6.7 billion Australasian global carrier'. ● 'Air NZ bought News Corp's 50% share in Ansett AUS' 'for more than \$A580 million'...

'Air NZ's chief executive flew to Melbourne last night to face criticism over the crisis that has seen subsidiary Ansett AUS's jets grounded at the busiest time of year. Ansett faces its most stern test today as it tries to fly 37,000 passengers around AUS while 10 of its 63 aircraft are grounded. As the crisis escalated yesterday, the airline faced criticism on a number of fronts: ■ A union in AUS claimed that the airline had been delaying repairs and maintenance until the last moment to save money. Increased competition in the AUSn aviation market, staff cuts and economic measures had also affected maintenance and safety, said the AUSn Manufacturing Workers Union. ■ Politicians and the media claimed that the airline was not doing enough to help passengers who had bookings – although the chief executive told the *Herald* that he could not leave sooner because the trip would have robbed him precious time on the phone arranging alternative flights. He also said four people had been suspended – two engineers who had signed off the chutes, and two technicians – but added that most of the maintenance problems stemmed from a system that had been in place before Air NZ took over Ansett, and which have since been changed to give more efficient safety checks. Ironically, the crisis only evolved after a problem with paperwork had caused safety checks to be delayed by 24 hours. The chief executive believed the problem was caused by Casa officials failing to pick up the paperwork, but Casa told the *Herald* that it was up to the airline to deliver the papers. A Casa spokesman said the documents were being checked late yesterday, and the first plane would be physically checked today. It would take until tomorrow or Wednesday for the first plane to be cleared to fly. If the first plane passed, then inspections might be sped up on the others. If not, then the planes would have to stay grounded for more thorough checks. Either way, it would take at least two weeks to check all the planes.'

... '170 passengers booked on a flight from Auckland to Los Angeles had to switch airlines at the last minute and were delayed for several hours after Air NZ sent one of its 747 jets across the Tasman to help its troubled subsidiary Ansett AUS. Only one AUSn domestic flight was delayed yesterday. The airline's chief executive, who flew to Melbourne on Sunday night, said leasing planes from other airlines and booking seats on other aircraft had cost \$2.4 million so far and would cost \$600,000 a day. Ansett would relaunch its brand and buy new aircraft after it resolved all its safety woes. "This is a setback, but it is consistent with the need for us just to relaunch the whole airline." However, an aviation analyst told the *Herald* that the safety crisis could not have come at a worse time for Ansett AUS. Normally, an airline tried to recapture market share by heavy discounting. The recent arrival of two new AUSn domestic airlines, Impulse and Virgin Blue, had already driven fares down to an unsustainable level. Getting the extra money to buy new planes and relaunch will be hard for Air NZ, as its share price is at 10-year lows and are expected to be hard hit tomorrow when sharemarkets reopen after the holiday

break. It is expected to ask the NZ Government again to allow Singapore Airlines, which already owns a 25% stake, to increase its shareholding, bringing in much-needed capital. Ansett AUS management were not the only ones spending the weekend trying to spread blame, with claims of dangerous cost-cutting levelled at AUSn Governments and Casa. The AUSn Manufacturing Workers Union has repeatedly called for a federal parliamentary inquiry into the effects of recent deregulation. Its national secretary said aviation was “plagued by a culture of cost-cutting,” which had affected all airlines as well as Casa. Air NZ’s engineers yesterday took pains to point out that they should not be blamed for the alleged shortcomings of their AUSn counterparts.’

...‘It’s Monday, 9 am Melbourne time, and Air NZ’s spokesman has just stepped off a plane to join an Ansett AUS rescue team. His jet slipped into Melbourne after a fine, sunny journey in which there was only one black cloud to be seen – over Melbourne, as it happened, perhaps right over the Ansett AUS head office in the central city. The early-morning reception lounge is quiet, but a few people upstairs are reading newspapers. Each has a similar headline: Ansett head hits out at safety body. The Ansett head referred to is also the chief executive of Air NZ. Together, he and the spokesman are poised to swing into damage-control mode. The damage is less than 10km away, at an Ansett maintenance base. There, nine Boeing 767s have been sitting on tarmac doing absolutely nothing for up to four days. They are grounded, and will stay that way until Ansett convinces Casa that no more cracks will be found in engine mountings, that no more planes will fly with their emergency escape ramps deactivated, that none will have gaps under their doors. The tenth Boeing is sitting in a shed at Auckland Airport for routine maintenance by engineers at Air NZ. “1900 seats sitting vacant,” the spokesman says, looking at the Boeings. “It should never have got to this.” He blames Casa for grounding the aircraft during one of the busiest flying seasons of the year. “There’s eight planes been sitting there ready for inspection since, when, Thursday? And where is Casa? Still looking at paperwork.” In the two glass-walled Casa offices, four grim-faced men bend over folders. They refuse access. They will not answer questions. The *Herald* wants to know how there could be confusion with paperwork for 24 hours when Casa is working in an Ansett building, within 10 paces of Ansett offices. But that question will not be answered today.’

...‘Casa has released a photo of the cracked engine mounts on one of the grounded Ansett jets. The picture was published on the front page of the *Daily Telegraph* newspaper in Sydney at the weekend under the headline “On a wing and a prayer.” Casa is understood to have released the photo after criticism that it had been too harsh on Ansett AUS. On Friday Ansett moved closer to getting its Boeing 767 fleet back in the air with the first of the 10 grounded jets cleared for takeoff by safety officials. The company said the cost of grounding the fleet was \$2.5 million. That included leasing aircraft, buying seats on other planes and loss of business. The company also announced it would sell the 767s, which are between 8 and 18 years old’. □ Because an Air NZ 747 is still being used by Ansett AUS, ‘passengers on the daily Air NZ flight NZ122 from Melbourne to Auckland are being re-booked on a United Airlines flight.’]

...A 32-year-old Japanese woman died and 83 people were injured on Sunday night when a United Airlines jumbo jet plunged 300m in massive air turbulence on a flight from Tokyo to Honolulu[, throwing]... passengers... with seatbelts undone – even though the seatbelt sign was on – ...flight attendants and serving carts to the cabin ceiling... Meals littered the cabin and the ceiling was damaged... When the airliner landed, passengers were helped off... bloodied... and... with broken limbs... Several had neck braces fitted before they were carried away on stretchers... A spokesman for the F[AA] in Washington said it would look into the “turbulence issues and whether procedures were followed,” although Japanese authorities would handle the formal investigation.

...An Auckland woman has criticised Qantas for not having enough infant seatbelts on a flight from Brisbane... The C[AA] requires children under four on aircraft registered in this country to be restrained, either in approved safety seats or by extension belts if sitting on adults’ laps... Air N[Z] and Ansett N[Z] said they carried ample supplies of extension belts... But... A[US’s Casa] allows children under three to travel unrestrained and... [NZ] officials say they cannot compel overseas airlines flying to N[Z] to provide seatbelts for young children... Qantas said it did not offer infant extension belts unless parents asked for them. Qantas recommended the use of approved child safety seats... although this meant parents would have to buy separate fares. [However, the Auckland woman] said she received no such information when buying her tickets... [Concern] has grown with word that a woman was killed and dozens injured when a... jumbo jet hit turbulence over the northern Pacific...

A C[AA] inquiry has begun into the potentially lethal practice of international flights carrying duty-free alcohol in over-head lockers. A spokesman... said the study was commissioned following concerns raised after the crash of Korean jumbo jet Flight 801 on Guam this year. Twenty-six people, including[a NZ] helicopter pilot... survived the crash but 228 people died. [The helicopter pilot], of Te Anaau, said yesterday that he strongly believed a cocktail of oxygen from emergency masks, mixed with fumes from duty-free alcohol, sparked... [a fireball that] went through the cabin moments after the jumbo went down. [The helicopter pilot] said he was sure it was not caused by the fuel tanks... He said all the bottles of duty-free alcohol flew out of the over-head lockers like missiles when the plane crashed... “It’s my assumption, based on what happened and what I know about those goods...” ...American air accident inspectors spoke to [him] in Guam hospital but he said they did not want to know about the alcohol issue[, probably because it wasn’t a direct cause of the crash. However, he felt NZ] was being responsible about it... [because he knew that ‘some passengers who survived the initial crash were burnt to death before they could exit the cabin.’ The CAA spokesman] said the inquiry would be completed by the end of the month. “If it finds changes need to be made, such as recommending 40[%] alcohol spirits should not be allowed on to the plane, it would not be a short process.” ...any recommended changes would have to be put to the International Air Transport Association and the International Civil Aviation Organisation... Air N[Z] said it would fully cooperate with the study, and agreed that any action should be standardised internationally. A spokesman... said Air N[Z] endorsed the principle of passengers[only] being able to buy duty-free alcohol on arrival. That was not yet possible in all countries... Some airports could be upset if... [restrictions were placed on selling] duty-free alcohol.

...[‘a pensioner battling against being charged 72c GST in Auckland Airport’s tax-free area may force a national book chain to change its prices. The pensioner tackled Whitcoulls, AIAL and the IRD after he discovered the \$6.95 he paid for a magazine at the chain’s store in the tax-free “air side” of the airport included GST. “It might only be 72c, but you think of the number of people who go through the airport, and it’s a lot of money,” he said. “If they want to do business in a duty-free area, they should not be charging tax.” An IRD spokeswoman confirmed yesterday that GST should not be charged in the area and said the department would investigate a complaint of overcharging if the pensioner wanted to lay one. AIAL said the anomaly would be corrected, while Whitcoulls, which runs stores on both the “land side” and “air side,” was less committal, saying it was reviewing the charge. Whitcoulls’ problem was that it had a nationwide pricing policy. Whitcoulls passes the GST on to the Government and does not profit from the charge.’ In related news, d]escendants of people buried in a Mangere cemetery yesterday spruced up the graveyard which one day may be covered by a... runway... [A]fter uncovering... many fascinating tales about the people buried there, [a]... Mangere woman... decided to organise a working bee, thanksgiving service and picnic for relatives of the 41 people buried in the Methodist Church cemetery... [T]he graves may have to be moved if... Auckland Airport... expands next century.

...[the] first part of a \$71 million Christchurch international airport terminal expansion, comprising a new overseas arrival hall, baggage claim and departure lounge, will open... on August 26, [the airport company’s] chief executive said yesterday... [By the way, t]he Government is selling its shares in the Rotorua and Palmerston North airports, in line with a policy to gradually quit its ownership of regional airports... The Rotorua airport has assets of \$4.7 million, and those of Palmerston North airport are worth \$10.4 million... The Crown also owns 66[%] of Wellington airport and 25[%] of Christchurch airport... The Crown has already sold its stake in Hamilton airport and has been discussing the sale of its holding in Nelson airport. The Government sees regional airports as beyond its core business.

...Argentin[a’s] President... has issued a decree authorising the sale of the country’s airports, warning there could be an air disaster if they were not improved urgently... Concern about airport safety has grown because of a series of near misses. The decree breaks a deadlock which has

delayed the Government's plans to find a private company to run the country's 38 airports. A condition of the 30-year concession is that \$US3.1 billion... be spent on improvements... [Incidentally, a] dispute over firefighter numbers at A[US]n airports is threatening to cause major disruption... and... may force airlines to cancel some flights.

...A burger bar fire last night closed part of Heathrow Airport, Britain's main international airport... [and] the world's busiest... bringing chaos as hundreds of flights were delayed... [or] diverted... and huge traffic jams built up.

...TRAVELLING to London's Heathrow Airport by bus is now much easier. For the first time, a bus express lane has been introduced along part of London's busy M4 Motorway which leads into Heathrow Terminals 1, 2 and 3. The initiative is part of the British Government's drive to encourage more people to use public transport.

...THE Civil Aviation Authority yesterday confirmed it is investigating a near collision between two aircraft in Britain's skies – the third to be reported last week... Britain's national news agency... reported the aircraft may have been only 60m apart, 3 km west of Heathrow, when pilots were forced to take evasive action. The airlines involved were not identified, and no other details were available. On Wednesday, the authority reported two British Airways planes carrying more than 300 passengers came within 120m of each other on November 22 [last year] after an air traffic controller mistakenly told one pilot to descend. A report into that incident called for a review of air traffic control procedures when dozens of aircraft were "stacked" over southern England while waiting to land at Heathrow.

...Oceanic airspace controls at Auckland Airport are under review after two airliners crossed too closely on opposing Tasman flight paths. The Transport Accident Investigation Commission homed in after an Air N[Z] Boeing 767 bound for Brisbane was cleared to climb before an opposing aircraft... an EVA Air Boeing 767... passed overhead. It reported yesterday that, although[the] aircraft... were not in danger of colliding, an absence of checks on clearances by controllers was of concern. "The circumstances of this incident had the potential for an in-flight collision which could have cost the lives of 421 persons," it said... It turned out there was still vertical separation of 1800ft before the Air N[Z] pilots noticed a vapour trail from the other aircraft and an automatic collision avoidance alert went off. Aircraft flying above 29,000ft must generally stay 2000ft apart, although this requirement had recently been halved on some electronically monitored Atlantic routes.

...Two air traffic controllers have been suspended after an Ansett[NZ] passenger jet overtook a slower commuter plane above Taranaki with only about 200m to spare. Both aircraft... were cleared to fly at the same level of 22,000ft as they headed south from Auckland on Sunday afternoon. Aircraft flying on the same track should normally be separated by... at least 5 nautical miles... if on the same level. Separate inquiries are being conducted by the Transport Accident Investigation Commission and the Airways Corporation...

Air traffic controls above Auckland are being tightened after conflicts involving passenger aircraft, a military transporter and a troop of parachutists... 10 parachutists jumped from an Air Force Hercules ahead of an Eagle Air Bandeirante flying from Auckland to Whangarei... The Transport Accident Investigation Commission, in a report out yesterday, said the clearance was given after a misunderstanding between controllers at [the Whenuapai Air Force base] and at Auckland International Airport... The Airways Corporation says it has introduced extra safeguards... Whenuapai controllers, who are employees of the Airways Corporation, are now instructed not to approve parachute drops without specific telephone clearance from Auckland International... It is also modifying radar equipment to warn ground controllers when aircraft are heading too close, such as in a second incident when the same Hercules passed within 1300m of another Eagle aircraft south of Hamilton.

...An airliner which landed at the wrong airport features in the latest crop of aviation escapades highlighted by the confidential reporting organisation Icarus... which is independent of but funded by the Airways Corporation... The... co-pilot had used the global positioning system... for navigation while the captain was absent from the cockpit for 20 minutes. When the captain returned, the right identification for waypoints to the destination airport was displayed... [but] the aircraft's latitude and longitude... went unchecked... And the crew could not make radio contact with their destination or see any identifiable landmarks when landing time approached. They checked latitude and longitude and found them to be for a different airport... more than 270km from its intended international destination... [Icarus] cited an article... which warned against an over-reliance on the... GPS... Though the system appeared highly accurate, it was statistically only 97[%] so. Pilots... could not know of any error without cross-checking with other navigation sources. Reasons could vary from keying in incorrect data to poor reception from satellites used to fix coordinates.

...N[Z] will be the first to use a new satellite navigation system for oceanic air traffic control, says the Airways Corporation[, which went on to remind everyone that 'in 1959 Wellington Airport became first in the world to install a precision approach radar.'] The corporation, which has 33 million sq km of airspace to monitor, will next year start feeding aircraft positions from signals bounced off satellites into traffic control screens. Controllers [currently] use a manual display board to monitor flight movements outside radar reach, relying on pilots to radio back from reporting points. But the corporation says it has tightened this system since a controller cleared an Air N[Z] Boeing... to climb out of turbulence, not realising that an EVA Air flight had yet to pass overhead.

...Airways Corporation of N[Z] Ltd is poised to participate in the privatisation of air navigation services companies around the world... Canada had already privatised its navigation services while Britain had announced plans to. Many countries also realised navigation was a key aviation infrastructure asset essential for their economic growth, yet lacked the resources and knowledge to operate an effective system... said [the corporation's] chairman... he added... [that] the company... had built its own expertise over the last five years through its consulting business. This had resulted in assignments in Nepal, Scotland and the Pacific... "The next phase of our growth is to pursue opportunities in the ownership or management of air navigation service organisations offshore. These opportunities are likely to present themselves as privatisation, concessions or joint-venture partnerships." Airways said it might have to raise prices for its customers to rebuild its revenue... A recent directive by the Commerce Commission had prompted the company to re-examine its pricing structure... [The corporation's chief] executive... said that with the Commerce Act no longer permitting Airways to apply a standard charge for aerodrome control services throughout the country, the company had to move to location-specific pricing to ensure that prices were competitive at each airport, without cross subsidies.

...Air traffic control services at... Ardmore[NZ's]... busiest airport... in terms of aircraft movements, with about 220,000 a year... are under threat from a row over fees. Aviation users have refused to pay a 23[%] increase, and the Airways Corporation has retaliated by threatening to withdraw control services for landings and take-offs... [Meanwhile,] Auckland Airport development costs have ballooned to \$180 million with another 12,000 sq m of terminal floor space added to an earlier design. The airport's chief executive... said the international terminal had grown to 76,000 sq m, N[Z]'s largest public building by far. Three years ago it measured 46,000 sq m... [T]he terminal should now be big enough for passenger growth until about 2005, when more space could easily be added to its modular construction... Despite hasty additions to the original specifications, the company will officially open the enlarged terminal on schedule on Monday.

...Auckland International Airport landed a record \$40.5 million after-tax profit... up 3.8[%]... for the June year just ahead of a decision by the Government later this month on its continued ownership. The Government, with a 51.6[%] stake, is already understood to have received a copy of draft recommendations from its sale advisers[, who]... valued the airport at around \$1 billion. Council holders, accounting for virtually the balance, are also seeking advice on their options... Whether the airport remains in the public or private hands seems not to be of great concern to... [the] airport's chief executive, [who] said the company was in "good shape." ...[AIAL] is confident strong passenger traffic will give it the cash flow it needs to keep expanding... As an indication of the quantum leap in visitor growth, [the chief executive] pointed out that it took N[Z] 140 years to attract 500,000 visitors just before 1980, and another 15 years to get to 1.5 million. Today the airport handles some 7.6 million passengers... However[, he]... expected further competition to come as a result of the recent sales of Brisbane, Perth and Melbourne airports. "The new owners

will doubtless market themselves aggressively and compete not only with each other, but also with Auckland for a greater share of the airline business. Auckland must, therefore, recognise these possibilities and develop strategies to minimise any potential risk."

...A day after the P[M] cautioned against hurried asset sales, the Government... faced... a sale recommendation for Auckland International Airport... A report prepared by the consultants... recommends the Government quit its 51.6[%] stake. The consultants envisage] some of Auckland's local bodies wanting to get rid of their stakes, which total 47.4[%]... But world stock markets are again hanging on Wall Street's overnight performance to see if it has decisively broken the vicious downward spiral of global share prices... Winning the public over to putting Auckland's gateway on the block is another likely hurdle. A decision is due by Christmas. Privately, some in the Beehive have questioned the wisdom of [the PM speaking]... out on asset sales. However, the offices of the Minister of Finance... and the Minister of State Owned Enterprises... last night moved quickly to say nothing had been changed by [the PM's] statement and that the condition of the sharemarket was always a factor that would be taken into account when assets were sold.

...The... Auckland International Airport could come under foreign control within five months of a Government decision to sell its majority stake, say consultants... The report, completed before this week's sharemarket uncertainty, says "market conditions are favourable" to getting a high price through a public float... It says a float would attract strong domestic and international interest as there are only four listed airport companies in the world [– 'and all of them are in the Northern Hemisphere']... The Auckland City Council may be willing to sell some of its 25.8[%] as it wants \$30 million for big city projects such as the Civic Theatre restoration. However, the deputy mayor... last night reiterated his concerns about the possibility of foreign control and monopoly problems with a trade sale. He wants a cornerstone local government stake retained, with the Government's shares being widely dispersed through a float. The Mayor of Manukau... strongly opposes the sale of any of his city council's 9.6[%] stake... while his Waitakere counterpart... is keen for his council to sell its 3.7[%] slice.

...The lack of public furore over the mooted sale of Auckland International Airport is likely to give the Government confidence... Since the idea was raised in April, hardly a murmur has been heard against it. This has pleased the dries in Government and pushed the sale up the agenda. The main question has become how the Government should sell its 51.6[%] stake. Easiest is a trade sale to the highest bidder among investment companies or airport operators. In the past, the Government has opted for this exit because the new owner pays a premium for control. This has maximised the cash for reducing Government borrowings and taxes to the[initial] benefit of the public. The airport would attract no shortage of interest abroad from the likes of Lockheed, the US aerospace group, or BAA, owner of London's three largest airports... But... given the fragmented ownership structure of the airport, it is not clear what level of ownership could be offered to a trade buyer, possibly reducing its appeal... [Furthermore,] a trade sale could be unpalatable to a public which has watched a few people enriched by their purchase of state assets. It also runs against the grain of the N[Z] First leader and Treasurer... He might like the Government's other option – a sharemarket float which would encourage wide distribution of ownership among the[wealthier sector of the] public. It would also give the Government the flexibility to retain a stake. Local councils holding most of the rest of the airport's shares would also benefit. They could raise much-needed funds by selling shares... Politics aside, the key issue is how well management runs the airport. If it stacks up against international comparisons, the opportunity for a new owner such as Lockheed to extract greater efficiency and thus value is much limited... The verdict will come in a report by... [an] investment bank assigned by the Government and the Auckland City Council to review the airport's capital structure. If the report gives management a low rating, the Government should weather the political turbulence to bring in an experienced operator through a trade sale.

...Local politicians were warned last night that they faced a major battle if they decided to sell North Shore City's stake in Auckland Airport without public input. North Shore councillors meet on Wednesday but remain divided o[ver] the future of the council's 7.1[%] share... the local body... has debts of \$72 million.

...North Shore residents will have a say on whether to keep the city's \$80 million stake in Auckland Airport, but the city council will continue to look at its sale option.

...Manukau's... shareholding equates to 20 million shares worth as much as \$100 million... However, you may ask why Manukau does not sell its share to reduce its public debt of \$107 million, a figure which is relatively low by local government standards. I do not believe that selling the airport shares to repay council debt would be in the council's best interests, given the likely increase in value. The council has developed strategic alliances with the airport company over the years that are not shared by other local authority, and we have worked together to achieve projects that benefit the city and the airport company. An outstanding example is the \$20 million eastern access between the airport and the Manukau City Centre... A[IAL] is a great success. N[Z]ers should be given the opportunity to share in this prosperous enterprise and its ongoing success.

...Auckland and Manukau city councils want to retain effective control of Auckland Airport and restrict foreign ownership under a plan bound to run into trouble with the Government's intentions for the... asset. The... Mayor of Manukau... said if the Government must sell its 51.6[%] stake, it should sell the shares to ordinary N[Z]ers. He... suggested Manukau City could increase its stake in the airport and hinted that other ways of protecting the public stake were being looked at. These ideas will be greeted with alarm in Government circles where ministers are trying to make local authorities stop running trading enterprises and a sale recommendation by the Government's consultants... has warned that restrictions on foreign ownership will depress the price. The report said... the Government... needed... to "maximise" the proceeds from its stake in the airport.

...The Treasurer... has an open mind about Auckland councils holding a strategic stake in Auckland Airport and N[Z] residents being offered cheaper shares than overseas investors... But he said no decision had been taken by the Government to sell its shares in the airport. The Minister of Finance... was cautious about the possibility of making any sale more attractive to N[Z] buyers. "There was considerable criticism of some floats in the UK where the people who were issued the early shares went on and sold them at substantial premiums." The chief executive of the Auckland Regional Chamber of Commerce and Industry... criticised[the] Auckland and Manukau[city councils], saying they were mistakenly holding back Auckland's growth and development.

...['Auckland City will soon have up to \$370 million in spare cash after councillors yesterday voted to sell the council's 25.8% airport shareholding. Auckland will sound out three other councils – North Shore, Manukau and Franklin – on putting their collective 43.4% up for sale in one block to get the best price. The Mayor of Franklin says her council has already decided to sell its 1.17% stake and could join the others. North Shore City has expressed interest in selling most of its 7.14% stake. Manukau is still considering whether to sell its 9.64% stake.']

...The green light for the sale of around 60[%] of Auckland International Airport has been given by its major shareholders. The Government and the Auckland and Manukau city councils... yesterday called for advisers for both a public float and a trade sale.

...['The prospect of Auckland International Airport being put on the market is already attracting the attention of Changi Airports Authority of Singapore, which has appointed an investment bank to advise it.' In the meantime,] Manukau City Council is still agonising over planning provisions for a second runway at... [the a]irport... and council staff predict appeals could drag the saga into 1998. Debate has heated-up in the 18 months since the second runway appeared in the council's proposed district plan. The draft shows a new runway to the north of and parallel to the existing one. Various submissions have mooted the alternative of reclaiming land from the Manukau Harbour and building the second runway to the south... The Air Safety League of N[Z] – a group of former pilots, engineers, navigators, and others from the aviation industry – said a southern runway would be safer. Its spokesman... said most air accidents occurred on takeoff or landing and it was safer to have a runway with water at each end rather than houses, businesses or roads. But the Huakina Development Trust, the environmental arm of the Tainui Maori Trust Board, has threatened legal action to prevent more harbour reclamation. The main promoters of the runway are [AIAL] and the airlines. The chief executive [of AIAL] said the

existing] runway could reach capacity by 2007 and local and international economies would suffer if increases in passenger and cargo traffic were not planned for. [He] said the airport company was completely confident the northern runway would be safe.

...[76 people were killed and 26 injured in Ecuador when a Cuban airliner crashed and exploded. Witnesses and survivors said the plane seemed to have engine problems before the accident because the pilot had tried and failed twice to take off. On the third attempt the Russian-made Cubana de Aviacion plane crashed into a nearby soccer field, killing seven on the ground, five of them children. Red Cross workers said that the accident was evidence of the riskiness of situating Quito's airport in the highly populated zone of the Andean city.] In local news, o]pponents of a deal to swap regional park land to make way for an airfield on Waiheke Island can vent their displeasure at a public hearing. The A[RC] parks committee is not obliged to hold a hearing, but yesterday decided it would, to minimise the risk of legal challenges... The Waiheke Airfields Ltd development would intrude about 100m into [the park]. In January last year the committee gave initial approval for swapping 0.8ha of the park needed for the airfield for 4.7ha of wetland owned by the company. Of the 183 submissions on the land-swap, all but two oppose it.

...A bird strike involving an Air N[Z] jet has highlighted an environmental dilemma with the habitat of protected grey duck near Samoa's international airport. The engine of the... jet sucked in a flock of grey ducks as it landed on Sunday, bending engine blades and causing a six-hour delay for passengers flying to Los Angeles and onwards. Among the delayed passengers was the [Samoa] P[M]... who was on his way to Scotland for the Commonwealth Heads of Government meeting. The Apia manager for Air N[Z]... said many near-misses between the ducks and aircraft had occurred in the past. The ducks breed in a swamp which [he] wants the airport authority to fill in or drain to rid the area of the "pests". An airport authority spokesman... said the birds were shot whenever they threatened planes... He said a few ducks being shot was the price of passenger safety – although other measures were used overseas for reducing the threat of birds, such as electronic buzzers[(Auckland Airport uses 'model owls, streamers and loud speakers' to keep birds away)]. The problem worsens during the wet season when the ducks are attracted to ponds formed beside the runway... [A local] environmental group... believed grey duck populations had increased since the cyclones earlier this decade.

...A Qantas jet headed for Auckland made an emergency landing at Sydney yesterday after an engine exploded in flames, filling the cabin with smoke. The plane had hit a bird on take-off. [Editor's note: as there are 'hundreds of minor bird strikes a year worldwide', laypeople could be forgiven for wondering why aircraft engineers haven't yet worked out how to fit bird-proof grilles over jet-engines!]

...Travellers were stranded at Auckland Airport when taxi drivers went on strike briefly this week in protest over the actions of a marshal... About 60 cabbies angry over the lack of taxi spaces at the airport staged a sit-in... The airport company's communications manager... said the marshal was carrying out her duties as instructed... The official was "going by the book" and stopping taxis not in the rank from parking on grass areas. [By the way, 'Sydney has roughly one taxi for every 572 people. Auckland has one for every 266 people. If Auckland had Sydney's population it'd have about 13,800 taxis (instead of nearly 4000). Scary, isn't it?' ■ London has 19,000 regular and 80,000 deregulated cabs vying for 7 million people.]

...NZ has been praised as taking the right direction as NSW grapples with how to improve its frequently criticised taxi services. The NSW Independent Pricing and Regulatory Tribunal has recommended increasing the number of cabs in the state by 240 a year over the next five years to take the total to 5700. But in a report to be considered by the state Government, the tribunal ruled out major restructuring of an industry that is still heavily regulated. However, the Centre for Independent Studies, a Sydney-based research organisation, yesterday argued that taxi industry deregulation had worked in NZ and would be the best solution in AUS. Deregulating in NZ in 1989 led to a tripling of taxi companies in the metropolitan areas in the first five years. According to the latest figures, there were 24.3 cabs per 10,000 people in Wellington, compared with 9.62 in NSW. A policy analyst at the centre pointed out that new specialised services had emerged, including taxi vans and executive cars, while fares charged by most companies fell by as much as 10% from 1989 to 1995. The NZ taxi market had been able to sustain growth that outstripped population increases in many regions because of the greater availability of cabs and improved ease of payment.]

...A KIWI condoms-in-cabs campaign has sparked worldwide interest. The Erection for Protection programme was run by Timaru's public health office. It gave local cab firm Budget Taxis 2000 condoms to supply free to customers. The condoms were expected to last 6 weeks but ran out in a month. The taxi scheme targeted the 18-year-old-plus group who were more inclined to have unsafe sex following alcohol or drug use. Following a story in this newspaper about the initiative, Timaru's public health sexual health promoter has been interviewed by the BBC and featured in an article in the New York Times.]

...Through the windshield, Manhattan reclined like a movie star on her plush little sofa of an island: a shimmering siren both forbidding and enticing. And for our cab driver, in his '88 Chevy on the wrong side of the East River in Brooklyn, totally unattainable. He is what is known in New York as an unaffiliated or "gypsy cab" driver, which just at the moment is perhaps the most dangerous occupation in the city. Nine of his fellow drivers have been shot dead this year, four of them in the past month alone. "Is always dangerous," he said of the seven years he has spent fending for his family behind the wheel. "I have been robbed 12 times. Nine times, I go to the cops. But so far I not been killed, and that is good. But every night, believe it, my heart is about dying. Us drivers, we all think about the bullet." Just why the city's predator class has decided to declare open season on cab drivers is a question he is too preoccupied to ponder. All he knows is that he would like to be over there in the relative safety of Manhattan, driving a nice, new, shiny Yellow Cab. His problem is that he cannot afford the \$US250,000 it costs to buy one of the Yellow licence medallions, which are actually red, and were last issued by the city in 1938. So while Manhattanites sometimes come to blows in their efforts to grab one of the scarce Yellows, a driver who would dearly love to take them is forced to hustle his old bomb down streets where every fare could be his last. City officials concede there are not enough Yellow cabs. But every time a study group or task force recommends issuing more licenses, the Yellow owners lobby ferociously to have the reports shelved. More cabs would mean cheaper medallions, which would render their own substantial investments that much less valuable. The result is a mess. Bureaucrats produce reports that will never be heeded, the Yellows seldom stray from the rich pickings of Manhattan, and desperate men like our driver fill the void in the danger zones of Brooklyn, Queens and the Bronx. "Is not fair," he complained as the unlicensed, unmarked taxi rattled along Flatbush Ave towards the Williamsburg Bridge. "These crazy kids, they kill you for a few dollars. I could have picked up two kids tonight in Red Hook," he continued, referring to a part of Brooklyn that is a high-rise slum of graffiti-daubed housing projects. "But I passed them by. The risk now is too much." What has made the spate of attacks so striking is the fact that they came hot on the heels of a furore sparked by an actor, who complained late last year that he had been left on the kerb outside an East Side restaurant by a succession of Yellow taxi drivers who, he charged, refused to pick up a black man. The First Lady weighed in with a lament about lingering racism in the city. The mayor responded by sending out black decoy police to ticket drivers who refused to stop for them. Everybody did the right thing. And then the killings started. The spate of cabbie murders in New York began in February with an incident that set what soon became a familiar pattern: a gypsy answered the hail of three black teenagers, who directed him to an out-of-the-way street and then shot and killed him for \$US127. Other attacks soon followed, until it has begun to seem that hardly a day goes by without a driver being killed or wounded. Now it has become almost a fad. □ Taxi driving is officially the most dangerous occupation in America, according to the latest government crime figures.]

...A Texas taxi firm that discounted fares to Catholics going to Mass on Sunday has been fined for contravening laws aimed at preventing religious discrimination. In related news, the Auckland taxi company Yellow Cabs has been ordered off the road after inspectors found the company had breached traffic regulations. The company, which operated 28 vehicles in central Auckland, was closed down yesterday by the LTSA. The regional compliance manager for the authority said Yellow Cabs had allowed its drivers to operate in some parts of Auckland without proper area knowledge certificates, and had failed to keep a proper register of drivers. Furthermore, 8 of the vehicles driving under the Yellow Cabs name were not up to a certificate of fitness standard. The owner of the company had left the country. The national secretary of the Taxi Federation said the Yellow Cabs company did not belong to the organisation, which represented about 55% of taxi companies. Thirty taxi organisations operated in the Auckland region, employing about 2500 drivers.]

... 'Auckland City has succeeded in removing dangerous taxi driving antics from Victoria St – but now they're doing u-turns on Queen St instead. The council closed the 10-car Victoria St rank a fortnight ago after a pedestrian was hit by a taxi doing a u-turn at the busy intersection with Queen St. A driver from Economy Taxis said a lot of passengers still turned up at Victoria St looking for taxis. He said the council should put a barrier in the middle of Victoria St if it wanted to prevent dangerous u-turns. Although it was the council's role to monitor parking, it was the police who controlled u-turns and the LTSA that ensured taxis were not seeking fares within 50m of a rank.' Incidentally, most NZ taxi drivers think 'drunks are the worst' passengers – especially when they 'throw up in their cabs.' Taxis are allowed to charge passengers a 'soilage fee' (~\$50) – but the passenger might refuse to pay it! There are an average of '30 attacks on NZ taxi drivers a year – often to avoid a \$3-\$4 fare.' As a consequence of political inaction, some 'taxi drivers are arming themselves' – although doing so will get them into trouble with the police. An alternative – but more expensive – 'remedy is to install video cameras in cabs' [...]

A Wellington taxi driver may lose some of his fingers after a knife attack. But his boss believes the attack could have been avoided if the Government had heeded the taxi industry's pleas for help... The owner of Gold and Black Taxis... said attacks had increased since 1989 when the Government decided it was not a criminal offence for people to refuse to pay taxi fares... If a passenger ran away without paying a fare, all a taxi company could do to recover it was drag him or her through a civil court case. That usually cost the company more than the fare was worth... The Minister of Transport... and her predecessor... had both been told about the problem, but neither had done anything... [Incidentally, a] \$1.6 million... subsidy scheme for disabled people has been abused by taxi drivers. The *N[Z] Herald* reported yesterday that the scheme was to be tightened up to crack down on able-bodied passengers using the disability vouchers. However, at least two cases of abuse by taxi drivers have also surfaced. Financed by the Auckland Regional Council, the vouchers, worth up to \$25 each, are handed out to GPs and 89 care agencies and rest homes... [The] chief executive of Eastern Taxis and a member of the council's Total Mobility Advisory Board, said a disabled woman on the board had told of a taxi driver who took six vouchers off a group of disabled people in a taxi van for the one ride... [The] chairman of South Auckland Taxis, who is also a board member, said he was forced to investigate a case where a taxi driver regularly cashed in two vouchers to take two passengers to the same place. [The chairman], who is also the Auckland representative on the *N[Z] Taxi Foundation*, said he alerted the regional council, which approached the taxi driver and the abuse stopped. Representatives of the board told this week's council meeting they were considering restricting the vouchers to a handful of taxi companies.

...Frustrated cabbies are threatening legal action against [AIAL] over its decision to change the rules of the... air terminal taxi rank... Last month the airport company brought in a system for domestic and international terminals where each rank had eight spaces – one for each of the eight taxi companies. But five days into the new system, Auckland Co-Op Taxi Ltd complained it was unfair on its drivers because of its greater number of vehicles. It argued that with a fleet of 700 taxis, each driver had a one-in-700 chance of finding a space. The smaller companies had better odds of picking up lucrative fares. The airport company called a meeting of the taxi operators, where it was decided to return to a "free-flow system." ...six companies... have since formed a front to seek legal advice about a bid to scrap the free-flow system. The manager of South Auckland Taxis... said the free-flow system was not what they signed for when the \$250-a-car operating licences were put up for tender. "In the free-flow system there will be times when most, if not all, spaces will be filled by cars from one company. The customer has the right to choose which company to use. That is only possible when spaces are divided among the companies." ...[By the way, t]here was a time, not that many years ago, when waiting for a plane in an Air *N[Z]* terminal involved having to protect your sandwiches from marauding sparrows while you battled to keep warm. It is hard to imagine that next week Harrods, the legendary British department store, will be opening a branch in Auckland International Airport, becoming one of scores of big-branded stores to open up in the newly-completed international terminal. Interestingly, the airport has signalled this event with a massive mailout last week of 260,000 glossy booklets to homes in the greater Auckland area, promoting the airport as one huge shopping mall. "With the booklet," says [the] chief executive of [AIAL], "we wanted to get across that Auckland airport is a whole new ball game." In effect, that it is worth visiting just to do your shopping... The catch, though, is that much of what the airport has to offer is in the secured area, available to travellers but not visitors. So why send out booklets advertising so many stores that ordinary Aucklanders can-not shop at unless they are travelling? [He] points out that... "We don't want you to be surprised by what is here when you do travel. We don't want you to say: 'I wish I knew... and I would have made more time available to shop.'" When [he] took over as chief executive officer in 1988, airport shopping comprised more or less of three duty free shops, a book shop and a sandwich shop that would not have been out of place in any rural, hick town. What's more, the duty free shops were expensive, preparing visitors for the lousy value for money they would encounter all the way down to Queenstown. There has been a 360 degree turnaround in the airport's attitude to duty free shops, brought about by competition and, presumably, some tough words from [the CEO]. In a recently published survey by European Data Research Ltd, Auckland airport was judged to have the "best value in duty free shopping in the Asia-Pacific area." The airport has been consistently innovative in recent years. When it put in McDonald's in 1989, it was the first southern hemisphere airport to do so, and only the fifth in the world... The long wait for passengers to arrive has been alleviated by a massive video screen, part of which runs international and local news, and part offering a blown-up display of passengers heading into the arrivals hall, for easy recognition by those waiting. The airport is part of the community, [the CEO] believes, and must reflect the culture of the city. It is also an important way of conveying a certain image with foreigners, he believes, as to many visitors "this is their first and last impression of *N[Z]*..." Because of that, the "city of sails" theme runs very strongly through the airport... A giant sail suspended on two masts, 80ft off the ground, will act as the centrepiece for the sailing metaphor... The place was designed to be bright, clean and airy, making a lot of use of the natural light.

...When... [he] became chief executive of British Airways in 1983, he saw that the future of the airline industry lay in customer service and set about turning around BA's culture with a series of motivational programmes... "Putting people first,"... "A day in the life [of BA]..."... "To be the best,"... "Winners"... "Managing people first"... The next stage of the programme is now more than halfway through but its process is complicated, as with the other courses, by the arrival of new staff. "Our present expansion poses a whole new set of problems,"... During [his]... influence on B[A], first as chief executive and now as chairman, it has fought to reinvent itself. He has not been afraid to authorise massive expenditure... \$NZ16 billion [will be spent]... between now and 2000 on new services, products, aircraft (43 new planes, including 29 Boeing 747-400s alone), facilities and training. And in the past two years BA has invested \$533 million in its top brands – First, Club World and Club Europe... He regards the airline as a franchise that can be exploited to attract new business such as travel publications and guides, financial services such as branded credit or charge cards, travel insurance, badged luggage and leisurewear... B[A] is just one of several major jobs. Very much a global man, he is also the chairman of the Confederation of British Industry, a member of the New York Stock Exchange board, deputy chairman of British Telecommunications, and chairman of London First Centre, the city's agency for attracting big-ticket investment. [His] belief in open global markets is unshakeable. "The most important political aspect of contemporary commerce and industry is the almost universal drive towards deregulation and open markets, such as we have in the European Union. This... has opened up enormous potential for competitive growth and expansion with few inhibitions to new market access." This is probably why B[A] wants the world... [and why it] has also been transformed from a very British airline to one with a deliberately global appeal, hence the controversial removal of the British flag from the tail[of its aircraft].

...World's favourite airline not so popular with its staff... The new... chief executive of B[A]... inherited... the world's most profitable airline; latest pre-tax profits were £640 million... with an enviable reputation for service. Yet this week [he] was on the edge of an abyss. Not only is his grand alliance with American Airlines increasingly bogged down in regulatory squabbles on both sides of the Atlantic, but... the airline's usually placid union[is] up in arms as he moves to compete in a deregulated European air market... [Consequently,] BA is on the brink of a strike at the start of

the peak summer travel season... Worldwide, airline revenues are falling by about 2[%] a year in real terms. It may not seem that way to business travellers in Europe, where flexible fares have kept on rising, but... [a] growing flock of new entrants, such as EasyJet, Debonair and Air UK, is undercutting the prices of BA's European flights by well over £100 a trip. As deregulation takes effect, this competition will grow... [The chief executive's] answer is to turn BA into a virtual airline, contracting out everything other than the actual sale of tickets and the handling of flights. By this he hopes to slash £1 billion of BA's cumulative operating costs by 2000. Since employees account for 30[%] of costs, many jobs are either to be hived off to contractors or downgraded. The new employment package for short-haul cabin staff is really intended to downgrade their jobs and pay to compete with rival British airlines, which pay cabin staff up to a third less than BA. From now on, new BA recruits will start on lower rates than existing staff. As a sop, the airline promises that no existing employee's take-home pay will fall. But once that guarantee runs out in three years, the union sees the writing on the wall. But then aviation in Europe has been over-priced and over-paid for too long.

...I noticed an article in your business pages... containing very extravagant and factually incorrect claims about the cost of some services in N[Z] compared to those in... Britain[, where there is]... a "light-handed" regulatory system... In the so-called deregulated N[Z] market for air travel, prices are simply not competitive. The European HQ of American Express has published a table of comparative prices which state that the "Air Economy IATA price" of a London-New York return is £219 (\$520). This does not contrast well with the regular Auckland-Wellington return of \$499 or the Auckland-Sydney return of \$649... United and Qantas are currently offering Auckland-London-Heathrow-Auckland tickets for \$3289... However, [the latest edition of]... *Sunday Times* (of London)... carries a short article in which London-Auckland-London tickets on Qantas are available (with some conditions) for £720 (\$1700). B[A is] currently selling tickets for £800...

['Thieves stole aircraft engine parts worth £4.5 million from a Portsmouth factory but blew any chance of making a fortune by melting them down into scrap which they sold for just £1000.' Incidentally,] Boeing and McDonnell Douglas shareholders have given the... go-ahead for a merger... [at separate] meetings in Seattle and St Louis...

Boeing Co's \$15 billion acquisition of rival McDonnell Douglas Corp... which would create a \$48 billion aviation behemoth... is not anti-competitive... because... Douglas' weakened position in the commercial aircraft market limited its ability as a long-term rival to Boeing... and can proceed without changes, U[S] officials said, setting the stage for a final showdown with... European anti-trust authorities[, who have already]... expressed concern about long-term contracts Boeing has signed that make it the exclusive supplier of aircraft to three major U[S] airlines... for the next 20 years... Boeing's exclusivity clauses tie up about 11[%] of the global market... Boeing already had two-thirds of the world's commercial aircraft market, while... Douglas' market share has dwindled to about 5[%]. Europe's Airbus Industrie controls the remaining 30[%]. The... merger also cleared the U[S] Defence Department, which said it saw no competition problems on the military equipment side... [despite] last year's \$3.2 billion purchase of Rockwell International's space-and-defence businesses... [by] Boeing, which has not made a fighter plane since before... W[W2, but will now]... turn into the world's biggest maker of fighter jets practically overnight.

...The planned... merger between Lockheed Martin Corp and Northrop Grumman Corp, effectively concentrating the U[S] defence industry around two groups, is putting the heat on Europe to speed up its restructuring... "Boeing-McDonnell was a major move, Lockheed-Martin was a major move, this Lockheed-Northrop is another nail,"... [a] European defence industry... analyst... said. The main names in the European defence industry... [are] Thomson-CSF... Aerospatiale... British Aerospace, General Electric and Daimler-Benz Aerospace AG and they are all engaged in an intricate multiple chess game to take the best from a European overhaul... BAe recently took out an insurance policy against its not receiving a key part in a European restructuring by teaming up with Lockheed Martin for the U[S] joint-strike fighter. BAe was also a main contractor for the Eurofighter project with Daimler-Benz, CASA of Spain and Alenia of Italy, that was still hanging on a thin thread because of German concerns about costs. BAe and Daimler, with Aerospatiale... and CASA, made up the Airbus civil-plane consortium. While Airbus was slowly moving to become a single corporate entity, there was a growing consensus to include some military activities as well.

...Boeing looks set to miss its goal of capturing at least 60[%] of new orders for commercial aircraft in 1997... So far this year Boeing has booked orders for 566 jetliners, giving it 55.1[%] of the market, while rival Airbus... won... 44.9[%]... In China, Airbus delivered more planes than Boeing for the first time...

Asia's growing economic crisis could force Boeing to delay delivery of as many as 20 airplanes a year over the next three years. That was the "worst-case scenario," a company spokeswoman said, and so far Boeing had not received a single request for a deferral from an Asian customer.

...Mounting production problems at Boeing will delay some plane deliveries well into 1999 – longer than previously expected – says the world's largest aircraft manufacturer... Boeing said it was negotiating with airline customers individually and declined to comment on specific orders... [However, sources say] Boeing told United Airlines that the... delays would affect deliveries on 12 747s, two 757s and four 767s... Other airlines said the delays meant they would have to reorganise some flight schedules and push back the phase-outs of some older aircraft... Some airlines – including Southwest Airlines and U[nited] – said they... had spoken to Boeing about compensation for the delays, although... [they] declined to provide details... [But,] based on Southwest's \$4 billion in yearly revenues and its fleet of 258 Boeing 737s, each aircraft represented about \$1.3 million in monthly revenues. Boeing missed its October delivery date on four 737s to Southwest Airlines and had told the company that some of the 21 aircraft scheduled for delivery next year could be affected also... Delivery delays were also expected for Delta Air Lines, which recently signed an agreement for 106 Boeing aircraft valued at \$6.7 billion. Last week Boeing signed a \$3 billion pact to deliver 50 jets to China but the Boeing chairman... said delivery problems were "not an issue" and would not affect the agreement... Boeing said last month that it would take \$US2.6 billion... in charges through the end of 1998 to cover late-delivery penalty fees, overtime and other costs associated with the problems in ramping up production... Boeing production problems included parts shortages, training 32,000 employees hired in the past 18 months and an expected rebound in aircraft demand... The company has almost doubled in size over the past year with the purchase of McDonnell Douglas Corp and its monthly production was rising from 18 jets last year to a projected 43 jets by April next year.

...Boeing Co, struggling to keep up with a flood of orders for its 747 and 737 jetliners, reported a third-quarter loss... of \$US696 million... on Friday that was heavier than Wall St had expected... [and] compared with earnings of \$466 million a year earlier. Boeing cited higher research and development costs, losses at the former Douglas Aircraft Co and a higher tax rate.

...['Boeing Co says the Asian economic turndown is forcing it to scale back the output of many passenger jets beginning in 1999 and to cut as many as 48,000 jobs by the end of 2000; says its earnings next year will be between \$1.5 billion and \$1.8 billion, down from an earlier estimate of \$2 billion; is still committed to delivering 550 planes this year and 620 next year']...

'Boeing Co is the biggest employer in the Seattle region, providing jobs for tens of thousands of blue-collar workers, so the company's announcement that it is cutting 20% of its worldwide workforce over the next 2 to 3 years represents a potentially serious blow to the region's economy'...

'The Star Alliance of airlines, which says a slowdown in the US economy and signs of a global recession are starting to hit the high-margin business-class travel market, has hailed Boeing's decision to drop plans for a 520-seat superjumbo jet so it can build a superfast, 200-seat passenger plane. The new plane (development cost \$10 billion) is expected to cut 3 hours off a trip between Sydney and London, thus making it popular with business travellers.'

...air passengers outside business and first class risk potentially lethal blood clots because of cramped seating. Travellers in the more expensive seats – which often cost double the price – are able to stretch and move their legs. But the... prolonged pressure on economy class passengers' legs... squeezes their veins and restricts the flow of blood. When compounded by dehydration as a result of poor-quality air and drinking alcohol to relieve boredom, economy passengers face a greater likelihood of deep vein thrombosis or blood clots. Although harmless in many cases... [the] clot

becomes fatal if it takes on a long, eel-like form... [T]hese can travel up from the legs to the lungs and block arteries. While airlines say the risk is minimal, doctors from one of Britain's leading hospitals believe it is sufficient to justify a study of 2000 long-haul passengers to establish how many suffer clots during flights between Britain and A[US]... British doctors have registered an increase in the numbers of patients suffering blood clotting as the legroom for passengers has been reduced in some airlines over the past five years... At Ashford Hospital, near Heathrow airport, [a doctor] said he saw at least one case a month of a passenger suffering deep-vein thrombosis... Dubbed "economy class syndrome", one suspected first symptom is swollen ankles. Victims may also feel feverish and experience soreness in their legs... Some travellers are believed to have died from the condition... Although no link has been proven with seat size, there is evidence that increasing airline competition on some routes is contributing to a reduction in legroom in many economy seats. Most of these have legroom of 79cm, while charter flights have even less, at 71cm – much too small for a 1.82cm person, according to the Consumers' Association... [However, international regulations only] say passengers should have at least 66cm between the back support cushion of their seats and the back of the seat in front when both are upright. A survey of 32,000 travellers this year found legroom was the biggest cause of dissatisfaction on flights... Middle-aged and elderly passengers are more susceptible to blood clots... To reduce the risk of clots, doctors advise passengers to avoid alcohol, rotate their ankles and occasionally walk up the aisle...

[A TOP doctor has advised long-haul air passengers to take aspirin to minimise the risk of lethal blood clots. Aspirin acts by reducing the stickiness of platelets in the blood, therefore decreasing the likelihood of clotting. The *Sunday Star-Times* revealed last week airlines were coming under increasing pressure to beef up warnings to long-haul passengers about the risk of in-flight clots.] 'One woman who needed to have her leg amputated after she flew across the Atlantic with Northwest Airlines is trying to sue the airline. However, the airline says "there is no evidence that it caused her condition". BA says evidence of a link is "anecdotal".'

... 'Air NZ, which already stamps tickets, timetables and itineraries with a notice advising passengers what they can do to reduce the risk of economy class syndrome,' is adding new advice to its inflight video to combat the problem of blood clots forming in passenger legs. The move comes as Britain's House of Lords calls on airline flight staff to lead their passengers in exercise routines that will stop clots. The Lords also urge that planes have more leg space, more comfortable seats and better aisle access, and that airlines serve less alcohol. The House of Lords select committee on science and technology released a report on the problem last Friday. It followed the death of 28-year-old Emma Christofferson from a clot that formed during a flight from AUS to Britain last month. The Lords found that evidence existed that being cramped in a plane seat for a long time could spark a blood clot, and that this could be fatal up to several weeks later. The risk was small, and one study had found three times as many clots in people who had been on long car trips as in those who had been on airplanes. The committee has no power to back its report, but the Government must respond within two months. The British report was kick-started by the Lord of Edmonton, who suffered from a blood clot after a long flight from NZ.'

... 'A British Lord who counts himself lucky to be alive after getting a blood clot on a flight from NZ is urging the use of special cushions to beat the problem. Lord Edmonton displayed his own cushion to the House of Lords while speaking about the week he spent in hospital three years ago fighting a near-fatal blood clot. He felt "a real ninny" to have had a clot when he now knew there were many ways to avoid them, such as taking aspirin, drinking lots of water and exercising. He had earlier recommended a vitamin blood-thinner called Jet Ease, made in NZ and marketed in England by NZ Health Products. His theory is that clots are more likely to form at a height of 10km because low air pressure causes the blood to thicken. The Lords decided on Friday that the British Government should work harder to protect airline passengers from the "real and serious" threat of blood clots. A Tory Baroness urged that immediate action be taken to study the condition. "We were astonished to find so little work had been done on this issue."

... 'Economy-class syndrome kills four air travellers landing in Auckland every year, doctors say. Many of the cases cited involved passengers dying on arrival, but one passenger died in-flight in 1994, en route from Los Angeles, and another last year. The syndrome – also known as deep vein thrombosis (DVT) – kills up to 30,000 travellers a year worldwide, aviation-health researchers in Britain have calculated. Mass legal action is now planned against many carriers. Yesterday, an AUSn MP claimed that an AUSn airline had reached a "substantial" out-of-court settlement with a passenger who suffered DVT on a flight six years ago, but Qantas and Ansett AUS refused to comment.'

... 'a 55-year-old Christchurch builder struggled around Germany with a painfully swollen leg for nearly three weeks without any inkling that a life-threatening blood clot had formed in his veins. It was only when the holidaying NZer's sister pointed out a newspaper article about a woman who died from a clot after flying that he realised he might have the same condition. It was discovered that the clot had shifted from his leg to his lungs. "The doctors in Germany reckoned I was an inch away from death." He was warned off flying for several weeks but eventually flew home – business class, thanks to his insurance policy. He is still taking drugs and has to wear a special compression stocking to prevent a new clot in his leg. A married man with two children still at home, he has to rely on a sickness benefit. He lacks the resources to sue airlines so, like 10 other NZers, he has approached the Melbourne law firm which is coordinating a multimillion-dollar lawsuit against up to 20 international airlines for 1000 claimants, including 40 cases where deaths were linked to DVT. British lawyers are also preparing cases. The Melbourne law firm said that even in minor cases, compensation might run into tens of thousands of dollars, as victims often had to take six months off work. Its managing director, explaining the basis of the claim, said of the airlines: "They knew there could be things done to reduce the risk, yet, mysteriously, it appears they failed to warn passengers, or at least adequately warn them." Despite the huge attention focused on DVT, it is not a new condition. Its link to long periods of immobility was noticed during WW2, when people spent long nights in air-raid shelters. The term "economy-class syndrome" emerged in the 1970s, because of the perceived link to cramped cheap seats in aircraft, but that is misleading because DVT has also killed business-class passengers. And long-distance bus, car and train travellers can also be at risk. United Airlines said this week that it would increase the leg room for some economy class seats from 78cm to 91.5cm. American Airlines has followed suit, and others will not be far behind, says the president of an American-based travel company. Airlines, who had been decreasing leg room to squeeze in more passengers and make bigger profits, told the British House of Lords that increasing seat pitch by 5.8cm would raise fares by about 10%. Air NZ says its economy seat pitch is 86.4cm on Boeing 747-400s.'

... 'One in 10 air travellers on long flights risks contracting the potentially fatal "economy class syndrome," a British vascular surgeon says. And as concern about the condition grows, the *Observer* newspaper in London revealed yesterday that British airlines ignored warnings about the condition for decades. The dangers of sitting immobile were revealed in 1940 when a British doctor found that the deaths of 23 people who had slept in air-raid shelter deckchairs were due to blood clots in their lungs. In 1968, two doctors alerted airlines, in an article on cardiovascular disease, to the dangers of blood clots during long flights. In 1985, three British doctors wrote to the *Lancet* about blood clots causing problems after landing. Their letter said: "We understand that airline passengers, even those on very long flights, are given no specific advice to prevent venous thrombosis." Air NZ was aware of the risks in 1991.'

... 'One of the world's most comprehensive studies into the link between air travel and potentially fatal blood clots is likely to start in NZ this month. Up to 1000 volunteers will take part, using for the first time a special blood test. Doctors from Green Lane Hospital and Wellington Hospital, who have worked on the project for six months, hope to get approval from the Health Ministry's Auckland Ethics Committee this week. The project aims to find out exactly who is in danger of developing economy class syndrome and why. A British study already completed and an AUSn one due to start have not targeted as many people, and are looking at travellers – usually with a scan of the lungs – only after their long-haul flights. The NZ project, costing up to \$250,000, would test volunteers before and after their flights. If a patient initially tested negative for clots but gave a positive blood test on return from overseas, more tests, including lower limb and chest scans, would be done. Volunteers also have to fill out questionnaires about their behaviour on the flight – whether they slept the entire way, if they exercised or if they took any preventative medicine such as aspirin. The blood test central to the study – called a D-dimer test – is available in NZ only at North Shore Hospital. But some doctors do not believe in economy class syndrome. At a conference in Sydney last Friday, attended by AUSn and NZ airline officials, unions and medical specialists, the AUSn Society of Thrombosis and Haemostasis said the

risk had been vastly overstated. Scientists from Griffith University's aviation medicine centre went further. "Economy class syndrome does not exist," they said'...

'What does flying really do to your body? DEEP VEIN THROMBOSIS ■ Despite the fact that people have been getting taller and fatter over the years, aircraft seats have become smaller. Most people would find a seat pitch of 76cm to be the absolute minimum for comfort yet many airlines give you less. Cramped seating makes it more difficult for passengers to get up and move around. The dry air in the cabin may also contribute to DVT – blood thickens when water is lost from the body. Lower oxygen levels may also cause the capillaries to shrink, reducing blood flow further, although there is little hard evidence low pressure in the cabin can contribute to DVT. Some people are more at risk of DVT than others. About 4% of us have a genetic defect called Leiden V factor, which makes blood clots more likely. Women taking the pill or undergoing hormone replacement treatment are also more at risk. RED-EYE ■ Flying is tough on the eyes. The main cause is the dry air in the cabins – usually set at about 2% humidity. This is drier than the Sahara and desiccates skin and eyeballs. Use moisturisers on your skin. Drink lots of water and use a facial spray to keep the eyes moist. DRINKING WATER ■ Recent tests found around 15% of the drinking water stored aboard commercial jets is contaminated with food poisoning bacteria and human faeces, although, in the vast majority of cases, the contamination was not sufficient to pose a health risk. It is unclear where the germs enter the water supply – the main culprit may be the water storage tanks at the airport. The best way to avoid the bugs is to take your own water. AIR FLOW ■ In the 1960s, when aviation fuel was cheap, aircraft cabins were well ventilated with fresh air drawn in through the engine intakes and pumped into the cabins. Then came the fuel crisis and the airlines looked at ways of saving money. One way was to reduce the amount of fresh air pumped into the cabin – recycling saves about 6% on fuel bills. Ironically, the drive to banish smoking from the skies has contributed to the problem. In the days of smoking flights, the air had to be changed more frequently to prevent the build up of unpleasant smells. Air passes from front to back so the freshest most oxygen-laden air is found in front of the wings, favouring first-class and business-class passengers. Not only does stale air contain less oxygen, it is also the ideal medium for the transmission of bacteria and viruses. Many long-haul passengers develop a minor infection such as a cold within 48 hours of flying. Air supplied into the cabin must be at least 50% fresh while the balance may be re-circulated and mixed with the fresh air. Most modern aircraft do have filters fitted to their cabin air re-circulation systems, to filter out bacteria and viruses. HEART ■ The air in most cabins is pressurised to an equivalent of between 6000ft and 8000ft above sea level. This in itself is not dangerous – millions of people live at this altitude or higher with no ill effects. Your body is able to acclimatise to changes in altitude. But it is the sudden depressurisation which can cause problems in a few passengers, possibly triggering DVT and putting an added strain on the heart. People with heart conditions should contact their doctor before flying. THE BENDS ■ This is a potentially fatal condition caused by bubbles of dissolved nitrogen forming in the blood. If you have been scuba diving while on holiday, you must allow sufficient time for any absorbed nitrogen to leave your system before flying – at least 24 hours from your last dive. RADIATION ■ Flying increases the body's exposure to radiation from space, originating either from the Sun or from distant exploding stars (cosmic rays). Aircrew are exposed to more radiation than workers in nuclear power plants and a long-haul flight can expose your body to as much radiation as a hospital X-ray.'

...Aircraft crew who are exposed to cosmic radiation and sleep deprivation, not to mention obnoxious passengers, are fuming over Parliament's refusal to give them legal protection. The flight attendants' union says it is baffled that Parliament has denied them protection available to most workers by throwing out a private member's bill to amend the Health and Safety in Employment Act. This follows the failure of an Auckland Labour MP and former union leader... to get any National or N[Z] First politician to support a second reading of his bill. [The Labour MP] said aircraft attendants were left without legal protection against a long list of hazards including excessive noise and turbulence, heavy lifting, time-zone changes and long and irregular working hours... He said employment conditions had deteriorated to the point that international flight attendants could be expected to work up to 20 hours at a time... [They] were on board aircraft primarily to provide first aid and safety assistance in the event of an emergency, an imperative which demanded physical and mental fitness... Scientists at the Ministry of Health's National Radiation Laboratory say flight crew are more exposed to radiation than any other workers, including radiology staff... [The Labour MP] acknowledged a commitment by the Minister of Labour... to extend civil aviation regulations to cover the safety of cabin crew but said this had worn thin after five years of inaction. Civil aviation regulations already specify maximum flight hours, limitations on duties and rest periods for pilots in line with international aircraft safety requirements, but cabin crew are not covered... Air N[Z] crew members... recently had to handcuff a drunk passenger who bit one of them and choked another by his tie after being told to stop smoking on a flight to Hawaii.

...Airlines have noticed a marked increase in the number of unruly passengers since the imposition of in-flight smoking bans. Pilots and aviation security officers are worried at the potential danger to aircraft safety presented by violent, abusive and intoxicated passengers. N[Z] aircrew can tell their share of hair-raising tales of the nasty airborne antics which abound worldwide... Air N[Z]'s manager of public affairs, said that in the six months to June the airline had eight incidents involving unruly passengers... The police were called to deal with all eight cases... The company intended to introduce a new training programme for airline staff to develop further "conflict defusing skills" that could help them take the heat out of confrontations... [An Air NZ] 747 pilot and president of the Airline Pilots' Association, said there were times when all-women cabin crews might be confronted with an abusive passenger. They tended to call on flight deck males to deal with such passengers, presenting a potentially dangerous situation if, as a result of confronting the passenger, the crew member could not return to his post on the flight deck... Aviation sources told... that during the past financial year, Qantas had 42 cases of violent passengers, 137 of verbal abuse and 118 of unruly behaviour. More than one third of the incidents were alcohol-related. Although unable to confirm the figures, a Qantas spokesman said the number of disruptive incidents was very low when compared with the 18.6 million passengers the airline carried each year. Singapore Airlines recorded 15 unsavoury incidents for the whole of last year, about half of which were alcohol-related. [40%] of them were termed "molesting." ...[last November a NZ] man indecently assaulted a female flight attendant on Singapore Airlines' Auckland-Singapore flight. The pilot diverted the aircraft to Melbourne where the offender was off-loaded... With 13 similar incidents in the first six months this year, the airline is experiencing the rising tide of unruliness. Cathay Pacific noted a 50[%] jump in passenger incidents – from 168 in 1995 to 251 last year... [S]ometimes chilling examples of unruly behaviour in other parts of the world include: • The case of a Saudi princess who became so annoyed with the slowness of her drink service, she choked and scratched a flight attendant. • Passengers on a domestic U[S] flight applauded when one of their number indecently assaulted a flight attendant. • A passenger on a flight between Los Angeles and Dallas/Fort Worth struck a flight attendant to the ground because there was no fruit on his food tray... • A passenger on a flight from Miami to Madrid repeatedly tried to open an exit door, screaming that he wanted to commit suicide and take the... aircraft with him... Many pilots, airlines and civil aviation officials oppose having armed guards on aircraft. But pilots are ready to discuss the pros and cons of unarmed sky marshals skilled in self-defence and the law so order can be maintained during flight... [The] aviation industry... is on the brink of developing aircraft capable of carrying up to 1000 passengers... Some offending passengers claim sleeping tablets have affected their behaviour while others fearful of flying drink alcohol to subdue their dread.

...Two air hostesses were assaulted and a plane-load of passengers had a nightmare flight when more than 70 Polish seamen went on a drinking binge on a N[Z]-bound plane... Police had to call in a Polish interpreter to interview them when the plane arrived in Auckland... Two of them spent their first night in N[Z] behind bars after being charged with assault... A passenger from Scotland said... "They were smoking in the toilets and swigging bottles of duty-free alcohol. We couldn't get any sleep because they were carrying on and we were afraid to say anything because there were so many of them... They were giving the wee lasses a hard time and... I could see... the poor things... were really upset." He said the crew spent the entire flight trying to quieten the Poles... The rest of the... [seamen, who] are employed by a Polish fishing company... and will spend a year working on fishing vessels chartered by Nelson-based Sealord Fisheries... headed for Nelson last night.

...['Air NZ says it has no plans to adopt a British tactic in the war against airline drunks who get rowdy on flights. British Airways has taken a leaf out of the football referees' rule book and staff will issue yellow cards to passengers who act up.' However, 'the very nature of long-haul aviation means troublemakers cannot be ordered off the plane at 30,000ft']

... 'You're crammed into a metal tube with 350 other people, you're fighting for elbow room with the person next to you and the baby in the row behind you has just started yelling, and then one of your fellow passengers loses control. As more and more of us are taking to the skies, airlines and the police are grappling with a violent and growing problem, one that puts every traveller at risk – air rage. In all there's been a 400% worldwide increase in air rage incidents over the last 3 years. "Sooner or later there's going to be a passenger incident which results in a major catastrophe in the air." Earlier this year in Japan it very nearly happened. "A passenger got into the cockpit with a knife that he had, and placed the knife against the neck of the captain, then drove it into his neck killing him." At this point the passenger took control of the plane, hoping it would resemble a flight simulation game. It didn't. The plane fell to 300m over Tokyo before the co-pilot managed to regain control and land the plane safely. Heathrow is the world's busiest airport. It handles 1200 flights a day, 60 million passengers a year. The police at Heathrow are in the front line in the battle against terrorism. Disruptive passengers are an unwelcome addition to their workload. "Air rage incidents come under the heading of public safety and we are spending more of our time dealing with these." The majority of air rage incidents happen on transatlantic flights between the UK and USA. Many transatlantic incidents happen over open seas, and in these cases the pilot has no choice but to push on to the nearest airport. This often means Heathrow. This morning the Heathrow police have been called to meet a flight from LA, to deal with an alleged incident of drunkenness and assault by a 45-year-old decorated Gulf War veteran who was on his way to a security conference in Sweden, accusations he denies. He was charged with threatening behaviour and released on bail to continue his journey to Stockholm, and then back to the US. Three weeks later his case was heard at Oxbridge's Magistrates Court. After only 20 minutes the veteran was free. The judge had dismissed the case against him on the grounds of insufficient evidence (after a flight, passengers and crew disperse, making it difficult for police to gather evidence). The whole process cost the veteran £15,000 in lost work, the cost of flights and hotel bills. The cost of proceedings to the British taxpayer is tens of thousands of pounds. Many experts believe that more expensive cases like this are inevitable as long as the emphasis remains on using the law to handle alleged infringements rather than trying to prevent them happening in the first place. Fear of bad publicity means the airlines overlook behaviour like this but now, in Britain, there is a clampdown on any mid-air infringement. "The airlines themselves have not paid enough attention to this yet. They are the ones who very often have raised passenger expectations. Passenger advertising doesn't show people cramped up very close together in their seats, suffering the discomforts that very often they do actually experience in air travel these days." The airlines want you to think air travel is spacious, relaxing and First Class. But in reality it's often more cramped, stressful and frustrating. Air travel is changing and is continuing to change. The number of passengers travelling each year is set to explode from the current figure of 500 million to 1 billion by the year 2015. A journalist who champions the lot of the air passenger thinks the airlines are making a fortune out of passenger discomfort, and that air rage is a natural consequence. Tighter airport security, although necessary, has added hours to peoples' check-in times. And then, of course, there are the delays. "When there is a delay, you get people who walk over to the bar and begin drinking." "From the surveys that we've done of our unions, the major single cause that's been identified for these incidents is alcohol." Many disruptive passengers are drunk before they board the plane. Says an ex-passenger who caught a flight from Johannesburg: "We very soon noticed that one of the passengers who had boarded the aircraft and was to be seated close to us was the worse for wear. My husband then approached the stewardess and said, 'Are you aware this guy's drunk? What are you going to do about it?' She said, 'We are aware of this and we intend to keep a close eye on him.'" But a few minutes later the drunk passenger headed for the toilets, which were occupied. "He then proceeded to kick at a toilet door. Continually he banged the door and eventually managed to open it, and there was a lady sat inside the toilet in a state of shock." Staff got him back to his seat, but then he started to watch pornography on a laptop computer. "The senior cabin guy came down and told him to pack it away, and that, I suppose, really lit the fuse. This guy fought the steward with everything before headbanging the door. He was kicking and pushing the door. What the outcome of that could have been at 35,000ft frightened the life out of us. We had no idea whether that door was going to open at any point, and that could have been the end of us all. Yet the incident could have been avoided because he was drunk on the ground. The ground staff allowed him to board the aircraft drunk. Somebody made the wrong decision." "The gate agent has to decide to let a drunk person on the flight, and possibly endanger the flight, or delay the flight. Well, 9 times out of 10, she's going to go for the on time departure. No airline wants to delay a flight. It can be very, very costly indeed. However, we must do everything we can to prevent these incidents because it's no good picking the pieces up afterwards and thinking about what we could have done." The captain of the flight from Johannesburg was faced with a terrible dilemma. Did he risk everyone's safety by landing in Africa at night, or did he push on to London with a madman aboard? He chose London. There's one airport that actually wants to receive air ragers. "On any given day we're going to have 700 airplanes go very close to Bangor on route to and from Europe, and when an incident arises the first thing that the captains think of is where can I put this airplane to have this problem taken care of." Because Bangor is the first port-of-call for flights entering the States, and the last for those leaving, it markets itself as a drop-off centre for air ragers. So what's in it for Bangor? Well, air rage has become a business. In general, it costs an airline between £5000 and £40,000 to drop off an air rager. Once the offender is removed the plane must be refuelled, damage to the cabin repaired, and distressed passengers soothed and fed.'

... 'passengers aboard a flight diverted to Anchorage after an air rage incident were forced to stay overnight so the crew had the required 18 hour break'.

... 'A 19-year-old man's air rage proved fatal when other passengers killed him trying to hold him down until the plane landed. None of the passengers will face charges, authorities in Salt Lake City said.'

...the singer from the band *Roxy Music* 'feared for his life during a mid-air jumbo jet takeover by a crazed passenger. A Kenyan man stormed the cockpit of the BA jumbo, plunging the plane out of control and into a nose dive.' 'Flight 2069 from London to Nairobi was carrying 379 passengers and 19 crew. BA officials said that the cockpit door was normally locked during take-off and landing, but kept open during the flight. A spokesman said the airline would assess "whether our procedures are adequate." The Kenyan, a suspected mental patient, was cleared by police to board the flight. He was said to have been "confused" at the check-in desk at Gatwick Airport.'

... 'An AUSn man who admitted assaulting a pilot and several other crew members during an Air NZ flight from Sydney to the US has been released into the care of his psychiatrist. Immigration officials were in the process of sending him back to AUS on Saturday, after a US District Court judge sentenced him to three years of supervised release. The defendant said he couldn't recall what happened but regretted any trouble he caused. The court heard that he suffered from depression and lost control because he drank too much wine after taking antidepressants.'

... 'NZ's Government has agreed to put up new laws to deal with air rage. The Transport Minister said the proposals would be introduced to Parliament next year. The announcement followed a meeting yesterday with the Flight Attendants Association, which does not feel the law is adequate. NZ law allowed for prosecutions only if a passenger was travelling on a NZ-registered flight. The Flight Attendants Association's executive officer said AUS, the US, Canada and Britain had already closed the legal loophole, so they could prosecute any air rage incident on almost any airline.' In related news, 'a US inquest has blamed the deaths of the passengers and crew aboard a crashed Egyptian airliner on the co-pilot, saying he deliberately pulled the plane into a fatal dive while the pilot was absent from the cockpit. However, to appease Egyptian authorities, they avoided using the word suicide.'

... 'Tighar's executive director has been chasing the same woman for more than 12 years. Now he reckons he knows where she is. If he's right, then one of the longest-running mysteries in the history of aviation has been solved. The director believes he knows what happened to pioneer aviator Amelia Earhart, and that the expedition his foundation is planning for next year will prove it. Since July 2, 1937, when Earhart and her navigator Fred Noonan disappeared over the Pacific on her second attempt to circle the globe close to the equator, there have been dozens of theories as to what happened after the pair took off from Lae, New Guinea. For many years the accepted wisdom was that their Lockheed Model 10E Special Electra had simply run out of fuel

and crashed in the ocean as they searched for Howland Island, their final refuelling stop before flying on to Honolulu and completing the journey in California. And that was what The International Group for Historic Aircraft Recovery (Tigar) also believed. At first, "It wasn't until I learned about the navigational logic that suggested it should have been possible for her to reach land that I became interested in seeing if that could be investigated." In 1988 Tigar set out to find her. The group has mounted five expeditions to a speck of land called Nikumaroro, south of Howland Island, and the director is confident that a fresh expedition will provide the final piece of the puzzle. But scouring a deserted atoll 3.2km long and 1.6km wide for proof that could be as small as a single shirt button or human tooth is a daunting undertaking. The plan for the expedition is to hire a ship out of Fiji and take a team of about 10 people for 10 days. Previous expeditions have not turned up identifiable pieces of the aircraft on the atoll, so the next step is to put divers on the ledge of the surrounding reef, and on a sandbar at the mouth of a passage into the lagoon, where it is believed wave action is likely to have deposited aircraft debris. Earhart's final flight is not the only aviation mystery the Tigar foundation is investigating. In 1985 the director opened Project Midnight Ghost to track down what he calls "history's most important missing plane," which disappeared into thin air 10 years before Earhart's ill-fated journey. L'Oiseau Blanc (the White Bird) took off from Le Bourget Field, near Paris, on May 8, 1927, bound nonstop for New York. Had the pilots, Charles Nungesser and Francois Coli, succeeded they would have been the first to fly non-stop across the Atlantic. But their plane went missing and it was the American Charles Lindbergh who, 12 days later, entered the history books in their place. Intrigued by speculation that Nungesser and Coli had actually reached North America, the director followed up a report of an aircraft crash heard by Anson Berry, a hermit who lived in the woods of coastal Maine, exactly on the plane's flight. Although Berry was long dead, surviving witnesses told of hearing or seeing an aeroplane that day, an unusual event in the 20s, and of an aircraft engine partially embedded in the ground. However, 20 search expeditions mounted by Tigar revealed nothing.'

...*'Glamour plane shows off her wings* Visitors to the MOTAT Aviation Museum on Meola Rd gain an exclusive insight into air travel in a bygone era. Fifty years ago Tasman Empire Airways Ltd (Teal) seaplanes were state-of-the-art aircraft for the glamorous and wealthy. A former stewardess on the Solent planes served famous passengers such as movie star Gary Cooper. Stewardesses had to be single women, and were not allowed to wear their uniforms before getting on board the plane. From April 30, 1940, Solent planes travelled the "Coral route", which took about 45 passengers on a flight from Auckland to Fiji, Western Samoa, the Cook Islands and Tahiti. These days RMA Aranui is the only Solent of four in the world to have survived the rigours of half a century. About 15 to 20 members of the Solent Preservation Society work on the plane each week and "it will never be restored, we'd be out of a job then". Although visitors to the MOTAT museum usually have to view the planes from the outside, an open day in two weeks will allow them inside this unique slice of NZ aviation history.'

... 'At some time between 1900 and 1904 Richard William Pearse of the Waitohi Valley, near Timaru, designed and built a high-wing monoplane of unusual and advanced design, constructed of steel and bamboo, with elevator controls. Pearse made a number of short flights at a very early date, but it is not certain that he flew any distance before 31 March 1904. The first recognised flight by a heavier-than-air machine was that by the Wright Brothers at Kitty Hawk, North Carolina, on 17 December 1903. The Pearse machine was ahead of the Wright's in the use of ailerons, or movable flaps on the wings to control the aircraft, which Pearse invented and patented, whilst the Wright brothers used a system of warping the wings. Ailerons are now universal.'

... 'Without financial backing from a Te Kuiti baker, the Airtruck would've been nothing but a figment of aviation imagination. But the baker's injection of \$200,000 helped get to top-dressing aircraft off the ground. The plane – the first commercial aeroplane developed in NZ – came about thanks to the money, a former WW2 pilot's drive and the drawing board skills of an Italian who designed trainers for Mussolini. The pilot, now living in retirement in Tauranga, recalled the top-dressing planes of the late '50s lacked what Bomber Command could have called "a payload". He enlisted the aid of the Italian, then based in AUS, and cannibalised parts from WW2 Harvards. "I was looking for an aircraft that was pilot-safe first, and could carry about a tonne and a half of fertiliser, second." What the Italian came up with was not a thing of beauty, but it incorporated some unique features. It placed the pilot above the loaded hopper, in a sort of steel cage, which would prove very strong in prangs (the plane was tough – one lost a boom in flight and still flew). Trucks loaded with fertiliser could back up between the plane's twin booms, fill the hopper and the pilot could then simply taxi away to take off. "A pilot could take off with a load of 1.5 tonnes of fertiliser, 10 seconds after landing." For farmers, that meant more top dressing in a shorter time. Two Airtrucks were built, powered by 600hp Pratt and Whitneys, but not without considerable obstruction from the air authorities. "CAA said 'We won't let you build it, you can't build an aeroplane in Te Kuiti'. You can't tell a Kiwi he can't do something when he damned well knows he can. So we did it." The first was destroyed when it crashed in the King Country after 500-plus hours of flying, the second about 1968 when it crashed near Dargaville – but in each case the pilots walked away without a scratch. The WW2 pilot, who in his wartime days flew one of the most beautiful aircraft ever built – the Mosquito – is used to all the taunts directed at the Airtruck. One is: "The ugliest plane ever built." "When they say, 'Gosh, it's ugly' I agree. Ever seen a truck that was beautiful? Nobody has. Sure it's ugly. But, by God, it worked.'" ● 'Topdressing with artificial fertilisers was an important factor in the intensification of NZ grassland farming.'

...**Airwork (NZ) Ltd, N[Z]'s largest airfreight and general aviation company, has acquired A[US]n-based... Pacific Turbine... for an undisclosed sum... making the company the largest independent turbine engine overhaul operation in Australasia. The acquisition[, which]... puts the company in a good position to compete for more business in Asia, the Pacific, the Middle East and Africa... was funded by equity provided by Direct Capital, a venture capital company which has a 44[%] stake in Airwork... Airwork operates seven aircraft in Airpost, an aircraft joint-venture with N[Z] Post. It also owns and operates 10 other aircraft and helicopters leased to customers including the police and WestpacTrust rescue operations.**

...**One of the key findings of the investigation into the Eagle helicopter crash four years ago is being challenged in the High Court at Auckland. Four people were killed when the police helicopter collided with a traffic spotter plane over central Auckland in November, 1993. Among the conclusions of the Traffic Accident Investigation Commission report in October the following year was that the helicopter continued to climb 400ft above its normal operating altitude. But that finding was yesterday disputed by an aviation expert in a civil case... An aviation consultant... told the judge... a transponder showing the helicopter's position at five-second intervals indicated that it had levelled out before the crash... He... was called as a witness for the helicopter's owner, Vertical Flight Management Ltd, which is suing the owner of the Piper Archer spotter plane, Airworks NZ Ltd... Vertical's lawyer... told the judge that the accident was caused by Airwork's negligence in failing to provide a safe system for the operation of both aircraft... Airworks also operated the Eagle under a management contract with Vertical... It is also claimed that Airworks, which had a contract to supply traffic information to the police, was using an unsuitable aircraft for the job because its wings were below the cockpit, blocking the pilot's view. Also, the spotter plane did not have a traffic observer, leaving the pilot to perform that function as well as fly the aircraft – something which has changed since the accident... [– and] that Airworks failed to provide proper communications systems so that each pilot would be able to know where the other was. Vertical claims rather than the helicopter ascending, the accident was caused by the pilot of the Piper flying too low... Airworks says the accident was the helicopter pilot's fault because he was flying too high.**

...**Pilots have reported many "near misses" with other aircraft over central Auckland since the fatal Eagle helicopter crash four years ago, the High Court at Auckland was told today... The potential for a similar accident still existed, despite the introductions of new mandatory broadcasting regulations, said a witness... Pilots were supposed to broadcast their location when they flew into the uncontrolled airspace over central Auckland, but many failed to do so, said [the] operations manager of Airworks NZ Ltd... The owners of both aircraft – or rather their insurers – are suing each other... Vertical is claiming \$US840,000 for the loss of the... helicopter, although Airworks says \$US605,000 is a more accurate valuation. Airworks has filed a counterclaim for \$75,000 for its spotter plane. In his opening address, Airwork's lawyer... said the system of communications between planes was inadequate at the time of the accident and no significant improvements had been made since then. Efforts to have the airspace**

over central Auckland controlled by radar had come to nothing, he said, because neither the C[AA] nor the Airways Corporation were willing to pay the cost. [He] said the helicopter pilot was at fault because he knowingly flew into airspace already occupied by the traffic spotting plane.

...Damages of \$1.5 million face the owner of the traffic spotter plane aircraft that collided with the Eagle police helicopter... The High Court has blamed Airwork (NZ) Ltd... The judge ruled that although the Eagle pilot was Vertical's employee, Airwork was liable for his acts and omissions because of the control it held over him... All three on the Eagle and the sole occupant of the Piper were killed when they collided... before plummeting on to motorways, miraculously missing peak-hour traffic.

...Ironically, the Airways Corporation has had the facilities in place to monitor the skies over the city at least since a \$90 million upgrade to its equipment in the early 1990s. Critics say that all it would take to improve safety would be for someone to monitor a terminal at the air traffic control room at Auckland Airport. "The facilities are there, but they just say they are short of staff,"... But the C[AA] said since the mid-air collision three reports had concluded that radar coverage was not required. A spokesman said significant safety improvements had been made since the accident, and the authority did not believe the expense of extending radar coverage was required. But cost was not an issue, the spokesman said: "The user would pay – just as they do everywhere in N[Z] where air traffic services are provided."

...Air N[Z] could be forced to pay extra charges every time its noisy 737 jets land at Wellington Airport. City council officers are preparing a report investigating how to raise money to insulate homes around the airport...

Engineers will no longer do final checks on some aircraft before takeoff from Wellington Airport. Air N[Z] has confirmed that ramp staff will do final checks on aircraft, but it says safety will not be compromised... 10 engineering jobs at the airport were being cut. The changes apply only at Wellington – which, because of problems caused by frequently strong winds, has been labelled 'one of the world's 15 most dangerous', and, as a consequence, has been 'blacklisted by the International Pilots Union'...

The way is now clear for a new \$41 million terminal building at Wellington International Airport, after Air N[Z] announced yesterday that it would drop... legal action against the airport authority. The project will be partly funded by increased departure taxes for international travellers.

...Airlines fear international passengers will have to pay up to... \$30... to leave the country if the Government saddles them with full border protection charges... Although most costs arise from screening arriving passengers, it would be considered more practical to levy any new charge at exit points... [A '\$2 international departure tax was first introduced in 1971', but] passengers leaving Auckland now pay a departure tax of \$20, most of which is a local airport development levy. Aviation security accounts for \$4 and the C[AA] takes \$1... The Government... envisages having to claw in an extra \$27 million a year... to recover all it spends on agricultural, customs and immigration services... Only about \$3.5 million in border protection costs is now recovered from airlines, which object to paying even that for the functions of Government departments... The airlines would not take kindly to having to pay agriculture inspection costs, which... [will] spiral... with the installation of x-ray screening machines, each requiring three operators... A particularly sore point for the airlines was having to pay the over-time costs of customs inspections at what were supposed to be 24-hour airports... [The CAA also] wants domestic air travellers to boost its coffers by \$4.19 million a year... Several funding options have been proposed, including a tax on aviation fuel and increasing levies on each domestic passenger from \$2 to about \$3 a flight... It needs the top-up to meet a shortfall in its 1997-98 budget, which is estimated at \$18.11 million, up from \$13.54 million for the 1996-97 year.

...Touching down on the tarmac in Godzone has always inspired an adrenalin rush for me... But the treatment dished out by jumped-up bureaucrats at the terminal... as we shuffled into Auckland Airport... [after] a holiday across the ditch... left me with a sour taste I haven't experienced since being interrogated at Heathrow... The ice-cold manner of the customs and immigration officer suggested he was having a really bad hair day. No smiles, no welcome home, nothing... No sooner had I stepped away from Dr Frost than I was pounced upon by another man drunk with power, sporting a sheriff-style hat. He demanded to see my passport and customs declaration form (what, again?) and my ticket, asking which flight I had arrived on. I asked him what he was doing, and he said it was just a bit of "routine monitoring." Fine, but shouldn't he have said that first? Recovering from that minor aberration, I joined the "Nothing to declare" queue and handed in my form, expecting to be finally free. Officer: What's in the case? Me: Clothes. Him: Didn't you buy anything in A[US]? Me: Yeah, clothes. Him: Well, you better get that x-rayed. Me: Do you do this to everyone? Him: Lady, a lot of people lie when they fill out their forms and we catch 90[%] out this way.

...['*Officious functionaries offer chilly reception* If NZers imagine their bureaucracy presents a relaxed and welcoming atmosphere to visitors, they should think again. The sad fact is that people coming to NZ for the first time are subjected to a system that appears never to have been tried before. As an observer I try to put myself in the place of the visitor trying to cope with the subtleties of NZ. What I found is an indictment of the society we call God's Own. My wife and I host a home-stay student who has just arrived here from China. Recently I took him back to the airport to pick up a suitcase he had sent as air cargo from Hong Kong rather than pay the cost of having it come as accompanied overweight baggage (unknown to him, and most other students I suspect, many airlines allow students an extra baggage allowance to cover the extra weight they might have with books – unfortunately, most ticketing agencies omit to tell students of this concession when tickets are booked). We called the Air NZ cargo terminal at the airport. The suitcase, we were informed, was there and could be picked up during working hours. We found the cargo terminal, but it was closed. A notice suggested we go to the office for Exporting Cargo. We entered this office to be met by a rather officious woman. "Have you cleared this with MAF?" At the MAF office we were told to: "Take this form to Customs and get it cleared. Then you can collect your suitcase, okay?" Finding Customs turned out to be our biggest challenge. The Customs office, it turned out, was not at the airport. It was 3km away. When we eventually found Customs, we handed over all the paperwork and the officer stamped the Bill of Lading. Back at the Air NZ cargo terminal we triumphantly handed over our stamped piece of paper to a still sombre woman. "Where's your MAF clearance document?" "It is with the Customs officer. He kept it when he stamped the release paper." "You have to go back to MAF and get them to stamp this.""]

...*'REAL BAD APPLES* I was outraged at MAF staff on *Border Control* (TV1) fining lots of overseas visitors \$200 each for bringing an apple into NZ. The apples were handed out in package form by an airline just before arrival. It is blatant revenue gathering. The MAF should have used discretion and fined the airline for handing the apples out. The poor people were crying at the desk. They had just arrived and already their holiday was ruined. A MAF officer said the visitors will tell friends not to bring fruit in. It's more likely they will tell friends not to bother coming.' Speaking of bureaucracy, NZ] aviation officials say they will not register any new passenger aircraft unless they are fully satisfied with safety documentation. Their assurance yesterday followed an admonition to Boeing by the U[S FAA] to correct "flawed" inspection procedures in the aircraft company's drive for record production. The *Wall Street Journal* quoted the agency as telling Boeing in a letter in May that production increases and customer-driven design alterations had "created an environment that is out of control." ...The deputy director of N[Z's CA]A... said his agency was sending an official as a matter of course to Seattle next month to inspect a new Boeing 737-300 before delivery. It is understood the aircraft is one of three which Air N[Z] intends leasing...

Air N[Z] is about to press twin-engine Boeing 737s into service on Tasman routes, in head-to-head competition with Qantas. The N[Z] carrier... has lost considerable ground to Qantas out of Wellington and Christchurch... Air N[Z]... has had an order for six 737s with Boeing for eight years, but a spokesman for the manufacturer said it was not delivering any new ones to... [Air NZ,] although two 767s have recently arrived from Seattle... Qantas... introduced 737-300s... on Tasman routes... some months ago.

...Qantas[announced] that it will... turn more competition heat on Air N[Z] by boosting... its trans-Tasman services by 11 flights to 79 a week... [Meanwhile, Ansett AUS] and... Air N[Z]... have deferred purchases of new aircraft pending a study of joint purchasing options. Ansett... put off

plans to spend as much as... \$NZ2.26 billion... on new aircraft until next year[and Air NZ]... has delayed the purchase of six Boeing 737 aircraft... worth about \$NZ500 million... [However,] Qantas... is to spend... \$NZ735 million... for three Boeing 747 aircraft, to be delivered in 1999 and 2000.

...[Qantas' and Air NZ's 'international airfares are likely to drop under a long-awaited "open skies" deal between NZ and AUS, which would boost tourism and increase flights across the Tasman. AUSn airlines are at present allowed to fly only the equivalent of 12 full jumbo jets out of NZ each week, and vice-versa. The president of the Inbound Tour Operators Council said the deal sounded like good news for his industry because AUS was becoming an important hub for Asian travellers and was NZ's biggest source of inbound tourists. Letting Air NZ fly more Asians through AUS would help kill seasonal bottlenecks, when tourists from countries such as Indonesia swamped airlines with their numbers. NZ has also just struck a five-way open skies deal with the US, Singapore, Brunei and Chile, and has other deals with the Cook Islands, Samoa, Peru, Luxembourg, Malaysia and the United Arab Emirates. But the deal is a first for AUS and comes after years of haggling and the occasional wrong step.' By the way, there are some unusual pricing mechanisms involved in airline ticketing. For example, an Auckland travel agent has been advertising a 'return airfare to London for \$1269 per person (\$4899 for Business Class) and one-way fares for \$899.' Better examples of this anomaly can be seen in the pricing of airfares across the Tasman (e.g., 'Auckland to Sydney - \$349 one-way/\$399 return; to Brisbane - \$389/\$399; to Melbourne - \$495/\$495') and within NZ (e.g., a 'standard one-way ticket from Auckland to Christchurch costs \$389, but a return fare booked 21 days in advance only costs \$289'; a 'business class ticket for the same return route costs \$1032'). Ideally, airlines want two people to buy standard one-way tickets instead of one person buying a return ticket in advance - but, to encourage air travel, airlines are also willing to offer reduced fares under standby (where tickets for empty seats are sold shortly before departure - so standby travellers are unsure about when or if they will get to their destination), 2-tickets-for-the-price-of-1 and 'piggy-back' deals.

... 'Buy a return adult fare to Sydney for \$559 and get a companion fare for just \$298 or a child fare for \$98. Find a special friend and jump across to a stunning Sydney. Seats are limited, special conditions apply.'

... 'Families with young children are disadvantaged by new airline safety rules and changes in child fares. On domestic flights toddlers now need to occupy a seat of their own and use an adult seat belt. This requirement of both the major airlines brings to the forefront issues of child safety, accessibility of air travel for children and affordability for parents. It is a move that both Air NZ and Ansett NZ claim is designed to enable more families to travel. If you ask families with children, they will say the changes are a considerable disincentive to go by air. Both airlines have lowered the age for child airfares from four to two years. Children up to four have until now been able to travel free if not occupying a seat. The airlines also now require children over 11 to pay adult fares. Previously, the limit was 14. Take a family of two parents with two preschoolers aged two and three and a half. The total cost of travelling between Auckland and Wellington return for this family on the cheapest special fare has increased from \$398 to \$597. It could also be harder for families to get the cheaper rate for travel at the time that suits them best. Access to special fares will depend on the availability of four seats now for this family, not two. I travel regularly around NZ and my airfare is usually paid for by whoever is sponsoring my visit. I am now faced with either saying sorry, I cannot accept your invitation unless you also pay for my infants, or pay the extra myself. My children have benefited tremendously from being able to travel with me as toddlers. They have learned much about planes and are very confident travellers. A range of experiences best enhances children's learning in the early years. It is a shame that the airlines are now making it more restrictive for young children to have the opportunity of flight travel. More importantly, the emotional and safety costs for young children, parents who travel regularly as part of their work, and families, have been ignored.'

...Vanuatu looks like snubbing French and A[US]n aid in favour of a project which it hopes will give it direct access to the Asian tourism market. The Minister of Trade... has announced a feasibility study for a multimillion-dollar project including an airport big enough to take Boeing 747s... as well as... the construction of a luxury tourist resort featuring a casino and hotel, a free trade, industrial and finance zone... However, France and A[US] are already backing a \$US13 million plan to revamp the[island nation's] airports at Santo and Port Vila. Both strips would be extended and new lighting, navigation and approach systems installed, but only to allow landing of aircraft up to the size of Boeing 737s... [The] regional director of Caisse Francaise de Development... said this plan was not compatible with the one proposed by [the minister. But the minister] said Vanuatu had "waited too long. We've been sitting around for years and the A[US]n and French advisers have told us we would get Asian tourists from New Caledonia. They have been lying to us. We now know the tourists will only come here if we have direct flight."

...A fall-off in visitor traffic from South Korea - and the unlikely prospect of any upward swing - is causing Air N[Z] to suspend services from next Wednesday... Air N[Z] flies four times a week to Korea during the November-March period and twice a week between April and October... Korea accounts for about 7[%] of the airline's Asian revenue... [The] deputy manager for Air N[Z]'s public affairs department, said Air N[Z]'s other Asian traffic was "all very solid." ...For the financial year ended June 30, 1997, Air N[Z]'s combined Asian revenue was \$632.46 million against total international airline revenue of \$1.72 billion.

...Qantas and Ansett[AUS] face a trying time as economic turmoil in Asia cuts demand for air travel. Heavy price discounting by rival Cathay Pacific on Hong Kong flights is one sign of the pressures on the industry.

...Cathay Pacific is predicting a difficult 12 months ahead amid a steep decline in tourism to the... British colony. Cathay executives said... [there] had been... a deeper-than-expected drop in the number of Japanese visitors. [● 'More than 200 people clad in destination-inspired costumes flocked to Auckland International Airport yesterday, hoping to win one of 25 return trips in Cathay Pacific's annual Dress Up and Fly competition. A 19-year-old, dressed as a chicken carrying blocks of butter, won a trip to Delhi as "butter chicken." Someone won a trip to Istanbul for dressing as a flying carpet (the carpet had been bought locally for \$70). Los Angeles inspired a guy to go in drag as Marilyn Monroe.'

...US] airlines flying between America and Asia may have found a silver lining to the black cloud hanging over the economies of the region. Plummeting currencies... are prompting more Americans to take advantage of the exchange rate by travelling there, say airlines and travel agents... Passenger numbers travelling to Korea have been increasing rapidly and will continue to increase as the won falls, the Korean National Tourism Organisation said... The declining value of the Asian currencies means travellers can buy goods for less, including hotel rooms, food and souvenirs... "There's no comparison to the bargains," said... a spokeswoman for the Pacific Asia Travel Association in San Francisco... Airlines in general are faring better than many other U[S] companies in the wake of the Asian crisis... U[nited Airlines Ltd] said this week it expected higher profits next year, even though Asia accounts for one fifth of its revenue. Northwest Airlines will increase its flights from Detroit to Beijing next year from three to five flights weekly... It is also increasing flights between Los Angeles and Shanghai from one to two weekly. Asian destinations, in particular Bangkok, have become increasingly popular in the past 18 months, as governments promote tourism and as baby boomers reach an age where they have the money and inclination to explore. "A lot of these folks have done Europe and the more traditional destinations, so they're looking for something different," said[a] spokesman... of the American Society of Travel Agents. "More people than ever are looking to travel to Asia, and certainly the exchange rate is playing into that."

...Air N[Z] is trying to coax more tourists from Europe with an additional weekly London flight and shorter waits at airports en route. From April, the airline will fly six times a week to London and back. It will no longer require passengers to change aircraft at Los Angeles. Aircraft will[only] stop there to refuel... Two weekly services to and from Frankfurt will be rescheduled to weekends, and passengers will no longer face long night-time interruptions to their journeys in Honolulu. There will be brief daytime stops there... Air N[Z] says... Germany and central Europe... are strong tourism markets... and the extra... London flight follows a new air services agreement with Britain... Other changes announced yesterday will include a sixth weekly flight between Los Angeles and Sydney, and extensions of island-hopping Pacific services to the U[S]. Boeing 767s will replace jumbo jets to increase the frequency of services between Auckland and Los Angeles. - 1997

More than 1.2 million visitors arrived in N[Z] in the year to 31 March 1994[, up 11.7%]... compared with... the previous year... The government has a tourism grants programme administered by the NZ Tourism Board... The funding available under this programme for the 1994/95 financial year [wa]s \$600,000... The Tourism Board is[also] responsible for the co-ordinated marketing and promotion of N[Z] overseas as a tourist destination... The social consequences of tourism are largely beneficial... stimulating a diversity of activities and facilities... As a... labour intensive industry, tourism generates a... wide range of jobs for [‘one out of every ten NZers’ in paid employment]. The number of equivalent full-time jobs supported directly by tourism is about 83,000. A further 109,000 jobs are in areas servicing tourism. In the period 1991 to 1994, it is estimated that the growth in expenditure by overseas visitors... generated more than 23,600 additional full-time equivalent jobs in N[Z]. Given further expected growth in tourism, the tourism industry will continue to be a leading generator of new job opportunities for N[Z]... In a 1994 survey of N[Z]ers’ attitudes towards tourism, 97[%] of people... saw tourism as important or very important to N[Z]ers’ lifestyle... N[Z]ers regard holidays as part of their lifestyle. Relaxation, socialising, new experiences, nostalgia, visiting friends and relatives and participation in sports and other special events are all reasons for a holiday, and N[Z]ers often travel for a combination of these reasons. During 1989-90, N[Z]ers made 10.3 million trips away from home which included at least one night away, and spent 41.1 million person nights away. This information has not been collected since 1990.

Ironically, the opportunity for NZers to experience their own country – or the quality of those experiences – can decrease as the number of tourists from overseas increases. Furthermore, while the NZ Government encourages people from overseas to come and spend money here, that revenue is being undermined by NZers spending money overseas (in ‘1991, 14,415,000 USers travelled to foreign countries, creating total expenditures abroad of \$US39,416 million, while the US had a total of 16,155,000 visitors, creating \$34,407 million’ in revenue)!

Figures extracted from Statistics N[Z] departure forms show a 20.2[%] jump in N[Z] residents who took overseas holidays in the year to July 31. The trans-tasman fare war started by the ill-fated Kiwi International airline played a large part in nudging people overseas, but N[Z]ers are enjoying cheaper holidays in a wide range of destinations, thanks to the stronger dollar... [One Auckland travel] agency... said many[people] introduced to overseas travel by budget fares were now keen to go further, such as to the U[S] and its island state of Hawaii, which together hosted a 28.4[%] increase in N[Z] holidaymakers. There was a 26.4[%] rise in N[Z]ers going to A[US] for holidays. A total of 495,503[– or approximately 1-out-of-every-7 NZers –] went overseas for holidays while a further 274,905 visited friends or relatives abroad and 205,088 left on business trips. The strong dollar conversely means less purchasing power for tourists arriving from overseas, but figures issued yesterday nevertheless showed a 9[%] growth in their numbers last month compared with August last year. A total of 100,830 overseas visitors marked a 3[%] rise from July, which suffered a 9[%] slump from June.

...A rise in the number of N[Z]ers taking mid-winter overseas holidays to warmer climes... resulted in a population decrease of 61,300. Statistics N[Z] figures showed the population dropped by 1.69[%] by June 30 from the March 5 census figure...

Figures showing a sharp growth in tourist numbers to N[Z] were not as rosy as they seemed, a tourist industry leader said yesterday. International visitors to N[Z] increased by 8[%]... in the past year, according to the latest Tourism Board statistics. Visitors brought in record foreign exchange earnings of \$4.8 billion... But... [while the] number of tourists... might be up... the number of bed nights was not going up as fast... The... Hospitality Association said most of the increase was from Asia, with tourists from South Korea showing a 40[%] increase... “These tourists only stay three or four days at the most, only getting to see Auckland and probably Rotorua... This year we have had 15,000 fewer visitors from central Europe and North America – the people who tend to come to N[Z] for... up to a month... and move beyond Auckland.” ...[the] general manager of the Christchurch Parkroyal Hotel... said the key to tourism growth was not the number of visitors, but how long they were staying... [S]tatistics for August showed that overall accommodation occupancy was just 27[%]... forcing hotels to slash room prices... The low occupancy rate was mainly due to the off-peak time of year.

...[‘Terrorists love tourists’] Spanish explosives experts deactivated two bombs at a hotel in the north-eastern coastal resort of Salou yesterday, bringing the total in the area since the weekend to six. A bomb attack on Sunday at the airport in the town of Reus injured 35 people, most of them British tourists. Two more devices exploded later in coastal hotels but caused no injuries, while another was found and deactivated next morning. The Basque separatist group ETA, which planted all the bombs, made a call to the radical Basque daily *Egin* warning it had placed two[bombs] in the Hotel Augustus II... ETA... has frequently staged attacks in holiday resorts in an attempt to disrupt Spain’s vital tourist industry, usually setting off small explosions, preceded by warnings, aimed more to scare than to kill...

German tourists appear to have said Auf Wiedersehen to N[Z, 14%] fewer coming here a year than two years ago. Just 52,203 of the big-spending German visitors came here in the year to June... Damaging German media reports about this country in the past year have been partly blamed. N[Z] was reportedly affected by fall-out from French nuclear tests, and the North Island was evacuated when Mt Ruapehu erupted. However, some experts say German economic problems... are to blame for the slide in visitor numbers... [In international news, f]ierce fighting dogs chasing unarmed volunteers are being used to entertain high-paying foreign tourists in north-eastern Hungary’s Zemplenyi mountains...

Growing range of ways to sell N[Z]... A logo of “Sheepie chan” is one of the weapons being used to sell N[Z] as a tourist destination. The British sense of satisfaction with their own way of life is another. At a conference in Rotorua last week the managers of the Tourism Board’s seven regional offices overseas reviewed their various markets... British visitors to N[Z] had all their expectations exceeded. It was not just the scenery and activities they took part in, but the unexpected friendliness and openness of the N[Z] people. “We were told of an amazing number of ‘good news’ stories, where Kiwis had gone out of their way to help,”... said... the U[K] and Nordic manager... After their visit, the travellers all described feelings of well-being and replenishment. They asked what magical ingredient N[Z]ers put in the food. The... board’s manager for Japan... said that by tradition the Japanese consumer was frugal, but the high yen, record low interest rates and other social reforms had encouraged growth in consumer consumption. This had influenced a remarkable surge in overseas travel, which grew by almost 13[%] to more than 15 million people in 1995. Since 1991 Japanese outbound travel growth had averaged 7.7[%] a year and for N[Z 7.2%] a year. The board, he said, was aiming at 179,200 visitors – up 12[%] – from Japan and foreign exchange earnings of \$728 million for the 1996-97 year. The “Sheepie chan” logo being used had been found to be the brand which best identified N[Z] to the Japanese consumer. As customers... the Japanese were second to none. They were delightful to entertain, appreciated service and quality, visited N[Z] year round and paid on time. The market was almost inexhaustible.

...*Tourism driven by dollars will cannibalise itself...* [The NZ] Tourism Board chief... who announced his resignation last week, has been the target of both brickbats and bouquets. Few in the industry have been able to remain neutral... [The] board, its composition, objectives, methods and results have been increasingly questioned in recent times and it remains to be seen whether his departure will succeed in calming the troubled waters of tourism in this country. N[Z] was the first country in the world to establish a national tourism organisation (1901). Despite this pioneering, the economic potential of tourism was largely unrecognised until the mid to late 1980s. By then the Government had adopted a dual role as the primary marketer of tourism and the largest single operator of facilities for what was a relatively minor economic activity. By 1990, a radical change of policy saw the Government abandon direct involvement in tourism operations (such as ownership of the Tourist Hotel Corporation and Air N[Z]) in favour of a role limited to the marketing and promotion of N[Z] tourism for its economic benefits. The market-driven approach was exemplified by the creation of the... Tourism Board, a partnership between public and private interests. The government was to set

policy and provide resources while private enterprise people were considered best qualified to put the policy into effect. Under [the chief]'s direction the board has enthusiastically pursued a purely economic set of goals – visitor numbers, foreign exchange earnings and job creation – and there can be no doubt that the results have been spectacular. International visitor numbers have increased by more than 50[%] over the past five years. Foreign exchange earnings of \$4.7 billion in 1995-1996 have underlined the contribution made by tourism to the economy. Critics of the board, however, suggest that there is more to a successful tourism industry than simple economics, and that an unfettered dollar focus is outmoded. The idea of planning tourism for economic benefit dates from the early 1960s and arose from the war rubble of Western Europe. Countries like Eire and France were the first to introduce master plans for tourism, seeking its foreign earnings and job creation possibilities, and the following years saw a series of Government-generated plans which focused on similar benefits. Economic considerations dominated to such an extent that the desirability of tourism growth was virtually taken for granted, a philosophy that a Canadian expert... calls 'boosterism', or growth at all costs. When the N[Z] board was formed in 1991, just as many countries were beginning to doubt the wisdom of such a strategy, the Tourism Minister... reaffirmed the role of tourism as a flagship of economic revival. High priority was given to marketing activities, and considerations other than economics were absent... N[Z] is still obsessed with 'boosterism', and there are few indications that this is changing. Worldwide, however, enthusiasm for the undoubted economic benefits of tourism have been tempered by a realisation that these are accompanied by costs... and... have led to a realisation... [that] social damage could[be the] result. Some of these effects are already evident in N[Z]. There has been damage to the physical and cultural environment, overcrowding and pollution in some popular tourist destinations, competition between locals and visitors for recreational facilities, and local antipathy (or even aggression) towards visitors. There is evidence that these can have serious repercussions... [A] former... director of tourism for Switzerland and an acknowledged expert in the social impact of tourism, has argued that social and environmental harm will eventually lead to a less attractive destination and a consequent reduction in visitors – effectively, that tourism will kill tourism.

...[in Bermuda they certainly know a thing or two about the tourist dollar. As the island that's widely credited with inventing the island resort holiday, it's been enjoying visitors for more than half a century. Today nearly 500,000 come here. Not bad for an island with a population just 13% of that, and in total they spend half a billion dollars. But it's all come at Bermuda's expense, and tourism is on the decline as the resort's jet-setting former patrons seek out unfamiliar or unspoilt holiday destinations. In response, the island has turned itself into an offshore banking haven – in fact, Bermuda is third after London and New York as a centre of catastrophe re-insurance – and as the off-shore financial industry has thrived, tourism's taken a back-seat. Although tourism is no longer the biggest revenue earner, it certainly ensures employment on a large scale. "The reality is you've got quite a lot of locals here that rely on the hotel infrastructure. Socially, and economically, you can't just make a decision to do away with the hotels and go after the international financial sector."]

...[Bali, says its tourism chief, has become a victim of its success, with environmental, cultural and social pressures threatening its survival. "When is too much already enough?" he asked, a surprising question from the president of the Bali Tourism Development Corporation. "Tourism brought great prosperity to Bali over the decades. But it also brought traffic, pollution, environmental damage, petty crime and street hawkers." Travellers eager to escape the madness of Bali's Kuta Beach usually look at nearby Lombok and Lombok islands. Both are serene, promoting themselves as "the Bali of the 1970s," and offer fantastic surf, cheap accommodation and none of the exhaust fumes, traffic noise and overcrowding that scars Kuta. The only way to Lombok from Bali is on a ferry that leaves Sanur, about 20 minutes from Kuta, about 8 am every day. The \$3.70 cost is well worth it. Double rooms less than 20m from the water for the equivalent of \$NZ6.20 a night, steaks for about \$10 and a Bintang beer for \$1 draw people to the island like moths to a flame. But Lombok has fallen from grace after the death of an island chief led to breakdowns in some services, including the rubbish disposal system. So instead of strolling along stretches of perfectly white sand, visitors now have to contend with waste – bottles, food, old clothes and more – that has been dumped on the beach.' The beaches on Thailand's Phuket Island are still pristine, but the locals complain that 'we have no beaches left because they are all privately owned by tourist operators and fenced off for their client's use. We have to ask permission to use' our beaches.

...[For two weeks Niue has been one of the world's loneliest places. The tourists have left, its resorts are empty, and there is no one left to answer the phone at the island's airport. Royal Tongan Airlines, the only airline flying there, shelved its weekly return flights from Niue to Auckland and Tonga after the CAA in Nuku'alofa grounded its two planes. Niue now has a tourism crisis, which has prompted its Premier to appeal to NZ for urgent help. In the high season, up to 70 tourists go to Niue each week, making tourism a multimillion-dollar enterprise. The crisis left an unknown number stranded on the self-governing island for 15 days, and has stopped NZ's 20,000 Niueans from visiting their relatives back home. Royal Tongan Airline's chief executive officer had said he hoped the two grounded planes would be allowed to fly again by the end of next week. However, the airline is now saying the flights were unprofitable and may not be resumed. Air NZ will double its flights to Tonga from Monday, but a spokesperson says there are no plans to fly to Niue. The only way to get to the island is by hitching a ride on a cargo ship, which visits once a month, or by chartering a small Air Fiji plane']...

Fiji's infamous souvenir sword sellers are to be banned after being accused of losing the country... up to \$F40 million a year... in tourism dollars. Renowned for hassling tourists with their hard-sell methods, the street vendors who flog the cheap carved wooden swords are said to be having a negative impact on visitors... The deputy head of the N[Z] Embassy in Fiji... said the sword sellers tended to operate... [by] accosting tourists and asking their names. "As soon as they have your name, they quickly carve it on to a sword – then they say you have to buy it... Some of them are virtually using standoff tactics to force people to buy their swords." Unsuspecting holidaymakers were usually stung for between \$5 and \$20 for the unsought souvenirs, "but I have heard of them being sold for up to \$50." Licences were issued to the sword sellers in a bid to curb their excesses, "but it hasn't stopped them from continuing with the same sort of tactics." [The deputy] said the sellers were "very unhappy" about the proposed ban. [By the way, 'one thousand labourers at any one time worked in 24-hour shifts over 21 months to construct the Hotel Burj Al Arab in Dubai. The \$US2 billion hotel towers 321m high above a man-made island. Featuring 200 suites no smaller than 1700 sq m each, a restaurant graces one side and a heli-deck the other – both cantilevered 200m above the ground. The project to build the world's only 7-star hotel was a joint venture of three companies – an Arabian company (labour) a South African company (structural steel) and NZ's Challenge Construction (project management and methodology)']...

Nestled between Mt Tongariro and Mt Ruapehu, 'the Grand Chateau Hotel was built in 1929 by a fledgling Challenge Construction Company. An 80-year-old who first stayed there as a 15-year-old has returned every year since 1934 (apart from seven years in the 1940s when it was closed to guests). "We would always take the lift after playing tennis or golf but when it came time to make an entrance for dinner we would dress to kill and float down the staircase to be as grand as possible for an evening of waltzing and romance. They were my flirting days and oh, did I have a time." She honeymooned at the Chateau in 1940 and continued her visits after her husband's death in 1950. The widow plans to continue her Chateau holidays, despite sometimes finding them difficult because they are "riddled with memories" of family and friends now passed away. "But because it makes me feel like I'm in heaven the Chateau will always be in my heart." Incidentally, last year's volcanic blasts... wiped an estimated \$10 million from the... Ruapehu District... - 1996

Ohakune chartered accountants... estimated that the Mt Ruapehu ash-fall cost the district \$70 million in lost revenue for 1996. The Earthquake Commission has paid out \$48,000 for more than 200 claims relating to the volcano's 1995 and 1996 eruptions, but it faces \$3.9 million in outstanding claims. The Whakapapa ski field general manager... said a claim for more than \$1 million for material damage had been accepted but a "substantial" claim for interruption to business would take a year to settle...

WHEN Mt Ruapehu erupted for the second year in a row last year, there were dire predictions that many of the businesses around Ohakune would not survive without government handouts. Certainly the effect on the town and its surrounding area has been devastating, but there have

been no handouts. Neither has there been any wholesale closing down of businesses... Skiing is estimated to bring in \$100 million a year to businesses around the mountain. When the first eruption cut the season short by at least five weeks on 23 September 1995, it was estimated to have cut the year's takings by about \$10m. That made for a bad year in an industry that can also have its ups and downs because of fickle weather conditions. Locals swallowed the loss and hoped that, in the swings and roundabouts of the ski industry, one poor year would be followed by a good one. Instead, the mountain followed a bad year with a disastrous one, choosing June 26, the opening day of last year's season, to launch an even more spectacular pyrotechnics display, which closed the skifields for most of the winter... A 10% loss of business one year followed by a 75% decline the next would be enough to send most businesses to the wall. Their problems have been made worse because the town has no significant summer tourism business to compensate for a bad ski season. Yet surprisingly... the marketing manager for [the] Ruapehu District Council, which has co-ordinated much of the work to counter the effects of the eruptions, knows of only three businesses in the area that have closed their doors as a result... Sure, some people did sell up when last year's season didn't happen. But there was always a buyer willing to jump in and take up the risk. Typical of those who have hung on is [the] proprietor of the Turoa Ski Lodge. He moved into the area 11 years ago and bought the old railway hotel, which he has modernised and extended over the years. When the mountain erupted in '95 he had just finished building new accommodation units at the back of the lodge. "I just thought, 'it couldn't happen twice', and kept going,"... During the summer he dipped further into his capital reserves and extended his bar, in anticipation of the good times over winter. On the opening day of last year's ski season [he] had 60 staff ready to go... Overnight he cut his staff from 60 to five. With his reserves already depleted... [he] opened a bar in Napier. "That has given us a cushion to get through until now,"... Others adopted similar strategies.

...THE spectacular eruptions of Mt Ruapehu in 1995-96 cost the country at least \$130 million, said [a] geologist... He put the loss to tourism at \$99.2 million... He estimated ECNZ's losses at \$21.5m. Almost half of that was the cost of repairs to the Rangipo power station, whose water intake was buried in ash. The rest was in lost electricity generation. [He] was not able to calculate precisely the losses of the aviation industry, frequently disrupted by the ash plume... His estimate was \$2.4m, which represented only the value of cancelled flights. That was almost certainly too low... Administrative and emergency service costs were estimated at \$6.5m. Most surprising... was the relatively low impact... on agriculture, with an estimated loss of only \$400,000. About 2000 ewes and lambs died from grazing on ash-covered fields and ash destroyed a year's cauliflower crop in Gisborne. The relatively light loss was entirely a matter of luck, said [the geologist]. If the wind had blown in a different direction, or the timing of the eruptions had been different, far more valuable crops would have been destroyed.

...[the 'Pink and White Terraces were a tourist attraction which was already world famous by 1886, when the eruption of nearby Mt Tarawera completely obliterated them. The terraces had been formed over thousands of years by a geyser, which had left deposits of silica creating a fanlike staircase covering about three ha, in delicate shades of pink and white. The only records of these scenic phenomena are paintings made by some of the thousands of people who went there. The night Tarawera blew up, three Maori villages were destroyed and ash was flung over thousands of square kilometres of forest and farmland, while the three craters on the mountain and the typography of the surrounding countryside were altered beyond recognition – so much so that no one has ever been able to identify for sure just where the terraces were.' We still know for sure where Happy Valley is, although volcanic activity picked up at Mt Ruapehu yesterday, with at least one small eruption, spotted in the Crater Lake by ski lift staff...

For beginner skiers the slopes of Happy Valley are quite aptly named. It is unique as the chair lift is free and you can catch this slow chair down the slope to start your lessons... The Valley has a world class ski school to put you on the right track to enjoyable skiing. Intermediate skiers can enjoy a vast range of varied skiing... Advanced skiers can rejoice because from the top of the Valley T-bar you can glide around the precarious Pinnacle Traverse to the Front Stage and even more demanding Back Stage Runs. Extreme off piste skiers can try the runs like Outer Limits, Black Magic, The Chimney and The Chute to satisfy their adrenalin buzz. Touring enthusiasts can ski from the Crater Lake area with spectacular views back to Whakapapa or Turoa[, and]... the awesome terrain... is ideal for snow surfers of all standards. This Magic Mountain... can truly be classified as the ski area for all skiers... SKI MAGIC RUAPEHU on the Whakapapa Ski Area [for] \$99 per day (midweek) Includes: Days Lift Pass or Beginners 1 1/2 hour lesson and beginners pass *Plus* • One days ski hire • Ski Jacket & Pants hire • Transfers to and from the ski area • One night backpackers dorm accommodation... \$169 (Weekend)...

SNOW machines, from Happy Valley at Whakapapa to Coronet Peak at Queenstown, have been working overtime in the last couple of weeks to get slopes ready for the school holidays. The aircraft jet engines on wheels that you see on most fields are a tad smarter than nature because they trigger snowmaking with a bacteria whose distinct shape makes water freeze at higher temperatures. The discovery has revolutionised snow sports. So long as it's cold, the humidity is low and you have a dam full of water you can put enough of the white fluffy stuff down to keep shareholders and impatient skiers happy. That is just the beginning because the snow freezes a bit more while it is lying around and packs down as the little arms break off the snowflakes. When it is solid enough the groomers do their sculpting – and it's goodbye slow starts to the season.

...[I knew, but couldn't quite believe, that those 9.7km from base camp to summit usually take six days to complete. And even at the daunting pace of 1.6km a day, most don't make it. Only one in three of those hardy (or foolhardy) souls lured to Aconcagua actually gets to the summit. Aconcagua, surrounded by emptiness, is in one of the remotest parts of the Andes. Twenty years ago, a Uruguay rugby team's plane crashed nearby, stranding them for weeks with little hope of rescue and forcing them to eat their dead colleagues to survive. These days, however, Aconcagua is an island of activity, with 3000 people drawn to its slopes last year. They come not just because, at 6962m, it is the highest mountain in the world outside the Himalayas. No, it combines its stratospheric altitude with a remarkable quirk of geology: you can simply walk to the top. Someone has ridden a motorbike almost the entire way to the summit, and a one-legged man has made it. But despite, or because of, the ease of Aconcagua, death is all too possible. The cemetery for people who have died on the mountain has thoughtfully been placed at the trail head where you take your first steps up the mountain. Fresh new crosses mark the graves of a 22-year-old American, a 36-year-old Korean and a 60-year-old Argentinian. Last year, eight people died. What on earth was I letting myself in for? Every 30m you ascend Aconcagua, the temperature drops, the air gets thinner and you collect another anecdote about an injury or death. Like the man there the week before us who took off his gloves to adjust his crampon only to have them blown away in the wind. He lost all the fingers on one hand to frostbite. The big worry on the mountain is acute altitude sickness, which hovers around the climbers like the grim reaper, picking them – us – almost at random. My tired mind entered a hypnotic state. With my eyes glued to the ground, all I could see was my boots and those of the walker in front, hour after hour. Then disaster struck. I thought I detected the taste of blood in my mouth. I walked on, but the taste came out loud and clear. It could be nothing, but it could be a symptom of pulmonary oedema. After months of planning, thousands of dollars of expenses, and two weeks of walking, I was just four hours from the summit. The temptation to go for it was overwhelming, but the rational part of my mind told me that the biggest killer on Aconcagua was summit fever. Those who ignore the risks and press for the summit are the ones who die. It's just one mountain, and I have just one life. With a heavy heart, I turned round. I wasn't alone. Of the nine of us, four made it to the top, although one, a fast marathon runner, had to be carried down because his legs had given up on him. A couple of days later, sipping congratulatory champagne back in the security of base camp, we each agreed it was the hardest physical thing we had ever attempted. None was keen to do it again, but we were glad we had done it. We might not appreciate the hardship, but we'll certainly appreciate the memories.'

... 'A SMALL South Island town is split over one of its most important tourism lifelines – helicopters. Some Franz Josef residents want their helicopter base moved out of the West Coast town because of noise and fumes. But others say it's important the base stays for the sake of the lucrative tourism benefits – about 31,500 flights a year buzz in and out, ferrying tourists to Franz Josef glacier. Helicopters operate from a riverbed site less than 100m from the shopping centre area and near some houses. In the peak season, they are booked from dawn to dusk. "Last summer the noise was so bad you couldn't

hear people on the telephone or watch television. The house shook," said a resident. "I was pregnant at the time." One suggestion is to relocate the helicopters to an airstrip 4.5km out of town. But Mountain View Accommodation's owner-operator said any move which impacted on helicopter operators would be felt by everyone. "Economics are very important in a small place like this and jobs are precious." "We like to hear helicopters taking off and landing because it means the tourists are still coming through," said the general manager of Franz Josef Hotels, which has just put \$2 million into building a 32-room development across the road from the helipad.'

...halving a tortuous nine-hour road journey is the rationale for a proposed new road link between Queenstown and Milford which includes a 38-minute 12.6km aerial gondola trip that would be one of the most spectacular in NZ and the longest cableway of its type in the world. The head of Skyline Enterprises Ltd – the successful operator of the gondolas and luge rides in Queenstown and Rotorua – points to the Skyrail Rainforest Cableway in Queenstown as an example of a gondola which promotes eco-tourism and has won major awards. The gondola, built in 1995, starts from a base station at Caravonica Lakes, just 5m above sea level. It runs 7.5km up into the rainforest to the township of Kuranda, famous for its alpine train and a hub of tourism in the area. But environmentalists are shaping up to oppose Skyline's application for resource consent, taking the stance that the development would be a scar on the pristine landscape of the Southern Lakes region, would threaten endangered species and introduce pests and weeds – the most vociferous opponent being the Royal Forest and Bird Protection Society. The society's field officer in Christchurch decries the gondola proposal. She points to her home patch and the Port Hills gondola as a development which is sometimes closed, especially during high winds, and predicts the \$80 million Milford Skytrail would be dogged by similar problems.'

...Some places, like Queenstown, are totally geared to tourism, with no other source of income. When the tourists do not come, the tills do not tinkle... Result? Gloom and concern. There has been a building boom in Queenstown and 5000 hotel and serviced apartment rooms are due for completion... th[is]... year. An... annual hotel industry survey released last December suggested the over-supply of rooms could cost Queenstown "its position as the most profitable centre (in NZ) for hotel operations". But a particular issue now upsetting southern hoteliers is the acute shortage of peak-season airline seats, claims regarded with sufficient importance by[the] Tourism Minister... that he has ordered an urgent inquiry into the extent of the problem. In Christchurch, Dunedin and Queenstown there have been cancellations of tour parties because of the unavailability of airline seats, particularly from Asia and the U[S. Air NZ] is the obvious Aunt Sally, especially when Singapore Airlines, Cathay Pacific and others have increased their capacity from the Asian area, and a British charter airline has permission for more than 30 flights from Britain and Europe. Air N[Z] denies culpability – especially allegations that its programme has been determined to a large degree by its [subsidiary Ansett AUS]... moving Asian tourists through A[US to NZ] to the detriment of visitor time spent in this country... [By the way, a 25%] jump in the number of N[Z]ers visiting A[US], to 671,900, helped to increase th[at] country's short-term visitor numbers to a record 4.2 million last year. The A[US]n Bureau of Statistics said yesterday that the number of A[US]ns going overseas for short trips also increased, by 8[%] to 2,512,600. For 15[%] of them N[Z] was their leading destination.

...Britain has overtaken the U[S] as a source of visitors to this country... Tourism Board figures confirmed on Wednesday that Britain had become N[Z]'s third largest single source... Arrivals from Britain rose to 146,638 in a year when visitors from the U[S] fell by 4[%] to 145,346... Only A[US], which contributed 436,068 visitors, and Japan (162,660) exceeded Britain.

...[N]Z... attracted 9[%] more visitors last year than the previous year and topped the 1.5 million tourists mark for the first time. The Tourism Board said there were 1.53 million visitors in the year ending December 1996, compared with 1.41 million in 1995.

...N[Z]'s tourism growth last year was among the best recorded by OECD nations... Japan led... with a 25[%] increase in arrivals... while A[US] benefited from a 13[%] increase. Overall... tourist arrivals in the Asia-Pacific region grew by 15[%]... niche marketing for tourism, such as eco-tourism and cultural tourism, helped to make the... region such a popular destination... The average growth of tourism among industrialised nations was 3.4[%]. OECD countries accounted for two-thirds of worldwide tourism last year. The U[S] was the biggest earner, taking in \$US64 billion. France attracts the most tourists annually – '60 million' – but they only 'spend \$NZ40 billion'. Britain was the 'sixth most popular tourist destination with 7 million visitors'. • 'DESPITE LACK OF scientific proof that the Loch Ness monster exists, it is said to generate more than \$50 million a year in revenue from tourists who visit the Scottish lake hoping to see the legendary creature. The monster myth also creates about 2500 seasonal jobs'...

'Just after London was dismissed as "squalid" by one tourism guide, a rival book dismisses some of England's best-loved villages and towns as mean, cold, ugly, clapped-out dumps. The West Yorkshire village of Haworth – home of the Bronte sisters – is "wretchedly over-visited." The Cotswolds is "afflicted by plagues of tea-and-souvenir shops." Blackpool is full of "predatory, half-dressed gangs" of stag and hen parties. The Isle of Man is a "tax haven for greedy Brits and a refuge for the sort of people who think that even Victorian values were a bit on the lax side." And although nothing can completely destroy the beauty of Lands End, the *Rough Guide to England* says, "the colossal theme park built behind the majestic headland in 1987 comes close to violating irreparably the spirit of the place." Tourism officials across England have fired off indignant letters of protest. They are furious at the battering leading attractions have taken in the latest crop of guidebooks, which follow the recent decision by France's top gourmets to downgrade English restaurants. Only one restaurant now enjoys the coveted three Michelin stars – compared with 21 in France.'

...A mere 15km off the coast of France, the Channel Islands are British – or sort of – with a few leftovers of a French legacy. Luckily, French cuisine is one of those. The Channel Islands have become increasingly popular with European tourists looking for more than hot summers and palm trees. But their real appeal comes from their generous taxation law: only one rate of income tax – 20% – no capital gains tax and no inheritance tax. Little wonder the rich and other celebrities have set up camp here next to local families who have lived on the islands for generations. From Alderney, the northernmost of the five islands, you can see the French coastline on a clear day. For lovers of history and old bricks, the island's numerous Victorian fortresses are not only a must, you can't avoid them. They're dotted along the entire coastline and at almost every outcrop you'll find remnants of past battles'...

British tourists overwhelmed in the battle of the beaches... After decades of sunbed warfare with the Germans, Britain has finally thrown in the towel. [Britons] can't fight them on the beaches because they outnumber us there by almost two to one... The Germans are the master-race at world travel and spend more money on going abroad than any other nation, despite economic problems at home. New figures show that one in eight tourists is German. Only the combined might of wartime allies Britain and America could knock them off their perch as the world's leading tourists. Almost 80 million of them are taking foreign holidays. That figure – including people taking more than one annual vacation – is up by a third since 1991. In the same one-year period only 44 million Britons go through the departure lounges, say market analysts Euromonitor. [Britons] are fourth in the table of globe-trotters behind Germany, the Czech Republic (yes that's right, the Czechs... 57.3 million Czechs visit foreign parts annually – up 87[%] in six years) – yet the 'population of Czechoslovakia was only 10,339,000 in 1993'... and the U[S]. But it seems that to afford the vast number of holidays they take, Germans are choosing the cheaper spots... There is no corresponding tourist invasion of Germany. It does not even figure in the top 10 tourist spots... They've got nothing to match our British Museum or Blackpool. The museum is more popular than even the Eiffel Tower – and Blackpool's pleasure beach is Europe's fourth most visited attraction. Beat that Berliners! ...China is currently the fifth most popular tourist destination, beating the UK for the first time.

...[he] 'could well be the most travelled of us all. He's visited more than 150 countries including China 22 times and South America 14 times. He has explored all 51 American states and all of east and west Europe. A few years ago a newspaper poll listed him as having one of the best 10 jobs in the country, that of an independent tour guide who writes his own itineraries and gets paid to make them happen. It's his job to "dream up incredible journeys." He has taken 28,000 slides, which he uses to publicise his tours and to illustrate the great beauty and desperate problems of the world. This year's schedule includes seven weeks on Marco Polo's Silk Road, a British canal trip, 40 days in South America, the less-visited regions of Spain, Portugal

and Morocco and, finally, Vietnam and its neighbours. Until recently he travelled for 11 months a year, keeping all his worldly goods in two suitcases stashed at an Auckland travel agency. Is he bored with travelling? "No way! I consider myself lucky." His early working life as an auditor in Birmingham, England, did not give much indication that his life would be one of such adventure. But later, in London, a sustained burst of enthusiasm for all the city had to offer saw him out every night for two and a half years. Even so, he says, "Like a lot of Poms I didn't want to go anywhere. I didn't even want to go to Scotland." An encounter with an AUSn traveller and her slides of the world changed all that. In 1960 he immigrated to AUS and two years later the accountant-turned-nomad visited NZ and fell in love with "this most beautiful of countries." He moved across the Tasman, giving up his old profession to pick apples and sort mail and to save money for long periods of travel of the overland, backpacking kind. A job in a travel agency in Auckland led to him escorting his first tour group in 1970. Since then he has escorted more than 2000 Kiwis to the far corners of the world and back.']

...MORE Kiwis are visiting Canada than ever before... Statistics Canada figures show that... 38,954 N[Z] residents visited Canada... during the p[ast nine months]... – an increase of 21.26% over the same... [months of the previous year. NZ] had the third highest rate of visitor growth to Canada behind mainland China at 29.40% with 52,131, and Ireland at 27.10% with 20,768.

...DUBLIN, with its reputation as a young, vibrant city, is enjoying a tourism boom. Some 16 new hotels have sprung up in the past year to cater for the influx of visitors. Short breaks from Britain are growing in popularity and it is increasingly fashionable to go to Dublin for hen and stag weekends. Ireland is fast becoming one of Europe's top holiday destinations and is forecast to welcome five million visitors this year, up 10[%] on last year. Meanwhile, a marketing campaign is under way to raise the profile of Shannon International Airport and the west of Ireland. The airport is undergoing a \$108 million upgrade so it can handle three million passengers by 2007.

...[expect to see a boom in the development of airport and hotel facilities in northern India now that local authorities have 'opened 20 unclimbed peaks in the Himalayas, as well as 176 other summits in previously closed areas bordering China and Pakistan. Their heights range from 6000m to 7800m.']

...Making a mountain of money... While the greater mass of humanity might dream of riches, more and more rich people dream of standing on the "roof of the world" – the dizzyingly high peak of Mt Everest, a plateau no bigger than a double bed, in winds of up to 160km/h. These people pay thousands of dollars to join the exclusive club – only 600 members so far – of those who have reached the summit. Or indeed to add their names to the list of 142 people who have so far died in the process. "A lot of people think they can buy their way to the top," says [a spokesperson for] the Ministry of Tourism in the Nepalese capital of Kathmandu. "But they forget just how dangerous Qomolungma [the seat of the Gods] is." Spring has begun, and more teams of mountaineers than ever are converging on the world's highest peak. Ten teams each have gathered below the North Wall on the Tibetan side and the South-east Ridge in Nepal. About 2000 climbers, guides and sherpas are competing to get on to the routes first. At least seven of the expeditions are "commercial groups" – climbers led by professional mountain guides. The Everest trip costs between \$40,000 and \$100,000. Business is going well, even though in May last year eight climbers died within 24 hours. This year's arrivals again include the N[Z] company Adventure Consultants. If this group manages to reach the summit, it will pass near the body of the company's founder... His body lies frozen in the ice only a few steps off the trail... Rob Hall... died because he delayed his descent too long when he tried to bring one of his customers safely back to the camp. He ended up climbing in the dark, stopped to rest, and never got up again. Hall's body is unlikely to discourage anyone on their way to the top. "The mountaineering ethic is lost," [the] owner of Everest Trekking in Kathmandu, says with regret. He blames the commercial enterprises for relying on professional groups of climbers to set up the necessary ropes and bases. "If those are missing, disaster is inevitable in poor conditions." He is critical of commercial groups for failing to set up emergency camps with oxygen reserves 100m to 200m below the summit. Not every Everest climber has the stamina of the sherpas. Although the sherpas' job of carrying loads of equipment on the ascent might seem menial, it is thanks to their knowledge and stamina that many climbers have survived the descent. They get paid between \$2600 and \$3000 each for a six-week expedition. That puts them in the lower income bracket in terms of the Everest business, which is worth millions of dollars. For each expedition of a maximum of seven foreign mountaineers, the Nepalese government earns \$72,500. Internationally accredited guides, most from the U[S or NZ], cost another \$22,000. The power of money has long since held the upper hand in the Himalayas. "If people want to pay to get up, why not," says [a spokesperson for] Himalaya Expeditions. He doesn't see anything wrong with up to 30 climbers a day pushing or shoving to get started on the climb. "You hardly notice them once they are on the mountain." That is true except for one spot... on the southern route. Only one climber at a time can cross the ladder which bridges a dangerous crevasse. If there are too many people at one time, they may have to wait up to one-and-a-half hours to get over, and not reach the summit until late in the day. "There are often terrible fights in the camps," says... a "mountaineering correspondent" who has been observing the Everest business for 37 years. "There are fierce arguments over who gets to set off first, who gets to tighten the ropes." Kathmandu is teeming with 500 mountaineering companies and 600 travel agencies... [The first person] to climb Mount Everest solo, is seen as responsible for the boom. [The soloist] led the marketing of tours. [In comparison, NZer] Sir Edmund Hillary[– who, together with 'the sherpa mountaineer Tenzing Norgay', is accredited with being the first to ever climb Everest –] took a different approach. [He] finances schools in the Sherpa regions and is trying to save the Sherpa language, now spoken by only about 6000 people... Hillary [has] suggested a "moratorium" in the interests of nature, recommending that climbers be banned from Everest for several years. In response, the Nepalese government introduced a rule that no more than one team could climb a route at any one time. The result was that climbers took to ascending on the Tibet side. And so the Seat of the Gods has become the highest rubbish heap in the world. Since Hillary[and Tenzing] reached the summit in 1953, those who followed have left around 15,000kg of rubbish behind. Empty oxygen bottles, tin cans, tattered bits of tents, old ropes, ice-picks, frozen excrement and corpses line the routes. Recently the German embassy in Kathmandu built a large cold-storage chamber for the bodies of foreigners who lose their lives in the Himalayas. But even death itself has become a lucrative business. A[n A]ustrian... restaurant owner, has a sideline as an undertaker specialising in repatriating dead tourists. Transportation costs for a corpse range [between] \$8500 and \$10,000.

...as [t]he... climber from Seattle... paused to take a final photo of the queue of climbers who were still making their way to the summit, [he] noticed something he had not seen before. The mountains surrounding Everest, which had been bathed in sunshine only an hour earlier were now covered in clouds. But neither [he] nor the 38 other climbers moving towards the summit that day realised a storm was brewing. They had no idea that within hours, eight climbers would be dead and others left permanently scarred in Mt Everest's most tragic day. The disaster received worldwide attention, not only because of its scale but because many of those caught on Everest were not mountaineers. They were amateurs – who paid up to \$84,400 to be guided to the roof of the world. One of those was... a writer for *Outside* magazine and author of the 1996 best-seller *Into the Wild*, who was sent by his magazine to join a guided ascent of Mt Everest and write a story about the commercialisation of the mountain. Of the six people in [the writ]er's group – led by veteran N[Z] guide Rob Hall – only two survived. A year later, [he] has written a harrowing account of the tragedy... His memoir is... seared with guilt about his role in the tragedy and whether he could have done more on the blizzard-swept slopes to save the lives of some of his colleagues... *Into Thin Air: A Personal Account of the Mt Everest Disaster* combines [his] recollections with those of other survivors and radio logs to piece together what happened on Everest on the night of May 10, 1996. The... gripping account of how human error, ego and greed and a liberal dose of bad luck came together at the top of the world... has become a best-seller in the U[S], where its release last month coincided with another tragedy on Everest in which up to nine climbers have been killed...

Nepalese authorities are about to embark on their biggest effort to retrieve the bodies of climbers – now more than 150 – many of which they regard as posing a health risk. The recovery operation, made possible by an unusual spell of mild weather, threatens to upset relatives who would prefer to see their loved ones left at peace on a mountain they dreamed of conquering.

...[according to a 'Canadian mountaineer: "Images of Sherpas and western climbers jostling for positions on ropes that are now fixed all the way from Base Camp to the summit have taken away any mystique the mountain may have had."'] Everest has even been successfully 'climbed by an amputee'...

'Late last year, a Sherpa reached the summit of Everest in a record time of 24 hours and 20 minutes from base camp. Hardly anybody noticed. *Encyclopaedia Britannica* says attempts to climb the mountain began with the opening of the Tibetan route in 1920. There were seven attempts on the northeast ridge between 1921 and 1938 – including Mallory's last attempt in 1924 – and three missions up the southeast ridge in 1951 and 1952. Whether the first footprints on the summit were those of Hillary and Sherpa Tenzing or Mallory and Irvine, is still what fascinates.'

... 'A pair of finds – one near the icy summit of Everest, the other in the depths of the Atlantic – may help unlock two of the great puzzles of exploration. From the Himalayas, a US-based expedition yesterday announced the discovery of British climber George Mallory, who some believe beat Sir Edmund Hillary to the top of the world's highest peak, while off the Bahamas salvage experts found the space capsule in which an American astronaut nearly drowned during a controversial splashdown in July 1961. Two pieces of vital evidence are still missing, however: the hatch which an author accused the astronaut of releasing in a panic, causing the capsule to sink before frogmen could retrieve it, and the Kodak camera which Mallory carried and which experts believe may contain film that could still be developed.'

... 'An expedition to Mt Everest is unlikely to find a camera that could prove two Britons were the first to scale the mountain, says Sir Edmund Hillary, who reached Everest's peak in 1953 with Tenzing Norgay. Britons George Mallory and Andrew Irvine disappeared about 250m from the summit 29 years earlier. There have already been several expeditions up the north side of Everest to find a camera which might not have existed, Sir Edmund told National Radio. However, he said Mallory was a greatly admired figure and it would be nice to find out whether he had been successful.'

... 'A 38-year-old Slovenian became the first person to ski non-stop down the world's highest mountain on Sunday. He said that during his descent he came across the frozen body of a dead climber whose identity was not known.' In related news, 'the discovery of George Mallory's body has sparked a race to rewrite Everest's history with New York publishers and Hollywood studios fighting for the spoils.'

... '*High altitude, low morality* "A BITTER wind raked across the shattered rocks of Mount Everest's South Col, brushing gritty snow into the folds of a dying man's clothing. He lay on his back with his bare hands resting at his sides. Less than a rope's length away, in a huddle of tents, seven men slept in snug sleeping bags. The dying man had lain outside for hours, exposed to a withering wind." Thus writes a mountaineer and award-winning author in the introduction to his latest book, *Dark Shadows Falling*, a fascinating indictment of what he fears the culture of mountaineering is becoming. "Had he been able to concentrate he might have heard the flexing and flapping sounds of the Dutch tents less than 30 yards from where he lay. In the darkness he might have understood what the noise meant – comfort, warmth, companionship. Perhaps the familiar sound had stirred something in his frozen memory, or the recognition of voices drifting over from the tents into his fading consciousness had triggered the almost superhuman effort to wave one hand. The effort in itself should have killed him as the chilled blood released by the spasms of his arm rushed back to his precious core. Either way, it was too late, and he died within reach of sanctuary." His analysis is instigated by the story of that Indian climber dying alone – because, shockingly, his wave was seen and the occupants of those nearby tents chose not to go to him. "No one acknowledged his last despairing movement, knelt by him and had the humanity to hug him. They let him die alone for reasons known only to themselves." Other recent expeditions to Everest are scrutinised in detail through the lens of morality. The heroism of some are recognised – for instance, the valiant rescue efforts that went on in the days after the vicious storm that swept the mountain in May 1996, killing NZer Rob Hall. But there are enough stories here to cast the shadow of truth over the thesis that ambition, selfishness and greed are turning the Himalayas into an overcrowded, "glorified theme park" in which "the age-old sense of concord thought common to mountaineers and sailors in the face of death and distress" fails to stack up against the ferocious – but senseless, given the fact that it's all been done before – competition to "summit." There are examples of terrible inhumanity among ostensible equals – the Japanese climbers who walked straight past three dying Indians without offering even a word of comfort, let alone abandoning their own expedition to try to save them. One of those Japanese climbers later told the *Financial Times*: "Above 8000m is not a place where people can afford morality." His partner added: "They were Indian climbers – we didn't know them." Or the South African team who, after the storm that led to the death of Rob Hall, refused to lend their radio to the rescuers. The book also reveals some extraordinary treatment meted out by Westerners to their porters. One, dressed in little rubber boots and cotton pants, dies of cold while carrying down clothing and Gore-Tex jackets on his back. Other Sherpas are left behind to fend for themselves when their employers, unwilling to pay \$200 a head to rescue their staff as well, are evacuated by helicopter. Two Westerners are in too much of a hurry to make their international flight connections to bother carrying their sick Sherpa to the rescue helicopter. The littering of the Himalayas with all the detritus of climbing, including bodies, the author compares with Sherpa Norgay's statement that as he climbed the mountain he craved forgiveness for every step he cut into her side. The author sympathises with the call for a complete ban on climbing Everest: "There is nothing left to be proved by an ascent other than to massage the egos of rich clients whose motives leave a lot to be desired. It is time for Everest to be made inviolate, closed to all suitors for all time, to become a sanctuary to be honoured, admired and respected, rather than abused." Unfortunately, Everest isn't the only mountain that attracts a high mortality rate – for example, '71 people have died trying to climb Mt Rainier in the US since 1987.'

... 'the grand-slam of adventuring encompasses going to the North and South poles plus climbing the highest peak in each of the seven continents.'

... 'adventure tourism company] **Shotover Jet has reversed its decision to sell Rainbow Springs and Rainbow Farm Show in Rotorua after none of the bids matched expectations. Directors blamed negative publicity about the state of the N[Z tourism industry.** On a positive note, '8 NZ destinations made up the top 100 cities for tourists following a poll by a prestigious US magazine. But only Christchurch made it into the top 10, headed by Sydney.')

... **Warning to Aucklanders: Napier wants you. The Napier City Council is spending more than \$200,000 to attract more tourists to Hawkes Bay – and Auckland is top of the hit list...** [By the way, less than half of Aucklanders regard tourism as vital to the local economy... A Tourism Board survey found that only 47[%]... saw tourism as "very important"... a further 37[%]... said it was "important." The remaining 14 cities and towns surveyed, with the exception of Wellington, said tourism was more essential... The Mayor of Manukau... said Aucklanders needed to shake up their ideas if they were to cash in on upcoming opportunities... [He] said Auckland International Airport was the gateway to the country, but the challenge was to intercept tourists before they immediately fled to Rotorua... Tourism contributed \$2 billion to the Auckland region in the last financial year, with 3.3 million international and domestic visitors.

... 'The tourism industry cannot afford to sit back and relax despite recent success, says the Minister of Tourism. N[Z]ers needed to make additional investment if that achievement was to continue... The industry had performed extremely well over the past six years, visitor arrivals jumping 42[%] since the Tourism Board was set up in 1991... [However, the minister] said the country needed to maintain and build on its investment in marketing, concentrating on smart, well-targeted campaigns. Extra money would be needed if the board was to achieve its goal of \$9 billion a year in foreign exchange earnings by 2000... [The minister] said later that he wanted the Government Statistician to keep a tourism satellite account so that the country's largest foreign exchange earner could be measured... The Tourism Board calculates the industry[currently] earns about \$4.8 billion in foreign exchange a year, but the Government does not produce figures... An official measure of the contribution the industry makes to our total foreign exchange earnings was urgently needed... He said more money was also needed for forecasting and tourism research... In the past the value of tourism was calculated on International Visitor Survey statistics[which]... had a margin of error of 6[%]. About 10[%] of tourists filled out the surveys... [The minister] said the new methodology, to be announced within the next month, would include details about domestic tourism. He would not comment on how much the new research would cost.

... 'International visitor growth will slump to 3[%] this year, a report prepared for the Tourism Industry Association says... [G]rowth in visitors to NZ slowed to less than 5% in the year ended June 30, according to Statistics N[Z].

...THE Tourism Board may have to review its much-championed target of \$9 billion in foreign exchange earnings a year by 2000. It distanced itself from an earlier target of three million visitors annually by the new millennium after a national outcry from N[Z]ers against the country being "swamped" with tourists. So rather than spend its \$50 million-plus budget on encouraging as many visitors as possible, the board has been trying to entice big spenders. We have, in the words of [a] former Tourism Minister... become a "boutique" destination. But as the growth in arrivals slowed... the money earned from tourism has also started to shrink... And the average spend per person per day decreased 6% to \$143, while the average spend per visit per person was down 7% to \$2595... Visitors from Germany, Switzerland and Japan were the highest spenders. But while earnings from Germans rose to \$4055, spending by the Swiss dropped to \$4013 and by the Japanese to \$3783 (down 7%). South Koreans continued to spend the most per day, although this was down 2% to \$337.

...The tourism industry is bracing itself for its worst year since 1992 after a dramatic drop in visitor numbers... In the... [2nd quarter] the amount spent by foreign tourists on services such as transport and hotels fell significantly, while the amount spent by N[Z]ers overseas increased, contributing to a \$128 million deterioration in the balance of payments... While hotels in Auckland are believed to be doing a steady business, those in other centres such as Christchurch, Queenstown and Rotorua are understood to be struggling to fill rooms... [O]ccupancy rates in some hotels were as low as 15[%]... The occupancy rate for all accommodation in June was only 21.7[%], compared with 24.6[%] in May and 30.5[%] in April... The slump has sparked calls for more Government support of the industry, including greater funding for the Tourism Board... An extra \$10 million of marketing expenditure would bring in 31,000 more visitors a year, according to the... National Bank's chief economist... After years of lobbying by the industry, the Government announced last week that it was doubling the amount of money available for tourism research over the next three years... What the... [latest statistics] have shown is that tourist operators cannot continue to assume that N[Z] will always be in big demand as a holiday destination... There are numerous reasons for the reduced growth, but the strength of the kiwi[dollar] takes centre stage... The international tourist industry is also highly competitive and other countries are managing to attract visitors away from N[Z]. Germans are responding to aggressive promotion by the Canadian tourist industry and A[US] has been particularly successful in attracting Asian visitors.

...[Building a Web site to showcase NZ to the world should cost far less than the proposed \$3 million budgeted for the Xena site by advertising agency Saatchi & Saatchi, says a new media entrepreneur. The managing director of Auckland-based Matcom, surveyed local Web designers and concluded a major tourism site would cost at most \$250,000, including all the bells and whistles. He said the \$3 million quoted by the advertising agency for a Xena site as part of its Destination New Zealand tourism campaign was a joke and should immediately be redirected to a saner project'...

'The Tourism Board expected to spend at least \$14m promoting the television star Xena as the "big idea" behind its global marketing strategy. Details of how the Warrior Princess would spearhead the campaign – and gobble up nearly a quarter of its three-year \$50m budget – emerged yesterday. The Auckland actor's role in the now-foundering strategy is touched on in a censored board report. But the *NZ Herald* has the uncensored version, which shows that the ambitious plan was to have debuted last month at a \$500,000 Hollywood launch with a "constellation of stars." The campaign allowed for a \$2m contractual agreement with the actor, a special \$5m episode of *Xena – Warrior Princess* with the actor showing viewers her favourite homeland places, a \$3m Web site, a 60-second TV commercial and a \$5m "new image" library to satisfy what the contracted advertising agency believed would be an "unprecedented demand for new source material." The agency described the use of Xena's cult and celebrity status as a "media virus" which would "get global cut-through and interest in visiting NZ." The "Xena project," as Saatchi & Saatchi called it, has collapsed and the board is hurriedly revising its plans.'

...The PM has been dropped back in the Tourism Board row – this time by the Minister of Tourism. Another document has emerged raising fresh doubts about the PM's explanations of what it knew, and when, of Saatchi & Saatchi's \$50 million tourism strategy. The damaging contradiction is contained in a summary of a meeting in the minister's Beehive office during September last year. The one-page document from Saatchi records advice from the minister that "the PM approved the idea in principle when given an overview by" the Saatchi boss. However, the PM has said on National Radio that it never agreed in principle "to anything that was put in front of me by the Saatchi boss or anybody else." The PM was yesterday directing all enquiries to the minister, who disputed the Saatchi report, saying: "At no time did I believe or tell anyone that the PM had seen or approved the Tourism Board campaign." He agreed the briefing occurred, and said he had remarked that the PM would be enthusiastic about the plan to use *Xena – Warrior Princess* as the big campaign idea. The minister also took a swipe at Saatchi – the world's 11th-biggest advertising network – saying the quality of their reports "is a matter for them." The Saatchi report is the third document in the tourism row to draw Government denials. The advertising firm was not returning calls yesterday. Meanwhile, TV3 last night reported that Saatchi's revised campaign is to show live images of NZ on billboards.'

...Tourism chiefs will demand answers from the Tourism Board today at a special meeting called to brief them on plans to salvage NZ's global promotion campaign. After scrapping Saatchi & Saatchi's plans, the board must now come up with a new campaign and get it into the international marketplace or NZ will fail to capitalise on the big events they were relying on to kick-start the \$4 billion-a-year industry in the run-up to the millennium. Last night the Tourism Minister and the PM were distancing themselves from the failed deal. Both said it was now up to the board to deliver.'

...Government sources believe the aborted Saatchi & Saatchi campaign could cost taxpayers as much as \$3 million – for nothing – and may yet cost the Tourism Minister his portfolio. Money set aside for promoting NZ overseas may now be needed to defend the Tourism Board in court if the jilted advertising agency sues after losing the \$53 million contract. As the tourism industry reeled from the announcement that the agency's global promotion campaign had been scrapped, Saatchi moved to recoup money for the work it has done since getting approval for it last July. One of the board's main reasons for dumping the agency was the likely budget blowout of the Saatchi plan. Figures of \$75 million to \$100 million have been suggested. Two weeks ago the minister said the campaign was outstandingly good. The week before, Saatchi had unveiled its revamped campaign to the board, which remained unimpressed.'

...The Tourism Board offered Saatchi \$220,000 at the end of their strained relationship, but denies the proposal was hush money. Saatchi executives were unavailable for comment last night, but have made it clear that they are pursuing legal action against the board. Although the board is believed to have explored its legal standing before dumping the agency, contract law experts say Saatchi has a strong case to claim for considerable compensation.'

...A letter which lay unopened during a watershed Tourism Board meeting is being investigated by the Auditor-General. The hand-written letter, from the office of the Tourism Minister, was assumed by directors to sack the board's chairman. But the white envelope remained undisturbed beside the chairman during the meeting on December 16 last year, with directors warning that opening it would mean accepting its contents. The letter, which was apparently returned unopened to the minister's office, was written when relations between the minister and the chairman were extremely tense and the board's global marketing strategy with Saatchi & Saatchi was close to collapse. The directors were sceptical that the advertising agency could deliver extra tourists with its \$50 million board deal, and were shocked when Saatchi pushed for a higher fee and a copyright claim over campaign material. The advertising firm refuses to defend itself over the now scuttled board deal and its chief executive – back in Auckland yesterday – had nothing to say when asked for the Saatchi story. The mystery letter had reached the board as it verged on a total breakdown with the minister. The *Herald* understands that the board's chairman and his deputy had consulted a lawyer over a High Court injunction against what they saw as the minister's excessive interference. Aghast board members cautioned against legal action and instead sent a three-member delegation to the minister's office, where a departure deal for the chairman and deputy was settled.'

...The Government may face long court battles in trying to recover \$340,000 in payments to former Tourism Board directors. An Audit NZ inquiry has found that the severance payments were unlawful. But the agency says there was no suggestion that the Tourism Minister directed the board to make any payment. The former board chairman said last night that he was seeking legal advice. The PM is seeking an opinion from the Solicitor-General on the

money, and the board, which believes the payouts were lawful, says it will also talk to its lawyers. The chairman was paid \$200,000, based on a formula he had proposed, as compensation for his premature resignation last December. His deputy resigned with him and was paid \$140,000. Labour yesterday stepped up calls for the minister's sacking, pointing to a conflict of evidence about whether he approved the golden handshakes.'

...'The Government is due to decide today if it will try to recover severance payouts of \$340,000 to two former Tourism Board members. The cabinet meeting is expected to weigh up the probability of large legal bills if the Government decides to pursue the money.' 'But of greater concern was whether the board may still have a "dysfunctional" relationship with its minister, as laid out in the Auditor-General's report.'

...The PM wants assurances from the Tourism Board that it can work with the Tourism Minister and if the PM does not get them it may force the minister to resign. The damaging row between the minister and the board was discussed by the cabinet yesterday – although the minister, said to have the flu, was not present. The PM has also demanded the board tell by the week's end what it was doing to get the severance payments to its former chairman and his deputy back. One way or another, the PM wants the matter sorted well before it leaves for South Africa in two weeks.'

...'AN end to the wrangle over Tourism Board payouts is in sight, with its former chairman and his deputy signalling they may return some of the \$340,000. But in return they want a concession by the Government the payments were not unlawful. The PM initially vowed to get back all the money, through the courts if necessary. But by late last week the legal complexities and costs of pursuing the payments had persuaded the Government to try to cut a deal with the men instead. The PM has hinted the Government would be content to get back just three-quarters of the payments, leaving the men with a total of \$50,000 and \$33,000 respectively. While the chairman and deputy still say they believe the payments were justified for being forced off the board, they are also feeling the heat of public condemnation of the deals. Their resignations triggered a series of public revelations about the Tourism Minister's management of tourism which led to his resignation from the portfolio last month'...

'TOURISM NZ will pay Saatchi & Saatchi \$225,883 in expenses after it was fired from the \$53 million NZ global campaign'...

'The Tourism Board's new plans for selling NZ overseas are expected to be revealed today. It is understood the board has decided to award the contract to an Auckland and Wellington-based agency, M&C Saatchi, over a Wellington-based firm. The board has been considering ideas from the two companies since dumping its initial choice for the plum contract, Saatchi & Saatchi Auckland. The decision to use M&C Saatchi is also a further twist to the Tourism Board saga, as the agency takes its name from the original owners of Saatchi & Saatchi. The brothers founded the new agency in 1995, after they were dumped by their original firm. It is understood the board has gone for a less grandiose campaign than the one Saatchi & Saatchi proposed.'

...'The greenrush is on. "100% Pure New Zealand" is the open invitation to party at our place. Tourism has become a markedly bigger concern than any other export earner – although NZ has only a 0.31% share of the \$3.5 trillion global tourist industry. But the "100% Pure" slogan thrashed overseas by Tourism NZ, the trading name of the state-owned Tourism Board, is raising expectations of a clean, green oasis that some experts say is becoming increasingly challenging to deliver. They fear that unless a sustainable national strategy is put in place down to regional and grassroots levels, where tourism planning is often haphazard if it happens at all, the natural assets used as beacons in the brochures risk losing their international allure. Tourism leaders and the Government are at last working on such a strategy, but it has taken them more than three years to team up since the Parliamentary Commissioner for the Environment warned in a major report that the industry had become largely unsustainable. It remains to be seen what chances the strategy – the final draft is just being completed – will have of reining in an industry of predominantly very small businesses, 80% of which employ fewer than five people.'

...'This is not about private dinner parties, advertising agencies or who said what. I – the leader of the Act Party – am not interested in the politics of personal attacks. I'd rather talk about the people's business. Should \$67.5 million of taxpayers' money be spent promoting an industry? That's what the NZ Government is spending on tourism this year, and among a huge pile of papers released last week by the Government was the former Tourism Minister's proposal to spend an additional \$20 million on tourism marketing. I was relieved that Treasury opposed this proposal. Treasury cast doubt on the absurd claim that a \$20 million ad campaign would earn \$240 million in additional foreign-exchange earnings. It's the same argument that says \$1 million of ratepayers' money for a car race will earn Wellington multimillions. If that were true, we could spend a billion and get richer than California. Treasury has produced a list showing how much various governments spend for each visitor. NZ now spends more than any other. Our taxpayers outlay more than \$30 a visitor. Italy spends just 49c, the US 34c and France \$1.20. Are they wrong and we right? The mess in Parliament must be making National start to doubt it. The idea that if only we gave taxpayers' money to tourism all would be well, is not new. Another Tourism Minister was forever putting up papers to the last Labour cabinet that read just like the current proposals. It's nonsense that there is some market failure peculiar to tourism that only packets of money can fix. Otago farmers are in a serious drought and the total support from the Government is just \$80,000. The Government did not step in to protect the timber industry from the Asian crisis. Wool prices are at their lowest for five years, yet no one so far is advocating SMPs. What's the difference between spending taxpayers' money on advertising tourism and spending it on, say SMPs for sheep?']

...Taiwanese tourists are being fleeced by a tourism scheme based on one of N[Z]'s best known symbols: sheep. For an undisclosed sum, Taiwanese are flocking to adopt and name a sheep... Adopt A Sheep is a joint venture of the Tourism Board, Rural Tours, EVA Airways and eight Taiwanese travel wholesalers. The proud "parents" are photographed alongside their adopted ruminant and take home a certificate proclaiming them as its foster parents... Tourists also take home a toy memento which goes baa – so they can never forget what their woolly "offspring" sounds like. More than 150 people have signed up in the venture's first month.

...['Two Peruvian thieves convicted this week of passport and theft charges are a reminder that the age-old art of tourist fleecing is alive and well. Police believe the pair were part of a South American ring of thieves preying on tourists in Auckland, Rotorua, Christchurch and Queenstown. Such scams, where one person distracts the tourist while another steals, are common all over the world, but relatively rare in NZ.' In related news, t]he Fullers Group is working on plans that will help it maintain its grip on... tractor-driven shuttles around Rangitoto Island... About 44,000 people visit Rangitoto Island each year and Fullers has been offering shuttle tours on a trial basis since 1995. A Fullers spokesman said the company wanted to consolidate its position by receiving a permanent concession... The concession limits the company to running six trips a day, using two shuttles.

...Fullers Group is in line to get a 15-year monopoly running Rangitoto Island visitor operations. The Department of Conservation intends issuing a concession to the company to run tractor-driven shuttles around the volcanic island[in Auckland's Waitemata Harbour], conduct guided walks and maintain roads. The company has operated island services for some time and, if confirmed, the new arrangement will place the operations on a long-term footing. The department will not reveal how much Fullers has paid to secure rights to Rangitoto.

...The Commerce Commission has warned tour operators against trying to "fix" the commissions, or kickbacks, which tourist businesses must pay. Warning letters ha[ve] been sent to the Inbound Tour Operators Council, the Bus and Coach Association and the Drivers' Guild. The groups' recommended industry standards included a 5... to 15[%] range for commissions to be paid by retailers and other tourist businesses to tour operators who brought tourists to their businesses.

...Tourism industry plans to put a 15[%] cap on commissions... and kickbacks... given to tour operators have been condemned by the Commerce Commission. The organisation said yesterday that it had not approved the guidelines... and... it would monitor them to ensure they were not a form of price fixing. The guidelines... set the 15[%] cap on commissions provided that the money is declared to the Inland Revenue Department. The commission's communications officer... said the kickbacks did not breach the Commerce Act. But competitors... were not supposed to come to an agreement on prices or commission rates. The deputy chief executive of the Tourism Board... said there had been a misunderstanding between the board and the commission. The board had liaised with the commission while the guidelines were being developed but had not realised the commission did not give its approval or disapproval on such documents... The deputy chief executive of the Tourism Board... said he was happy for

the guidelines to be “tested in practice” and they would still be released today... The guidelines are the latest attempt to rid the industry of illegal commissions and kickbacks. In some cases bus drivers and tour guides demand... cash, from shopkeepers and tourist attractions before they will take tourists in. Others – particularly Korean guides – tell tourists that prices for goods are in U[S] dollars not N[Z] dollars.

...Some tour guides have been “ripping off” tourists by asking them to pay to visit places which are free of charge, Rotorua police say.[A] Detective Inspector... said police had been told that over the past few months the guides, mostly Korean, had charged their overseas clients \$US10... to walk in Redwood Forest, Rotorua, and \$US20... “departure tax” to cross between the North and South Islands. Police had also heard of tour guides demanding \$US100 from tourists to play on golf courses, telling their patrons it was a golf club fee. [● An Asian tourist walked into the pro shop of a Waikato golf course, paid the price advertised on a new set of clubs, then returned the clubs after completing his round. Although the pro assumed that the tourist had mistakenly believed it was only hiring the clubs and paying green fees, the pro didn’t bother to refund the cost difference of about \$450!]

...TWO beers bought by tourists in Athens proved to have an unexpected punch when the bill came – they cost more than \$650 each. The Athens prefecture has fined the owner of... [the] cafe \$6000 for overcharging... City officials said the beers should have cost \$18... “Greece’s foreign exchange needs depend heavily on tourists and this kind of stupid trick damages the reputation of the entire country.”

...PRAGUE is trying to stop taxi drivers from overcharging tourists. Unscrupulous cabbies have been picking up tourists from the airport and main railway station and charging up to \$24 a kilometre. After a barrage of complaints from angry tourists, Prague authorities plan to introduce a blanket fare of 77c a kilometre.

...[known as ‘the fairytale city, Prague has a population of about 1 million but is visited by about 80 million tourists each year. “It’s real difficult to come across a local who isn’t trying to sell you something.”] It’s also difficult for tourists to know whether or not the prices charged are valid – but this is a problem that isn’t confined to Prague. This year, US tourists have allegedly been paying ‘about \$250 each for a day bus trip from Auckland to the Bay of Islands’ (a standard bus service to the same destination is ‘\$42 return – or \$29 if booked two weeks in advance’). Furthermore, the bus trip takes four hours one way, which means that the tourists only have enough time for lunch – spending more money if they haven’t brought a packed lunch – or a short walk before the return journey. However, the tourists could’ve spent about ‘\$10 busing to Auckland’s airport to catch a 50 minute plane ride to Kerikeri (for \$182 return – \$91 if booked in advance), arriving about 9.30am, paid \$15 (\$30 return) busing the 23km to the Bay of Islands’, spent another \$20 or so on a boat trip round the islands, returning on a 5.50pm flight, leaving themselves with enough change to catch a bus back to their hotel in the city!

...[NZ] is a nice, safe place for tourists to get ripped off in, according to an Otago University survey of international and domestic travellers. The university Centre for Tourism found about 27[% of English-speaking]... visitors surveyed in Christchurch and Queenstown felt they had been ripped off during their stay solely because they were tourists... However, 95.6[%] of the respondents recommended N[Z] as a safer place than Canada, Sweden, A[US] and 11 other countries. South Africa was considered the most dangerous tourist destination. Big, bad Auckland was seen as the most unsafe place for visitors[in NZ], with Dunedin and Nelson the safest sightseeing spots. About 5.5[%] of tourists said they had been the victims of crime – mostly theft – while in this country, although incidents of violent offending against visitors were few... Japanese travellers appeared to be the most trusting, with just over half saying they avoid leaving valuables where they were visible. By contrast, 90[% of AUS]n tourists took security precautions while on this side of the Tasman. Hitchhiking around the country was considered safe by 54[%] of the survey group.

...a new service may make life a little safer for those who choose to [hitch-hike] this summer. The hitching post... matching hitch-hikers and drivers... [who] put a notice on the post, advising where they’re going and when... will be installed... at Wellington’s Youth Hostel... The free service will be available to the 35,000 people who stay at the hostel each year, as well as Wellingtonians and other travellers. “It’ll work just like car pooling, only on a grander scale,” said[the] hostel manager... The idea came from a Canadian hostel guest. [The hostel manager] said while hitch-hiking around N[Z] wasn’t as dangerous as other parts of the world, there were still risks... Police get dozens of “missing person” reports each week about people hitch-hiking, although most are found safe... [In related news, a] Danish tourist has had his N[Z] holiday destroyed after being savagely beaten in central Auckland early yesterday... He had been in the country for less than 12 hours... [He was] robbed of U[S and NZ] cash, his backpack, glasses and camera. Nursing swollen eyes, a heavily stitched mouth and a broken nose, he told the N[Z] *Herald* that he could not come to terms with the vicious attack. “I had heard that crime was non-existent in N[Z]. In the last 30 years I have travelled to more than 80 countries and never had something happen like this,” he said... after being discharged from Auckland Hospital. “I didn’t do anything to provoke anybody.” He will spend his time quietly recovering before leaving N[Z] on Wednesday as planned.

...A 21-year-old German tourist was so disturbed by an attack on him in central Auckland at the weekend that he left the country the next day. [The German], who arrived in Auckland on Friday, was attacked and robbed by two men in... broad daylight on Saturday. [He] was treated in hospital for minor injuries and flew out of N[Z] on Sunday.

...A German couple were left with nothing but the clothes they were standing in when they were burgled just hours after arriving in N[Z] yesterday. They] arrived at Auckland Airport at 6 am after a marathon flight across the globe, and three hours later all their belongings had been stolen. The couple have been left feeling bitter about N[Z] on their first trip here and will return home as soon as possible. They had planned to tour the country for three weeks. [They] were checking into the Airport Travelodge and had been away from their rental car just five minutes, but that was enough time for the thieves to strike. A screwdriver was used to pry open the lock. The couple’s hand luggage and suitcase were taken, containing passports, credit cards, clothing, expensive camera equipment and about \$10,000 in cash. Mrs [German] said she had travelled to many countries around the world and never had any problems... [S]he had been told N[Z] was virtually crime free... [The] airport police, said tourists should be told about N[Z]’s “huge” theft problem. He was concerned that thieves were beginning to target tourists at the airport and surrounding accommodation houses. Steps were being taken to ensure the problem did not get out of hand.

...Faith in N[Z]ers was restored last night for three holidaying Israeli friends when they were reunited with their stolen van. [The trio] were shattered when their van containing almost all they owned was stolen from central Auckland. But they were overjoyed last night when their [van] was recovered on a day when the public overwhelmingly responded to their tale in the N[Z] *Herald*. “We don’t believe in luck, but miracles do happen,” said [one of the men]. “We are so grateful for all the good Kiwis who have helped us and who have found our van.” ...Although their cameras, most of their clothes and camping gear is missing, the men were elated to have many of their possessions returned. “Films, diaries... we have them back,” said [another]. The men were showered with offers of help and hospitality by well-wishers. Rover N[Z] offered the use of a County Defender Land-Rover to replace their rusty van, while Great Barrier Airlines wants to show them Great Barrier Island. The owner of the Park Lodge in Paihia... went to Bay of Islands businesses and arranged a holiday for the trio. They spent yesterday on a chase boat watching the mini-America’s Cup regatta, and were entertained... “It has been unbelievable,” said [the first man]... Offers of help have[also] poured in for a German couple who had all their belongings stolen at the weekend... [Mrs German] said people had offered food, accommodation and a yacht. She was thankful, but she and her husband... would not continue their planned three-week holiday.

...[the latest tourism] survey shows many visitors don’t feel safe in our main cities. Nearly 40%... felt Auckland was unsafe... The good news is that most of the... tourists surveyed felt N[Z] is still one of the safest places in the world to visit. [Incidentally, the ‘47-year-old who was jailed for life in 1990 for the murders of Swedish tourists Heidi Paakkonen and Urban Hoglin is going before the parole board next month. Paakkonen, 21, and Hoglin, 23, vanished while tramping on the Coromandel Peninsula in 1989. The 47-year-old, who unsuccessfully appealed his conviction for their murders to the privy

council, has maintained his innocence' – even though he 'admitted stealing the couple's car and selling some of their effects. He had skipped bail for a 1986 rape and was on the run when the murders were committed. He also has a conviction for the 1972 manslaughter of an Auckland prostitute.'

...“Come with me and I will show you the real India.” The smooth invitation came from a man with Bollywood film-star looks, and a penchant for blond women and foreign cash. Saying yes was the worst mistake Diana Routley made in her short life. What she could not know was that the 32-year-old had a criminal record for beating and attempting to rape tourists, and that his first wife died suspiciously. On August 10, the 24-year-old Aucklander scrapped her plans to travel from Varanasi to Darjeeling, and made a fateful train journey with the 32-year-old to his home in Brindavan, Uttar Pradesh, northern India. The pair arrived the next morning. He spent two days parading her in front of the villagers, calling her his “beautiful Kiwi girlfriend.” At 10 pm on August 13, after a drinking binge on 90% proof country liquor at home with three friends, the men made sexual advances towards her. She rebuffed them and threatened to call the police. The foursome allegedly strangled her with her own scarf, stole about \$5600 in travellers cheques, her camera and sleeping bag, and bundled her into a shallow grave beneath the floor of a spare room. They called a stonemason to relay the floor and returned to their drinking. This month the four men will go on trial for murder. If found guilty, they will die for their crimes. According to the inspector in charge, the men confessed and said they had killed for cash – their share of her travellers cheques is 20 times the average annual wage in India. “I was never that happy about her travelling alone, but she did a safari through Africa the year before so I thought she would be okay,” says her father.’

...‘Ugandan tourism authorities have started “a fully integrated sustainable tourism programme”, under which special packages have been arranged for well-to-do tourists. “The Ugandan Trail”, a full tourism adventure, will cost between \$5106 and \$12,000. Uganda was visited by 220,000 tourists last year, down from 230,000 in the previous year. They brought in \$214 million, compared with \$250 million. This was an improvement on the 53,594 arrivals and an income of \$10 million in 1986, when the current president seized power in the East African state. Uganda Tourist Board officials are hoping to arrest the decline which is thought to be due to conflict around the nation’s main tourist sites between government forces and Allied Democratic Forces rebels.’ In related news,] **Brazil has launched a \$342 million programme to develop ecological tourism in the Amazon.**

...Japanese... students... o[n] a... rafting expedition in the Peruvian jungle... were robbed... hacked to death and thrown into the Amazon River...

...Radio Tanzania said... a 52-year-old German tourist who wanted to sleep on a... beach on the island of Zanzibar... was advised by a soldier that it was restricted. The tourist refused to be searched, the radio said, so the soldier shot him twice in the neck. He died shortly afterwards in hospital. [By the way, ‘for the average person the risk of dying in a fire is ten times greater when staying in a hotel than when in his or her own bed. And over the last decade fire brigades in the United Kingdom have been called out to deal with, on average, nearly 20 fires in hotels every week.’

...‘The small, rust-coloured Albergo-Rifugio Campo Imperatore Hotel perches precariously near the summit of the Gran Sasso mountain range in Abruzzo, north-east of Rome. This is where Benito Mussolini was imprisoned for 15 days after being overthrown by his own Grand Council. Our guide tells us the tale of Il Duce (the leader) of Italy whose Fascist reign lasted for 21 years. He laughs at the irony as he explains that this very hotel in which Mussolini was incarcerated was being built by Mussolini to honour Mussolini. When it was finished the structure was to have spelt, from the air, the word “Dux.” Obviously the people’s taxes couldn’t stretch to “Il Duce” so the Latin version of leader had to suffice. Unfortunately, construction only got as far as D before Mussolini’s demise began. Up the stairs we creak. The air hangs heavy with history as we enter the bedroom where Il Duce spent his captive nights. Mussolini had a reputation as a womaniser who suffered from venereal disease. The guide laughs as he tells us that people paid “lots of money” to sleep in this bed and even today, if you pay “lots and lots of money,” you can still have the pleasure. Leaving the room I decide that I will watch the movie *Tea With Mussolini* and leave sleeping with Mussolini and his memories to the more dedicated historians. Il Duce was freed from his mountaintop jail in a daring raid by German paratroopers sent in by Hitler. What are friends for? Mussolini was carried to power by the country on a tide of disappointment and frustration. At the end of WW1 the soaring cost of living contributed to an atmosphere ripe for a strong, vocal leader. Ordinary people were sick of being cheated, with their incomes not increasing at the same rate as others. Italy was also worried at missing out on its rightful share of the spoils of war at a series of peace talks that started in Versailles in 1919. For too long this quick-witted, shrewd man was the epitome of Italian aspirations – to be influential abroad, to be seen as a great nation, to be prosperous and attain justice. But the man who started life as a journalist was kept in power by tyranny and the force of unchecked propaganda. So when the tide turned, his demise was brutal and quick. He was caught by liberation forces, shot with his mistress Clara Petacci and lynched with 15 other leading fascists in a square in a drab district of Milan. This square already had a history of bloodshed. In 1944 German soldiers had executed a number of partisan prisoners there. So now the people who had been forced to watch that spectacle gathered to howl and chant their hatred and spit at the corpses of the oppressors. As we journalists crawl on to the bus to wind down the road towards Rome I see the only graffiti on the trip, on a crumbling wall. In Italian it says: “It is our duty to make love.”’ ● ‘Most of the coins that tourists toss into Rome’s Trevi Fountain end up in the pockets of a man who’s made coin-fishing his profession. For 6 days a week, at dawn, he jumps in and rakes up the coins for 20 minutes, making about \$NZ1065 a day.’]

...NEW hotels... have been springing up in southern Italy after a cash injection from the European Union. Over the past two years, some \$90 million has helped boost tourism to the region by adding 2500 rooms to the accommodation stock. Under the scheme, historic buildings have been developed into classy hotels...

THE [head of Virgin Airlines] certainly knows how the other half want to live and with his latest travel venture he makes their dreams come true. Virgin Ultimate’s collection of hotels around the world are not only exclusive and unusual, but a great many of them are fabulously expensive. For example, a 24-hour stay at his 30ha private paradise in the Caribbean, Necker Island, will set you back \$US11,000... Mind you it does have a staff of 26 to cater to your every whim, and you (and up to six others) do have the island and accommodation, called the Great House, to yourself... Virgin Ultimate has properties in... London... Majorca... Malaysia, A[US] and South Africa. Two N[Z] properties are being developed.

...[‘Indulge yourself in the pleasures of world travel’] Fancy spending an intimate evening on a private Caribbean island... for \$16,000? Or what about booking 14 rooms in a Gothic castle in Dublin for a little more than \$12,000 a night. Former guests include Queen Victoria, [the 40th US President] and the rock group REM. Or if you prefer a sailing vacation, there’s always a seven-day cruise in the Mediterranean on a 40m motor yacht with nine of your friends for just over \$76,000. Kiwis will be able to choose such lavish holidays from next week when... [a] British multimillionaire... sets up a branch of his empire in N[Z]. Virgin Ultimate opens its Australasian head office in downtown Auckland on Monday to promote and take bookings for its collection of luxury destinations around the world. The... N[Z] sales representative... said there was a growing market for the holidays... “People are looking for something different, an experience of a lifetime. These are not trips you’d do every year.” The company expected to make 60-80 bookings through the office a year, with clients likely to include company executives and honeymooners.

...[‘Queenstown is abuzz with talk that the world’s most famous newlyweds are honeymooning at an isolated resort nearby. The Hollywood stars, who wed in a secret ceremony on the Malibu coast two weeks ago, are said to be staying at Blanket Bay, a lodge on the northern shore of Lake Wakatipu. Blanket Bay staff yesterday refused to comment on whether the couple were guests at the American-owned resort. Residents of the nearby settlement of Glenorchy said they had not seen the newlyweds. However, the locals added that it was common for film and television stars staying at the resort to slip in and out of the area unnoticed. Access to the lodge is via a restricted road or by helicopter. Rooms at the lodge cost up to \$2390 a night and guests are promised a “haven of comfort – a sanctuary from the outside world.”’]

... 'Rudyard Kipling's visit to AUS and NZ, described in his autobiography *Something of Myself*, took place after an illness that left him feeling he needed to get "clean away and re-sort" himself. His vivid terse notes on NZ are an accompaniment to the famous line of poetry (from *The Song of the Cities* and often quoted by other travellers) he wrote about Auckland: "Last, loneliest, loveliest, exquisite, apart."']

...Construction of Auckland's latest major hotel is expected to begin in [three to four months]. The \$78 million... 35-storey hotel... in downtown Auckland... is the first time a hotel investment prospectus has been offered in... [NZ. P]ackages start from \$207,557 and include the unit title to one of the 268 rooms, a furniture package and a share in the hotel's 60 car parks. Investors will receive returns based on how well the hotel does in all of its operations in an income pooling system. The three-star Albert St hotel[is] aimed at tourists and business travellers... A tourism consultant... said at the launch that Auckland needed a mid-range hotel if it is to cope with tourism numbers from 1999. "This is the fastest growing hotel market and yet most hotel developers build five-star hotels,"...

['The 170-room Auckland Park Recency Hotel, overlooking Myers Park in central Auckland, has closed its doors after a dispute between owners who invested in the rooms and the management. The hotel in Greys Ave, marketed as a "stunning boutique hotel" with all the trimmings of a four-star plus, stopped taking guests last week. Last September, members of a Philippines delegation, including the Philippine President, left the hotel for the Auckland Heritage Hotel as they were unhappy with the size of the rooms in the Park Regency. Finance for the \$39 million hotel opened 14 months ago by the Governor-General was provided by private investors who paid up to \$300,000 for a unit-titled room with the guarantee of a 9% net return for 10 years, annual inflation adjustments after two years and surplus profit share. The chairperson of the Auckland branch of the Major Accommodation Providers said the recent surge in the number of new hotel beds in Auckland was outstripping demand.' Incidentally, 'for most of us the fact that beneath Albert Park are 3.2km of WW2 air-raid shelters is, at best, of passing interest. But for a 60-year-old Glen Eden butcher, these tunnels are something of a magnificent obsession. For 13 years he has battled for the right to open them and create a subterranean tourist park. Now, \$109,000 later, a bill has been introduced into Parliament which makes his dream possible. The bill, now before the local government select committee, will remove the public reserve classification from the underground labyrinth, allowing Auckland City to permit development of the site. The 22-tunnel complex was started in 1942, soon after the Japanese bombing of Pearl Harbor, when 114 council workers began the eight-month task of hacking through the hard papa, scoria and basalt under the park. The resulting shelter had toilets, first aid units and could accommodate 22,000 people. In February 1946, the plumbing and wiring were ripped out and the whole lot filled in again with millions of unfired bricks. The butcher's first proposal dwelt not just on the tourist potential of reopening the tunnels but incorporated a solution to the city's parking problems. He offered a multi-storey car park below the High Court on Constitution Hill. This was adjacent to one end of the main 616m tunnel, which ran from Constitution Hill under the university through to portals at Victoria St, Princess St and Bacons Lane. He envisaged commuters rapid-railing from the new car park to these city-side exits. The council gave him permission to explore, at his expense and responsibility, the feasibility of his proposal. However, his financial backers refused to get involved unless the council entered into a long-term lease, which it did not. Eight years later the butcher was back, with no talk of parking, but keen to build an underground Disneyland of rides, shops, markets, offices, a museum, underground rafting and other entertainments. He rejected suggestions he was crazy, and councillors seem to have agreed, giving him permission to excavate the first 62m to carry out his feasibility study. Still, before we scoff, who of us at the time thought Kelly Tarlton's dream of an aquarium in some abandoned underwater sewage holding tanks would work?'

... 'The \$15m resort proposed for overlooking the Gap at Piha, is to have a giant water-purification machine, an electric people mover and a helicopter landing site. A public relations consultant who has helped put the Hong Kong-based Amanresorts proposal together, said the people mover, known as an Aerotram, was a special vehicle with rubber wheels similar to a tram car. An electric cable sunk beneath the road powers the Aerotram along a fixed course. Similar devices have been used in theme parks such as Disneyland. Guests would arrive in style by catching a helicopter from the airport and approach the hideaway from the sea. "These sorts of people don't take the bus," the consultant said. But plans for the 30-room resort have incensed some locals. A freelance journalist, whose family bach borders the site, said the proposal made a mockery of the land's special conservation designation. "Appalled is not a strong enough word. The location is wrong, the scale is wrong, and the purpose is wrong. We need to protect the land for future generations." The Piha Residents and Ratepayers' Association said a major concern was that residents would not have land access to the beach at the Gap, or to the blowhole, or an area of land known as the "tennis courts." However, the Mayor of Waitakere, who met the Amanresorts founder and the consultant last year, said the doors to the city must remain open, and potential investors should be welcomed and listened to. The Waitakere City planning manager said there had been no formal proposal put to the council yet. He said a special planning application would need to be made, and that public submissions might be sought.'

...NZ]'S tourist industry faces many challenges as it approaches the 21st century. Among these are who to target, how to attract them and how to balance the interests of the industry and local residents. The problem with attracting wealthy, big-spending tourists is that simply by their wealth they render most Kiwis menials in their own country. (That many of these types happen to be particularly arrogant and objectionable is also rather galling)... My eldest brother... and his long time fishing and hunting buddy... have stomped the mountains and valleys of the lower South Island for decades and their over-riding feeling is of great remorse. They feel N[Z]ers are gradually being disinherited from their own country. The mountain streams that were brim full of wild trout are increasingly becoming the preserve of wealthy foreign fishermen... N[Z]'s trout fishing industry is quickly becoming a victim of its own success... ['Zane Grey's success in catching giant marlin and broadbill swordfish as well as hammerhead, thresher and mako sharks provided the material for his book, *Tales of the Angler's Eldorado, New Zealand*. The American author, known internationally for his Western novels and his accounts of his fishing experiences, first visited NZ in Jan, 1926. The size and frequency of his catches on his visits, and his vivid descriptions of the country and its people, undoubtedly popularised NZ and gave it an international reputation for fishing.' However, my eldest brother believes that reputation is now under threat because he] has seen an alarming decline in the quality of back country fishing, and that impact on local and foreign anglers has disturbed him... Majestic valleys where one could find peace and solitude, valleys that were inaccessible enough so as to be largely the preserve of only those enthusiastic enough to truly appreciate them are now the tramping equivalent of the Northern Motorway. That Kiwis are required not to camp within 300m of the Milford Track so as not to disturb the paying clients is enough to make the ample hairs on the back of my brother's neck bristle... It is a curious irony that our efforts to make our wilderness areas more accessible is actually destroying their charm... In tourism, as in life, so often what people think they want and what they actually want can be very different things.

...Over 140 million years of evolution have provided N[Z] with spectacular landforms and a unique assemblage of plants and animals at which overseas biologists and visitors marvel. Opening conservation lands to more intensive tourism development... would further compromise this biological treasure-house and leave this and future generations immeasurably poorer.

...The impact of tourism on N[Z]... has come under the spotlight. A wide-ranging investigation into the... risks tourism poses concludes that the sector is in danger of failing to protect the interests of N[Z]ers and their environment... It said the sector was woefully short of the information needed to develop a strategy to ensure tourism has a sustainable future. The report suggests that N[Z] has been marketed to an extent that tourism may have outstripped the capacity of the sector to manage the environmental consequences of growth... Visitor pressure on at least two leading attractions - Milford Sound and the Waitomo Caves - cannot be sustained, "even in the medium term, without major attention being given to reducing adverse visitor effects... Overall, the Government system for the management of tourism is fragmented, with poor communication and coordination between those agencies which promote tourism and those which manage the environmental effects associated with it. Government agencies have very little ability to influence the direction of the tourism industry and thus its effects on the environment." ...Eco-tourism representing sustainable, environmentally sensitive tourism is also targeted in the report, which notes a growing demand for the experience in

N[Z]. But some of those consulted suggested that it does not exist here “because virtually none of the operations are actually sustainable, let alone beneficial to the environment.” ...One operator noted that tourists who responded to advertising for eco-tourism activities were often disappointed because the experience did not measure up to expectations. “Such tourists may also react negatively to other aspects of N[Z] life that run counter to the country’s clean, green image.” ...The Coromandel Peninsula (population 24,000) attracts about 700,000 domestic and nearly 100,000 international visitors a year. A high proportion of the houses are holiday homes. The report says the influx of summer visitors strains many services, including roads, sewage disposal and water supply. Additional capacity to meet peak demand goes unused for much of the year.

...The humble lavatory could end up as the Achilles’ heel of the[N[Z] tourism industry, says the Parliamentary Commissioner for the Environment. Toilets were listed as a major concern in submissions to the commission for its report on environmental effects associated with tourism... The state of the nation’s[public] toilets – many of which were dirty – could be an indicator to a range of other... problems... “We’ve got small communities struggling with the cost of providing this resource – there are examples in the Southern Lakes and in Northland... It’s really about who carries the cost and how should you share it.” He was aware that the issue of toilets and tourism is not new: [Whangarei’s National MP] had referred to the appalling state of the country’s toilets[(many country ‘highway rest-area long-drop toilets are threatened with closure because they are continually being blocked by bags of rubbish’)] when he was Minister of Tourism. A single tourism strategy was needed...

The *Business Herald* tells us that N[Z] tourism is in danger of going into decline. In the late 1960s, when jet-powered international tourism was getting into its stride, I worked in London as a creative group head at [a company which was] then the world’s biggest advertising agency. I asked my boss... why our tourism client always had such difficulty in meeting targets though he was not under-capitalised and there was a boom in nearly all other consumer spending. [My boss] had worked for years on the Jamaican Government tourist account... He explained the nature of the tourist business to me, in very simple terms, thus: (1) The desirable tourists are well-off, free-spending trend-setters. The expensive investment in hotels, resorts and infrastructure is put in to attract them. High-quality shops, restaurants, golf courses, trips, vehicle hire firms and the like appear in order to encourage their local spending. Local people often invest at this level. (2) But very few destinations have good weather for more than half the year. Even the tropics have their season of fog, rain or hurricanes. The free-spenders will not come in the off-season. The operators cannot let their facilities stand empty, so they must offer lower, off-season rates to the less well-off. These people spend less on the services put in for the rich. (3) The rich make a fickle, fashion-conscious group. Once “everybody” has been to “that marvellous little place” it is no longer smart to go there, and they find somewhere else. (4) The investors are left with the second-grade market and must now canvas it to fill beds in the “on” season. But they must also price their product accordingly and the return on investment is less. (5) The off-season is now left to the package tour or “bums on seats” market – people who look for bargains, pay for their holiday in their own country in their own currency, who eat in their hotels and spend very little on souvenirs or day trips. They help to keep airlines in business but do little or nothing for local economies. (6) This process spirals on... The final condition is a destination over-crowded with low-spenders and a local economy with too many jobs dependent on tourism struggling to extract their few dollars. Nearly all the original big investors are long gone and small (local) investors are struggling or bankrupt. It is useless to try to return to Stage 1 because the environment that first attracted the wealthy is so altered that it cannot be recovered. And that, said [my boss], is tourism. I have watched many tourism markets since then and have seen that what he said is generally true. It seems to apply not where a modest level of tourism exists, but wherever tourism becomes dominant in a local economy. It is an industry too fragile in its nature, too dependent on outside factors and too destructive of its own best product – a fresh new environment – to bear the weight of expectations put on it.

...After struggling with an over-supply of hotel space caused by a 35[%] increase in hotel rooms during the past two years, Christchurch hotels are now having to cope with a 20[%] drop in Asian visitors resulting from the economic crisis in South-east Asia. Christchurch has 2000 first-class hotel rooms. To supply an anticipated continuation of a tourism boom, four city-centre office buildings were converted into hotels in the past two years, adding more than 700 rooms to the market. While average occupancy... in Christchurch was reported... to be “not bad” at 69[%], the pain is being felt in prices which are down 20[%].

...N[Z] has the potential to become a major destination for international conventions, says an American expert. Changes to U[S] tax legislation dealing with hotel construction during the [40th] Administration have caused a shortage of hotel space for conventions there. This is pushing up accommodation costs 5 to 7[%] a year... says [the] senior vice-president and chief executive officer of the Professional Convention Managers Association of North America (PCMA). [He] was in Christchurch recently at the invitation of... the managers of Christchurch’s recently opened convention centre... [and] says American hotels are pricing themselves out of the market... [As a consequence,] conference organisers are starting to look overseas for cheaper venues... Despite the shortage of hotel rooms in the U[S]... it is not economic to build convention-sized hotels. Some hotels, built in the 80s as tax write-offs, are now selling for “50c in the dollar.” ...The PCMA represents 60[%] of the convention industry in the U[S] and its members book 35 million room nights each year... The meetings and convention business in the U[S] is worth \$US120 billion... a year, providing a third of American hotel revenue, 20[%] of US airline operating income and \$12.3 billion in sales and income tax. While still in its infancy, the N[Z] meetings and conventions business is an important part of the tourism industry. In the year to September 1997, 27,500 conference visitors came to N[Z], staying an average of nine days and spending an average of \$365 each day. This produced \$98 million worth of foreign exchange. Not only are these visitors “high-yield” tourists, but 66[%] come between April and October, the industry’s low period... Airfares are seen as an impediment to international conference trade. However, N[Z]’s scenic attractions can compensate for the added cost and travel time... [Furthermore, the] sales and marketing manager of... Christchurch’s Conference Centre... says it comes as a pleasant surprise to Americans to learn that N[Z] is closer than... Singapore... or... Hong Kong... [–] destinations to which they already fly for conventions.

...Tourism, Hong Kong’s biggest foreign earner, has plummeted so seriously... [in the past] three months... that a top-level task force has been appointed to find ways to reverse the slump... Already the hotels, which scared off many of those planning to come to Hong Kong during the handover... to China... by demanding sums of \$HK20,000 or more for a few days’ stay, have got the message and cut their rates dramatically. This week, even the top hotels are offering rooms for \$HK1000 per night. That’s half their usual “special-price” rates... [To compound the situation, none] of the usual tourists, the British, Germans, Taiwanese and Japanese[plan]... to come after the handover... The numbers coming from Japan... [–] traditionally Hong Kong’s best market and certainly its most lucrative... [–] are more than 50[%] down, a terrible omen for the Hong Kong[tourism] industry... Worse still, mainland China visitors who make up 20[%] of Hong Kong’s arrivals were not permitted to come to Hong Kong because Beijing slapped a ban on travel there to avoid complicating the handover. Although that ban has been lifted, mainland visitors are still not coming to the territory because China is still having problems determining what sort of visas need to be issued to mainlanders visiting... Hong Kong... The airlines servicing Hong Kong are offering all kinds of incentives for passengers into and out of Hong Kong, including long-weekend packages to the UK and A[US]...

China is poised to become A[US]’s greatest long-term tourism competitor in the Asia-Pacific region... the A[US]n Tourism Commission said yesterday... “We are facing competition in this country like we’ve never seen before,” [the commission’s managing director] told a hotels forum in Sydney. “[China] has a commitment from the highest levels, from... the Premier himself, to develop their inbound tourism industry. The Chinese are going to order 1900 new jets in the next 20 years – they are Boeing’s forecasts...” ...[‘on the other side of the coin’, AUS] has to recognise the region’s potential to compete for[China’s] outbound tourism... “The Chinese Government is committed to outbound tourism. We’ve been working very hard with the Government there to have A[US] designated as an official tourist destination.”

...Air N[Z] expects to start flights to China next year after N[Z] became the first non-Asian country to get official tourist destination status. With the P[M visiting there]... last week, China decided in principle to... a move which could boost tourist numbers from that country... Chinese officials are working on an implementation date... The airline's arrangements would develop alongside the Government relationship... Air NZ said flights could be through A[US], in conjunction with... Ansett Holdings... Chinese visitors to [N]Z... increased 50[%] to 17,000 in the year to September and more than 7000 N[Z]ers paid return visits. China is expected to take up some of the slack from falling numbers from elsewhere in Asia after the economic strife there, with the new status possibly leading to an annual 70,000 to 80,000 Chinese tourists, most in organised groups. [Previously, Chinese citizens 'had to be travelling to NZ on business.' Obviously, 'only wealthy Chinese will be given visas by their Government, because poorer people might not want to return to China' – although they couldn't afford to leave their country on holiday in the first place!

...while visiting Samoa, NZ's PM] refused to be drawn into the... [controversy surrounding its PM, who's] been linked to a passport scam. Some 500 passports went missing and it was alleged they had been sold for \$70,000 each to Chinese people who could use them to enter N[Z]. By the way, the... problem of size and isolation were highlighted at the Matavai Resort where... [NZ's PM] stayed... on his whistlestop tour of the South Pacific this week... N[Z] aid contributed \$2.4 million of the \$2.8 million cost, but since opening 11 months ago few tourists have stayed there. Some nights it is empty.

...work... has started... on the Denarau Villas luxury apartment project between two of Fiji's five-star hotels, after contracts were signed for 44 of the 82 villas... The \$36 million project is being... marketed most strongly in N[Z]... but also in A[US, the US] and Asia... Units, mostly with two bedrooms, were... price[d]... between \$340,000 and \$695,000... Tabua Investments[– the NZ]... consortium developing the project[–] bought the whole Denarau Island resort in June last year... for... \$160 m... from the Long Term Credit Bank of Japan, which had put the resort up for offers the year before as it sought to mop up part of the collapse of the Japanese developer EIE International. EIE spent about \$US265 m... developing Denarau, which has an 18-hole golf course opposite the villas and a marina which is the launch point for... island ferries... and... cruises...

[Cruise ship company P&O AUS] has bought three of Queensland's best-known island resorts from Qantas for \$A25 million... substantially less than the original asking price. They are the exclusive 16-villa Bedarra Island Retreat, and 148-unit Dunk Island Resort (both off Cairns) and the 108-room Brampton Resort, in the Whitsunday region to the south... [The] acquisition would double P&O A[US]'s resort holdings... [In related news, o]ne of the world's most acclaimed cruise ships will berth at Mt Maunganui... to begin the season of liner visits to the Port of Tauranga. Passengers on board the Seabourn Legend pay around \$1500 a day for the five-star comforts on board.

...The annual cruise ship season kicks off this weekend – and with it the sound of cash registers jangling with the flow of foreign exchange... The Ports of Auckland general marketing manager... said... "Each day there is a cruise ship in port represents major business for local retailers and tourist operators." ...The liner Fair Princess will be the first of 24 cruise ships[– representing 'about 1.5% of the world's cruise ship traffic' –] scheduled to call at Auckland during the summer months[, and the]... season will close with the departure of the Island Princess... 25,000 passengers and 10,000 crew are expected... Most ships will spend a day in port, although some will tie up overnight.

...Thanks for coming – but if you want a farewell party you will have to pay for it yourselves. That is the message to cruise companies, which are being forced to pay \$300 per ship... The charge, which covers the fee for a brass band to perform as ships leave the city, was introduced this year to bridge a funding gap... [However, a] report released yesterday shows that passengers on cruise ships spend about \$42 million a year in N[Z] and the flow-on value of the market is estimated at \$150 million. That means retailers – not the shipping companies – should pay for the farewell parties, according to tourism groups and the port authority... Tourism Auckland had approached retailers and chambers of commerce to fund the shortfall... but "every time we approach somebody they run like scalded cats." ...[a] spokesman for the Heart of the City Association, which represents 400 retailers, said the association could not afford to pay for the farewells... The chief executive of Tourism Auckland... said his organisation would love to pay to give visitors a decent send-off but[also] could not afford it... The marketing manager for Ports of Auckland... said... some... cruise companies... were opting not to have the farewells... [while others had told him that] the quality of the performances was embarrassing compared with those overseas.

...ANOTHER Travelwise... holiday is the Orient Lines Marco Polo cruise... From \$3175 each you can spend 13 days travelling from Auckland to Brisbane by way of Tauranga, Picton, Milford Sound, Melbourne and Sydney. - 1997

Last year, worldwide, five million people went on an ocean cruise and this year that figure is expected to rise by at least another million... [O]ne of A[US]'s most experienced cruise executives, knows why cruising is so popular. "It's the complete holiday... Almost everything... is done for you, making it a completely stress-free holiday... There's entertainment galore... And to top it all, you're seeing different countries almost every day."

...The Cruise Bible is out now! It's your guide to adventure, indulgence, romance and outstanding value... For heaven's sake get your copy today!

...SOMETHING about life on a luxury ocean liner smacks of romance... [Unluckily, thirteen] years ago I sailed from Sydney to Auckland on P&O's original Oriana, shortly before the dear old lady was decommissioned. Back then we squeezed into a twin-cabin barely big enough to fit our suitcases in through the door. The "twin" beds turned out to be bunks and the shared women's bathroom down the corridor dripped water and smelled. But things have come a long way in 13 years. This time I was crossing the Tasman in the opposite direction on P&O's newest superliner Oriana, 69,000 tonnes of stylish luxury. One of the first things you do on boarding a passenger liner is eat, no matter what time of the day. The stream of food is almost non-stop, punctuated only by breaks for the staff to wash up and reset tables... Staff have 1800 passengers to serve in two sittings so they don't muck about... Not to mention 24-hour room service and a pizzeria... It is while showering in the cleverly-put-together-in-a-small-space ensuite that I begin to feel queasy... Surely not... seasickness, not me who has boated in all weathers since I was a nipper. An hour later I am in no doubt as I cling to the ensuite loo... I crawl down to the Grenada deck to the doctor's surgery. Yes, the doctor confirms, you are seasick. There's a long, slow transtasman roll... and the motion has affected you. "I've treated skippers of fishing trawlers who have been seasick on passenger liners," he says reassuringly, adding that Oriana has the largest stabilisers of any cruise liner afloat. His nurse gives me an injection in an unmentionable place, charges me \$100 and I weave my way back to my cabin... However, the expensive jab works... The next morning dolphins show up below my window... [and] the day stretches luxuriously ahead. Choices, choices. To blob out in a deckchair with a book from the library... or... soak in a spa pool... Then there's table tennis, golf... walks/jogs around the promenade deck and the highly competitive shuffleboard. You can practice ballroom dancing during the day, learn line dancing, bridge, whist... or knit squares of a blanket which will be donated to charity. For a little solitude, the gymnasium is the place to be... [Instead of seeking solitude,] I... pop in to visit... a retired couple from Surrey, happily on their ninth world cruise... Their... suite on A deck with its own balcony has cost them around \$195,000 a double (which includes hors d'oeuvres served each night in the cabin) with drinks, parties and shopping extra. They... [came] aboard with enough eveningwear to see them through a three-month cruise without having to wear the same outfit twice... Time to visit... [the captain, who] sits in an ergonomically designed chair and manoeuvres the ship with a tiny knob. Oriana is 260 metres long... and is kind of like steering a 13-storey apartment block[, but getting]... in and out of port is a doddle, it seems. The ship has computer software developed especially for the ship which means the captain can have a bit of a sly practice beforehand at docking using a simulator, taking into account wind and tide.

...The World, marketed by U[S] company ResidenSea, is nearly 200m long and contains 110 apartments... There are also 88 guest suites for rent, starting at US\$2100... a day. The Norwegian-built liner... is certainly magnificent, boasting the only full-size floating tennis court in the world, two swimming pools, a jogging track, a business centre, two golf driving ranges, a... spa and six restaurants for its "global village at sea" of 390

residents and guests[('the owners of each luxury apartment can live on the ship permanently – and can even commute to work by helicopter from whichever ocean the ship happens to be traversing – or use it as a holiday home; for personal use and renting to other wealthy holidaymakers')]. It... has 320 staff... If you have a spare US\$2.5 million to US\$7.5 million... an apartment aboard luxury liner *The World* could be yours. Otherwise, you will have to settle for a view of the ship when... after cruising the Pacific... it berths in Auckland for the start of [the yacht] racing in February.

...If you had to endure the frustrating – and ultimately doomed – wait for the yacht racing to start yesterday, the pool bar of *Silver Cloud* was as good a place as any to do it. There, in the shade of the terrace, you needed only to wave a hand and another glass of Moët would be gently slipped into your hand... *Silver Cloud*... is one of two identical ships of Silversea Cruises, an ultra-luxury line which takes passengers to all continents in the style to which any of us would like to become accustomed... *Silver Cloud*'s passenger capacity is a mere 280 but it is never full... [C]atering to their every whim is the constant task of 210 crew and staff – a ratio better than three to four. Of course, with fares that range from \$1400 to \$2800 per person per day, the passenger list is full of people who are used to having their whims catered to. "They kiss my butt on a regular basis and that's the way I like it," one told me... in a jocular snarl... [The snarler] and... her... husband... had taken more than a dozen cruises aboard *Silver Cloud*. Yesterday was their 255th day on her immaculately sanded teak decks... The vessel and its sister ship, *Silver Wind*, are barely five years old, but for four years running the line has been voted the world's best small ship cruise line by readers of the upmarket *Conde Nast Traveler* magazine.

...Ngati Whatua o Orakei's historic carved waka Mahuhu o te Rangi... was on the Waitemata Harbour on Saturday morning to welcome the... 70,950-tonne luxury cruise liner *Legend of the Seas*. The *Legend of the Seas*, which left Auckland late last night for the Bay of Islands, is believed to be the largest cruise ship to visit N[Z] waters... The ship can accommodate 1800 passengers and has a crew of 900... [E]verything on board... the floating hotel, designed to an ancient Greek theme... is on a grand scale... And the environment is not neglected. All combustible refuse – including human waste – is burned on board to avoid polluting the ocean.

...The biggest cruise ship ever to dock in N[Z] takes less effort to drive than a family car. Not only can the 76,000-tonne *Aurora* spin around in her own length, it takes just a few flicks of a joystick to accomplish the feat. "It's just like Pacman," says her captain... "I've had this new toy since April, and all the technical aspects make her a joy to drive." And she should be, because the new British superliner has all the latest nautical gadgets for her maiden round-the-world cruise. Aucklanders driving along their waterfront yesterday could easily have mistaken the ship for a massive hotel that suddenly sprang up overnight... Longer than 2 1/2 football fields, at 270m, the P&O Cruises vessel is also 10m taller than the Niagara Falls, which means she is too big to pass under the Auckland Harbour Bridge. Between those 62m-tall walls are 850 crew and 1900 passengers in 939 cabins spread over 10 decks. Her diesel-electric engines produce as much power as 1330 Ford Escorts, pushing her along at 24 knots... But... in... [comparison, Britain's old superliner, the 70,327-tonne *QE2*, had a speed... of... 28.5 knots...]

It's staggering but true. The *QE2*'s nine diesel engines gulp 441 tonnes of fuel a day. They also power huge alternators that generate more than 10MW of electricity each to drive two 44MW electric engines... And the stately old girl, recently in N[Z], continues to draw praise, being rated... as the best large cruise ship last year.

...[T]HE world's biggest cruise ship – more than twice the size of the current largest liner and more than three times the size of the *QE2* – is due to be launched before the end of the decade by the US-based Westin Hotels Company. The first major passenger vessel to be built in the US for almost 50 years, the Westin ship, at 250,000 tonnes and carrying 5,600 passengers – the ship will have 2,800 rooms housed on three 8-floor towers (the *American World City*, which will cost £800 million, has 21 decks in total and will also have a crew of 2,400; a special feature of the vessel will be an internal marina housing four small boats, each able to carry 400 passengers ashore at destinations where the mother ship is too big to dock) – will take over the mantle of the world's largest liner from the 101,000-tonne *Carnival Destiny* which is being launched next week in Venice by Carnival Cruise Lines – the biggest cruise company in the world. Carnival's ship will carry more than 3,350 passengers and replaces P&O's 77,000-tonne *Sea Princess* as the world's biggest cruise ship.

...[T]he world's largest ever luxury cruise ship – the *Grand Princess* – built for \$700 million, is due to take its maiden voyage' later this year]...

It seems the designers of the latest "biggest cruise ship in the world" had one thing in mind – to ensure passengers would want for nothing in the way of activities... From November the 142,000-tonne ship from the Royal Caribbean International fleet will cruise the Caribbean on seven-night jaunts, leaving Miami every Sunday evening of the year... About 50 cruise ships have been built this decade, each reportedly bigger than the last. The *Voyager of the Seas* brochure says it is 30[%] bigger than the next largest...

['Growing in ruthlessness, gangs now sack or hijack some 120 merchant ships a year worldwide (insurance data suggests the problem costs up to \$170m a year). Pirates attack pretty much anything that floats, including moving bulk carriers and oil tankers. Victims have included the 120,000-tonne Korean tanker *Ocean Runner*, the 80,000-tonne US tanker *Ocean City* and the 114,000-tonne Greek ore carrier *Konkar Dinos*. Where yesterday's cutthroats may have measured their booty in metres of silk or kilos of jewels and spices, today's measure theirs in tonnes of cement, coffee, car batteries, steel reinforcing rods and ladies' undergarments. As many as 300 ships a day enter the Strait of Malacca off Singapore, making it a rich picking ground for pirate gangs.']

...A Japanese-owned cargo ship that went missing three months ago has turned up at a Chinese port with a new name and crew, sparking fears for the fate of the original hands. The freighter, originally called *Tenyu*, was discovered in Zhang-jiagang port in eastern China's Jiangsu province... carrying 16 Indonesian crew, maritime officials say. It went missing in the Straits of Malacca... after setting sail from Indonesia for South Korea carrying aluminium ingots. The... Straits of Malacca between Indonesia and Malaysia are the scene of many incidents of piracy.

...FOR Mustapha, the ship's parrot, the lure of a life before the mast proved to be a fatal attraction. As the elegant barquentine... sailed majestically through the Malacca Straits, Mustapha, hampered by clipped wings, laboriously climbed high into the rigging, sadly surveyed the indulgent scene 60m below on deck and then dived, beak-first into the sea. [The captain], a dour German master mariner unused to recalcitrant crew members – specially a mutinous parrot – immediately hurled two lifebelts overboard to mark the spot and, in a remarkable 12-minute display of seamanship, turned the giant clipper ship 180 degrees, plucked the bedraggled Mustapha from the water and threw him in the brig to dry off. A few days later, Mustapha did it again. Parrots on [this captain's] ships only live twice. Bye, bye birdie... The fabled era of these... greyhounds of the sea... lasted a mere two decades between the California gold rush of 1849 and the opening of the Suez canal 1869 (and the advent of steamships) but for those who yearn for a tall ship and a star to steer her by, the clipper ship and her ilk will forever remain a true symbol of the sea. On January 13, 1946... a child destined to rewrite history, was born in Stockholm... Building such a ship became the schoolboy's dream. In May 1991, by now a successful maritime lawyer and noted yachtsman, [he] watched as his square-rigged four-masted barquentine *Star Flyer* – the first true clipper ship built in more than 120 years (albeit a high-tech re-creation with the latest [GPS] navigational equipment and a 12-cylinder 1350hp engine) – moved down the slipway at Ghent, Belgium. Almost a year later, a sister ship, *Star Clipper*, was launched. [He] was \$100 million poorer but, in his heart at least, infinitely richer. Today, these... high-flying passenger... ships ply the glamour seas and off-beat ports of the Caribbean, Mediterranean and South Asia. And before the clock strikes 2000AD, there's a good chance that clipper No 3 will be sailing the waters of east coast A[US and NZ]. Both the *Star Flyer* and *Star Clipper*, at 360 feet (110m) are the longest clippers ever built, and with masts at 226 feet... the tallest... Replicas these may well be, but the gleaming white, steel-hulled clippers come complete with all the comforts of a millionaire's yacht – air-conditioned spacious cabins for 170 passengers with TV, en-suite marbled bathrooms... in-house movies, satellite telephone and a unique ballast stabilising system that ensures a brimful glass of champagne stays on an even keel, even if the partying passengers are sometimes not... A seven-night cruise from Phuket to Singapore costs from \$2113 a person including all meals, port taxes and most shore excursions (plus airfare)... Or, for a mere \$250,000 you can organise a private charter – as did the U[S] publication *Naked Magazine* for its Nude Cruise around the eastern

Mediterranean in June 1997. “Climb aboard, get naked and get ready for an unparalleled sailing adventure with 170 other naked guys,” went the promotional blurb in the magazine, “...Pack only T-shirts and shorts for shore excursions.” For... Mustapha the parrot, this may well have been the final straw that sent him tumbling from his perch... [Or perhaps], unlike anyone else on board, Mustapha was suffering from an incurable case of ruffled feathers brought on by... the inability to find a lady parrot with whom to share the fantasy of sailing in a tall ship with wind in the sails and romance in the air... On this night, stars dripped out of a black sky, jazz music filled the air... endless cocktails appeared like magic... and almost hidden in a tangle of ropes, blocks, winches, mops and buckets sat a tanned, Swedish goddess tinkering with dive tanks. Ah, how the crews of spartan 19th-century clipper ships must have longed for such things as they experienced the terror of Cape Horn, sails in tatters and bodies bruised and bloody.

...A thousand years after Leif “the Lucky” Eriksson discovered North America, [one of his descendants] has set sail on the open Viking boat *Islandingur*, to follow his ancestors’ route from Iceland to Greenland and North America. The crowd cheered when the... vessel... departed from Reykjavik’s old harbour on Iceland’s National Day... The discovery of North America, or Vinland the Good, as Leif... named it, is well recorded in two medieval Icelandic manuscripts, the *Saga of Erik the Red* and the *Saga of Greenlanders*... “Icelanders do not take credit for discovering America,” [Iceland’s P]M... said as the vessel left. “But we do reckon that we played a significant role in the first contact between native Americans and Europeans one thousand years ago.” ...[Leif’s descendant] was determined to re-enact the voyage when he designed and built *Islandingur* of oak and pine from Norway and Sweden. The sail was made in Denmark. Completed in 1996, the 23m-long vessel is a replica of the well-preserved 9th century Gokstadship, which was excavated from a Viking burial mound in Norway in 1882. Like the original Viking ships, *Islandingur* is fast and exceptionally stable... The tight-knit crew counts nine experienced sailors. In the Viking era, a battleship like *Islandingur* would have had a crew of 70, including a double shift of 32 oarsmen for a quick getaway. This time, they will rely on a motor and an interpreter to deal with the locals in a more peaceful manner. The 4200-km voyage will take four months and include more than 20 scheduled stops.

...Nearly four centuries after the Duyfken became the first European ship to reach A[US], its \$A4 million... replica has hit the high seas off Fremantle, Western A[US]. The original vessel (“Little Dove” in Dutch) sailed into the Gulf of Carpentaria, northern A[US], in March 1606.

...Two entrepreneurs aim to build a replica of the doomed cruise liner Titanic in Belfast, the city where it was constructed... [T]he pair – one Irish, the other South African – hope to recreate the splendour of the luxury liner, including artefacts from the sunken wreck... [that] went down with the loss of 1503 lives... They reject claims that they are cashing in on the tragedy... The plan hinges on... [whether] corporate banks will lend the company up to half of the estimated £360 million needed to recreate the Titanic. Titanic II will be longer and heavier than its predecessor, at 1200ft and 96,000 tonnes. The first Titanic was 882ft and weighed 46,000 tonnes. Prices for a week on board will range from \$US15,000... The... Belfast-based [partner]... denies that the project is pie-in-the-sky, insisting that it makes sound business sense. “We’re getting around 80 calls a week, mainly from rich Americans who want to book tickets on Titanic II even though it isn’t even built yet.” ...[his] alliance with... the... [South African] began after he presented a proposal to the Titanic’s builders, Harland and Wolff, for a yacht with a Titanic theme inside. “The company told me [the South African] had been speaking to them about a more challenging project, to replicate the original Titanic... so it was natural we came together.” [● ‘MORGAN ROBERTSON’S novel “Futility”, published in 1898, described the fate of the “Titan, the largest ship afloat and the greatest of the works of men”. A special feature was the water-tight compartments which closed automatically in an accident. Even if the ship hit an iceberg, the theory went, she would not sink. Titan hit an Atlantic iceberg and sank. In life, 14 years later, the Titanic sank in the Atlantic for the same reason.’]

...For the woman who adores perfume and is not superstitious, the cosmetics industry is about to put on sale one of its most bizarre offerings – a Titanic fragrance, based on essences discovered in 80 phials that sank with the vessel... The essences, manufactured in Britain, would have been marketed in America in 1912 if Adolphe Saafeld, the Manchester salesman who carried them in his first-class compartment, had survived the Atlantic crossing. Now the American salvage company RMS Titanic, which has exclusive rights to the vessel and discovered the phials, will try again on his behalf. “It’s the smell of that perfume which really captures the Titanic for me,” said... the wreck recovery manager... If the market in Titanic memorabilia is anything to go by, [he] may be on to a winner. Handwritten Titanic menus are valued at £2000 to £3000... Titanic II is the latest plan to cash in on the [tragedy]... In the wacky world of passenger ships, naming one after a liner that sank with the loss of 1503 lives is just the tip of the iceberg. Titanic II... is set to be built at the Harland and Wolff yard in Belfast...

A row has erupted over who is to blame for shipbuilder Harland and Wolff’s failure on Friday to win the £450 million... contract for Cunard’s new liner, Queen Mary II. Harland and Wolff is one of the mainstays of the Northern Ireland economy, but the 140-year-old Belfast shipyard that launched the Titanic now faces its own sinking. Britain’s Department of Trade and Industry indicated that the Belfast yard approached it for aid too late. The company praised the department for acting quickly to secure a £400 million aid package, but said its bid had been thwarted by lack of support from Northern Ireland’s Industrial Development Board. Up to 1700 jobs at Harland and Wolff are threatened, plus 1500 more in supporting industries. The contract is to go to French yard Chantiers d’Atlantique.

...The giant shipyard cranes of Harland and Wolff that dominate the Belfast skyline may never work again but there are those in the city who are quietly cheering. The yard’s history is long, but so are the divisions of which it has been a part. On July 21, 1920, a mass meeting of Protestant workers was held in the yard of Workman, Clark and Co in Belfast. After the meeting, during which “speeches were made about not allowing Sinn Féin and Roman Catholics to work in the shipyards any longer,” men carrying sticks and clubs descended on Harland and Wolff – the site of the third most important shipbuilding centre in the British Empire. A police report described the subsequent violence as a “general hunt” for Catholic workers, some of whom were beaten and thrown into the water. Thus began, in the middle of the Irish Republican Army’s war against British rule and the establishment of a separate Northern-Unionist state, the mass expulsion of Catholic workers from the shipyard... The expulsion sparked off an orgy of sectarian violence in east Belfast that continued sporadically for two years after partition. The expulsion of thousands of Catholic workers left a deep psychological scar on nationalists who found themselves living inside the new partitioned Northern Ireland two years later. It is hardly surprising, therefore, that when news broke last week that the shipyard... was on the verge of closure, there was a certain amount of schadenfreude within the republican community in the city. In republican eyes at least, a Protestant working-class institution was coming to an end, another death knell for the Victorian-Unionist version of old Belfast. They point to the fact that the yard’s workforce continued to provide the shock troops for loyalist street protests right up until the... 1980s. But such delight over the shipyard’s imminent closure is short-sighted and as sectarian as the bigotry which kept Catholics excluded from the yard’s gates for decades. The loss of shipbuilding in Belfast will have a negative spin-off for the entire Northern Ireland economy. Everyone will be a loser... Nearly 2000 liners, tankers, bulk carriers and rigs have started their days at the Harland and Wolff yard... [In related news, 26] workers were killed and three more are feared dead after a wall of water flooded into a giant dry dock... Dubai Drydocks employs about 3500 workers and claims to be the premier ship repair yard between Europe and the Far East.

...“Isn’t she the most beautiful baby you ever saw?” ...the chairman of... a large U[S] printing company whose publications include *Time* and *Sports Illustrated*... is one very proud dad. And his new “baby” is certainly a looker. It is the... largest motor-yacht of its kind ever built in Australasia. The 47m superyacht... took Sensation Yachts of Henderson more than two years to build, involved more than 400 staff, and cost \$16 million... Local politicians, Sensation workers and [the owner’s] family members gathered yesterday to watch the *Aria* slip into the upper Waitemata Harbour. [The owner] obviously has a slightly superstitious streak. Among the beautifully coiffured American women and their blue-blazered husbands quaffing champagne were two Catholic priests, looking slightly out of place as they sipped cups of tea. The pair were flown in to

bless the Aria. No one else would do, apparently, as the two priests had blessed the [family's] last yacht and their house... The launch was appropriately accompanied by a trilling opera soloist singing arias... The yacht... will undergo sea trials and a final interior fitout over[the next] six weeks. It is likely to cruise to South Pacific destinations over the next few months but will sail the world... [The owner] is looking forward to spending time on the yacht. "It's even better than having a toy one in the bathtub. This one is a little bigger... and the waters of the world are my bathtub." ...More than 85[%] of the Aria could be labelled Made in N[Z]... "It is tremendously exciting that this magnificent... Kiwi designed and built... yacht will be sailed around the world... It shows that we can foot it with the big boat boys,"... Sensation Yachts['] managing director... said.

...QUEENSLAND is trying to steal west Auckland's boatbuilders, enticing them with tax breaks and other incentives. The move is worrying the Waitakere City Council which has backed the setting up of a marine industry cluster in the city. Cheaper rent and a readily available workforce in Waitakere have already attracted several boatbuilders to move west from the North Shore. [The city's] projects manager... says Queensland has set up facilities similar to what Waitakere is trying to establish at Hobsonville airbase... "Geographically it's closer to European and U[S] markets and it's likely to take business away from us,"... Alloy Yachts International['] managing director... says the Henderson company has been approached to relocate to Gold Coast Marina at Century Cove[, where]... a big marine facility on 600 acres of land has been set up... with the backing of the Queensland state government.

...DICTATORS make trains run on time. Dictatorial premiers create resorts like Sanctuary Cove on Queensland's Gold Coast. The 474ha resort... between Brisbane and Surfers Paradise, owes its existence to a law pushed through the state's parliament in 1985... Before the law change there was no such thing in Queensland as private roads, let alone private waterways... With [the Premier's] help the bulldozers carved a rundown dairy farm and swampland at the mouth of the Coomera into a network of private canals fed from the sea and roads for residents and guests only. They fashioned two superb 18-hole golf courses – the Pines, a challenging championship course... and the Palms, a resort course open to the public – a marina, a marina village to go with it, and turned the sods for the luxurious 247-room Hyatt Regency Sanctuary Cove. I know about these things because I have the good fortune to be staying at the hotel which has what I consider the ultimate in pig-out indulgence. For a couple of hours each evening a lounge is run like an airline VIP lounge and the free whisky is tempting. It also has a novel restaurant where perspiring chefs cook your choice of dish in front of you in an open wood-fired oven. And I hear how tourist development used to be done in these parts from... a retired daily newspaper journalist, sometime PR man, travel writer, and occasional contributor to these pages, [who] lives in Brisbane but has his bach at Sanctuary Cove. The bach is a 12m luxury launch and a marina berth that costs around \$NZ3450 a year... It's quite a cunning concept; dig out a farm to create your own private "rivers" so there can be no complaints about desecrating the Queensland equivalent of the Queen's chain. The odd thing is that the million-dollar homes that back on to these waterways, with their private jetties, perhaps a sleek launch tied up, and a jetski under a tarpaulin on the deck, seem mostly deserted. I'd noticed as much driving around the private residential streets of the resort the day before. Apparently it's almost always like that. My hosts are nonplussed and can only surmise that the owners are bogged down in the boardrooms of Sydney, Melbourne, Hong Kong or Singapore. I'm not complaining... The next day we do my obligatory round of the theme parks. Dreamworld has turned itself around in recent years and can hold its head high, especially with its 33-storey high Tower of Terror that uses electromagnets to propel its riders to 160km/h in just 7 sec. That is it; a 7-second thrill. My children admit to more long-term enjoyment from the opportunity to cuddle a sleepy koala. Movieworld is mainly for movie fans who ooh and aah and rush for photographs to be taken with Marilyn Monroe lookalikes, Batman, Bugs Bunny and various other Looney Tunes cartoon characters... Movieworld, Sea World and Wet'n'Wild can all be seen on a three-park ticket that costs \$A99 for adults and \$A63 for children. Dreamworld admission is \$A41 for adults and \$A24 for children and pensioners.

...When [the entrepreneur] thinks about the direction of his development company, he hangs his head. The family which brought Aucklanders their canal-side holiday playtown of Pauanui, on the Coromandel Peninsula, are seriously considering shifting into operating retirement villages... [The Ower-based company is] tired of being hamstrung by the Resource Management Act – the costs, the waiting and the delays to its ambitious projects. In the 5 1/2 years spent fighting to get permission for his Whitianga Waterways development... the firm has spent \$2 million. "And that's a lot for a small family firm like this one... [I]t was hailed as an act to restate and reform the law relating to the use of land, air and water"[], and]... was supposed to be enabling for people like... [the entrepreneur] – but instead it is a huge thorn in his side. It did not start out that way. In 1991 [the entrepreneur] saw it working as he thought it was supposed to when his Pauanui Waterways unveiled its radical canal and housing project in the Tairua Harbour. The project flew like a bird, buoyed on the wings of an exciting new piece of legislation. "The proposal drew... submissions in a ratio of two to one against development," [the entrepreneur] recalls. "Issues included variations to the district plan, subdivision consent, water take, water diversion, water discharge, land use, seawater diversion, dredging permits and depositing sand in an inter-tidal zone." In other words, it looked like a real nightmare. But under the act's rules the issues were dealt with, an appeal in the Environment Court was dismissed within three months, and the first stage of Pauanui was finished by September 1993... "I believe this early experience provided a glimpse of what the [act] intended." But how different is the experience... with the similar Whitianga Waterways project. These days the company spends \$1 million a year in the Environment Court with an average wait of between eight and nine months. With 3000 cases waiting to be heard, the company can consider itself lucky to progress that fast.

...A N[Z] woman... told the *Guardian* newspaper that she was angry... "W[e]... are normal people wanting answers to questions we have asked for... years." ...[she] believes her son, a victim of the Marchioness disaster on the River Thames, was among those who had[their] hands cut off for finger-printing... 22-year-old... Dean Palmer, was one of 51 people who drowned when the sand dredger Bowbelle collided with the cruiseboat of partygoers in London in 1989. Two years ago relatives learned that the hands of some of their loved ones had been cut off... [Dean's mother] has been at[tending] the formal inquiry into the accident in London... For the past week, as coroner's officers have been forced to publicly defend at the inquiry what they did, details have emerged that the hands of more victims than originally thought may have been severed. Relatives were refused the opportunity to see the victims at the time of the tragedy, which was marked by a lack of information and support from officials. One black family, whose son's hands were removed, were given a white body when they tried to reclaim him for burial. Officially, the hands of 25 victims were removed. The Westminster coroner, police and a pathologist decided visual identification of bodies recovered from the Thames would be too distressing. Some were in the river for up to two weeks... The Marchioness had 113 party-goers on board when, 20 minutes into the trip, the dredger ploughed into its rear, causing it to tip over and sink.

...IT was a story which galvanised England and the seafaring world and spawned, nearly a century later, one of Monty Python's funniest sketches. The 17-year-old, 50-foot wooden yacht *Mignonette* set sail from England on July 5, 1884, under the command of Captain Tom Dudley and three crew, on a delivery voyage to her new owner in Sydney. Sixty days later, the *Mignonette* foundered some 1000 miles off the Atlantic coast of Africa, her aging timbers sprung by the impact of a freak wave. All four survived and drifted in an open boat for 24 days. When finally they were picked up, only three were left. Or rather, three were left and one was leftovers, for in their extremity the castaways had resorted to "the custom of the sea": they had killed and eaten 19-year-old Richard Parker, the cabin boy... [S]hipwrecks were far from uncommon last century, given the parlous state of English shipping, a testimony to the deleterious combination of legislative laissez-faire and entrepreneurial greed if ever there was one. Not infrequently, there were survivors, and in a surprising number of cases, these were forced to resort to the same desperate remedy. Only 10 years earlier, an emigrant ship bound from England to N[Z] had caught fire and sunk in the Southern Ocean. Of the 433 souls aboard, only 81 survived the wreck, in two boats. One of these was lost, the other drifted, was sighted but ignored by one ship... [-] something

which happened to many... castaways... [-] before being picked up by another 10 days after the sinking, by which time the survivors had resorted to cannibalism. Only three people survived undrowned, unstarved and uneaten. Because of the comparative frequency of this unspeakably un-English practice, there was a feeling at the highest levels that a leading case needed to be established to deter other seamen from having their shipmates for dinner and to encourage them to die a ghastly but Christian death instead. When Dudley and his companions were repatriated, making no secret of the events of their ordeal and convinced they had done no wrong, a prosecution was brought. Public opinion was overwhelmingly sympathetic to the men, but it was the political agenda which carried the day. One of the three, Edmund Brooks, who had opposed the execution of poor Dicky Parker and who had only reluctantly partaken of his share of the filet mignonette, was persuaded to testify against his companions and they were convicted of murder. Out of compassion, the mandatory death sentence was commuted and replaced with a light prison sentence... [Incidentally, a] new report criticising a captain who drank six pints of beer before his barge rammed the Marchioness pleasure boat[, which]... had been hired for a birthday party and was crammed with 131 partygoers... will be referred to the British Director of Public Prosecutions... But Brit[ain's] Deputy P[M]... admitted that there was little chance of prosecuting [the captain] – whose trials for failing to keep a proper lookout twice resulted in hung juries – [this long]... after the sinking... “This is a shameful consequence of the failure to hold a formal investigation following the disaster,”... The captain of the Marchioness died in the accident. He had not been drinking but may have been tired by long working hours, the report found. “The basic cause of the collision is clear. It was poor lookout on both vessels. Neither vessel saw the other in time to take action to avoid the collision,”... said... [the report's author. The barge's captain] is believed to be now serving as a mate on a non-British registered vessel in Northern European waters... Although it was believed that he would have had no alcohol in his blood at the time of the collision, the report added: “We cannot stress too strongly how much we deprecate [the barge captain's] conduct in drinking so much before returning to the vessel as master.”

...The Greek ferry that sank with the loss of at least 66 lives yesterday, was like a ship without a crew in the hours before tragedy struck... Some sailors were watching soccer when the Express Samina hit rocks off the island of Paros. Even after the impact, with the ferry in darkness and sinking fast, the crew failed to supervise as the 530 people on board struggled to abandon ship... Survivors claim... the tradition of women and children first was abandoned. They describe how they clung to the topside of the ship wondering how to launch the lifeboats themselves. A few lifeboats do appear to have been launched, but most passengers seem to have ended up in the water, without so much as a lifejacket... Two N[Z] cousins... were among the hundreds who jumped for their lives. Both... were sucked under the sinking ferry but emerged unharmed on the other side... A massive rescue operation swung into gear with a small flotilla of fishing boats rushing to the scene, followed by dozens of other vessels and British Navy helicopters... The operation, reinforced by passing British warships, continued through the night. Greek investigators say they are struggling to explain why the ferry... hit a charted islet with a lighthouse, which some officials say only a blind person could have missed.

...As Greek investigators try to work out why a ferry sank and killed at least 72 people after hitting a... well-charted islet with a lighthouse... questions are being raised about the age and safety of the country's coastal fleet. Authorities yesterday charged the captain and three crew members of the sunken Express Samina with manslaughter. The ship, with more than 500 aboard... sank on Wednesday in a storm. It was Greece's worst maritime tragedy in 35 years... Investigators focused on reports that the vessel was on automatic pilot minutes before it struck the rocks. Survivors say the crew panicked and failed to organise an evacuation. [However,] sailors' unions... said the sunken ferry was “problematic, overaged, with worn-out sheet metal.” The Greek Merchant Marine Mechanics Union described it as a “rusting hulk.” But the coastguard said the... 34-year-old... ship was inspected this month and found seaworthy. In Greece, ferries must be decommissioned after 35 years... A Greek member of the European Parliament... said his country should adopt the E[U]'s more stringent regulations and decommission ships after 27 years. In Greece's coastal fleet of about 130 ferries, 18 are over 29 years of age, many of them on the busiest tourism routes.

...An elderly American died when... [t]he Zeus Three... a chartered Greek boat carrying... 31... US tourists ran aground and sank off the Aegean island of Naxos yesterday. The sinking came just four days after at least 77 people died in a ferry disaster off the nearby holiday island of Paros, and less than two days after another ferry... with 1081 passengers aboard... ran aground while approaching Naxos... The Express Artemis, a big vehicle and passenger ferry, managed to dislodge itself after three hours and docked safely without injury to passengers or crew. Since the sinking of the Express Samina, the merchant marine ministry has confined 65 ships to port, saying they had failed to meet safety standards.

...With the death toll still rising[-] ...divers pulled three more bodies from the wreck... [yesterday -] four men accused of causing Greece's deadliest ferry disaster in 35 years began giving testimony as the Government promised an overhaul of Greece's troubled shipping industry.

...UK ferry company may take over routes around Greek islands after series of recent accidents; ...bereaved families scorn compensation offered as captain admits he was not on bridge when ferry hit rocks... [F]erry co. manager commits suicide following disaster in which at least 80 died.

...N[Z]'s worst sea disaster... [occurre]d in 1863... when the HMS Orpheus sank... [at] Whatipu... with the loss of 189 lives... [Incidentally, the] pilot who directed [a]... cruise liner on to rocks in the Marlborough Sounds in 1986 [has] admitted he drank vodka and beer several hours before the accident but said it did not affect his judgement. A book released tomorrow reveals for the first time the full testimony by... [the] pilot... to a government inquiry into the sinking of the Russian ship... after[it] hit... rocks in a passage of water between Cape Jackson and a lighthouse beacon... [He's] never spoken publicly about the sinking, and only bare details of his testimony were released, including that he made a “sudden decision to navigate the ship through... a... passage... [where I had] no detailed knowledge of the rocks... other than... that... the... depths[were] estimated at 35 to 40 feet... [on] a soundings chart... drawn up in 1895... In hindsight, the only explanation I can offer for the action I took is that I was suffering from mental and physical exhaustion and that I was over-stressed as a result of working long hours for an excessive period of time.”

The [\$]45 million liner with 741 passengers and crew on board... [was] the biggest ship to have foundered on the NZ coast... The ship was under the control of the Marlborough Harbour Board's harbourmaster and acting general manager... On leave from his job, he was working on a private contract when he made the fateful decision to steer the liner through the narrow passage... The ship's owner, the Baltic Shipping Company, ultimately admitted its decision to employ [the harbourmaster] made it indirectly responsible for the sinking. Yet the harbour board... paid an extraordinary \$2.5 million to the owner... The ship left Picton a little after 3pm on a fine February Sunday. [The ship's c]aptain... left the bridge and went below to his cabin at about 4.30 pm, asking to be woken when they reached Ship Cove. [The harbourmaster], who was gaining a reputation as a knowledgeable tourist pilot, was to give a talk about the cove... and [the captain] was interested. But when they reached Ship Cove the [captain], who had been on duty since the liner left Wellington late the night before, decided to catch up on some sleep. From Ship Cove, [the pilot] headed for Farewell Spit... But when he came in sight of the Cape Jackson lighthouse, which is separated from the cape by a passage of open water, [the pilot] made a sudden and tragic decision. Without reference to charts, he ordered the helmsman to steer through the passage instead of going around the lighthouse[, and a]t her full speed of 15 knots... [The pilot] – like several other skippers – had taken vessels through the passage before but none had the 8m draught of the Mikhail Lermontov. The chart which [the pilot] did not consult showed a shaded area and a line representing foul ground and a reef in water less than 10m deep. It was not enough: at 5.37 pm the ship shuddered under the first of a series of sickening jolts. She had struck rocks on a remote and dangerous coast with night only a few hours away and hundreds of passengers on board... Pavel Zaglyadimov, a 32-year-old refrigeration engineer[, was making]... his last round of checks for the day... when... sharp rock sliced through the steel hull and the seas poured in. Zaglyadimov is presumed to have died instantly... [The captain] rushed on to the bridge and, refusing early offers of assistance from nearby vessels, began a desperate attempt to prevent his stricken ship from sinking... But his bid was doomed... Fortunately, the masters of the

LPG tanker Tarahiko and the Cook Strait ferry Arahura had ignored [the captain]'s refusal of their offers of help and had entered Port Gore searching for her in the growing darkness... The sinking ship... was... without main power and almost blacked out, [making it] difficult to see... These days [the pilot] is master of... a live-stock and general freight carrier, plying the waves of Cook Strait. The inquiry, conducted by [one of his friends'], found that in the absence of [the captain] from the bridge, the safe navigation of the ship was the responsibility of the two Soviet officers on duty[– 'who twice questioned the pilot's decision to move through white water at speed']. They were officially reprimanded while [the captain] was prosecuted by Soviet authorities and given a four-year suspended prison sentence. Today his rank is restored and he is serving as master of a Maltese-registered freight ship operating between Russia and Hong Kong... Interviewed through an interpreter, [the captain] is in no doubt that the accident was caused by "the reckless decision of the pilot... to navigate close in-shore." But he also agrees with a Moscow newspaper's verdict that "the captain bears the responsibility for everything, even when he is asleep." The ship's navigator was blamed for not being sufficiently decisive to overrule the pilot... [The person who conducted the inquiry in NZ] recalls the Soviet master as a very competent and experienced seaman whose skill got the ship into the shelter of Port Gore where everybody could be taken off safely. "His action in not dropping his anchors when the vessel grounded on the sand bar probably saved hundreds of lives. He only had a few seconds to decide but realised people could well have gone over the side if panic had broken out and the beach seemed so close."

Hundreds of passengers were on their way to Wellington on board rescue vessels early today after... the 20,000-tonne... Russian... ship... Mikhail Lermontov... which left Sydney on February 7 for a cruise of N[Z] and the Pacific Islands, sank in Port Gore about 10.30 pm after hitting rocks at... the northern tip of the Marlborough Sounds about four hours earlier... [T]he ship smashed on to rocks after both its engines failed. The helpless ship had drifted into the sheltered Port Gore where the captain ordered all... 740 passengers... and crew to take to the lifeboats. They were then picked up by an armada of small craft answering the ship's distress signals... [S]earch and rescue... officials said later that everyone had been safely evacuated from the boat minutes before it sank in about 33m of water. Most of the passengers and crew were later transferred to the interisland ferry Arahura... Major hotels in the capital have been alerted to be on standby to receive the passengers[, most of whom]... were reported to be either from A[US or NZ. There]... were 330 Russian crew and 10 A[US]n cruise staff... A Wellington travel agent... who was on board the Mikhail Lermontov before she left Wellington on Saturday night, said... the Picton harbourmaster... was on board to pilot the ship for the last five days of the cruise. "I had dinner with him last night. He's very experienced. He takes all the passenger liners out of Picton and he knows the area well. I can only think it might have hit an uncharted rock – it's such a big area down there." ...A weather spokesman in Wellington said conditions in Cook Strait at the time of the incident were poor. Visibility was down to only a few kilometres, and a strong 55.5km/h southerly was picking up the seas... The Mikhail Lermontov went down in historic waters – close to Captain James Cook's favourite anchorage at Ship Cove... Captain Cook found safe haven in the Sounds, but the N[Z] coastline generally is notorious for hazards, and in the country's[European] history the loss of more than 1400 craft has been recorded. - 1986

Rescue teams in the Philippines resumed their search this morning for survivors of what may be the world's worst peacetime maritime disaster this century. The coastguard posted 1,530 people as officially missing after a ferry packed with Christmas travellers collided with a tanker 100 miles south of Manila yesterday morning and the two vessels sank in a sea of flames. Survivors said the ferry Dona Paz was packed with more than double that number. "We just don't know, we may never know," a coastguard spokesman said. If the feared death toll is confirmed, it will surpass the Titanic disaster... Yesterday, after an extensive rescue effort in the disaster area only 26 survivors had been found... Most were suffering from burns after jumping into oil that caught fire in the collision, engulfed the two vessels and formed a slick over the sea... Radio reports quoting unnamed officials, said several people had been eaten by sharks... The 20-year-old Dona Paz, licensed to carry 1,493 people, and the tanker Victor, carrying 8,800 barrels of oil products, collided in straits off the island of Marinduque... There has been no official explanation of how the accident happened. Weather conditions were good, but it was a particularly dark, moonless night.

...As rescuers stepped down their search for victims of the Philippines ferry disaster and the clamour for more controls on the country's chaotic shipping industry mounted, a remarkable story of survival emerged... Government radio operators monitoring the search in the area where the 2,215-tonne Dona Paz collided with a tanker... reported that a five-year-old boy had been found alive after two days floating on a piece of timber. The boy was last night in hospital after being found in "serious condition" by fishermen, and was given a "50-50" chance of recovery. The boy, whose name was not known, brings to just 27 the total of those saved from the Sunday night collision. Meanwhile, as hundreds of anxious relatives and friends jammed the offices of the Sulpicio Shipping Lines company, owners of the Dona Paz, waiting for word of those who were lost, a company spokesman admitted that, while records showed that 1,490 passengers and 53 crew should have been on board, the list did not include children and passengers who boarded at an intermediate stop. The incident has sparked numerous calls for tighter controls of the Philippines passenger shipping industry. Coast guard records show 80 collisions, 117 sinkings and 53 shipboard fires in Philippine waters since 1972, when records were begun... A... member of the panel which will begin hearings on Monday to investigate the cause of the disaster, described the Board of Maritime Inquiry as a "toothless lion" when it came to enforcing safety laws and awarding damages, with the biggest fine that can be imposed set at 1,000 pesos (£33)... Yesterday's search was hampered by bad weather, but it soon became clear that hopes of finding a[ny more]... people alive were fading. Under new government regulations, the relatives automatically receive about £650 for each victim in insurance compensation. However, with no confirmed passenger list and the impossibility of identifying victims, it will be some time before payments can be made.

...A quarrel started in a mortuary when two families both claimed the disfigured body of a woman as relatives tried to identify the victims of the Philippines ferry disaster. Only 253 bodies have been recovered, although 2,000 people are feared to have died...

Key witnesses to the world's worst peacetime shipping disaster... have disappeared... When an official inquiry into the collision... opened... yesterday, the authorities said that they did not know the whereabouts of the two surviving crew members of the tanker's crew... They disappeared soon after a rescue ship arrived in Manila on Monday last week. Meanwhile, a... lawyer for the registered owner of the tanker said that the vessel had been sold as long ago as 1985, and that his client... denied any responsibility for the disaster. No one was there to represent the alleged present owners, Vector Shipping Corporation. The owners of the ferry also denied responsibility[, and]... a vice-president of Sulpicio Lines, said the ferry was not overloaded, countering reports from survivors that up to 3,000 people were on board. A survivor had earlier said that an apprentice was at the helm of the Dona Paz when she went down, that the first and second mates were on the deck drinking beer, and that the captain was in his cabin watching videos. The company denied the claim, but there was no attempt at the start of the inquiry to corroborate or disprove this controversial account... The hearing was continually disrupted by dozens of relatives of the ferry victims, together with journalists and television crews, who crowded around the conference table. At the same time, a special Senate investigation into the disaster opened and adjourned, with the investigation chairman... accusing the authorities of taking a "cavalier" attitude towards the inquiry.

...Relatives for the victims of the Philippines ferry disaster questioned the competence of the Marine Board of Inquiry at yesterday's hearings, insisting that the board must not include coastguard officials "because the coastguard, too, is on trial in this case". The collision between the tanker Vector and the ferry Dona Paz has become the worst peacetime shipping disaster, with [as many as '4341 people'] believed dead... During yesterday's hearing, lawyers for the owners of the vessels argued over which ship rammed the other... "According to my belief, if the Dona Paz was the one which rammed the Vector, Dona Paz would be able to survive and not sink because she was built with a collision bulkhead,"... said[the

lawyer for]... Sulpicio Lines Inc... [The] lawyer for the Vector Shipping Corporation retorted: "If the tanker was the one that rammed the Dona Paz, there would have been no explosion." He explained that the Vector had a bigger collision bulkhead and a device next to it to prevent its oil cargo from exploding in flames. • DHAKA: More than 150 people were feared drowned yesterday after they jumped in panic from a ferry which caught fire and sank in the Bay of Bengal... Local police said that 11 people with serious burns were rescued from the river. The ferry was carrying about 200 passengers from a village carnival. - 1987

In the darkening of a grey winter's evening, the majestic ferry *Herald of Free Enterprise* set off on a routine crossing from Belgium to England. The sea was calm, the weather quiet. There was nothing to suggest that within minutes there would occur the worst British peacetime marine tragedy since the sinking of the *Titanic*... The *Herald* had nosed into her berth at the Zeebrugge ferry terminal at 5 p.m. that Friday, March 6, 1987... A crew of 80 manned the *Herald* on the run to Dover. They worked 24-hour shifts, which came to two round trips, then had 48 hours off. Some were uneasy with this arrangement. They knew the ship would sometimes be operated by a tired crew... [Her captain on that Friday] had other concerns about the new breed of roll-on roll-off ferries, or Ro-Ros. Six months before, he had written to the other masters and chief engineers who operated on the *Herald*, commenting on the ship's tendency to stay nose down after taking on water ballast in the bow tanks. This was a routine procedure to facilitate loading vehicles in high tides, but it took up to two hours to pump the water out. Thus... sometimes "the bow wave is well up the bow doors." The Marine Department had been made aware of this problem, but no action had been taken. There was talk that a high-speed pump would be installed during the overdue annual refitting, scheduled for the following week. But on this Friday, [the captain] knew, the *Herald* would be leaving Zeebrugge about a metre down in the bow. Just after 7 p.m., [the captain] stepped into the wheelhouse... All hands on the bridge... were thoroughly at ease with the departure procedures. [The captain] knew them by heart. He gave the familiar orders softly: they were softly acknowledged. What [the captain] did not know was that the massive steel bow doors... had not been closed... AT EXACTLY 7 P.M., the loading officer of G deck, [the] Chief Officer... went to a control panel and notified the bridge that the shore ramp was being lifted... A moment or so later, the public-address system called all hands to harbour stations. At five minutes past the hour, the *Herald*... began backing away from the wharf. [The Chief Officer] looked around to see who would be closing the bow doors. Across the dimly lit deck he saw – or thought he saw – [the]... assistant bosun, in his orange overalls, threading between the parked cars towards the control panel. It was [the assistant bosun]'s responsibility to close the 12-tonne hydraulically operated bow doors. That satisfied [the Chief Officer]. His harbour station was on the bridge, so without speaking to the man in the orange overalls, he... began climbing up to the wheelhouse. But if [the Chief Officer] saw a man in orange overalls on G deck when the *Herald* began slipping out of its berth that Friday evening, it was not the assistant bosun... That afternoon, [the assistant bosun] had busied himself with maintenance and cleaning work. Then he reported to the vehicles deck and helped secure some semi-trailers. After a while he encountered [the] Bosun... who told him there was nothing else to do. So [the assistant bosun] went back to his cabin to await the harbour-stations call. At that time he would report back to G deck and close the doors, if someone else hadn't already done so. Meanwhile, he would make himself a cup of tea. Feeling chilled, he closed the porthole, then sat on his bunk to read for a bit. Almost at once he fell asleep. He slept right through the call to report to harbour stations... [S]tanding on the bridge wing, [the captain] might have noticed by the bright dockside lights that the bow doors, only just visible from the bridge, were open. But with the *Herald* backing out of her berth, he was facing the stern. By the time the ship swung round, she was in darkness, accelerating out into the night with her nose weighted down by ballast and the open car door only three metres above the sea. The elements for disaster were all in place... At 7.20, the *Herald*... passed the beacon on the inner breakwater and turned into the main shipping canal... As the *Herald's* speed increased, a bow wave began to pile up under her blunt prow. For a while it was suppressed by the forward extension of the main vehicles deck... But... at 15 knots, churning white water began to break over the top of the car deck at the rate of 200 tonnes a minute. H-deck [']s steward... was one of the first to notice anything wrong. Standing in the linen room, he heard water rushing down a nearby staircase and thought a pipe had burst. He went directly to the telephone and called the purser's office... At that moment, 7.27, the *Herald* began rolling over on her port side... For an excruciating moment, there was a pause... Then she went over on her beam-ends and started to sink. Everyone on the bridge was flung down to the port side. The captain... fell the full 12-metre width of the wheelhouse, seriously injuring his left side and collapsing a lung... Aboard the dredge *Sanderus*, working near the inner breakwater, [the] First Skipper... was horrified by what he saw. The big ferry had barely cleared the harbour wall when her lights tilted sharply to port... Then the lights went out; [he]... was sure the ship had gone down. He ran to the dredge's radio and raised the alarm... AS RESCUE VESSELS sped to the scene, their crewmen could see that the *Herald*... had somehow slewed out of the channel and crashed on to the shallower sea bed, less than 2000 metres outside the harbour, in just ten metres of water. Her orange hull and starboard propellers stuck incongruously out of the sea... But at least the ship had not gone down in deep water. There were lives to be saved – if the rescuers were quick... There were about 460 passengers aboard. No exact tally was made – there were always uncounted children, a few extras in the cars that drove aboard, even fare-dodging stowaways in the trucks... One hundred and ninety men, women and children, including 38 crew members, are counted as having perished... Each of these deaths – so utterly unexpected – left heartache in homes across Britain and Belgium. But some survivors suffered losses so devastating, so complete, as to stir the pity of the watching world. A five-year-old girl... lost... her mother, father [and] baby brother... a London postman, lost four generations of his family... At 10.30 a.m. on April 27, just as the refloated *Herald* was towed back into Zeebrugge harbour, the formal investigation into the disaster got underway. It would produce ample evidence that there was enough responsibility to be shared by everyone – by [the assistant bosun], who should have closed the bow doors, and didn't; [the] Chief Officer... who should have made sure they were closed, and didn't; [the] Captain... who should never have sailed out of Zeebrugge harbour without knowing that the doors were closed – and did. Some of the sharpest criticism was reserved for [the ferry company] Townsend Thoresen, whose management, said the report, was infected with the "disease of sloppiness." And the configuration of modern ferries also came under attack. The very design that makes Ro-Ros such a dramatic commercial success makes them vulnerable to what marine engineers call "free surface instability." ...New safety regulations are being implemented. Design changes are being studied. We can only hope that tragedy will be a teacher, that the catalogue of lessons learned will help to close the gap between man's exhilarating self-confidence in his technological skill – and the inexorable claims of the sea. - 1988

THE *Titanic* was sunk by six separate slits in its hull, a team of divers claims. Ever since the liner went down... experts have argued that an iceberg tore a single 300ft gash in its side. Engineers involved in the latest deep-sea investigation said the damage to steel plates was astonishingly small. [The *Titanic* was divided into numerous compartments that could be sealed off, thus enabling the ship to remain afloat if the hull was only breached in a few places.] But each of the slits punctured a different watertight compartment. The slits were no bigger than a person's hand. "Everything that could go wrong did," said [an] American naval architect. [The ship may also have 'suffered "brittle steel fracture" due to the cold temperatures'. 'In the wake of *Titanic*, an international ice patrol was established and regulations were introduced to make ships carry enough lifeboats to hold all people on board' (although, when a Mediterranean cruise ship carrying 800 passengers recently caught fire, the 'fire alarms didn't work, life jackets couldn't be found and life raft mechanisms didn't operate'!).]

...back in 1912... [when] the RMS *Titanic*, the largest moving object then ever made, was sinking slowly into the north Atlantic it was definitely an advantage to be a woman. No surprise then, that the survivors featured in tonight's documentary... are, bar one, female. Man proposes and God disposes, so when it comes time for divine retribution perhaps it's only fair the seats in the lifeboats are reserved for women and children. Says one

of the survivors, ruefully: "To say a ship was unsinkable – which was indeed what was claimed – was flying in the face of God." ... "It will go into history as the one disaster in which there was no excuse for anyone to die," says another survivor... Another theme is the lack of information from the crew and general disbelief that the mammoth ship was actually on its way under the waves... The Titanic was the ultimate boy's big toy. At 11 storeys high and "four city blocks" long, it represented the acme of human technological achievement. Such was the confidence of its makers and owners that it set out on its maiden voyage with only enough lifeboats for less than half the 2200 passengers and crew... The hour-long programme may not reach quite the heights of passion of the blockbuster movie or titillate viewers with hints of lost treasures, but its first-hand accounts are all the more powerful for their spare descriptions and understatement. And it follows the story further than the fictional version, describing the arrival of the rescue ship, the Carpathian – dubbed the "ship of widows" – in New York where it was greeted by a curious crowd of over 40,000. The programme examines the plight of the women passengers from third class, most of whom were immigrants to America and had lost their men and everything they owned. It also looks at the stigma which instantly became attached to any of the men survivors as public outrage boiled over that more first class males survived than children in steerage... Then there's confirmation of some of the more famous stories – the orchestra playing calmly on deck, the passengers locked in third class, the... putting on best clothes to "go down like gentlemen."

...Edith Haisman, the oldest survivor from the sinking of the Titanic, has died in a Southampton nursing home, aged 100. Mrs Haisman remembered being in a lifeboat and seeing her father, Thomas Brown, waving from the deck as the Titanic sank in 1912...

The Haitian President... and Government ministers were grilled by angry villagers yesterday when they visited the scene of this week's ferry sinking... "Why are you coming here now... everyone's dead...?" screamed a woman who had lost five children in the accident... Divers pulled 28 bodies from the shipwreck yesterday, bringing to nearly 80 the number of victims now recovered. But many more who were trapped on lower decks have proved difficult to reach... The vessel... sank in 35m of water close to the shore... Witnesses said the vessel rolled when passengers eager to disembark went to one side. In an area with no dock, people routinely disembark from ferries by wading, swimming or being carried to shore... Haiti's Secretary of State for Security... said the vessel might have been overloaded. It was permitted to carry 200 passengers, he said. Between 260 and 280 people are reported to have been on board. The Haitian national police chief... said an investigation had been launched. Both the owner and the captain of the ferry would be questioned. [By the way, a 'former *Shortland Street* star – who played receptionist Moira Crombie's first husband Earl – cheated death after his boat was run over by a skipper-less launch. The actor and his brother-in-law were fishing in the five-metre boat on Thursday morning in Auckland's Hauraki Gulf when the 12m launch hit. The launch's owner was relieving himself from the stern and did not see the dinghy. "He was very sorry but now the weather's great and I have no boat. It was a very dear boat and we've had a lot of fun on it. It was like part of the family."

...[THE] FAMILY of the five... fishermen – [two] [brothers... their brother-in-law], a cousin and a friend – who all... died... in last year's tragic Wellington Harbour shipping collision are to ask the coroner to reopen the investigation into the accident... The news comes on the eve of tomorrow's first anniversary of the collision between fishing trawler Maria Luisa and container ship Sydney Express... [The] owner of the fishing boat... still has not received an insurance payout... The Maritime Safety Authority [MSA] and the Transport Accident Investigation Commission blamed both vessels for the accident, but family and others connected to the Maria Luisa maintain crucial evidence was ignored... "We believe we can prove the original inquiries were not conducted properly..."

...Failings in the [MSA's] new ship safety code are among critical findings of an official... investigation... into two groundings of... the Auckland-to-Coromandel passenger ferry... Neither accident resulted in injury to passengers or crew... [T]he Transport Accident Investigation Commission... found in both cases the skipper... – a different one each time – was at fault. The main factors in their errors of judgment were fatigue, lack of training and experience, and the absence of documented procedures... But the investigation also identified shortcomings in the... new ship-safety management system and in how a company authorised by the [MSA] operated... Although the ferry had a certificate from Maritime Management Systems, a safe-ship management system had not been installed effectively when the first grounding occurred... The system had been installed by the second grounding but still did not comply fully with the code. So the ferry was not considered "fit for purpose" during either grounding.

...[Dozens of people were on board a ferry when it went out of control approaching Queen's Wharf in Auckland and smashed into another ferry, the 150-seat Manu, which then bumped into a third – the 94-year-old Kestrel. No one was hurt. All three ferries are operated by Fullers. The MSA is investigating the incident, which has put the Manu out of action for at least a week. Fullers uses the Manu for charter trips and runs to Stanley Bay, serving 70 to 100 people. The firm spent much of the weekend hunting for a charter vessel to replace the Manu, but said that there would be no disruption to services this week. Fullers said the crash occurred after a generator failed on the Kea. It had been fixed and the ferry had resumed service. The crash was the latest in a series of incidents involving Fullers' ferries. On October 21 last year, the Kestrel smashed into Queen's Wharf while carrying 60 passengers. On January 16, the skipper of Quickcat II was fined \$3000 for going too fast. His ferry hit another vessel in the Waitemata Harbour on May 31 last year.]

...Passengers on high-speed Auckland ferries need not worry about a safety risk revealed in a confidential A[US]n report, say experts in N[Z]. The... head of naval architecture and ocean engineering at the A[US]n Maritime College in Tasmania, says high-speed aluminium ferries are unsafe in certain conditions. N[Z] has about a dozen such ferries, including some of the Fullers Gulf Ferries in Auckland and Tranz Rail's Lynx... [Such] a ferry travelling faster than the waves can plough into the wave in front, take on water and quickly submerge... N[Z] experts say the risk disclosed in [the] report has been known for some time, and rules are in place for dealing with it... The deputy director of maritime safety... said all commercial fast ferries in N[Z] operated under strict conditions. He had contacted his A[US]n counterpart... and was satisfied that N[Z]'s regulations were adequate.

...Two new Cook Strait fast ferries may have severe restrictions placed on them when they can sail from Mana, north of Wellington, because they are relatively small... [The MSA] said the size of the catamarans – 24m long and 36m – meant there was a safety risk... The first vessel... will carry up to 150 passengers... The second [will carry] up to 300 passengers... [and take] 75 minutes to cross the strait... The Straitrunner, which travelled the same route but went into receivership last year, was 31m long. The Lynx, which runs between Wellington and Picton during summer, is 76m long. [A spokesperson for the MSA] said he expected the director of Cook Strait Sea Cat Ferries... to be responsible and not push the ferries to the limit of weather conditions... [The director of Sea Cat] said the ferries were being built to the highest safety standards. Catamarans were suited to cross the Paremata sandbar in Porirua Harbour and to the side-on seas of Cook Strait, [and] he said... the \$10 million project would create 39 jobs initially, plus 20 more when the second ferry began sailing... In bad weather passengers will be able to use a backup air service...

The Lynx fast ferry is still damaging Tory Channel marine life, a Department of Conservation study shows... [M]arine life that had recovered during the winter months has again "been knocked back" by fast ferry wash over summer. - 1997

One small council should not be able to dictate Cook Strait freight and ferry options, the Road Transport Forum said yesterday. Marlborough District Council's bylaw halving fast-ferry speeds to 18 knots (33 km/h) in the Marlborough Sounds was unacceptable, [according to the forum's] chief executive... "They allowed fast ferries to start up, but now after much investment has been put into them, the council pulls the plug." The council passed the bylaw on Tuesday and it takes effect [in a month]. The forum, which represents 4000 truckers nationwide, said it would be "pleased" to work with ferry companies in appealing against the decision... Fast Cat Ferries ['] chief executive... said the bylaw was passed without regard for the impact on local and national economies. The alteration to the speed limit would add half an hour to a 1 3/4-hour journey – a crucial time difference in an industry where speed was everything... [The forum's chief executive said his] industry would lose operational benefits provided by the time-saving the ferries offered. In an environment of high fuel prices, the last thing needed was another knockback.

...A “ridiculous” Cook Strait fast ferry price war has forced Mana Seacat to close... [Y]esterday... 22 mainly part-time staff were laid off and 600 booked passengers were being offered refunds after the sudden halt to services on Tuesday... [T]he decision was made at a directors’ meeting on Monday... “[We met] to evaluate the market conditions, given the abundance of fast ferries and cheap plane seats, and made the decision that it was not prudent to trade over the winter months given the capacity that’s available and being discounted,” [a director] said. The company... had not met budget targets since the new fast ferry Top Cat started and Tranz Rail’s Lynx ferry began winter crossings.

...[a Marlborough District Council bylaw has been blamed for Fast Cat Ferries’ decision to shut down its Top Cat service]...

Last Friday, a [Marlborough District C]ouncil bylaw came into force restricting the speed of fast ferries in the Sounds to 18 knots. But yesterday the council said it had granted a Tranz Rail application to test-run the Lynx at up to 23 knots. The... [council’s] regulatory department manager... denied the decision was a weakening of the council’s stance on ferry speeds. The 18-knot restriction was a very black and white rule, but the dynamics of ship wake generation were more complex, so there was always an exemption provision. “Tranz Rail have trialled their vessel between 25 and 30 knots and feel they can’t comply with the wave formula in that bracket, but are of the view the Lynx will run to about 23 knots without causing a problem.” ...[a] Guardians of the Sounds spokesman... said the trials would be meaningless if they were conducted without the Lynx carrying commercial vehicles. The ship is not due to carry commercial vehicles until early in the New Year.

...Tranz Rail has confirmed it is considering preliminary plans for a new ferry, drawn up by the same Spanish shipyard which built the... Aratere. Maritime sources are incredulous the company would think of using the Spaniards to build a replacement vessel for the ageing Arahanga freight ferry. “No doubt it will carry on the great traditions of the Aratere and the Albayzin,” said one source. The Albayzin was an ill-fated Spanish-built fast ferry used by the Sea Shuttles firm on Cook Strait in 1994-95... The \$106 million Aratere, which arrived in Wellington on January 20, was plagued with early operational problems... The M[SA] detained the ship on February 24, after it was left with 220 passengers on board drifting in Wellington Harbour. An electrical fault had cut the fuel supply and an emergency generator failed. Other problems have included railings too widely spaced, and unbolted seats in the ship’s main lounge bar. [A] Tranz Rail spokesman defended the Spanish yard. “It wasn’t really the shipyard that was the problem. It was some of the suppliers. The shipyard has copped a bit of unfair flak.” Earlier this year, another company spokesman angrily spoke of the media depicting the ship as a lemon. Under the new plans, a new ferry would be slightly bigger than the Aratere – capable of carrying 500 passengers rather than 350. The new ship is nicknamed Ara-7 – this being the seventh Cook Strait ferry which would carry a Maori name beginning with Ara. The Arahanga has been operating on Cook Strait for more than 25 years and was due for replacement in 2003. However, Tranz Rail is reviewing its entire “retonnaging” project taking into account which South Island port it uses in future. If it goes ahead with a long-running proposal to move to Clifford Bay, it will be able to use bigger ships.

...Tranz Rail may be forced to move its Lynx fast ferry terminal out of Picton to stop environmental damage in the Marlborough Sounds, a Marlborough District Council report says. The council said wash from the ferries was eroding shorelines and destroying marine life. One option was moving fast ferries to Clifford Bay, 40km southwest of Blenheim, an option put back on Tranz Rail’s agenda last year, the report said.

...a \$100 million-plus terminal... at Clifford Bay, 38km south of Blenheim would cut 30 minutes off the normal [3]-hour Cook Strait sea travel time, and about an hour off the car journey time to Christchurch... The move... [to] replace Picton as the gateway to the South Island... could cut ferry fares but would cost Picton up to 260 jobs and 44[%] of its visitors... [But there may be new jobs up north, as] Fullers Gulf Ferries says it is prepared to order two new low-wash ferries to start a passenger service between... the eastern suburbs... and[downtown] Auckland. Subject to getting approval from the [ARC] it will put in the \$4 million order for the new craft and build a ferry terminal at Half Moon Bay... The catamaran ferries would carry 150 passengers each and take about 24 minutes to get between the two points... The company is[already planning] to begin a subsidised Bayswater to downtown Auckland ferry service in the first quarter of next year. When Fullers and the Yellow Bus Company put in a joint tender for the Half Moon Bay service earlier this year, the regional council had to defer it because it ran out of money for trial passenger transport services. The [ARC] is now budgeting more than \$1 million for such services in the 1996-97 financial year and hopes to award contracts before Christmas. The council... said there had been interest in the Half Moon Bay service, but the cost [per] passenger had previously been too high. The council has developed a system for “weighting” proposals, the highest weighting going to “innovative” services which would improve passenger transport use during peak travel times... [and] has now changed the weighting to give ferry services an increased chance of getting funding.

...An engineering blunder has left the Auckland port company with an \$11 million super-crane on a wharf too weak to support it. The 810-tonne container crane, towering more than 60m above the waterfront, was assembled on Bledisloe Wharf from sections imported from Germany. It cannot be used because tests have shown that it is too heavy to run along rails on the water’s edge... The crane is one of two designed to allow Ports of Auckland Ltd to offer shipping companies wide-boom lifting capacity to service a new class of big ships. The other crane has been installed, apparently successfully, at the Fergusson Container Terminal... Strengthening work would be done in phases, and although this would take some time enough progress would be made in two months for the new crane to operate safely... A spokeswoman... would not say how much the... work would cost, but added that it would have been needed sooner or later anyway because of long-term plans to add more crane capacity.

...The planned \$100 million expansion of the Fergusson container terminal in the Waitemata Harbour has run into strong public opposition... Ports of Auckland Ltd... wants to extend the container terminal about 180m eastwards by reclaiming 10ha of the harbour bed... [Strong public opposition itself isn’t an issue – public outrage failed to prevent the ports company spending money on dredging the harbour a few years ago to make it more accessible for larger container ships, then dumping the dredgings ‘over recreational seabeds’ – but t]he company needs the consent of the... A[RC]... the Auckland City Council and the Minister of Conservation.

...The consent hearing for the expanded Fergusson container terminal has ended with its promoters arguing that the... project was of “critical importance to both the region and the country.” ...The company sees the 10ha reclamation as the first stage of increasing the port’s capacity. The extension would allow more ships to berth at the wharf and more containers to be handled.

...A combination of economic growth and more frequent visits from container ships helped Ports of Auckland increase container trade by 6.6[%]. Annual container... trade through the ports topped 400,000 units for the first time. Most of the increase occurred at the Fergusson container terminal, where throughput was up 12[%]. Nearly 276,000 20ft equivalent container units were handled at the terminal... [T]he Ports of Auckland chief executive, said the capacity of Bledisloe Wharf... [– which] takes a mix of containers and cargo... [– had been] increased as a short-term measure to accommodate the increasing container... traffic until a proposed expansion of the Fergusson terminal was completed in 1999... The proposed expansion would increase container capacity by 46[%]. Ports of Auckland handled more than 10 million tonnes of cargo during the latest year, nearly 6.5 million tonnes of it in containers. Non-containerised cargo increased 2[%]... in the June 30 year.

...Since June... four... Russian fishing boats... have been tied up at the... Port of Otago... two [due to]... wage disputes, and... [the other two] are stranded by an international financial wrangle... The body of a woman crew member was found yesterday on the Russian fishing boat Novopskov[, but the police]... said the death was not being treated as suspicious... In late June, a crew member on the Yefim Gorbenko died of natural causes.

...To say life on board the stranded Russian fishing vessel Ivan Korobkin has been difficult in recent months is an understatement. What should have been a nine-month fishing voyage has turned into 15 months of tension and boredom for the 10 crew who remain aboard. For most of their stay in Timaru the crew have gone virtually unnoticed except by the half-dozen families who have befriended them. Occasionally the ship hit the headlines – such as when it was arrested for unpaid debts, or when the crew refused to leave even though the High Court was arranging their

repatriation... For the 53-year-old... ship's cleaner... this trip should have been her last; her retirement nest-egg... The nine-month trip promised \$US8000... in wages, enough to buy a small flat. She has received only \$NZ1420 so far... [plus] \$428 the captain gave each crew-member... [She] could have gone home with most of her shipmates last November, but a promise of much-needed additional pay was enough to make her swap her job... for that of the cook... [The] single woman... knows if she doesn't get the wages she is owed she will have to beg on the streets when she returns to Russia. [The ship's chief engineer] worries about a family at home with insufficient money to live on... His... pay packet is crucial to the family budget. [He] wanted to go home... but as chief engineer the ship's owners insisted he stay. The crew's only remaining hope seems to be with their Dunedin lawyer... She attached a writ to the Ivan Korobkin a week ago, and is confident that move will guarantee the crew's wages – even though it could be three months before the court pays up out of the proceeds of the ship's sale. It now looks likely the ship's new owners, All Weather, a subsidiary of a family-owned Hong Kong shipping company, will pay the crew to get them off the ship. They could be flying home soon.

...[after 'five Russian fishing boats were impounded at Lyttelton for violating fishing quotas, a total of 90 sailors went without pay for over 10 months – sustained only by charity from locals plus a food and fuel grant from the NZ Ministry of Fisheries. After the ship owners paid their fines to the NZ Government they offered to back-pay their workers \$NZ59/week'.

...the South Port operations manager said the Russian trawler Abruka was not allowed to discharge while in port so four temporary toilets had been installed on the wharf. But gales sent one into the harbour and tipped the other three over. The toilet was caught before it floated away and within hours all four were back in action, much to the relief of the Russian sailors. "However, we did get a complaint about soggy toilet paper," the manager added.

...Greenpeace received a warning from the Nelson City Council for letting its ship the Rainbow Warrior II discharge treated sewage while in port. Vessels are allowed to discharge treated sewage, but the council and Greenpeace are at odds over whether the discharge was within acceptable limits. Council staff arrived too late to test water samples, but said the discharge last week was unlikely to have complied. Greenpeace disagrees, saying the sewage was little more than discoloured water. Greenpeace specifically asked about toilets before deciding to come to Nelson for maintenance, which included replacing the on-board sewage treatment system. The port had agreed to let the crew use its staff toilets and arranged for a key to be provided last Thursday, the day the spill happened. Most visiting crews made their own arrangements if they could not use ship toilets. The crew are now using hired portable toilets'...

The Auckland City Council wants a crackdown on shipping to reduce the risk of foreign marine organisms entering local waters through ballast water discharges. Scientists have listed 53 foreign organisms introduced by shipping. The Waitemata Harbour, site of N[Z]'s busiest international port, has at least 38 introduced species living in it... The council said all ships should be checked by engineers to see if they were capable of discharging and exchanging water ballast in mid-ocean. This enabled ships to rid themselves of unwanted marine organisms and sediments. The council also advocates a look at the practical difficulties of sampling each vessel's ballast tanks to establish the presence of unwanted marine organisms and installing telltale pump meters in ships. - 1996

Ports of Auckland is taking part in a study of the effects of ballast water discharges from ships entering N[Z] harbours. Ballast water, which is taken on board ships to enhance stability, can carry unwanted organisms into foreign ports when discharged.

...[It is known that exotic marine organisms have been introduced to NZ waters over many years by human activities. What might Captain Cook have left behind when he scraped the Endeavour's hull at Ship Cove in Queen Charlotte Sound in 1770? Because large oceans separate NZ from all its trading partners, we are totally dependent on shipping to sustain our economy. Almost 99% of our exports by volume, and 90% by value, are transported by sea. Unfortunately, empty or partially loaded ships also carry thousands of tonnes of water to keep them stable and structurally sound. Ballast water is pumped into a ship while it unloads its cargo. Usually a coarse screen prevents large items being sucked in but in one reported case 50 fish were found swimming in the tank of a ship docked in a US port. Smaller species inevitably get through. One teaspoon of ballast water could hold five million tiny organisms – and it is impossible to predict which could cause a problem. They can survive long journeys and when a ship begins loading cargo at its next port, at the same time discharging now-unnecessary ballast water, surviving organisms are flushed out along with it. The design and location of most ballast tanks have so far made treating the water and cleaning the tanks impossible. Voluntary controls on ballast water discharges have been operating in NZ since March 1992. Ships entering NZ waters are required to exchange ballast water in mid-ocean, treat it before discharge or refrain from discharging if at all possible. It is dangerous for ships to exchange water mid-ocean but compliance is reportedly good. Crucial to us, the possible import of ship-borne nasties is a worldwide issue, too. The efforts of scientists in many countries have been motivated and made urgent by already occurring marine ecological disasters – one as close as Tasmania involving the predatory starfish, the Pacific seastar.]

...At the end of 1995, NZ's Ministry of Fisheries and DoC asked 'people to watch for a voracious starfish from Asian waters.' In 1994 the NZ Government had 'imposed a seasonal ban on the discharge of ballast water by ships from Tasmania.' The 'northern Pacific sea star arrived in Tasmania as larvae in ships' ballast water, devastating shellfish beds within a decade. There was no evidence that it had arrived in NZ' as of the beginning of 1996.]

...The potential devastation of living coral by a voracious starfish in N[Z]'s largest and only sub-tropical marine reserve is going unchecked. A University of Auckland marine scientist... is calling for more research on the crown of thorns outbreak in the Kermadecs... It is now more than 14 months since [the scientist] and a D[OC] biologist... visited the islands where they found the outbreak. The density in the area studied in the northern Raoul Group of the Kermadecs was 84 starfish a hectare in water five to 10m deep. A density of more than about 30 crown of thorns a hectare is cause for concern in the tropics such as A[US]'s Great Barrier Reef where the crown of thorns have resumed their attack on its famous corals. The starfish occurs in the Pacific and Indian Oceans and is thought to have infested the Kermadecs naturally, having probably drifted in on ocean currents as microscopic larvae.

...[an invader is devastating thousands of kilometres of seabed throughout the Hauraki Gulf, says a top scientist. The tube worm is a tiny marine organism that rapidly reproduces inside a crustaceous tube. The 6cm worms build their papery tubes, up to 20cm in length, at an alarming rate, and cement them together to form a carpet-like layer over huge tracts of seabed, suffocating other marine life. Auckland University's senior marine biologist said that since the worm was discovered by scallop fishermen near Whitianga three years ago, debate had raged over whether it was a native species or an alien. However, he said that: "It's sudden appearance in such large numbers, and its dominance close to the main shipping lanes into Auckland, strongly suggests we are witnessing a major marine invasion." The worm has now spread as far north as Houhora and as far south as Tauranga. Coromandel scallop fishermen are frustrated that the Ministry of Fisheries has ignored warnings about the worm. "It's bugged our industry but the ministry has just shoved us aside," said the secretary of the Coromandel Scallop Fishermen's Association. "We don't want compensation but we need help." He is adamant that over-fishing is not the cause of this latest problem in the troubled industry, which was affected by black skirt disease last year. The ministry could not be contacted for comment. The scientist said the ministry had agreed to finance a survey of the worm's spread but it might not be able to get rid of it. "I don't want to sound alarmist but at the moment we just don't have the information to act to stop it." A similar organism had invaded coral reefs off the coast of northern NSW. But its spread had not been as rapid as in NZ.]

...The intruder arrived sometime in 1982. It rode from the Atlantic in the ballast water of a cargo ship and was flushed into the Black Sea, experts believe. Then it began to eat and multiply at a frightening rate... By 1990, the total mass in the Black Sea of all the jellyfish-like creatures, known as Mnemiopsis leidyi, was estimated at 1 billion tonnes, equal to the total weight of all fish caught in the world that year. The tale... reflects the devastation that a single alien species can cause in an almost-closed ecosystem... Free from its predators in the western Atlantic, the animal devoured fish larvae, eggs and the plankton needed by small fish. Anchovies and the Azov Sea kilka, two commercially important fish, were among

the hardest hit... "What is certain... is that mnemiopsis altered the Black Sea as perhaps no other alien species ever had anywhere," said... a biologist at the Woods Hole Oceanographic Institute in Massachusetts. [The biologist] has been studying the possible introduction of the butterfish... which averages about 700g and... can eat its weight in jellyfish every hour. But he said... "The intentional introduction of yet another species poses ethical questions... We must face the possibility that something could go terribly wrong."

...[Less than two decades ago, *Caulerpa taxifolia* was an innocuous seaweed whose long, fluorescent green tendrils were familiar to the inshore fishermen of its native Caribbean and to a handful of marine biologists. Today, after its mysterious introduction to the warm waters of the Mediterranean, the weed has been condemned as a killer. Growing at prodigious rates, depriving the seabed of sunlight and starving it of oxygen, *Caulerpa* has already ravaged marine life along the Mediterranean's poshest resorts, and experts say an environmental disaster looms if no action is taken. First spotted as a patch of about 1 sq m off the coast of Monaco in 1984, *Caulerpa* has now taken root across 5500ha of Mediterranean seabed. "I am sorry to say that the battle is lost," says a researcher from the French marine research institute Ifremer. "*Caulerpa* is now expanding at the rate of about 50% a year. When the weather is hot it grows at about a centimeter a day. Ordinary seaweed takes a century to cover 3m." Already, ecologists say, it has led to a decline in the variety and size of fish caught in the affected coastal areas. It is toxic to fish and has no significant natural enemy in the Mediterranean. France is resorting to costly and frantic attempts to get rid of it. These range from the use of plastic sheeting or aluminium film to cover the weed and starve it of sunlight, to the uprooting of the plant by hand by scuba divers, a process that costs about \$100 per sq m. Other possibilities are treatment by copper, which has been found to be highly effective, and the discovery of two species of Caribbean seaslug that feast on *Caulerpa* but not on other species of flora. Both options are still at the laboratory stage, however. Scientists are still trying to devise a cheap way of administering the copper to the weed without contaminating the neighbouring sea area, and they are leery about introducing the slugs until they are completely convinced that the newcomers will not become a pest in their own right.'

...Scientists blame recreational boaters for the spread of the tropical killer algae *Caulerpa taxifolia* by not cleaning their anchors before moving to a new area. The weed now covers more than 6000ha of Mediterranean seabed.'

...The Ministry of Fisheries says the sunken trawler *Seafresh One*, infested with the invasive Asian seaweed *undaria*, must be moved from the Chatham Islands. The fishing vessel, which sank eight days ago in Hanson Bay on the east coast of Chatham Island, was found to be carrying the weed on Saturday. The plant is a threat to other marine life and animals. It has spread to several east coast harbours since it was discovered in Wellington Harbour in 1987. However, it is not thought to be present near the Chathams. A ministry spokesman said it had ordered the trawler to be moved within 30 days and either sunk to a depth of 1500m or taken to an area where *undaria* already existed. *Seafresh NZ*, which owns the vessel, says the boat had recently been in dry dock and cleaned. Its managing director said he would be asking questions of the firm that cleaned the vessel.'

...the Chatham Islands will continue to offer its bays to sheltering ships, but does not want to be exploited any more. The mayor said yesterday that he did not know the trawler *Seafresh 1* was a "dead ship" until four days after its arrival. The Wellington-based fishing vessel was towed to Hanson Bay on March 10 after its engine-room caught fire and it took on water while at sea. It sank and began leaking diesel, launching a national operation to contain the spill before it harmed marine and wildlife in the area. The mayor believes the ship still had power and would have been able to leave the area without help. He will seek answers from the company that owned the vessel about why *Seafresh 1* was not towed to the mainland immediately, instead of the Chathams. Local people had also questioned why a crippled fishing vessel was towed close to the island's fishing resources. The MSA said yesterday that there was no trace of the 2km-long by 100m wide slick seen drifting 8km offshore. On Saturday, divers had plugged vents leading from the vessel's fuel tanks.'

...The owner of a North Sea shuttle-tanker, on charter to Norwegian state oil company, Statoil, has been fined a record amount for an illegal oil discharge from a ship, the British Coastguard Agency said... [The] owner... was fined £35,000... after pleading guilty to responsibility for a spill of 10... to 20 tonnes of oil in the Humber Estuary on January 3...

[There's no sign of the Asian fishing fleet off the North Otago coast now – people are still picking up rubbish washed on to beaches though. "There are Sprite and Coke bottles with foreign labels, peanut butter jars, shampoo containers, medication, sauces and even dozens of full packets of noodles." New marine pollution regulations are in the process of being written.'

...a world fleet of 50,000 ships dumps at least six million tonnes of metal, glass and plastic containers overboard every day.' Ships even lose containers overboard (e.g., during storms)! Sometimes – such as when a ship is called to aid in a rescue – 'containers are deliberately dumped to make the vessels lighter' (although, ironically, 'several ships have sunk after hitting stray containers').

...the 'two-tonne rolls of industrial packaging paper being washed ashore in the Bay of Islands after being lost off a container ship are likely to be collected by barge and taken back to the Carter Holt Harvey paper plant at Kinleith, where it will be decided whether they can be recycled or disposed of. CHH has told the Northland Regional Council that three containers, among six lost overboard from the Malaysian container vessel *Bunga Kenari* off Northland last Saturday, held a total of 44 rolls. The rolls were loaded in Tauranga for export to Malaysia. So far, the regional council knows of 29 rolls washed up or floating in the Bay of Islands. The council and CHH will work together over the next few days to try to collect and clean up the rolls before they deteriorate further. They will also search for more containers.'

...Areas of the Queensland coast requiring ship's pilots may be extended to include the Whitsunday Islands. Great Barrier Reef Marine Park Authority's chairwoman said the authority was considering changes even before the Malaysian container ship *Bunga Teratai Satu* ran aground on Sudbury Reef near Cairns earlier this month. It was freed 12 days later in a controversial operation involving blasting away several sections of reef. The ship was in an area where compulsory pilotage was not required. Charges of causing serious environmental harm have been laid against its owners, captain and first mate. The chairwoman said the authority was concerned not only about coral damage but about removing anti-foulant paint scraped off the ship's bottom. The authority's executive director said a specialist park team had prepared a report on what was required to rehabilitate Sudbury Reef. He said shipping insurers had given him verbal assurance they would immediately begin removing the paint and repairing the reef – expected to cost \$A500,000'. Meanwhile, a 'second snorkeller has been left behind by a Great Barrier Reef charter boat.' ● The 'US diving couple who were left behind on another part of the reef by a different charter boat, whose skipper failed to check numbers before returning to port, are presumed to have either drowned or been eaten by sharks.'

...Police fear for the safety of the 4th tourist to go missing off Queensland's coast in 3 weeks.' In local news, 'pollution experts say the air force is responsible for a spill that turned part of Auckland's Upper Waitemata bright fluorescent green. An ARC pollution control officer says a non-toxic dye, fluorocine, contaminated the estuary foreshore near Hobsonville airbase on Wednesday. Small packets of the dye are kept in air force lifejackets so personnel can mark their location if they need to be rescued from water. Two matchboxes full of the powder is enough to colour 2 sq kms of water. "They were doing some form of maintenance at Hobsonville. The guy removed the packets and tipped them down a sink, which was unfortunately connected to the stormwater not the sewerage system." "The air force takes full responsibility and is rectifying the situation," said a spokeswoman. Waitemata volunteer firefighters pumped 100,000 litres of water containing about 90% of the pollutant into a tanker. The liquid was taken to a waste disposal area and treated.'

...HELP! Nobody should be out there. But they are. Engine breakdown. Battery failure. Equipment or hull damage. Accident or illness. Inexperience. Poor judgement. Or sheer carelessness. Whatever the reasons, whatever the conditions, our volunteers are regularly called on to offer assistance (last year we received 2,669 calls for assistance, and 5,447 people were rescued), often in the most extreme and dangerous circumstances. Saving lives. Risking their own. Now we need your help. We are not a government department. And while we are very grateful for the generous support we receive from grants and the community, it is never enough. We have 62 action units on coastlines and lakes throughout NZ. All weather purpose built vessels and aircraft are available 24 hours a day to effect rescue missions up to 12 miles off shore. To operate quickly and efficiently we need the latest technology – radar, G.P.S.

location and computerised radio direction finding equipment and pagers. We need sophisticated first aid facilities, training and safety education programmes. And we need money. If we had more, we could do more. And for someone, somewhere that could be the difference between life or death. By helping us, you help many NZers. And of course, you could be a big winner! Thank you. And good luck. DON'T MISS THE BOAT, OR THE EXPLORER, OR ANY OF THE OTHER SUPERB PRIZES (100 prizes worth \$210,460) in the Royal NZ Coastguard Federation Lottery – Tickets only \$10 (limited to 100,000)'...

'COROMANDEL coastguard services are angry a prank mayday call tied up police and coastguard resources all day yesterday. Whangamata Coastguard received a mayday call at 11.13am from a man who said his five-metre runabout had hit a 44-gallon drum near Shoe Island, had a damaged hull and was sinking. Two planes, a helicopter and 30 boats were called upon to help, but the search was abandoned after four hours when police failed to find any wreckage. A constable said the Coastguard received another call at 3.17pm from a boat called the May Rose, claiming it had rescued the survivors near Tairau. The caller said they were all well and he would bring them to Whitianga. He later rang back to say the boat would be delayed because of electrical problems. But at 7.30pm Whitianga police decided the calls were a hoax after a search failed to find the rescue boat. "It's the work of a real sick person," said Whangamata's Coastguard co-ordinator. The calls were too short to be traced. Meanwhile, Blenheim police were last night still looking for a couple missing in a remote part of the Marlborough Sounds. Benjamin Smart (21) and Olivia Hope (17) were last seen at the Furneaux Lodge, at the Endeavour Inlet on the northern shoreline of Queen Charlotte Sound, 34km by launch from Picton. Anxious parents contacted police late on Friday and off-duty police were called in yesterday to bolster the search party after initial inquiries failed to locate the pair. About five launches and at least 30 searchers were combing the area, said Picton police. The search was expected to resume this morning.' By the way, the] **American who defied authorities when he sailed from N[Z] in breach of safety regulations has appealed against his conviction... [He] had left Opuia for Noumea... on his Maltese-registered 12m cutter... in May 1995 without satisfying the director of maritime safety that the vessel carried appropriate safety equipment and crew to make the voyage. He was the first foreign yachtsman to be prosecuted under section 21 of the Maritime Transport Act, which required yachts to undergo a safety check before leaving N[Z], and was... fined \$1200. In submissions to the High Court at Whangarei yesterday, [his]lawyer... argued that section 21 could not apply to foreign-registered pleasure craft... [and] said no other nation was known to require foreign pleasure craft to undergo inspection. But the lawyer for the... [MSA] submitted there was no conflict between N[Z]'s maritime law and international convention, and [the USer] had made a deliberate decision not to comply. Outside the court [the USer] said that if he did not fight the charge other countries might adopt similar procedures if "they thought they could get away with it." He said funds to fight his battle had been raised by concerned boaties worldwide... [He] was meanwhile stuck in the Bay of Islands but was considering having his yacht towed out of N[Z] waters. The court ruling against him infringed on the principle of freedom of all small boats in international waters, he said.**

...A conviction against a yachtsman who refused a safety check before leaving N[Z] in 1995 was upheld in the High Court at Whangarei yesterday... He... is considering going to the Court of Appeal. [Editor's note: Every year yachts become distressed or go missing in or near NZ waters. Most of the searching is usually done by volunteers and the air force (which, excluding fuel, is funded in advance – and regards search and rescue missions as being 'part of its regional role as well as providing valuable training'). 'Volunteer search and rescue teams receive partial funding from the police training budget.' Rescued yacht owners aren't sent a bill. Perhaps the USer would prefer NZ maritime authorities to let unsafe boats leave and, if a distress call comes from any boat 'without a clearance certificate', either exercise the *principle of freedom* to ignore it or charge them for the search costs?]

... 'a weak ionosphere can cause high-frequency emergency radio channels to not work properly worldwide for several months, meaning that cargo ships, fishing boats and other vessels have to rely on either VHF signals – the cheapest option but which provide only "line of sight" communications and have limited range – or emergency locator equipment that relies on satellites. The ionosphere's effectiveness as a mirror varies over an 11-year cycle.'

... 'When yachts are battered at sea by walls of water, driving wind and rain, helicopters are often in the front line of rescue. Bad weather – usually responsible for grounding aircraft – sometimes means rescue teams have to take to the air in treacherous conditions to haul stricken and injured people to safety. On Saturday, a team took off to find, then rescue, a US family from the crippled yacht Freya, 90 nautical miles off Whangarei. In 70-knot winds, the Northland Electricity rescue helicopter hovered over the vessel, and eventually winched a couple and their 13-year-old son out of danger. Giant waves, 10m and higher, crested just 5m below the helicopter during the rescue. But there are other problems for crews battling the forces of nature to save lives. Visibility is a key factor. During Saturday's rescue, the crew had to scan the ocean in visibility of just 400m. Big waves can create turbulence for a low-flying helicopter trying to hover. Masts and rigging swinging wildly as vessels pitch and toss are big dangers to rescuers being lowered from helicopters.'

...A RESCUE helicopter last night battled treacherous weather to pluck nine crew from a stricken... yacht adrift and threatening to sink off the South Island coast... A distress call was sent about 4pm after a crew member suffered head injuries and the National Rescue Co-ordination Centre in Wellington swung into action... The Westpac helicopter was dispatched at 7pm but fears winds gusting to 60 knots might prevent the rescue resulted in the Lynx fast ferry, heading to Picton with more than 300 passengers, being diverted to assist. Unable to battle the high winds, it was sent back on course and the ferry Aratika, travelling to Wellington, was diverted about 8pm on the three-hour trip to the scene... [A second helicopter] airlift... was completed just after 9pm, and the Aratika rediverted... During a dramatic incident, one of the crew became entangled in the hoist rope... was nearly strangled... and... dropped into the sea...

A woman sunbathing on the shores of Lake Taupo yesterday afternoon got the shock of her life when a jet-skier coming into the beach landed on top of her... The jet-skier is likely to face charges, but authorities are unsure how to proceed because it is the first time an accident involving one of the machines has happened on shore rather than on the water. The Taupo harbourmaster... said he would seek legal advice on how charges could be laid under the Maritime Transport Act. He said jet-skiers were out of control on Lake Taupo, colliding into one another and zooming close to swimmers... [The harbourmaster] said more than 150 jet-skiers were on the lake each day and he received 120 complaints about them yesterday. "They're a huge headache. I'm spending all my time chasing jet-skiers." ...He was fining about 15 daily up to \$500 each for exceeding five knots within 200m of the shore, or being closer than 30m to a swimmer... it was only a matter of time before someone was seriously injured or killed.

...['A woman was run over by a four-wheel-drive vehicle while on a picket line outside the Port of Lyttelton yesterday. The woman, the wife of a port worker, later died in Christchurch Hospital. The incident happened as port workers picketed over a dispute about the Lyttelton Port Company's contracting its coal-loading work to a West Coast firm. Picketers said the driver of the vehicle was becoming abusive when forced to stop. He drove off at speed, leaving the woman, who had had her hands on the bonnet, sprawled unconscious on the ground. "He went right over the top of her," said a picketer.'

... 'A jury in the High Court at Christchurch has found a pleasure-boat importer guilty of the manslaughter of Lyttelton picketer Christine Clarke, a 45-year-old mother of two, after deliberating for almost 12 hours. The importer's counsel had argued that the Port of Lyttelton picket was illegal, and that he drove off after being illegally detained and attacked by picketers. The Crown said the importer could have retreated by reversing his 1.8-tonne Land Cruiser. It said the fact that the picket was illegal was irrelevant, and the importer had driven forward out of impatience or anger, not as an act of self-defence.' In international news, m] **ercenaries were undergoing training in Dubai at a cost of \$A10 m... in preparation to break up union power on A[US]n docks, it was claimed yesterday. The A[US]n Opposition leader... said the first contingent of up to 70 men had been recruited through advertising in the defence force magazine *Army*... But the Opposition admitted it had no documentary evidence as to who was bankrolling the plan, while suggesting it could be private shipping companies with the approval of the Government. The Government has vowed to break the power of the Maritime Union of A[US] on the docks, with unions warning of war on the water-front if troops were brought in... The Labour Party's transport spokesman... said... [up] to 180 further people would be trained... [T]he men would be paid between \$A46,000 and \$60,000 per annum... "This is indeed a very sinister operation... this is a clandestine, covert operation of industrial mercenaries, effectively similar in concept to the**

problem... with Sandline in Papua New Guinea... They will be deployed as... a scab labour force... to attack the Maritime Union of A[US] and the members of that union," he said... The Workplace Relations Minister... strenuously denied any involvement in the plan. "It is quite frankly news to me..." he said.

...The... International Transport Federation... which represents 500 unions worldwide... forced the expulsion from Dubai of A[US]n soldiers being trained as potential water-front strikebreakers yesterday[, and] warned it would hound any other "scumbag" country that accepted the trainees[– who are being 'bankrolled by farmers organisations concerned about the effects of inefficient ports on their ability to compete with other exporting nations'.

...AUS]n dockworkers, fresh from an international victory... yesterday rejected Government attempts to modernise the waterfront... [Unions] refused to accept targets for crews to work more efficiently.

...The Columbia Star, a... freighter from N[Z], has been waiting to unload at Long Beach, California, since the middle of last week... Paralysis strangles this seaport and that of Los Angeles which adjoins it – the two largest American ports in terms of the dollar value of container cargo. The two ports are crippled by a combination of troubles which began with the inability of a giant railroad merger to meet the demand for haulage, and are exacerbated by a shortage of motor transport and port workers, a harbour pilots' strike, chaotic mixups of laden and empty shipping containers, and a booming increase in Pacific trade... expected to increase 28[%] for the year ending next June... The International Longshoremen's and Warehousemen's Union in Southern California is training workers and adding 30 every day to cope with the overload... The Columbia Star, which arrived... with a cargo... meant for Los Angeles, has been diverted to Long Beach and is still standing off while waiting for dock space, probably tomorrow... according to the Maritime Exchange, which co-ordinates shipping for both harbours. Unloading the Columbia Star may take five or six days – a task usually requiring only 24 hours. If ship arrivals stopped completely, it would take five or six weeks to clear the port congestion, said[the] executive director of the Maritime Exchange... Blame for the shipping nightmare, which also affects other Pacific coast ports as well as wholesale and retail commerce across the western U[S], is concentrated on the Union Pacific Railroad. It recently took over the Southern Pacific and is struggling to integrate two major rail systems, with 56,000km of track. Ineptitude in the huge new systems' management is also being blamed for tying up the movement of grain in the Middle East[of the US], where corn and wheat are being piled up out of doors; in Texas where oil shipments are stalled, and in the Pacific north-west where timber and steel shipments are stalemated... The national Surface Transportation Board is said to be threatening measures to punish... Union Pacific.

...N[Z]'s maritime industry faces a staffing crisis... the Merchant Services Guild has warned. Officer cadetships have fallen from more than 50 annually a decade ago to just a handful today, leaving the industry with little alternative but to recruit from overseas – often from countries with inferior training standards, the union says... [Unfortunately, t]he problem was not confined to NZ... International Shipping Federation figures showed that in 1995 there were 409,000 qualified deck officers in the world – 18,000 short of the number needed... The[union's] secretary... said that the full effects of the shortage would not be felt for another five to 10 years, when half of the N[Z] officers and masters were due to retire. That would leave the country struggling not only to man ships but also to fill the myriad of shore jobs taken by officers who had retired from the sea. "In the next 10 years we are going to be short of stevedoring supervisors, compass adjusters, maritime surveyors, harbour pilots, tug masters, insurance assessors, maritime safety inspectors and so on." ...[Incidentally,] Port Nelson pilots will soon head to A[US] for training on a computer simulation of their own harbour. The simulation, being built by the A[US]n Maritime College at Launceston, Tasmania, from charts, soundings, weather and tidal information, will hone pilots' skills and test how well the harbour can take larger ships.

...Port Nelson Ltd plans to spend \$23.6 million on capital works over the next two years... in preparation for a predicted rise in cargo tonnage to 3 million tonnes a year between 2003 and 2008. The planned expenditure included a new \$4 million container crane, a new repair and layup berth, wharf upgrading and a cargo container tracking system... reclaiming more than 2ha of the harbour... and deepening areas of the harbour floor. Up to six ships at a time would be able to berth at the new facility.

...Investigations which started 20 years ago into a deep-water port at the entrance to the Whangarei Harbour have come to a head with the start of a hearing into the port application. About 80 members of the public attended the opening session of the four-week hearing yesterday in front of a panel of independent commissioners appointed by the consent authorities.

...[the] Northland Port Corporation chairman... wants the Government to pay more attention to the soaring costs businesses incur in complying with legislation and regulations... He cited the \$4 million plus costs of the hearings and public consultation process for a new deep water port at Marsden Pt when the port company sought consents under the Resource Management Act.

...Northland Port Corporation expects a decision in the next two weeks on its proposed deep-water port at Marsden Point... [The] proposal was subject to... approval from independent commissioners appointed by Northland Regional Council, Whangarei District Council and the D[OC].

...after years of planning and investigating... Northland Port Corporation said yesterday it had been given the green light for its \$76.5 million... deep-water port project... [which] will include a 32ha reclamation, stretching 500m into the harbour... The 2.8 million cu m of fill dredged from the adjacent seabed will create a 45ha ship-turning basin with a minimum 13m operating depth... needed to cope with an imminent upsurge in Northland's forest product exports...

Anglers are preparing to resist plans to dump Onehunga port dredgings off the Manukau Heads. The Ports of Auckland wants to dump 10,000 cu m of dredgings a year... in water depths of about 30m... 8km from the Awhitu Peninsula, which forms the south head of the Manukau Harbour. The company bid for A[RC] resource consents for the dumping will be discussed at a public meeting in Waiuku on Tuesday night. Company spokesmen can expect some close questioning from the Counties Sport Fishing Club, which has 500 members. The club president... said last night she felt any dumping should take place outside the 12-mile territorial limit instead of in part of the recreational fishing grounds. "The dump will be over a popular snapper fishing spot. Two marlin were also caught there last year,"... Dumping beyond the 12-mile limit was too costly... said... [t]he company's manager of port planning... [He added that] the life of the port depended on annual dredging of up to 10,000 cu m to cater for cement carriers, coastal container ships and the fishing trawler fleet... For decades port dredgings have been dumped in the Purakau Channel inside the Manukau Harbour. The channel, near Puketutu Island, also takes the discharges of treated waste from the Mangere sewage plant. Permits granted in 1991 for the company to use the channel expired last month.

...A plan to dump Onehunga port dredgings off the Manukau Heads will be given closer scrutiny by Ports of Auckland. This follows a complaint from Counties Sport Fishing Club members... The ports planning manager... said a further study would be made of marine life in the area to determine the impact of dredgings on the food supply of snapper... [He] also undertook to review a suggestion from anglers that an alternative dump site be found outside the 12-mile limit.

...[P]orts of Auckland is considering building an inland container port beside the main trunk railway line in Hamilton. The Mayor of Hamilton says he and Ports of Auckland's chief executive have been discussing the proposal for nine months. A port industry source says it would make sense to have Hamilton as a loading and unloading point for the Ports of Auckland's recently announced \$5 million plan to extend its container catchment area in the North Island by running its own rail freight service between Auckland and Palmerston North. Plans for an inland port at Hamilton also appear to have been hatched to take back some dairy and meat export business lost to the Port of Tauranga in recent years. Last week Port of Tauranga took the Far East service of major shipping line Fesco off Auckland. Tauranga was able to cater for the extra business by the development of its own inland Metroport container

distribution hub in South Auckland. Tauranga and Auckland were both the same distance from Hamilton but all the dairy factories in the Waikato, except Te Rapa, were closer to Tauranga. Dairy export volumes passing through Tauranga have risen to 550,000 tonnes from 370,000 tonnes two years ago.'

... 'Tauranga Harbour is one of the best kept secrets in the Bay of Plenty and many areas are left unexplored by the locals. THE CENTRE of attention is the Mount at the entrance to Tauranga Harbour and the Port of Tauranga, NZ's largest export port. Shipping movements can take place at any time, day or night, so the channels leading to the main wharves must be kept clear. Tauranga has a lot more to offer however with a harbour that covers 200 sq km and is 24 km between the Katikati entrance at Bowentown and the larger entrance at Mount Maunganui. Approximately 290,000,000 tonnes of water flow through the entrances for each tidal change. This flow generates currents up to 7 knots within the entrance channels.'

...Financial uncertainty in South-east Asia is disrupting log shipments out of Tauranga... Challenge Forests, said a couple of log orders for South Korea had been cancelled because of an inability of the customer to get a letter of credit through the banking system... [By the way, t]he sale of property worth \$2.95 million boosted the Port of Napier's after-tax profit to \$6.73 million for the year...

For the financial year ended June 1997... Ports of Auckland... container volume... totalled 464,056 boxes... up from 405,092 boxes in 1996 and 380,964 boxes in 1995. Ports of Auckland already has 50[% of NZ]'s container market... [Despite the growth, its net] after-tax profit for the year... [was down 33%] compared with the previous period... [However, the] profit decline is mainly due to a number of one-off property sales which boosted its bottom line with extraordinary gains in 1996.

...Northland Port's after-tax profit... for the year... fell 16.6[%] to \$7.12 million... The profit included an abnormal gain of \$854,000 from the sale of a site near Auckland's Viaduct Basin, which realised extra value added by the upcoming America's Cup. Revenue for the year totalled \$66.56 million, against \$70.75 million last year... The chairman... warned of slower export demand and more intense international competition in the light of Asia's economic turmoil... The company... paid... a... dividend of... 8.25c, the same as last year.

...Port of Timaru announced a record \$2.8m loss and said no dividend would be paid this year to its shareholders, the Timaru District Council and listed investor *South Eastern Utilities*.

...N[Z] has 12 ports and in the first half of the year offshore cargoes fell at seven of them. Volume was about flat so... that fall in tonnage was being picked up by other ports. But as[the] outgoing Port of Wellington managing director... said last week, ports have limited ability to influence the direction that cargoes take. Port costs, he said, were small compared with the cost of moving the freight inland, so road and rail pricing was proportionately a greater determinant of where freight was landed or shipped from. Even when ports were able to increase volumes, margins were under real pressure. Port of Wellington, for instance, last month reported a 6[%] slide in annual profit to \$5 million, despite a 2.9[%] increase in cargo tonnage to 7.46 million. Ship arrivals were up 4.5[%] at 4969, although container vessels visits were down... Margin pressure might be good news for exporters and importers, but a "destructive" level of competition... among shippers is putting a real squeeze on some ports – ports that are predominantly rate-payer owned. And when ports start losing money, as Timaru did this year, that comes off the shareholder's value. The warnings are not new and councils have enjoyed good returns from the port stakes they inherited in the 1988 local government reform. In 1993 Waikato councils sold their stakes in the ports of Auckland and Tauranga and since then have been using the \$66 million fund created to offset rates. In the past year, several councils have enjoyed multi-million dollar capital returns as ports re-gearred their balance sheets, with Hawkes Bay Regional Council due in December to distribute about \$13.5 million among its ratepayers. But as high-value container traffic has been inevitably sucked toward N[Z]'s hub ports at Auckland and Lyttelton, and more North Island bulk cargo has headed to Tauranga for shipping, the warnings have become more strident. Even Lyttelton, which reported a 17.4[%] rise in post-tax profit this year, warned of the risks. In May, [its] outgoing chairman... asked how Christchurch City Council could justify keeping its 65[%] stake... when Solid Energy was... building a... 2.2km jetty on the West Coast for coal it now ships through the port. "Strategically and financially the council is not acting prudently," he said. [The] Ports of Auckland chairman... believes fundamental rationalisation – mergers and acquisitions – will begin among the ports within the next two years. But he is concerned at the value loss that may be incurred in the meantime as parochial shareholders continue investing to retain business. "There is already surplus capacity within the ports but people, in order to try and be more competitive, are still spending money and further increasing the surplus capacity,"... [With] the increase in coastal shipping, some ports have a future that they did not before. But he believes only a few have good prospects for growth, and that there is an urgent need for ports generally to decide what business they are in.

...Southland Regional Council will next week consider selling between 18[%] and all of its \$35 million shareholding in Bluff port operator South Port.

...privatisation of Ports of Auckland Ltd has been thrust back on to the political agenda by last week's roller-coaster ride on the sharemarket... [T]he chairman of the Auckland Regional Services Trust which has a \$700 million ports stake, said last night from Brisbane: "I believe we must sell some of the shares." The[ARST] chief executive... says... that the sharemarket volatility threatened the value of the trust's 80[%] stake... \$120 million was wiped off the value of the trust's ports investment when comparing the shares' highest price, \$7.55, with last week's low of \$6.41 on Tuesday. But by Thursday evening they had bounced back to \$6.80, representing a \$42 million recovery. [The chief executive] says it is financially unwise to carry that form of exposure without a clear strategy for managing and minimising the risk... The issue of the sale of the trust's ports share has been dormant since 1992, when the then owner of the stake, the [ARC], narrowly voted against privatisation... [The ARST chairman], who at election time flagged the possible sale of some shares, said last night: "Regardless of what might have been in [the Citizens and Ratepayers Association 1995 election] manifesto, we have to take a sensible business attitude because we are stewards of public funds." He said that if the trust decided to sell some or all of its ports shares it was required to consult the public. An Alliance list MP... said... "Some Gucci-wearing jerk in Hong Kong has a bad day and suddenly we're looking at selling our flaming port." As a radio talkback host in 1991-92, she stirred up a successful public campaign... against selling the ports. But in 1993, the Waikato Regional Council floated its 20[%] stake on the stock exchange at \$1.60 a share.

...The [ARST] has been promised "war" if it tries to privatise... Ports of Auckland Ltd. The warning shot was fired yesterday by a trust member... after the chief executive... raised the possibility... "I'm sick of this push, push, push to sell the ports. That's not his job," [the member] said. "He is not there to promote policy. He is there to give advice." ...[the] Alliance deputy leader... [also] warned in a statement that the trust would have a serious fight on its hands if it tried to sell... "The public of N[Z] paid for the development of this valuable asset and it is the public that should reap the rewards of keeping it rather than private business." ...The... trust received dividends of \$41.3 million from the ports company last month, boosting the trust's total cash holdings to about \$89 million... The executive director of... [a sharebroking company said the] ports company was a "gem" of an investment and many investors, locally and internationally, wanted a piece.

...The Mayor of Manukau... last night vowed to fight Ports of Auckland for the ownership of two popular South Auckland marinas. [The mayor] was reacting to a High Court ruling which favoured returning ownership of the Half Moon Bay and Bucklands Beach marinas to the port company. It overturned an earlier decision by the Minister of Transport... who said the facilities were not part of the former Auckland Harbour Board assets approved for transfer to the port company in 1988... The marinas were valued at \$2.2 million on a peppercorn rental basis when they were bought by Ports of Auckland in October 1988, but are now worth considerably more. They were set to be vested in Manukau City with no apparent compensation to the port company, had the minister's decision been allowed to stand... The minister's decision and the way he exercised his discretion was wrong in law, the judge said.

...Auckland's "poor" boaties are nervous about plans by the new owners of the Okahu Bay hard stand to improve it with... \$250,000... [of] landscaping and better facilities. The Auckland City Council has taken over ownership and management of the 3.2ha reclamation from Ports of

Auckland. The land is home to the Royal Akarana Yacht Club, several boating clubs and a kayak hire business. It also provides an area where boats can haul out their vessels for maintenance, and a boat ramp and car park... The... chairman of the Okahu Maritime Park Group... said... Okahu was the only public place... [for “poor” boats in] an era where expensive marinas were taking over harbours]. By the way, a ‘storm has destroyed Lyttelton’s half-finished marina, sinking 27 boats’...

‘The pockets of Aucklanders who do business or have facilities occupying the coast and sea are set to be hit – if ARC plans for a coastal occupation tax get the go-ahead. Marinas, private jetties, wharves, boat ramps, moorings, and marine farms are all possible targets, in a move the ARC’s environment committee says has been a council option since the beginning of the year. ■’] The threat of huge legal bills has forced... [the abandonment of] a legal challenge against Ports of Auckland’s \$100 million plan to extend the Fergusson container terminal. The... lawyer acting for the... Auckland Yacht and Boating Association[, which] joined... other objectors... [because] the extension would make the Devonport side of the Waitemata Harbour congested... said... [along] with the estimated \$100,000 cost of taking the appeal, Ports of Auckland would be able to seek costs if the appeal failed. While shared among the [7] appellants, these could come to half a million dollars. Ports of Auckland had never said it wo[n]’t try to seek such costs.

...Plans to erect a large tower crane over the Devonport naval base are likely to be opposed by residents wanting the military bound by tighter land designations. The Navy wants to replace four aged cranes with a \$2.58 million permanent tower structure rising 45m above its dry dock. This will be higher than the Calliope Rd ridge running behind the base’s south yard, and the crane will have a 50m horizontal jib. The Navy says it needs this to lift modular components from the new Anzac frigates, especially as the older cranes have had their load capacities downgraded... The Navy’s head of fleet support... said it recognised any crane of such height would have an impact on the views of Devonport residents and harbour users alike. But he said a consultants’ visual assessment report noted that, as part of an operational dockyard scene, the crane would be “in keeping in general terms with the appearance of this type of industrial area.” The consultants went further, however, in saying a large horizontal jib held high in the sky was of a shape not seen before in the dockyard and was more commonly associated with temporary construction sites. “The impacts therefore on the residential neighbourhood of the dockyard when perceived will be significant,” they say... Its jib and upper tower would appear above house roofs to become visible along the length of William Bond St, which now saw nothing of the dockyard.

...Balloons are about to go up over the site of a giant tower crane at the Devonport naval base, but it may not be party time for all the neighbours. The Navy has agreed to fly the balloons on Saturday and Sunday to give nearby residents a graphic measure of a 45m-high crane that it intends erecting as a permanent feature of its dry dock. This follows disagreement by residents at a community board meeting over the Navy’s prediction of just how visible the crane will be from neighbouring streets... [The situation wasn’t helped by February’s announcement that r]adio emissions from the Navy’s communications station at Devonport exceeded safety standards inside a neighbouring childcare centre – but test results were kept secret for two years... Navy staff admitted the cover-up... after inquiries by the N[Z] Herald. They said things would be done differently if radiation levels again exceeded maximum limits, but insisted staff and children at the creche were never in danger... The North Shore City Council says it should have been notified of the radiation levels in 1995. Instead, Navy staff shut down two of the station’s six aerials, took new recordings and sent those results to the council indicating all was well... Compliance with the standard was a condition by the council when it issued resource consent for the... station in 1993. The childcare centre is on Defence land and can take up to 50 children. The aerials, two of which are less than 10m away, are used for communicating with Navy ships. Radiation levels... more than double[d the NZ] standard... for up to six months, possibly longer.

...A high radio transmitter radiation reading near a Devonport childcare centre in 1995 was the fault of incorrect testing methods, the Navy has told the North Shore City Council... Navy representatives... [said] that the high reading was the result of measuring the radiation from the Navy side of the fence, rather than the childcare centre side. Some of the radiation was reflected back and magnified because of the fence... The explanation for the high reading was given to the council’s regulatory committee... The council asked for annual readings, but... the Navy declined the request because it was a huge inconvenience and expense... The Navy’s head of fleet support... said someone made a mistake... in 1995... and the incident was a storm in a teacup... [The Navy has largely diffused the radiation issue, but t]he 45m crane planned for Devonport naval base may have to shrink 14m if North Shore City Council planners have their way – making it too short to work on Anzac frigates... Council planners have recommended a shorter crane or a single luffing jib crane with a maximum height of 53m above the dock, which is considered less intrusive than the construction-style tower... The Navy and Devonport Community Board would not comment yesterday, preferring to wait until a recommendation was made to the council after next Monday’s board meeting. The Minister of Defence will then respond to the council’s recommendation, receive advice from the Navy and decide, which the council may appeal in the Environment Court.

...The Coromandel ferry service is again in the midst of a storm even though its boat is still in dry dock in Auckland. The 17m ferry... under repair at the Devonport dockyard after a grounding... has been refused permission to land at wharves in the Coromandel harbour. The order has been made by the Coromandel-Colville Community Board, which after a year of negotiation has been unable to reach agreement with the ferry operators over landing charges. The ferry skipper... said he would be willing to accept the same \$800 annual fee charged similar-sized vessels, usually fishing boats, for landing at the Coromandel wharf and the Hannaford Point jetty. The board and the Thames Coromandel District Council wanted to charge \$2500 but had failed to justify the amount, he said. “Why should it cost less for dead fish than live people?” The community board chairwoman... said the fee had been calculated at a rate of 15c a passenger and based on patronage estimated by a former ferry company director... The... [ferry] seats 59 and is licenced to carry 70 passengers...

A compromise over wharf user charges was reached yesterday in a bid to end a long-running dispute between Hauraki Gulf commuters and ferry operators. The wrangle centres on maintenance fees which are levied from passengers using the Auckland City Council-owned wharves on Waiheke, Great Barrier and Rakino Islands. More than \$500,000 in fees is levied each year. It is sourced largely from ferry services operating out of Waiheke... Two... operators... say the passenger-levy system is unfair and gives fishing boats and other users a free ride. They want to see vessels charged berthage fees for each visit instead. But other operators and island residents want to stay with the status quo. They fear that high berthage fees could deter new businesses and allow a monopoly which could lead to price rises... [In related news, t]he company operating the trouble-plagued ferry between Coromandel and Auckland has been placed into receivership... The... ferry bought for \$430,000 about 18 months ago is up for sale.

...A new ferry service to Pakatoa Island has been launched by the owner of the resort... The 18m catamaran, which carries 130 passengers, will make day trips to the Hauraki Gulf island. [The owner] is discussing with other tourism operators a plan to offer a “loop” between Auckland, Pakatoa and the Coromandel Peninsula.

...A GOOD way to avoid the traffic jams in Paris is to see the sights by boat. The hop-on hop-off services link the main attractions of Notre Dame, the Louvre, the Eiffel Tower and Musee d’Orsay. Three boats cruise the route between 10 am and 7 pm and a daily pass costs \$13. [In local news, Auckland’s Yellow Bus Co has been ‘sold to Stagecoach for \$110 million.’

...‘Auckland bus and ferry passengers will enter the world of seamless travel on Sunday, when they will be able to transfer between services on one ticket. Stagecoach yesterday announced the introduction of integrated ticketing from Sunday, ending years of frustrating delays for commuters who have had to buy new tickets for different journeys. Public transport users and politicians have long complained about the lack of co-ordination between different bus and ferry operators. Now, passengers buying a \$99 monthly Gopass can use it on all Stagecoach Auckland services. A \$7 day pass, Aucklandpass, will also be able to be used on buses and ferries. The services involved include the Link bus and routes operated by Whenuapai Buses and Cityline. The alignment of fares and passes is a result of Stagecoach buying the Yellow Bus Company last month, then a week later buying 51% of ferry company

Fullers.' A family (2 adults plus up to 4 children) Aucklandpass costs \$14. Also available is a 'single-person "Rover" pass, which allows 3 consecutive days of travel for \$17.'

...Fullers has shut down non-public holiday sailings to Great Barrier Island' because the three hour service – which sometimes carries no passengers – is unprofitable. The decision has dismayed islanders, especially those whose children go to school in Auckland and return to the island at the weekend.]

...Key decisions surrounding the purchase of a new Hokianga Harbour ferry will be reconsidered following an allegation that a Far North District councillor had a financial interest in the matter... [Meanwhile, a different] ferry operator has been granted a subsidy for a struggling commuter service between Gulf Harbour on the Whangaparaoa Peninsula and downtown Auckland. The transport committee of the [ARC] yesterday approved the subsidy for Gulf Harbour Ferries Ltd which amounts to \$125,000 over 12 months. But the... subsidy came with a condition it was for a six-month trial and that should it continue, the operator must reach a target number of commuter passengers within two years... [The] target was confidential but it is understood... to be about double the present number – 40 to 45 passengers a day. More than 28,000 now live on the peninsula and the number is expected to increase to 45,000 in 15 years. Since the commuter service began in 1995 it has received a subsidy from the developer of an expensive marina, housing and golf course complex... Gulf Harbour Investments Ltd... [Its] general manager... said yesterday the company would stop its subsidy but would consider subsidising a weekend service.

...Some North Shore commuters will have up to 25 minutes slashed off trips to downtown Auckland with bus and ferry services which began yesterday... Link feeder buses will take Chatswood and Highbury residents to the Birkenhead ferry, and those in Milford and Takapuna to Bayswater. The ferries will connect with the inner-city Link buses. The Bayswater service is the area's first passenger ferry service since the construction of the harbour bridge, while Birkenhead has had only a morning and evening service. The ferries and feeder bus services operate during the week – every 30 minutes at peak times, then hourly until 9pm and 11pm on Fridays. Bus and ferry operators said they were encouraged by the first day's patronage... The Bayswater ferry carried about 10 people each trip and the feeder bus about six. The Link service... received a \$650,000 subsidy from the Auckland Regional Council kitty... It will get the same sum this financial year... North Shore politicians say additional Waitemata Harbour commuter ferries could be used to relieve Auckland Harbour Bridge congestion... A push for... [further] funding from the [ARC for] ferry services from the East Coast Bays and Takapuna to the downtown wharves is under way.

...The Bayswater wharf is now legally owned by the North Shore City Council following an amicable out-of-court settlement with the Auckland port company. The transfer comes as the wharf handles increasing numbers of ferry commuters crossing the Waitemata Harbour[, indicating]... its significance and benefits to Shore commuters... Ownership of the wharf and an adjacent piece of land had been unclear since the abolition of the Auckland Harbour Board in 1989, when the Ports of Auckland Ltd bought the board's assets worth \$250 million... The chief executive of Ports of Auckland... said yesterday that the ownership of the wharf land had presented a "small but complex" legal problem that was left over from local government restructuring... However, the council believed the wharf was part of "non-profit" properties transferred into its hands instead of being bought by the port company... Part of the settlement involves the port company transferring the land to the council but retaining some of its rental income... The managing director of Fullers... said his company had spent \$100,000 modifying the Bayswater wharf for ferry berthing and was completing canopies on the gang plank and pontoons. He said that in the first month of the 20-trips-a-day service about 300 people a day had taken the ferry from Bayswater, which was a third better than company projections. Use of the bus feeder service was about 40[%] more than expected.

...LAST week we looked at the possibility of saving money by buying a hull and deck package and building the rest of the launch yourself. This week's boat may appeal to... hunters with fatter cheque books. Bayswater Marine Ltd, which has just taken up the[Australasian] franchise for... luxurious... American Hatteras launches, has a 20m "convertible" which... is for sale at what[the] director says is a bargain price of \$3 million. The [latest] model, not yet released in America, will be priced at \$4.5 million, he says... The [old model]... has... the interior to provide four "staterooms" to sleep eight people, with three bathrooms... five refrigerators, including a massive mirror-fronted model with ice-maker in the saloon, a microwave oven, dishwasher and waste compactor in the gallery, three freezers, a laundry with washer and dryer and two electricity generators.

...When... [they] gained the agency... the couple thought they might sell one... luxury motor yacht... a year in little old N[Z]. Instead they sold five... The price of th[e agency's] Rolls-Royce-on-water is something only millionaires can say out loud without squeaking. In other words, it's not for ordinary mortals to speak of.

...CUSTOMS has stepped outside the square of civil service conformity with the appointment in Northland of its first two community customs officers. In the Far North – where cruising yachties once had to tie up and wait for an officer to drive from Whangarei or Auckland – a Kerikeri-based inspector is now available 24 hours a day. Around 90[%] of the cruising yachts visiting N[Z] make their landfall in the Bay of Islands... [The] Customs manager for border services in the northern region... said the new approach arose after an extensive survey of client needs in Northland. "For a long time Customs has had district offices in the regions which were essentially clones of the main centres... Our officers were working to traditional public service conditions. It was Monday to Friday, eight to five, and when we wanted to provide a service outside those hours there were expensive penal rates to pay. But yachts arrive at all hours."

...Information technology and isolation are N[Z]'s best defence against smugglers, says the head of intelligence for British Customs. After a week here comparing notes with his counterparts, [he said NZ] Customs' two-year, \$22 million computer systems upgrade had given it a leading edge. But geography was also an important factor... "We don't have that luxury, because if you think in terms of Europe then the furthest flight would be about four hours. Most of them are about an hour..." [(It takes about 3 hours for a 747 to cross the Tasman.)]... Intelligence-based risk management is the best way to detect smugglers in a country where 1000 trucks come through Dover alone every day. "You can't deal with 1000 trucks a day in a traditional way. You need to develop information about the ones that you should be looking at. If we started searching every passenger coming through Heathrow, it wouldn't take an hour before the entire airport would grind to a halt." ...[he] is responsible for 1300 customs intelligence officers, which includes liaison staff in 40 countries. N[Z] is not one of them... Although there is a huge difference in the scale of the problems confronting the border authorities of the two countries, the solutions are similar. Throughout the world, customs organisations are turning to information gathering to maintain security on more limited budgets. "Everywhere you go these days you get the same sort of pattern to some extent – resources are being constrained and people are being invited to do more." ...Unlike the N[Z] service, British Customs had the added responsibility of administering and collecting VAT... which accounted for half of the department's 23,000 staff. Revenue collected for the Government totalled... about \$[NZ]227 billion... a year... Unfortunately, it is almost impossible to gauge the success of the new border protection. No one knows how much contraband gets through.

...An Auckland firm has won an \$800,000 contract to build a high-speed, long-range Customs boat for frontline duty against seaborne smugglers... The... new launch would enhance the service's ability to prevent smuggling... [by replacing] the converted 11.5m pleasure boat Hawk III, which the service has used for the past 11 years... Customs' northern inspections manager... said the Hawk III had notched up... 65,000 nautical miles patrolling N[Z]'s vulnerable northern coastline. A larger boat was needed to carry out long-range patrols in bad seas and weather...

Anxious police planners may have succeeded in convincing their bosses that a fleet of patrol boats in Auckland is vital. The police have awarded a contract to a Henderson boat-building company to build a prototype, 12m patrol craft as a forerunner to the fleet... [The] specially designed rigid-hull inflatable boat – dubbed "Interceptor" – ...is expected to undergo sea trials ...[ext] April... The... design allows[it] to be easily manoeuvred alongside other boats for simple boarding action. The craft would provide large stable platforms in seas up to 4m... Police strategists believe they need 11 such patrol boats... [Each] would have a crew of four police officers; some staff had already begun special training for their new duties...

Neither police administrators nor boat-builders are divulging the contract price, but it is believed the budget for the Interceptor fleet could exceed \$1.5 million... [The boat-building company already has an order] for five 10.5m aluminium boats... worth \$1 million... for the South Korean maritime police[, and the company's]... general manager... hoped the[South Korean] deal would lead to a further order for 95 boats.

...As the hot, sunny weather drew... Auckland boaties... out of hibernation, the National Coastguard Federation also took to the Hauraki Gulf waters. It was launching a new \$35,000 rescue boat for Waiheke Island... At the launch, the federation president... said coastguard units around N[Z] constantly struggled to stay afloat financially... Half of the money for Waiheke's inflatable craft had come from a lottery grant and the rest had been raised locally... Earlier, four of the region's rescue units had united to form the Hauraki Gulf Coastguard Alliance... [The federation president] urged Waiheke businesses to donate money towards a headquarters for the alliance. Waiheke Sea Rescue, with 18 volunteers, attended 47 callouts in the past year, saving boats worth a total of \$873,000.

...Italian fishermen joined police and the coast guard yesterday to rescue hundreds of Kurds from Turkey and Iraq stranded on a ship that ran aground in rough seas... The Turkish-registered ship... was carrying some 750 illegal immigrants when it grounded 300m off the coast of Calabria... before dawn. All were brought ashore during the day by rescuers in motor boats after the coast guard sounded the alarm at first light. Hospital officials in the nearby town of Soverato said many of the children were sick, mostly suffering bronchial problems, and one woman was ready to give birth. The woman told reporters that... most families had paid about \$US7000... for the trip... Albanians and Tunisians were intercepted in separate incidents at the weekend. They were among the thousands who arrived in Italy each year, hoping to use it as an entry point into the European Union and then move north in search of work. The Italian Government has been urged by its E[U] neighbours to tighten border checks. Italian coastal and police authorities... have stepped up the fight against illegal immigration, and a tougher law to allow immediate repatriation is being debated in parliament. Despite the effort, the coast guard faces an almost impossible task in monitoring the coast and its thousands of isolated coves and beaches, especially during the night.

...A fishing vessel bound for N[Z] with 39 Chinese boat-people on board has disappeared near New Caledonia. The 27m boat... and its cargo of asylum-seekers has not been seen since late on Friday, when it was spotted by a French military aircraft monitoring its progress towards the island. The... boat was expected to arrive at New Caledonia later this week to refuel and take on provisions before continuing its unscheduled voyage... The boat is believed to have been at sea for a month after Indonesian authorities refused to let it land, despite claims by the refugees that they were heading for N[Z]. They... were assisted through the Torres Strait by the A[US]n Navy and were last reported to be 200 nautical miles north of New Caledonia. Under international law, New Caledonia can replenish the boat's supplies but is not obliged to accept the refugees unless they claim asylum... N[Z] authorities estimated it would take at least a week to reach this country after leaving New Caledonia... Possible contingency plans included using Air Force maritime surveillance aircraft to follow the refugees' progress as they neared N[Z] and having a Navy ship escort them into Auckland... If successful, the party would be the first boat-people to complete the voyage and could encourage further attempts by seagoing asylum-seekers. A Ministry of Foreign Affairs source said five boatloads of refugees had named N[Z] as their destination in the past two years. "The other four boats never made it."

...[the] Chinese refugees... appear to have ended their voyage in New Caledonia... A reporter for the Noumea-based *Les Nouvelles* newspaper... said... "First of all the refugees wanted to go to N[Z], but now they are in New Caledonia they don't want to continue their travels." ...They have yet to formally claim asylum. The N[Z] Consul-General in Noumea... said the 32 men and seven women disembarked from the wooden fishing boat... yesterday and were taken by French authorities to a disused hostel in the capital. [The authorities]... are expected to spend about five more days checking the identities of the refugees... most of whom carried no identification papers... After leaving Hainan in southern China they spent 54 days at sea before landing... in northern New Caledonia last Wednesday... [The] refugees were kept under quarantine on board the crippled... *Pek Hai*... for six days before being taken by road to Noumea yesterday. They were given food by humanitarian aid groups and the local Chinese community. The *Pek Hai*, which has a broken engine, is anchored offshore awaiting a thorough search.

...French authorities suspect an illegal immigration ring is shipping Chinese refugees to New Caledonia after the arrival of a second... wooden fishing boat carrying 71... asylum-seekers in Noumea... Some of the occupants of the two boats were believed to be related... [The] first boatload... had allegedly cited China's economic regime and stringent birth controls as their reasons for making the hazardous two-month journey.

...[A shipload of 102 Chinese boat people who may be just days away from landing in NZ forced Parliament into urgency last night to debate new powers of mass, indefinite detention. Faced with the arrival of the vessel *Alexandra II* this Sunday, the Government rushed forward changes to the Immigration Act.]

...a Royal NZ 'Air Force Orion may begin sweeping seas south of the Solomon Islands from Saturday as the Immigration Service monitors the *Alexandra II*. Parliament passed emergency legislation bringing forward the implementation of tougher regulations to deal with this possible influx of more than 100 "economic refugees". Under the new law they can be held indefinitely until deported by aircraft back to China, which is required to accept the return of its nationals. Until now, the detention period has been limited to 28 days. There was still no indication last night that the *Alexandra II* is heading for NZ or whether its real destination is AUS. It is understood that intelligence sources have detected another 2 vessels which could be heading for either AUS, NZ or New Caledonia. Most of the would-be refugees are fleeing China in search of a better standard of living rather than for political reasons. They are lured into paying high fees to local migrant traffickers for a place on a boat in return for the empty promise of jobs in AUS. The *Alexandra II*, which had run out of fresh water, arrived in Honiara, the Solomons capital, last Saturday after three weeks at sea. The local authorities immediately ordered the ship to leave.'

... 'This week, as the ship *Alexandra II* and its cargo of 102 Chinese boat people left the Solomons reportedly for NZ', 'two Indonesian fishing boats were intercepted at the remote Ashmore Reef, Western AUS. The 86 desperate people on board were the latest of nine boats and 225 illegal immigrants who have tried to sneak into AUS from the barren islands of the reef this year. Several days earlier, another Indonesian boat had landed 12 further "illegals" on the razor-sharp limestone escarpments of Christmas Island. Earlier this month, a guest at the Kooljaman Resort at Cape Leveque, a speck on the West AUSn coastline 2500km north of Perth, saw a boat unloading illegals when he rose early to photograph the dawn. In April, a rusting tugboat rammed ashore in northern NSW. More than 50 Chinese fled for the bush and the coastal highway to Sydney, many donning suits as they ran. No one knows if, or how many, others might have slipped ashore elsewhere. In China, officials announced a sweep against the "snakeheads" now sending hundreds of men and women to sea in rusting ships for the dangerous voyage to a country that will, almost without exception, arrest and return them immediately. But the boats keep coming, mainly from southern China and the neighbouring region, but even as far away as the Middle East and Somalia. Others with more money to spend are flying in with forged travel documents provided by organised crime groups in a new wave of illegal migration that has trebled to more than 1500 illegals a year in the past four years. It is, according to the International Organisation for Migration, a small but growing part of a worldwide traffic in illegal migrants that deals in four million people a year for an annual global turnover of \$US7 billion. AUS, with its sparsely populated coastline of 37,000km, has been learning rapidly as a ballooning army of illegals land in remote, waterless and dangerous parts of the country infested with crocodiles, deadly snakes and spiders, or in country towns, even moving down the east coast as far as Sydney. Between 1989 and 1994 about 780 illegals landed in AUS: 48% were allowed to stay overall, rising to more than 70% for three of those years. But in 1994 the number leapt alarmingly to 977. AUS's tolerance waned as the numbers mounted, economic distress overtook political persecution as the catalyst and trafficking became more apparent. The proportion of illegals allowed to stay fell to between 2 and 13%. This year AUSn concern has deepened further. Already, more than 680 illegals have been caught, more than three times the 200 found last year. There are fears that others might have slipped through an inadequate net of part-time Air Force, Navy and Coastwatch patrols.'

...while 'AUS was ejecting the Chinese boat people who had arrived in the country aboard the Alexandra II', on the other side of the world 'the corpses of 54 men and four women, thought to be Chinese asylum-seekers, were found crammed into the back of a refrigerated truck. It was not clear how the victims of Britain's biggest illegal immigration tragedy had died, though suffocation or hypothermia seemed the most likely cause. The driver of the Dutch-registered vehicle was arrested and two survivors taken to hospital. The lorry left the Belgian port of Zeebrugge on Sunday evening and was searched by customs officials a few hours later at Dover. Its journey has been traced back to Rotterdam and police across Europe are coordinating their investigation. British police say they were stunned by the scale of their overnight discovery. "The numbers speak for themselves. The scale of the find is something that officials here have not found previously and it has had a huge and very distressing impact on anyone who has been involved in it." "This is a most terrible event. I am appalled by this loss of human life. Our thoughts are with the relatives of those who perished," said the British Home Secretary. The British Government introduced fines earlier this year for people who try to smuggle illegal immigrants into the country. "The Government is determined to continue to crack down on the evil trade in such trafficking, whose perpetrators have no regard for human life."

... 'Chinese gangsters are believed to be behind the botched ride to hope that ended in death for 58 illegal immigrants on a packed tomato truck. British police are concerned about the safety of the two men who survived and have placed them under armed guard. The two hold the key to what happened, and the police are taking no chances that triad-style gangsters may try to stop them blowing the whistle on human smuggling scams. Early indications are that the victims died a slow and agonising death through suffocation on board the sealed 18m truck. The truck's cooling system was switched off, turning it into an oven in sweltering summer temperatures of up to 32 degrees. The *Daily Mail* newspaper said the two survivors had told an interpreter some of the victims screamed desperately for rescue as they tore at the hot metal walls of the truck. The possibility of a Chinese gangster link was fuelled when a British lawyer told BBC Television's *Newsnight* that he had been approached by people who said they had relatives on the truck. "They have spoken with us and we know they are in great fear," he added. Police experts said smugglers called Snakeheads were behind the hugely profitable traffic in illegal immigrants from China. Charging migrants £15,000 a head, they "traded in human misery," a spokeswoman for the National Criminal Intelligence Service said. At a summit in the Portuguese town of Santa Maria da Feira, EU leaders expressed shock at the deaths, and pledged to step up the fight against the traffic in illegal immigrants and adopt severe reprisals against smugglers. Individual asylum-seekers have died on journeys to Britain, often after jumping from trains to avoid detection. The average wage in Britain is nearly seven times what is on offer in China and acts as a powerful magnet for illegal immigrants. About 400 Chinese a month seek asylum in Britain, anxious to join the 200,000-strong Chinese community. Each day in London's busy Chinese quarter, groups of them stand around clutching mobile phones, waiting for calls about work. "I do not know why they come to England. It is really difficult to earn anything here," said one Chinese newsagent. "They have to work long hours in restaurants or supermarkets and every week must pay back some of the money they borrowed to get here. But most days they stand around doing nothing."

... 'For many Chinese who make the 9700km overland journey to Britain, the dream of a comfortable life in the West is short-lived. British detectives have investigated a series of cases in which migrants have been kidnapped by the Snakeheads until their families in China make a ransom payment in addition to the trafficking fee. One hostage only escaped by jumping out a second-floor window in a South London flat. He was found in a disoriented state by local police and reported he had been one of five hostages in the flat. Another man discovered by London police had been manacled for 22 months, treated like a slave and had his finger slashed to the bone with a machete when he refused to rape a female hostage. Those who have been helped to find work often find themselves paid £150-a-week for long hours in the Chinese food industry, with the bulk of their earnings sent home to pay the money-lenders. Most dread the prospect of being deported. A London-based lawyer said that deportees and their families would probably commit suicide in the face of insurmountable debts and fear of retribution from Snakeheads. "There is no way back, it would take them 200 years to pay off their debts in China." Senior immigration officials are concerned that although 95% of asylum claims from mainland China are rejected, very few are returned because they have deliberately destroyed identification documents, without which the Chinese Government will not accept them as citizens. Among Dover residents this week, sadness of the deaths was limited. Many feel besieged by the influx of illegal immigrants and asylum seekers. One driver, who asked not to be named, said: "Good riddance. It's 58 less for us to support. We're sick of it." The driver of the truck in which they were found dead was charged with manslaughter yesterday.'

... 'The Dover tragedy is the worst of its kind in modern British history but joins a growing list of mass fatalities linked to organised illegal immigration in other parts of Europe. At least 490 people have died from drowning, suffocation or road accidents in the past year alone, according to an unofficial toll compiled from news reports. At least 165 Asians are believed to have been lost on a Greek ship which sank in the Mediterranean in 1996 en route to Europe from Alexandria. A series of tragedies off the Adriatic coast of Italy have led to the deaths of around 200 Kosovars and Albanians after light craft used by smugglers have capsized or collided with police boats. And in a similar incident to this week's horror, 18 Sri Lankans died from suffocation in a lorry in Hungary in temperatures of 33 deg in 1995. According to the International Organisation of Migration, flows of illegal migrants to western Europe have run at between 300,000 and half a million per year since the collapse of the Eastern Bloc in the early 1990s. How many of them are genuine asylum seekers rather than economic migrants seeking a better life is impossible to know. But the influx has strained traditional tolerance, as well as welfare budgets to house asylum seekers. Germany has a million asylum seekers. In Britain, 71,000 people filed for asylum last year, double the figure of the previous year, and 100,000 more cases are still being handled. In France, there were 30,000 new asylum seekers, up from 22,000 a year before. The suffocations this week are likely to act as a powerful spur on the EU to beef up co-operation among national police forces and forge a single policy on immigration.'

... 'For generations, the path for anyone with more ambition than money in China's southeast has been clear: work abroad. Those who do not return send money, vaulting families up the social ladder. Foreign earnings buy land, build houses and start business back home. In the 19th century, poverty drove a flood of migrants from Fujian and Guangdong provinces to Southeast Asia. Their descendants are the elite of modern Singapore and the Philippines, and money sent home has transformed villages. Today, *Forbes* magazine ranks a migrant who left Fujian in 1938 to seek his fortune in Indonesia as the world's 473rd richest man, worth \$US1 billion. He has lavishly supported his hometown, paying for roads, schools and a hospital. The deaths in Britain seem especially tragic in light of the economic revolution being wrought in Fujian. The province, which retains ties of language and culture to Taiwan, is the mainland base for billions of dollars in Taiwanese investment. Factories that make everything from umbrellas to computer parts have created hundreds of thousands of jobs. And the area is hardly barren. The countryside around the capital Fuzhou is carpeted with rice and vegetable fields. The province exports produce and fish. Yet the people still leave'. ● '3 more people were charged yesterday with the deaths of the 58 Chinese illegal immigrants'...

'A Dutch truck driver was jailed for 14 years yesterday for killing 58 Chinese. The driver, aged 33, who closed the air vent to cut the noise, was sentenced to six years on 58 counts of manslaughter and eight years for conspiracy to smuggle illegal immigrants. His co-defendant, a 30-year-old Chinese translator and organiser for Chinese criminal gangs, was sentenced to six years for conspiracy. But the case also raised disturbing questions about whether Dutch and British police knew in advance about the immigrants' fatal journey to Dover and whether the deaths could have been avoided. There is talk of a failure of communication between officials in the two countries and claims that a "sting" operation had gone wrong. Two months before the driver's journey, police stopped his friend at Dover with 50 Chinese hidden in his container truck. In events that proved a harbinger for the second expedition, the illegals had begun to suffocate in the back of the friend's lorry. They were heard and the friend was forced to open the back of the container, resulting in the 50 running round the decks of the freight ferry. The friend was arrested in Dover on suspicion of facilitating the entry of illegal immigrants but he was not charged because of lack of evidence that he knew they were on board. Even so, he became a marked man. In the Netherlands, police were watching a Turkish gangster who had been hired by the Snakeheads to organise the next trip. The Turk agreed to the friend's suggestion that one of his mates transport the shipment. The mate had helped his friend on the earlier trip and he needed the money. His small transport company had gone bust. Worse, his uncle's

firm, for which the friends drove, had also gone under as a result of the £100,000 in fines and the impounding of the lorry when the friend was caught. But there were no attempts to stop the mate leaving Rotterdam with his Chinese cargo, behind crates of tomatoes. The Dutch authorities said the watch had been called off a few days before, but refused to reveal why. The organiser and the friend are among 11 Dutch and Turkish nationals on trial in the Netherlands on charges in connection with the deaths in Dover.'

... 'The woman in her mid-30s moves widely throughout Europe on her Dutch passport to organise the illegal immigration routes and she is also seemingly able to travel in and out of China with ease. She is said to have powerful connections there in the Communist Party and among police. She is from a tiny village in the Fujian province of China (which is almost all that is known about her after years of police investigation) and she is among the most prolific traffickers of human cargo in Europe. She has built up a fearsome reputation for running a criminal empire that combines the efficiency of a modern conglomerate with vicious, punitive violence. She is also suspected of being one of the main organisers of the fatal shipment. In Westkruisad, Rotterdam's shabby and windswept Chinatown, they shudder when they talk about the retribution she is supposed to exact on those who cross her. The driver and his fellow defendants are minor players, as are the others in the support network through Europe. A Dutch detective said: "To destroy the organisation you have to get to the 30-year-old and the figures close to her. But that is proving extremely difficult. The Chinese are very tightly knit, they don't mix with the others and they terrorise their own people into silence." The criminal Snakehead gangs are ruthless in protecting the profits of trading in illegal immigrants. And these profits are huge. European law agencies estimate the business to be worth about £8.5 billion a year. American agencies say it is nearer £21 billion.'

... 'The UN estimates that worldwide, people smugglers made around \$US6 billion in the past 12 months. The coordinator of the UN's project to set up a functioning Bosnian State Border Service says that more than 10% of the half million illegal migrants who reached the EU last year came via the Bosnian route. There is a rising sense of crisis in the EU about illegal migration, which has increased more than tenfold in the past 10 years. In Bosnia, the traffic in illegal migrants conceals a second, more venal trade in humans – the trade in sex slaves which lures women and young girls to Bosnia, mainly from Eastern Europe and former Soviet republics, with the promise of jobs as au pairs or waitresses in the EU. Few doubt that the smuggling of migrants through Bosnia is being aided by police and politicians at the highest level.

... An agricultural labourer and father of two children had sold his land and spent all his savings to enter Europe as an illegal migrant. But he fell at the first hurdle of the "Sarajevo Route". His lack of education let him down. He thought he was arriving in a country called Sarajevo, at a capital called Grozny. The State Border Service told him he would be sent home. As the 26-year-old Turk sat in the arrivals area at Sarajevo Airport, surrounded by police, his head bowed, close to tears, dozens of young men with similar ambitions passed through immigration en route for Fortress Europe.'

... 'Encouraged by the calm summer seas, over the past few weeks thousands have headed for Europe in flotillas of high-speed launches and rusty cargo ships, mainly organised by ruthless smugglers and racketeers, proving that "Fortress Europe" is far from impenetrable. The 1993 Schengen Treaty, which abolished border controls between 13 of the 15 EU states (Britain and Ireland did not sign), placed the burden of policing Europe's southern shores on countries such as Spain, Italy and Greece, which are struggling to defend the coast from Crete to Andalucia. Since last November, at least 200 would-be immigrants have died at sea off Italy, either in collisions or being thrown overboard by traffickers fearing more for the fibreglass hulls of their dinghies than for the lives of their passengers. Recently, Albanian traffickers cast into the sea 60 Chinese to protect their hull from the rocks. A policeman said: "Poor people. In this sea, even a few hundred yards from shore, they don't stand a chance. In these waters you have about two minutes to live if you can't swim well. Most of those people who make the crossing have pockets stuffed with valuables, and when they are forced overboard they try to take their clothing and other belongings with them, and so many drown." Police in Otranto, where a Nautical Squad was created 18 months ago, said Italy was too soft on the smugglers. One member of the squad of just seven officers says: "In my opinion we ought to be allowed to shoot to kill these Albanian traffickers of human beings. They treat people as if they were animals. They make them sit on petrol tanks that in the case of an accident or a shoot-out could explode. To save their boats, they throw women and children overboard, and sometimes into the propellers. But if we were to maltreat them, we would go to jail." He said that much of the traffic to Italy of Albanian immigrants was with children, "because they are merchandise for prostitution, paedophilia, or to be butchered to provide human organs. Why else would whole boatloads of 10 to 12-year-olds be continually brought to Italy." According to official figures, 47,000 would-be immigrants made the crossing here last year. But the officer said that for every illegal immigrant known to arrive, at least one other managed to slip through the net. At least 100 illegal immigrants were intercepted this week off the southern coast of Spain. This year in Spain, 7000 migrants from Africa have been expelled. Under a law to be passed soon, a further 80,000 could be thrown out, and at least 250,000 more are seeking permission to stay. In Greece, 4256 immigrants have been picked up at sea this year, while 13,502 have been caught at the land border and sent back. In the past 18 months, 100,000, mainly Albanians, have been repatriated. There are now so many illegal migrants in Greece that state radio broadcasts in 12 languages. Greek authorities say there are at least 600,000 immigrants in the country – the figure could be a million. A Greek court in Lasithi, Crete, imposed record 10-year prison sentences a week ago on six Turkish seamen arrested for smuggling 334 Kurdish and Afghan migrants who were put ashore at a cove near Ierapetra.'

... 'One man was found dead and two in critical condition yesterday when authorities in the Greek port city of Corinth discovered 31 refugees hidden in a container on a truck. The illegal immigrants from India and Middle East countries had been trying to sneak from Greece into Italy.'

... '*A port where body parts come in with the cod can no longer resist an inquiry into the drowning of 283 Pakistanis.* It was a shock at first to haul in a corpse with the fish. An unusually heavy load became something to dread and some of the fishermen would retch. As time passed they got used to it. In any case there were no more bodies, just bits of bodies – thrown back in the sea and forgotten. The fishermen of Portopalo, a desolate village on Sicily's southern tip, knew that reporting the finds to the authorities risked investigations, police inspections and impounded equipment – a bureaucratic morass adding up to lost fishing days. So they said nothing. Last week Portopalo's secret was revealed, exposing the Mediterranean's worst tragedy since WW2. The bodies were those of illegal immigrants from the Indian subcontinent, drowned at 3am on Boxing Day 1996. They had been decanted from the freighter Yiohan into a ferry that collided with the larger vessel and sank. The Yiohan limped to Greece, where survivors spoke of the horror. And no one cared – not the coastguard, not the Italian Government, not the media. A cursory search for debris or bodies yielded nothing, so the story was dismissed. It became a "phantom shipwreck." That changed on January 12, when an *Observer* investigation proved that the shipwreck had happened. Reporters reconstructed the voyage with testimonies from survivors and relatives. The Italian authorities were forced to investigate a massacre: crew members from the Yiohan forced more than 300 passengers (whose \$US7000 fees to the immigration mobsters were met by their families' sacrifice and borrowing), allegedly at gunpoint, to climb into a craft designed for a third that number. Most were sucked under when it sank. Only two dozen made it back on to the freighter. In May a 43-year-old Lebanese went on trial for multiple charges, including manslaughter, in the Sicilian port of Syracuse, but he skipped bail and has disappeared.'

... 'A GROUP of 10 Indian and Middle Eastern men claim they sneaked into NZ on a Malaysian-owned container ship that stopped in Napier last month and disappeared undetected. The Immigration Service will investigate their claims which raise serious concerns about the country's borders.'

... 'A man and a woman were arrested on Monday as part of a police operation against an alleged organised crime syndicate trading in human cargo. Police said the syndicate smuggled more than 1000 people into NZ and AUS in the past 5 years by selling them fake passports and documents. Detectives were still hunting 20 others.' ● 'Libyan authorities have found the decomposed bodies of 93 African immigrants who were stranded and died of thirst in the Sahara'...

'Hungarian police have found 46 mostly Asian illegal immigrants near death in the back of a van designed to carry 15. The immigrants from Afghanistan, India, Nepal and Somalia, were found during a routine traffic check in the north-eastern province of Heves. "The immigrants owe their lives to the

policeman who carried out the check,” said a police spokesman yesterday. “There were so many of them in the small truck that if they had been found 60 minutes later the police would have found only corpses.” Dutch police said at the weekend that they had detained 23 Chinese illegal immigrants, who were attempting to enter Britain hidden in the back of a van. Meanwhile, French truck drivers are said to be furious with British immigration authorities over new fines slapped on them whenever illegal immigrants use them for a ride to Britain. Some drivers have chalked up as much as £40,000 in fines and some are refusing cross-Channel routes for fear of getting a £2000 ticket for even unknowingly harbouring illegal passengers. About 8500 illegal immigrants were stopped in France trying to make their way to Britain via the French Channel port of Calais last year. A new machine which detects carbon dioxide from human breath was installed by Calais port authorities last month and has so far found 1400 illegal immigrants hiding inside lorries.’

...yesterday, French ‘authorities evacuated 908 passengers – including three newborns – from an ageing freighter the East Sea, which ran aground about 20m from the shoreline, not far from the resort city of Nice. Emergency health workers said the refugees, who endured a week-long voyage without sanitary facilities and with little food or water, looked weak. One Kurd told reporters, “We were down in the holds. You couldn’t tell if it was night or day. There wasn’t even room to lie down.” Another said they were given no warning that the ship was going aground. “We all thought we were going to die.” It was unclear how many passengers evaded authorities by swimming ashore when the 60m bulk carrier washed up on a sandbank in the early morning darkness. “The captain has fled, leaving the boat facing land, the propellers turned, so that the boat cannot drift away. It was professional work,” the mayor of nearby St-Raphael said. The vessel sank after the refugees had been evacuated. The grounding of the East Sea is certain to increase pressure for further action to clamp down on the world’s fastest-growing criminal activity, which – UN experts believe – has already affected 200 million lives.’

...‘Immigration officials were yesterday questioning nine illegal immigrants discovered hiding beneath a Eurostar train from Paris. A girl aged 3 was among the group found in a compartment under the 300 km/h train when it arrived at Waterloo Station in London. Police seized them after passengers on board heard frantic banging noises and raised the alarm shortly before the train was due to leave for Brussels. The men and women said they were Romanian and have claimed asylum. A British Transport Police spokesman said the immigrants were all found wedged in a recess used for luggage. A Eurostar spokesman said the train had been “stabled” overnight at a depot in Paris. Strict security measures applied at the depot and at Eurostar stations in France to prevent unauthorised access to trains. The spokesman added that this type of stowing away had not happened before.’

...‘A TICKET to ride which turned to tragedy is the subject of a former singer’s latest work. The wife of Beatles star John Lennon has unveiled a freight car bored through with hundreds of holes and illuminated from inside at an art installation in Berlin. The piece – simply called Freight Train – was inspired by the deaths of 18 Mexicans in 1987 who perished in a sealed freight car trying to illegally enter America.’

...‘Authorities have rescued 40 Guatemalans trapped inside a truck-trailer in blistering heat for more than 10 hours. 7 were yesterday in a serious condition in hospital. The group was buried among sacks of corn inside the trailer before one of them managed to break open the doors of the truck, which had been abandoned on a highway outside the southern Mexican city of Villahermosa near the Guatemalan border. The group had hired a smuggler in the Mexican state of Chiapas, which borders Guatemala, and paid him \$US1500 to take them to the US-Mexican border. Despite the harrowing journey, those who came out relatively unscathed said they planned to return and try to cross Mexico again on their way to the US. “Of course we’ll try again. Even if the heat kills us or we drown, we will keep on trying because in our country there is no way to live.” A week ago, 22 bodies washed ashore after a boat carrying Guatemalans trying to reach the US sank off Mexico’s Pacific coast. The lone survivor told the government news agency Notimex the boat was caught by a storm.’

...‘a small boy lost and found at sea has fanned one of the biggest storms to hit the US-Cuba cold war in years. The international custody battle that engulfs the innocent victim of a migrant boat tragedy has made strange bedfellows of the US and Cuba as they vie with the determined distant relatives who have temporary custody of the 6-year-old and vow not to return him to live in communism with his father.’

...‘THE six-year-old boy at the centre of an international tug-of-war is set to return home. He was rescued off the coast of Florida last November after a shipwreck. His mother – and 10 others – drowned. The boy has lived with his relatives in Miami since his mother’s death. They want him to stay in America, claiming that’s what his mother wanted, and have threatened to prevent the boy from being taken from his uncle’s home. But his dad, who arrived in Washington on Thursday, wants to return to Cuba with him. The boy’s parents were divorced. The father’s bid is backed by Cuba’s President.’

...Good news for the 6-year-old boy who may be about to return to Cuba – ‘the garrulous “Maximum Leader” may have ended those oratorical tours-de-force when he would often speak on his feet, without so much as a sip of water, for up to six hours. The first clue he gave was in an interview several weeks ago published by the ruling Communist Party’s daily, *Granma*. “I have reached the conclusion, a bit late perhaps, that speeches should be short,” the President said at the end of an interview that filled four pages of small print. True to his word, the President’s longest speech since then was for just 90 minutes, when he accepted a prize from Latin American non-governmental organisations last week. Then, at a mass rally yesterday, he shocked many of the 200,000 Cubans gathered to hear him with a speech barely lasting half an hour on a patriotic celebration that last year drew two five-hour discourses. “Everything changes,” he told his audience, gathered to commemorate the anniversary of the start of the revolution.’

...‘About 100,000 Cubans staged another rally yesterday, demanding that the 6-year-old shipwreck survivor be immediately reunited with his father. The latest open-air rally in Cuba’s campaign of daily protests, meetings and televised discussions during the four-month custody battle took place in the eastern province of Las Tunas. Urged on by their President, the Cuban people have united behind the boy’s father, a 31-year-old tourism worker, in his demand for the boy’s return from relatives in Miami. After US Government and court rulings in favour of the boy’s return to his father, the father flew to Washington last week to press his case. Havana has expressed dismay that the US Government, while supporting in principle the boy’s return to Cuba, has not been able to enforce it. A legal expert said the saga showed the irrational nature of US immigration policy, particularly the Cuban Adjustment Act, which favoured Cuban immigrants over other nationalities. She said the group behind that policy, which stimulated dangerous, illegal trips from Cuba, was “the Cuban-American Miami mafia.” Cuba’s Foreign Minister, speaking on state television yesterday, said the visit of the boy’s father to the US was helping to shift American public opinion to Cuba’s side.’

...‘the US Government was set to tell relatives of the Cuban castaway today how to hand the boy over to his father, after sending mental health experts to Miami to discuss making the transfer as painless as possible for the child. With the custody handover expected in two or three days, thousands of Cuban exiles who have backed the boy’s Miami relatives in battling to keep the 6-year-old gathered in a vigil in Miami’s Little Havana district, waving Cuban and American flags and praying the boy would be allowed to stay. Lawyers for the relatives worked on last-ditch legal salvos. They planned to complete today their appeal of a federal judge’s ruling upholding an Immigration and Naturalisation Service (INS) ruling that the boy should be returned to his father. The relatives will also file briefs in a Florida family court to have the boy’s great-uncle declared his legal guardian. The 4 1/2-month tug-of-war has bitterly divided an extended family and fired up decades-old enmity between Cuba’s President and anti-communist exiles in Miami.’

...‘Even while officials have been debating the future of the boy found floating off Fort Lauderdale after his boat capsized, there has been no letup in the exodus of Cubans seeking wealth in America. Last year alone, some 1300 fled the island clandestinely, clutching a few possessions in plastic shopping bags, and waded into political exile. But although over 60 would-be refugees drowned in the attempt, hundreds of others keep trying to sneak across the shark-infested straits. Owners of swift cigarette boats, which also are the mode of transport preferred by Miami drug traffickers, can charge a cool \$US8000 per passenger for the 144km trip north. But the penalties are harsh and, if caught, smugglers of human cargo can languish for years inside Cuban prisons. The boatbuilder who sold a 5m aluminium craft to the boy’s mother’s hustler boyfriend was hauled off to jail soon after the overloaded boat floundered and 11 people drowned. He is still awaiting trial. Most of the Cubans who attempt such perilous crossings are under 30. Over half of Cuba’s 11 million citizens were born after the 1959 revolution, and they take for granted the free schooling and healthcare available under communism. But, increasingly, young people chafe under the restrictions of the post-revolutionary lifestyle. One enterprising teenager at Varadero Beach, unable to afford the trendiest

sports clothes, recently tattooed a Nike trademark on his chest. Rebels embrace capitalism not only to annoy their hardline parents, but in order to find their way out of a stagnating system. Since the economy bottomed out in the early 1990s with the collapse of the Soviet Union, the Government has encouraged foreign tourists to bring in hard currency. Cruise ships call at Havana Harbour and dollars fly freely. With two million foreign tourists expected this year, Cuba has invested heavily in beach and scuba diving resorts suitable for holiday packages. Youthful Cubans compare lifestyles with the visitors and many want out. Average salaries in Cuba are only \$US8 per month, with top professionals earning \$US30. The Government hands out rations books for basic foodstuffs, but families with no access to dollars are hard-pressed to scrimp through the month. Many Cubans must rely on friends and relatives who send money from abroad back to their poor cousins. The estimated \$US800 million that comes in from outside is vital to prop up the Cuban economy. Relatives frequently arrive with their suitcases stuffed with medicine, even simple aspirin, that is otherwise unavailable in Cuba. Society is now three tiers: the communist party elite, those with access to dollars, and the workers. "We must give our youth a future," argues the founder of the Christian Centre of Reflection and Dialogue in Cardenas. "That is the wake up call that we've been given. After the return of the 6-year-old-boy we can not slack off and simply return to our homes."

...the 'US President yesterday said there was "no conceivable argument" for keeping the Cuban shipwreck survivor from being reunited with his father now that a court has temporarily banned the 6-year-old from leaving the US. Earlier, the boy's father accused his relatives of abusing the boy by keeping him from his father and appealed to Americans for help in getting him back. The US Attorney-General has been considering whether to send in federal agents to remove the boy from the house where he has been staying. A federal appeals court in Atlanta ruled on Thursday that the boy must stay in the US until it resolves an appeal filed by the boy's Miami relatives, who are asking that he get a hearing for political asylum. It is due to be heard' in 3 weeks.

...'ARMED federal agents stormed into a Miami home in a pre-dawn manoeuvre yesterday and grabbed the six-year-old boy. At least 20 agents arrived at the home shortly after 5am and kicked in the door. A short time later, a woman and man brought the boy out of the Little Havana home and put him in a white van. Some of the 100-strong protesters at the scene climbed over barricades and unsuccessfully tried to stop the agents, who were armed with automatic weapons. "The world is watching!" yelled the brother of the boy's caretaker.'

...'The raid was carried out by eight armed federal agents – backed up by 130 other agents, including federal marshals. After three knocks on the door and "identifying themselves," the agents used a battering ram to force their way in. As the agents were battering the door, the boy was taken from his bed and hidden in a cupboard. But not for long. He was wrenched from the fisherman who rescued him last November by a male agent, under the watchful barrel of his colleague's gun, and handed over to a Spanish speaking woman – the only compromise with gentility – and taken to a waiting van. Then it was off and away – first by helicopter and then by plane to Andrews Air Force Base in Maryland and his father. The Attorney-General explained why she had had to abandon a promise that the boy would not be taken under the cover of darkness. "We had hoped that it could have been done another way. But the crowds began to suggest they were going to prevent it happening." She said the family had continually "moved the goalposts" and was still defiant in obstructing the law. The stand-off between the US Government and the Cubans of Miami is now absolute. Yesterday, as the boy's Miami family cranked up the hysteria in and around their house, crowds gathered to express their outrage. Hundreds of Cuban-Americans poured into the streets of Little Havana. To meet them were 400 riot-ready Miami police who made 260 arrests. Some protesters threw rocks and shouted. Others waved signs and flags – Cuban and upside-down American ones. One man stalked through the crowd with a baby doll pinned to a cross, fake blood streaming from its hands. In Cuba, the President downplayed the shock that the boy suffered during the raid. "That boy cried for three minutes, for something that probably saved his life." He told a crowd of 400,000 people: "Today is a truce with the US, perhaps the only one since 1962. This is a day of glory for our people."

...'A thousand words a minute tumbled in a torrent over the airwaves yesterday as America scrambled to make sense of the bold raid that wrenched a 6-year-old boy from his Miami relatives and returned him to the arms of his father. But not one of those words – from the bland assurances of the US President's Administration to the stunned stammers of Miami's outraged Cubans – was worth a dime beside that picture. The picture. The one that was never supposed to have been taken. The one thing the US Justice Department, which planned the 5 am snatch-and-run with military precision, never expected. It is the shot that last night even the most dutiful and durable defenders of the White House seemed embarrassed to explain. What leaders of the INS assault team did not know was that a freelance photographer was one of the few journalists not napping at 5 am on Saturday, when the federal agents' trucks charged onto the street outside the home where the boy has spent almost five months in a legal limbo. Nor could they have known that the photographer would jump a side fence, run through the home's rear door and take photographs as the troops poured in, guns at the ready. It's all there in that picture, the whole sad story captured in a single arresting image – the snarl on the face of the goggled and helmeted Swat squad officer, the submachine gun pointed at a fearful 6-year-old, the expression of amazement on the face of the man who holds him. That man is the Florida fisherman who hauled the boy from the sea last year. He spoke to the cameras less than 90 minutes after the 130 members of the federal assault team holstered their weapons and pulled out of Little Havana in a cloud of tear gas and pepper spray. "America, you sent troops – I call them 'troops' because that is what they look and act like – into a citizen's home at 5 am to told people at gunpoint and kidnap a child. Cuba's President must have approved of those tactics," he said amid the smashed furniture and broken doors of the trashed home. "What have you done, America, to this little boy?" More to the point, what has the saga done to America? As piles of tyres burned in Miami and every cop on the force was summoned back to duty, a Florida TV station was broadcasting the inflammatory accusation that the official photo of the boy's "joyful" reunion with his father at Andrews Air Force Base near Washington was a cut-and-paste fake. As for the human impact of the case, the fisherman's own experience speaks most eloquently of that. When he hauled the boy from the water back on Thanksgiving Day last year, he was with his cousin, who had been his best friend and fishing partner for more than 20 years. Now the men no longer speak. "He thought the boy should go to his dad. It was something that became so sensitive, we couldn't just agree to disagree."

...'LARGE NUMBERS OF HISPANIC PASSENGERS are nothing unusual on flights at Sky Harbor International Airport in Phoenix, Ariz. But there was something not quite right about the group of more than 100 Hispanics boarding Delta's Flight 1800, a red-eye to Atlanta, on Tuesday, Feb. 16. When the INS was brought in to investigate, sure enough, 102 of the 186 passengers were illegal aliens. Two days later, the INS checked another Phoenix flight, American Trans Air Flight 751 to Chicago. Of the 171 passengers aboard, 60 were illegals. Another ATA flight later that day turned up 29 more. The INS says all three groups were part of an organised ring smuggling illegal aliens into the US. Since February 1996 the agency has arrested more than 3,000 people at Sky Harbor. The smuggling of human beings includes the use of stolen airline tickets. According to the INS, stolen tickets are part of a package deal, including phony IDs and Social Security cards, that smugglers provide to their clients. And for one person, that news was vindication of sorts. For three years, ever since her Classic Travel Agency in Naperville, Ill., was one of 28 agencies in the suburbs west of Chicago hit by what police describe as a Colombian burglary ring, she has waged a one-woman crusade to focus attention on what she and others say is a serious public-safety issue that the airlines have ignored. At all 28 agencies the take was the same: blank airline tickets – 6,000 of them, worth \$6 million on the black market. The Chicago break-ins were part of a nationwide crime wave that has victimised more than 600 agencies, netting perhaps 500,000 tickets. The crimes are continuing. A Marietta, Ga., agency was recently hit twice for 6,000 tickets. Travel agents are eager to get federal agents involved because once a ticket is used, the carrier can demand payment from the agency, even for stolen tickets. The agents say the airlines could thwart these crimes by using scanners capable of detecting tickets that have been reported stolen. Such technology would have enabled Hawaiian Airlines, for example, to intercept two passengers who flew from Honolulu to Maui last year with stolen first-class tickets on a plane that had no first-class section. The airlines reply that the scanners don't always catch the bogus tickets. But last week British Airlines – one airline that does scan – caught a man who was flying from Miami to London and trying to get a \$26,000 refund for seven tickets. A scan revealed that four were stolen, part of a batch of 24,000 taken from Hudson Holidays in Elmwood Park, Ill., in December 1996. Liability for stolen tickets is potentially fatal to travel agencies, which have already seen their commission payments cut by the airlines at the same time that the agencies' business is being eroded by customers using the Internet. "We don't have that kind of money," says the Naperville agent,

who got a letter from American Airlines demanding \$16,000 for stolen tickets written on her ticket stock. The airline later relented because she had followed security guidelines. A Government Accountancy Office report due out shortly will recommend that the airlines be forced to scan tickets, thereby rendering stolen ticket stock worthless. For some travel agents, that will be a little too late. A travel agent in Libertyville, Ill., who lost 6,000 blank tickets to the ring and owes the airlines \$300,000, was forced to close her 7-year-old Travel Incentives Inc.']

...Overseas criminal syndicates are responsible for one in every five asylum-seekers arriving in N[Z], say immigration officials. A... spokeswoman for the Minister of Immigration said yesterday: "There are people in other countries issuing them with documents, telling them exactly what to do when they get here and organising lawyers to meet them at the airport." The manager of border investigations for the Immigration Service... said... asylum-seekers obtained false documents en route to N[Z]... The service was helping airline staff to identify falsified or altered travel documents. [The manager] said the service's new \$6.1 million computer system would make it easier to trace illegal immigrants because it combined information from all of its branches on to one database... Immigration officials monitored 16.5 million movements a year... The executive director of Amnesty International in N[Z]... said he was disturbed that the Government seemed to be preparing the public for a tightening of refugee procedures "through the random release of information."

...Seven airlines had immigration charges dropped against them in Auckland yesterday on a promise that they will tighten their scrutiny of passengers' travel papers... The 22 members of the Board of Airlines Representatives have agreed to work with the... Immigration Service... on a review of screening systems overseas... The executive director of the board... confirmed his members were happy to work with the service to reduce problems, although there was a limit to what could be done... The Immigration Service's national border investigations manager... acknowledged that airlines would not be expected to foil every elaborate illegal entry scheme... Those charged under a section of the Immigration Act providing a maximum penalty of \$20,000 were: Air N[Z], Air Pacific, Aerolineas Argentinas, Polynesian Airlines, Qantas, Royal Tongan Airlines and United. It is understood to have been the service's biggest crackdown on the aviation industry in years.

...[A Somali microbiologist was denied entry into NZ because immigration and airline officials believed his sky-blue suit and yellow socks were not the clothes of a real scientist. The scientist, now a Hamilton laboratory technician, sued the Immigration Minister and the Attorney-General for more than \$180,000 over the fiasco, but reached a confidential out-of-court settlement last year. He also received an apology from the Immigration Service. His plight remained secret until last week, when the *Herald* won a legal challenge in the High Court at Auckland enabling the newspaper to search court records. The registrar at the High Court had refused to allow the *Herald* to search the file on the case. The Immigration Service, through the Crown Law Office, had earlier turned down a *Herald* request for the documents. A memo obtained yesterday from his Auckland lawyer indicated that the 34-year-old scientist's fashion sense, and his failure to tie his own tie, played a big part in the saga, which included being locked in a Singapore airport jail for two days. The drama began on August 16, 1995, when the scientist arrived at Changi Airport in Singapore. He had flown from Yemen, where he was working at the University of Sanaa, and was in transit, bound for Auckland. His Somali passport contained a NZ residence visa issued by an immigration officer at the NZ High Commission in New Delhi, as the scientist met all criteria under the service's points system. But after several unsuccessful attempts to collect his boarding pass from Air NZ staff, he was told he could not board his flight. Staff wanted to check his visa with the NZ High Commission in Singapore, which was shut. To his horror, when his passport was returned it had been defaced by a handwritten entry stating: "The bearer of this passport can not use this passport for entry or travel to AUS (or transit) under any circumstances." AUSn immigration officials later told him that the entry had been written by an AUSn who was attached to Qantas Airways. It appeared that airline staff referred immigration queries to the AUSn when the NZ High Commission office was closed. The AUSn said the scientist's passport was illegal and likely to have been forged. The visa had therefore been mistakenly issued. The AUSn had torn the page containing the visa out of the scientist's passport. The scientist was placed in custody and told he would be deported to Yemen. The scientist believed he would then be sent back to Somalia, which was torn apart by civil war. "That was a death sentence for me. I would have easily been killed." However, he was able to remain living in Yemen, where he reapplied for NZ residency. Sixteen months later, he arrived in NZ with his wife and two children. "This is a beautiful country with beautiful people," he said, "but those people who are representing NZ outside should be clever, broad-minded, well-educated, who do not generalise anything." The scientist still owns the sky-blue suit. "I sometimes wear it but I just keep it." Incidentally, t]he Race Relations Conciliator... said... on Wednesday that globally, there were 20 million displaced refugees.

...[according to the latest statistics, 'the world has 11.8 million refugees from Africa, 7.9m from Asia, 6.5m from Europe, 1.08m from America and 0.05m from Oceania. Most of the refugees accepted into NZ during the past 12 months were from Iraq (437), with the next most coming from Ethiopia (34). The US resettled 83,000 refugees' during the same period. ● 'NZ's only hostel for asylum-seekers may be forced to close as money dries up and arguments rage about who's responsible for its upkeep. The Auckland Refugee Council says the occupants will be homeless if it doesn't get finance within the next six weeks.'

...[The Refugee and Migrant Service says it will be forced to close its doors to asylum seekers within weeks unless it can find other funding. The service's director said the service, which has offices around the country, had been using its cash reserves to pay for the advocacy service but could no longer afford to do so. Two staff based in Auckland and some casual staff would lose their jobs. The director wants Government funding for an advocacy service, which he estimates would cost \$200,000 a year. "We feel very strongly that the Government is shirking its responsibilities in this area and merely paying lip service to some of its obligations under the UN High Commissioner for Refugees convention." The Minister of Immigration said the Government recognised its responsibilities and planned to review funding because of the rapid growth in the number of people applying for refugee status. In 1993 there were 693 applications. By 1995 there were 1251. People seeking asylum must complete a complex form to apply for refugee status. The Refugee and Migrant Service helps them with paperwork, arranges interpreters and helps present their case to the Immigration Service. Legal aid is no longer available for asylum seekers in the initial stage, but if their case is refused they have the automatic right to appeal to the Refugee Status Authority and are granted legal aid. The director said that without the free help provided by the service at the first stage, many applicants would be unable to lodge well-presented and complete applications, resulting in a "far greater number of unnecessary and expensive appeals."■ 'The Government said yesterday that mandatory overseas HIV-Aids tests would be introduced for all refugees, immigrants and anyone wanting to work here for longer than two years. Anyone who failed the test would be barred entry. Aids and refugee groups immediately condemned the policy. At present, refugees are asked to take a voluntary test for HIV-Aids and none has yet refused.']

...After years of dramatic shifts in immigration numbers, a new rationale has been established – a net population gain of 10,000 a year from migration. Other moves announced yesterday by the Minister of Immigration... will limit to about nine months the time it takes to appeal against immigration decisions and to determine whether someone has refugee status. [The minister] has set a target of attracting 500 investor migrants to N[Z next year]... He said there was competition for good-quality migrants and N[Z] needed to market itself more positively. He has been told one of the main reasons for[a] fall in business investors was the English language test and that would be relaxed from requiring a modest level of English skills to a basic level – or from level five to four in the approved standard test. The test was introduced in October 1995 as part of changes to the points system that gave the Government greater control over the flow of immigrants. The previous year 50,000 approvals were granted – double the target. In 1995 more than 500 business investor immigrants were approved and more than \$330 million was transferred to N[Z]. That has been reduced to a trickle. Up to September this year, for example, just 63 business investors had been approved with about \$30 million... N[Z] experienced net losses from long-term migration frequently before 1990 but more recently has had gains of about 20,000 a year. The 10,000 net gain translates to a population increase of about 0.2[%] a year... But the measures to clamp down on immigration scams were the most important part of the package. N[Z] was seen as a soft touch for asylum seekers and the system would now be less open to exploitation. More than 1600 had

applied this year and there was a backlog of 2400 people being processed. The application and appeal procedures would be simplified. Only two appeals would be possible and they would have to be lodged within 28 days to the Refugee Status Appeals Authority and to the High Court. [The minister] said cutting the delays would save on social benefits. For, say, 780 asylum seekers the savings would be more than \$8 million a year... [T]he Government is[also] considering cutting its annual quota of 800 refugees and instead picking up the travel costs for the reduced number... The U[N] High Commission... which pays for refugees to get here, has pressed N[Z] for some time to pick up their travel costs as some other countries do... [T]he Labour immigration spokeswoman... said yesterday... [that any] fall in the refugee intake would be shameful and sully N[Z]'s name as a generous international donor... [Furthermore, problems] are likely to loom with the Government's plan to limit the time it takes to determine refugee status, says an Auckland Refugee Council spokesman... "The trouble is... the backlog of cases... and no staff available to interview them. Those people, as things stand and unless more money is spent, will never get a hearing." ...[likewise, praise] for the 10,000-a-year net migration gain target was faint... The biggest beef was the numbers... But an immigration consultant... said that comparing total immigration with net migration was like contrasting apples and oranges... "...they think immigration is about numbers... It's about appropriateness of selection. Are they working? Are they paying taxes? That is the issue." Immigrants would still be left unemployed and people with diplomas would still be reduced to driving taxis, he said... N[Z] already exceeded its net population gain target, and the figure included N[Z]ers returning from overseas... [A] spokesman for the United Asian Association... remained cynical of the Government's intentions and was angry at the retention of the English test, which he said was a poor way to gauge migrants. Alone in welcoming the initiative, the president of the N[Z] Ethnic Council... said... [migration] was needed to "strengthen the existing cultural richness of N[Z]." ...Immigrants now formed about 8[% of NZ]'s population...

At a place called Waitangi a treaty was signed... on behalf of... Queen Victoria, and... by a number of Maori chiefs, with a great many more adding their names later. The treaty has often been called the founding document of N[Z] for it gave legitimacy to the British settlement that followed; and as well it created what is best described as a living partnership between the Maori people and those who were to come here in the years ahead. As the signatures were being affixed, Captain Hobson... of the Royal Navy... obviously using words supplied to him, said in Maori, "He iwi tahi tatou," which is usually thought to mean "Now we are one people." But the meaning is more subtle than that. It is, rather, "Our peoples are joined together as one." Maori had not seen themselves as one people in any sense of nationhood and there is no reason to think that they saw the newcomers any differently. Thus the concept of unity in diversity, the over-arching theme of the Federation of Ethnic Councils, harks back to the beginnings of what became our nation. Maori were able to accomplish their incredible feats of navigation because they were very skilled weavers and plaiters. And an appropriate image of what is meant by unity of diversity is the plaited rope, consisting of many strands, each retaining its individual identity but, bound together, achieving a strength that even exceeds the sum of the strength of all the individuals. The plaited rope that is N[Z] society today has several major strands, but many others too, all giving strength and purpose to the whole. But the analogy of the plaited rope breaks down a little at this point for its strands are all alike while those of our society come in many shapes and hues... We have the unique inheritance of Maoridom, stretching back into the Pacific mists of time and legend[, and – 'since 1901' – the inheritance of other Polynesians]. We have the inheritance of Europe which has come down to us from the earliest days of history. To these two mainstreams have been added the mainly more recent contributions of our... Asian neighbours... The result of that is a unique national identity... to be appreciated and enjoyed by us all and which cannot but enrich us all. Sadly, this is a truth that many have still to learn. And rather tragically some have a great deal to learn. Recently the media reported several incidents of racist or cultural aggression. Th[es]e sort of ...in[cidents]... cannot be too strongly condemned. There is no place for it, or for those who behave in this way, in N[Z] society. Almost all N[Z]ers would agree with that, at least in theory... One can only hope that we have all learned something from these incidents... But more than that is needed. We need not only to know how to deal with visible manifestations of ignorance and prejudice, we need to address [them]... It is essentially a matter of education and training, best dealt with at the stage in life when attitudes are formed. I must say how enormously encouraged, uplifted indeed, I have been as I have visited schools drawing on a multi-ethnic community to see how the children accept each other for who [or] what they are. As in so many other ways we can all learn much from the innocence of our children. All to often we see and hear people emphasising the differences between N[Z]'s peoples and cultures as if differences were undesirable; and we hear people talk about the friction that our cultural diversity is somehow supposed to create. This sort of talk can only create disunity, whether through envy or fear or anger... For the truth is that we are human beings first, N[Z]ers second and only then may we justifiably separate ourselves into ethnic groups, races or adherents to different creeds... It is very important for our own sakes and for the nation's that we should retain and cherish our own particular cultural identity. But our culture must not become a cocoon in which we wrap ourselves to the exclusion of all about us. We must be willing and eager to share it and equally willing to understand... the cultures of our fellow citizens. None of us has the right to claim any cultural superiority. And, of course, it adds no status or worth whatsoever to our own culture to disparage, let alone to insult, the culture of others. Here in N[Z] we are singularly fortunate for all of us are beneficiaries of more than one cultural inheritance[, but as]... is too tragically obvious these days... countries which live in perpetual, or even in recurring, strife never prosper and never can achieve true happiness for any of their people.

...Ethnic groups that cannot afford to send representatives to the Government's \$750-a-head population conference in Wellington in November will receive a limited number of sponsored seats... The Government, under fire for refusing funds for a conference of ethnic councils... [and faced] with having only 250 participants signed up... has increased its allocation of free tickets... from 30 to 50... The Government[claimed it] wanted as diverse a range of people as possible to attend... The fees[were meant to] cover \$133,000 of the conference cost; [with the Government covering]... the remaining \$428,000 bill. The keynote speaker... from California... [will join NZ] experts... covering the effect of population changes in areas such as the labour market, business, education, social services, the environment, and the settlement of migrants here... [He] has led a research panel examining the impact of immigration in the U[S]... Its report this year concluded that immigration had a net gain for the country, perhaps adding up to \$10 billion a year to the economy... not much considering that the total economy runs to trillions... About 820,000 immigrants settle legally in the U[S] each year, largely lower-skilled workers... while up to 300,000 enter the country illegally.

...N[Z]ers and AUS]ns can apply for 837 immigrant visas being offered by the U[S] to the Oceania region from a worldwide lottery of 55,000. The annual lottery boosts immigrants from areas that receive few visas. The winners will be selected at random following the October 24 to November 24 mail-in. [By the way, 'between 1900 and 1913, 13 million people arrived in America from Europe – the greatest voluntary migration.'

... 'Between 1939 and 1945, Somes Island – recently renamed Matiu – in Wellington Harbour was home to 220 men. Branded as "enemy aliens" they were guarded by 30 rank and file soldiers armed with rifles but no bullets. The Government of the day, immersed in WWII, interned as a "protective and preventative measure" a Japanese man, Italians, Austrians, Russians and Germans as well as German Samoans from Apia. Jews and fervent Nazis were delegated to the same huts. For some of the German Samoans, the experience was *deja vu*. They were interned as children with their parents at Motuihi POW Camp in Auckland from 1915 to 1919. Letters and statements held at the National Archives record escapes, protests and pleas for release, and the woe of families left behind. Their stories paint "an interesting portrait of NZ when paranoia in this country rose to such a height that they locked away NZers with foreign sounding names." The on-going battle was against boredom.' While on the topic of migrant 'misery, the new Minister of Immigration concedes that hundreds of migrants, mostly granted residence in 1995 and 1996, were victims of a flawed policy.'

...A leader of the Pakistani community said yesterday... at celebrations for the 50th anniversary of the birth of Pakistan... that his people had been lured to N[Z] under false pretences... and then left with little support once they arrived in the country. The Auckland Pakistani community number about 600, with many more living in other parts of N[Z]... The frustration of not finding work had led to relationship breakdowns and three

suicides that... the president of the Pakistan Association of N[Z]... knew of... Doctors, pharmacists, engineers and computer programmers featured among the... many... now living on the dole... [A]ll had uprooted their lives to bring their families and their skills to N[Z]. Some... had already returned to their home country.

...[‘Smile and say “namaste” next time you meet a Nepalese-Kiwi. Nepal has enjoyed an almost mythical connection with NZ since Hillary conquered the tiny kingdom’s giant mountain in 1953. Yet for many of us, the country and its people are still shrouded in mystery. A west Auckland man, fired by successful Nepalese New Year celebrations held in Auckland, wants to make the cultural festival a regular event. But the day almost never happened, as around a third of the 45 Nepalese families in Auckland have packed their bags for AUS in the past few months. 75% failed to find work here, though all have since been employed across the Tasman. Most had masters degrees, doctorates and engineering qualifications, and came to NZ from 1994 to 1996’]...

A Russian migrant fluent in... Russian, English, Ukrainian, Japanese and Chinese and can also read French, German and Arabic... but who cannot get a job says N[Z] is not ready to absorb immigrants... [The] former linguistic researcher with the Academy of Sciences in Moscow, said she had spent a futile year sending out hundreds of job-seeking letters. She said a cross-party organisation was urgently needed to offer new migrants a helping hand into employment... “It makes me very sad not being able to contribute.” Her being on the dole was a “human waste.” ...[she] lives in Auckland and wants to become a language teacher[, having]... published more than 100 scientific articles and books on “super-intensive teaching,” a method which claims to offer automatic computer recognition of foreign language characters and give English-speaking students a grasp of Japanese in two days.

...According to the Korea-N[Z] Business Council, some Korean immigrants are finding it too difficult to assimilate in this country... [The council’s] chairman... says Koreans have high expectations of N[Z] as a paradise with bright open spaces, plenty of places to play golf and an excellent place to educate their children. But once they get here they are troubled by problems with the language and adjusting to a country with fewer than four million people. Seoul alone has a population of 14 million... [The] Korean Residents Association president... says a number of Koreans are leaving... In one case, a Korean businessman left after losing \$250,000 after setting up an Auckland business which failed three months later... N[Z] Immigration has arrival and departure figures but departure figures are not broken down by nationality... Census figures... show the number of Koreans applying for residency... fell by more than 40% last year from 3463 to 2055.

...[‘ABOUT one in five Asian immigrants can’t hold a conversation in English. The statistics, in the Ethnic Groups report compiled from 1996 Census data, shows the country’s Korean population is worst off, with 40.7% of the 12,657 population unable to converse in English. Of the 4302-strong Cambodian population, 24.5% of men and 33.6% of women also fell into that category, as did just under a quarter of the 70,000-strong Chinese community and more than 30% of Vietnamese. While Census data revealed a 7.7% unemployment rate for all NZers at the time of the survey, Vietnamese, Koreans and people from Middle Eastern groups had unemployment rates of between 20% and 30%. The Ethnic Council had long believed large numbers of immigrants were becoming isolated because of their inability to speak English. In AUS, under the Adult Migrant Education Programme, all adult migrants were entitled to 510 hours of co-ordinated government-funded English-language education.’]

...Migrants from non-English-speaking backgrounds who came to A[US] more than 20 years ago are suffering unemployment at unprecedented levels. The problem is greatest among blue-collar workers, says the study by the A[US]n Centre for Industrial Relations Research and Training. The study... found that the answer to migrant unemployment was complex, but appropriate policies could be developed... Also important are better access to... vocational skills-related training... and... English language skills...

[An] Iraqi woman... has failed the English language test... three times. The first time cost her \$6000... [She] is trapped by a two-year-old requirement that every member of some immigrant families reach a “modest” level of facility in English. Refugees and immigrants admitted on humanitarian grounds don’t have to sit the test – but general and business immigrants do. Those who fail must post a \$20,000 bond. If they cannot pass within three months, they lose \$6000; if they still cannot pass after being here a year, they lose the lot. The Minister of Immigration... hinted this week that the requirement could be softened. We used to require only the principal applicant in an immigrating family to speak English but now everyone over 16 has to. But any change won’t come in time for [the Iraqi woman], the only member of her family doing battle with the test. She has passed three of four parts, but failure in the reading section means failure overall and she must pass [in less than two months], or lose her bond... [In] a long discussion with her, I have trouble with only one word – the extraordinarily difficult “thigh” which she makes rhyme with “dig.” Her neighbours understand her and she shops with ease. But we want her to pay a small fortune for her linguistic hesitancy and she says the stress of it has made her ill and is eroding her self-esteem. “I’ve always been the person who solved every problem for my family,” she says. “Now I am the problem.” [Her] two Korean classmates... feel even gloomier. Each has already forfeited \$6000 and [one of them] says she will pay the \$20,000 because she is so scared of exams – but she still comes to daily classes... The test, designed at Cambridge University, is littered with English placenames, and it is harder for Asians than non-Asians... If we do make the test easier, it will be out of self-interest. Officials are worried that the test is discouraging Asian interest in us and potential immigrants, rich in talent or capital, are looking elsewhere... Whichever way you look at it, the test scarcely helps immigrants settle here. Unlike Canada or A[US], we offer non-refugee immigrants no English teaching ([the Iraqi woman] has spent \$4000 on lessons). And failing it doesn’t mean exclusion; it means paying what looks suspiciously like a tax – or even a fine – for not being a N[Z]er before you arrive.

...As a teacher of English as a second language I sympathise with the students in[a] recent article. The English test which immigrants must sit is very dry and essentially British in culture... Are we asking immigrants to pay large sums of money to do a test which many of us Kiwis would find difficult? ...I would be extremely interested to see how senior students in an average N[Z] secondary school class would perform in the test. The reading would be a challenge to many since today’s young people “tune out” to any reading which is not stimulating and interesting to them. The listening test, always a difficult task, requires a level of concentration beyond many N[Z] youngsters, brought up as they have been on the two-minute television sound-bite.

...[the] recent argument for lowering English language standards for immigrants defies belief. While[its] three hand-picked cases may seem hard-done-by, a policy allowing immigrants to pay \$20,000 to avoid learning English is insane (after paying \$500,000 for residency, the sum is paltry). Auckland University is crammed with Asian students with English ability no better than primary school children, who are marked more leniently than N[Z]ers... Competition between universities and even departments for funding ensures that standards are continuously lowered to increase the numbers of... graduates compromising their, and our, futures. By seeking residency, foreigners avoid the English requirement for international students and get to pay much smaller fees. Is it any wonder our own graduates cannot spell?

...The controversial English test and \$20,000 bond for immigrants will probably remain despite calls to remove it to attract more immigrants. The Minister of Immigration... said yesterday that he would be cautious towards his previous indication of softening the requirement, in a bid to make sure that future migrants would become a benefit rather than a burden to N[Z]... Addressing the N[Z] China Trade Association at its Auckland business luncheon, [he] said his ministry had to balance risks... Those risks included a big incidence of overstayers or asylum seekers from some countries – especially China... Last year, 987 Chinese people claimed refugee status – a third of all claimants.

...Refugees are a huge problem internationally. Until recently N[Z]’s geographic isolation has shielded us from this problem to a large extent. Western countries, particularly Germany, France and Britain have... reacted... [to their] large numbers of refugees... by tightening procedures and discouraging claims for permanent residence. In N[Z] we take two categories of refugee: quota refugees [– ‘NZ is one of only 10 countries that opens its doors to a set number of refugees every year’ –]and convention refugees. Quota refugees are part of N[Z]’s overseas aid activities and are

essentially not a problem. N[Z] takes about 800[quota] refugees each year[('AUS takes 7000')]. Convention refugees are a different category... a[nd a]re far more difficult to deal with. Basically a convention refugee is a person outside their country of nationality who has a well-founded fear (a real chance) of being persecuted on the grounds of race, nationality, political opinion, religion or membership of a particular social group. There can be no serious objection to N[Z] providing asylum for genuine convention refugees. The major difficulty is separating genuine convention refugee claims from bogus claimants who are essentially economic migrants (seeking a better life); or from bogus claimants telling lies and presenting false documents; or from people who are genuinely scared and fearful but are none the less not at significant risk. N[Z] operates a fair and humane system of refugee determination. The major difficulties are, first, delays in processing claims... [- a]t the end of May the refugee status branch of the Immigration Service had 1613 outstanding applications from convention refugees... [(a) year earlier there were 864] -] ...and, secondly, the failure to send... refugees back to their homelands once they have exhausted all the avenues for staying in N[Z, which] is costing taxpayers millions of unnecessary dollars every year... Last year this cost the taxpayer \$19,707,000. Add to that the cost of legal aid which many of those seeking asylum get from the taxpayer and the cost skyrockets further... Clearly the branch is either understaffed, poorly managed or both... Compliance officers are... people employed by[the] Immigration Service to remove illegal immigrants. In May this year 29 compliance officers were employed by the service. Immigration statistics show that as at March 1996, 16,574 people were still in N[Z] after their permits to stay had expired. However, given the inadequacy of accurate record keeping within the Immigration Service, this figure could well be understated... [Yet, e]ven if, say, 12,000 (of the 16,574) were in the country illegally... there is no way 29 compliance officers would have any chance of detecting and deporting 12,000 illegal immigrants.

...The Immigration Service has been slammed for failing to address continuing inaccuracies in its overstayer list, and has been told it cannot do its job properly without cleaning it up. The office of the Controller and the Auditor-General... accused the service of failing to implement nine of the 24 recommendations made three years ago to improve efficiency... [The] office says: "It is worrying that the accuracy of the list has not improved since... 1994... when the... Immigration Service told us it was initiating a programme 'to purge' the list. The overstayer list contains the names of all people who, having been recorded as entering the country, have not been recorded as leaving... and no longer have the legal right to remain here... [The service] supplied us with a list of 13 'reasons' for this inaccuracy - including clerical error, people travelling on two passports, U[S] citizens leaving on military flights to Antarctica and tourists having died here." ...About 15,000 people are deemed at present to be overstayers.

...Overstayers, now there's a word you don't hear bandied about much in the politically correct 90s. Nor do you hear the phrase it was synonymous with in the mid-70s: dawn raids... In 1976 the raids (evidence that spin-doctoring is no new political phenomenon is revealed in newspaper reports of the time with the then Minister of Immigration... declaring them "visits") were designed to deal with what the[National] Government decreed a problem of illegal immigration of escalating proportions. To keep the record straight... such raids had also been carried out under[the] Labour Government in 1974. Immigration division figures in the mid-70s estimated the number of overstayers at between 10,000 and 12,000 with up to 75[%] of them being Pacific Islanders. The campaign involved not just police, immigration officials (and occasionally dogs) arriving at houses in the early hours of the morning, but warnings being issued that those who didn't quite look like true-blue Kiwis should keep their passports with them at all times. The problem... said those pointing the finger at the activities of the Department of Labour which was charged with administering the Immigration Act, was that those with brown faces were prone to be picked because, like Friesian cows in a herd of Jerseys - to paraphrase a remark allegedly made at the time by one of the main defenders of the raids - they were easily identifiable... [One] policeman... of the time... says the order to "go to areas where brown-skinned people are congregated and question them as to the validity of their stay," came from the top. Pitt St, Karangahape Rd and upper Symonds St were the "first ports of call" for [the policeman] and his colleagues. The memory of a job to be carried out in the line of duty still makes the Samoan-born constable laugh immoderately: "We collected four or five people and took them down to the station. Among them was a Niuean, a Rarotongan [both legally entitled to residency] and a Maori - they weren't particularly happy that we took them and it was probably illegal that we did." [The constable], who was outspoken at the time about what he saw and still considers... "a very bad policy," says the campaign was originally hung on a law-and-order issue; part of a task force initiative to clean up the streets. From there it developed into dawn raids and [he] was involved in three or four of them. They were, he says cautiously, "a bit insensitive... when the dogs were sent in there at that time in the morning. You'd think it was the crime of the century." ...But there was, according to [the constable], another side to the story. "A lot of the problems came from the Pacific Island community itself... You bring your cousin into the country, he's not conforming, not sending money home, not paying rent, so you... [phone the police] and send him back." He'd try, he says, to let people know the consequences of the many anonymous calls to the station to inform on relatives. His worst memory is of "old Joe" whose nephew was playing up. "We went and picked him up and half an hour later who turns up crying and saying he'd changed his mind, but Joe. It was too late. The nephew was taken into custody and deported." ...It was a time of painful learning for everyone... Outrage. Injustice. It was certainly there says... an Auckland-based lawyer who was then president of the Law Society of Western Samoa. In legal terms, he says, the attitude of the Samoan people affected is today much as it stood then: "If you've breached the laws of another country and you're caught... well, so be it..." Retrospectively, though, he suggests that history might judge the episode as an occasion where "the immigration system failed to filter and then, suddenly, it was amputation time." ● 'In a morning raid yesterday, police and immigration officers took a screaming 10-year-old from her adoptive parents' home to deport her to Samoa - although she has no close family there (her family had all come to live in NZ legally; adopted in 1991, she is in this country on an expired student permit; her adoptive parents were granted citizenship in 1996). A lawyer got a last-minute court order to stop the deportation.'

...In times of economic prosperity migrants can be absorbed. In times of unemployment and recession, however, popular pressure means that governments are often forced to expel foreign workers, as Nigeria did in 1985. Nigeria had absorbed 900,000 workers from neighbouring countries. In the small Gulf state of Qatar, 88% of the workforce is made up of foreign workers; 80% in Kuwait (the great majority of them Palestinians').]

...Thailand says it will deport all illegal alien workers from the country and stop issuing work permits for unskilled foreign labourers to preserve jobs for Thais. An estimated one million aliens working in the country will be affected. Thailand is fighting its worst economic crisis in decades and unemployment is rising.

...[The Thai Government is considering joining legal action against NZ's Immigration Service over the treatment of Thais arriving here. Thai Embassy officials in Wellington are alarmed at reports of their citizens being held as suspected overstayers or prostitutes after arriving in Auckland or Christchurch. A total of 1238 people were refused entry to NZ in the year to June, 900 of them from Thailand. That number is more than 20 times that of the groups with the next highest rate of refusal, AUSNs and Malaysians, with 42 each. Embassy staff looked into the treatment of their nationals after reading the *Herald's* October 13 account of a Thai woman who was held for 2 1/2 days at the Papakura police station awaiting a flight home until a last-minute court hearing allowed her to continue her holiday. The woman claimed police denied her sanitary napkins and she had to resort to tearing strips from a handkerchief. Since then the *Weekend Herald* has been told of five more cases of alleged mistreatment of Thai women. □ One woman, with children aged 3 and 5, came to Auckland to stay and work for her sister to escape an abusive partner. She flew home to see her critically ill father after being advised by an immigration consultant that as it was an emergency she would not require a visa to return. She was turned away at Auckland Airport on August 29. □ The 25-year-old daughter of Thai Government officials spent a night locked up at the Papakura police station before being flown home, despite having guaranteed accommodation and a credit card. The university graduate was coming to Auckland to study English. □ A 23-year-old Thai woman came to NZ to visit her aunt and NZ-born husband after finishing university exams. She spent two days in the Otahuhu police station despite having a passport, return ticket,

accommodation and a financial guarantor. □ The Ombudsman is being asked to consider the treatment given to a 26-year-old woman who was visiting a NZ man she met in Thailand and has subsequently married. After being stopped because of visa problems and despite having accommodation, a NZ sponsor and available money in her Thai bank account, she was handcuffed and held before being sent home. □ A young Thai girl was held at the Papakura police station for two days after arriving with a friend who was a regular business visitor to NZ. Immigration officials said she had insufficient money for a brief visit despite carrying \$750 and an ATM card with \$5000 credit. She was released an hour before her flight home after the intervention of a NZ friend and a lawyer. The lawyer for the woman held on October 13, who is also dealing with two of these cases, said it appeared all young, attractive Thai women arriving here were considered potential prostitutes and turned back if they aroused suspicion. "If this was happening to NZ women on a regular basis everybody would be up in arms." She said many problems arose because the women spoke limited English. Thais do not require visitor visas to holiday here for up to three months. An Immigration Service spokesperson said only about 5% of Thais arriving in NZ were refused entry. Of those, only a very small number were detained. He said evidence showed many of those sent home had been forced to borrow money to travel.'

... 'In a matter of minutes, heavy-handed, inept migration officers resurrected the spectre of the 70s – memories of dawn raids and random street checks based solely on skin colour. All they needed was that one near-dawn swoop which led to the illegal deporting last week of a Filipino overstayer family despite a pending appeal. The family was immediately returned from Kuala Lumpur after the department had badly misinformed the Immigration Minister on the details. She was forced into an abject, angry explanation and apology to Parliament. A terrible start to a new look, tough policy on overstayers. There are no simple answers to the overstayer issue. Outcomes which will appease legal sticklers affront liberals and ethnic advocates alike. Politicians are uncertain which way to jump, knowing they'll be damned if they do and if they don't. For their own political and socially PC reasons, various Governments, both National and Labour, have ignored the obvious migration controversy waiting to happen. They've pretended that the legally invisible yet socially very visible hidden population of illegal immigrants does not exist. But they do exist – national estimates are as high as 22,000 – protected by their families, churches and their ethnic communities sometimes for years, living underground, working under assumed names and illegally, without official records, bearing and raising children. Always in fear that a chance encounter with officialdom will reveal them. One minor traffic smash and their cover is blown. Now, that terror is magnified since the recent law change could mean near instant deportation – as the Filipino family knows only too well. This is not an attempt to cloak the facts. Make no mistake, most overstayers are here illegally and deliberately so. They chose to come here on some pretence and then officially disappeared. As they had intended. While the Immigration Service busied itself with other business – like preventing a British grandmother from living with family here because she had a daughter in the UK, ignoring that they were permanently estranged. She may well have left from an airport crowded with other elderly grandmothers from somewhere closer, arriving here for permanent residence without the same issues being raised. Immigration is not noted for its judgment or its heart – obviously for good reason. Too many overstayers, too many opportunities for mistakes and bad decisions. Too many unanswered questions. Like the pleas from Asians trapped into illegal deals by dishonest agents. They ask why there should be amnesty for people who for five years knowingly evaded detection for what was a deliberate illegal act.'

... 'The Government is considering a selective amnesty for overstayers, which would allow thousands of Pacific Islanders to stay in NZ if they have strong family ties. It would help if they had jobs. The amnesty, similar to policies applied in 1991 and 1987, would not include serious criminals. Of the 20,000 overstayers three years ago, about 4000 were Samoan, 2400 Tongan, 1900 British and 1600 American. Ministers are also looking at developing a special Pacific Island access category, which would include Tonga and Fiji as well as Samoans. At present, up to 1100 Samoan citizens annually who have a job offer in NZ and are aged between 18 and 45 may be granted residence. They may also qualify under other categories, such as family, humanitarian or general skills. A cabinet minister said he wanted a review of the Citizen (Western Samoa) Act 1982, which overturned a Privy Council decision confirming NZ citizenship rights on Samoans born between 1924-1949 during NZ's administration, and their children.' ● 'The PM is expected to acknowledge, if not say sorry for, the deadly flu epidemic of 1918 that killed thousands in Samoa after the crew of a NZ trading ship lied about sick passengers and let them ashore, and the Mau killings under NZ colonial rule a decade later when NZ police gunned down unarmed independence protesters, killing nine and wounding 50.'

... 'The Government's payroll tax apology to the Chinese is seen as the first step on the road to reconciliation says Waitakere City's lone Asian politician. From 1881 till 1944, all Chinese immigrants had to pay £10 entry tax, valued at \$20 million in today's terms.' In related news, **a n ugly row has erupted in West Auckland over the right to bestow citizenship on new immigrants. The Mayor of Waitakere... says [the] Waipareira MP... has muscled in on his job by organising a mass "vote-catching" citizenship ceremony. "This is blatant political hijacking of what is supposed to be a non-political event and, in my view, sets a dangerous precedent,"... But the National MP lashed out last night, describing the mayor as "insecure" and "egotistical"...** ["The mayor] thinks he is the king pin in Waitakere City, but he is proving that he is really only the court jester,"... **The backbench MP denied the initiative was politically motivated, saying many of the residents were not even in his electorate. He contacted the Department of Internal Affairs offering to hold a function because he was concerned that some residents had been waiting[for seven months] to become N[Z]ers... He was fronting a ceremony at Waitakere College involving 300 immigrants on Friday in a bid to reduce a backlog of around 800 people.**

... ['Foreigners who come here to live often seek assistance from immigration consultants to help them with the process of becoming NZ citizens. Often clients speak little or no English but are willing to pay large sums of money – between \$1500 and \$25,000 – for some consultant assistance in securing a visa. However, dishonest immigration consultants are giving the industry a bad name in NZ. One consultant, who deals mainly with Japanese-speaking people, says it is too easy for the unscrupulous to set themselves up as immigration consultants in NZ. He knows of clients who have hired an immigration consultant and paid high sums of money only to see nothing done. He wants to see compulsory registration for all professional consultants. Says the police officer in charge of Auckland's Asian crime unit: "If you're asking me if immigration consultants are involved in fraud, then yes, it would seem to be the case." He says the on-going Operation Passport is an investigation that looks at the fraudulent sale of NZ passports to foreign nationals.'

... "'Sex, lies and money" lured a high-flying immigration official into a passport scam that allowed foreigners to stay in the country. The former team leader of the passport office in Auckland was jailed for 2 1/2 years yesterday after issuing 48 false passports to mostly Asian immigrants. The 31-year-old, separated from his wife, became ensnared when his Thai girlfriend introduced him to the mastermind of the immigration ring, allegedly a city restaurateur. It is believed immigrants were charged about \$35,000 for the passports. Authorities were tipped off when a Chinese man was stopped last July at Auckland Airport with a letter saying passports could be brought from a staff member at the Department of Internal Affairs. Several other people will also appear before Auckland courts in connection with the scam and police say they were still hunting some of the illegal immigrants.'

... 'Two cabinet ministers are today ordering officials to investigate an immigration scheme where homeless Aucklanders are lured into sham Asian marriages for thousands of dollars. An undercover reporter exposed how an Auckland company arranged marriages from which the Asians hoped to gain permanent residency.' Incidentally, 'an organised crime ring blamed for bringing over 1000 illegal immigrants into NZ on fake passports was run from west Auckland homes. Two men and a woman are on bail for a variety of fraud charges and will appear in the Waitakere District Court on Monday. Houses in Glen Eden and Glendene were among properties raided by police last week. A Henderson detective says the syndicate of Iranian and Afghani nationals – which is linked to three others around the world and has been operating in NZ for the past five years – was mainly involved in smuggling immigrants and refugees into NZ and AUS. To track down the ringleaders, Henderson police are working with the immigration department and officials in AUS'...

'This week, in yet another warning of the soaring global trade in people and passports, authorities in AUS and Hong Kong cracked a gang supplying AUSn citizenship for cash. Unlike scams operating in the Middle East, where fake AUSn visas and identity documents are openly on sale for \$US5000, this was the real thing. At its heart was a corrupt and not-yet-named immigration official in Sydney who earned about \$A1 million in bribes by flashing 140 Chinese through the citizenship process under special provisions bypassing normal requirements. In Hong Kong, the Independent Commission

Against Corruption arrested a local emigration consultant, two associates and 26 customers following a year-long investigation. By the time of his arrest, the commission said, the consultant had earned \$A5 million by charging up to \$A100,000 for new passports. The client list ran from people simply wanting a new life to criminals increasing the scope and flexibility of their international travel. And in Nairobi, the UN is investigating five refugee officials – one Italian and four Kenyans – who allegedly charged up to \$US5000 a head to push the fortunate and moneyed to the front of queues heading to Canada, the US and AUS. AUS has been a growing destination for traffickers. The trade is a low-risk, high-return venture for traffickers – but expensive and dangerous for the desperate. Last year, more than 2700 people made the journey that most often ends at Ashmore Reef, a desolate strip of land off the northwestern coast of AUS. They do not find a ready welcome. AUSn officials track the boats through intelligence arrangements with agencies in the Middle East, China and Indonesia, and intercept many with RAAF Orion aircraft and patrol boats. Last year, AUS poured \$A124 million more into its coastal surveillance network, including two new Dash 8 patrol aircraft and a new night-capable helicopter to patrol the Torres Strait, new satellite communications technology and a new national surveillance centre linked to state government agencies and defence bases. Tough new fines and controls have also been introduced to establish the identities of asylum-seekers who frequently try to conceal their origins. The cost to AUS, both financially and politically, is high. Finding, intercepting and detaining illegal immigrants costs about \$A120 million a year. Their detention has become a political nightmare, with riots, hunger strikes, mass breakouts and persistent claims of neglect, violence and sexual abuse plaguing the Government.’

... ‘The Government is under pressure to drop laws forcing expatriates to choose between AUS and their adopted country. Present laws prevent people born in AUS from keeping their passport if they take up citizenship elsewhere, but allow some migrants dual citizenship, depending on the laws of their homeland. The AUSn Citizenship Council recommends AUS follow the lead of countries such as Britain and the US, which allow their citizens 2 passports. The Opposition immigration spokesperson said AUSns shouldn’t be penalised because globalisation forced them overseas for jobs, study and business.’

... ‘At the beginning of this year, the head of the Auckland University Business School asked her 800 first-year students how many of them were born overseas. Two-thirds put up their hands. How many, she asked, expected to be overseas in five years? 80% put up their hands. Perhaps they were just going on their “OE” and would come back. So she asked how many thought they would still be overseas in 20 years. This time they hesitated. “It will depend on how well NZ’s doing.” For most NZers, this is a deeply worrying time. After pumping money into the country for much of the past 15 years, suddenly foreign investors are pulling out. The dollar has dropped to its lowest value ever – so low that the PM has suggested we might be better off to give it up and adopt the AUSn currency. From 1960 to 1984, the income of the average NZer slipped from 100% of the average in the world’s 23 rich countries to 67%. Since 1984 we have slid to 54% of the rich-country average. The head, an American, says our pay levels for professional people are now even lower. “Ten years ago, when I came to this country, our salary levels were about 50% of the international levels. Now they’re 30% and falling. So attracting top talent here is impossible. There are areas of the university that haven’t been able to hire anyone except for Third World scholars for five to seven years – in business, information technology, high-technology engineering and medicine.” It is not much better on the factory floor. A South Auckland manufacturer lost three people off its production line a few weeks ago, all going to AUS. Its chief executive, who divides his time between the company’s Auckland and AUSn plants, says a worker on the average wage in AUS is now just over \$10,000 a year better off after tax than a worker on the average wage here. The result is a shortage of skilled workers’ in NZ.

... ‘Migrants from countries other than Pacific islands accounted for 11,471 – or 17% – of Auckland’s registered unemployed in June. Of the legion of jobless migrants, 3980 held university degrees or other tertiary qualifications. Many migrants pack up after years of fruitless job-hunting and head for AUS. The AUSn Immigration and Multicultural Affairs Department says 30.8% of the 31,610 NZ passport-holders who emigrated across the Tasman in the year to June were born in third countries.’]

...Almost 5300 N[Zers left] for Queensland in the year to March... according to its Local Government and Planning Minister... making them the state’s major source of overseas immigrants at 36%. [However, Sydney remains the most popular adopted home for NZers in AUS – ‘70,000 live there.’

... ‘I feel smug when AUSns mutter about putting limits on the number of Kiwis going to West Island. Years ago, in a preemptive strike against just that, I got my mum’s Aussie birth certificate, threw some money at the relevant bureaucrat, and got a beige piece of paper saying that hence forth I was advancing Australia fair. Just as well. Our cuddies are trying to push the doors shut. Since February, Kiwis arriving have faced a two-year stand-down before becoming eligible for benefits – inference being that they turn up on Bondi Beach and slum it on the AUSn government. This overlooks the fact that both governments balance their welfare books, and that NZ’s much-lamented brain drain isn’t going to Burkina Faso or Alaska. More and more of our professional people train here, but give their gifts to AUS. Some would say that working in AUS is a dubious privilege – you might get more money, but you enjoy sand flies the size of small aeroplanes, crocodiles and snakes. But I have to admit that there are lots of things to like about life in Aussie. People are laid-back – okay, brash – and have an ability to laugh at themselves. NZers often seem to prefer the gloomy side of the street. Look at the respective nation’s recent films if you doubt this: Aussie has given the world hilarious gems like *The Castle*, *Simply Ballroom* and *Muriel’s Wedding*. We’ve offered up *The Piano*, *Once Were Warriors* and *What Becomes of the Broken-Hearted?* Generally, I sit on the fence on the Aussie/Kiwi reciprocal rights issue. Neither passport has an advantage over the other – neither will let me work in Europe without a big fight. Thus, I can be bought – and right now I’m sticking with’ AUS.

... ‘in a secret transtasman deal expected to be signed before Christmas, the Government is preparing to let AUS cut permanent residency rights for NZers, meaning they would be treated the same as other migrants. NZers could still live in AUS under the proposed deal. But without permanent residency, they would not be entitled to family tax relief, maternity allowances, childcare benefits, housing benefits and even education for their children. It will not apply to those who already have permanent residency in AUS. In return, AUS will stop asking for millions of dollars from our Government to pay for NZers receiving benefits in AUS. The PM last night went to great pains to stress that NZ’s taxpayers were paying the social welfare benefits of expatriates living in AUS – something they did not do for NZers in other countries. A briefing paper from the Foreign Affairs Minister, leaked to the NZ Press Association, said the agreement would halve the annual flow of people across the Tasman. The uneven nature of the present arrangements has long concerned the AUSn Government. AUS’s Immigration Minister produced figures last month showing 31,615 NZ citizens moved permanently to AUS in the year ended March, compared with 5208 AUSns moving in the other direction.’ In related news, from] **next year 400 N[Z]ers aged between 18 and 30 will be able to take a year-long working holiday in Canada, with the same number of Canadians having the right to come here.**

...Vancouver and Auckland are the best cities... to live in, according to a report just published... by the Swiss-based Corporate Resources Group... The study... is widely used by Governments and international companies in assessing how to pay staff they send abroad. The annual survey focuses on “quality of living” issues that most concern business people[, rating]... the cities for political and economic stability, crime, pollution, health, environment and schooling... This year it covered 192 main cities, including 31 appearing for the first time. These were mostly from developing countries... The... top-ranked cities... for business executives to be posted to... were: Vancouver, 1; Auckland, 2; Toronto, 3; Zurich, 4; Geneva, 5; Melbourne, 6; Sydney, 7; Helsinki, 8; Vienna, 9; Brussels, 10. The five lowest-ranked cities were: Phnom Penh, 188; Khartoum, 189; Sarajevo, 190; Baghdad, 191; Brazzaville, 192... Last year Vancouver, Toronto, Zurich and Geneva took top honours, and Tashkent and Sarajevo were the lowest ranked. [‘Auckland was ranked as the world’s fifth best city, and the top city to live in among Asian and Pacific countries (Wellington was the only other NZ city rated – coming in 7th in the Asia/Pacific region). In 1995, Auckland and Sydney were ranked equally’. The Treasury Department will be hoping that the latest rankings encourage more people to migrate to NZ.]

...The Treasury has cut its estimate of the economy’s sustainable growth rate because of net migration slowing to a trickle... The Treasury has for some time assumed the economy can grow at a sustainable trend rate of 3.5[%] a year... But in yesterday’s December Economic and Fiscal Update

it said the sustainable growth rate was now more like 3[%], because the reduction in net migration would pull labour force growth below 1[%] a year. Annual net migration inflows have dwindled... as fewer would-be immigrants are approved and the number of people permanently leaving rises... The effect of the economy being able to take 3[%] strides rather than 3.5... is, very roughly, \$500 million less a year flowing through pay packets, cash registers and tax coffers.

...N[Z] will open its gates to an expected 45,000 immigrants next year after a 1995 clampdown slashed numbers and saw investment plummet... A formal announcement is not expected until at least next week once the matter has been considered by Cabinet. The decision will mark a huge policy switch for [the leader of NZ] First... who, during last year's election campaign... claimed... that immigration had put massive strains on services "to the detriment of other existing residents." ...[he had] pledged to slash immigration to 10,000. That target was described as "crazy" by... [the] Immigration Minister... who yesterday said the party was ill-informed about the "critical importance" of immigration. "I have a number of reforms in the pipeline..." [the minister] said... during a three-day visit... [to] Hong Kong. - 1997

N[Z] is throwing open its doors to the elderly in the hope of boosting the flow of immigrants... [T]he business investor category has been extended from 65 to 84, although applicants aged over 65 will lose points. The Government is also looking to attract more pensioners to retire to sunny N[Z]... On present rates of departure, residency approvals need to rise from about 28,000 to 38,000... to meet... the Government... target of a net population gain of 10,000 a year... Although the age restrictions in the investor category have been relaxed, the minimum investment required has risen... to \$1 million. The new policies undo some of the tougher restrictions National imposed in 1995, including a \$20,000 English language bond. Instead, non-English speakers who are otherwise accepted must prepay for approved English language lessons. The cost will vary according to competency but could be between \$1700 and \$6500. Immigration offices will be opened in Shanghai, Moscow and Pretoria, and nationals from Argentina, Brazil, Chile and Uruguay will be able to travel here without a visa. The new posts' location and the visa waiver signal where the Government wants to expand N[Z]'s trade and tourism potential... The Government is to boost its overseas tourism promotion by \$12.5 million... to cash in on "millennium opportunities." ...The move follows a *Time* magazine article that billed Sydney as the first major city to see the new millennium, but failed to mention N[Z] at all.

If decreased immigration and tourism thwart the Government's economic plans, its focus may have to totally revert to expanding NZ's first official method of earning revenue from overseas – exporting ('in 1818, 60 tonnes of NZ flax, valued at £2,600, were exported – the first record of export of a NZ processed product; the fibres of NZ's indigenous flax plants – used by the Maoris for clothing, matting, baskets, cordage and fishing lines – were used by Europeans for ship sails and rigging; as steam superseded sail, the demand for flax fell, but WWI needs led to a revival and a record export of 32,000 tonnes in 1916').

In order to increase the volume of produce that NZ can export to certain nations, or to gain access to others, NZ's Government is an advocate of FREE TRADE. Unfortunately, free trade agreements mean that NZ must accept imports from those nations – and, if the economic value of the imports exceeds that of the exports, NZ loses money. It can also lose money if someone fails to ensure that unwanted plants, insects or larger animals aren't imported at the same time (e.g., an importer or transporter who tries to save a few dollars by not fumigating thoroughly – if at all – can cost NZ \$millions in eradication costs).

The Government has injected a further \$1 million into a programme to prevent the Asian gypsy moth from establishing itself in N[Z]. Officials... believe the moth would pose a serious threat to the \$2 billion forestry industry if it becomes established... Forestry officials have been on the alert for the arrival of the moth since egg masses were found on a Russian ship in May 1993. The moth has been described as the "foot and mouth" of forestry... To catch the moth before it spreads here some 2500 traps laced with a sex stimulant which attracts male moths have been laid near the ports and airports. No moths have yet been found... - 1995

Forestry officials have banned shipping containers from the Russian Far East to stop the destructive gypsy moth from entering N[Z]. In the past few years several of the distinctive containers have been found to have been infested with... eggs.

...[The discovery of 20 live gypsy moth caterpillars and a nest in the wheel of a used Japanese imported car caused a scare at the Port of Auckland yesterday. A Ministry of Forestry quarantine service spokesperson said the vehicle was immediately isolated and fumigated. The rest of the shipment was reinspected and cleared, and ministry staff also inspected vegetation in the surrounding area.]

...The Minister of Forestry... wants tougher action to keep unwanted pests such as the white-spotted tussock moth out of the country. He said yesterday that the risks of foreign pests entering N[Z] had increased as 20,000 used cars were imported each month... There were regular checks for the Asian gypsy moth which was easy to see, but the white-spotted tussock moth was smaller. A cluster of eggs could be concealed under a car's mudguard or flap. "I am not satisfied, having looked at the evidence, that the... vehicles coming into N[Z] are clean enough." ...Importers of second-hand forestry equipment had been told that if it came into the country dirty the equipment might be sent home. Subject to the recommendations of the ministries, and if the cabinet agreed, he was[also] prepared to order that shipments of second-hand vehicles be reloaded and sent home if dirty cars were found.

...Residents of Auckland's eastern suburbs will be losing sleep this spring over the white spotted tussock moth. Within the next few weeks, the Government is expected to approve aerial spraying, based on the threat to N[Z]'s forests posed by the moth's highly mobile and voracious caterpillar. Civil Aviation Authority assent has yet to be given, but the operation will probably involve low-flying aircraft dropping a mist of insecticide over 40 sq km... Flying could begin before sunrise over several days... with aircraft applying the insecticide 10m to 30m above roof lines... [The spray zone contains 80,000 people, including] 37 schools and 25 rest homes and hospitals... The general manager of protection operations for the Minist[ry] of Forestry... said last night: "When we spray, people will be woken up. There is no question about it. All we ask is for people to bear with us for the short time we are spraying so we can protect our forests." ...An... entomologist... [from the] Forest Research Institute at Rotorua... said young and older caterpillars had differing diets. Young... ate blackberry plants but, as they grew older, they moved on to eat radiata pine and other trees. With blackberry being a common weed in pine forests the impact of the caterpillars could be significant on the \$2.6 billion forestry export industry... The species, originating from Asia where it is not considered a major pest, was discovered in Kohimarama... after possibly entering the country in an imported secondhand car. Scientists believe the infestation has been contained in a 7 sq km zone in the Kohimarama, St Johns and Mission Bay area. Garden trees have been stripped by the caterpillar which has a fondness for roses and plum, peach and apple trees. Testing... has also found the caterpillar likes native beech trees and rosaceous natives... Inside the... zone, masses of whitish eggs, individually the size of a pinhead but laid in clusters the size of a 5c coin or smaller, are being monitored two or three times a week by scientists for signs they are hatching. No-one knows for sure when they will hatch. But just one female, if left to survive, could be responsible for producing 3 million more females by autumn. The best prediction is that hatching will take place in spring, and the plan is to have the spraying operation ready by September 1. The ministry proposes using a spray of Btk... to battle the newly hatched caterpillars, which in their young stage can be dispersed by the wind on long silken threads. The spray is claimed to be one of the safest insecticides known. The bacterium occurs naturally in soils, foliage, water and air in most countries, including N[Z]. It has been used for 30 years in North America... It has not been used to eradicate white tussock

moth before... The toxin in Btk is activated by the gut contents of the caterpillar, causing paralysis and death in two to three days. No evidence has been found that Btk causes any problems for people other than those involved in the spraying, who can develop minor irritations such as dry skin, burning eyes and runny noses. No effects on... bees, spiders, worms, reptiles, birds or marine life, have been reported, apart from the temporary loss of caterpillars as food... [I]t does kill all exposed caterpillars of moths and butterflies... but populations should recover after a time... The spray itself is made up mostly of water but also contains non-toxic thickening and sticking agents. It can be applied at a volume of 75,000 litres per 25 sq km... The ministry would mount a huge consultation exercise before any aerial and ground spraying began... "Even though this spray is so environmentally safe and harmless to life other than caterpillars, people will still not like it and you cannot blame them for that."

...When the BTK organic pesticide begins to settle on Auckland's eastern suburbs... residents can take some comfort in the fact that they are not guinea pigs. Cities have been sprayed with BTK before and the verdict... is that harmful effects that can be directly blamed on the pesticide are unlikely... The largest health study of an urban population took place after extensive BTK spraying over Vancouver... in April 1992 to eradicate the Asian gypsy moth... believed to have arrived on Russian freighters... The moth... posed a threat to Canadian forestry... Swabs from 128 patients produced positive cultures likely to be BTK, with 74 of those patients coming from within the spray zone and 50 from outside. The positive results from patients outside the spray zone might be explained by the natural occurrence of BTK... But none of the positive cultures could be linked to clinical illness... The main author of the study... attributed reported illnesses to anxiety rather than the effects of the spray.

...Health concerns over plans for aerial spraying in Auckland... are now focusing on the chemical ingredients... rather than the insecticide itself... The spray to be used in the Ministry of Forestry's Operation Evergreen is Foray 48B... The precise make-up of the formulation, manufactured... in Chicago, is a trade secret... Information from the *US Journal of Pesticide Reform*... identifies some of the chemicals which "could cause health problems." The information states that Foray 48B has contained sodium hydroxide, sulphuric acid, phosphoric acid, potassium phosphate and methyl paraben, a potential allergen... [A]sthmatics, allergy sufferers and people with compromised immune systems... [could be] at some risk... The Ministry of Health says the spray will not be a health risk but Auckland Healthcare is preparing a spray health impact study... The chief adviser (public health medicine)... said proving links between symptoms and spraying was not always easy and no one could give a blanket guarantee to every individual. "There is no such thing as zero risk in any aspect of human endeavour." The Ministry of Forestry says spraying is likely to begin about the middle of next month. It has \$5.1 million for the operation...

Eastern suburbs households, all 28,425 of them, will receive information packs from today on the... spraying programme... The information... contains a conclusion that "generally, no special care needs to be taken by the public..." The document also states, however: "People with severe or unstable asthma or other respiratory conditions, immune conditions, allergies, or others who have concerns such as pregnant women, can reduce exposure to the spray by staying inside with windows and doors shut during the spraying operation."

...Beware the white-spotted tussock moth caterpillar – even a dead one can exact an itchy revenge... The caterpillar... has hairs which can irritate the skin of people allergic to them.

...Six white-spotted tussock moth caterpillars were discovered in Kohimarama yesterday... If hundreds more... hatch in coming days officials will probably have no option but to call in a DC-6 aircraft from Canada to start... spraying... The aircraft could be here... in a week... [A] huge \$1 million public information campaign will begin next week in newspapers and on television and radio. For the estimated 20[%] of residents who do not have an interest in the news, officials are considering towing an Operation Ever Green... banner behind a light aircraft over... eastern suburbs.

...The... Minister of Forests... said that the estimated cost of combating the moth had risen almost 60[%]... to nearly \$8 million. The sharp cost rise is partly a result of the selection of... Canadian-based... Conair Aviation Ltd... to carry out up to six early morning spraying runs... By starting flying at first light, the area can be covered within three hours, but weather conditions might delay flights until later in the day... The 40-year-old... DC6... has been chosen by authorities for safety reasons: with four engines, it can return to base without jettisoning its load of up to 12,000 litres... The plane... entered service with United Airlines... then was sold to Ansett... During one flight, an engine fell into a bay off Melbourne before the pilot safely landed. Ansett sold it to Far Eastern Transport, where it had a passenger role during the Vietnam war. Conair bought it in 1972.

...[a] Canadian DC-6... with two pilots and two engineers is expected to arrive at Whenuapai on Monday night and should be ready for spraying in a few days. The [CAA] has yet to approve the operational plan for the aircraft... The authority has specified a minimum altitude of 150m for a multi-engined spraying aircraft... It is understood, however, that the authority is set to agree to a spraying altitude of between 45m and 61m because of the net benefit to the country... [S]cientists have determined that a spray release height of 61m or less is required... Helicopters will be used for inaccessible areas such as gullies.

...The aerial war against the white-spotted tussock moth is due to begin today with a helicopter targeting densely vegetated gullies... Ground spraying of infested properties also will start... The... DC6... is to make a test drop of... Btk over Woodhill Forest to fine-tune equipment.

...Auckland has come under siege from unwanted and harmful insects. As the eastern suburbs braced themselves for the first aerial spraying... investigations were already under way into two new bug threats. Ministry of Agriculture quarantine officers intercepted 15 dead fruit fly larvae and many eggs contained in two commercial consignments of Tongan watermelons at the Port of Auckland yesterday... An operation to exterminate fruit flies in Mt Roskill involves insects from the same family... Earlier in the day, forestry officers found seven clusters of eggs of the destructive gypsy moth on the outside of a container on board a ship from Russia. Each cluster is thought to contain at least 1000 eggs.

...Ministry of Forestry officials[have] found another unwanted overseas visitor – a small tortoise beetle about one centimetre long believed to have come from A[US]... on an air stream... The beetle attacks primarily acacia wattle trees and is perceived as a much lesser threat to forestry and garden trees than the white spotted tussock moth. However, officials are wary of the possibility the beetle will adapt to N[Z] conditions and widen its eating habits... [Ministry] officers have been checking all over Auckland since the first beetles were found in April... Three sites of the beetle infestation have been found in Mt Wellington and Remuera... Pyrethrum spray – derived from chrysanthemum flowers – will be used to kill the beetles... [By the way, fruit] fly eggs found in a shipment of Tongan watermelons last week have failed to hatch after incubation, showing the fumigation treatment in Tonga was effective.

...Fruitgrowers' representatives expect a tough new border control strategy... which will lift the cost of border control by \$19.9 million over the next three years... will help to persuade overseas markets to lift restrictions imposed after the Auckland fruit fly discovery... Three more sniffer dogs will be used at Auckland Airport, which now has two beagles sniffing incoming international baggage, and the scheme will be extended to... the international mail centre in Auckland... and to the... Wellington, Christchurch, Hamilton, Palmerston North, Dunedin and Queenstown... airports... If it's not sniffed it will be x-rayed... About \$16.5 million will be spent installing and staffing... seven x-ray machines... to detect illicit food... at the Auckland, Wellington and Christchurch International Airports and at... the mail centre... The increased scanning of baggage would speed the processing of passengers because the... machines were fast and each would have seven staff... About \$500,000 will be spent on a public awareness campaign, including an in-flight video in a variety of languages to inform N[Z]-bound passengers about our agricultural laws. There will also be new passenger declaration forms in a wider variety of languages and improved signs and amnesty bins. The Minister of Agriculture... said officials were confident... the strategy... would push the detection rate higher than 80[%]... The President of the Fruitgrowers Federation... welcomed the strategy. "It's what we've been calling for," he said. Most countries that buy N[Z] fruit responded to the fruit fly larvae discovery in Mt Roskill in May by banning imports from within a 15km radius of the site and demanding fruit passing through the zone is insect-proofed by special wrapping. The bans are expected to come off early next year if no more flies or larvae are found... [Incidentally, m]ore than... 96[%] of this

year's export... apple... crop, have been sold, the Apple and Pear Marketing Board said yesterday. As of September 20, the board had sold 17.1 million cartons... in its four main market sectors – Europe, Britain and Scandinavia, Asia/Pacific and North America.

...N[Z] is the world's biggest exporter of apples but our closest neighbour is being denied the taste of Kiwi-grown fruit because A[US]n growers claim this country's crop is diseased... N[Z] has never exported apples to A[US] but Enza – a division of the Apple and Pear Marketing Board – wants to change that. It has officially applied... for permission to sell premium grade apples on the A[US]n retail market. The application is supported by A[US]n retailers who... welcome the chance to stock high quality N[Z] varieties, some of which are not available from their own domestic growers... The move is strongly opposed by A[US]n growers. They say the risk of contracting the disease fire blight from N[Z] apples could slash production by at least 25% with up to a third of growers going out of business. But... [Enza's] market access manager... said the A[US]ns are being alarmist. Extensive testing showed the bacteria were not present in mature fruit. [Incidentally, 'the search for the painted apple moth will be widened today. Properties within 1km of the infestation in a Waitakere industrial area will be checked by forestry crews over the next week. However, officials are cautiously optimistic that the intense outbreak of the AUSn import is concentrated on five Glendene industrial properties, which were sprayed with insecticide on Saturday. Another infected property had been found within 300m of the cluster. The chief forestry officer said that because the infestation appeared to be highly localised, eradication should be possible through ground spraying. The moth had probably been shipped here in a container. It was an AUSn native and generally considered a minor pest there, although it was sporadically a problem on pine and acacia trees. It had natural predators in AUS which kept the population in check. In NZ it is a more serious threat than the white-spotted tussock moth because it fed on a wider range of trees.']

...The unwelcome discovery of a batch of older tussock moth caterpillars in the eastern suburbs has Operation Ever Green staff on full alert. Ministry of Forestry staff have... found about a dozen... of the hairy pests in their final stage on five or six... properties... The operation leader... said discovery of the older caterpillars... was... not unplanned for. "Operation Ever Green has eradicated the vast bulk of the infestation but there was always a risk some stragglers would escape the spray,"... Appallingly wet spring weather had added to the problem, he said. Heavy rain following recent aerial spray days could have washed some of the organic spray off leaves before caterpillars started feeding on them... Meanwhile, the last DC-6 aerial spray... was planned for tomorrow morning, weather permitting, and ground spraying was expected to continue until closer to Christmas.

...Christmas trees are causing a headache for Operation Ever Green... The Ministry of Forestry is scared that the... moth could travel further if Christmas trees sold in eastern suburbs are taken out of the area... Tree growers or sellers could be given packs of fly spray and asked to spray the pines themselves... A Glendowie Christmas tree seller... said people came "for miles" to buy her trees, but none would be sold without meeting the ministry's regulations. It is illegal under the BioSecurity Act to remove anything from the controlled area without ministry approval. An initial ban on the sale of fresh trees had eastern suburbs residents worried... "People are quite distressed – they think they won't have a... tree at Christmas time." But... [a] forest health worker... said he hoped the issue would be resolved in time for the Christmas tree rush.

...HUNTERS of the dreaded white-spotted tussock moth were scratching their heads yesterday as to how the bugs survived one of the heaviest hit areas... Five adult male moths were trapped on Christmas Eve and Boxing Day... "[The area] was severely dealt with," [the operation leader] said. "It was sprayed from the air with the DC-6, then with the helicopter and also on foot. Some caterpillars survived all that." ...the moths may have been a small group not feeding at the time the Btk insecticide was sprayed... [E]ach aerial spray was thought to kill between 90-95% of the caterpillar population. Operation Ever Green staff are back on full alert today, with traps being set and checked daily throughout the danger zone. More traps would be added outside the infested areas during the next few days. - 1996

Auckland's eastern suburbs are to come under aerial attack again... Scientists and Operation Ever Green staff were called back from holidays... A larger twin-engined helicopter would be used to meet civil aviation regulations for flights over houses... Thirty-nine males have now been found... The males were attracted to traps by a hormone secreted by females. No egg clusters or females have been discovered in ground searches.

...While Auckland's eastern suburbs have been under a strict quarantine to contain the white-spotted tussock moth, a Rotorua entomologist... has been driving carloads of the pests across the country every week. Thousands of female tussock moths have been bred in the past three months to lure males into traps... "I'd rather not use real moths but there are no synthetic pheromones... [although] we do have people working on it," he said. Females were raised to the cocoon stage under secure conditions at the Forest Research Institute... one of the few facilities with a building designed specifically for rearing insects in isolation... Each week 500 cocoons were stacked inside plastic containers, stored in chillbins to keep them cool, and packed into the back of [the entomologist's] station wagon. "I tape the chillbins closed, too, in case I'm involved in an accident or something, and I drive non-stop to Auckland. The car is never, never left unattended,"... The moths were delivered directly to a secure "hatching" room within the spray zone, where they were locked in individual cages before being placed in traps. Their five-day lifecycle meant that between 50 and 60 were needed every day to replenish the 300 traps scattered throughout the eastern suburbs. Forty-nine male moths have been discovered alive... The leader of Operation Ever Green... said that weather-permitting, 100 properties would be ground-sprayed next week and about 100 ha aerial-sprayed. "We may still not get them all but we will continue until we completely wipe them out."

...THE Government will be asked for the second time for more money to eradicate the white spotted tussock moth... [after] Ministry of Forestry investigations... confirmed that the... moth is a threat to a larger list of trees and shrubs than first expected... Poplar, citrus, alder, birch, macadamia, wisteria, elm and grape were all now part of a list just compiled by... researchers... The ministry announcement comes as opposition to its spray campaign intensifies. In the past four weeks more than 1500 households in the helicopter spray zone have written to the ministry to withdraw their consent to spraying the area. But... under the Biosecurity Act, the ministry did not require residents' consent for aerial spraying or for inspectors to enter private property... The bigger issue is that forestry is now such a large part of N[Z] business. It directly employs more than 32,000 people... A helicopter completed the 20th aerial spray of the Kohimarama hot zone yesterday.

...Angry residents in the... spray zone last night demanded that the use of the chemical Btk be stopped immediately... Despite assurances by the Operation Ever Green leader... that the spraying was medically proven to be harmless, residents said they feared for themselves and their children... Headaches, nausea, skin rashes, itching, breathing difficulty and burning soreness of the throat and lungs were some of the symptoms the residents reported... One said the spray was too powerful because her children had been sick... immediately after spraying. "It's like dropping an atomic bomb to kill a spider," the woman said. Another woman said: "We're not against killing the moth, we're against hurting people. And the sound of the helicopter is enough to drive somebody up the wall."

...The Eastern suburbs has been a community under siege for six months... [After being] "bombed" 21 times... [s]ome very concerned residents began to communicate with specialists and groups in Canada and the U[S]. What they learned left them] aghast. No community has been sprayed with Btk more than three times... Opponents of the... anti-moth campaign... are considering legal action to stop further aerial spraying... One resident, whose wife is expecting a baby in June, said he would personally sue the Government if the child suffered defects... Reports of premature births and miscarriages have jumped in suburbs that were sprayed... Auckland Healthcare[']s environmental healthcare manager... did not know of any ingredients in the... spray used... that could cause such effects on pregnant women. "At this stage I believe there is no cause for concern but we would certainly investigate any cases that people report to us." ...If there was a genuine "cluster" of premature births or miscarriages, officials would also need to check other potential environmental causes such as lead poisoning from paint in older houses... Health officials... signed secrecy deals to stop them revealing what was in the insecticide... The helicopter spraying is due to finish at the end of the month...

People living in Auckland's tussock moth "hot zone"... are being asked to put their names on a register to be held in the National Archives... [An] independent medical adviser to the Ministry of Forestry, said registration would be voluntary and the information confidential. She said health risk assessments in N[Z] and overseas had concluded there were no particular concerns for people exposed to the Btk insecticide. "However, the register will provide people with an assurance they can be identified should studies be undertaken in the future." ...Research... showed... [the eastern suburbs had] 201 miscarriages per 1000 deliveries in 1995-96, dropping to 156 during the spraying months. The rest of central Auckland recorded 223 miscarriages per 1000 deliveries in 1995-96, compared with 189 during Operation Ever Green... [T]hree more spraying sessions [a]re scheduled before the end of spring, when an assessment would be made whether more spraying was required next year.

...Residents in the eastern suburbs have no guarantee that they have seen the last of spraying... The last aerial spray... was carried out yesterday... [after] 9 DC6 sprays... [and] 14 helicopter sprays... Officials said it was too early to tell whether more spraying would be required... 72 moths[have been] caught to date... Cost: \$8.27 million to June 1997...

Savings made by linking the Ministries of Agriculture and Forestry are to be put towards[future] eradication of the tussock moth. Up to \$2.5 million in operational savings is hoped for.

...A new moth pest which strips the leaves from eucalyptus trees has been discovered in... [NZ. The AUS]n Uraba lugens, commonly known as the gumleaf skeletoniser, is considered a potentially serious defoliator of a wide variety of eucalypts. It has attacked a dozen of the about 120 eucalyptus trees on the... Mt Maunganui Golf Course. Ministry of[Agriculture and] Forestry health officers and a Tauranga District arborist... are checking gum trees within a 5km radius... It was too early to say how the moth entered the country, but it was found within 4km of the Port of Tauranga.

...Another new pest, the brown lace lerp, is sucking the life out of some species of eucalyptus, and threatening a small but growing industry producing high-value timber from the trees. By the time the[then] Ministry of Forestry discovered the insect pest about a year ago it was too widespread to control. "There was no option other than we're going to have to live with the critter, which is often the way," a [Ministry of Agriculture and Forestry] spokesman said yesterday. "At this stage the decision is to do nothing." ...The Opposition spokeswoman on biosecurity... questioned whether the M[AF] had enough resources to fight more than one new pest infestation at a time... The pest is a major problem in parts of A[US], and it is believed it was introduced on foliage imported for a trade event... More than 7 million eucalyptus seedlings are available for planting by the industry this year... [T]wo mills in the country had invested more than \$5 million in the past three years in specialised drying and milling equipment... Timber... is already being exported to its country of origin, A[US]... An Auckland environmental consultant... first noticed gum trees around Auckland Airport were losing their leaves... last year and told the forest health service. Yesterday he was back at the airport complaining nothing had been done. "These[trees] were a picture of absolute beauty two years ago... This is an absolute disaster." ...[In related news, U[S]... environmental groups... concerned over the presence of bugs or pests in products from... [other countries have recently] taken court action that could affect N[Z]'s \$100 million timber exports to that country.

...['By 1920 about 100 species of insect pests had been introduced into the US, although this number has now been reduced by careful controls. ']

...A weevil introduced in North America to control rampaging European thistles itself went haywire and started preying on native plants. Scientists said the case illustrated the dangers of using living organisms to control pests, and recommended U[S] authorities be more careful about such imports... [A] professor of biology at the University of California... said public concerns about such issues were much stronger elsewhere. "Europe... A[US] and N[Z]... are way ahead of us on this."

...AgResearch Ruakura said that DNA studies... [of t]he clover root weevil, which is causing severe damage to pastures in the northern North Island... had shown that the insect was an almost exact match with weevils found in America. The discovery means that scientists can now target American sources for more information about the insect.

...Angry dairy farmers are demanding to know why action was not taken faster to control a clover weevil which they say could cause an agricultural catastrophe... Dairy farmers in the North Island have reported weak clover growth since spring and poor response to fertiliser applications. Recently, scientists in the Waikato have found clover weevil infestations of up to 600 adults a square metre, which can completely strip pasture of clover... Both... adult weevils... [and] larvae... reduce the amount of nitrogen clover is able to fix in the soil... [C]lover was the basis of N[Z]'s low-cost farming, giving it a real advantage over overseas producers. While the damage to the dairy industry alone could run to hundreds of millions of dollars, sheep and beef production could also be affected along with clover seed export in the South Island. "It may be absolutely necessary to stop it getting across Cook Strait." ...[the] chairman of Federated Farmers' dairy section... said he and most of the farming world found out about the alarming explosion of numbers of the weevil only in the past few weeks. But AgResearch scientists say the weevil arrived in this country in 1994 and a survey carried out in the following year showed it had spread to areas of Auckland, Waikato and Bay of Plenty... [An \$8000 MAF] survey showed the weevil would be impossible to eradicate... "...it has come into a very favourable environment with a lot of white clover which is fairly unoccupied with other insects and seems to be in an outbreak phase." ...It is estimated to be spreading at a rate of 35km a year, but there is no up-to-date information on its exact location... Emergency funding has been sought for research into the weevil's spread and possible predators. But the ministry's national adviser on plant pest control... said the weevil was not a priority for further funding... It is possible that some parasites already in N[Z] may adapt to control the clover weevil... When the closely related lucerne weevil arrived in N[Z] 23 years ago, it posed similar threats, but it is now well controlled following the release of two natural insect parasites... Two Morrinsville farmers... have put together figures for a 130ha dairy farm showing that it might cost \$13,565 a year to replace the lost nitrogen and \$91,000 if farmers adopted a do-nothing strategy... Nitrogen-fixing bacteria... may soon... be... imported from the U[S]...

Desperate farmers in drought-stricken Marlborough have been forced to refuse donated hay from the top half of the North Island because of fears that the clover-root weevil pest might spread... The... Federated Farmers... president... said many farmers in the "forbidden area" had made generous offers of hay, and it was regrettable that they would all be turned down. "We just can't run the risk of spreading the weevil further south." ...[However, h]e said the insect could fly a few kilometres a year, so its spread was inevitable. "We just want to contain it in the north until we find a way to get rid of it..." A chemical spray could be used, but that option had been ruled out because it could harm people and was expensive... Marlborough farmers were now looking at getting immediate hay donations from the deep south... [By the way, yesterday a MAF official said] that the white-spotted tussock moth was no longer seen as a significant threat to commercial forests, native forests or horticulture, but it [still posed] a significant risk to urban trees and gardens. In Auckland City alone, parks and private gardens had a value of at least \$1 billion.

...Another insect has slipped past N[Z]'s border control and infested an Auckland suburb. A European species of... sawfly not previously reported in N[Z]... was found by an Onehunga resident stripping his willow trees and taken to Landcare Research, Mt Albert, for identification... The sawfly is thought to attack only willow trees... Another sawfly already exists in N[Z] but it causes only small, reddish galls on the leaves of willows. The new species is thought to have more potential to cause harm because it is a defoliator... It may be the same species which invaded southern Africa in 1993-1994 and severely defoliated exotic willows... While the sawfly is not thought to pose the same threat to trees as the white-spotted tussock moth, border control authorities will take the finding seriously. Willows are mainly used as shelter belts and along streams to prevent erosion. The... [MAF is] expected to survey its distribution to see if anything can be done to halt its spread, and to find out how it got into N[Z].

...A new sawfly species found in Onehunga two weeks ago has spread rapidly across the Auckland region... A biological approach will be among the weapons analysed to fight the fly... Pest experts say its swift spread suggests attempts at eradication would not succeed... [Incidentally, f]ruit

flies have made it tough for travellers hoping to slink through the country's airports with undeclared contraband. X-ray machines installed at... [airports] last month to protect agriculture... after Mediterranean fruit flies were found in Auckland last September... are also being used to detect firearms, narcotics and undeclared alcohol and tobacco... The flies, whose existence threatened the country's \$1.4 billion fruit export industry, were thought to have entered in passengers' undeclared luggage.

...Six live fruit fly larvae... have been found since the start of the year in passengers' undeclared luggage. X-ray machines... picked up four of [them]... But a M[AF] briefing paper which says only 30[%] of baggage can be x-rayed at certain times has raised fears about ongoing surveillance. Coverage drops to this level during peak arrivals from high-risk countries because of lack of space to x-ray all luggage. Of 30,000 passengers who passed through the green, nothing to declare lane at the airport in the first month of x-ray surveillance, 378 seizures of material which could harbour fruit flies were made. A further 232 finds of other quarantine material was made... [In comparison, one] of the new dog detector teams found 576 quarantined items in the three months to December 31[, 1996]. Three-quarters of the travellers did not declare the illegal items... "It is a pretty alarming situation that that number of people can come in and not declare these items... It really breaks my heart," said... [the] national adviser (border inspection)... [D]etection rates of illegal quarantine risk goods are expected to increase from 55... to 85[%] by September this year. But with passenger numbers increasing, it is estimated the rates will fall back to 74[%]... unless extra steps are taken.

...Smugglers have been given the strong message that crime doesn't pay after the M[AF] fined two travellers... [An Aucklander] was fined \$3500... for attempting to possess unauthorised goods and making a false declaration to a MAF inspector... [He] was intercepted at Auckland International Airport with 2.5kg of mangoes and 4.5kg of other fruit. The fruit was found concealed in layers of clothing in a bag. It was later found to contain no fruit-fly larvae... [A] tourist from Indonesia, was fined \$800... on each of the same charges after 17 salak (snake fruit), 53 limes, 12 pieces of lemon grass and a bag of fresh leaves were discovered sewn into various items in his luggage.

...Tough fruit fly restrictions blighting N[Z] trade have prompted calls for a worldwide uniform export standard. A[US] yesterday lifted trade restrictions imposed on all fruit grown within a 15km radius of Mt Roskill... after one fruit fly generation and 28 days had passed since the last fruit fly was found. But the U[S] and Japan required three cycles... and... China has said it would lift its import ban on fruit from the North Island one year from the date the fly was first found.

...Recent *Herald* articles have painted a vivid picture of the A[US]n apple and pear industries' battle to keep fresh N[Z] products out of their market. Much has been made of their willingness to accept our competition if it was not for our fireblight status. Emotional blackmail makes good copy but how real is it? Who in A[US, or NZ] for that matter, was concerned when citrus growers in N[Z] found their livelihoods destroyed when our market was opened to uncontrolled international competition and A[US]n navel oranges flooded in at prices less than our cost of production. The response of Kiwi citrus growers was to search the world for new products and new markets. Today we have burgeoning orchards of easy-peel mandarins and lemons for the lucrative markets of Japan, closed to A[US]n growers because of their fruitfly... A[US]n apple and pear growers could well look at their stonefruit counterparts who, when faced with the challenge of substantial volumes of imports from N[Z] some years ago, invested in developing new varieties and production technologies to such a degree that today they have not only almost closed our opportunity in their market but also now compete head on with us in Asian markets... A[US] has at least 11 different species of fruitfly in residence yet N[Z] still accepts assurances of the A[US]n authorities that their protocols are robust enough to make sure fruitfly do not accompany commercial shipments of fruit and vegetables to our shores. Many of our fruitgrowers feel less accommodating. The A[US]n fruitfly menace has a relatively far greater potential to decimate N[Z]'s fruit industry than fireblight has to affect A[US]n growers... Fireblight was first recognised here over 80 years ago. It caused devastation until knowledge advanced to the point that fireblight is just another problem to be managed... Today... understanding... is increasing rapidly; work being done at Ruakura on using honeybees to deliver biological control agents while pollinating flowers looks particularly exciting... Fireblight is simply not an issue. A[US]n arguments heavily distort the incidence and management of fireblight here. Claims of vast quantities of antibiotic sprays being used are simply not correct... A[US]n growers want guarantees that they will never get fireblight. Should we require guarantees that we will never get fruitfly? Over the years more than a few Aussie growers have sneaked back home with some exciting new plant material in their pockets; a few have been caught. That is a far greater risk area... Of course, the fact that you could take a crate of apples off the Auckland market, whiz it over to Sydney and sell it for three times the price would have nothing to do with the issue at all.

...You have to believe that it was all done in the interests of science and was the result of a well-trained, inquiring mind... According to the diplomatic members of the local scientific community, A[US] owes N[Z] a debt of gratitude over the discovery by [a] Kiwi scientist... of the potentially devastating plant disease fireblight... in Melbourne's Royal Botanical Gardens... While there he happened, by chance, upon a nondescript bush in an out-of-the-way corner of the vast gardens. On the bush he noticed a couple of suspicious-looking twigs and a clump of diseased leaves. [The scientist], who is something of an expert in diseases such as fireblight, was so alarmed at his discovery that he smuggled the plant out of the country and back to N[Z] to perform tests which confirmed that A[US] wasn't as clean as it claimed... The curious nature of the... affair hasn't been helped by [the scientist] himself. In a rather tongue-in-cheek way, [he] described his Melbourne discovery in a fairly low-key style. "I took a few little twig things and, lo-and-behold, they had fireblight," he told the N[Z] media... But the story... is tipping transasman relations in the direction of cricket's infamous underarm incident...

N[Z]'s Apple and Pear Marketing Board says it has previously sent scientists to A[US] specially to search for fireblight disease. But a big search in 1993 - with the support of A[US]'s quarantine authorities - failed to turn up the disease... The disease was eventually found by another N[Z] scientist... while he was holidaying in Melbourne last month. Since then Victorian fruit-growers upset over the discovery - and subsequent bans within A[US] on their produce - have called for legal action to be taken against [the NZ scientist]. And other growers have called for an investigation into how the disease was discovered, with suggestions that it be carried out by A[US]'s Government spy agency, Asio... A board spokeswoman... did not know whether the samples taken... [in 1993] had been tested in A[US or NZ]. "But it wasn't an underhanded thing," she said... Today it was revealed that the [MAF]'s chief plants officer... had reported another suspected outbreak of fireblight in Adelaide, after he took a sample from that city's botanic garden while attending a horticulture conference... and was given permission by A[US]n authorities to take the sample away for testing... Scientists on both sides of the Tasman are now testing material from the garden...

South A[US]n orchardists are now facing financial ruin. Their fruit's been banned from sale in other A[US]n states because fireblight has been discovered in an Adelaide orchard. A[US] is the only country in the world to ban apples and pears for fear of fireblight. Even a strict market like Japan accepts that N[Z] apples are not a fireblight risk, so long as certain procedures are followed.

...Tasmanian apple growers say they have taken legal advice on suing the N[Z] Government over the fireblight scare... [B]y leaking preliminary test results indicating fireblight in A[US, the NZ Government]... has... "cruelled" Tasmania's Japanese export drive...

Apple and pear orders in A[US] plummeted by 40[%] yesterday as the transasman row over fireblight disease worsened... The sales fall was "of enormous concern..."... [the] chief executive of the A[US]n Apple and Pear Growers' Association... said. "If it's not a N[Z] plot to damage A[US], they've been inordinately successful doing so without trying."... A senior N[Z] agriculture official... told A[US]ns on national television he had nothing to apologise for after earlier disclosing that he had taken a twig from Adelaide with fireblight symptoms. "They are the ones who should be apologising,"... [he] said last night[, adding that while N[Z]... had spent hundreds of thousands of dollars on research, A[US] did not have an effective system to detect fireblight. "What we are finding is that their... system is rather lacking,"... He said A[US]n suggestions of sabotage to explain how

fireblight was introduced were “utterly insulting.” Indications were that fireblight had been in the Melbourne gardens for 10 years... As the war of words intensified, the [NZ] minister for international trade... appeared to modify his stance after previously apologising for the initial discovery by a HortResearch scientist in Melbourne’s Royal Botanic Gardens... [NZ] scientists are supposed to be helping the A[US]n testing effort. But it was understood last night that key staff from the A[US]n Quarantine Inspection Service and the [NZ] ministry were virtually not on speaking terms.

...WHAT’S A[US] got that [NZ] hasn’t? Good neighbours. Yes, it’s the trans-Tasman sparring season again, sparked this time by... fireblight.

...For such a sensitive debate, there is very little tact. In A[US] the MAF’s senior official... is perceived as a Machiavellian headkicker who believes A[US] deserves all it is getting in the way of fireblight disease. In [NZ], the A[US]ns are regarded as commercial chickens, hiding their orchardists from competition behind a wall of pseudo-science. They are seen as unwilling to take far less of a risk with [NZ] apples than Kiwi orchardists accept through shipments of A[US]n fruit and their potential invasion of fruit fly. These are hard words from both sides and they are getting harder. The debate over the exclusion of [NZ] apples is moving into murkier waters tinged with nationalism and scientific rivalry. Reputations are at stake and the two countries are in danger of getting into conflict in a broader diplomatic arena. We have been through this before. In the early 1980s [NZ] shearers fought a war over the use of “wide combs” which led to death threats, brawls, beatings and arson. A decade after losing that round the A[US]n unions were back in a confrontation, with allegations that [NZ]ers were destroying the award system, wrecking the livelihood of A[US]n shearers, and ripping off the tax and social welfare system[– although a]... Senate inquiry rubbished the claims... [However, with] parliamentary backers, the unions pushed industrial grievances into political prominence... The apple dispute is approaching a similar critical mass... [NZ] regards the science of its fireblight case as superior to that presented by A[US] in its rejection of [NZ]’s third bid to ship apples across the Tasman. A[US] rejects this claim and asserts that [NZ] has left large holes in its case... While both sides agree that two Melbourne plants have the disease, there are significant differences... For Adelaide, the [NZ] tests are inconclusive, A[US]’s negative. A[US] now looks likely to call in an international mediator. But even if the mediator confirms the [NZ] results, the line has been drawn in the sand. Canberra says A[US] can still reject [NZ] apples on the ground that the disease is “present but not widely distributed and being officially controlled.” ...A[US]ns have a track record of trying to have it both ways. Take Phar Lap, the legendary racehorse who was bred in [NZ] but bought and raced by an A[US]n. Before one of his big races, an A[US]n newspaper prepared two headlines: “Aussie Horse Wins”, and “New Zealand Horse Loses”...

[A defiant jockey shocked Melbourne’s] Flemington Racecourse when he declared Might and Power’s win better for him than Kiwi’s legendary Melbourne Cup victory in 1983. Kiwi’s last-to-first dash for cash has become an icon in racing, but [the jockey] said it did not compare with the thrill he had in leading throughout yesterday... You can thumb your nose at anyone when you win a Melbourne Cup, and... [the jockey who] was left almost friendless when disqualified for two years for bringing racing into disrepute after being found guilty of tipping to undesirables... was milking it... “Winners are grinners, and losers are boozers... Rival jockeys were saying in the papers they were going to get up alongside Might and Power and start yelling to get him to race fiercely. They’re not doing too much yelling now. Where are they?” Might and Power’s fierce racing manners in front are well documented, and many doubted he could last a tough 3200m at Flemington... The win was a great boost for the [NZ] breeding industry, as both Might and Power and runner-up Doriemus were bred here. [NZ horses have now ‘won 12 of the last 21 Melbourne Cups’...

‘An A[US]n diagnostic laboratory has brought NZ’s multimillion-dollar horse-breeding industry within a nose of catastrophe. On Tuesday night, a pregnant thoroughbred mare was destroyed at a Cambridge stud after she was found to have the horse equivalent of Aids – equine infections anaemia. Seven other horses on four studs in the Waikato and Pukekohe are in isolation while their anxious owners wait 45 days for test results. The MAF has already reported worldwide the occurrence of the notifiable disease, which it says could disrupt trade. Last night, an equine industry spokesman and top studmaster – who has Australasia’s leading thoroughbred stallion Zabeel at his Cambridge Stud – said he was appalled at the peril the \$100 million export industry was in because of “total and complete incompetence.” The MAF said the slaughtered horse was one of six imported from NSW last month after Aqis certified five of them clear of the disease. The results of tests on the sixth were still to be confirmed and it was quarantined on arrival. But last Thursday, 10 days after their importation, Aqis reported a labelling mistake at the NSW testing laboratory that meant the wrong horse had been isolated. Questions would be asked of Aqis at the “highest technical level.” But an Aqis spokesman said the mixup was nothing to do with the service because the testing was carried out by a laboratory on behalf of the MAF. The MAF adviser on international animal trade said the disease was not present in NZ and the last NSW case occurred in 1986, but it was found in Queensland.’ In related news, a) **new trade deal between [NZ and AUS] comes into force today.** [To mark the 14th anniversary of the signing of CER, b) **both Governments have agreed to give unrestricted entry to low-risk food products manufactured in the other country, meaning lower compliance costs for exporters. An agreed list of high-risk foods will remain under examination.**

...Closer economic relations may not be all they’ve cracked up to be, if the results of the latest... University of Auckland survey are anything to go by. Asked how great an impact A[US] had on their business, just 27[%] of those questioned replied ‘very great’ or ‘great.’

...[NZ and AUS]n Trade Ministers meeting in Canberra this week will push the annual review of closer economic relations beyond the Tasman... While there remain key issues outstanding... both countries are anxious to develop joint strategies for the rest of the world. A free-trade agreement linking CER with the fledgling Asian Free Trade Area (Afta) formed by the South-east Asian Nations, for example, is being driven by both sides of the Tasman... Their discussions will also touch on the tentative moves to link CER to the Mercosur trade agreement between Brazil, Argentina, Paraguay and Uruguay... Closer to home, the labyrinthine and almost intractable stumbling blocks of new aviation, taxation and investment regimes... and a highly technical maze of lesser matters... will be reminders that CER retains some hooks... [T]ax harmonisation remains complex and slow-moving... and... there is virtually no chance of a new investment agreement... The key barrier... is A[US]’s Nara agreement with Japan, which ensures that the rules applying to Japanese investors will be no more restrictive than those for any other foreigners. A[US] maintains that this agreement prevents Canberra granting [NZ] more favourable investment rules, and that even under the existing regime [NZ] investors enjoy privileged treatment... On the other hand, with the 15th anniversary... coming up next year... CER... [is] an agreement that despite hurdles has achieved extraordinary success... with trans-Tasman trade set to pass \$10 billion this year after a decade in which exports between the countries had grown by about 50[%]... Last month, [NZ] signed an agreement... allowing companies from both sides of the Tasman to compete freely for each other’s public contracts. This week, legislation to establish the trans-Tasman mutual recognition agreement is expected to enter the A[US]n Senate, following [NZ] acceptance and Wellington’s dilution of privacy laws to accommodate their weaker A[US]n counterparts. This... will allow goods and services meeting the standards of one country to be sold freely in the other. However, standards harmonisation will still be discussed... Both sides also want unrestricted access to each other’s salmon markets... Quarantine will... force itself on to the agenda, with the... hunt now under way in A[US] for traces of fireblight disease... and [NZ]’s application for apple access still in limbo.

...A[US]n fruitgrower representatives yesterday renewed claims of [NZ] sabotage after... no further incidence of the disease had been found in its countrywide survey of fruitgrowing areas, nurseries and gardens... [NZ]’s Minister for International Trade... said the application process for [NZ] to export apples to A[US] could now continue... The [NZ] Government and authorities have yet to be officially advised of the... survey... findings.

...[‘Wanted – dead or alive, preferably dead. MAF officials are concerned that 10 scorpions that stowed away in a shipment of Portuguese wine bottles and then escaped on to a Hawkes Bay vineyard could breed in the warm weather. A MAF spokesman said officials had searched for the escapers since Wednesday. He said entomologists were confident the scorpions would be found and would not spread. The biggest hurdle to finding the scorpions was the time between the sighting and reporting them. “We are very concerned that we were not notified for three weeks. People should notify immediately in this situation and not wait.” Officials were told about the scorpions only after a chance remark to an entomologist. A winery employee saw the scorpions when

he was unpacking the empty wine bottles. He did not realise the significance of his find because he did not know that scorpions were not found in this country. The scorpions are likely to be of the *Buthus occitanus* variety. They can inflict a painful sting but are not deadly. The consignment was fumigated before it left Portugal and must have been reinfected before shipment or in transit. Meanwhile, in Britain, police are trying to trace a man who handed in a black widow spider to a reptile house yesterday, claiming to have found it in a consignment of wine from AUS.'

...MAF officials are concerned] about redback spikers lurking in bunches of A[US]n grapes... The poisonous redback discovered by N[Z] quarantine officials in... January sparked N[Z] demands for a speed-up in improved fumigation methods. That led to A[US]n accusations of sour grapes. The *Melbourne Age* suggested the fumigation change was simply retaliation for A[US]s insistence on banning N[Z] apples, and said that there wasn't]... any chance of compromise on the grapes... A[US]n grape growers have complained the new fumigation method will virtually destroy their grapes. [A]Federal Liberal MP... said N[Z]s demand for better fumigation came close to the imposition of a non-tariff barrier. [However, the] communications manager for MAF was bemused by the accusations. "This is not part of a trade war... There's no comparison between fireblight and redback spiders... We think it is reasonable to try to prevent someone picking up a bunch of grapes at the supermarket and getting bitten... Fireblight causes minimal problems. We should know. We've had it for... years and it hasn't destroyed our apple and pear industries." ...The change in fumigation methods was agreed with the A[us] in October last year. "They chose it, out of several options." ...The[fireblight] battle's not over... N[Z] has a month]... to make a case. Next stop, if this is rejected, can only be the World Trade Organisation.

...N[Z] apple growers should not hope for too much... A[US] has already gone to the line with Canada over its quarantine policy, and will be prepared to step up to it again should Wellington, too, go to the [WTO]. The Canadian protest over A[US]s continued ban on imports of fresh salmon, and any attempt by N[Z] to overturn this week's... rejection of its case for sending apples across the Tasman, will test the WTO's credibility on one of the most sensitive issues in agricultural trade... But agricultural trading nations have always been deeply suspicious of each others' quarantine regulations, complaining regularly and bitterly that they are often thinly-disguised barriers erected to protect local farmers. A[US], which has long sought the moral high ground in international trade, has now become the target of those claims, despite Canberra's protestations that its quarantine decisions are made in strict accordance with the WTO's sanitary and phytosanitary guidelines. Denmark, Thailand and the U[S] are also demanding access – for their cooked chicken products, and the U[S] is supporting Canada's salmon case in the hope of opening A[US] to its own salmon. The European Union, long the butt of A[US]n trade complaints, has also been scathing of Canberra's quarantine rules. Earlier this year, the EU's Agriculture Commissioner... attacked A[US]s "subtle" trade barriers. The row with Ottawa... has gone on for 22 years. It was imposed because of a long list of North American fish diseases. Like N[Z], Canada argues that it had scientifically established that A[US]n salmon stocks will not be at risk from imports of fresh fish. A[US], which had previously accepted the safety of Canadian pigmeat products, rejected Ottawa's case and refused to lift the ban. Canada retaliated with a sudden and unexpected cut in A[US]s beef import quota, slashing it from 42,000... to 35,000 tonnes, outraging Canberra and hardening its intention to fight the salmon case to the last before the WTO. If it loses, it will not only be forced to open its market to Canadian fish, but also suffer a major dent to its trade credibility. N[Z]s dispute with A[US] is fundamentally the same... Wellington must[now] decide whether its science is tight enough to win over the WTO. [But if that doesn't work, Wellington can try to take advantage of the selection of our last Labour PM (r:p263, ln42) as 'the new Director-General of the WTO in Geneva.']

...The treaty establishing the W[TO] in 1994 is one of the most important international agreements that N[Z] has ever entered into... [There] are already 132... members... and... more than 32 countries queuing up to join... But Parliament was never asked to vote for or against membership. What Parliament was presented with was a miscellaneous collection of amendments to trade and copyright legislation that, taken together, made N[Z] law compatible with membership of the WTO. Once that legislation was passed the Government was in a position to adhere to the treaty... According to the latest annual report of the Ministry of Foreign Affairs and Trade, N[Z] entered into 25 treaties (including amendments to treaties) in 1995-96... This system, whereby many treaties never come before Parliament for consideration and those that do are considered only indirectly for their legislative consequences, is a deficiency in the parliamentary process... [T]reaties can no longer be pigeon-holed in a special category called "foreign affairs," as treaty-making is pervading many areas of N[Z] life. The process whereby the executive have exclusive powers to make treaties, while less than satisfactory from a parliamentary perspective, is tolerable... Parliament... does retain the final word before the law is changed to give effect to a treaty, illusory as this power may be at the end of a long set of treaty negotiations. What has turned a less than satisfactory parliamentary situation into a thoroughly unsatisfactory one are the related judicial developments. Increasingly, treaties that have not been legislated into N[Z] law are being held by the courts to have legal significance in our domestic law... This seems, on the face of it to be a reasonable attitude to take. But there is a contrary view. Treaties, especially multilateral treaties, are often the product of negotiations reflecting many conflicting views. They are drafted in a language or languages which is not the first language of most of the participants. They are subject to drafting timetables that have nothing to do with domestic exigencies. The text of a treaty is likely to look very different from that of a domestic statute implementing it. It will be open-textured and broad in its phraseology where our statutes are (or aim to be) precise and detailed... Whether a move to more general statements in legislation rather than detailed rules is desirable or not is debatable. Until such a move is made there is a major question of drafting compatibility between treaties and statutes... There should not be any suggestion of bad faith because a treaty has not yet been incorporated into N[Z] law. The difference between adhering to a treaty and incorporating it into law has existed for over 700 years. It is unfortunate if those who have negotiated treaties on the basis of that distinction should now be criticised because the courts must, if it runs to its logical conclusion, abolish the distinction altogether. In sum, the courts in a number of instances have effectively incorporated into N[Z] law treaty obligations that Parliament has not legislated for. The Government, which ostensibly has by treaty made what the courts have now held to be legal obligations, has been surprised by the developments. It has been cast in the role of arguing against the judicial incorporation of the treaty in each case that has arisen. As for Parliament – it is not consulted and the courts perform the task of incorporation into domestic law. It is where this leaves Parliament that demands a reconsideration of the treaty-making process. Is it justifiable any longer to leave this as an exclusively executive function? ...One problem with "globalisation" is that people can lose control over decisions on the rules that affect how their society is governed. Moving rule-making to an international plane exacerbates the danger of remoteness which is already present at a national level. No parliamentary system can guarantee that everyone will subscribe to the policy choices that are made, nor should it do so. But it should provide an effective forum for alternatives to be examined and advocated. There have been numerous process failures in... N[Z]s Parliament; nevertheless, the one defining characteristic of the way it works that distinguishes it from overseas parliaments is the degree to which it involves members of the public in its legislative deliberations. The calling of public submissions by select committees is something we take for granted but which is unusual and either envied or regarded with suspicion in many overseas Parliaments. As a participatory democracy N[Z] is second to none... The question then, is whether Parliament should share in the treaty-making function... The requirement for prior parliamentary approval of trade treaties was repealed only in 1965... [Previous] trade arrangements with Canada and A[US] were presented to Parliament for... formal endorsement... N[Z]s adherence to Gatt and membership of the IMF and World Bank were specifically approved by Parliament...

A total of 20 bilateral... and 15 multilateral treaties were signed, ratified, accepted, approved, acceded to... or entered into force by N[Z]... without reference to Parliament... in the year to June 30...

The cabinet is preparing to sign an international agreement liberalising foreign investment rules without seeing the need to consult the N[Z] First or National caucuses or debate the issue in Parliament. The new rules being devised by the OECD would put foreign companies on the same footing as local companies when it comes to investing in N[Z], and prevent future Governments from tightening them up... The agreement would not force

the Government to privatise assets, but any future privatisations would have to be open to foreign companies on an equal basis to N[Z] companies... The Minister of Foreign Affairs... said: "...we do not see this as a threat to [N]Z... sovereignty."

...The[NZ coalition Government's] latest u-turn on privatisation highlights yet again the dangers of the foreign investment treaty being negotiated, behind closed doors at the Organisation for Economic Cooperation and Development. If all goes to plan, the Multilateral Agreement on Investment (MAI) will deliver to foreign investors a "high-quality" guarantee that they will be treated at least as well as the domestic investors of countries which sign the agreement, and their investments will be protected once they have been made. The head of the [WTO] has dubbed this agreement "the constitution for a single global economy." ...Because the MAI will bind local governments, foreign investors must be given equal rights to bid for assets like the ports or bus compan[ies], and for contracts to run the sewerage works or the libraries. De facto discrimination, such as arranging for employee buy-outs, issuing shares exclusively to local consumers, requiring joint ventures with a local company, or setting a minimum domestic shareholding, may all be prohibited... unless they are preserved... Governments signing up to the MAI have the chance to lodge reservations to exclude certain areas of investment from its coverage... At present... [the NZ] Government's proposed commitments to the MAI would prevent any such proviso... While the[coalition] agreement says that local authorities will need prior approval from ratepayers or consumers to sell over 25[%] of power and gas utilities, airports and ports, there is no suggestion that foreign ownership should be restricted once approval has been gained – hence no need to preserve any right to discriminate... However, the... MAI... is expected to prevent future governments from adding to these reservations as economic circumstances, policy preferences and attitudes to foreign investment change... Binding future governments in this way seems outrageous in a functioning democracy. The Government's arguments are even more untenable now the coalition's commitment on privatisation are being cast aside... The political silence that surrounds the negotiations reflect the dysfunctional state of our democracy... Time is running out. The final signing of the MAI has been delayed until May next year, but negotiations are 90[%] complete... The problems... [this] controversial and anti-democratic treaty... will cause become more manifest every day.

...The Deputy P[M] and Treasurer... yesterday released the draft [MAI] prohibiting the sort of restrictions on foreign investments he once made his name promoting... N[Z] is believed to be the first country to release the draft... Each country may attach agreed exemptions. N[Z] proposes 13 exemptions, including... [foreign] ownership restrictions on Air N[Z] and Telecom, a... bar on foreign ownership of fishing quota (without Government approval)... one to allow Maori to receive favourable treatment in various undertakings... and all current producer board legislation... The participants have not yet agreed on the wording under which countries would endeavour to review their own exemptions... Once a country has signed, the treaty is binding for at least five years.

...The Government has accepted criticism about the treaty-making process and agreed to put international agreements before Parliament before signing them... The new policy will be tried for the rest of the parliamentary term. Pressure has mounted on the Government to change the... process after an Alliance-led assault on the [MAI] and criticism from the Clerk of the House... that the process was "anti-democratic." ...The Government will still retain the power to decide whether N[Z] signs a treaty...

There has been a failure at the highest political levels to explain the virtues of... [MAI] and other international economic arrangements, such as the [WTO], and their attended benefits to N[Z]. If NZ... was not part of the MAI it would risk being seen as a relatively unsafe place to invest... Why am I for foreign investment? We need the capital... N[Z] cannot survive without [it]... One in three jobs in N[Z] is based... directly or indirectly... on overseas investment... Only 10[%] of profits are remitted offshore. Only 0.25[%] of staff are non-N[Z]ers... Are these... agreements perfect? Of course not: they simply offer the most hope for N[Z]... to get a fairer share of the world's wealth and markets... Some commentators have pointed out that N[Z] already has an open environment for investment. So what do we stand to gain from this agreement? Simply that N[Z]ers are also overseas investors and we want to make sure they have a fair chance to compete in other countries... [Furthermore, the] agreement would provide a measure of security for the \$28 billion N[Z] already had invested abroad... But for every \$1 N[Z]ers have invested abroad, foreigners have roughly \$4 in N[Z]. In comparison, 'in 1990 US assets abroad amounted to \$US1.764 trillion and foreign assets in the US, \$2.176 trillion. Foreign assets in the US have exceeded US assets abroad since 1983.'

...US] officials hailed a global agreement to open banking, insurance and securities markets... reached at the weekend at the... WTO... The... agreement... will not require any changes to laws and regulations in N[Z]... and... is scheduled to be ratified by the end of January 1999...

American business interests are being asked to lobby the[US President's] administration to push through the necessary authorities to allow a free-trade agreement between the U[S] and N[Z] to be negotiated. The N[Z] division of the American Chamber of Commerce has asked 360 N[Z] companies which are either owned or controlled by U[S] interests to seek congressional support for the legislative change. Congressional approval is needed... but it is being opposed by powerful labour movements in the U[S]. The unions contend[free trade means] jobs could be lost to low-paid workers in countries with poor environmental records... [However, the] administration has already signalled it favours N[Z] as a free-trade partner because labour and environmental laws here are considered to be progressive... N[Z] is keen to have... [an] agreement ready for [the US P]resident... to sign on his visit downunder in 1999...

Securing congressional authority to negotiate free trade agreements will be a tough fight but[the] President... is determined to win it, the U[S] Deputy Secretary of State... said yesterday. "Fast-track" authority, expected to come to a vote on Friday, is an essential precursor to a bilateral free trade agreement between N[Z] and the U[S].

...The NZ] Minister of Trade... is confident the[US President's] administration will gain the necessary... fast-track negotiating authority from Congress... Such authority would mean that once the administration had negotiated a free trade agreement, Congress could vote to ratify it or not, but could not alter its content... [In talks] he had in Washington with the U[S] Trade Representative, the minister]... made it clear... [that NZ] was not interested in any areas – especially agriculture – being excluded from a free trade agreement. A potential sticking point is the single-desk seller status of the Dairy Board[, although]... it was not Government-owned and thus differed from the state-trading enterprises the U[S] looks askance at. The proposed deal would be a model of a new generation of trade agreements... Unlike the enormously detailed and prescriptive North American Free Trade Agreement, [Nafta] the approach would be to rely as much as possible on sound competition policy within both countries to ensure markets functioned fairly... The three-week tour from which [the minister] returned yesterday also included a meeting of the Cairns Group of 20 agricultural exporting nations in Rio de Janeiro, Brazil.

...Formed in 1986, the Cairns Group operates under A[US]n leadership on an informal basis... The Rio de Janeiro meeting was the first in which Paraguay participated as a full member, bringing the group to 15 countries. South Africa, which also attended as an observer, had formally asked to join and could be received as a full member at the next meeting... The Group's members[currently] account for about 20[%] of the world's agricultural exports... N[Z] has played a key role from the outset, promoting reduction of agricultural subsidies and protectionism as a way to free up international agricultural trade.

...Ask farmers what they got out of the last Gatt round and the response is likely to be a shrug of the shoulders. Such worthy aims as freeing up international agricultural trade and reducing subsidies and protectionism are close to their hearts, but it is to their chequebooks that they look for the real benefits. The process has begun all over again with a meeting in Brazil last week... The group decided to push for further reforms... Particularly mentioned is the application of scientific principles to trade that N[Z] has had some recent and rather bitter experience of at the hands of A[US]... Another specific... M[AF]... goal is to minimise technical barriers... [The EU ruling that NZ's] award-winning spreadable butter... is not

made directly from cream – and therefore should attract a higher tariff – is being challenged at the [WTO]. Farmers might be forgiven for thinking that it was all so much easier when a gentlemanly hand-shake between the agricultural ministers of two countries with historical links secured trade deals. But one of the most difficult lessons to the new world trading environment is that no one is granted favours any more.

...Up until 1973 Godzone was one of Britain's farms. Most of our exports were food and most went to "The Old Country." Britain's entry into Europe[– 15 years after 'the Rome Treaty establishing the European Economic Community came into effect' –] changed all that.

...BRITISH Customs agents arrested the entire London-based hierarchy of N[Z]'s export dairy industry to the UK and Europe during a secret lunchtime raid[yesterday. As the six] men responsible for a \$4.8 billion industry sat stunned in the dock at London's Magistrate's Court[, industry sources said the move]... could be just a small taste of what may follow... "We are astonished... We have been working (with Customs)... for some months. In co-operation, you understand. This came out of the blue... What we can't seem to communicate (to Customs) is that we have 100 years of... exemplary trade... history... behind us..."... said[t]he Dairy Board[']s... public relations consultant... The swoop, potentially a major political embarrassment, will be seen by the N[Z] industry as part of a concerted European campaign against its successful discovery and marketing of softer butter that can be spread straight from the fridge, the "holy grail" of butter manufacturers and one proving a huge hit in Britain, N[Z]'s biggest dairy market... N[Z] exported around 50,000 tonnes of butter to the UK worth around \$300 million annually... The "spreadable, designer" butter... is growing at up to 20% a year in Britain. A front-page article last month in the *Financial Times* said Anchor believes there is demand for at least twice the 6000 tonnes of spreadable butter it sells... Supermarket giant Sainsbury's has helped fund a newly privatised farm research and consultancy company called Adas, which the *Times* reported as having produced the UK's first spreadable butter by feeding cows a special oil-rich diet. Anchor produces its spreadable butter by remixing the fats and fluids in cream... The British problems were revealed just hours after[the head of the] British Council... and [the NZ PM had]... met to discuss closer links.

...Some of N[Z]'s top dairy industry officials in Europe have been charged with a £5.4 million... fraud by British Customs and Excise. Six officials from Milk Products Holdings (UK) Ltd, the British arm of the Dairy Board and Anchor Foods, the retail company, were charged in the City of London Magistrate's Court and released on bail. They have pleaded not guilty to a series of charges relating to imports of butter in 1995 and 1996... If convicted, they could face up to seven years' imprisonment and unlimited fines... The Dairy Board... has rejected the... charges in a strongly worded statement. Its chairman... said he was astonished at the arrests. "The board is entirely satisfied of its executives' innocence. It will vigorously defend any charges. It is outrageous that senior executives of our companies should be subjected to this treatment, despite the fact that the board has been co-operating fully with Customs and Excise on the issues which have led to the arrests." ...N[Z] qualifies for lower dairy tariff rates – \$800 a tonne rather than \$18,750 a tonne – if certain conditions are met. Customs says the Dairy Board claimed lower tariffs on some butter consignments... when it knew full well its quota had already been exhausted... Other charges relate to product which Customs and Excise said did not meet the criteria for the preferential quota... [The chairman] said the arrests amounted to an attempt by Britain to bully N[Z] into reducing butter exports when they were guaranteed under the Uruguay round of Gatt. "Coming on top of the exclusion of spreadable butter from the quota, we find it hard to accept that this sudden and draconian action was not motivated by a desire to restrict trade by non-tariff means,"... The[NZ] Minister of Agriculture... said he could not say if the arrests resulted from a "trade war" but he would watch developments closely... The Government will step in if... [the] fraud charges... are proved to be "trumped up." ...N[Z]'s dairy-product access to European markets has long been a source of discontent to local farmers, particularly those in Ireland and France... One manifestation of that... [discontent] is the much closer eye kept on our regular shipments of dairy products and the flurry of querying by customs officials which has been going on over the last 12 months. That scrutiny found one butter shipment to Holland last year to be over the 80 to 82[%] fat level, touching off investigations which culminated... in fraud charges being laid... The board's Wellington head office has been unshakeable in his assertions that testing of all butter before it leaves the country is up to the highest standards of accuracy so any discrepancy must be on the receiving end.

...[Butter exports to the EU containing too much fat could cost the Dairy Board \$800 million in back-duties. Although British courts have cleared board executives of customs charges, the European Court of Auditors still claims that higher tariff rates should have been charged on butter exports for the past 20 years. A NZ parliamentary source said the board might have to liquidate its high-profile Anchor brand in order to settle the matter, which has been dragging on for several years. The Minister of Food said yesterday that the longer the matter took to settle the higher the cost would be.]

...The Dairy Board battle to regain access to E[U] markets for spreadable butter will come before the [WTO] for the first time next week... The dispute is on the agenda for next Tuesday's monthly meeting of the WTO dispute settlement board, at which N[Z] will formally request that a panel hear the dispute. The Minister of Foreign Affairs and Trade says it is usual for the opposing party to turn down the request the first time it comes up. That cannot be repeated the second time the request is made, which could be at the board's meeting in the middle of next month. A panel is then expected to be established to hear the case. The three panellists hearing the arguments will be drawn from lists submitted by a number of countries or from experts with particular expertise in the disputed area. Their report is generally issued within six months of the panel's establishment but an appeal process can then mean the issue is not finally determined for another four-and-a-half months. A Dairy Board spokesman... said it was confident the dispute process would establish that what the board had always claimed about the manufacture of the butter was true... Sales which were worth around \$100 million a year were halted last year after an EU claim that the butter was not manufactured in the traditional way and so was ineligible for importation under N[Z]'s quota arrangement... Since exports to the EU were banned Britain and Portugal have been supplied with spreadable butter manufactured in Belgium from local milk supplies... The butter has been available on N[Z] supermarket shelves for the past few weeks... Sales... on the local market... are expected to be close to \$7 million in the first year... and new export markets have been found in Chile and A[US]. The board will shortly launch the product in South-east Asian and Pacific markets.

...A[US]'s biggest dairy co-operative... launched its Western Star butter to the N[Z] cafe and restaurant trade six weeks ago... The Auckland-based manager... said [the co-operative] had taken the soft-entry approach... The... single-serve... sachets do not show a country of origin... The general manager of N[Z] Dairy Foods... who is responsible for the Anchor brand within this country, said Western Star's trade was small but would be taken seriously. "We don't want them to gain a foothold in N[Z]. We are not unduly concerned but we will not be making life easy for them." ...If offered A[US]n butter in a cafe... he would eat his bread dry... The trade needed to be seen in the light of the Dairy Board's aggressive marketing to A[US]ns of NZ butter. By the way, when the WTO... came into existence... [and members] signed on to a set of rules founded on the reduction of tariffs and subsidies... there was never any suggestion that its creation would bring an end to the protectionism that has blighted world trade, particularly in agriculture... However, the new global regime was likely to create an industry as countries tried to find innovative ways with which to protect home-grown products against foreign competition. So it has come to pass... Canada is charged with using selective pricing as a means of subsidising exports of milk products.

...N[Z] will file legal proceedings against Canada today at the [WTO] in a bid to stop cross-subsidies in its dairy sector... Canadian dairy farmers had two special milk classes, one for export and one for domestic consumption. They are paid an artificially low price for the export milk so that the resultant products could compete more cheaply than otherwise on world markets. Then they were cross-subsidised from their high-priced domestic market, getting paid an average for the two classes... The case was serious and could have a severe impact on further trade liberalisation, says the Minister for International Trade... "If Canada gets away with it, the Europeans are almost certain to try it on as well... If it wasn't for... subsidising... world dairy... prices would be higher and our farmers would get more for their products." ...other countries had tried to get Canada

to drop its scheme... The U[S] initiated its own case against Canada a month ago and... it was possible N[Z] could... join that... N[Z]'s resources were stretched because it had taken the E[U] ban on spreadable butter to the WTO.

...A U[S] congressman believes the N[Z] Dairy Board is dodging American taxes... A spokesman for the board... rejected the allegation. "The Dairy Board pays all the tax it is obliged to pay in the U[S] and not a cent more. There is no tax evasion,"... However, the board, like any other competitor, paid as little as legally possible, as required to meet its duties to shareholders... In a letter to the U[S] Inland Revenue Service the congressman... said law changes may be needed to ensure foreign producers did not have an unfair advantage over American farmers... The board, which is owned collectively by about 14,000 dairy farmers, has been under increasing pressure from U[S] dairy lobbies for having statutory support for its monopoly. The pressure is growing, even though the board gets no financial support from the Government. N[Z] agriculture is also subsidy-free, while the U[S] is still phasing out subsidies.

...['For many years, the Milk Board – set up in 1953 to organise and control domestic milk supply on a national basis – operated a government subsidy on domestic milk but this was abolished from April 1 1985.' Next year, the board responsible for milk exports – and similar boards (such as the 'Apple and Pear Marketing Board, set up in 1948') – will also cease to exist. The 'Government plans to disband producer boards to obey US wishes.']

...The Government should not take away the Dairy Board's export monopoly unless it can deliver something worthwhile in return, says the board's chief executive. Such as access to the U[S] market. That might be an acceptable trade-off, he said... Its export monopoly was... seen as a potential obstacle to a bilateral free trade agreement with the U[S]... The board's annual sales of some \$6 billion made it N[Z]'s largest exporter and represented about 30[%] of the international dairy trade.

...['Producer boards and their monopoly on major primary exports have all but ended. In a whirlwind three days, the Government and the three major single-selling boards – dairy, kiwifruit, and apples and pears – have sliced through more than a decade of debate to agree in principle to axe the boards' governing legislation, which should allow more freedom for other would-be exporters.']

...*'Boards prevail in battle to sell solo* Yesterday, the Government rushed legislation into Parliament to deregulate the dairy industry and allow it to form a company which will amalgamate most cooperative processing companies and their marketing arm, the Dairy Board. It was the third such move in as many days by the Food and Fibre Minister and Finance Minister. On Monday, they announced the kiwifruit industry would retain its single-seller status and corporatise its marketing arm. Then they revealed almost identical plans for the apple and pear sector's marketing arm. Yesterday, they said that dairy industry legislation paving the way for the integrated company was "epoch-making". "That enterprise, known as the MegaCo-op in industry circles, would be NZ's biggest commercial company by a significant margin. That would provide the critical mass necessary for successful global operations, but on a commercial, rather than a regulated, basis." However, the bill would not proceed without Commerce Commission authorisation for the mega co-op, and a 75% vote of support by dairy farmers. The ministers said dairy farmers would exchange their company shares for shares in the mega co-op which would own 100% of the Dairy Board, reconstituted as a commercial company. Farmers exiting the industry should be able to recover fair value for their mega co-op shares and the industry has proposed there be a commodity milk price, a "Q" class of shares covering returns on quota, and an "A" class covering all other returns. Farmers would get to vote on the mega co-op proposal in 3 months at the earliest. Formation of a mega co-op also hinges on an agreement to merge by the two major dairy companies, Kiwi and NZ Dairy Group. That could yet be the stumbling block. The board has said that a complete refiguration of the industry would boost gross earnings to \$40 billion a year in 10 years. The Dairy Board's chairman said that could translate into \$100 billion for the economy. Under the legislation, planned to take effect from September 1 next year, exporters would be free to market dairy products except in the quota or similarly restricted markets of the US, EU, Japan and Canada. The dairy single-seller will have exclusive access to the countries that set quotas for 6 1/2 years, with the rights phased out in the following four years. Around 84% of the industry's sales revenue is earned outside the quota markets.'

...The US Administration has been unable to muster the numbers to get Congress to give it "fast track" authority to conclude trade deals. The [NZ] Minister for International Trade... said: "Our information is that the House of Representatives vote on granting the President such authority looks likely to be deferred until next year..." Although the setback was disappointing, [he was optimistic the] President... would finally succeed... Meanwhile, members of the Asia Pacific Economic Co-operation (Apec) forum are due to meet in Vancouver later this month... Apec groups A[US], Brunei, Canada, Chile, China, Hong Kong, Indonesia, Japan, South Korea, Malaysia, Mexico, N[Z], Papua New Guinea, the Philippines, Singapore, Taiwan, Thailand and the U[S].

...The NZ P[M]... is one of Apec's veterans – one of just a handful of the 18 P[M]s or Presidents who has been to every leaders' meeting since the informal gatherings began in 1993. This means that despite representing one of the smallest economies, [he] has status which otherwise might elude N[Z]. He has in the past used the forums shrewdly. Four years ago in Seattle he forged a relationship with [the US] President... and helped to repair distrust which followed the Anzus breakdown. In Canada he will renew his friendship with [the US President] and hold talks with the leaders of Chile, Hong Kong and, crucially, China. These are invaluable opportunities. [NZ's PM] has also been an enthusiast for Apec's free-trade agenda and will want his two cabinet ministers already in Vancouver – the Minister of Foreign Affairs... and [the] Minister of Trade... – to make progress fast-tracking the abolition of trade barriers for fish, forest products and fruit and vegetables.

...The Minister of International Trade... rates as 50:50 N[Z]'s chances of securing Apec agreement for the early liberalisation of trade in forest products and fish... "Among Apec there is as much support for N[Z]'s proposals as for any others..." ...Forest products and fish are also areas in which the U[S] Government has residual fast-track negotiating authority, left over from the [41st] Administration... It was an advantage, [the minister] said, that most of the trade – 80[%] in N[Z]'s case – in forest products and fish occurred within Apec. That minimised the problem, that under [WTO] rules whatever trade benefit was granted to one country (unless under a bilateral agreement) had to be granted to any other... But there was also strong opposition, especially from the Japanese and Koreans, who fear that opening the door on any primary sector will threaten heavily protected agricultural industries.

...Who wants Apec? Not a lot of Vancouver's citizens who live and work downtown, apparently. They are suffocating under a massive security blanket thrown over this attractive Pacific... city. Downtown retailers and restaurateurs complain that business has slipped more than 50[%] since the early summit vanguard arrived a week ago... Apec means "lockdowns" where entire blocks are closed, helicopters circle overhead and high-speed convoys chase down empty streets carrying unseen leaders behind blacked out windows of stretched limousines. It is a taste of what Auckland will get in 1999 when N[Z] hosts the... summit. More than 8000 people are here on Apec business – leaders, ministers, huge delegations, hangers-on and some 2500 journalists. Keeping them safe involves 500 Vancouver police officers, 2500 Mounties and 1000 members of the Canadian armed forces.

...The... [US] President... the big guy here, came with the White House press corps, about 250 journalists. With him, too, were hordes of nervous Secret Service agents, sharpshooters to station on highrise towers around the downtown hotel he occupies, and two helicopters and a spotter plane to clear airspace ahead of his tightly scripted forays into the world outside Apec's hermetically sealed meetings.

...[the US] President... is to meet China's President... [and, separately, the Japanese P[M]... to discuss financial turmoil sweeping the region and to examine major political issues... [The US and Chinese presidents] also are expected to discuss... China's ambition to join the [WTO]. China's President] said... China's foreign trade would exceed \$US310 billion... this year... The meetings will precede the formal start of the [Apec] summit... The financial crisis which has struck Thailand, Indonesia and South Korea, has overshadowed the Apec gathering and is expected to dominate the summit agenda. While economics remained at the top of the official agenda, protesters attempted to make their points on the street... [M]ore than

2000 demonstrators marched through heavy rain to the edge of the waterfront convention centre where Apec is meeting. Billing themselves a "People's Summit" they pushed causes from workers' rights to the environment and the perils of free trade. "There are two words that can't live in harmony together – Apec and democracy," said... a N[Z] professor who helped organise the event.

...Police, using dogs and pepper spray, arrested 38 demonstrators in clashes during a noisy protest by a crowd of about 1500 yesterday... The protesters... who waved banners and sang and chanted through megaphones, urged the Apec forum to focus on human rights, particularly in China and Indonesia... Groups... repeatedly charged a security fence just a few hundred metres from where the leaders... met on the University of British Columbia campus. About 100 officers of the Royal Canadian Mounted police, backed by a 50-strong riot squad[... prevented]... them from marching on the leaders' meeting... At least two students were given first-aid treatment after being overcome by pepper spray... Pressed on whether he condoned the use of pepper spray, which can cause intense pain when sprayed into a person's eyes, the Canadian P[M]... claimed ignorance. "I don't know what you mean by that... For me, pepper, I put it on my plate."

...[Try to remember the Canadian Government's shambolic attempts to flatten student protests on the quiet. NZ's politically active persons must be allowed to hold large, internationally embarrassing protest rallies during Apec if they want to. Western Governments which allow the public to protest freely at events such as Apec are the very last word in sophistication, beaming a positive image of a mature, functioning democracy around the world. We only have to keep it up for a week. As a card-carrying member of Generation Apathy, I doubt I'll personally manage to roll out of bed to hunger-strike, but anybody who wants to protest against human rights transgressions must be allowed to protest. Apart from anything else, it will prove to the rest of the world that NZers read newspapers. It is best – especially in a country of NZ's humble proportions – to allow demonstrations to run their course. Human rights demonstrations here usually get ugly only when authorities try to shut protesters up before protesters are finished marching about with a placard. Let the people speak and be done with it. It ultimately makes for a quieter life. Actually, NZ's PM has no choice but to let the public speak. Particularly at the moment. There's a groundswell of opinion against high-handed elected leaders who try to tame protesters. Here's an example: The Mayor of New York, a lovable fascist, is getting it for tightening the rules regarding who may protest through New York. He cites security concerns for tightening the rules, but the public has its doubts. As well it might. It turns out that the mayor was happy for thousands to rally through the streets for the Yankees. However, he refused a permit to a small protest held by the family of a youth who was murdered by a member of the NYPD after hitting that policeman's car with a football. "There's no freedom of speech," said the mother of the unfortunate footballer. You said it lady. The public is tired of transparent attempts to quash the public's right to protest. Keep this in mind for 1999, NZ's PM. If you're still around.]

...Auckland has two years to gear up for a superpower security challenge after it was confirmed yesterday that the... leaders of the U[S], Japan and China will take their seats alongside the Russian President for the Auckland forum in September 1999. The presence... of the world's most powerful leaders for three days presents officials with severe security and logistical tests... far tighter than those imposed for the 1995 Commonwealth Heads of Government Meeting in Auckland. The leaders' motorcades... are expected to have exclusive use of roads between Auckland Airport, the city and their hotels. Police intend to ensure all parked vehicles are cleared from roadsides before the leaders pass... The Auckland Museum is being touted as the venue... Surrounded by domain parkland and trees, the museum building can be easily isolated and cordoned. Few high-rise buildings overlook the museum's main entrance so the security officers' bete noire – a sniper – would have little chance of finding a vantage point... [The forum means] a sizeable bill... [for the Government, which also has] the job of convincing N[Z]ers that the investment, and disruption, is worth it. Canada spent \$C50 million (\$[NZ]55 million) on Apec over the past 12 months... mostly paid by the Canadian Government. Sixty Canadian firms kicked in \$9.1 million, and got to stick their corporate logos in places where they got noticed... For \$500,000, firms became "diamond" level sponsors, and got to host breakfasts and schmooze around delegates at \$1000-a-head dinners... [A] leather retailer, pulled off the conference coup by outfitting the leaders in brown, \$500 bomber jackets at yesterday's informal retreat... The British Columbia Government stumped up \$5 million and Vancouver ratepayers put in \$1 million... An estimated \$C23 million was pumped back into the British Columbia economy but many Canadians have challenged the value of a forum which seems remote from their lives. The decision of the 18 Apec members to add three members to their club (the others are Vietnam and Peru) was made a year ahead of schedule and had the rider that no more could join for at least a decade... [The] 21... Apec economies... [will account for 54%] of global output and[cover] nearly 2 billion people.

...[The Tourism Board expects Apec to cost NZ \$44m (40% for security), inject \$60m into the economy and generate publicity worth \$384m.] NZ got some free publicity when 'agents protecting the US Secretary of State on a visit were forced to hand over their weapons at Auckland Airport. NZ forbids foreign security services accompanying leaders from carrying arms. But warnings that NZ would "have trouble" applying similar strictures to agents protecting the US President, and pressure from other security-conscious governments, is expected to result in a temporary amendment to the Arms Act to allow agents to carry guns during the talkfest – with a possible proviso that weapons be kept hidden from public view.' ● 'Eight countries were allowed to carry guns at the recent meeting in Vancouver – including Indonesia, three of whose members were arrested by Mounties for threatening to shoot protesters.'

...the Government is moving to change the law to allow guns to be carried by bodyguards protecting some foreign dignitaries at Apec. Authorities have created the impression that on previous visits of overseas dignitaries, including for Chogin in 1995, delegations left their weapons at the border. But the *Herald* understands that on some occasions, the "no firearms" policy has been read out to visitors, with officials then turning a blind eye. When the Queen attended Chogin her officers were allowed to carry arms after being sworn in as temporary constables by the Commissioner of Police. The *Herald* understands that bodyguards for some American VIPs, going back to the late 1970s, were also made temporary constables. And it is believed other delegations at Chogin brought handguns into the country without police taking any action. However, one leader's party was blocked from bringing in an AK-47 assault rifle. The *Herald* understands that the US made it clear that its president would not come to Apec in NZ – which will be the 'first official visit by a US president' to our country (although the '36th US President stood on the tarmac at Auckland Airport – in an attempt to drum up NZ support for his war in Vietnam – while on his way to AUS', to gain its support for the war; an 'official visit to NZ by the US Vice-President occurred in 1970') – 'without armed protection. Officials believed the same would be true for other member countries.'

...Officials flying into NZ for September 1999's Apec forum may end up staying in youth hostels as accommodation resources in Auckland are stretched to full capacity. Around 7000 people – 5000 dignitaries and 2000 media – are expected at the event. With at least a dozen America's Cup challenger syndicates expected in town at the same time, the big question for organisers is where they will all stay. The chief executive of the Hospitality Association said the whole event was proving to be a logistical nightmare. A big problem would be putting up the usual tourists and business travellers during the Apec week. A tourism specialist said previous smaller, international conferences had been big money-spinners, though the scale of Apec raised the question of "are we stretching it too far?" ● 'The rest of NZ will be stripped of a third of its police power during Apec. More than 2000 police officers will be on duty.'

...More than half the \$5.215m bill for the Auckland City Council's planned spruce up of downtown Auckland for the Apec summit is for road sealing and footpath upgrading in the inner-city. Streets will get an extra footpath clean and graffiti removal sweep just before the summit. NZ flags and Apec banners will be hung throughout the city. Downtown flower beds will be freshly planted, with a strong NZ natives theme. Work on the Domain includes repaving the museum forecourt for \$100,000, and sprucing up the kiosk for the leaders' luncheon there. Park benches will be repainted and extra planting carried out. The council is budgeting \$564,000 for staff time and communications about Apec and its impact on the city.'

...At last, Auckland's main street is moving out of the 1970s. Soon to go are the concrete, stone-chip-clad rubbish bins, memorably described by a city official as a relic from the "Fred Flintstone era." In their place will be gleaming grey metal containers more resembling the robot R2D2 from *Star Wars*.

Also disappearing are the orange street poles and their cluster of globe lights which threw "dirty" sodium-bulb glare. The poles are being painted charcoal grey and the single replacement lights will shine a cleaner, white light. Small cabbage trees are being installed in planters flanking Queen St, replacing the taller plane trees, some of which had begun to wither as their root growth was restricted. The work is part of a \$450,000 Auckland City Council budget to improve Queen St and Queen Elizabeth Square for the Apec leaders' conference – although the US President and other world leaders are unlikely to wander down Queen St, let alone notice the new bins'. Editor's note: Last year, as part of the '£30 million that the Philippines Government put aside to stage Apec, luxury villas were built to house the heads of state while shanty slums were demolished to hide them from the heads of state' and the rest of the world.]

...leaders gathered yesterday for a 12-nation summit which was meant to be a grand celebration of Asean's 30th birthday but was shaping up into a sombre dialogue on what went wrong.

...Burma, East Timor and other human rights issues hung like thunderclouds over major meetings between Asia and Europe yesterday, aimed at forging a new era of relations. Foreign ministers of the seven-nation Association of South-East Asian Nations... insisted that such issues not be raised in meetings with their 15 E[U] counterparts today and tomorrow. Indonesia threatened to walk out if East Timor was brought up at those meetings or on Saturday, when the 22 ministers will be joined by colleagues from Japan, China and South Korea to plan a second Asia-Europe summit. But European politicians facing pressures back home, especially on the crackdown on Burma's pro-democracy movement by the military Government in Rangoon, were seeking ways to discuss such issues without bringing the meetings to a crashing halt... [An EU] official... said... "How do you speak about the unspeakable? These subjects have to be raised, yet no one wants to be the one to do it." Burma is an issue because Asean – Brunei, Indonesia, Malaysia, the Philippines, Singapore, Thailand and Vietnam – has promised it membership. The European Parliament has repeatedly warned the European Commission – the ...p[arliament]'s executive – that it will not tolerate dealings with Rangoon.

...Once again in Europe the discussion about admitting new members is coming to the boil and, once again Turkey, promised membership to the E[U] more than 30 years ago, is not on the list. In fact, it is even worse than that. Turkey is being actively blacklisted. At a get-together of European Christian Democrats in March a prominent member... was widely quoted as saying, "The E[U] is in the process of building a civilisation in which Turkey has no place." ...The hand of European chauvinism is again being dealt to Turkey, home to Istanbul, the city that strides two continents, the only city to have served as the capital of three empires, the historic meeting place of east and west, cradle of Christian Byzantium as well as Ottoman Islam. What is it then that blocks Turkey from assuming its natural position as the easternmost flank of Europe, a role it has played quite happily as a member of Nato since 1960? Is it Turkey's state of economic development, its human rights record, or its religion? It is a bit of all three, but none are totally convincing if looked at with even a modicum of good sense. Turkey, admittedly, is still a developing country with high inflation, a heavy load of debt, a growing maldistribution of income and over-rapid urbanisation. Nevertheless, according to the World Economic Forum, Turkey is ahead of Greece, not to mention its rivals for European membership, Poland and Hungary, in a league table that compares... economic strength... It is certainly as well placed economically as were Spain, Greece and Portugal when they negotiated entry. The human rights story, in contrast, is as painfully true as outsiders paint it, although there are many insiders, not least the late president Turgut Ozal, who have worked hard over the years to get their country's house in order. Torture is still practised widely, as a recent report from Human Rights Watch underlines. The war against the dissident Kurds continues with an obsessive ruthlessness. It is powerful hard-line elements in the Army who make it difficult for civilian leaders to reach out to the accommodation now being offered by... the leader of the Kurdish insurgency. If America didn't feel itself so obsessively in hock to the Turkish military in its quest to keep Iraq isolated and Iran and Syria on the defensive, it could use the muscle of its large scale military assistance and arms sales, much of which is used to fight the Kurds, to push Turkey to be more accommodating... [Incidentally, duty]-free shopping within the E[U] is due to end next June... The EU's Council of Ministers decided in 1991 to abolish duty-free sales within the union as they are seen as an anomaly within the single market... Travellers to destinations outside the EU will still be able to buy duty-free goods... However, [a]... survey by the British Consumers' Association... [- that] compared prices of alcohol, cigarettes and perfume... found hypermarkets]... in Calais, France, were... offering particularly good value for money when compared with duty-free shops at ports and airports.

...[In 1996, travel shopping world wide was valued at \$NZ160 billion and predicted to reach \$NZ300b by the year 2010. The Asia Pacific region makes up over 30% of this industry, the biggest proportion of any world sector. Latest statistics show that NZers take 4th place in the top 10 travel spenders in the region (spending an average \$US424.71 while travelling internationally) – the top three were Japanese (\$US820), South Koreans (\$US573) and AUSns (\$US508). In assessing the total amount spent by each nationality, NZ drops to tenth place (\$US300 million), while the Japanese remain the biggest total spenders (\$US12b), followed by South Korea (\$US1.7b) and AUS slips to 4th place (\$US1b). However, NZ and AUS are the favoured countries in the region for travellers to spend their money. In fact, 1993 and 1995 saw Auckland International Airport voted best value duty free in a survey of 12 airports in the region. When arriving in NZ, the allowance on duty free liquor is six 750ml bottles of wine, plus one 1125ml bottle of spirits, plus 200 cigarettes. Travellers entering the country are entitled to bring duty free goods (for personal use) to a value of \$700. This is known as the passenger concession.]

...A NEW \$22 million Customs Department computer system... – installed over the past 16 months in a complete Customs overhaul – ...has run into problems with thousands of shipments of goods entering the country unchecked for duty... Goods have been released on trust to avoid huge bottlenecks at ports and airports... The system... started having hiccups about two weeks ago. In the process of taking the system "up and down" to get it fully operational, electronic processing of duty declarations was not possible and they had to be filled in manually... [In international news, during June the US] trade deficit... soared by 17.0[%] to \$US10.23 billion... as imports rose for the seventh straight month to a record high... [E]xports fell 0.8[%] to \$77.2 billion, which reflected a drop in exports of such capital goods as telecommunications' equipment. Imports continued their steady rise by a modest 1.0[%]... to \$87.5 billion, led by demand for capital goods, primarily civilian aircraft and automobiles... The [previous month's] trade gap was revised upward to \$8.75 billion from the \$8.36 billion originally reported... The U[S] trade deficit with China surpassed that of Japan, only the third time that has happened[. widening by 9.1%]... to \$3.76 billion... The gap was the highest since the October 1996 deficit of \$4.9 billion... The politically sensitive deficit with Japan was the lowest since last June. It shrank by 25[%] to \$3.63 billion from \$4.84 billion [the previous month. The US] trade deficit with Mexico swelled by 21.7[%] to a record \$1.7 billion from \$1.4 billion... In trading with Canada, the deficit more than doubled[. It rose 104.1%] to \$1.74 billion... Imports from Canada of \$14.5 billion... were the highest[monthly total] on record with any country...

The [U]S... yesterday accused... [some countries] of unfair trade practices, starting a process that could eventually lead to economic sanctions... [Under] a provision of U[S] trade law known as Super 301... the President... [can] impose punitive tariffs if negotiations to remove... unfair trade practices... are not successful. [The US] Trade Representative... announced that such a case was being brought against South Korea because negotiations between the two countries had failed to resolve all complaints. "Korea was not prepared to undertake the reforms that are necessary for real opening of their auto market." Despite South Korea's commitments in 1995, sales of foreign cars make up less than 1[%] of the Korean market," she said. The U[S] car industry has urged that both South Korea and Japan be cited... However, the U[S] did not bring a case against Japan on cars. Instead, it cited Japan, Canada, the 15-nation E[U and AUS] for other alleged unfair practices. But instead of instituting cases under the Super 301 provision, the administration said it would file cases with the [WTO]. While the U[S] could still file trade sanctions, it could only do so if a WTO hearing panel ruled in favour of its complaints, a process that normally takes more than a year... [The Trade Representative] said the Super 301 review demonstrated the administration's resolve to ensure other countries lived up to their commitments to remove trade barriers.

...South Korean civic groups yesterday threatened to boycott American products unless the U[S] halted pressure on their country to further open up its car market. "We demand the US stop putting pressure on us so that they can sell more cars here," said a spokeswoman for the Citizens' Movement Against Over-Consumption... [By the way, record] imports helped by car purchases from Japan and falling exports pushed the U[S] trade deficit up sharply in July...

[The US] ordered Japanese cargo ships barred from its ports yesterday... and the Customs Service to detain those already anchored... but delayed enforcing this in the hope that last-minute talks could resolve the escalating trade dispute... The move came after the... U[S] Maritime Commission... had received word from Japanese shipping companies that they will not pay an estimated \$US4 million... in fines... which... were levied on Japanese cargo ships entering U[S] ports, and amounts... to \$100,000 a vessel... The fines were imposed after negotiations between the two countries failed to agree on American demands for freer access to Japanese harbours.

...The... [WTO] has sided with Japan against the U[S] in a dispute over access to Japan's photo-film market... [which] had pitted the two governments against each other on behalf of their respective photo giants... Kodak [and Fuji]... The preliminary decision... prompted[a US] trade representative... to suggest that Washington might retaliate with sanctions... [In related news,] Japan's merchandise trade surplus surged... 51[% from the previous month] to 1.1 trillion yen (\$NZ14.5 billion)[, while bulging]... oil imports and a record deficit with China... helped push the [U]S... trade gap... [for] August... to \$US10.36 billion...

Commerce Department figures show the U[S] trade deficit shot up in September... by 17[%] to \$US11.07 billion... its highest in eight months... and well ahead of Wall St forecasts. And Labour Department figures show the number of newly out-of-work Americans seeking unemployment benefits has also exceeded economists' forecasts, rising by 20,000 in mid-November... as trade with troubled Asian economies showed early signs of deterioration... Asia's deepening economic woes[also] took a bite out of Japan's November merchandise trade surplus, the fourth decline in six months. The surplus was down 7.6[%] on October at 1.144 trillion yen... [but] was up 58.7[% from]... November a year ago...

N[Z] ran a trade deficit of \$395 million last month. That was a deterioration from the deficit of \$279 million a year ago[– and the 'surplus of \$10.4 million for the last month of 1996' –] reflecting a 10[%] increase in imports, while exports fell 0.7[%].

...Moves are under way to revive the defunct Export Institute of N[Z] by reformers hoping to raise a sense of urgency over the need to rebuild exports... [There] had been... criticism of Tradenz. "We see that as disastrous for N[Z], that there should be a knocking of what little trade organisation we have... That has probably caused a loss of confidence in people working with Tradenz... We are not out to undermine anything that Tradenz is doing... I think we, and Tradenz, have a common objective[," said the]... director of the N[Z] Trade Centre...

Tradenz is being revamped into a sharper, more focused organisation... aware that continued expansion depends on proof of its effectiveness and the ability to increase revenue should Government funds shrink... Tradenz is also streamlining its products and organisational framework... and... [its] chief executive... is... in the process of getting the budget for major technological spending that would be spread over two financial years... [C]harges would be increased, but clients need not worry about exorbitant jumps, as subsidies would continue... "We... are careful with the introduction of any change... But... [that] is just the reality of N[Z]. All Government agencies are being asked to increase revenue, it is not something new or exclusive to Tradenz." ...The organisation is looking at models in the market to find a right charging base... In future, when Tradenz does work for clients, they will be told in advance the cost of that work or if they are eligible for a subsidy... With a more consistent charging base, Tradenz hopes to raise internal revenue to about 10[%] of its operating budget. Currently it receives some \$49 million per year from the Government to run its activities.

...International activity at the Auckland Regional Chamber of Commerce is hotting up. The Chamber's World Trade Centre... sponsored by ASB BANK... is planning a serious attack on the international trade resources of the 320 World Trade Centres in cities world-wide... The WTC offers research... advertising... trade fairs and... is a joint venture with TRADENZ...

EXPORTERS and manufacturers are angry that their representative bodies have turned down a \$100 million assistance package from the Government. They say individual companies that are hurting would have welcomed the help, and they should have been consulted... [R]ifts within industry groups are emerging... The \$100 million package was outlined in the coalition agreement last December... The offer included a \$50 million export credit guarantee scheme, an extra \$10 million for the Government's venture capital fund, the Greenstone Fund, \$32 million for organic farming research and technology transfer and an extra \$5 million for Tradenz... [Incidentally, t]he *Vegetable Research Council*[has] released a document examining the industry's strategic direction, citing the extensive research into improving quality and marketing. The industry has a retail value of \$1.2 billion and exports of \$327 million, but 70% of exports come from just two species – onions and squash. The challenge, says Vegfed, is to diversify that base.

...[NZ] vegetable growers are being urged to explore new market opportunities so they can depend less on Japan. The president of the Vegetable and Potato Growers Federation... said the whole industry needed to invest in market research to offer diversified products. The federation is working towards establishing a single brand which would be recognised as a consistent guarantee to quality. N[Z] asparagus exporters to Japan in particular are under pressure from A[US]ns.

...NZ missing out on a huge market for organic foods Ten thousand crates of export apples last year fetched \$10 a crate more than any other export apples. These highly rated apples were certified organic – produced in a system without toxic pesticides and herbicides and fed with compost instead of mineral fertilisers... The market for certified organic food is huge. Tokyo alone has a million consumers who actively seek out organics. So far, no one can keep up with Japanese, European and U[S] demand.

...Exporters are responding too slowly to the growing demand for organic food says a Tradenz business development executive... Two years ago Tradenz helped to form the Organic Products Exporters Group in response to... demand for certified organic products from established markets in North America, Europe and Japan... Results have been extremely positive, [the development executive] said, with organic exports totalling \$20 million in the year to June, a growth of 50[%] over the previous year. "However while opportunities way outstrip the capacity of our tiny organics industry, there is only a glimmer of evidence that the majority of our highly efficient agricultural export industries are alert to this demand, let alone gearing up to meet it."

...[The NZ Government doesn't support the production of organic food. When it tried, its attempts were blocked by the Federated Farmers. Why? Because if we promote organic food, people will start to ask questions about what goes into non-organic food.]

...A Japanese food flavouring manufacturer has bought a \$500,000 Oamaru property to open an international college for the study of organic agriculture. Nikken Foods plans to attract post-graduate students from NZ, the US, Japan and Europe by offering courses in organics and health studies. They will be accredited by the Qualifications Authority. Qualifications are likely to be centred around the growing, processing and marketing of organic foods. The college will be a private institution and is due to open in two years. The firm believes NZ is placed to be a world leader in organic produce and sees great demand for qualifications in such agriculture. The number of certified organic growers in NZ has doubled in two years to 700. But the country is still a small player in the \$40 billion global market, which is tipped to be worth \$210 billion a year by 2004.]

...A price war in the packaging market is beginning to hot up with exporters the main benefactors of the battle for business... The intensifying industry rivalry has already resulted in big cost-cutting measures, including factory closures. Now prices are being slashed... Some customers have been able to negotiate discounts of more than 10 to 15[%]... For businesses in the export industry, especially producers of agricultural products such as kiwifruit, meat and cheese, the packaging represents a significant element of their costs... The main spur to the price war was the entry to

the market last year of A[US]'s second-largest paper maker, Visy Board... "Visy have had some impact but we have adjusted to cope with them,"... said... [the] managing director of Amcor subsidiary Kiwi Packaging... In fact, it is understood Visy has found it tough to win orders from customers of Kiwi and the other traditional supplier, [CHH]... "The competition has the potential to be fierce," a [CHH] spokesman said. "There are a lot of deals being done." Last August Visy Board beat Kiwi Packaging in a bid to supply boxes to brewer Lion Nathan and Pepsi-Cola Bottlers A[US]. It is understood Lion is considering moving back to Kiwi, whose managing director... said superior technology and flexible production methods were ultimately likely to win the packaging war. In line with his theory, Kiwi Packaging yesterday opened a \$25 million refit of its Wiri facility that will boost production 50[%] to 60,000 tonnes a year... Output from the refitted plant will include around 40[%] recycled paper, compared with 30 to 35[%] previously. The move to raise recycled materials means Kiwi will increasingly obtain raw material for the factory from Amcor's A[US]n mills, rather than its traditional supplier, the forestry division of [CHH].

...Companies that are usually fierce rivals in the forestry sector are splicing together a long-term strategy report on their industry to help secure Government research and development funding... The self-proclaimed Forest Sector Taskforce... maintains that as forestry is set to become the country's largest industry by the turn of the century, there is a good case for increased Government nourishment... At present the industry attracts \$25 million a year from the... Public Good Science Fund... less than a 10[%] share... The taskforce is spearheaded by the N[Z] Forest Industries Council, which is a representative organisation for large industry players such as... Challenge and [CHH]. But the taskforce also aims to be broadly representative, including small foresters and other sector groups such as the... Federated Farmers. It also wants to pool ideas from those not at present involved in forestry but who might become involved later, such as general manufacturers.

...[Timber was the first major export from NZ. A Royal Navy brig took a load of kahikatea (white pine) from the Coromandel Peninsula in 1794 and established a trade that grew over 60 years. It peaked in the early 1850s at 11 million broad feet (3.35 million m) a year (much of it kauri) which represented more than one-third of the country's exports at a time when wool was less than one-quarter. The decline thereafter in timber exporting was swift as settlers hacked and burned large areas of native forests in the North Island to establish livestock farms. By the 1870s laws were being passed to encourage settlers to plant trees. The first exotic forest plantings followed the establishment of tree nurseries in 1897. In the first 25 years of this government-sponsored afforestation, 19000 ha were planted, but the first boom period was between 1922 and 1936 when government agencies planted 150000 ha and private interests 120000 ha. In the years before WW2 the export of native timber was banned. At that time, and until after the war, the native timber reserves were needed for building wooden houses and for all purposes requiring durability because of the rapid deterioration of the exotic softwood timbers. The change of emphasis came with the development of thoroughly reliable preservative techniques for the softwoods. In the 1960s the government stepped up planting again and made financial inducements to private companies to plant as well. During the 1970s the planting rate multiplied by five to an average of more than 20000 ha a year. This enthusiasm for the future of the industry was compounded in the early 1980s, with a number of major companies expanding their interest in forestry products and accelerated plantings. During the post-war period the production of pulp for export has increased enormously. The production of paper and paperboard is now approaching three-quarters of a million tonnes a year. Total production of NZ forests for sawmills, plywood, pulp and paper and fibreboard mills (and not including firewood) is now about one billion m3 a year. Pulp, paper and paperboard exports represent in earnings about 5% of all export income.]

...[Since we started trading with the rest of the world 200 years ago, we've lived mainly off the resources of the land and sea. Getting those resources out to market required more brawn than brains. But in a world of instant "dotcom" millionaires, the Science Minister warned this week that NZ needed to "transform its economy from a reliance on primary industry commodities to more value-added and knowledge-based production. This transformation is more than a shift in economic strategy. It is also about creating a society that recognises and rewards innovation." The challenge of rewarding innovation – encouraging the "nerds" – without leaving everyone else behind has become a key issue in most of the 27 countries that sent speakers to the world research and development conference in Wellington this week. NZ has dropped behind the pack of most other developed countries when it comes to spending on R&D as a percentage of national income and that failure is reflected in average pay packets. According to the latest figures available, we spent 1.1% of our national income on R&D, exactly half the developed countries' average of 2.2%. And our average income was worth only \$US17,583 each in real purchasing power, against the developed country average of \$US21,544. After a period of decline, many developed countries have responded to the surge of new information-based businesses by boosting R&D spending. US federal R&D spending is up 9% this year; Japan doubled its basic research spending over the past 4 years; Singapore, with the same population as NZ, is spending \$S5 billion on a "Science Hub" to house 200 high-tech companies and institutions such as Johns Hopkins University. Last week, AUS's PM unveiled a five-year "innovation package," which doubled grants for private sector R&D, announced "world-class centres of excellence" in information technology, and topped the existing 125% tax reduction for R&D with a 175% offer for the labour costs of additional research spending. In its own way, NZ's Government is paddling hard to catch up. Last year's budget boosted R&D spending by 10%, to \$474 million. And the minister plans to use crown research institute profits and private sector capital to launch a "seed capital fund" for new high-tech businesses.] • In '1990 a total of \$US145,450 million was Expended for R&D and Basic Research by the US – 44% of which came from federal sources.]

...[Last week... the [AUSn] Federal Government unveiled its latest strategy for raising economic performance – Investing for Growth... The new four-year A[US]n industry policy package amounted to a \$A1.3 billion of initiatives including tax breaks of between 100 to 200[% on R&D]... Added to what is already in place, spending on industry policy will now be... \$4 billion over the next year... The chances of a similar package being announced here are extremely slim... Shrinking funds for the nation's Small Business Enterprise Centres may render some of these centres obsolete...]

The Be Your Own Boss programme (BYOB), a scheme to help N[Z]ers achieve self-employment, will not be axed. Instead funding for the programme will be trimmed... to just over \$2 million from about \$3 million over the next two years and capped in the future... The BYOB programme teaches small businesses a host of skills relating to starting up or evaluating a business. They are available mostly either through community-based centres or some Small Business Enterprise Centres. In 1995-96, 11,000 people went through the programme throughout the country...

Fledgling businesses were thrown into a state of uncertainty yesterday when the Government froze cash grants because of fears the system was being abused. The Ministry of Commerce put a temporary halt to payments of claims under the Business Development Programme, which awards \$19.8 million a year to firms nationwide... "It has been a concern that some Business Development Boards have been issuing grants which are not in line with the criteria they are required to follow," said the Minister of Business Development... Up to \$2.4 million should not have been handed out... according to checks on grant files... Grants are made through 21 regional committees to assist with projects and training in small and medium-sized businesses. Applicants pay for the project themselves and are then reimbursed for some of it, usually about \$5000... Money is made available on a dollar-for-dollar basis, with each company limited to \$20,000 of grants in any year, and \$50,000 over the life of the company... It is understood the concerns include that grants are being given to companies for an innovation... [which] is later found... [to be] not that new after all. Other firms are not filing the appropriate receipts and invoices which show what the money has been spent on... Labour's spokesman on industry and business development... said the suspension of payments caused several pressing problems. "The first, and most urgent, is that those new business initiatives which have already spent money on their investigations, in the expectation of a partial refund, need a ministerial letter of comfort to take to their bank manager. Many recipients will be just starting out in business with a bright idea. They will have no spare cash. That is precisely why the grant scheme is available in the first place... If they go bung now, we will squash the entrepreneurial spirit."

...Business Development Board grants... have been... suspended by the Ministry of Commerce... [amongst allegations that] the apparent downfall... was in part due to the greed of consultants... “...who benefit greatly from the 50% fee subsidy for professional services that forms the cornerstone of the scheme.” ...[However, nearly] a third of the firms receiving grants... did not qualify, an audit has found... Boards with more than two-thirds of surveyed files showing substantive non-compliance were: Aorangi (100%), Auckland (80%), Marlborough (67%), Waikato (90%) and Wairarapa (78%)... The... manager for the Auckland Business Development Board... said the issue was in the interpretation of the code for the [boards], introduced in 1995... What had to be established was whether the instances of non[-]compliance cited were merely clerical mistakes or more serious... “My view is that you will find minimal serious breaches.” ...The Auckland board processes over 1000 applications a year, sometimes as many as 145 a month. But it admits to lacking the resources to supervise or monitor its clients’ progress... The Auckland board did a rough estimate and found that for every dollar the board gave out, the return was \$25.

...Should the government scrap its Business Development Programme which is aimed at helping small businesses compete internationally? ...Free market proponents say government must not meddle in business. Intervention breeds massive distortions in economies, reducing competitive ability. Further, if someone chooses the lonely path of owning a business, why should tax-payers fund them? Abroad, government help for small enterprises continues in many shapes and sizes. [Why should N[Z]... differ? N[Z]’s unique business profile is such that 90[%] of the country’s 200,000 enterprises employ fewer than 9 people. Yet just 150 or so large enterprises contribute some 80[% of NZ]’s exports... If the programme is ditched, so should all other government-funded programmes, including money for Tradenz and Technology for New Zealand... (TNZ).

...An investment of less than \$2 million by a Government agency is helping 10 companies chalk up total revenues of more than \$200 million in under five years... said... [the] manager for T[NZ]... The Government would have collected about \$19 million in taxes from these companies, giving it a return on investment of more than 10 times... He said TNZ clients had been concerned over recent news that no future grants would be approved for the Business Development Programme... [H]e opposed the idea of Government funding specific projects, but felt that it had a genuine role to play in helping develop the skill base or infrastructure... to build successful businesses on... R[&D] investment... in business[is] critical for future competitiveness... “In the decade to 1993 R&D investment in N[Z] declined by 27[%], while it rose 52[%] in the... other OECD countries...” ...[one] technology success story in TNZ’s file is the [company] which used the funding to develop pulse-control technology that gave them a breakthrough in the electric fence market. [Editor’s note: ‘Electric fences can affect the Internet and other forms of telecommunication.’]

...Telecommunications exports are estimated to be worth \$250 million in the current year... Combined with other electronic exports, such as fire alarms, electric fences and control systems, they could hit \$1 billion in the year 2000, said the immediate past chairman of... Telecommunications Exporters of New Zealand (TENZ)... “I can assure you... stuff that is being produced in N[Z] is right up there, well able to compete with huge international manufacturers... Where we tend to have an edge is that we specialise and do it very well,”... An important factor was the natural ability of N[Z]ers to get along with people, acting as advisers rather than attempting to force their views on people. TENZ, an industry export group which grew out of a Tradenz joint action group, has been boosting its profile at international trade fairs[– because ‘TRADE MEANS JOBS’]...

Through sheer hard work and kiwi ingenuity... [an] Auckland... company... has... put N[Z] on the world map for crystal manufacturing... [I]t has expertise the rest of the world is just catching onto. The company makes... highly stable crystals which form the heart of telecommunications equipment, something its Japanese competitors haven’t quite come to grips with... The crystals have applications in satellite-based GPS... equipment, wireless communication, fibre-optic hubs and microwave links, among others... 90[% of the company’s turnover comes] from exports.

...Every night 40,000 Coke-vending machines in A[US phone NZ] to report their day’s takings. A N[Z] invention has allowed the machines, and 7500 in this country, to link with base using a telephone line and a modem. The computer software technology[which]... has been used in N[Z] and AUS] for four years... is undergoing extensive trials in the U[S]... and is now being installed in vending machines in many U[S] cities... “It tells you how many cans have been sold each day, so you can be much more efficient about sending people to refill them,”... the public affairs manager for Coca-Cola Amatil... said. The system also indicated the cause of malfunctions and whether a machine had been vandalised.

...One of the world’s highest paid business executives... yesterday recommended N[Z] promote itself as a regional corporate capital... and... he recommended companies in Asia and North America consider N[Z] as “the most rational country in which to locate their international headquarters for the region.” ...Locating in Auckland rather than, for example, Sydney, had many advantages... no capital gains tax... a more pro-business environment, its legal and banking facilities were world class and it had a simpler political structure. “If I had a criticism – it would only be that you hide N[Z]’s light under a bushel too much,”... The multinational food giant Heinz of which [he] is chief executive, could have gone anywhere, he said, but chose Auckland as its regional headquarters. Heinz owns[NZ’s food giant] Watties... To promote businesses to locate here [the Heinz CEO, who is also] chairman of Dublin-based Independent Newspapers, owners of the N[Z] *Herald*, suggested incentives needed to be offered such as tax breaks. He pointed to a bustling Irish economy as an example. However, [he] stopped short of recommending that N[Z] adopt the 10[%] tax rate that Irish companies now enjoyed. “N[Z]’s corporate tax rate [of 33[%]] is necessary to pay the bills here.”

...The difficulties of running an international business from N[Z] show through in the latest survey of senior executives... Some 40[%] of the respondents gave N[Z] only a moderate rating... Of the balance of respondents, more were less favourable about N[Z] than favourable. The country was rated more highly by smaller companies (under 200 employees)... than by big companies. This indicates that the bigger the scale of international operations, the harder a company finds to run them from N[Z].

...N[Z] traders operating in the global marketplace face numerous risks they would not expect to confront at home... Whole firms of New York lawyers do little else but hunt among listed companies for opportunities to file damages suits against management often on the flimsiest of pretexts, knowing they can usually settle them profitably out of court. Espionage is one of the constant problems of international technology companies... corruption and bribery are omnipresent risks... and[there are usually] lower standards of corporate governance than in N[Z]... The quality of corporate governance is highly variable... even in Britain[– where]... only a third of companies had a proper strategy, another third said they had a strategy which was in fact “really only a budget,” and the last third operated without any plan whatsoever... [The] chairman of British Airways... who is also the chairman of the powerful Confederation of British Industry, regrettably accepts that it would be too much to hope for a single global set of corporate governance rules in the foreseeable future even though it would make life much simpler... [According to him, a] major impediment to simplified global management remains different accounting rules... One of the most onerous burdens of global governance can be the requirements of commercial watchdogs. [A]Wellingtonian... now spends two days in every three months attending compulsory briefings with the US Securities and Exchange Commission... The SEC requires companies... [listed] on the Nasdaq stock market... to keep up with all changes in commercial law but the trouble... “is that they are often talking about amendments to amendments that haven’t yet been issued.”

...N[Z] has slipped from third to fifth in global competitiveness according to the annual survey of the World Economic Forum, an international grouping of government, business and academic leaders. The report said N[Z] had come a long way towards being an efficient, competitive economy, but still faced the task of consolidating a decade of fiscal and structural reforms and translating those into solid economic growth. The forum, which has its headquarters in Switzerland, made its conclusion after assessing eight critical factors: the openness of the economy, government, development of financial markets, infrastructure, business management, labour market flexibility, and judicial and political institutions. Leading the world rankings were Singapore and Hong Kong, economies that “excel in nearly every major area that counts in terms of competitiveness...” They were followed by the U[S] and Canada, while A[US] was ranked 17... Although N[Z] was ranked fifth in competitiveness

by the forum, it did not carry the same status in a separate survey of international business executives which placed its competitiveness at 17, still ahead of A[US] on 20. That re-ranking was in part explained by a tendency of survey respondents to give more positive assessments to large, wealthy, highly visible economies, even if those economies were not performing particularly well. Japan, despite recent problems, was ranked number two. In terms of N[Z]'s impact on the overall growth of the 53 countries in the survey, N[Z] was ranked a lowly 35, a reflection of its small size, as much as anything.

...It keeps getting harder for N[Z] to earn its living as a trading nation. The terms of trade index, which measures what volume of imports can be funded by a fixed volume of N[Z]'s exports, fell 0.4[%] in the... quarter and is at its lowest level for six years... Despite the declining trend in the terms of trade, export volumes have been growing faster than imports. Export volumes for the... year were 7.7[%] up on the previous year... Import volumes... were 4[%] up.

...N[Z] continues to face an uphill struggle as a trading nation, with the terms of trade having worsened in the[latest] quarter... It fell 1.2[%]... making a drop of 4.1[%] for the year, as import prices rose twice as fast as export prices.

...Agricultural exporters are concerned about the turmoil in Asian financial markets but say it is too early to get a clear picture of how their businesses might be affected. The Dairy Board exports more than \$2 billion worth of products to Asia each year – more than a third of its total tonnage. “The markets are crucially important,” said [the board's spokesperson. Pipfruit]... exporters are unlikely to be greatly affected because Asian markets are not so important as those in Europe and the selling seasons are almost over.

...Asian financial turmoil is having an impact on Otaki-based necktie maker Sander Apparel, with the cancellation of two \$50,000 orders from Malaysia... [The company's] managing director... said the buyers had told him they were following directives from the Malaysian Government to conserve foreign exchange by buying Malaysian-made products... Sander Apparel... had exported neckties to Malaysia since 1989 and the cancelled orders were from two of i[t]s main customers there. [The] company, which directly employs 28 people, exports about \$2 million of neckties a year. About a quarter go to Asian countries.

...[while Asia] is throwing great black clouds of negativity over N[Z]'s economic growth prospects for the year ahead[, t]he... Warehouse is hoping to capitalise on the turmoil in South-east Asia by taking advantage of cheaper prices for manufactured goods... More than half [of the budget retailer's] stock comes from Asia... The company's buyers were already receiving offers from Korea, Taiwan, Malaysia and Indonesia,[the] merchandising director... told the annual meeting yesterday... [H]e expected the currency problems... would put pressure on Chinese producers to bring down their prices. However, it was possible The Warehouse would change some of its suppliers. The cheaper prices are likely to offset those the company expects to pay in some markets because of the weaker N[Z] dollar... The company's buyers hoped to counter the... drop... between the N[Z] and US dollars... with better buying strategies, he said. [● The cabinet today is expected to put the heat on Enza over big foreign exchange losses. The Government hasn't ruled out appointing a statutory manager if Enza doesn't stop deducting about \$19m of projected forex losses from growers' payments (Enza's been deducting \$4.50 a carton from suppliers' returns which would reduce to \$1.85 if it took responsibility for next years' losses). Enza's chairman said last night that to legislate property rights away from any shareholder group to another group would “put NZ back in the financial dark ages.”]

...West Auckland orchardists want a quick resolution to a row over Enza debts – one saying he will resume exports if the situation improves (this year is the first time he has decided against exporting, as he could forecast trouble, along with rising costs in packing and transport). Enza is taking \$4.50 a carton from apple grower payments this year to cover about \$19 million of foreign exchange debt forecast next year. That's part of about \$50m in foreign exchange debts which growers believe Enza shareholders should bear. The Auckland Citrus Growers president and owner of Huapai's Sunnyview Orchards questions the need to pay for Enza's losses. “They were appointed to export, not to borrow foreign money.” He says the Government must do something or there mightn't be any apples to export. “I've been growing fruit for 50 years and we've got a wonderful industry that's on the verge of being destroyed.” 40 years ago the Huapai Fruitgrowers Association joined many others in making submissions about the Apple and Pear Marketing Board. Seems their doubts were justified.

...‘A 10-year rollercoaster ride of foreign exchange dealings may have cost the apple industry at least \$67 million – or nearly \$48,000 a grower. Although there were good times during those years, the last of the bills for failed forex contracts are now hitting home, pitting apple suppliers into a battle with major exporter Enza. The clash is unlikely to produce any winners and has soured relations between the interdependent foes.’]

...Pipfruit and kiwifruit shipments are to link next season in what it is hoped will be a catalyst for further joint activities. The chief executive of the Apple and Pear board... said it and the Kiwifruit Marketing Board had reached a global shipping agreement... to all markets. “Enza and Zespri have a significant opportunity to be able to leverage critical mass,” he said... It is believed to mean cuts of over 10[%] in the present shipping costs for both boards, who last week announced that they would combine marketing operations in Britain in the coming year... Further arrangements could include marketing of Chilean fruit handled by the Apple and Pear Board's Chilean company, Zeus, under the Enza brand and working with Zespri in the packaging area. The chairman of the Apple and Pear Board... estimated at only \$20 million the cost of poor quality fruit this season, saying an earlier running total of \$64 million took into account “\$30 to \$40 million” of opportunity costs.

...the... 1700 pipfruit growers around the country... [are] reeling from a season when hailstorms took their toll in most growing areas then international markets did much worse damage... [A] smaller crop should have meant higher prices, but quality problems meant a total of \$64 million so far has been spent on checking, repacking and sending unsaleable fruit to be used for fruit juice or cider. The... Apple and Pear Board... [is tightening] quality controls for next season – a move which was endorsed at the recent Pipfruit Conference, along with clawback provisions which will see the cost of poor quality fruit being charged back to individual growers... The average per carton payout to growers this year is \$10.21 compared with \$12.17 last year.

...Kiwifruit growers' surplus per tray has risen 50[%] in the past ten years and their per hectare surplus has doubled, says the chairman of Kiwifruit N[Z]... “The profits are a long way ahead of what they were under the old export system in 1987,”... However... a director of the post-harvest company Hukapak, said the kiwifruit industry was locked into an enforced marriage. “Some of us want a divorce.” ...Zespri International's chief executive... said fragmenting the supply of N[Z] kiwifruit to world markets would be “a formula for disaster.” The marketer was already below the size needed to be a key supplier to world supermarkets... The cost of running Zespri International was \$16.1 million a year, or 4.5[%] of the shipped value of the crop. For that cost of 38c a tray, the single seller had added \$100 million in sales growth over the past two years. Prices under a free-marketing system might be similar to those received by Chilean growers – \$2 a tray less. “That is not a future this industry can contemplate,” [the chairman] said.

...An exciting future for kiwifruit sales to India is being predicted following an agreement which will allow exports to begin next year... [WTO] countries, had persuaded India to bring forward... the... phasing out of import restrictions... [A] spokeswoman for offshore kiwifruit marketing arm Zespri International, said the company would “very aggressively pursue the opportunity.” She said: “There is the potential to grow quite rapidly. It is one of the last untapped markets.”

...China could be a kiwifruit export market of three million trays annually in [five years says the] chairman of Kiwifruit N[Z]... who made his first visit to the original home of the crop recently... N[Z] began exporting kiwifruit to China several years ago and sends about... 300,000 trays of fruit a year... work was [also] underway to develop a Chinese industry based on the fruit popularised by N[Z]... The Chinese still eat the fruit kiwifruit was developed from, which is known as monkey peach... [I]t was small, a different shape and “nowhere near as appealing as kiwifruit.” - 1997

KIWIFRUIT... is a sub-tropical fruit which has become the fastest growing NZ export commodity since the mid-1970s... [O]riginally known as the Chinese gooseberry because of its origins in the Yangtse Valley of China[, it has]... been developed in size and succulence by the industry here...

1937 The first commercial planting of Chinese gooseberries... took place at Te Kuiti, Otahuhu and Wanganui.

An ugly little fruit brought back from China in the early years of the century, the chinese gooseberry was developed by plant propagators in Wanganui and Auckland and was grown in many home gardens. But it was not until the 1950s that its potential as an export crop started to be exploited when production exceeded the demand of the local market. By the late 1950s Turners and Growers were sending fruit to the U[S] but were meeting buyer resistance because the name chinese gooseberry meant little to the Americans. At the suggestion of Turners and Growers the fruit was renamed kiwifruit. Now it is one of the more popular fruits worldwide, with most grown in countries other than N[Z].

TAKE a good look at that unfamiliar plant before you dig it out of the garden; it could make you rich. Several new fruit and vegetable types crop up each year through accidents of nature. Occasionally, as in the case of the [kiwifruit], they prove to be commercially viable. These accidental discoveries are exploited by... a few... entrepreneurs... [The latest example is] the Luisa plum[, which was discovered at a]... property in... Hamilton... There was a number of old fruit trees on the property and [a new owner] reckoned they were past their best and had most of them bulldozed. Two, however, looked ideal for supporting the ends of a hammock, so he kept those. In the spring one of them blossomed, and produced a strange greenish fruit the size and shape of a small mango. It was succulently sweet, with the texture of a plum and hints of apricot in the taste. [The new owner] went to the M[AF] and every other expert he could find, but no one could identify the fruit. All they could say was that it was[a] freak... result of some odd cross pollination... “You sometimes find that, where people have been eating fruit on a verandah and tossing the stones away into the bush, the seedlings that grow as a result may recombine to produce something new,”... Having taken advice, he found that he could claim the fruit as a new species, and named it Luisa after his daughter. The process of gaining a grant of plant rights, a so-called plant patent, took a lot more time and money than [he] expected, but with the help of... a horticulture consultant, it was completed in 1990. The grant of rights under international convention makes the plant the exclusive property of the [owner] for 17 years[, and means that each]... time a tree is sold a royalty from the sale is paid to the [owner]. Orchardists the length of N[Z] have planted Luisa plum] trees, and this summer the first fruit appeared on a large scale in supermarkets. Trial exports of fruit to Japan and Taiwan have excited interest, but the exports will not be profitable until much larger quantities are available. Growing rights have also been sold to fruit-producing companies in Chile and France, and negotiations are continuing to sell the right to grow the trees in the U[S, AUS] and South Africa... [L]icensing growers overseas is the only way of protecting the “patent” on the variety. “If it proves a winner, growers overseas would acquire it anyway without your authority,”... [That can lead to a new set of problems:] “There... is a legal battle going on over the rights to a pink apple from Western A[US].”

...Twigs that make export millions... In 1996, 18 million cartons of N[Z] apples were sold to 56 countries – up nearly 150[%] on the 1986 total... Our apples take (by value) 31[%] of the European market, 56[%] of the North American and 50[%] of the Asian... [70%] of our exports are from varieties developed here... [such as] gala... royal gala... and braeburn[, which]... came off the side of the road somewhere... Meanwhile, other Southern Hemisphere producers have continued to rely on traditional apples such as red delicious and granny smith[, which]... was found in the back yard of a little old lady in Sydney... The Fruit Industry Improvement Association, an Enza subsidiary, oversees new apple variety development and its latest successes have been southern snap and Pacific rose. Pacific rose, which took more than 15 years to develop, is being hailed as the industry’s new flagship apple – and it was apparently the target for the Chinese... [A] Matamata orchardist... noticed one very red apple hanging high on a tree in 1969. Four years later he had turned that... apple into 12,000 twig-sized trees... [Therefore t]he finder of the royal gala knows what can be done with one apple bud, let alone several twigs...

The Chinese Government has been asked to explain a case of industrial espionage involving a group of horticultural scientists who tried to smuggle a new variety of apple out of N[Z]. The four... scientists and an interpreter were caught by a joint customs, police and M[AF] swoop at Auckland International Airport on Sunday... One of the scientists was found with 15 cuttings wrapped in wet tissue and plastic, in his hand luggage. The scientists told police they had planned grafting the new strain of apple when they returned home, which has alarmed N[Z] fruitgrowers. Police did not lay charges against the scientists and allowed them to leave the country the next day, but the matter has not been left there... The... scientists were on a N[Z] Government-sponsored trip to visit horticultural research institutes... The president of the Fruitgrowers Federation... said the N[Z] apple industry had to be wary of China’s “huge potential” to swamp the Pacific area with cheap apples... The world was tending to target N[Z] for industrial espionage-type activity because of our “wonderful research capability,”... In today’s competitive environment there was real advantage to be gained in being the first to release a new variety of apple on to the market... Chinese Government officials could not be reached for comment last night.

...Chinese visitors have previously been caught trying to smuggle fruit tree cuttings across N[Z] borders... This year, when a Chinese delegation arrived from A[US], border authorities found tree cuttings inside thermos flasks. It is understood these were taken but no further action taken. The delegation continued its tour of N[Z]... Outrage was also expressed yesterday that no charges were laid [after the latest incident]. Accusations were laid that the[N[Z] Government had taken a soft line because of fear of China. The Minister of Customs... defended the decision not to prosecute... He said it was not worth jeopardising trade with China “and our relationship with a huge, industrially mighty country for that incident.”

...Chinese officials retaliated to this year’s apple-smuggling scandal by accusing N[Z]ers of stealing plant material from China. At that point our Government decided it was satisfied with China’s response to its concerns about the initial incident and took the matter no further. Papers released... under the Official Information Act provide a peek into the delicacy required of diplomats and Government politicians from small countries dealing with a superpower. China... is shown as particularly sensitive to anything casting it or its people in a bad light. Its officials required prompting before admitting wrongdoing and instead tried to blame N[Z] for the row that blew up when one of its horticulturists was caught at Auckland airport with 15 cuttings in his suitcase. This country’s \$200 million a year pipfruit industry was outraged when the Chinese national was freed without being charged. The official was in N[Z] at the Government’s invitation as part of an economic aid project... Chinese officials, particularly at the Wellington embassy, deeply resented the way the N[Z] Government made the incident public and the news reports that followed... Ministry of Foreign Affairs... staff said last night the claim... that our consultants involved in the aid project had removed plants from Wulian County in China... had not been substantiated... The Government fears that releasing further details about the... incident... will damage relations with China[– which could, perhaps, accuse NZ of stealing the chinese gooseberry].

...Brightly coloured cars... are spreading the new Zespri kiwifruit brand around Europe in an extension of a similar successful promotion carried out last year. Twelve Volkswagen beetles are touring Germany and Holland, while six Citroen deux chevaux cars are visiting holiday spots in southern France. A train which runs between resorts on the Belgian coast has also been painted in the bright green Zespri colours. In Spain, which has one of the highest growth rates for kiwifruit consumption, the fruit is being taken out in chilly bins on the back of bicycles for consumers to sample. Zespri International Europe[’s] commercial director... said the travelling promotions were... aimed at reinforcing the message that kiwifruit made a healthy snack any time of day.

...A joint venture between two apple orchardists has put into production the first corporate-branded apples. The Sheraton hotel company is giving guests apples with the word "Goodnight" and a trademark "S" on them. The marking is produced by covering the outlines of the letters from coloration by sunlight. [The orchardists, from] Gisborne, and... Hawkes Bay, have formed a company, Ad-apples, to market the shadow-branded apples. The partners have spent five years researching and refining methods to produce fuji apples marked without use of chemicals.

...[according to] Tradenz's manager, fresh foods and agribusiness[, the]... question is not whether we can afford the costs and discipline of branding primary products destined for the world stage, but whether those companies which have not already grasped the benefits of marketing branded products will stay in the export business without this approach... As Zespi International['s] chief executive... says: "In an increasingly competitive marketplace, the greatest rewards go to those who create the strongest brands."

...N[Z] needs to be up on the world stage if it is going to make it in the age of globalisation, [according to] a leader in PR... [He] means this in the nicest possible way... N[Z], you see, is just not up there... "I wouldn't like to use the term backwater, but there's an element of that," he explains... We need to promote ourselves more.

...[The North and South Islands are the most exciting places in the world, but they have the duller names, a branding whiz says. Imaginative and exotic names, such as Maui and Pounamu, derived from Maori names for the islands, would be much better, he told tourism bosses yesterday. "It will definitely create tension between NZ and the Hawaiian island of Maui. That should be good for awareness." His company was sifting through ideas and promised it would come up with "a huge iconic idea" for its global contract with the Tourism Board. Other ideas were a new flag – black with a silver fern – a new national song, and bringing back a stamp for passports. And Air NZ could paint its jumbo jets all black, with a silver fern stretching along the fuselage.]

...In marketing a branded product, we are making a promise to consumers... that today, tomorrow and the next day we will supply to the same quality, reliably and consistently... Just like a packet of soap powder or a car, a country can be branded in some powerful way... Companies seeking to gain leverage from N[Z]'s favourable image in our markets can... adopt the New Zealand Way fern brand – a country-of-origin branding initiative... When it comes to branding, however, some countries have it and some don't... Detailed research on the impact of The New Zealand Way's efforts has yet to be done, but... [its] chief executive officer... says: "The results are very encouraging." It still has a long way to go, she concedes. "N[Z] is a dot on the globe. But you have to start somewhere. And you have to start with a vision." ...One problem with branding N[Z] may be that N[Z]ers themselves don't believe in the brand. We will accept we have one of the most beautiful countries in the world, but will still head for Fiji or A[US] on holiday, instead of the South Island. Kiwis know that many N[Z] products have reached world-class quality, but will still look for A[US]n or overseas labels.

...N[Z]... consumers... just have to look for "Made in USA" or "Made in UK" labels to find what goods to avoid – if the huge pricetags have not already told them.

...[a brand (or trademark) is a 'distinctive mark placed upon goods to identify the manufacturer – either a device, label, ticket, heading, signature, word, letter, or numeral. If a word, it may not be one in general use as a name for that particular product and not the name of a person (except a signature in facsimile) or place. It may not be morally objectionable or misrepresent the product.' ■ In '1990, there were 53,600 trademarks registered in the US and 7,200 were renewed (the respective figures for 1980 were 18,900 and 5,900').]

...“Brands have to work harder than ever before,”... observed... an identity consultant, or in other words an expert on branding. He was responsible for the development of some of the greatest brands in banking... The benefits of a strong brand lies in the unique mix of rational and emotional qualities associated with a product which enables it to be sold at a premium. Hence, a plain white T-shirt is worth \$20, but add the Nike symbol and it can be worth four times as much. The Virgin brand is an example of how a strong brand can support a range of products with little in common... Brand comes in the form of logos, typefaces and slogans and how they are applied across all manifestations, from letterheads to brochures and, most importantly for banks, the exterior appearance and interior layout of branches... In an address to a banking conference in Bali, [the consultant] said the brand might soon be the only sustainable competitive advantage in financial services... In a world where banking products are little more than commodities, the power of the bank's brand may be the difference between it and a competitor... The importance of branding to banks lies in the promise to increasingly busy customers who cannot do comparisons with other market offerings to make sure that the product will meet their expectations... However, [he] said, banks had a lot to learn from retailers... Just to complicate things, mergers and joint ventures between banks and non-banks are posing a new set of branding issues... “This whole issue of brand sharing is taxing many identity consultants... and increasingly we are having to look at how we fit two sometimes incompatible brands and their identities together...”

...Union Bank of Switzerland and Swiss Bank Corp have merged to create the world's second-largest bank... The new group will have assets of 1320 billion Swiss francs (\$NZ1534 billion) and is expected to cut 13,000 jobs worldwide.

...Two of Germany's oldest industrial titans... on Tuesday said they planned to merge their companies, ending over a century of intense rivalry. The companies were created by 19th-century industrial barons... built the weapons for Adolf Hitler's armies and later stoked the furnaces of western Germany's post-war recovery. If completed, the merger would create Germany's fifth-largest company...

...the U[K's]... Real Estate group... is to merge with U[S]-based CB Commercial Real Estate Services Group Inc. The companies said the merged group – yet to be named – would have 8000 employees in 31 countries.

...Accountancy firms Ernst & Young and KPMG hope to merge early next year, cutting the world's Big Six down to four once Coopers & Lybrand and Price Waterhouse complete their merger. The Ernst & Young-KPMG... marriage (if consummated) would create the world's largest accountancy firm... employing more than 163,000 people. It's whispered from London that image consultants have been retained to find a name, and the possibilities are horrendous... But one possibility... is simply KEYS... The point of the deal seems to be that bigger internationally is best, a logic which could see the number of big international firms whittled down further.

...Global business is in the grip of a new round of merger mania... ON THE morning of October 13... the whirlwind of activity began. Within a few minutes, [6 merger] deals potentially worth \$203 billion flashed up on screens all over Europe... Never, in the history of business, has there been a day like it. Mad Monday, as the dealers labelled it, may have been a shock, but it was no isolated incident... 1997 will break all merger records... What sparked off this sudden determination by so many companies to turn into giants? ...The common thread running through most of these deals is globalisation. Everyone is boasting of becoming one of the biggest of their kind in Europe, the US or the world. “Small is beautiful” is a phrase confined to mobile phones. Unlike the mergers earlier in the decade, this batch is not based on saving money by putting... workers out of jobs. Although cost-cutting remains important, these takeovers are justified by the need for scale, not penny pinching... “...the world is getting smaller... All these companies are operating in a... larger market and to operate effectively you have to become larger yourself...” There are other factors at work besides the simple urge to merge... Many companies have... their balance sheets in reasonable shape. They spent years slimming down their organisations. Now they are rich... and confident enough to risk a big move. A [merger] deal is a much easier way of adding profits than seeking and developing new markets. Many of the deals announced this month will take months to wrap up. While they drag on, with regulators investigating and courts approving, the fees clock up. Naturally, advisers rebuff any suggestion they might play fast and loose with their client's billions.

...Adidas AG said on Monday the German cartel office had approved its 2.4 billion mark... takeover of sports equipment group Salomon SA... Combined 1996 sales would have been more than six billion marks... The deal enables Adidas to offer a dizzying array of products from shoes and sports apparel to... ski, golf and tennis gear... The new company will be called Adidas-Salomon AG.

...Turmoil on the sharemarket is expected to foster a round of management buyouts... [However, t]akeovers are good for shareholders and the economy as a whole, according to a... study released yesterday... by the Securities Institute of A[US]... The study of more than 2500 takeover bids for A[US]n Stock Exchange-listed firms... said at least \$A20.4 billion... was earned by shareholders directly as a result of such bids between 1974 and 1995. The study found an active takeover market resulted in the allocation of corporate assets to higher-valued uses and prompted otherwise entrenched managers to act in the interest of shareholders through better management practices. The report... found investors did well by identifying firms that were the subject of imminent takeover bids... “...experiencing, on average, an abnormal return of 32[%] after allowing for market-wide movements and firm size,” it said. - 1997

If mergers and takeovers continue at their present rate, the world may eventually have just 2 corporations (perhaps with one being legal, the other illegal?!)

...the next thing that will happen – corporate wars.

Of course, the ultimate scenario would be to end up with just one worldwide corporation!

A great ambition has been fulfilled. We are now, without question, the richest, the greatest, the most powerful company this world has ever seen!

corporation... a group of people authorized to act as an individual, especially in business.

We’re a business, and like every other business we try to make a profit. Hopefully more profit than the others.

A company must operate profitably or it dies: this is the system by which our production operates and, in many ways, it is a good thing, for it removes unprofitable businesses which might otherwise waste a lot of material – and... people’s time for... a negative amount of effective work.

In 1991[, US corporations]... with assets over \$1 billion... accounted for only 0.05% of all corporations in number[(‘3,563 thousand corporations operated in the US in 1988 – compared with 13,679 thousand proprietorships and 1,654 thousand partnerships; and 412 corporations in 1944’)]; yet, they accounted for 71.2% of corporate assets and 73.2% of net profits.

General Electric Co’s profits soared to a record of \$US2.16 billion... in the second quarter as most of its global businesses registered strong growth. The giant manufacturing and broadcasting company said its net income for the three months ended June 30 rose 13[%]... 10 of its 12 businesses reported higher operating profit for the quarter, with nine... achieving double-digit increases.

...Telecom N[Z] has been listed at 380th among the world’s top companies, according to the *Financial Times* annual global FT-500 survey. Telecom, which placed 396th last year, was the only N[Z] company to make it into the top 500. Among top Asia-Pacific companies, Telecom ranked 32nd, down two places... while [CHH] was 74th, down nine places[– although ‘Challenge would be larger than CHH’ if its four trading divisions (Energy, Paper, Forests and Building) were counted as being one company, and ‘would be larger than Telecom going by the value of its assets’]... The FT-500 provides an annual snapshot of the world’s leading companies, ranked by their size, at the end of each September year. A company’s size is measured by its market capitalisation, which is the number of shares the company has on issue multiplied by their market price. Telecom’s market capital was valued... at \$US8841.5 million... with [CHH] at \$3791.7 million... British Sky Broadcasting, headed by... [a NZer], topped the list of the most profitable companies in Europe... U[S] company General Electric, with a market capital of \$150,264.2 million, topped the FT-500, up from second place last year. Netherlands-British company Royal Dutch/Shell also moved up one place to rank second with a \$135,350.2 million market capital. The U[S]s’ Coca-Cola Corp was third at \$126,872.4 million... - 1997

Company *market capitalisation* allows corporations to prove who is the biggest – although it is possible that one corporation might have the largest market capital but not gain the most annual revenue or profit. Other ways in which a corporation can claim to be *the biggest* is through having the most employees; or because it has the most offices (or, alternatively, most buildings). Then there is always the simplest ambition – to have the biggest (or tallest) building!

Empire State Building, tallest building in the world... When it was built, 1930-1, it was 1250 ft. high, with 102 storeys. In July 1945 the building was struck by a B-25 bomber, causing the death of 13 people. The addition of a television-sending tower in 1950 increased its height to 1472 ft.

Having pierced the sky with the world’s tallest building, the 451.9m twin Petronas Towers[– however, a building ‘planned for construction in Shanghai will be taller’ (‘7 out of 10 of the tallest buildings completed or currently under construction are in Asia; a decade ago they were all in America’) –] Malaysians are now about to erect the world’s longest. Budgeted at 10 billion ringgit (\$[NZ]5.73 billion), the 10-storey tube-like “Linear City” structure on stilts is supposed to snake for 2km above the Klang River that winds through downtown Kuala Lumpur. The centrepiece is “Giga World,” so named by its backers as a step above “mega.” The open-sided building is to have a canal running through the seventh floor, an artificial rain forest, shops, restaurants, offices and even an in-line skating arena. The entrepreneurs behind [it] hope to begin the first phase – an 8km monorail through the heart of the capital – by September. The P[M]... wants it ready by September 1998, when Malaysia plays host to the Commonwealth Games. - 1996

Great wall of towers... Stand anywhere on Nanjing Rd, the very long main shopping street of Shanghai, spin around and you can quickly see more office space under construction than is contained in the whole of Auckland’s central business district... The amount of development is awesome... Shanghai is possibly the largest construction site in the world with 20,000 buildings under construction... [i]n an area which until 1900 was paddy fields... Behind these towers, where a 94-storey giant is about to make the normal 40 to 50-storey buildings look small, Shanghai has a new container terminal and industrial zone... Shanghai is undoubtedly pushing to become China’s main commercial centre... although... western businessmen dealing in Shanghai and Hong Kong are divided on which will be the more important in 10 years... [A] 1995 report... warned... that, because of the magnitude of construction in Beijing and Shanghai, rents were starting to fall. No matter: Jones Lang Wootton recorded[that a further] 200,000sq m of top grade office space[was] completed in Shanghai’s main business district last year... In the space of four years, JLW has forecast that 3.3 million sq m of new offices would be completed in Shanghai. Naturally enough, this has made the market more competitive and the overall vacancy rate has pushed up to 25[%], with rents dropping back more than 20[%].

...RENTS for good quality office space may be rising, but tenants should count their blessings. Commercial office rents in this country are among the cheapest in the world, according to... [a survey of] the commercial property market in 87 cities... And they can be grateful they do not rent space in Hong Kong where the pending takeover by China has done nothing to diminish property values, pushing the annual cost up to a whopping... 27% more expensive than the next most expensive city... 1, Hong Kong... \$2014 sq m... 2, London (West End) \$1588... 3, London (City) \$1472... 4,

Singapore \$1462... 5, Bombay \$1411... 6, Beijing \$1321... 7, Moscow \$1320... 8, New Delhi \$1200... 9, Shanghai \$1160... 10, Seoul \$1159... 11, Tokyo \$1033... 12, New York (Midtown) \$1028... 13, Paris \$898... 14, Edinburgh \$862... 15 New York (Downtown) \$826... 56= Rome... Sydney \$447... 74 Warsaw \$302... 75, Wellington \$301... 76, Auckland \$292... 78, Melbourne \$257... 80, Christchurch \$211... 87, Bulawayo (Zimbabwe) \$95...

Demand for new office space should push gross rents in the best buildings to \$440 a sq m in Auckland, \$425 in Wellington and \$235 in Christchurch by the year 2001, [according to the]... latest office review... Those figures are well above the generally accepted level of about \$350 a sq m used as the benchmark for new construction to start because, as gross rents, they include the outlay for operating expenditure... Vacancy levels in both Auckland and Wellington's CBDs... had... dropped below 10[%]...

About 38,000 sq m of office space was [rent]ed in Wellington's [CBD] over the first half of 1997... But bring that gross absorption rate down to net impact, and a net 3500 sq m was taken up in the six months, compared with 18,700 sq m for the previous half-year... [T]he overall Wellington CBD vacancy rate fell just three percentage points over the half-year, after substantial falls in the previous three years from a 20.6[%] vacancy level in December 1993. The prime space vacancy rate actually rose three points to 4.6[%]... The survey showed a 10.4[%] vacancy rate in the Wellington CBD core, 14.5[%] on the fringe, 13[%] in Te Aro and 4[%] in Thorndon.

...Overall demand for office space in Auckland's [CBD] fell in the first half of 1997... However... demand for prime space remained strong and the vacancy level fell to 4.9[%] in June, while indicative prime rents rose 10[%] over the six months... A... survey of major business districts in N[Z and AUS] showed the net absorption rate in Auckland's CBD over the past five years was 21,891 sq m a year – slightly more than the space in Queen St One, the former Air N[Z] House... That absorption rate closely matches the average of office supply in Auckland over the 11 years preceding the 1980s boom, but is well short of the 83,000 sq m a year supplied from 1985 to 1987. The Auckland absorption rate for the past five years has run at about one-sixth that of Sydney CBD's 124,280 sq m a year... [Sydney's CBD] now has just over 4 million sq m of office space, of which prime quality space forms about 7.5[%]... Two buildings totalling 65,000sq m are under construction on Pitt and George Sts and the threshold to make new developments viable was a gross \$A700... a sq m, [although]... Bayleys DTZ... beat that figure with the leasing of 396sq m on the 36th floor of the 44-floor Chifley Tower for \$770, to Nikko Securities for seven years... The overall vacancy rate in Sydney had fallen from 22... to 6[%] since 1992... Sydney's vacancy rate for prime office space has fallen from 28... to 2.4[%] in five years... The survey shows prime rent in Auckland in the third quarter reached an average of \$203 a square metre, with the top space averaging \$220, compared with prime rent averages of \$195 in Wellington and \$135 in Christchurch. Capital values of prime stock in the three N[Z] cities were \$4120 a sq... m... in Auckland, \$3750 in Wellington and \$1600 in Christchurch, while the yield range for prime city property was 8 to 8.5[%] in Auckland, 7.5 to 8.5... in Wellington and 8.5 to 9.5... in Christchurch. Looking forward[, a firm specialising in]... property consultancy... said new CBD construction[in Auckland] would be of prime grade office towers... Large occupants of medium-quality space – some of that being the best premises built during the 1980s boom – are expected to upgrade to prime space again as their leases expire over the next five years, leaving... large refurbishment opportunities.

...“We're back in a development market,”... says... *Moving Times*. One difference between the 1990s version and the 1980s boom is that, this time, tenants are not racing each other to jump into the next highrise before the concrete has dried. They are examining workspace solutions. At least, that is what consultants would like them to do. Another difference is that the solution is not just [CBD] highrise... At least 27 concepts around Auckland are being touted to potential tenants. Most are on the city fringe and in the under-\$10 million bracket... The fringes offer more parking, business parks and low-level office blocks... One company that has decided to move from fringe city (Symonds St) to a greenfields site, Smales Farm on the North Shore, is Clear Communications. Its \$50 million new headquarters will have 17,364 sq m, housing 1100 staff on six levels, with ready motorway access and a signposting opportunity better than most. That removes the best part of a large office tower from CBD planning... Kiwi Income Property Trust[s] joint managing director... however, believes there will be more than one new tower in the central city because of tenant incompatibility, “and the emotional factor will drive people wanting to put their name on a new building for the turn of the century.” Other factors impinge on demand for new office space, not least being the dramatic reduction in space required for every employee. New terms such as hot-desking (desk-sharing, where a work-station or office may be booked for use by more than [one] person a day) and hotelling (an extension of hot-desking) are taking effect, although they are not practical for all industries and have not been received well by all potential participants... Telecom[s] spokesperson said a typical office building around the Pacific Rim at the moment would allow 20 to 23 sq m for every occupant, but technology, cultural and design opportunities existed to take that average down to 12 or 14 sq m “without any significant impact on productivity. Businesses will make this paradigm shift to maintain competitiveness.”

...a consultant with PA Consulting Group in London... arrived in Auckland this week proclaiming the message that, among the changes to come in the use of offices in the next decade, a key one will be that organisations use less space in total. They would also spread themselves over a greater number of buildings: the grand statement would be no more. However, these notions are at odds with [hi]s own work... managing the shift of two banking institutions into 100,000 sq m of new[London] office space. And the theory that the grand statement is dead defies the existence of city developers and tenants who want their name up in lights on the tallest building. But, slowly, as developers recognise how to make money out of changes in office use, we may get smaller new office blocks, which are more efficient... Creative Spaces... created a model for Trans Tasman[s]... former *Auckland Star* site between Shortland and Fort Sts... that measured tenant efficiency, worked out as the percentage of usable space to rentable space. This showed that on a 30-level building with 18,939 sq m of net lettable area, usable space was 13,179 sq m, giving 69[%] efficiency. But by reconfiguring and dropping the number of floors to 27, [Creative Spaces] showed Trans Tasman that although the net lettable area was slightly less, the usable space increased to 13,516 sq m and efficiency to 74[%]. By changing the building design, the model showed an accountancy firm which previously allowed 24 sq m for each staff member could get down to 15 sq m each... Telecom expected that through new, flexible work systems it could reduce its space requirements by 30[%] and the cost of... “churn,” or staff movements... by 70[%] in the next five years. But there was another side: saving too much space could hurt morale and cut productivity.

...Trans Tasman Properties moved closer this week to its aim of building an office tower on the old *Auckland Star* site... between Fort and Shortland Sts... with results back from a three-way design contest... Trans Tasman is competing with several sites, developers and property owners to be the first off the mark with a new tower... One of its competitors is Kiwi Income Property Trust, hoping to develop the old Lion Nathan premises between the same two streets, and another is the NZI property owner, Sentry Investments, hoping to go ahead with its Chancery Square project backing on to Albert Park... In property terms, there is an unquestioned need for two and possibly three more high-rise office buildings in Auckland's [CBD] over the next five years. It is six years since the city's two flashiest towers, the ASB Bank Centre and the Coopers & Lybrand Tower, were completed and the vacancy level in prime office space is down to about 6[%]. That is quickly pushing rents up towards a level to make new development viable... Two of the designs are traditional and rectangular – “buildable, practical buildings,”... The third is elliptical and has the longest way to go to prove to Trans Tasman the efficiency of its floorplates. All three designs used mid-level plant rooms, increasing the height of the building, removing the need for a transfer floor for the lifts and also reducing duct sizes... Meantime, the company still has to convince some major tenants to go with it before the project becomes reality.

...Work is to start on Monday on a seven-storey office building alongside Farmers car park in downtown Auckland, although the assumed occupant, accountancy firm Deloitte, has not signed a tenancy agreement... The... Symphony Group's building at the foot of Nelson St... would give it prime exposure to traffic entering the city along Fanshawe St from the harbour bridge... Symphony's building would have about 7700sq m

of office space and would be cheaper than high-rise towers to build. Rents would also be lower, about... \$301 a sq m... compared with... \$320 a sq m and higher... for high-rises. The departure of one major tenant to that site... leaves proposed tower developers with a tight field to choose from for their plans for buildings of 20,000sq m and 30,000sq m. Developers of the larger towers cannot make a start on the commitment of a single major tenant, and two large firms in the same profession will generally not take space in the same tower, so the developers have had to seek out a combination of law and accountancy firms.

...Kiwi Income Property Trust has won the race to build Auckland's next office tower... The new trust its managers have created, Kiwi Development Trust... will raise \$194 million to build Auckland's tallest office tower... [at] 170m... with a completion value of about \$250 million... The 38-storey Royal SunAlliance Centre will top the [39-storey] Coopers & Lybrand tower on the Auckland skyline... It will... have higher ceilings than most office buildings completed in the 80s, at 2.7m... Royal SunAlliance, the seventh largest general insurer in the world after mopping up operations such as Lombard, Guardian Royal Exchange and Commercial Union in the past decade, has 350 Auckland staff spread around four city buildings. It will take six floors in the new building. Its existing Shortland St headquarters will be demolished toward the end of construction of the new tower to make way for a foyer area... In most eyes in the property industry, the 37,000sq m net lettable area... will leave room for only one more tower to be built in Auckland in the next five years, and that tower will need to be smaller... In the Auckland CBD... annual absorption had averaged 28,000 sq m a year since 1965[but with]... the number of people working in the CBD... [now rising at] just over 1[%] a year... the extra space requirement... at 15sq m a person... was only 12,000 sq m a year... Among the contenders for the other is... a 20,000sq m tower of about 29 levels... on the old *Auckland Star* site... A third Fort St proposition is the Imperial site[where]... a medium-rise tower of 26 to 30 levels and 28,500sq m has been planned... Then there is the... seven-storey Symphony Group building... [on] one city fringe... On the other city fringe, Quay Park's developers[recently] began looking for office building developers and tenants for the former rail land... If firms... choose to occupy single-tenant projects such as Symphony's and small office blocks on Quay Park, the contest for core downtown tower tenants must become even tougher... Even so, [the] Kiwi Income joint managing director... said yesterday projections done for the trust showed office tenants occupying more than 200,000sq m were due to renegotiate expiring leases or find new space in 1999 and 2000... Capitalisation will increase in significance in the new-verses-refurbished debate in tenants' offices. Compared with a cost of about \$390 a sq m for brand-new office space, some tenants may be convinced to stay put for another 12 years if they can get the right improvements and have their rent held around \$250 a sq m.

...Win-win-win, a nice combination but a rare one. That is the way the Kiwi Development Trust has been presented in the prospectus launch...

Kiwi Development Trust's prospectus to raise \$144 million for a new Auckland office tower was registered yesterday, with 35.7[%] of the 48 million units already taken... The building's cost has been put at \$195 million, with bank debt totalling \$51 million. Projected pre-tax internal rate of return is forecast at 19.9[%] of capital growth a year up to December 2000, based on net rentals of \$424 a square metre and annual parking fees of \$6017 a space... The prospectus shows net asset value of the units should be \$4.08 on building completion, giving the building a total value of \$247 million at a capitalisation rate of 7.5[%] in December 2000... [By the way,] Royal SunAlliance has cut its space requirement by 30[%] from its existing premises and... law firm R[MMB]... will take about 20[%] less. Law firms have been accustomed to having well above 20sq m for each employee, but [RMMB's employees] will get down to 16sq m a person in the new tower... Royal SunAlliance will get down to 13sq m a person by moving to full open plan. That is short of the performance in some of Sydney's new buildings, where the ratio is being brought down to 10sq m. But that sort of tight occupancy depends on new methods such as hotelling and hot-desking, which are less applicable to a major law firm.

...As AMP Investments prepares to launch a new listed property trust tomorrow, investors in unlisted property trusts have been warned they risk being left behind as the size of the listed market increases... AMP's... \$500m listed property trust... highlights how much property listings have become the flavour of the month, even after recent sharemarket turmoil... The AMP move follows last week's registration by Kiwi... of a prospectus for a \$145m trust... Early next year Trans Tasman Properties plans to raise \$300m towards a \$620m float of most of its existing N[Z] assets... Trade journal *Property Australia* recently tipped the listed property trust sector across the Tasman to double in size to \$33b by the turn of the century... In the US, the size of the listed property sector... already capitalised at \$160b, is expected to double over the next three to four years. [Meanwhile, 'more than a decade after work started on one of Sydney's most controversial CBD sites, a 10-storey-deep hole in the World Square block has been filled to ground level. When the \$500m World Tower development is finished in 2003, its 75 storeys will be home to 1,300 residents, and the tallest residential tower in the southern hemisphere (the tower will also be the city's third-tallest building, behind the 235m MLC Place and the 305m Centrepoint Tower.'

... 'An AUSn world swimming champion made a brief splash in Auckland yesterday when he flew in to drum up sales for the world's tallest apartment building – Sunland Group's proposed 80-storey Q1 tower on Queensland's Gold Coast. NZers have already bought about 18 apartments in the 323m tower.'

... 'Slow apartment sales and lack of interest in above-ground retail areas in Metropolis' – 'the tallest apartment and hotel building in the country' – 'has resulted in a cash crisis for its developer. Bondholders were due to have their \$21 million capital – plus 14% interest a year amounting to \$4.5 million – repaid last month. But the general manager for Trust Tower – acting for the bondholders – expects the new plan will better the first rescue package, which promised a combination of only 7% interest for the existing period and 5% for the next three years. For the second rescue plan to work, many of the remaining 44 Metropolis properties, valued at \$45 million, must be sold, freeing the capital to repay bondholders.' In related news, 'concrete from a Christchurch building site fell 10 floors on to the road and cars yesterday. Fortunately, no-one was hurt.'

...Pedestrians in... central Auckland... [are] in danger from glass falling from high-rise buildings because the code for installing windows is often ignored, according to glaziers... In the past year Woods Glass had surveyed 30 buildings with glass problems. All windows in seven of the buildings had been replaced... [T]he chief executive officer of window makers Thermosash Commercial... said [some]... companies did not understand the effects of wind on the buildings... He... said an incident on Tuesday in which glass from the MLC Building almost hit[a] pedestrian... could be repeated if the standard of window installation was not improved... "There's not a lot of supervision by the council. At the end of the day it's their responsibility and I don't believe they are taking the risk seriously." ...Following the MLC incident an Auckland City Council spokesman said the building would be checked if a complaint was received... The national director of the Building Owners and Managers Association... said... [c]hecks were made once a year but safety was essentially the responsibility of the... owners[who] had to meet the requirements of the Building Act.

...Just as the next generation of building technology is being touted for the office towers likely to start rising in downtown Auckland before the turn of the century, a troupe from [a lift manufacturer] arrived in town promoting something better. The Otis technology would integrate vertical and horizontal people movers, inside buildings and between them, in a system called Odyssey. Double-deck lift cars would travel in the same lift shaft and there is even a three-car shuffle, which would enable faster movement between levels in very tall buildings. The shuffle would require horizontal as well as vertical movement of a lift, with the passengers still inside. It would be automatic, driverless, quick... The double-decker idea, alone, can be a major space-saver... [T]he Petronas twin towers in Kuala Lumpur... [have] five large double-deck shuttle lifts... The amount of core space taken up for lifts in the World Trade Centre in New York was an example of the savings that could be made. There, the 50-person shuttles took up 24,500sq m of floorspace. "If double-decker lift cars had been used, they would have occupied 9000sq m. With Odyssey, we could have brought it down to 8000sq m." ...[a f]amed architect... planned the mile-high (1600m) building in the 50s but was beaten by lift technology... At 700m to 800m of travel, elevator ropes start to distort and fracture and the rope becomes the heaviest part of the system... The Odyssey system, by using both vertical and horizontal movement, gets over the rope-length problem but still uses ropes... "The next stage will be transistors which...

will be able to move under their own steam... It opens up a completely new dimension of designing buildings and complexes... Ropeless linear technology... has major problems and is still some way in the future,"... Otis has designed its "Transitor", the cab for vertical and horizontal transport, to enable people to commute from parking buildings to the top of "hyper" skyscrapers or to the end of sprawling "metroplexes", within large industrial and distribution centres, universities, hospitals, airports and [CBDs] – places with the density to justify it.

...[yesterday, 'a lift in a Beirut building site plunged 20 floors after its cables snapped, killing 12 Lebanese workers and injuring three others.' Incidentally, 'the world's tallest tower is to be built in Melbourne. The Victorian premier announced the Grollo tower concept had won the bid for the Batman's Hill precinct at the Dockland's site. The 560m tower, estimated to cost up to \$A1.5 billion, will include apartments, a luxury hotel and offices.'

... 'Plans to build the world's tallest building in Melbourne have been shelved. The tapering, 120-storey office and apartment block would have surpassed the Petronas Towers in Malaysia, which wrested the world's highest building title from Chicago's Sears Tower in 1996. "When it was clear that a fundamental financial condition would not be met, the development agreement was terminated," the Docklands Authority chief executive said yesterday'...

'In Taiwan two towers are planned, each of more than 100 storeys. Hong Kong is building 88-floor and 102-floor skyscrapers that will, in turn, become that city's tallest. Plans for the 94-floor Shanghai World Financial Centre are being revived after an impasse when the Chinese and the Japanese construction companies squabbled over design. Shanghai's tallest building at present is the 421m, 88-storey, Jin Mao Tower.' By the way, 'towers can cause "ghosting" on local residents' TVs. Japan's tallest building – the 800ft JRC Towers (that took seven years – at a cost of \$1m per day – to build) – had to undergo a multimillion-dollar redesign to change it from being square-shaped to circular-shaped to prevent TV ghosting. The redesign included not having metal or glass on walls facing the transmitter. The twin towers of New York's World Trade Centre were designed to withstand being hit by aeroplanes, but the design created a fire smoke trap for workers inside (the terrorist bombing earlier this decade knocked the emergency sprinkler system off-line')...

When fire broke out on the 14th floor of Shangri-la in Herne Bay this week, the Fire Service quickly brought it under control. The systems in place to protect the building worked well – this time. But the Fire Service fears the emergency could have ended in a death if the fire had broken out at night. The problem with apartments like Shangri-la, and up to 11 others built in Auckland before 1991, is that they are not fitted with sprinklers... "We asked them as forcibly as we could to put sprinklers in," said the district chief fire officer at Ponsonby... who was involved in discussions between the Fire Service and Shangri-la developers in the mid-80s. Before the Building Act 1991... high-rise residential apartments below 45.7m did not have to have sprinkler systems. That measurement was taken from the highest point on the ground to the highest occupied floor... Shangri-la[']s... developers... built up a piece of ground on one side of the block, which brought the 16-storey building under 45.7m. "I don't know whether they did that deliberately,"... Five years after Shangri-la was built the regulations were tightened, and the level at which apartment blocks must have a sprinkler system was lowered to include those above 34m. The level from which the measurement was taken... also changed, from the highest point on the ground to the lowest point. If Shangri-la was built today it would need sprinklers. Instead, the developers chose to install heat detectors, which set off an alarm at the Fire Service when activated. The Fire Service arrived within minutes and water was pumped up to the 14th floor through a specially built pipe, known as a "dry riser," quickly quelling the fire in the laundry and containing the damage to the one room... The area fire hazard manager... said the dozen or so high-rise apartment buildings in Auckland without sprinkler systems were an ongoing problem. Early fire detection was crucial because the upper floors were beyond the reach of the Fire Service's aerial appliances.

...[yesterday the] Auckland... assistant area chief fire officer[received] the keys to Parnell station's new turntable ladder appliance... which can reach up 10 storeys. The \$1.1 million weapon against high-rise fires was unveiled at the central station... [Yesterday also marked the start of 'a bid to save the country's only shot tower. A Mt Eden landmark for almost a century, the tower stands among the munitions factory buildings in Normandy Rd. The only other shot tower in Australasia is in Melbourne and has been preserved within a department store. The Mt Eden tower's owner, Chamko Holdings, a company associated with one of Auckland's wealthiest property companies, believes its location is now inappropriate and wants it demolished. However, the tower's strong historic classifications have forced Chamko to make an application for resource consent under the Resource Management Act 1991. In its application, Chamko claims it would cost \$300,000 to repair. Some of its structure is corroded, making it unsafe. The owners would be happy to see the tower moved to the Museum of Transport and Technology. But the Historic Places Trust, which describes the tower as being "of great historic significance," opposes any suggestions of shifting it out of Mt Eden. The Auckland area coordinator said the trust believes Auckland City Council could create a reserve around the tower. The trust is preparing a submission to the council, and the coordinator says it has received many letters and phone calls calling for the tower's retention. In the city's 1993 district plan, the council had given the tower the highest classification of a category A building but this was dropped to a B when its owners objected "on the grounds that the listing was inappropriate given its condition." Shot towers were common earlier this century. The process of making lead pellets for bullets was a true art, affected by the temperature outside, the skill and experience of the shot-maker and the quality of materials. The process started with 28kg bars of solid lead which were hauled from ground level 30m to the top of the tower via a lift, which is still visible today. The lead was put into a melting pot in the tiny corrugated iron shed, where it was left to reach a searing 480 deg C. The molten lead then flowed into what looked like a kitchen frying pan before it ran into a lower pan which had hundreds of tiny holes in its base. The lead then dropped to a deep water trough at ground level to break its fall and stop it from flattening out. A perfect ball shape, the shot was then cooled and polished with graphite in a revolving barrel where it was sorted until the finished product was a series of identical ball bearings. The Mt Eden tower, which was built in 1916 but closed in 1982, made the .303 shot used by soldiers during NZ's war efforts.']

...Auckland City Council has guaranteed itself a war with developers as they discover the potential impact of restraints under the new central plan... It received a roasting yesterday at a seminar on key issues, run by the Building Owners and Managers Association... [T]he new plan reduced the ratio of building floor area to the size of site from the existing 13:1 to 10:1 for most sites and 8:1 for some... Kiwi Development Trust has won consent for its... [building] under the existing district plan, but Trans Tasman Properties looked in possible trouble with its plans for a tower on the old Auckland Star site... Parking provisions under the new plan are far more restrictive, ranging from one to 120 sq m up to one to 240 sq m gross floor area, depending on the street, and reducing from two to one for dwelling units.

...The Auckland City Council proposes a 5[%] levy on development... which is 10 times higher than the present levy the council can apply to mitigate the effects of development... but it will not affect new downtown office blocks... that already... have permission to proceed under the existing central area plan. Developers... said the new Auckland levy was disappointing... "It adds another \$85 a sq m to a construction cost of about \$2000 a sq m of net rentable area." ...[one company developing a] new Auckland tower and the tower under construction on George St, Sydney... said the contrast was sharp between levies in the two cities. Sydney had brought back its 1[%] development levy, dropped after the 1980s boom, to upgrade the streetscape for the Olympics in 2000... The proposed plan is expected to take at least two years to bring in[, and]... will also have a wider selection of heritage structures – a schedule of 187 listings compared to about 50 now – which... would be... used to... encourage... developers... to retain buildings and other heritage features, gaining a bonus on their building in return. [■ A sharp-shooting reader sighted last Saturday's article about the shot tower in Mt Eden and said .303 shot was never made there but shot for shotguns was. Another phoned to say that a third shot tower is still in existence in Australasia. This is the brick shot tower in Hobart.]

... 'The Tower of Pisa has leaned since day one. Over the past 800 years, the lean had changed in direction and extent. Contrary to popular belief, the Leaning Tower has never been in danger of tipping over. However, it has long been on the verge of collapse due to the excessive stresses in its stonework. Efforts were made in 1935 to deal with excess water under the tower believed to be weakening the foundations. Workers drilled angled holes at the base with the intention of pumping in grout to provide a seal. The up-shot was a badly damaged foundation which caused the tower to decline at an even faster

rate. All bets were declared off until the Pisa Commission and its expert consultants rolled into town in 1990. Prudently, in 1992 the commission first had the stressed south side of the 2nd floor wrapped in plastic-coated steel wires. In 1993 any tilting was temporarily arrested by the stacking of 300 tonne lead ingots on the north side of the tower. These provide a counter to the south-directed load. In 1995 work on a full new underground foundation began – until it almost caused the tower to collapse for good. No one had realised that plates had been added to the foundations in 1838. These were effectively supporting the tower. The 1995 work cracked these plates and the tower now slowly and steadily started a relentless fall to the south. Immediately a further mass of emergency lead was piled on the north side and, for a moment, disaster was averted. In 1998 soil extraction will be attempted – very cautiously. Every 100 years or so soil will be taken from beneath the tower, something soil mechanists believe could keep matters hunky-dory for at least the next 300 years.']

...In China's headlong rush to develop, first in its fanatical left-wing past and then in the get-rich-quick days of reform, it has hacked or bulldozed away much of its architectural heritage. Graceful old courtyards of Beijing have fallen victim to the... onslaught in recent years, crumbling alongside one of the earliest casualties – the once majestic Beijing city wall. Built to ward off invaders centuries ago, the wall was unable to withstand the inroads of its own people bent on discarding what was considered out of date. But China's capital is trying to make amends for some of its past excesses by restoring a small portion of the wall that[once] encircled the city... Residents of Beijing have been answering a public call to return city-wall bricks to help rebuild a small section of the structure... Now some 30,000 donated old-wall bricks sit stacked in a city lot. Workers chip off hardened soil, revealing the names of Ming dynasty kilns (1368-1644 A.D.) where the bricks were fired. "As a child I remember helping take down part of the wall," said... [a worker for] the Beijing Historical Relics Construction Co of the municipal government... "Now I have a chance to put some of the wall back together." The wall, in some places 12m tall and 16m wide, was built largely in the Ming dynasty, although some parts dated back to the Yuan dynasty (1279-1368 A.D.), a period of Mongol rule. Large chunks of the wall were pulled down in the 1950s when Beijing's communist leaders created Tiananmen Square. More was torn down in the 1960s and 1970s for the construction of one of the city's main roads and for the subway... In more recent years, soaring real estate values led to the wholesale clearing of buildings to make way for office towers. One such project demolished homes that had been built up against the wall. Their outline is still visible on the section being restored.

...A Hong Kong investor has gone against the Asia jitters and bought two central Auckland buildings for \$20.2 million. The two sales were... the Vulcan Building, on the corner of Queen St and Vulcan Lane, sold by Kiwi Income Property Trust at its \$10 million book value, and the former Grand Slam building on the Strand... Kiwi Income acquired the Vulcan Building and six other buildings when it bought the N[Z] Land portfolio in 1994. The 70-year-old, seven-storey building was refurbished in 1989...

Architects say a proposal to knock down... the only 1930s building left in Queen St... [at] the corner of Vulcan Lane... to create a small park is stupid... The property has a net rental of \$264,000 a year... As part of its[new] district plan, the Auckland City Council wants to buy the five-storey... [building] and demolish it to create an open space [– even though Vulcan Lane, being a pedestrian mall, already serves this purpose!] ...The chairwoman of the Auckland branch... [of the] Institute of Architects... said a park would be a waste of money because neighbouring buildings would make it dark and gloomy... [However, t]he... acting chairman of the harbour edge committee, said demolishing the building would open up views of the Occidental Hotel, which has a category one listing because of its historical value.

...The 70s are becoming hip with heritage fans. Flares have long remained street-cred. Now the establishment seems to have caught on and has begun venerating icons of that decade. Thus, the Students Union Association building at Auckland University, completed in 1973, has found its way into the Auckland City Council's new district plan for the central city... The reinforced concrete building – birthplace of many a student protest about fees... and other causes – ...gained category B protection, along with 131 other heritage buildings or sites. Developers need resource consent from the council to knock down category B buildings and the council has flagged that they would need to mount a strong case. There are also 55 category A items – 51 buildings, [2] parks, one cemetery and a chimney. Demolishing buildings on this list is prohibited... Queen St has [8] category A buildings and 26 Bs... Other changes in the plan include... [p]rotection for 541 trees (up from [7] in the existing plan) and 14 Maori heritage sites. The... new plan legally stands alongside the old one for the next two-or-so years until after public submissions, council hearings and court appeals.

...Preservation of this country's cultural heritage depends on a political awakening, sa[id] a senior Historic Places Trust official... [in response to] consulting engineers... describ[ing] the trust as a toothless tiger strapped for cash... [T]he manager of heritage conservation for the trust, told a heritage seminar that the issue was an example of the conflict between the community good and private property rights. While the general public wanted to preserve heritage buildings, it was the owners who carried the burden of cost... Nineteen local authorities throughout the country had established heritage funds to encourage preservation but the amounts were pitiful. The seminar organised by the Resource Management Law Association looked at how to assess the real cost of heritage and what should be saved... Traditionally, property owners had no interest in heritage but they were now starting to value such buildings. However, incentives... such as rates relief... were poor.

...Too many of this country's heritage buildings and sites have been lost because[the] Historic Places Trust's attempts to get owners on side have lacked... incentives... [The trust is] still waiting for the \$500,000 incentive funds for private owners promised by the P[M]... before the election but not included in the latest budget... We are losing our heritage at a disturbing rate. Central Auckland and Wellington alone are estimated to have lost more than 80 registered historic buildings in the past 10 to 15 years... But it is money not sentiment that talks and saving our heritage usually gets back to financial concerns.

...Challenge Properties is pushing for the rezoning of its valuable harbour site overlooking the America's Cup village to allow buildings up to seven storeys... The application has surprised the... Auckland City Council... as it follows months of negotiations with Challenge and other companies over the council's own rezoning of the area and its acquisition of the properties needed... for public spaces around the Viaduct Basin. The harbour edge committee will rule on the application on Thursday. If it is turned down, Challenge Properties... can appeal to the Environment Court. The 3384 sq m leasehold site... is[currently] used for marine businesses and car parking. The council wants the site for its planned Waitemata Plaza, the hub of a network of public promenades designed to help convert the rundown area to a "people place." Concerts and other big events, such as next year's Whitbread [round-the-world-]yacht-race welcome, would be held there. The council aims to spend almost \$50 million on the scheme, including buying and developing the public spaces and fixing seawalls. About half would come from levies paid by developers... Challenge representatives could not be contacted last night.

...[Challenge] Construction has chopped \$8 million off the estimated... cost of Kiwi Development Trust's Royal SunAlliance Centre project... The savings had come from "a lot of small numbers, not a particular trade,"... [the] directors of the trust's management company... said. "[Challenge] are saying the worst position is a construction cost of \$126 million, but there are some innovative ideas which should deliver further savings." ...More importantly from a tenancy perspective, the office tower's completion date has been brought forward three and a half months... Earlier completion will take the tower closer to the peak of Auckland [CBD] lease expiries, in 1999, improving its leasing opportunities significantly.

...Kiwi Development Trust's bid to raise \$144 million to build this country's tallest[office] building has made a dismal start with subscriptions falling 23.8[%] short. ...[the Environment Court's] decision to adjourn the Britomart resource consent hearing indefinitely takes the... 11 building... project out of a crucial high-rise office time slot... The uncertainty will cause some office tenants to decide to stay where they are, while space vacated by tenants

moving to... other new towers[, such as the one being]... built by Kiwi Development Trust... will come on the market to compete with... Britomart... None of this is good news for Pacific Capital[, which]... has bought back 22.9 million shares at 40c, a 10c discount to issue. Unless... Britomart agreements can be rolled over and renegotiated, remaining public shareholders in Pacific Capital will be looking closely at their option to get their 50c back on June 30 next year, when the Britomart master development agreement needs to have become unconditional... [By the way, m]ore shareholders are attending annual meetings now than five years ago, and most are knowledgeable about the companies. Yet senior executives are divided on how useful the traditional gatherings are for keeping in touch with shareholders... Fewer than 10[%]... of the executives... considered shareholder knowledge poor.

...Over the past decade, [US] companies have tried hard to find ways to discourage senior managers from feathering their nests at the expense of shareholders. The... most popular measures have been recruiting more outside directors in order to make boards more independent, linking bosses' pay to various performance measures, and giving bosses share options. These reforms have been widely adopted by the U[S]'s larger companies. But have they done any good? Three papers presented to nearly 5000 management theorists at the annual meeting of the Academy of Management in Boston recently suggest not. As is usually the case with boardroom tinkering, the consequences have differed from those intended. Start with those independent boards. On the face of it, evicting the boss's cronies and replacing them with outsiders looks like a perfect way to make senior managers more accountable. But... bosses with a boardroom full of outsiders spend much of their time building coalitions, doing personal favours and generally ingratiating themselves with the outsiders. All too often, these seductions succeed... [A] professor at the University of Texas, based on a survey he conducted... found that, to a remarkable degree, "independent" boards pursued strategies that were favourable to senior managers rather than shareholders. They diversified their businesses (a policy normally associated with managerial empire-building), increased the pay of executives and weakened the link between pay and performance... The big discovery was that bosses attended to measures that affected their own incomes and ignored or played down other factors that determined the company's overall success. Instead of aligning the interests of bosses and shareholders, "performance-related" pay frequently promoted opportunism and tunnel-vision. Such findings are not new. They are the main reason that share options have become the most popular way of linking pay to performance. By aligning an executive's pay with the firm's share price, options reduce the scope for playing games. But not entirely, it seems... [A] professor at Brigham Young University... found that one effect of giving bosses a significant portion of their pay in share options was to stimulate acquisitions and divestitures. Bosses relish such "symbolic churning," as [he] dubs it, because it gives the impression that they are strong leaders, vigorously reshaping their companies. Hyperactivity is further encouraged by the fact that bosses lose nothing on their share options when share prices fall, but stand to make virtually unlimited gains if they rise. In short, bosses are quick to turn every imaginable system of corporate government to their advantage. But there is a paradox for the management theorists: any boss who cannot outmanoeuvre a system designed to keep him under control is probably not worth having... [Incidentally,] Coca-Cola's Roberto Goizueta has added his name to the list of CEOs who must battle cancer while heading some of America's best-known companies... The C-word evokes horrific images of death and incapacitation, even though these days many cancer victims survive and are able to come to the office every day throughout treatment. Still, disclosure of a CEO's life-threatening illness can devastate stocks and force re-evaluation of succession plans. The challenge for companies is to balance a CEO's desire for privacy with the fears of employees and investors that the company will be left rudderless... "There's an immediate feeling of fear and insecurity about what the illness could mean to ...a... worker's... future and stability..." said... [the] social service director for Cancer Care, a non-profit education and outreach organisation... Coca-Cola's handling so far of Mr Goizueta's illness demonstrates that a well-timed disclosure of the top boss' illness can allow the news to sink in without causing undue corporate damage. It made its announcement on a Monday, after the market closed, and after Mr Goizueta personally called each board member and internal announcements were made to employees. Coca-Cola's stock took a minor dip shortly after the market opened the next day, but analysts dismissed it as only an emotional reaction to news of Mr Goizueta's illness. But there was every reason for the stock price to rumble. Though the company said the tumor was isolated, Mr Goizueta is considered a critical reason for Coca-Cola's soaring success... [H]e is revered in business circles as the brilliant tactician who won the ballyhooed "cola wars". Though now 65, Mr Goizueta said he planned to work indefinitely. And Coca-Cola said he would remain in control while he underwent therapy. By disclosing the news early, Coke was a "textbook example" of how to let investors and employees know of a CEO's illness, said... a vice-president at[an] executive search firm... in Atlanta. "If it's done properly, it should almost be a non-event." But not always. When... an apartment house developer based in Georgia, announced last October CEO Peter Knox had colon cancer, the stock price dipped slightly to about \$18 a share. But in the transition after Mr Knox's December death, the price bounced back to \$22.25. "It was a fairly rapid demise," said [the company's] president... who took on the CEO role after the death while Mr Knox's brother... became chairman. The transition was fairly smooth, however, because the top executives had operated by consensus. Cancer – unlike heart attacks and car accidents – gives even fatally stricken executives time to pass on their responsibilities and say their goodbyes. Donald Karcher worked as president of the Carl's Jr hamburger chain in Anaheim, California, until the days before his death from lung cancer in 1992. He stayed at his desk even when he had to keep an oxygen tank at his side. "He was so dedicated to the company and loved his work," said his brother[, who was] the company's founder and former chairman. Gradually, Don spun off duties to his brother, who became president and chairman again after the death. Mr Goizueta is one of the estimated 1.4 million Americans who will be diagnosed with some form of cancer this year, said the American Cancer Society.

...Coca-Cola[']s chairman and chief executive officer Roberto C. Goizueta, one of the U[S]'s most respected corporate executives, has died from complications from lung cancer. He was 65... After becoming [CEO] in 1981, Mr Goizueta was credited with transforming the culture of Coca-Cola, once a genteel Southern institution that was slow to react to challenges. When he arrived, the company dabbled in everything from shrimp farms to wine. Now, it focuses solely on making the concentrate and the advertisements for soft drinks... Mr Goizueta built the company's market capitalisation to more than \$150 billion from \$5 billion in 16 years... Coke's shares have multiplied in value nearly 40 times... Mr Goizueta is expected to be succeeded by[his] protegee... who was named president in July 1994. "The transition should be seamless," said... a[n] analyst...

'Coca-Cola's chairman and CEO has walked away with a golden handshake worth at least \$NZ62.67 million. The former president whose tenure in the top Coca-Cola job coincided with a rocky period in the company's history, would pocket three annual payments of \$3.1m and \$177,000 every month through to the end of his and his wife's life, Coca-Cola said in a statement. The 52-year-old, whose salary was about \$2.7m a year, was also awarded 335,000 Coca-Cola shares. Coca-Cola said the package was reward for "long and loyal service." But as CEO he oversaw an embarrassing contamination scare in Europe, a racial-discrimination lawsuit in the US and a failed takeover of France's Orangina drinks brand. He was criticised for failing to quickly deal with the crisis. Coca-Cola continues to struggle with a massive restructuring, including laying off more than 6000 staff – 20% of its workforce.'

...Even successful companies can run into bother when it comes to replacing CEOs. Having someone in mind beforehand can avoid problems... This is more urgent than ever. A freak of demography means that an unusually large number of CEOs of U[S] firms are preparing to retire in the next few years. In addition, more boards are being pushed into firing the boss by increasingly active institutional investors. A recent Harvard Business School study found that CEOs of big American firms are now 10 times more likely to be fired for bad performance than they were 20 years ago... Not surprisingly, firms in trouble are much more likely to look for fresh blood. When the business is running smoothly, directors are more than happy to pick an experienced insider to continue along the same path... As might be expected, firms which replaced the CEO with an insider tended to show little change in performance, even if the CEO had been fired... [H]owever... outsiders replacing a chief executive who had been fired tended to improve their firms' performance, [while] most of those who took over from CEOs retiring for normal reasons failed

miserably – even after allowing for the possibility that firms which fired their CEOs were already struggling. The study's calculations provide concrete evidence of something that many directors have long suspected: in the absence of a crisis, it is hard to recruit an outsider without infuriating managers who have been passed over. And without support from the insiders, the new CEO is usually a flop.

...[the small NZ economy means career paths are restricted. Thus, we may be short of executives and technicians with the necessary education and experience. Perhaps the greatest single weakness, though, lies in boardrooms, particularly among outside directors. They are meant to bring additional skills to the table and, crucially, challenge management to examine issues every which way. Yet, NZ companies draw their directors from a remarkably small pool. It's the norm for one moderately competent person to sit on many boards (one top company director is on 97 boards). Not only are meagre skills stretched but conflicts of interest can arise. Globalisation of business means more NZ companies have to work to the highest international standards. But when it comes to corporate governance, NZ is well off the international pace.' "When I left school going into business was the bottom end of the totem pole in terms of career aspirations. The bright ones were doctors, the next bright were lawyers, the dummies were accountants and those who had no hope whatsoever went into business," says NZ's richest businessperson (r:p379, ln32) – who made his wealth by turning water into drunks, and 'believes in God but not utopia'...

□ 87: Percentage of AUSn executives who daydream during meetings.']

...MOST listed A[US]n and British companies fail to deliver adequate returns to shareholders, and there's no reason to suspect N[Z] companies aren't equally at fault... In Britain more than half of the top 400 listed companies earned less than the market's expected return. And more than two-thirds of A[US]n listed companies deliver equally poor returns... [I]n only three of 15 industry groups were A[US]n companies delivering shareholders decent average returns – chemicals, development and construction and banking... What was clear was that the companies' top management needed to perform and turn their companies around before it was too late... Simply paying them more didn't produce the results... [S]tudies showed paying above-average salaries had proved self-defeating in Britain, drawing companies into a vicious money spiral. If every firm tried to offer above-average salaries, the average salary rose. Next year, each firm must offer more to pay above the market average. By definition, if most companies sought to pay above-average salaries, they would fail because most companies could not, by definition, be above average. Instead, the key was to balance the remuneration package to provide the right incentives. Companies that paid below average bonuses tended to have poorer long term results for shareholders. For those companies which offered high bonuses, paying above average salaries resulted in no increase in performance. A better approach... was to pay the boss less than the market average but to offer them incentives, [such as] shares in the company...

The chief executive of the AMP Society... A[US]'s largest financial institution... has defended his salary package... [He] could receive 1 million shares worth up to \$10 million by... the year... 2000 depending on the company's performance, on top of his present salary of about \$2.46 million. He said the salary package was justified because a large part of the 1 million shares would be earned by the company's achieving certain targets...

When salary and bonus were the primary source of CEO compensation, they made 30 or 40 times what the average employee made. But with massive stock options, which regular employees don't get, the differential has grown enormously, to 150 or 200 times. - 1997

As a general rule: the more money a CEO has to control, the more money it will earn. This rule seems to confirm that, nowadays, in the eyes of most people – or, at least, most shareholders – the art of making money is considered the most valuable talent a human can have!

[A NZ]er... has emerged as Britain's highest paid executive through a £3.8 million... salary and bonus package with British Sky Broadcasting... [The former] managing director of [an AUSn media mogul]'s Nine television network from 1976 to 1990, has been chief executive of BSkyB, formerly Sky television, since 1990. The former farm worker has watched the pay television company grow from a £20 million-a-week loser five years ago to a huge success within [an AUSn media tycoon]'s News Corporation. A BSkyB spokesman said [the CEO]'s actual salary was just over £288,000 with the remainder made up of performance-related bonuses.

...A DEBATE in A[US] last week about the level of pay for chief executives there following revelations that... Coles Myer[']s CEO received \$NZ3.3 million produced... [a table which indexes CEO] salaries in A[US] at 100, and compares salaries in other countries to that... U[S]... 173... Germany... 146... Singapore... 143... Japan... 141... France... 130... Hong Kong... 119... Britain... 113... Canada... 101... South Africa... 89... N[Z]... 70... On the same subject, we can understand political support for a law that requires executive salaries to be disclosed.

...Up to half of the payment to B[IL]'s executives was incentive-based, the company said yesterday as it disclosed that four of those executives earned more than \$1 million a year... The disclosure, in B[IL]'s 1996 annual report, that the chief executive... was paid \$1,437,270, was expected. But more surprising was the revelation that the Asian operations head... was paid \$1,247,490, while his British counterpart... received \$1,156,462, and the head of the Thistle Hotels chain... [was paid] \$1,014,721... Their remuneration was... justified... [because], in the past year, shareholders received a gross return of 33[%] through the combination of a 22[%] increase in share price and the payment of 9c a share in dividends, a BIL spokesman... said. The... BIL quartet joins Telecom's [chief executive]... in the million-dollar club. The former chief executive of C[HH]... also stood to receive about \$1.5 million in the 1996[financial] year, but he returned to the parent company, International Paper, before the year was up. The disclosures of executive pay are required under the new Companies Act.

...The Business Roundtable has defended the salaries of executives, saying people think... models and opera singers deserve high pay but industry leaders do not. The executive director of the Roundtable... told a National Party... meeting last night that many "in the chattering classes" were "particularly allergic to the idea of high rewards to top people in business. Ours is a curiously selective type of censoriousness. It hardly ever applies to... golfers, television personalities and others who earn high incomes, many of whom were born with unusual natural gifts which may in some sense have been undeserved. Yet the school of resentment certainly lets its views be known about remuneration in private business and about top earners in the public sector." ...[he] said that, in all cases, high rewards to outstanding performers reflected the value of the job they did. "Our top business executives do jobs that are among the most difficult and demanding in the country and in a highly competitive environment." He said companies undertook huge investments and made decisions affecting thousands of jobs... [He ignored the fact that the PM]'s salary of \$185,000 puts him at the bottom (save one) of chief executive salaries revealed so far[, and instead]... cited the recent example of publicity given to the chief executive of Telecom[']s... salary "as if it could possibly be major news that [this person] is paid a lot of money." ...A... survey estimates that three N[Z] executives earn more than \$1 million with 10 earning between \$500,000 and \$1 million.

...[another person] has confirmed his membership of the select group of executives being paid more than a million dollars a year. As chief executive of the \$13.3 billion forestry, energy and building giant... Challenge... he received \$1.08 million in salary and incentive payments... - 1996

The... Challenge... 1996 annual report revealed that it had no fewer than 2301 employees paid more than \$100,000 a year... At the top of the pyramid, the CEO... received \$1 million in salary and bonuses not, I suggest, because he is in charge of 23,000 workers, but because he is in charge of four – the four senior managers just below him in the hierarchy over whom the chief must of course be paid a decent premium.

...Challenge[']s chairman... has been reappointed a Reserve Bank non-executive director... [The] chartered accountant, is[also] chairman of Fernz Corporation and Guardian Trust and a director of BOP Fertiliser... [In related news, d]irectors of some crown health enterprises and state-owned enterprises are complaining of being overworked and underpaid and want the taxpayer to increase their fees to levels enjoyed in the private

sector. A little-known group of officials, the crown company monitoring advisory unit, has undertaken the first review of directors' fees since 1991, but refused yesterday to release the results of a survey comparing public and private sector fees. It is due to report to the Government next month... A typical crown director is[annually] paid anything from a few thousand dollars for an average two and a half days' work each month... [– providing leadership, monitoring] the chief executive and be[ing] collectively responsible for the company... [–] to \$25,000 for the largest [SOE], the Electricity Corporation. By comparison, Auckland merchant banker... [Mr R (r:p379, ln15)] was paid \$25,000 in 1995 as a director of TranzRail, a publicly listed company considerably smaller than the Electricity Corp... In 1996 his fee increased more than 500[%] to \$132,000. Other directors of publicly listed companies receive more modest payments, although generally they are still better paid than crown directors. The non-executive directors of B[IL] are each paid \$50,000, the Natural Gas Corporation pays its directors \$25,000 each and \$35,000 for the chairman, while Colonial Motors – a small publicly listed company – pays directors \$8850 and the chairman \$22,859... “Basically you are getting professional people at very, very cheap rates,”... said... [t]he... advisory unit director of appointments and governance... “If you dragged in consultants it would cost an arm and a leg to do the same thing.”

...Non-executive chairmen... and directors of N[Z] companies... earn between 15-25[%] less than the average \$A84,000... of their A[US]n counterparts after adjusting for exchange rates. Non-executive directors earn between 25-33[%] less than the \$A37,000 benchmark in A[US]. The relative pay position of N[Z]ers improves however if they are in the hot seat. Chief executives of publicly listed companies here receive on average “about 90[%] of the A[US]n benchmark,”... Best off, relatively speaking, are chief executives of N[Z] SOEs. Their packages are typically worth 50[%] more than their A[US]n counterparts... No less than 75[%] of N[Z] boards pursued a formal process of evaluating the CEO's performance compared with just 61[%] across the Tasman... Just [6%] of directors are female. However, only [1%] of women in A[US] had gained executive director status. In N[Z] among the surveyed companies, none made it to executive directorships... On both sides of the Tasman, there's a serious absence of foreign nationals among directors. In fact, hardly any companies appointed foreigners... [56%] of directors on N[Z] boards were under 55 compared with 47[%] in AUS... Last year just 36[%] of AUSn companies received “adverse media attention” compared with 61[%] here.

...DIRECTORS in N[Z] see themselves as the Cinderellas of the corporate landscape compared with fees internationally. This despite a... directors fee survey released this month that shows an average annualised increase of 11.3%. Yet a third of 1199 N[Z] directors surveyed believe they remain overworked and under paid... Almost two-thirds... of the companies surveyed this year paid for or reimbursed their directors for liability insurance coverage, up from 68% of companies surveyed three years ago. In the past 12 months, the average amount of liability insurance coverage increased from \$15.5m to \$20.9m. According to... [the] survey manager... the increase reflected the growing myriad of laws which now held directors directly accountable for their actions. A growing number of directors were seriously considering whether the rewards still outweighed the risks. [The c]hief executive of the N[Z] Institute of Directors... said even though the institute membership was growing 25% annually, the risk/reward ratio meant the pool of capable directors was diminishing. The downstream effect would see lost corporate governance within N[Z] business... “The average hourly rate for non-executive directors is \$160, whereas the hourly rate for an accountant from the top six firms is more than \$500 per hour... So where's the encouragement to take up directorship?” The... average fee paid to non-executive chairpersons was \$30,832, while non-executive directors received \$20,231... “While most non-executive directors are independent board members who help make strategic decisions affecting shareholders, some directors who find themselves on boards due to a shareholding may, in practice, offer little value,” said... an Auckland-based remuneration consultant... [The consultant added that the survey] results needed to be interpreted with caution. There was a danger in comparing the fees of... non-executive directors, who were typically recognised as the cream of N[Z] business... with fees paid to executive directors, gainfully employed by a company.

...If your board doesn't count among its directors a retired general or at least some former top brass from the armed forces, its probably missing something. That is the view of... [the] retiring chief executive of the Institute of Directors (and a former professional soldier with 22 years experience in the N[Z] Army). He laments the peculiar absence of ex-military people on N[Z] boards. You can see his point. In Britain and many countries, companies set considerable store on the expertise that military training can bring to a company's direction... “In the eyes of many[N[Z] business people, a general is somebody who is trained to shove bayonets down people's throats, which does not exactly equate to what they do in reality,” he suggests... But it's not just generals, rear-admirals and wing commanders who are... missing from N[Z] corporate life – it's also mandarins... Absent generals and mandarins aside, the institute's outgoing chief executive leaves with a sense of a job well done after 11 years masterminding the revival of what was a virtually irrelevant and cobwebbed institution. The institution's courses for directors now receive international recognition and attract directors from overseas to learn about governance, law, accounting, strategy, planning, human resources, marketing, capital formation and other essential directorial skills. These days, the standard of N[Z] boards is as high or higher than practically any other country in the world, [he] insists. Indeed, he compares American boards unfavourably with our own, in particular... their failure to separate power at the top, such as in their habit of combining the president and chief executive's job. He's pleased at the increase in women members to about 9[%] of the total. Likewise, Maori members have gone from zero to [5%]... Revenues did even better, up 33 times... As the retiring chief executive is the first to admit however, the fortunes of the institute could only go up in 1986. Elevated from Wellington branch secretary, he was expected to resurrect a moribund organisation on two hours a week. Now it's practically a full-time job... [T]he Government routinely seeks the institute's help in finding chief executives for corporatised government departments... His predecessor was in his 70s and the institute's main – indeed sole – preoccupation was to lobby Government in its own interests. It was, in fact, a club. One did not actually apply to be a member of the Institute of Directors; one was invited... [T]he standard method of recruitment was to go through the membership list of posh business clubs. Nor were N[Z]'s directors exactly representative of the shareholders... in those days... As a specialist on corporate governance, it's only to be expected that he has strong views on the composition and modus operandi of boards... A powerful major shareholder should not be in a position to call the shots... Seven to nine directors is ideal, but even five is alright... Effective boards contain a mix of skills... And every board should include an “argumentative bastard” who isn't afraid to take on accepted wisdom and is not... afraid to ask what might seem dumb questions... An “assenting” board of yesmen lays the foundation for uncontested decisions.

...A new “how to” guide for company directors will remove the need to learn by trial and error, the A[US]n Institute of Company Directors says... [By the way, i]t is 10 years almost to the day since [a young man] destroyed his family inheritance by bidding \$A2.1 billion for the company which would be his anyway... That single act of stupidity set in train a remarkable tussle for control of the... media group... company which continues unabated today. Doubtless it will do so for many years to come. [The young man], of course, went broke and receivers were appointed. That was not before he went through two different groups of management and sacked them both. The head receiver, too, got his marching orders after he meddled in the editorial coverage of a lawsuit about his firm's responsibility for losses suffered by electronics company AWA. By 1990, moves were made to refloat Fairfax, and [a]rival media mogul [(r:p604, ln36)] was the front runner. His family – which had owned Sydney's *Daily Telegraph* – and the Fairfax's had been bitter opponents for many years. The Fairfax's had a lofty station in society, while the [mogul's family] were looked down upon as owners of the tabloid press. [The mogul] saw it as his chance to put things right... [and] get the last laugh by grabbing ownership... of [the company that the Fairfax family had controlled for] 149 years... But he... pulled out when a parliamentary inquiry threatened to unveil information he wanted kept private. That left the running to [a]Canadian media man... who won a tender to float the company. But, last year, he too sold because of countless knockbacks by the Federal Government for his plans to cement control. Out of the blue, in came [BIL] to buy part of [the Canadian's] shareholding and to challenge [the mogul] who had quietly bought a 15[%] stake. But the Kiwis too were not welcomed

when shareholders rejected an attempt to lift their stake to 25[%]. You get the picture. The facts about Fairfax are bigger than *Ben Hur*, *Gone With the Wind* and *Days of Our Lives* all rolled into one. As a long-serving employee... it is nice to feel that so many powerful people want to fight over us. If only. The real attraction is the so-called “rivers of gold” – the cashflows generated from the lengthy classified advertising columns run in the *Sydney Morning Herald* and the *Age* newspapers... The barriers which so far have stopped anyone winning these riches are widespread beliefs that the media already is controlled by too few people, and that foreigners should be kept out because they threaten A[US]n culture (such as it is).

...Five [BIL] employees are in the millionaire’s corner – one more than last year. There is also another million-dollar salary noted in the 1997 annual report for [a former BIL] director... whose salary was \$1,214,506. He retired as a director in September last year. The bulk of his remuneration was from his job as chief executive of... Thistle Hotels.

...In reporting... an otherwise satisfactory trading performance... [of] a flat \$311.34 million after-tax profit, B[IL]’s chief executive... expressed disbelief[that] the share price of Thistle, the British hotel chain which is BIL’s largest asset... has slumped to a record low... The share price of Thistle, in which BIL has a 46[%] stake, has fallen 17.5[%] to 125p since earlier this week reporting a 58[%] jump in pre-tax profit for the six months to July of £38.1 million, a weaker-than-expected result... Executives of [BIL] must be wishing they had exited Thistle... when it was relisted on the British sharemarket last year at 170p a share... With every 10p movement in the Thistle price roughly equalling a 2.5c a share change in the [BIL] price, there was the double-whammy of watching the BIL price slump too. [BIL’s] logic for keeping the asset was to cash in on further upside in the British hotel market. It might also have hoped to get back at its critics who have incessantly slated [BIL] for having made the blunder in buying the asset six years ago... Rubbing salt in the wound is the performance of Guinness Peat Group, which is run by [BIL’s] ousted founder... GPG consistently trades at a premium to its asset backing, not least because of the market’s faith in [its leader] and his team to do deals. Part of the secret to GPG’s success is its relatively small size, which enables it to do meaningful deals. This is where BIL falls down. To do anything worthwhile it needs to invest \$500 million. While [BIL’s] size masks mistakes like its \$100 million investment in the A[US]n retail group Vox, it also swamps its successes like the \$52 million profit it made from a quick foray into... the N[Z] *Herald*. Having Thistle on board also means management is not given any credit for some of its better investments such as Sky City... and James Hardie, in which it has a 28% stake. However, the BIL chairman has... dismissed any suggestion the \$577 million, 23[%] investment in the A[US]n publisher... Fairfax Holdings was bought as a quick flick. “We intend to remain a shareholder long-term. We will pursue any avenues open to us to significantly increase our Fairfax shareholding.” [‘The total value of BIL’s assets as at June 30, 1997, was \$6193m – less net debt (including minorities) of \$2453m.’ Editor’s note: after its ‘debt had risen by another \$1 billion and the company had made a \$1.19 billion asset write down, causing BIL to fall foul of its bankers and its chairman’ – r:p212, ln63 – to ‘tender his resignation, the once-feared predator, whose shares were down to 36c, became the quarry of a Californian-based investment firm with ties to the Disney empire.’]

...The Disney chief executive... is poised to become one of the most richly rewarded employees in the history of American business thanks to a new 10-year pay package worth nearly \$US771 million... [In addition, t]he former Disney president... has received a severance package worth nearly \$100 million... which consists of \$36.9 million in cash and stock options valued at \$54 million... A small group of Disney stockholders, the Washington-based Council of Institutional Investors... have voiced displeasure with [the former president’s] severance package... and... is set to protest at the [chief executive’s compensation package. ■ The ‘highest paid employee in the world this year received a salary and bonus totalling \$415 million’...

NZers, who have a bit of a problem about highly paid chief executives, will doubtless begrudge Telecom’s [chief executive] his \$1.5 million salary reported yesterday... “Nobody’s worth that much!”, a sixty-ish woman remarked in the supermarket last year at the news that... [h]e earned a mere \$1.2 million... Mark Twain sums it up: “Few of us can stand prosperity. Another man’s, I mean.” ...Now that the Telecom chief executive’s income has shot up by an extra \$5769 a week, the chorus of complaints will no doubt double, especially because Telecom’s profit fell. Clearly, [Telecom’s chief executive] has benefited from the market economy he once toasted at a black-tie dinner and which he feared had become “an extinct species.” But before we all get an attack of the envies, a few points should be made. First, [his]... bonus salary this year is based on the prior year’s improved profits and presumably it will fall next year... Second, [while]... there may be better executives around, working for themselves or for smaller companies that can’t pay them what they are worth, [Telecom’s chief executive] probably is “worth that much.” ...by overseas standards \$1.5 million is about par for the course for roughly similar telecommunications companies[– although] Ameritech’s CEO earns more than \$US3 million... BellSouth’s \$US2.27 million... and Bell Atlantic’s \$US1.2 million... Third... we’d better get used to escalating salaries for chief executives because they are rising all the time toward international levels, especially performance-based packages... Telecom’s rival, Clear Communications, is offering top money for its next chief executive in an international search.

...Twenty people were interviewed for the \$1 million-a-year top job at... Challenge. According to the group’s chairman... 12 of the candidates head-hunted were from overseas. However, he pointed to some difficulty in luring them here. “We found that many of these overseas people were extremely well paid. They are leading a very comfortable life,”... Others were reluctant to come to N[Z] because it was a small place and off the beaten track. Some, however, were interested in the job almost in an intellectual sense because of the letter stocks – it was different and it was a challenge. The applicants were either chief executives or the number two at their present positions... There were three applicants from inside... Challenge. • ...the chief executive of Steel and Tube Holdings, took a... pay cut... [of] \$6728 or 1.8[%] less than the \$370,000 he earned in the 1996 financial year. The cut comes as a result of a fall in Steel and Tube’s net earnings from \$25.3 million in 1996 to \$19.59 million in 1997. Approval is being sought at next month’s annual meeting to allot 80,000 shares valued at \$3.60 a share ex bonus to [the CEO] on a deposit of 1c each.

...Executive pay is still increasing, but more slowly than last year. The reason? The weakening economy, according to Hay Management Consultants latest executive compensation report. Fixed remuneration has risen by between 5 and 6.5[%] so far this year, which is down by 1 to 1.5[%] on last year... The overall lesson from the survey is that [executive]s need to take a hard look at their current pay systems to ensure they match an increasingly turbulent future... and... that they link pay and performance...

Chief executives should not get pay rises of 10 to 15[%] when many companies were under-performing, says Labour’s employment spokesman... He said... [m]ost chief executives received their pay increases for little more than sacking people.

...[‘An American CEO who sent his staff an e-mail accusing them of being lazy and threatening them with the sack has seen the share price of his company plummet after his message was posted on the Internet. Three days after publication of his outburst, stock in the health care company Cerner Corporation dropped by 22% because of concerns about staff morale. Now, three weeks later, it is trading at one-third less than it was before the e-mail was sent. The author of the offending e-mail now spends most of his time trying to mollify investors. Cerner, which is based in Kansas City, was included last year in *Fortune* magazine’s list of the 100 best companies to work for in America. The CEO, who founded Cerner in 1979, attributed his blunt management style to growing up on a farm in Oklahoma. “You can take the boy off the farm,” he told the *New York Times*, “but you can’t take the farm out of the boy.” He is not the only business high flyer whose blunt speaking cost a fortune. In 1992, a British jewellery magnate described the merchandise in his chain of stores as “total crap.” His customers deserted in droves, the company made a loss and by the end of the year the magnate was out of a job.’]

...In 1995 a British economist... wrote a book called *The State We’re In* which became an immediate best-seller... [The author] lays much of the blame for “the state we’re in” on what he describes as “shareholder capitalism,” which places immense economic power in the hands of the few who pursue short-sighted policies of what he terms “short-termism.” He documents the way in which this practice has handicapped the British economy in contrast with its competitors.

...STRESSED managers grappling with information overload and heightened shareholder expectation are increasingly turning to outside consultants for help. But the quality of advice they are receiving is being questioned. Pressure on managers to deliver short-term results in an environment of tougher competition, fewer staff, and where accountants rule with a firm eye on costs is taking its toll. "The sheer bulk of decision making and processing is overwhelming a lot of people," said [a] lecturer in human resources management at Auckland University... "There are fewer managers today and flatter organisation structures, but the amount of information that has to be processed has not decreased. The same amount of decisions need to be made. Managers are judged on quarterly results and rewarded or punished accordingly." Demand was exceeding the ability to supply, [he] said. "There's a limit to what the survivors can achieve."

...Most companies that make a \$A550 million cock-up would not survive to clean up the mess. If they did happen to be big enough to handle it, however, it would be expected that the heads of those responsible would roll. Not so BHP. The oil, minerals and steel giant... [with] 65,000 employees in 50 countries... has adopted the unusual practice of promoting... the man who claims credit for the purchase last year of U[S] copper miner and processor Magma Copper. He was head of BHP's vast minerals division and is now chairman of the board... The Magma debacle is the best example of how BHP's board and senior management has lost the plot in recent years. The chief executive... took the only option open to him last Friday – short of resigning – and made \$976 million worth of writedowns on the carrying value of assets, including \$550 million for Magma and \$220 million on steel... [Another man, the one who sold Magma] to BHP and was considered so important that BHP created a copper division for him to head, was let go. One might argue that someone smart enough to extract such a price from BHP should be kept... [The new chairman] gets a chance to play on, for now, but only if he can deliver significantly improved returns to shareholders... Capitalised at \$37.5 billion, the company speaks for so much of the A[US]n Stock Exchange's market... that no serious investor can afford not to own shares.

...An improved operating performance at N[Z] Steel was among the major contributory factors... which saw net profit... [for] BHP's steel division... rise 25.6[%] to \$A113 million... in the first quarter... BHP said... [However,] BHP has set itself a May 1998 deadline to fix or sell its underperforming assets... [as part of a drive] to reduce the company's debt by \$A4 billion... and the future of N[Z] Steel is squarely on the line... BHP, which bought the mill outright in 1991, is understood to have lowered its usual requirement that a subsidiary return 15% on its assets to around 10% for Glenbrook. But even that figure has proved beyond... a mill that should never have been built... Last week, BHP announced huge cuts to its steelmaking operations in A[US], costing 2500 jobs, to be phased in by the end of the century. It also said Glenbrook's steelmaking facilities are unlikely to be replaced at the end of their working life – estimated at another 10 years – and if business did not improve, they could close earlier... as early as 1999[... although the]... mill's metal fabrication and painting operations, employing 200-300... workers, would continue even if steelmaking was shut down... Glenbrook [was commissioned in 1970. In 1981, despite] poor returns the Muldoon Government[spent] \$700 million to increase the plant's size fivefold as part of its ill-fated Think Big drive.

...BROKEN Hill Proprietary Co was forced to surrender its title as The Big Australian last week, after unveiling a massive cost blowout at a key project and a worse-than-expected first quarter profit. BHP's share price briefly slumped to a level where it was no longer A[US]'s largest capitalised stock. Although it regained its top spot later in the week, in the minds of many investors it no longer lived up to the name. One irate shareholder at last week's stormy annual meeting in Brisbane suggested the company be renamed Broken Hearted Proprietors. Another suggested Bloody Horrible Performance... "You've got your finger in so many pies, the oven will burn them," [one] shareholder... told BHP's 11 directors... Shareholders called for the dismissal of [the] chief executive... but BHP[']s chairman... was having none of that. "The board believes he is the best person to run BHP... We are poised for growth." Which would be a change after BHP's recent performance. Profit to May 31 was slashed from \$A1.39b to \$A410m because of asset writedowns... BHP had written off about \$A2b in assets in two years... The shareholders' association... asked how many more write-downs of assets and losses shareholders would have to bear... BHP had \$A7.5b tied up in development projects which were yet to produce income, representing 27% of the company's total investment in non-current assets. "The continual growth of a company is clearly in the best interests of those who work in it... However... is continual growth always in the best interests of shareholders? Is the board policy simply a case of growth for growth's sake?"

...Three senior managers leave BHP. The company's market capitalisation plunges by \$A1.8 billion... The exodus of talent from the giant steelmaker is one of the best examples of the link between human resources and the bottom-line, A[US]n experts say. They have embarked on studies of ways to establish a more meaningful correlation between human capital and company performance... Other tangible results of managing or mismanaging human capital are absenteeism, labour turnover, customer service and employee satisfaction. Eventually, predict experts... organisations will be valued more for the quality of their intellectual capital than for their bottom-line results.

...Selfish businesses, concerned with their own sector's interests but not broad reform, will hurt A[US] in the long term, warns the chairman of the National Competition Council... The short-term gains for those businesses will result in long-term losses for A[US], he said on television yesterday... "I think that there is a clear leadership problem occurring at the business level at the moment..."

...When a legend in American business says the world is on the brink of "an epidemic of institutional failure," it sounds like the corporate version of Armageddon. But... the villain is the "current, hierarchical, command-and-control organisational model." This structure is the child of the industrial revolution and is now so long in the tooth that its general unsuitability for today's commercial environment threatens the very fabric of commercial life as we know it.

...[an] American "strategy consultant"... improves on the old adage that business is war. He says it's two wars... the combat is fought on two fronts – the battle for talent and the battle for profits. And victory in the second depends on winning the first. In an interview in Auckland... [he] explains that most U[S]-based businesses – and he suggests N[Z] is little different – have spent the past decade wrenching profits out of cost reductions and other slimming strategies. That has worked reasonably well until recently. But now that companies have run out of room for further "re-engineering" they are bereft of ideas for growing revenue. For some, it's almost too late. "Some businesses have taken out so many costs that they have damaged their ability to grow revenue,"... [Furthermore, too] many companies give managers too many conflicting responsibilities. "I have seen managers who can do a lot of jobs but who did none of them well... In America and many other countries the pool of really talented people has shrunk. Quite average people are earning top packages," he explains.

...The battle for corporate immortality... For all of 1996... 71,811... U[S] businesses failed, with liabilities of \$[US]34 billion... During... the first half of 1997... 43,461 business failed... [and] the dollar liability... totalled \$US20.8 billion... A seminal 1990 study of 200 big firms in America, Germany and Britain, carried out by... the Harvard Business School, found that most long-lived and successful companies are those that are the first to make two kinds of key investments: in marketing and distribution networks, and in managerial manpower... For most firms, life is nasty, brutish and short. The life expectancy of a typical multinational is between 40 and 50 years, which means that of all the companies now featured in America's *Fortune* 500, about one-third will have merged, been broken up or gone bust by 2010. For least exalted firms, life can be even shorter. A recent study... found that the life expectancy of the average European and Japanese company was fewer than 13 years. On the other hand, Stora, a Swedish paper and chemicals giant, dates back to the 13th century. Other wily old birds include Japan's Sumitomo (now 400 years old), America's Du Pont (195) and Britain's Pilkington (171). Whether longevity matters is the subject of heated debate in management circles.

...[In 1991, there were 880,400 business bankruptcies in the US, compared to 360,300 in 1980. Of these, 124,200 were in California.]

... 'In 1990, there were 4449 company insolvencies (840 companies placed under receivership; 1012 court ordered liquidations; 2,597 voluntary liquidations) in NZ – up from 2997 (1,103; 831; 1,063) in 1989. In 1994 the respective figures were down to 1751 (222; 888; 641'). Incidentally, NZ has about] 237,000 business enterprises, the vast bulk of which are small to medium-sized with about 85[%] employing 10 or fewer people. - 1997

Ask[the] Employers' Federation boss... and he will tell you small businesses are the engine-room... of N[Z]'s buoyant economy. Ask[a] Wellington consultant... and he will tell you they are hard work, more likely to fail than succeed and, as often as not, the only option left to those wanting the dignity of work after long-term unemployment or redundancy. On one matter, both agree – the number of small businesses... defined as employing five or less people... set up in N[Z] in the past decade has exploded... "In the three years between 1987 and 1990 there was a net increase of 8211 in the number of small businesses – and that takes into account businesses which fail. In the years 1991 to 1994 that figure was 28,826." ...Last year, 178,000 small businesses provided a total 261,000 full-time jobs and a further 121,500 part-time jobs. In 1991 there were 149,000 small businesses employing a total of 292,000 people (there is no breakdown for full-time and part-time work)... But if the growth in small business numbers is one of the measures of our success, statistics for just how many fail are not so readily at hand. [The boss] admits he can provide no figures on small-business survival. Studies have shown a high failure rate but he stresses this is not unique to N[Z]. "That's universal. There will always be a proportion of small businesses that fail..." Figures from Statistics N[Z] show that in 1987, there were 22,946 new businesses set up. In the same year, 19,919... closed... [The boss] is quick to point out that such figures mean little unless you know why a particular business closed. - 1996

For every Colonel Sanders who parlays a small business into an international chain of Kentucky Fried Chicken franchises, there are hundreds of owners of small businesses who struggle along inauspiciously or go broke.

Since unsuccessful competitors drop out of the race – often by merger or absorption by the more successful – unbridled competition rapidly tends to the creation of cartels and monopolies. Huge aggregations of privately owned wealth arise, and their possessors acquire the power to control markets and limit competition by those who are less wealthy.

The problem is particularly evidence in relation to cartels... [However, NZ c]onsumers should get far more protection against price-fixing and other anti-competitive practices with stiffer fines – and possibly even criminal penalties – now in store for companies which breach the Commerce Act. A Ministry of Commerce discussion paper issued yesterday concludes that present fines are too low to deter firms which profit from breaching the law... The maximums are \$5 million for firms – under half the A[US]n and U[S] equivalents – and \$500,000 for individuals. But the highest penalties imposed were \$500,000 on Port Nelson Ltd for three offences, while seven car dealers were ordered to pay \$350,000 for price-fixing.

...The [NZ] Government intends to strengthen the Commerce Act's key provision against anti-competitive behaviour... The legislation, which seemed to be in doubt after some high-level lobbying earlier this month, will be put before Parliament in the dying days of the session. It will change Section 36 of the act, which prohibits a dominant firm from using its position for specified anti-competitive purposes. The proposed amendment defines "dominance" as a "high degree of market power". It says that in determining whether a firm has high market power, regard must be given to the extent to which the firm is constrained by the conduct of competitors or potential competitors, or by the conduct of suppliers or customers... One of the options canvassed by the Ministry of Commerce in its discussion paper... earlier this year was to adopt the A[US]n legislation's language. Instead of dominance, it speaks of "substantial market power" and "substantial lessening of competition"... [The] Enterprise and Commerce Minister... said that although the high market power test was not exactly the same as A[US]'s "if the courts do what we would expect them to do and look at similar jurisdictions, they will take a view which is not too dissimilar to A[US]'s." The minister added] that... the intention was to restore the strength of Section 36, which had been watered down by court decisions since 1992, which relied on dictionary definitions of dominance rather than the economic test Parliament had intended. The amendment will also ensure that "purpose" can be inferred from the firm's conduct or circumstances. The other major change relates to Section 47, which prohibits mergers and acquisitions creating or strengthening dominance in a market... [The minister] said the changes set a delicate balance between preventing dominant firms from using their market power to stifle or eliminate competition, while at the same time allowing them to compete... Labour's commerce spokesman... said it was fundamental that major industries had a proper opportunity to look at the measures and give reasoned submissions... Eleventh-hour legislation with little opportunity for input was not the way to do major micro-economic reform, [he]... said.

...An English doctor, one Thomas Fuller, writing in 1732, claimed: "[Whoever] resolves to deal with none but honest men must leave off dealing"; Napoleon suggested in his *Maxims* (1804-15) that "the surest way to remain poor is to be an honest man." They were given significant precedent for their cynicism in Plato's claim that "honesty is for the most part less profitable than dishonesty." Noticeably, such reservations focus on the world of commerce, implying that, by definition, the competitive nature of business and the need to turn a profit from which to make at least a living... ensure that probity in commercial dealing is much more difficult to maintain. Keep in mind that these were opinions reflecting the 17th century and very much earlier – rules and regulations restraining sharp practice were notable for their absence. Perhaps it says something about the ambivalent attitude of the human animal that society had to have honesty in business dealings enforced by legislation.

Shareholders don't have to know anything about a business in order to make money out of it. Likewise, an individual doesn't need to know anything about business in order to start one up – just the money (or capital) to finance it! This capacity for freedom in business is related to an unproven theory that competition leads to perfection (i.e., strong or efficient businesses are successful over those which are weak or inefficient, who grow strong themselves or disappear). However, theories seldom work out in practice the way they should. This particular theory looks a little unbalanced when, apart from the fact that many new businesses fail (which wastes resources and inconveniences customers), it is possible for an unlimited number of small businesses to be created while the trend is to merge into fewer, larger and more powerful corporations (which ought to be more efficient – and, therefore, be more desirable – than having lots of small businesses). Furthermore, the impact of a new business on existing ones – within the same industry – can be negative overall (unless the market for a product or service is expanding). If, for example, 10 companies have established themselves to full capacity in a limited market then another begins, the existing businesses will, on average, be faced with a 10% reduction in market share (which may lead to redundancies at the original businesses – i.e., new workers may enter the industry at the expense of existing workers) or, if the new business survives, one or more of the others must fail completely. This process of elimination works well if those that fail deserve to do so. Unfortunately, those which remain can be least deserving – they survived because they had the most capital instead of the most talent; because they were prepared to act in an anti-competitive or illegal manner. Also, business failures can affect consumer confidence in the product or service being provided (commonly known as the 'bad apple effect'), thereby threatening the profitability – and even the existence – of the surviving businesses. In addition, competition can divert businesses from their core activity – that being the provision of a particular product or service to customers (a 'survey of Australasian retailers found that most rate beating off new competition as a major concern'). On top of all that, if the business is a 'limited liability company – and most are – the owners are only liable for the money they put in at the start' (i.e., most business owners are able to make potentially risky economic decisions without being responsible for paying the full costs of their failures).

People generally choose to start up a business because they see it as a way to fulfill their ambition to become wealthy – although some also have an ambition to provide something that the world needs. Sometimes business people succeed at doing both – but often they succeed at neither! Yet, if no one

failed at business, would it be possible for anyone to succeed? However, being successful at business creates new problems. If a person is self-employed (i.e., owns a business which only employs itself) and is so successful that offers of work outstrip its capacity to complete them, that person faces two primary choices: (1) select only the best jobs and cruise through to retirement; (2) take on an employee. The problem with the second option is that previously the business was effectively earning enough revenue to pay one wage and suddenly it must pay two. But if the businessperson has empire-building aspirations it will risk taking a cut in its own income in the hope of reaping the rewards later. If the decision to expand proves ill-fated, both workers might end up unemployed. If it proves otherwise, the businessperson may eventually face the expansion problem again – and will continue to do so whenever the business receives more work than it can complete. A successful business could continue to grow indefinitely, aided perhaps by purchasing competing businesses, or ultimately itself be purchased – by a competitor, or by an individual (or investment group) who wish to enter the industry via an established concern.

I am looking to purchase a plumbing supplies business. The information I have been given shows assets amounting to \$450,000, comprising a small amount of plant and machinery, inventory, and debtors. However, the asking price is \$650,000. When I asked the owner for justification for the price exceeding the value of the assets, he replied this was attributable to goodwill. Is this reasonable? Unfortunately, there is no straightforward answer to this question... Goodwill is very much an intangible factor, representing the value associated with an amalgam of contributing factors... Goodwill is the essence of any business. Goodwill transforms what would otherwise simply be a collection of assets into a viable business that generates profit. There is no standard formula for determining the value of goodwill. In a technical sense, goodwill can be regarded as the price paid now to acquire a future earnings stream. Without knowing anything about the earnings stream, it is impossible to assess the goodwill value... In practice, many factors will contribute to the existence of goodwill, and affect its value. One of the most traditional factors is location... The nature of the market in which a business operates, and its position within that market, can justify goodwill... Goodwill might be derived from the business having a unique product which no one else can offer; perhaps as a result of a sole agency arrangement or because the product has been developed by the business and protected through patents and trademarks... Goodwill is often justified in the case of businesses that have products that enjoy high-profile branding, such as those frequently seen on... television commercials. This branding means there is high consumer recognition and regard for the product, leading to increased sales over competing products, often at higher prices... [Where] there are significant barriers to entry, the value of an existing business will be higher... Sometimes goodwill will be reflected within a set of financial statements... A business may enjoy cost advantages over its competitors, perhaps because of sophisticated manufacturing processes or better distribution systems, but in any event its cost advantage boosts profits and increase the value of goodwill. A company that has a well-diversified clientele comprising largely high-quality customers who pay their accounts on time will clearly be regarded more favourably... However... the goodwill may very much belong to the individual proprietors, rather than their company, and, as a result, may not readily transfer with the company to a new owner... Perhaps the most overlooked factor justifying the existence of goodwill is a company's staff. The customer relationships, experience and know-how possessed by staff will not appear as an asset on any balance sheet, but are nonetheless key indicators of the existence of goodwill.

...[Unless a potential business owner wants to risk buying one that is failing, it is necessary to have the business thoroughly checked out beforehand – but sellers aren't completely obligated to make the task easy! The bigger the business, the harder it is to check. There are usually various laws to protect buyers, but creating a law is much easier than enforcing it – and they only truly come into effect after being broken, which is of little use to a buyer who may have lost everything (especially if faced with a long, expensive – and possibly unsuccessful – court case to prove it was defrauded).

...If most companies could not, by definition, be above average, then the same must be true for bosses – who need to have numerous talents, but can be above average at some and below average at others. It isn't essential that a boss be above average – a below average boss can get a business to succeed with above average employees (likewise, an above average boss can get a business to succeed with below average employees). However, is it sensible to allow the LAW OF AVERAGES to be a central part of business? Is it valid to accept that, statistically, up to 50% of businesses, possibly more, would be expected to fail through having ineffective leadership (or that an unknown percentage of employees could be miserable in their work – and, therefore, their lives in general – because their employer is below average to the point of being 'a complete bastard', but they can't afford to leave, or can't find employment with an above average employer because such positions are popular and, therefore, competition for them is strong)? From the perspective of the business owners there might seem to be little wrong with having to cope with failure, but what about the effects of allowing lots of independent businesses to operate in a closed – or semi-closed – system such as an economy or a community (i.e., a system where every person and business is unavoidably, and necessarily, linked)? Each failed business affects the staff, their families, its suppliers and customers – who may depend on the products or services supplied (or purchased) by the failed business for their own survival. Expect everyone who has an association with Levene to be losing some sleep at the moment.]

...The man whose... family founded... one of N[Z]'s best-known retail chains... with a single paint store in Auckland more than 70 years ago... choked back the tears yesterday as he contemplated the uncertain future facing... the 28-store... [business which] has become synonymous with stylish household goods... [The former owner], who still owns around a third of the properties in which the Levene stores are based... could only say he was "desperately sorry" for the 600 staff whose jobs are now in the air, following a decision by its[new] owners to place the company in receivership. The move follows months of rumours that... [the] nationwide chain was in serious financial difficulty... At the time... the company... [was] sold... to the Skellerup Group... for \$74 million... three years ago... it had a turnover of \$150 million and was highly profitable. It has since plunged into debt, and... lost around \$12 million last year... It is understood creditors are owed around \$10 million... Suppliers... said the company stopped paying its bills two weeks ago. Several suppliers stopped delivering their products, placing staff in the embarrassing position of having to explain to customers why orders could not be taken... Some customers are believed to have been asked to pay cash up front for their purchases in recent days, even though the goods could not be delivered immediately... Sources said some suppliers realised how serious the situation was on Thursday and moved quickly to reclaim their goods... Suppliers reclaimed about a dozen couches from the Newmarket store on Thursday afternoon... Staff had turned up for business as usual yesterday, by and large unaware of the severity of the company's financial difficulties right up until the public announcement of the receivership at lunchtime... [But] yesterday morning there were some clues that the receivers were taking charge, with security guards posted at the entrance of stores. They were under instruction not to allow any stock to be removed, unless it had been paid for by customers... Stores were closed at midday yesterday for stock-taking... The receivership does not affect nine stores independently owned and operated by franchisees...

Ten office staff at Levene got the news they were dreading yesterday: no job and no redundancy pay... Twenty-five of the 600 Levene staff have now been made redundant... Levene receivers have placed the remaining... staff on week-by-week employment contracts... [Staff] were on the same pay and conditions as before except they would receive just one week's notice of termination and no redundancy compensation.

...Under the terms of the Receivership Act 1993, [the receiver from]... KPMG... had to make a decision on all contracts of employment by November 14... [In] accordance with the Companies Act 1993, employees' wages and holiday pay owing to the time of receivership was protected, up to a ceiling of \$6000 per employee, but redundancy pay did not carry the same protection.

...A trouble-shooter sent into Maine Investments' by... [its principal shareholder, a US] investment bank, believes that cutting Levene loose was the only way to proceed... Levene was sucking too much cash from the profitable industrial operation, which would be floated next year under the name Skellerup Group. The decision taken by... Maine Investments... to put Levene in receivership, however, gives rise to an "enforcement event."

This means the trustee for holders of \$77 million worth of bonds can call for an early redemption. The bonds were not due for redemption until 2001 when they were issued at the beginning of last year to help fund the ambitious \$520 million leveraged buyout of Skellerup Group by [the investment bank] led vehicle, Maine Investments. Maine is calling for the trustee not to take up this option... With group debt at uncomfortable levels... now at \$225 million, and the bond debt... a forced redemption would require [the US bank] to come up with the funds. The other option would be a fire sale of Maine's assets. [The bank], along with a small group of the original Skellerup management, has so far put in equity of \$170 million[, which]... includes a recent \$40 million injection of capital of which \$10 million was allocated to the retail division. Those extra funds had already been swallowed up. Of the retail allocation, \$2.5 million was put into Palmers Gardenworld, with the balance going to Levene. As a result of the capital raising, [the bank] increased its shareholding of Maine from 83... to just under 90[%]... At the time of the buyout, DML Construction was its largest single asset. But with moves underway to wind up its troubled A[US]n arm, only a N[Z] operation is left. Its sale could not be ruled out... the appointee said... Palmers Gardenworld... would be kept as a stand-alone business outside the industrial group... The man who introduced [the bank] to the asset... remains as chief executive of Maine. But his responsibilities have been trimmed.

...Essentially a leveraged offer is an attempt by the buyer to make a financial killing by borrowing a large sum of money to pay for the acquisition. The strategy is to pay the interest costs from the cash flow of the acquired businesses... Leveraging the company with a debt of \$400 million supported by equity of only \$130 million was always going to be a big ask.

...THE Levene brand... looks set to disappear now the company has gone into receivership... [I]t was unlikely anyone would be interested in continuing to operate Levene as a nationwide chain... [The business person] who bought The Store chain of homeware shops after it went into receivership last year... expected... [Levene's] stores would be sold individually and the sites used for other purposes... Meanwhile, Levene's receivers said yesterday there will be bargains for Levene customers today but no fire sale... By keeping going Levene was not looking to trade itself out of difficulty but was instead hoping to find a buyer, said... [one] of the receivers... Levene's major suppliers are understood to have agreed to continue supplying the chain until Christmas, as the receivers talk to potential buyers... In an interview in June... [the] man who... came here to run Levene and Palmers Gardenworld for Skellerup but returned to Britain a few months ago, citing family reasons... admitted Levene had lost touch with its customers and many key staff had left, apparently unable to make the adjustment to a new management regime.

...Retail giant The Warehouse Group is being tipped as the saviour of the Levene home decorating chain... But... [analysts] said yesterday that The Warehouse might be more interested in picking up Levene's sites rather than the brand name as its own brand was probably stronger.

...Levene stores should either honour their gift vouchers or shut their doors, the Minister of Consumer Affairs... said last night. She questioned the legality of a store in receivership continuing to trade but refusing to repair or replace faulty goods or honour gift vouchers, which she said were effectively promissory notes... Customers queued for bargains when the paint and household goods retail chain reopened yesterday. Many were angry and disappointed, however, when told their gift vouchers would not be accepted and there would be no exchanges or refunds... [The minister] said she would not blame customers who tried to stop cheques or credit card transactions after being refused repairs or replacements for faulty goods... A spokeswoman for the receivers said last night that they were acting within the law. She said secured creditors had first call on any money held by the company... [and] voucher holders... are at the bottom of a pecking order of creditors fighting to get their money back...

The Minister of Consumer Affairs... yesterday urged legal action against Levene over gift vouchers which Levene's receivers are refusing to honour. [The minister] said she could not instigate the legal action but could refer the matter to the Commerce Commission, which enforces the Fair Trading Act. The commission seemed less enthusiastic, but did not rule out a prosecution... The Minister... lost about \$1100 in 1995 when she bought a dishwasher from a Tauranga firm that went into receivership. She said she paid in advance and asked that it be delivered a month later when her home was built. "It was on special..."

...Pity Levene customers who took advantage of the Labour Weekend special on couches. For just under \$1000 they could select the sofa of their dreams, providing it was in blue or green. The only catch, it appeared then, was waiting four weeks for the furniture to be made and delivered. How could they have known that [four days later], Levene... would be in receivership? If the receivers opt for winding up rather than trading on, the would-be couch owners will become that most unlucky of commercial casualties – the unsecured creditor; best described as the miserable character standing at the end of a long line of people with their hands out for their money. In front stand unpaid staff, followed by secured creditors – normally banks... The law is certainly on... the... hapless customers' side, according to[a] lawyer... who practices in the area of consumer law and trade practices. After all, the Consumers Guarantee Act gives them rights. But with the cupboard bare... Levene is unlikely to be able to meet its legal obligations to supply the goods or pay a refund... One benefit of the new Companies Act (1993) is that if customers stung by a receivership can prove the company was trading while insolvent – and there is no reason to believe that applies to... [Levene] – the directors become personally liable for debts, says... [the] Consumers Institute chief executive... But reality can be cruel. Not only may the directors have already salted away their assets into family trusts, but litigation is expensive, although there is always the possibility of class action. In the meantime, [he] has good news for some... Levene customers: if they bought goods on layby and those goods are in the warehouse, "all you have to do is pay the balance and take the goods." ...But perhaps the best advice to minimise the risks in buying... is to pay by credit card. Visa, for instance, guarantees your money back if the goods are not delivered. Liability rests with the bank of the defunct retailer. However, when airlines collapse, it is the travel agent who has to refund the money – a little-known fact that caused a fracas between the travel agents and Visa last year after Kiwi International went into liquidation... A supplier of goods will often include a clause in its conditions of sale stating that ownership of the goods will not pass to the buyer until payment is made. Such clauses are known as reservation of title or "Romalpa" clauses. If the buyer becomes insolvent, the clause will enable the seller to recover the goods from the receiver in priority to other creditors. Most reservation of title clauses simply seek to recover goods for which payment has not been made. However, some clauses also seek to retain ownership in any finished products made by the buyer using the goods. Generally, for such a clause to be effective, the goods supplied must retain enough of their original character to be identifiable. For example, a seller was able to retain title in logs that were processed into sawn timber... [W]hether the clause succeeds will also depend on the wording of the clause itself and on the facts of each individual case. This was illustrated by a recent High Court case resulting from the supply by ICI of raw material (polyester terephthalate granules) to Lab-Plas for use in the manufacture of plastic containers. ICI's conditions of sale contained a clause stating that ICI retained ownership of the goods until it received payment in full of all sums owing. Lab-Plas went into receivership in December 1995, and into liquidation in April 1996. The receivers accepted that ICI's claim for raw material stock at the start of the receivership was valid and that payment would be made for it. However, ICI also claimed ownership of plastic containers and the sale proceeds of containers... [but] because the security had not been registered as required by the Companies Act, it was void against the liquidator.

...One of the two major players in the N[Z] paint market has bought Levene and Co's commercial business for an undisclosed sum. Wellington-based ICI Paints plans to open up to five new outlets in Auckland in the new year and another two outlets in Wellington and Christchurch, to ensure supplies of its Levene-branded paint will continue to be available... ICI is believed to have paid around \$17 million for Levene's paint factory only a year ago, along with the right to use the Levene brand. It promptly closed down the Auckland factory to enable its own paint to be sold in Levene stores... At present, it owns just one trade outlet in... Auckland... Before the... Levene... receivership, ICI had between 10 and 12[%] of the commercial paint market. ICI's main competitor, Resene, is also believed to have looked at the trade business...

Levene voucher holders may be able to recoup most of the value of their chits by "double-dipping." Resene Paints, one of two companies accepting Levene vouchers as part-payment for goods, yesterday returned the tokens to customers. "We want to give the vouchers back so

customers can have two bites of the cherry by using them at other companies offering special deals,”... As well as being able to use the vouchers at other outlets, the customers could hold the chits for a possible claim on the Levene receiver... Also caught out by the collapse... were 15 winners of a *N[Z] Herald* promotion. The subscribers won \$500 of Levene gift vouchers... [T]he *Herald* has now offered them alternative prizes to the same value. Another 15 winners cashed in their vouchers before the collapse.

...Two of Levene’s three directors quit within weeks of the company being placed in receivership, Companies Office records show... Their resignations have left Maine’s chief executive... as sole director of Levene... Meanwhile, DML Resources, once the jewel in Maine Investments’ crown, has been put into receivership owing an estimated \$10 million to creditors... However, Maine Investments said it should be noted that DML did not form part of its charging group and thus the action did not affect the holders of Skellerup finance bonds. As part of the restructuring of the ownership of the former Skellerup Group in August, DML was sold to Vermont Investments, which in turn is controlled by [the US investment bank that owns most of Maine Investments]. Once worth around \$90 million, DML was sold for \$6 million... DML holds the earthmoving contract at Solid Energy’s Rotowaro Mine... In the wake of the announcement, Solid Energy said that coal supplies would be unaffected by the receivership... Levene has closed down one of its four trade outlets as talks continue with potential buyers for the business.

...The Levene home-decorating chain has shrunk from 28 stores to 21, as the search continues for buyers interested in picking up what is left... [The] co-founder of Harvey Norman, has confirmed the company is... one of several A[US]n firms taking an interest in the assets of the Levene home-decorating chain... But the furniture, computer and electrical goods chain is playing down whether it might be interested in buying the business as a going concern... “I don’t know at this stage...” said [the co-founder]. “My experience over the years is that when a going concern falls down, you can very rarely, if ever, bring it back.” Other companies known to be eyeing Levene’s assets include... the Farmers Deka Group...

The Farmers Deka group is believed to be one of several companies talking to Levene’s receiver about taking over some of the collapsed company’s sites... Farmers Deka has already bought fixtures and fittings from several of the closed stores... However Farmers Deka is not believed to be among the parties interested... in Levene’s giant store at Wairau Park, North Shore... as it already operates a Farmers Home Centre and Freedom Furniture store in the area.

...After disputing its numbers, the auditor has valued Maine’s goodwill at \$160 million... Adding goodwill back into the accounts and stripping out \$86 from Levene and DML, total assets would be \$361 million. That compares with combined bank and bondholder debt of \$357 million.

...The \$77 million of Skellerup Finance paper plunged to new depths yesterday, even for junk bonds. As banks and management haggle over a rescue package for the former Skellerup Group of companies, the yield of the bonds hit 250[%]. That means a dollar invested is worth only 9.2c... At the close of trade there was one large seller at 250[%], with the only buyer in sight being at 325[%]... Bondholder debt ranks behind that of banks, which are owed \$230 million.

...BONDHOLDERS of embattled Skellerup Group... have been told the company is technically insolvent. At June 30 it had debts of \$290m, exceeding its tangible assets of \$265m... The trustee said Maine had also claimed intangible assets worth \$198m.

...At September 30 total assets of \$386.9 million were unable to cover... Maine Investments... total liabilities of \$433.5 million. But the backbone of the group is made up of 10 heartland *N[Z]* industries producing \$360 million of sales and \$30 million of earnings before interest and tax.

...Bondholders... said they remained perplexed how a parent company which two years ago was in fine shape had gone downhill so fast. [The] general manager of the Presbyterian Savings and Development Society, which owns 200,000 Skellerup bonds, said how Maine could lose more than \$300m from its balance sheet... was “a mystery”. Other bondholders to take a bath included the Salvation Army, which owns 500,000 bonds, and Lincoln University, with 2.2[million] bonds. However, the failure of corporate bond issues are rare.

...God knows there is little charity in big business. So when some of the country’s leading churches got involved in high-powered business investments, they knew there was no chance of their being sheltered from any financial thunderbolts... The Salvation Army... and Presbyterians had no exceptions made... The Methodist Trust Association has also been worrying about what will become of the \$500,000 of bonds it bought... According to the bondholders’ register, there are several other churches... involved in the Maine strife[, including]... the St Francis Charitable Foundation, and the Lutheran Layman’s League...

More than 120... Levene... staff... were delivered the news... [that] they are to lose their jobs three weeks before Christmas. The move follows a decision by the stricken firm to close a further 11 stores, including three in Auckland.

...Hopes are fading that the Levene... chain will continue trading beyond Christmas, with no potential saviours emerging... Companies[are] still believed to be talking to the receiver... However, none is believed to be interested in taking over the company as a going concern.

...The Levene’s trade store in Hamilton and stores in Rotorua and Tauranga have been sold to... a Taupo-based operator of independent Levene stores. The Levene receiver... has also confirmed that the retail stores in Hamilton and Lower Hutt would close from December 14... Just five Levene stores... [– excluding the franchised stores – will] remain trading in the lead-up to Christmas...

Two of the remaining five Levene homeware stores trading under receivership closed yesterday...

The last[non-franchised] Levene store – sited at Newmarket – will close its shutters at 5pm today...

Levene’s... was a good asset turned sour by trying to take it upmarket[, while]... Skellerup’s preoccupation with growth through acquisitions created nervousness among investors and analysts... Analysts were not sorry to see Skellerup go from the market, perhaps for no other reason than the difficulty in valuing such a diverse group of companies. Hindsight has proven the same to be the case for Skellerup management.

...Seven banks holding \$221 million of debt in beleaguered Maine Investments were locked in meetings yesterday poring over a revised proposal understood to include a partial interest-payment holiday. The new proposition put in front of banks comes after they scuttled a plan late last month to swap around \$46 million of their debt for shares in Maine. Much of the opposition among banks to accepting such a swap is believed to have stemmed from A[US], where most of the original financing... would have come from.

...Maine Investments’ bankers are understood to be contemplating wiping around \$70 million of their debt as negotiations reach a critical point... But in doing this banks, holding around \$280 million of interest bearing debt, are now proposing to take an equity stake in the restructured group which will include 10 industrial companies. A portion of the reduced debt will be held in a company called Otherco, which holds non-core assets... Estimations of the value of these non-core assets are around \$35 million to \$50 million. The deal with the banks is also based on a \$30 million cash injection from Maine’s shareholders – principally [the US investment bank] and its clients. Together this will cut debt by \$100 million, boosting the group’s bottom line by around \$10 million a year. This would put annual pre-tax profit for the industrial group at around \$12 million...

Maine Investments and its bankers are expected to sign off on a rescue package... today after weeks of intense haggling. The company’s finance director... would only say that negotiations were at a delicate stage.

...Maine Investments’ future hangs in the balance after its bankers rejected a rescue package.

...Maine Investments breached Stock Exchange listing rules... the market surveillance panel said yesterday... In April the company, in response to two inquiries from the exchange, said that it was unable to explain sharp falls in the price of... \$77 million worth of bonds... Yesterday the panel said the information was material to the price of the company’s securities under rule 10 of the exchange listing rules requiring the “timely” release of relevant information. - 1997

N[Z]'s insolvency laws are heading for a major overhaul in a bid to boost flagging confidence in the system. A Government review of the existing laws has yet to be completed, but at this stage the likely outcome looks like being: ■ Much tougher enforcement in cases of commercial irresponsibility, including the creation of a new office of Inspector-General of Insolvency to oversee investigations and prosecutions. ■ A new company rehabilitation regime aimed at enabling basically sound companies to trade their way back to solvency. ■ Stricter checks of the qualifications and impartiality of the private practitioners appointed as receivers and liquidators. ■ A bringing together of the myriad laws affecting insolvency into a single statute.

In order to check that private businesses apply with the various regulations relating to business practices, standard of premises and employee rights, etc., governments have to set up surveillance panels or departments of inspectors – although these departments never seem to have enough power or funding to perform their tasks thoroughly! However, their funds might be enough if most of their work didn't involve dealing with the same offenders (who react to having their business shut down by simply starting up a new one), or the same offences (i.e., an offending business can be shut down only to have a new one take its place and cause exactly the same problems). Some employees may help the relevant authorities by dobbing in their employer, but most workers seem to choose to remain silent – perhaps because they are more concerned about losing their source of employment than the wider issues or principles at stake?

The owners of a business can be the only people who benefit from it being successful but, if a business fails, the entire community – including the environment – may get hurt. Unfortunately, the environment can get hurt by businesses regardless of whether they fail or not! Lots of so-called successful corporations or large businesses depend on the destruction of Earth – be it directly during the process of extracting raw materials, or indirectly via pollution. Small businesses can also damage the environment, but the problems they cause are often harder to see because their scale is minuscule in comparison (although the combined effects of many small businesses can be greater than one corporation).

“Business” means one thing when it is small; quite another when it is large. Both apparently exist to make profit, but small business is affected by the forces that shape society – big business can largely ignore them... Big business' response to a financial crisis (largely due to short term profit-oriented decisions) is to cut and run – dumping whole factories and thousands of people to preserve the company. An international company has no real responsibility for the victims of the dumping – their social welfare is paid for by the wage and salary earners and the taxes of small business people... who themselves are affected by these closures. The less that government is involved in holding big business accountable for their environmental and social impacts, the more control big business has over society and the shape of its future... Unlimited growth without regard for its consequences cannot last – yet there is little opportunity for most people to put controls on the big corporations who take what they can now... Air and water are still seen as free resources and acceptable dumping grounds for wastes, however toxic. Communities affected by big companies polluting air or water still do not have any real say, even when the damage is done... In a “market-driven” society business creates “needs” to keep up the cycle of growth and profit. For local authorities, the pressure to provide jobs is a big incentive to allow industries to set up... [The] health and welfare of all the people of the planet are more important than private profit.

Why deplete the earth's resources in privatised consumption? ...while this occurs to some of us as a problem, it is viewed as a virtue by those who see increased consumption of goods and services as the way to prosperity.

THE GROWTH DILEMMA besets not only th[e US] but the whole industrialized world... The dilemma, simply stated, is that we cannot sustain the unregulated growth of the sort we have had in the past – but we cannot afford *not* to keep growing because of the massive economic consequences that would result from a halt to industrial growth. Stated more bluntly, the industrialized countries of the world are structured in such a way that their economies demand growth that the world's finite resources can support only with increasing difficulty.

In their continuing efforts to expand and grow, the giant transnational corporations are extremely careless in the way they treat the natural environment, to the extent of creating serious threats to the global ecosystem.

In every ecosystem, human understanding is challenged by the same fundamental strategy of life. Unlike human economies, ecosystems never proceed as if energy, air, water, and soil were infinite. In a finite world, the strategy of life is to make the most of what is at hand... The economic calculus motivates the same behavior that made deserts of the Mediterranean lands. The peasant got the tree and, centuries later, the goat ate the last blade of grass. In modern parlance, the calculus internalizes benefits and externalizes costs. On the manufacture of solid waste, the packaging industry makes its profit now. On the disposal of it, the taxpayer pays later to open up new landfills. The market, reconciler of contending interests and objectifier of value, cannot see farther than the discounted future. The higher the interest rate, the nearer is that future. Against the always ready calculation of the interest rate, the political forum must be convened. There, as well, present optimum return holds plainer visibility than the countervalue of long-range future potential benefit. People only live once, and even the 70-plus years of present expectation are fleeting. In the contest over who gets the electricity and who gets the pollution, now and not in the future, it is also to the political forum rather than the market that contenders must repair. For these two functions, self-governing people have yet to perfect their political institutions. A [41st US A]dministration spokesman... improved on [someone else]'s cost/benefit analysis with the estimate that eliminating acid rain would soak up the military budget. A more reliable calculation, employing the... input/output model of the economy maintained by the Environmental Protection Agency, shows that management of all the major forms of pollution should cost no more than 4[%] of the GNP. That would create more jobs than equal military expenditure does now... A measure of the long lead that technological innovation has held over social invention is presented by the problem of the toxic waste dump. On the E[PA] list are 27,000 toxic waste dumps marked for cleanup at an estimated average cost of about \$25 million at each site. The product of these two numbers comes to about one-third the assets deployed by the 500 largest U.S. industrial enterprises. Protection of ground waters across the country must also reckon with numberless buried fuel tanks of households, shopping malls, and filling stations; taint from these sources has made the bottling of spring water a growth industry.

The Department for the Environment acknowledges 7200 contaminated sites in N[Z].

...By the Government's own admission, N[Z]'s environmental record falls well short of its rhetoric. Last week's State of the Environment report, a 650-page “audit” by the Ministry for the Environment, reminds us of how little progress we have made in reducing the strain that we put on nature. Even if we have changed some personal habits we have failed as a political society to confront the fundamental changes we need to make if we are to use fewer non-renewable resources and produce less waste. It's easy to ignore these issues, because dealing with them seems so difficult.

...The... International Institute for Industrial Environmental Economics at Lund University in Sweden... [carried] out a study of company reporting on the environment in [the US, Canada, AUS, NZ and 9 European] countries... And when the results were released earlier this year... N[Z] was the only country among those surveyed where not one company produced a separate environmental report[(the 'US topped the survey with between 40 and 50% of companies producing separate reports; AUS's figure was about 6%')]. For the purposes of the survey a separate environmental

report was defined as either a one-off report or a section in the annual report on the environment of three pages or longer that contained relevant information. Overall, 24[%] of companies published a separate report... A much larger number (71[%]) mentioned the environment in their annual reports but in [N]Z... only 39[%] did even that... The perceived costs of gathering information were not a significant reason[for the NZ figures, although]... most of the [N]Z companies were much smaller than others in the survey... [Incidentally, a] book written for the Business Roundtable suggests that conservation assets could be better utilised by applying market forces and that people should pay to use public parks and reserves... The... proposals for privatisation and increased exploitation of conservation lands, access charges and the disembowelling of the Department of Conservation are essentially corporate greed masquerading as concern for the environment. [The Roundtable] argues that wild places and native plants and animals have no right to exist in themselves, that they are valuable only if they can be bought or sold. This attitude and the desire to make a dollar from everything is at the heart of many serious environmental problems...

An Auckland businessman plans to set up a new group to challenge the Business Roundtable's view of social policy... He said... [what] business did also had implications for employees, other businesses and the wider community.

...*Civilisation and profits go hand in hand – US president Calvin Coolidge*... That's the view articulated by the Business Roundtable... Indeed, the Roundtable's core argument could be summarised by[the] economist... observation that "nothing contributes so much to the prosperity and happiness of a country as high profits." Although... Auckland's warm-hearted cereal manufacturer... pays tribute to the Roundtable's contribution to economic debate, he insists that a business can and should do a lot more than just enrich shareholders... [H]e's at one with[an] American humourist... who once said: "The trouble with the profit system has always been that it was highly unprofitable to most people." ...But [the Auckland] thinks a lot can emerge from a more organised debate and that the idea has a particularly important relevance right now. "Business needs a more human face," he says. "This might help the perception of business in the values-based nineties." ...The notion of businesses with social responsibility isn't new, as [the Auckland] is the first to admit. America's Businesses for Social Responsibility, formed in the early 90s, is exploring the dynamics of how business can interact with the community. And a number of [N]Z businesses have individually practiced social responsibility in isolation...

America's Business for Social Responsibility is much more than the standard trade lobby. Described in America's *Management Review* publication as "a combination of New Age corporate social and environmental activism and cutting-edge management thinking", it was launched with a dramatic philosophy different to any other business organisation. Basically, BSR aims to change the way business is done in America. [Its chief] executive... explains: "Our starting point is, if something is bad for customers, employees or the environment, then it is probably not going to be good for business. We believe long-term business profitability must incorporate environmental responsibility and social equity... Socially responsible business is not a new idea," [he] adds... "But it is an idea whose time has come."

...[a NZ]-born scientist... is no surfer, but the A[US]n Surfers Hall of Fame thought she deserved a prize for high-lighting pollution of Sydney's beaches by raw sewage. Since then... [she] has become known internationally for speaking out on global concerns. Her latest book... targets the world's major corporations, claiming they dominate so many aspects of society that the environment is being sacrificed for economic growth. It argues that with strategies to manipulate public opinion and the law, corporations have been able to conduct business as usual with little care for the environmental consequences. [She] was in Auckland recently to publicise her book. Mysteriously, at least one function... was cancelled. "I don't know why," she says... [What she does know i]s that with their new powers of domination, corporations are now beating environmentalists in the battle of ideas. Before the late 1960s, businesses wanting something had to negotiate with politicians. Then hippies, public interest groups and environmentalists forced business and governments to accept consultation. At the same time environmentalists changed public perceptions of the environment. As a result corporations found themselves on the back foot, prompting... the first wave of corporate strike back – the formation of conservative think tanks and business councils. The second wave of corporate strike back came towards the end of the last decade and early 1990s... and... aimed at proposing free market solutions to environmental problems... It is now the environmentalists, she says, who are on the back foot... "The environmental battle... is not going to be won by lobbying the people at the top... It's only going to be won by changing the hearts and minds of the general public." [She] says at present people vote in elections on the basis of their standard of living, failing to see the links between doing that and what is happening to the environment. "Individuals pursuing their self-interests and profits will benefit society... to a large extent that has been true. For many years Western society has benefited from that sort of thing. But I think we have come to the point where we need to reappraise where we are, and whether continuing along the same old path is any longer the best way to go. We can't continue along the same old path. So the question is what sort of change is necessary..."

...A new wave of global corporate activism is emerging from the U[S]. It seeks to counter the gains made by environmentalists, to undermine public support for environmental protection, and to persuade politicians against increased regulation. Corporate public relations tactics now dominate most debates about the state of the environment. That poses grave dangers for the ability of democratic societies to respond to environmental threats. Environmental public relations, or "greenwash," is a billion-dollar industry. A large part of this is spent on advising companies how to counter environmentalists. Equally large sums flow into intellectual arguments to support corporate goals, casting doubt on the magnitude of environmental problems and exaggerating the costs of regulations that are designed to solve those problems. By combining activist techniques with huge financial resources, corporations are beating environmentalists at their own game. But isn't this simply democracy in action? It is true industry has the right to lobby governments and run campaigns just as any other pressure groups do. However, what we are seeing is a perversion of democracy. Democratic expression is becoming a commodity that is more effective the more money is spent on it. For the right fee public relations firms can generate the appearance of widespread support for their corporate clients using specially tailored mailing lists and computer databases to identify potential supporters. Banks of telephone "salespeople" sell the corporate interpretation of an upcoming piece of legislation and persuade people to agree to having a letter written on their behalf to their local politician... The aim is to persuade politicians that there is a spontaneous outpouring of public opposition to the legislation. The manufacturing of grassroots support, or "astroturf," is now an \$800 million industry in the U[S] and has become a normal part of business for corporations and trade associations. The use of corporate front groups enables industrial interests to take part in public debates behind a cover of community concern. The names of these front groups are carefully chosen to mask the real interests behind them but they can usually be identified by their funding sources, membership and who controls them. The Forest Protection Society is an example of an A[US]n front group, funded by the forest industry and headed by a long-term staff member of the National Alliance of Forest Industries... Another, front group, the Global Climate Coalition – representing oil, gas, coal, automobile and chemical interests – has spent millions of dollars to persuade the public and governments that global warming is not a real threat. Dissident scientists, who oppose the general scientific consensus on global warming, have had their voices greatly amplified by fossil fuel money. These scientists do not disclose their funding sources when talking to the media... Corporate tactics being exported from the U[S] include Strategic Lawsuits Against Public Participation (Slapps) by which citizens who speak out are intimidated and silenced by the threat of lawsuits that have no legal merit. Every year thousands of people are sued in the U[S] for doing no more than exercising their democratic rights – circulating petitions, writing to public officials, speaking at (or even just attending) public meetings, organising boycotts and engaging in peaceful demonstrations. Slapps are already widely used in A[US] and in Canada they have even been used by [the NZ]-based transnational corporation... Challenge... Democracy has become dominated by a vast propaganda industry aimed at achieving the consent of the public to the goals and values of those who can best afford the experts, the think tanks, public relations firms and media outlets. Governments are less and less responsive to public demands and more and more

influenced by these corporations and monied interests. The result is that the overwhelming public support for environmental protection in most countries is not being translated into government action.

...*Don't look to business to solve society's ills...* More than 200 years ago, Adam Smith made a simple observation about business. The butcher or the baker do not provide our dinner out of benevolence... they do it out of self-interest because they can make a profit in the process. The better they do their business, the better off we all become. When they take their eyes off their jobs their businesses suffer and the community is denied the benefits generated by the honest pursuit of profit. To many that is still an unpalatable truth. Many retain the feudal notion that to be responsible business must put down its tools and attend to social concerns. They are asking butchers to be social workers not business people. What they would get, sooner or later, would be bad meat and bankrupt butchers. We should not confuse corporate social responsibility with gestures such as saving endangered species or sponsoring Christmas concerts in the park. If they are honest, most businesses that make these efforts admit they do so to add value to their firm or brand. When businesses are asked to go further and become social guardians in the name of corporate responsibility they end up failing to serve anybody properly... I can think of no other legal activity where success is so frowned on. We expect schools to be good at educating and encourage them to be better. We want hospitals to strive for excellence in a pursuit of saving lives. We do not thrust extraneous tasks on them. Yet when businesses achieve excellence, words such as "greed," "profiteering" and "exploitation" are thrown about. We hear demands that those which do well should somehow make amends for their profits. That is one reason there is much more focus on the social responsibility of business than on that of Churches, trade unions or universities, for instance. The business of business is business... Those that do the best job for consumers make the most profits. This is not a radical idea. As[the current] Pope... put it: "When a firm makes a profit this means that productive factors have been properly employed and corresponding human needs have been duly satisfied." [Someone else] put it somewhat more provocatively in 1970 when he famously said that "the social responsibility of business is to increase its profits." ...Generally, this means maximising the return on the shareholders' investment... The... shareholders should dictate the charter under which businesses operate. Managers must carry out the shareholders' aims, whether they are for quick returns or protecting Planet Earth... Recently, the idea of wider social responsibility for business has been promoted under the banner of the "stakeholder" theory that has been revived by the British Labour Party. This is the notion that businesses have diverse constituencies such as employees, customers, suppliers and local communities, all of which, it is argued, should have a voice in the firm's governance. The theory poses an immediate problem. Of course firms must be concerned with the needs of such groups, if only to be successful. But it does not follow that these wider stakeholders should exercise power over corporate decisions without having to bear the cost of mistakes. In practice the shareholders would be exploited and alone pay the price of failure. Those still imbued with the romance of socialism may see that as an overdue turning of the tables, but in fact nobody would benefit. How would the clamour of conflicting demands among stakeholders ever be resolved? Workers, inevitably, would be inclined to vote against any proposal to lay off staff though it may improve the value of the firm. Consumers would apply pressure for more and cheaper products, disregarding the profitability of the firm. The local community would inevitably lobby against the closure of a plant. What of the other communities affected because of the reduced profitability of a company forced to maintain an inefficient operation? And we should consider also the unidentified constituents in another location where the company may have begun new operations if it had been able to close down an unprofitable plant. In other words, company decision-making would become a matter of politics rather than economics... Perhaps we have difficulty accepting it because we do not like to face our individual responsibilities. I believe that we do have a duty to care for such amenities as the environment and endangered species and to make personal efforts to alleviate poverty and other social ills. These responsibilities fall on individuals' shoulders, working independently or voluntarily with others. Indeed, the attempt to evade responsibility, to push fault further up the line to "Government" "society", "big business" or anyone other than ourselves, lies behind many of our problems. One day we may be honest and mature enough to admit where real responsibility lies.

...[Why should individual members of the public be responsible for trying to ensure that businesses aren't being irresponsible – be it in regards to the environment or corporate law? 'Corporate interests still don't understand that they do their own cause harm with the public at large by fixating on policies that reflect narrow self-interest and by insisting that their interests must be paramount and at the expense of all others'. By the way, 'seven out of 10 employers in NZ admit that their mission statements emphasising customer satisfaction are fiction, according to an international study by a lecturer in business at the Auckland University of Technology. The customer comes behind meeting budgets, getting good returns on investment and making profits.']

...*"Did you ever expect a corporation to have a conscience when it has no soul to be damned, and no body to be kicked?"* asked Baron Thurlow, Lord Chancellor of England, some 200 years ago. [The executive] director of the Business Roundtable, unwittingly confirmed this soulless concept when he addressed a business seminar recently. "Those who argue that companies have a social responsibility beyond enhancing shareholder value are mistaken," he is reported as saying. "Corporations have a responsibility to maximise profits for shareholders." ...he goes on: "Many are uneasy about the profit motive but economic theory says that business promotes the general interest more effectively by pursuing its own interest rather than by directly trying to 'do good.'" Exactly which "economic theory" supports this ethically neutral view goes unstated... This dichotomy between private virtue and corporate amorality raises urgent questions in the public mind[, such as: how come, when corporations are successful, generally only the shareholders and the percentage of the public who actually want, or can afford, their products or services benefit, but when they are unsuccessful every member of society can end up paying the *price of failure*; if a business has exploited its customers in order to *make the most profits*, how can that business be described as doing *the best job for consumers*; etc.? He seems to believe that businesses should be free to provide anything that they can sell profitably without first asking themselves whether the product is really something society needs (i.e., they don't need to consider whether *productive factors have been properly employed*); shareholders shouldn't be exploited, but their businesses should be able to exploit the environment (including fauna) and other people; individuals should be responsible for what happens in their society, but groups of individuals acting as a business should only be responsible for making a profit!] What other sector of society can claim to operate in a value-free zone? ...The grateful shareholder... might find comfort in not having to examine his conscience as to just how the company in which he has invested conducts its business and earns its profits. Such a blanket declaration of a social ethics-free zone might, however, trouble the wider community... Big business often finds its operations called into question on ethical grounds, and the corporate public relations spokesman's bland reassurances are likely to be greeted with some scepticism... Corporate tax avoidance and tax evasion are at present very much in the public mind... Ethical concerns[underlie] many apparently simple economic issues such as the payment of a minimum wage. The rationalising of business accompanied by downsizing of company labour, or the decision to pull up stakes and relocate production offshore, may throw individual careers, families and communities into turmoil... One could go further. Tobacco companies fight for the right to manufacture and market their wares, come hell or high cancer rates. Decriminalised brothels would no doubt be able to maximise their profits. At the wider edges, if maximisation of profits is the supreme objective, what moral condemnation can be brought against drug traffickers, overseas industries built on child labour, child prostitution, and kiddie porn on the internet? ...Business ethics... have little to do with ethics in the classic sense, which deal with absolutes, the greatest good for the greatest number, obedience to some universal moral law, the special care of the weak, the vulnerable and minority groups, concern for unborn generations, the husbanding of the earth's resources... When it comes to such matters, the established doctrines and practices of today's prevailing economic philosophy has little to offer.

...Big business is bad business for the mass of the people. International big business is the worst and most dangerous sector in big business... [Yet] multinationals already accounted for 60% of world trade and this grew each year. - 1997

...big business only understand supply and demand Pollute the sky and rape the land The whole thing's getting out of hand... and they just keep on taking everything that they can get... with no regret... are we one big family Look around what do you see Starving people on TV and soldiers where they should not be... everyone hopes it'll be alright... [but] every generation has not learned to listen yet... [so] I... can't see no end in sight...

Power grabbers come in all shapes and sizes – from pool hall hustlers to giants of industry. Sometimes they operate outside the law, sometimes within it. And sometimes they make the laws. Whatever their calling, they seek to dominate and control everyone within their sphere of influence. While exploiting the weaknesses of others, they deny any sign of weakness in themselves. Since they view life as a “dog-eat-dog” existence, they can justify their power-grabbing behavior. “That’s the way the world works,” they will say. “It’s survival that counts. And anything it takes in order to survive is okay.” ...Money is seen as the key to survival... Like all power-grabbers, the manipulator uses money to get power and power to get more money. To the manipulator, life is a contest. But it is a contest played with little fun or enjoyment. The manipulator is likely to appear competitive, yet only participates in contests where the possibility of losing has been all but eliminated. Importance is placed not on the process but on the victory... Frequently they are fast thinkers and fast talkers who use flattery, promises of easy wealth and a variety of manipulative promotional and sales techniques to induce people to part with their money... There is probably no area of endeavor that some manipulator has left untouched if it offers the opportunity to glean fast money and power... Not infrequently, their greed for power and money blinds them to reality and allows them to be hustled by someone a little more clever than they are... Even the sharpest manipulators are at times manipulated by someone else... Increasingly with age, they are surrounded by manipulators who are now using them as they have used others.

You might be a financial wizard with a sack of loot... in an expensive suit... but... it won't make you wise... Go on... run your corporation... feed your big fat face... make another deal... and kiss some arse You can buy up half the nation but you can't buy class You bastards think it's funny lying and thieving all your life Big corporation money got your future wrapped up tight... got it writ[ten] down in black and white but remember... just cause you got the power that don't mean you got the right... not you or anybody... - Eat The Rich

This kind of economy... cannot work for man; it can only work for itself. It produces more and more means of production – that is, machines, equipment, electricity, fuel, metals – in order to again use all this in the next cycle for still more production of nonconsumable goods – that is, things that people cannot eat.

Corporations in the U[S] and Europe that have lost markets to environmental regulation have made up for those losses with the continued sale abroad of products banned at home... Preindustrial countries have been protesting double standards that permit sales to them of products banned in the domicile of the manufacturer; yet they continue, in ignorance or desperation, to use such products... [Another] mode of pollution export practiced by some transnational corporations... is... the failure to observe abroad the occupational health and safety practices enforced by law at home and even the establishment of plant abroad expressly to make products illegal at home.

Companies... frequently move their factories to... nations whose environmental regulations are less stringent... British exports of DDT... a powerful carcinogen, rose by seven times soon after it was banned from British farms. Its use became illegal in the US in 1972, yet that country exports [20,000] tonnes a year... Further, some [20] million tons of toxic waste are sent by the rich to the poor each year – often it ends up in illegal dumps.

Poorer countries victims of toxic waste policies... The issue of N[Z] sending toxic waste abroad has arisen recently. Unfortunately, the focus of concern has missed the bigger picture, which is not the trade between industrialised countries but between rich and poor nations, and N[Z]'s role in it. N[Z]ers enjoy a fairly high standard of living. Waste is part of the by-product of that living standard, toxic waste in particular. Exactly how much is produced and where it is disposed of is speculative. There is uncertainty about what is... reported, to whom, and where it eventually goes. For example, N[Z] began shipping toxic waste for final disposal in France in the 1980s but until the early 1990s neither the Foreign Ministry nor the Environment Ministry were aware of that and the trade was not formalised until 1994. Awareness has greatly increased as the amount of waste being generated has increased... At the end of [last year], the Environment Ministry estimated the amount[of toxic waste] generated in N[Z]... at 8.5 million tonnes a year... Globally, perhaps 400 million tonnes of toxic waste are generated annually. At least 90[%] comes from the wealthy countries... Initially, after dumping into the ocean was outlawed, the wealthy countries started to send it to the poorest countries all over the planet. That practice was permitted by an international convention devised by the wealthy countries to control the trade in toxic waste. Soon it began to arrive in multiple guises in the most remote countries in Africa. It then began to flow into South America and later into parts of the disintegrating Soviet Union. It goes to such places because their costs of disposal are a fraction of the cost in industrialised countries, and the wealthy countries have discerning and vocal populations who do not want waste in their back yards. Sometimes the toxic waste arrives in poor countries illegally. Other times the importation is agreed to by their Governments. This is the crux of the problem of the trade in waste: there is a disparity in bargaining power between the two sides. Countries agree to accept toxic wastes, not because they like it but because it offers an easy source of foreign currency. While the practice may be an exemplar in economic theory, ethical issues arise in a transaction where people's strongest saleable asset is their poverty and their willingness to tolerate the hazardous waste of others. In a world of increasing poverty the trade would never cease unless all poor nations stood together against it. Eventually they, and some of the more ethical wealthy countries, did just that. Rather than trying to regulate the trade in toxic waste, as the international community had intended, they banned it. The ban[was] agreed to by the majority of countries in 1994. It does not cover the trade between wealthy countries... because the obvious focus of concern was the dumping of waste on the poor, who were unable to deal with it... Unfortunately, the trade in toxic waste between rich and poor countries... did not end with the ban. By way of compromise, the international community agreed that trade was to be allowed if the produce at issue was for “recycling” and the material was not classified as “hazardous.” Not surprisingly, a huge debate (and a vast amount of reclassification) developed over what was recyclable or toxic. Keeping open the “recycling” loophole has certainly been to N[Z]'s benefit. Not only have we shipped waste to a number of developing countries (the Philippines, Indonesia, China, Korea, India and Pakistan) for “recycling,” we have also imported a bit ourselves. N[Z] has also argued against a blanket ban on the trade of toxic waste between rich and poor countries. Such an approach is now seen as the antithesis of free trade.

There are two additional problems... First, multinational advertising is selling the poor [in preindustrial (or developing) countries] food... produced and distributed by the multinational corporations... [that] they cannot generally afford. Secondly, much of this food is of little nutritional value. The result... in poor villages... is[that] less... of the virtually nonexistent family food budget... is... available for nourishing food and thus a malnourished population... According to one executive of a British-based multinational corporation, “It is a sad fact that most nutritional food products marketed by commercial firms are aimed at the segment of society least in need of them.” The poor spend their meagre resources in response to the high-powered advertising campaigns of the soft-drink corporations more than on any single item. Coke, its co-product Fanta, and Pepsi are the big three. But soft drinks are not the only villain. ITT packages its Hostess Twinkies singly; Nabisco does so with individual Ritz crackers; and Del Monte has its single slices of pineapple – all to reach into the pocket-books of an increasingly malnourished population... [Consider] two devastating

illustrations of this power of the multinational corporations. The first is a letter from a Mexican priest... written in June 1974: ["It seems that soft drinks are a very important factor in the development of villages. I have heard some people say they can't live one day without drinking a soft drink. Other people, in order to display social status, must have soft drinks with every meal, especially if there are guests... Near the larger towns where salaries are a little higher, soft drinks are cheaper. But in the very remote villages where people earn much less, and where soft drinks have to be transported in by animals, soft drinks cost in many places up to twice as much. The typical family in Metlatonoc can't earn more than 1,200 to 2,000 pesos a year. But even the little they receive each year they spend drinking soft drinks. In the richest village in this area, Olinala, where the majority of people are artisans and earn from 25 to 70 pesos a day (\$2.00 to \$5.60), about 4,000 bottles of soft drinks are consumed each day. Olinala has 6,000 inhabitants. The great majority of people are convinced that soft drinks must be consumed every day. This is mainly due to extensive advertising, especially on the radio which is so widespread in the mountains... In the meantime, in these same villages, natural products such as fruit are consumed less – in some families just once a week. Other families sell their own natural products in order to buy soft drinks..."] The second statement offers a sharp contrast. In the words of [the] Chairman of the Board of International Flavors and Fragrances (IFF) – ["How often we see in developing countries that the poorer the economic outlook, the more important the luxury of a flavoured soft drink or smoke... To the dismay of many would-be benefactors, the poorer the malnourished are, the more likely they are to spend a disproportionate amount of whatever they have on some luxury rather than on what they need... Observe, learn, study (how to sell in rapidly changing rural societies). We try to do it at IFF. It seems to pay off for us. Perhaps it will for you too."] - Bread and Justice

Recent reports suggest Mexico's soft drink situation has worsened since 1974 (although *worsened* is RELATIVE – soft drink companies probably say the situation has improved!). Another example, theoretically worse, is the promotion of baby formula to *Third World* mothers – who are often uneducated – in a manner that has caused many of them to believe this milk, which is designed primarily to substitute for human breast milk when the mother is dry (or so other people – e.g., au pairs – can feed the child if the mother isn't around), is actually better for babies than their own breast milk. Breast milk costs nothing to obtain but to artificially feed a baby 'in 1979 worked out to be 3% of the parents' income in Britain, 16% in Burma and 63% in Egypt.' Furthermore, 'baby formula requires sterilised water and utensils, and temperature control,' but few people in the Third World have proper facilities to make and heat the formula – or clean (and easily accessed) water supplies. If the mothers have to use a fire to cook or heat anything, they have to go out and collect the wood – but often their local area has 'already been denuded of vegetation for use as firewood,' which means they then have the additional expense of buying more firewood than would otherwise be necessary. This trade has resulted in 'malnutrition, chronic diarrhoea and sometimes premature death' in the babies.

The dramatic success of the consumer boycott of companies selling infant formulas in Third World countries led to a strict set of recommendations at the joint UNICEF/World Health Organisation meeting in Geneva in 1979, including a provision to ban advertising of such infant formulas and curb their sales and promotion.

Infant food manufacturers, including Nestle... systematically violate international codes by pushing their products in developing countries without saying breast milk is best, a UN-sponsored report charges. The report, released yesterday, was based on research in Poland, Thailand, South Africa and Bangladesh. In each country, health clinics had received information either promoting bottle-feeding and/or discouraging breast-feeding, it said. This was despite a 1981 W[HO] code seeking to ensure that women knew breast-feeding is best and that infant formula promotions acknowledge this... However, researchers found clinics in all the countries involved displaying promotional material from manufacturers, including calendars, leaflets and posters. Health workers accepted gifts from manufacturers and passed on samples to mothers... The WHO reported in 1993 that 1.5 million babies' lives could be saved annually through effective breast-feeding. Yesterday's report... said the risks of bottle-feeding could be particularly great in poor countries, citing over-dilution because of the cost, literacy needed to follow the label instructions, and hygiene... The report was commissioned by a group called the International Code of Marketing of Breast Milk Substitutes. - 1997

Breast-feeding "zealots" are denying N[Z] women the right to choose how to nourish their babies, says the author of... *Bottle Babies: A New Zealand Guide to Guilt-Free Bottle Feeding*... [S]he... claims a... WHO... code on the marketing of infant formula is being used to force women to breastfeed. A N[Z] version of the code effectively bans the advertising of infant formula and breaches women's rights... to make decisions... [The author attacks NZ] policies and a "religious" fervour among health professionals who steadfastly push the message that breast is best... [The former NZ] *Herald* journalist, said her book was inspired after she was unable to adequately breastfeed her new son. When she decided to switch to bottle-feeding she found a dearth of information and a campaign to keep women in the dark... The result was a sense of failure by those who could not breastfeed and years of needless suffering... She said... the WHO code was designed to protect women in the Third World by promoting breastfeeding after one company said its formula was better than breast milk... [However, the] Ministry of Health's child health adviser... said there was no ban on the marketing of infant formula. Rather, infant formula companies had adopted a self-imposed advertising ban. He said the ministry was pro-breastfeeding, because that was the best nutrition for a baby, but it was not anti-formula. [Incidentally, 'the UN's WHO plays an important role by, for instance, declaring that the Nestle corporation cannot continue in false advertising for selling formula to mothers in the Third World. The UN Development Fund and similar agencies can also do a great deal for the Third World by showing the right way in which foreign aid should be given.'

...NZ] has been ranked in the top four when it comes to helping out the world's poor in a new international index which ranks the efforts of 21 rich nations. Developed by *Foreign Policy* magazine and Washington's Centre for Global Development the index grades countries on more than their level of foreign aid... The index also considers whether the nations' trade, migration, investment, peacekeeping, and environmental policies help or hurt poor nations... The Netherlands finished first, followed by Denmark and Portugal. At the other end, A[US] finished ahead of only the U[S] and Japan, the two largest aid donors... Of the US, the researchers said: "Like Japan, an economic titan with little measured commitment to development. Tops on trade, but last on aid and environment, and surprisingly low on migration[– giving it a score of 2.6." Japan scored 2.4.] The top-ranked countries should not be congratulating themselves... "Even the Netherlands... gets only 5.6 on the 10-point scale." N[Z]'s score was 5.1]...

Faith in humans key to cash aid... It sounds simple when... [the] vice-president of... the largest transatlantic philanthropic consultancy... describes it: "You have to believe that people are ultimately generous. If you believe, then you believe people have the desire and willingness to [give others] a better society and culture in which to live." He's talking about convincing individuals to part with their hard-earned cash to support... the... development... of... beggar... countr[ies]. He... says... that... in the U[S]... the growth in philanthropy... [– 'concern for the welfare of mankind, especially as shown by acts of benevolence' –] is not from corporates but individuals... "If you look at American philanthropy, 95[%] is from individuals and 5[%] is from companies. Ultimately it is down to individuals. If they have more than they need, then they will do things for the benefit of [less developed] communities."

Corporate spending on philanthropy is meager. As a percentage of worldwide pretax income, manufacturing corporations spent only 0.9% on philanthropy in 1990.

Developing countries with healthy economic prospects are benefiting from a boom in foreign investment – but from corporations seeking market opportunities rather than governments donating aid. According to the O.E.C.D., *private investment in the developing world* reached \$159 billion in 1995, double the 1992 figure. Official aid from 21 O.E.C.D. members, however, fell to \$60 billion, a drop of 9% since 1994.

Aid for development in 1995 fell for the fourth year in a row, with 16 of the 21 major donor countries cutting back.

Recently, in Chad, hundreds of thousands of people were threatened by the combined effects of drought, malnutrition, disease, and famine. Although famine brought on by drought occurs periodically in this region, the situation has become even worse because of the inability of other countries to help out this time. The worldwide economic crisis has forced many formerly generous countries to cut back foreign aid programs and to funnel the money to the needy within their own boundaries. While this may only be a temporary setback, it may also be a glimpse of the future: We may never again be able to afford easily large-scale international aid programs.

Sweeping changes to A[US]'s programme of aid to the Pacific, recommended in a review presented yesterday to [the] Foreign Minister... would end guaranteed aid to P[NG] within three years, see some countries dumped and others progressively weaned off assistance. Fiji, Tonga and Western Samoa are high on the list of island states which could see A[US]n aid vanish in response to rising economic indicators. Fiji receives almost a third of its aid funding from Canberra. While recognising the "great national importance" of the Pacific to A[US], the review recommends tightening the rules for its \$[A]430 million-a-year regional aid programme... [S]o island Governments realise that A[US]n largesse cannot be taken for granted, and that Canberra wants results for its money... the review[recommended] that... aid to the Pacific[be] tied to the development of good economic and social policies... [Briefing papers for NZ's] Ministry of Foreign Affairs... also express concern about... the misuse of aid... N[Z] contributes about \$80 million in direct aid to the South Pacific. [□ Last year 'NZ gave \$227.8 million (0.26% of its GDP) to help developing countries'.

...NZ] is providing more than \$1 million in emergency funds to help refugees in Africa's Great Lakes region. The U[N] has asked for help for up to two million returning refugees in Rwanda... Zaire, Burundi and Tanzania.

...The U[S] is donating another \$18.45 million in aid in response to an appeal for the Great Lakes area of East Africa. - 1997

From 1946 to 1990, the U[S] extended \$374.076 billion in foreign grants and credits. Of this total, \$269.375 b... were extended to developing countries under assistance programmes and \$14.846 b... represented famine and emergency relief. In 1990, the U[S] forgave \$7.2 b... in foreign debt owed by severely underdeveloped countries. Political considerations have played a major role in determining the size of U.S. assistance.

The interaction of states on the world stage, each pursuing different aims of foreign policy, creates what is known as the International Political System. Each state tries to achieve what its leaders feel is essential for survival – keeping its territory intact, national wealth, access to markets and protection from potential enemies. The state's leader pursues these aims using a mixture of diplomacy (persuading other states to accept its needs), economic power and force. Because some states are more powerful than others, either through size, economic strength or geographical position, the system is inherently unequal and constantly fraught with danger... In an effort to reflect the reality of the international system, it has become normal to divide states into different categories, based upon their strength and influence. The most common such division, introduced in the 1950s, is the idea of the First, Second and Third Worlds, largely based on political considerations... Western Europe, North America, Australasia and Japan... [form] the First World... [T]he Second World[is] essentially the Soviet Bloc and China... This is the basis for the main ideological split in the world – that between "West" (First World) and "East" (Second World). This leaves the majority of countries, situated in Latin America, the Middle East, Africa and Southeast Asia, to be lumped together into the Third World, characterised by its general lack of power and influence. This stems from the fact that the countries involved are, in most cases, struggling to develop the political and economic structures so essential to stability. For this reason, they are often called "developing states" and some commentators even distinguish a group within them, known as the Fourth World, which means much weaker than the rest... All this is unsatisfactory on a number of counts. First, not all countries fit neatly into the categories laid down... Second, many states, particularly in the Third World, regard the use of such terms as insulting, implying as they do that First World states have somehow achieved a superior form of government which other states have to struggle to match. Finally, and perhaps most importantly, the division is not very accurate, ignoring the power and influence of some Third World states (notably those with access to oil, primarily in the Middle East) and presuming that the East-West divide is the only important element in international politics... This latter point has led, in more recent years, to an acceptance that the world can be divided far more realistically into "North" and "South"... [(o)bviously, countries such as South Africa, A[US and NZ] do not fit the pattern... [of the South]. Between them, the South's genuine] member states may encompass a large enough part of the world to form a potentially powerful voice, but they are inhabited by people with little economic strength. Canada, for example... has more industrial power than the whole of Black Africa, [which has] a population ten times as large... Today seven out of 10 African countries... are actually "underdeveloping", a source of grave social and political instability which has given rise to persistent military coups, riots and even insurrections as the people demand services which their governments cannot afford to provide... [T]he threat of a "resource war" is a much discussed possibility... [However, although] Northern countries... export arms to the South... the military balance has not shifted in the latter's favour... The rich nations spend every year on development aid less than 0.5[%] of worldwide military spending... Furthermore, the economic assistance which the South has received from the North, far from solving its problems, has in some cases merely contributed to them... Unfortunately, aid often carries heavy interest payments, especially when loans are provided by the... IMF... or the world's leading (Western) banks. As a result, the developing countries have become increasingly indebted. By the mid-1980s, they owed nearly \$300 billion in back payments. The international economic order is becoming increasingly unstable. Many countries are finding it impossible to live within strained means, let alone develop their economies. In some cases, countries need to borrow simply to repay the interest on their loans. At the end of the 1970s the most indebted country in the world, Mauritania, owed more than 115[%] of its annual income. The Sudan owed 80[%]; Tanzania and Indonesia more than 60[%]... Given such problems, there is the possibility that the South might one day simply refuse to repay what it owes. This would have catastrophic consequences if carried out since it would destroy confidence in the Western banking system...

WHILE mega-rich Saudi princes might have no trouble handing over billions in cash to fund purchases, banks in their cash-strapped near-neighbours Libya and Niger have been forced to adopt more novel funding mechanisms. Libya is making Niger a \$27 million loan, which is to be repaid in part with camels rather than cash... They'll hand over 1500 annually for the next 10 years.

...Recently I returned from Senegal after being sent there to debrief World Vision workers who were forced to flee Sierra Leone after a military coup. It was a nasty business and completely unexpected. Marauding soldiers, taking advantage of the confusion, roamed the streets of Freetown smashing and looting. The wife of one of our staff had a gun thrust through her kitchen window and was threatened with being shot unless she opened the door... When they entered, they insisted that she hand over cash and jewellery. In a final act of terror, one of them put a gun to the head of her eldest child and demanded the children's shoes. It was my job to counsel our staff and their families and help them to deal with their traumatic experiences... Their position is akin to the social worker who is beaten up by an angry client: "Why me? I was here to help."

Nevertheless, attacks on aid workers around the world are becoming increasingly common. No longer can they rely on working under a non-governmental organisation (NGO) banner such as a red cross to offer them any protection, and it would pay for all countries and individuals interested in humanitarian work to consider why this is so. The first thing to note is that increasingly first-world governments channel aid money through NGOs. This circumvents money being siphoned off by corrupt administrations. But if a third-world government is dependent on foreign money to maintain stability, then NGOs are going to be a prime target of attack by any dissident element which wishes to destabilise that government. The situation is made worse because there is no better way to attract attention to your country's plight than through the well-being of a first-world citizen. In my experience few things get the media buzzing more in the U[S] than the kidnapping of an American citizen in a third-world environment... The West has much to contribute to the Third World in terms of expertise and experience, but we should... give aid for the right reasons. I read a report in the *Los Angeles Times* recently which showed how the U[S] is assisting the development of poor villages in Mexico. Nice, you might think. But it transpired that the real motive of this "aid" was to provide a slightly trained workforce for American-owned companies (car companies especially) in order to enable them to keep labour costs down and continue to compete with foreign vehicle importers. Third-world citizens are not stupid. They can work out just as easily as anybody else who the real beneficiaries of this kind of "aid" are and inevitably will become contemptuous of it... The Cold War maintained a kind of neutrality in third-world environments but now the situation is much more volatile. As a consequence terrorism and violence is likely to continue to increase in the foreseeable future. - 1997

As the politicians and lawyers never tire of telling [everyone], there is just so much to go around, and you have to be aggressive in getting a piece of it. What is not said, but of course is always tacitly understood, is that you must get there ahead of others, and if this means that some other equally "worthy cause" gets short shrift, well that's the nature of the game.

Developed countries are consuming energy and raw materials at five times their rate of population growth... [T]he addition of 75 million Americans (current population increase projections for the year 2000) in terms of consumption of ever-scarcer, non-renewable resources, is equal to that of 10 billion Nigerians or 22 billion Indonesians.

The people of the U[S] consume... a third and more of the world output of energy... From all the different primary sources – coal, petroleum, natural gas, falling water and nuclear fission – expressed in the common denominator of the energy evolved from the burning of a ton of coal, they consume the energy-equivalent of 2.3 billion tons of coal each year. That is nearly 14 tons of coal per capita.

The [U]S... comprises 5[%] of the world's population and uses approximately 30[%] of its energy[('70,569 trillion btu. in 1975; 80,246 in 1988')]. Our enormously powerful and expensive military forces exist, as[the] Secretary of Defence... reminded Congress in his annual report for fiscal year 1984, not only to protect us but 'to protect access to foreign markets and overseas resources.' Once our multinational corporations expropriate those resources, usually on terms that cause great hardship over time in the Third World, they – in co-operation with the big labour unions, who seldom look beyond the immediate issues of wages and growth – produce for us planned obsolescence; toxic products; polluted air, soil, and water; and manipulate advertising campaigns to convince us the quality of American life has everything to do with having and little to do with being.

The wealthy nations naturally use their economic and political power to protect and enhance their privileged position... Trade policies consistently discriminate against products imported from poor countries, especially potentially competitive processed goods. Unprocessed commodities typically enter duty free, whereas the same products are subject to tariffs if they have already been processed. This practice keeps the poor countries from taking advantage of their lower labor costs, one of the few resources the poorest of the nations possess; it discourages industrial growth and reinforces the dependence upon industrial nations of countries that supply raw materials. As a result of all these factors, the poor countries' share of total world trade is small and declining. Because they maintain a much greater volume of total trade, rich countries even export more primary resources than the poor countries. The resource-supplying nations are slowly learning to band together for mutual assistance and to use such devices as cartel-controlled pricing. But such a technique only works for nations that control strategic resources in sufficient quantity that they provide an effective bargaining position.

In 1973, the sellers of... oil found it in their power to set its price... Frightened by the prospect of inflation upon repercussion of the oil-price increase elsewhere in their systems... the industrial market economies... put deflationary brakes on their economic growth. Especially for conservative governments in the U[K] and the Federal Republic of Germany, such policies comported with ideology; they tightened the money supply, reduced social expenditure, and gave freer rein to private enterprise. The... U.S. economy was becalmed with... the rest of the industrial world in the doldrums of no growth. To the preindustrial nations, the forces thus exerted on the world economy brought deepening distress. Decline in their exports and in terms of trade for what they did export put one nation after another into current-account deficit. Growth of the "newly industrializing" economies was sustained for a while by the recycling of the petrodollars in loans, especially by the U.S. banks. Interest payments on debt swollen by these easy-money loans at rates inflated by the U.S. Treasury soon increased to punishing percentages... In 1983, the flow of funds between the industrial and preindustrial worlds went into reverse; by 1990, the preindustrial countries had, in effect, extended \$200 billion in aid to the recovery of the industrial countries. The weak and tentative recovery of the industrial market economies in the late 1980s – by which time inflation had discounted the price of oil in current dollars back to its pre-OPEC level – brought no corresponding increase in their imports from the preindustrial world. Especially to the distress of sub-Saharan Africa, the rich nations had learned to live without certain agricultural raw materials and were recycling copper and other metals above ground more efficiently. Food exports from some African countries were displaced by competitive cultivation of their products in Southeast Asia and the Caribbean under sponsorship of the transnational marketers of luxury foods... The most serious untoward human consequence of the recession relate, of course, to the halting of economic growth and the consequent decline in GNP per capita in so many... preindustrial countries. Many African countries had been experiencing decline in available calories per capita in the 1970s... The number of malnourished people in Africa is estimated to have increased from 60 million in 1970 to 100 million in 1985. Statistical reporting from these countries tends to be belated and uncertain[but] women and children suffer first and worst in reversal of national fortunes... The economic downturn in the Latin American countries worked its principal harm on the poorest people there. According to... UNICEF... 30,000 more infants died in Brazil in 1984 than in 1982, indicating a pronounced increase in the infant-mortality rate... As early as 1985[the] then Secretary of the Treasury of the U[S], conceded for the industrial creditors that the preindustrial countries could not service, much less ever pay, their then \$800 billion debt without economic growth... The adjustment measures urged and effected... [by] the World Bank and the International Monetary Fund, as well as other bilateral lenders... reflect not only the ideology of the creditors but the priorities of the debtor governments. In most countries, balancing of the national budget seriously reduced expenditures and programs that had channelled economic growth into human development. Budget cuts in the low-income countries, most of them in Africa, reduced expenditures on health by 50[%] between 1972 and 1988; the middle-income countries cut their health expenditures by 30[%]. The low-income countries made equal cuts in

their education budgets, from 20.5 to 9[%] of their governmental expenditures, during the same period. Under counsel from their creditors and under the burden of their debts, the newly industrializing countries in Latin America cut their health and education budgets as well: Argentina, by 65[%]; Brazil, by 42[%]; Mexico, by 43[%]... Everywhere, the budget cutting uncovered a feature of the social order emerging in the preindustrial countries... the percentage of total government expenditure reserved for “public administration” invariably increased. The government payroll identifies the elite of these new societies and furnishes the living and the social security of the higher-income, more highly-educated people. Overloading of that payroll often leaves inadequate funds for office equipment and supplies. Thus, in Kenya, budget cutting increased the percentage of the public administration budget allocated to salaries from 60... to 90[%].

...in the current system of so-called international division of labour the industry and agriculture of Third World countries are controlled by foreign aid and by credits from international banks so that their production is primarily oriented towards the needs of the industrial countries. They are forced to sell their goods cheaply and to buy expensive industrial products in return, which leads to massive indebtedness. To pay their debts, Third World countries have to increase their exports, which is possible only by paying starvation wages. At the same time, their purchasing power keeps decreasing. Thus massive poverty becomes the foundation of an economy totally oriented towards foreign countries.

The foreign debt burdens of many of the world’s poorest countries remain a serious impediment to their development. The 1996 Trade and Development Report, just released by the Geneva-based U[N] Conference on Trade and Development... describes 40 countries – 34 of them in Africa – as “heavily indebted.” The money some countries owe to multilateral aid agencies, chiefly the I[MF] and the World Bank, accounts for more than half their total debt and is a “rising proportion of total indebtedness,” according to the report. Africa, the world’s poorest continent, faces the most serious difficulties. Its debt service payments – interest and capital repayments – shot up from \$NZ31 billion in 1994 to \$47 billion last year. Although a number of debt relief schemes have been tried over the past 10 years, most of the countries affected have seen little benefit. In 1994, for example, lending countries approved the “Naples terms,” which permit up to two-thirds reduction in debt service payments. But because of strict criteria for eligibility, only a handful of countries have benefited... “It’s critical for the human welfare of millions that progress is made on debt relief...”

Popular disillusion from... experience with economic assistance – and official disappointment, just as often, in what it bought politically – has put “foreign aid” at the bottom of the priority list in the politics of the U[S] and most other industrial countries. Starting as a trickle and then surpassing government outlays, investment by transnational corporations and lending banks have established the closest economic links between the industrial and traditional worlds. The flow of private funds has been even more narrowly directed, however, than the flow of official funds... The transnational corporations... constitute an entirely new kind of world-besiding sovereignty. Only four preindustrial economies had a [GNP]... in 1985 larger than the turnover of the biggest transnational that year... One-third of the 159 members of the U[N] in 1989 were smaller, by that comparison, than the smallest of the 350 largest transnationals... Some 15 transnational corporations control more than half the food trade. Fewer companies control higher percentages of the shipment of each of the more lucrative commodities. To their “home” countries or to the world market... the preindustrial countries have found their access and connection being made by an ever smaller number of ever larger transnational corporations. These corporations are the winners in the world market contest... Whatever their country of domicile, the transnational corporations tend to do an increasing percentage of their business outside that country. Some make more of their sales, more even of their product, and most of their profit in other countries... As increasingly stateless entities, they burke the sovereignty of nation-states, large ones as well as small... The corporations are in those countries, it goes without saying, for their own purposes, not to promote the economic development of their hosts.

Recall that US *multinational corporations cause great hardship over time in the Third World*. Most multinationals would dispute that statement. After all, many have moved production to the Third World, thus providing stable employment for people who mightn’t have it otherwise, which also causes money to be circulated though the local communities. However, while this means that in most instances products will be manufactured at the source of the raw materials (which is desirable), it also means that people in one part of the world lose their jobs to people in another. Why would a corporation decide that it is sensible to make one lot of workers (who may live near the corporation’s head office) redundant, close down a factory, build a new one in another country, then employ – and train – a different lot of workers to staff it? Because the people losing their jobs are high paid; those gaining jobs are low paid. If a corporation has to pay \$10 per hour to a worker in one nation but only \$0.30 per hour in another – but can still sell the product for the \$10 per hour price in the original nation – it’s easy to see what the motivation behind such apparently mindless endeavours is. A corporation’s primary reason for investing in the Third World is to maximise profits by exploiting the low wages that are maintained by national debt (and, in part, by foreign aid)!

MICKEY MOUSE, who has delighted youngsters for decades, is facing tough questions from children over alleged abuses of workers who make Disney clothes and toys. Although Walt Disney Co said the charges were either unsubstantiated or dated, a labour rights group has started a week-long campaign to highlight Disney business in countries with questionable human rights records. The New York-based National Labour Committee said it planned pickets, marches, leaflet distribution and protests at Disney stores in several major U[S] and Canadian cities. The action was scheduled for a time of year when the company’s popular products were in demand... [The] NLC executive director... alleged that wages as low as US\$30c an hour were paid to workers at a factory in Haiti making two-piece *101 Dalmatians* garments. Disney said that the median wage for workers who make Disney-licensed goods was “well above the Haitian minimum wage”.

...Women making Nike shoes in Indonesia work up to 80 hours a week for as little as 40c (NZ) an hour, the aid agency Community Aid Abroad said in Sydney yesterday... Workers were often forced to work overtime... the women lose fingers in unsafe machinery and are subjected to abuse by supervisors, the agency said in a report on the sport shoe manufacturing industry. It said Nike did not actually make shoes but designed and marketed them, contracting the manufacturing out to suppliers. - 1996

Vietnamese women as young as 15 toil for US\$20c... an hour to make a million Nike shoes a month, suffering corporal punishment and sexual harassment, according to a report. “Supervisors humiliate women, force them to kneel, to stand in the hot sun, treating them like recruits in boot camp,” [a] labour activist... of the U[S]-based Vietnam Labour Watch said in New York. [His] report on working conditions was made after a 16-day inspection of four Vietnamese plants that make products for the athletic shoe giant... [It] said that about 35,000 workers at the plants – more than 90[%] young women – put in 12-hour days in over-heated and noisy environments to make shoes with labour costs of under \$US2 that retail for up to \$US149. In one plant, he found workers who during an eight-hour period were allowed to go to the bathroom once and to take only two drinks of water. Their average wages are \$US1.60 for eight hours of work – and it costs more than \$US2 to buy three meals a day... He said at one Nike subcontractor... a floor manager forced 56 women to run around the plant in the hot sun as punishment for wearing non-regulation shoes. Twelve fainted and were taken to hospital. That manager has been suspended, Nike... said... About 3[%] of Nike’s output is produced in Vietnam, a Nike spokesman said. [Incidentally, Nike (which uses the phrase: ‘I’ve failed over and over in my life’ in an advertisement; and is also known for the statement: ‘At Nike our philosophy is you can’t be afraid to make mistakes or you won’t take chances – our one and only rule is there’s no such thing as a

dumb idea') 'is recalling 350,000 pairs of its Air Force Up range, because a design flaw has injured about 35 people who wore the studded basketball shoes. Nike says the shoe, which went on sale five months ago, has a small rivet attached to the outside of the shoe that can be bent to form a sharp edge.'

...Sports marketing giant Nike Inc[has] posted a 12[%] increase in quarterly profits... [after its r]evenues rose 21[%] to a record \$2.77 billion... Nike said it earned \$US253 million... or 85USc a share, in the quarter...

Next time you light a stick of incense spare a thought for... the millions of... Indian women who get paid 6c for every thousand sticks they roll. Surprisingly this is a "good" rate, made possible only with the help of India's biggest trade union, Sewa, the Self-employed Women's Association[, which was]... started... by an Indian woman... who wanted laws to protect the millions of women working on their own. Statistics indicated that of the total workforce at the time 90[%] were in unorganised labour. Of those, 94[%] were women... Before joining the Ahmedabad-based union [incense rollers were] paid even less... roughly half[the] current rate... Each of the women deftly rolls a tiny amount of... black paste... a mixture of charcoal, clay, perfume or oil on to each bamboo stick. The mixture can be bad for their health when it gets into their lungs... alongside the ugly textile mills with their huge brick smokestacks belching thick plumes... the underbelly of Ahmedabad[, which is home to] hundreds of Sewa's 162,000 members. In a neighbouring house [another woman] and her two daughters-in-law are busy hand-rolling the small cigarettes known as bidis. For every 1000 she will be paid just over \$1. With time for domestic duties taken into account, it will take her about a day and a morning to earn this sum. "Those who are fast in rolling bidis, they can make 1000. I am old so I can't make 1000 a day... I do around about 800 or 900." She is 40 years old and has been rolling cigarettes since she was a small child... [W]omen must buy the tobacco and tobacco leaves from the trader to whom they are contracted. Each leaf has to be wet to prevent it from breaking during rolling. The leaves have to be cut to size and the stems shaved with a razor. After rolling, each cigarette is tied with fine cotton... [By the way, Triumph -] the world's biggest underwear company - ...makes most of its products in China due to cheaper labour costs...

Singer Co plans to close factories and fire about 6000 workers, or 28[%] of its staff, in a bid to cut costs and boost the sewing-machine maker's earnings... The company will be moving production to facilities in northern Brazil, Russia, and... China... The moves will save the company money. Workers in the new locations will make \$US3000 to \$US4500... a year, compared with as much as \$US65,000 in some existing locations... Singer estimates the restructuring will reduce its costs by \$104 million annually... Singer is the largest maker of commercial and industrial sewing machines with about 43[%] of the consumer market and about 20[%] of the industrial market.

...A leading labour rights activist has accused [a group of companies] of subcontracting in a Nicaraguan "sweatshop" despite efforts to end exploitation of Central American, Caribbean and Asian workers... [An] investigation found sewing workers making 15c an hour and children as young as 15 in one apparel plant. [A spokesperson for one of the companies] said: "We take allegations regarding the manufacturing of our merchandise very seriously and we are investigating this..." ...The company noted, however, that the minimum wage in Nicaragua was 15c an hour and 14 the legal working age... [In related news, w]ith its share of the U[S] men's jeans market dropping from 48[%] in 1990 to an estimated 26[%] because]... Wrangler and Lee brands... have taken about \$US1 billion... each in annual sales away from... [it.] Levi Strauss and Co is cutting back. It has announced it will close 11 plants in four states, putting nearly 6400 out of work - 34[%] of its manufacturing workforce in the U[S] and Canada. Last February, Levi announced 1000 job cuts in the U[S]. Levi says the layoffs are limited to the U[S], since the company is growing abroad. The company, which says it tries to make most of its product near where it is sold, employs 13,500 workers outside North America... Despite its problems, Levi says it had a record \$US7.1 billion in worldwide sales last year. That included \$US4.3 billion in sales in the U[S]...

SLICK AND SEXY, GUESS?, INC.'S LONG-cultivated image began turning seedy last year. First, five contractors for the \$500 million clothing empire were cited by Californian inspectors for illegal home-sewing operations. Then a class-action suit accused Guess and 16 subcontractors of paying their mostly immigrant workers less than minimum wage... Last week... the jeans giant... revealed that in the past year - just as it was fending off an organizing campaign by UNITE, the nation's largest garment-workers' union - the company was quietly shifting about 40% of its manufacturing to Mexico and South America. Only three years ago, Guess was making 97% of its garments in the U.S... The shift may already be showing results: Guess's profits improved slightly for the first nine months of 1996, with \$40.5 million in earnings on \$411.9 million in sales. In Mexico the company's stitchers earn \$20 to \$40 a week, compared with about \$5 an hour for their Los Angeles counterparts, who are overwhelmingly Latino immigrants. The difference shaves up to \$2 off the cost of each pair of jeans and explains, in part, why U.S. apparel jobs have dropped 43% since 1973. [In local news, 'an Auckland factory busted for paying its mainly Chinese immigrant machinists less than the minimum wage has started paying legal rates. The factory owner, who was notified of the rate by the Clothing Union, also promised to give the workers backpay.']

...After rattling global financial markets two years ago when it nearly defaulted on \$30 billion in foreign debt, Mexico tried to spotlight its return to creditworthiness last week by announcing prepayment of the remaining \$3.5 billion it owed the U.S. from a \$12.5 billion emergency-aid program negotiated in February 1995... Mexico's financial crisis erupted the year the North American Free Trade Agreement went into effect... But the Mexican economy rebounded last year as exports surged. Mexico will also save about \$500 million in interest charges by replacing its higher-cost U.S. debt with cheaper currencies like the Japanese yen. - 1997

To make their low-priced labor force more accessible to employers from overseas, preindustrial countries have established "export processing zones." Manufacturers ship into these zones, tariff-free, their raw materials, intermediate products, and component parts for the handwork that takes them to the next or final stage of production... In 1980, there were more than 50 of these zones in preindustrial countries... In the Mexican zones... U.S. corporations have come to employ 500,000 Mexican workers over the past decade. They pay them less than \$1.00 per hour... The nearly 2000 factories owned by U.S. companies along the northern border of Mexico are called *maquilas*, after the mill to which a farmer takes his corn for grinding. In this transaction, there is no technology transfer. The *maquiladora* arrangement is a measure of the poverty of Mexico and its people. It is equally a measure of breakdown of social arrangements and the decline of factory jobs in the U[S]... The nations of the poor shed most of the blood drawn by the Cold War... With the end of the Cold War... the time has come to address the important questions: Environment and Development... [The] industrial revolution that began 400 years ago is very much a current event. Abruptly, it has divided the planet into two worlds: a new world of rich industrial nations and the traditional world of the poor. Since 1950, the people of the rich nations have taxed the planetary ecosystem with a fourfold multiplication of their consumption of goods per capita. Industrial revolution long ago increased production ahead of the increase of population. Now, assured of the survival of their first children, these fortunate people - nearly one-quarter of the world population - are bringing their population growth to zero, with low death rates and low birth rates. In contrast, for the people of the 130-odd poor nations, the industrial revolution has just begun. Already it has brought a lengthening of life expectancy; however... they maintain high birth rates. The consequent population explosion in these regions accounts for most of the doubling of the world population since 1950... If [humanity's] population is to be stabilized, the industrial revolution of the poor countries must be accelerated... [because] development has proved to be the surest mode of population control... As such, it is the ultimate environmental protection measure. To that end... "common humanity must heal in time the estrangement in which for so long some people have lived rich and most have died poor." ...Among the necessities taken for granted by people fortunate enough to have their industrial revolutions behind them are potable water, sanitary disposal of their excrement, and a dwelling secure against the weather. The same lucky people know still other necessities: electric light to lengthen the day, retinues of large and small household appliances, personal mobility and the public services of communication and transportation, safety, medical care, and education. All of this comes from the value that these people add by technology to their resources, the same resources that are available in one combination or

another in preindustrial countries. Presently, for lack of industrial technology, the human and physical resources of those countries go underemployed and under-utilized... In the export of agricultural products to the industrial world, the terms of trade for the poor countries have declined 15[%] over the past decade and 25[%] over the past 15 years. The terms factor in not only the decline in prices for their exports but the relentless increase in the prices of the industrial goods they buy in exchange... Ever since the beginning of civilization, people have organized their social institutions to secure the inequitable distribution of goods that were always, until recent times, in short supply. Now the inequity that divides humankind is international; people are inhabitants of rich nations or of poor nations. And the rich go on living at the expense of the poor. From historic habit, nations make policy and people continue to root their morality in the assumption that there can never be enough to go around. The industrial revolution has confuted that assumption... The internationalization of inequity is absurd because it is not compelled by any scarcity of physical resources – and absurd again because the stock of objective knowledge that commands the Earth's resources, going back to the first stone tool, is the common heritage of all mankind. It is a menace... to the survival of the human species... because the poverty of the 75[%] amplifies the destruction that the rich have been wreaking on the biosphere. [Even if] the industrial nations... succeed in reducing the destruction they do, it must continue to be amplified by the rising numbers and desperation of the poor[, who]... have seen little or no improvement in the supply to them of food and other necessities... Want is the one thing that the peoples of the preindustrial world have in common... The well-being of the 25[%] who live in the industrial nations was won and is maintained in part at the expense of the 75[%] in the preindustrial world.

Coming *third* isn't normally a bad thing – unless there isn't a *fourth*, in which case it is just a polite (or condescending) way of saying LAST. In the same instance, coming *second* merely represents being average. The above quote split the world into two unequal parts, which a previous quote called *North* and *South*. For the remainder of this thesis the *two unequal parts* will simply be called the FIRST WORLD and the LAST WORLD, with countries belonging to one or the other depending in their economic wealth.

In order to compare the respective wealth of countries they are most often ranked according to the figure produced when 'the total value of goods produced and services provided in each country in one year' is divided by their population – otherwise known as the GDP (or GNP). However, a country's GDP doesn't take into account hidden labour (e.g., voluntary work – including housework) and environmental costs.

Gross National Product (GNP) essentially measures how many goods are produced by the country, but Greens reject the simple notion that goods = growth = happier and healthier human beings. If goods could be made to last longer or could be repaired more easily, this would increase our standard of living in the most material sense, yet if goods were better made and didn't need to be replaced so often, GNP would fall. Goods produced with built-in obsolescence are part of economic 'progress'. As they are replaced, jobs are created, profits rise and the balance-of-payments position of the country producing them tends towards surplus. Real growth should take account of qualitative factors such as workmanship and durability rather than crude quantitative measures of how fast goods are consumed and destroyed. Where production takes place, the use of scarce resources, the contribution to the greenhouse effect and the creation of other ecological ills should be taken into account. At present, if factories pump toxins into a river, leading to increased spending by local water authorities, such spending is counted as 'growth'. If racism and poverty prompt inner-city riots, the resulting increase in police overtime is also regarded as 'growth'.

A badly designed pulp mill leaking mercury waste into a river may run at a profit of so many hundred thousand per year, but in the process may destroy a fishery worth twice as much; thus the pulp mill apparently runs at a profit, but the overall effect to the system is a loss. Atmospheric pollution in cities costs millions in crumbling stonework, lost working days, hospital beds and so on, with probably as much loss by way of reduced agricultural production outside. If this cost were borne by the factories producing the pollution they would probably prove uneconomic. Usually the cost of removing the pollution is less than the cost of the damage done...

Modern industrial systems still do not normally include in the cost of what they produce such diseconomies of production and distribution as the spewing off of effluents into the air or the overloading of the land with solid waste or the lack of any charge for eventual disposal of the used-up goods. Thus they pass on a hidden and heavy cost to the community, where it is either met by higher taxation and public spending or by the destruction of amenity. The costs cannot be avoided. The citizen pays either as consumer or as taxpayer or as victim. The political and economic problems raised by the inexorable and unavoidable price spring from the fact that different citizens are involved in the problem in quite different degrees. The taxpayer may be out of reach of the major pollutions and have no direct incentive to clean them up. Yet poorer citizens can hardly welcome an increase in consumer prices for daily necessities even though they might be glad of cleaner air. The calculus of who shall pay for what improvement is *the* political issue at the core of any policy designed to deal with hidden subsidies and external diseconomies that underlie many of the present methods of satisfying economic needs.

Every N[Z]er is born with a silver spoon in his mouth. If you're Vietnamese, Chinese or whatever, you look at what the average Kiwi has got, so all life is relative.

...Our standard of living is worse than most other developed countries, including A[US], says a new international report. N[Z] ranks 20th out of 28 OECD countries for living standards and a large gulf separates us from the world's leading... economies. One of the smallest countries, Luxembourg, scored the highest standard of living, followed by the U[S], while Turkey came last... □ Statistics N[Z] does not consider gross domestic product per capita, used in the OECD report, an accurate reflection of standards of living because it says quality of life cannot be measured solely by production.

In the *Human Development Report 1990*, the statisticians of the UN Development Program propose a new kind of index of progress. It is to stand alongside GNP per capita and to counter the "narrow and misleading attention to only one dimension of human life" that is fixed by that familiar index number. The "human development index number" [HDI] is the summary expression of three indicators: life expectancy, literacy, and "income for a decent living standard." ...Since "there are diminishing returns in the conversion of income into the fulfillment of human needs," these numbers in the [HDI] are transformed to their logarithms. This operation narrows the gap between the top and bottom incomes stated in GNP per capita. Thus, the GNP-per-capita scale... suggests that the Swiss, at \$21,330 per capita in 1987, were 142 times better off than the people of Zaire, at \$150 per capita... [Going by the HDI], that difference shrinks to about 20 times. While it would take teams of anthropologists, social psychologists, and, perhaps, psychoanalysts to prove it, the smaller gap seems more plausible... The [HDI] ranks Japan at the top... Switzerland in third... and Niger at the bottom. On the GNP... scale, Japan's \$15,760 places it fourth... In second place on the GNP... scale, at \$18,530, the U[S] drops to nineteenth place on the [HDI]... At the top of the list... appear, of course, all of the 31 industrial nations.

Generally, the First World is now said to consist of '27 developed countries' – the 21-top OECD countries plus the 'newly industrializing countries: South Korea, Taiwan, Hong Kong, Singapore, Argentina and Brazil.' However, those last six countries probably have more in common with the industrialised Second World than the First. For the purposes of this thesis, the *First World* countries will more precisely be those where the majority of their population

have a comfortable standard of living (i.e., where the *survival of their first children* is assured; where the *necessities are taken for granted*; where human rights are generally acknowledged and life is mostly peaceful), while the *Last World* will be the remainder (i.e., the OECD countries that aren't ranked in the *top-21*, plus most if not all of the *newly industrializing countries*, plus China, Russia and most if not all of eastern Europe).

People in eastern Europe went from one dictator to another... [Consequently,] **there is a very high level of poverty.**

A possible exception to the eastern European trend (i.e., a nation with a very low level of poverty – or a First World contender) is the Czech Republic.

Bohemia, Moravia, and Slovakia were united in the independent nation of Czechoslovakia from 1918 to 1992. A separate, independent Czech Republic came into being on Jan. 1, 1993... Czech Republic has a high standard of living as compared with other formerly communist countries.

Times are heady in Eastern Europe... Eight years after the fall of the Berlin Wall and six since the collapse of the Soviet Union, most of the region's economies are growing smartly. Perhaps too smartly. Economic growth is good but too much, too soon, can transform fantasies of prosperity into nightmares. Mexico learned that lesson in December 1994, when the crash of its peso threw the economy into a deep depression. Last May a currency crisis brought an abrupt end to the boom in the Czech Republic... Early warning signals... [mean all] of Eastern Europe's governments still have time to avoid currency crises. But budget cutting and monetary tightening are always painful. It is easier for governments to cross their fingers and publicly deny the warning signs. Of all the indicators of trouble ahead, this may be the most reliable.

...[In one of the poorest nations in Europe, tyrant Nicolae Ceausescu built one of the world's most monstrous palaces. Now the architect is going back to finish it. He won't be drawn on how much the palace, a mish-mash of architectural styles, has cost so far – estimates start at US\$2.5b – or how many workers, political prisoners among them, died during its construction. But other vital statistics roll off his tongue: 84m high, 270m long, 245m wide and stretching 92m underground, the House of the Republic (also known as the marble palace) is the largest public building in Europe, and the 2nd largest in the world after the Pentagon; there are 13 floors and 7000 rooms. There's no air conditioning (Ceausescu feared chemical attacks through the ventilation system), but just as well – if all its lights are turned on the palace burns more electricity in 3 hours than Bucharest's 2 million inhabitants consume in 24.]

...Prisoners join protest... Thousands of inmates, some sleeping three to a bed, have intensified a protest in Bucharest's main prison to demand better conditions and faster parole... Inmates at the 19th century Jilava prison on the capital's outskirts refused food, burned bedsheets and shouted "Freedom, freedom," and "We want new laws" for the third day in a row. "We will go to the bitter end with our protests,"... said... one of 3500 convicts in... Cell No 56. The room was jammed with 51 inmates, three times normal capacity. Unshaven inmates stuck their heads through the narrow windows of steel cell doors, shouting: "We want our rights." The prison, intended to hold 1500 inmates, is typical in a country where post-communist crime has swelled the numbers of those serving time. Officially there are 43,000 inmates in Romania...

Just four months after they staged noisy strikes to demand job security, the traditionally militant miners of Romania's Jiu Valley are queuing up to... [receive] redundancy money from the Government... worth between 12 and 20 months of salary, depending on length of service... Prices have doubled as shopkeepers try to take advantage of the money suddenly accumulating in miners' wallets... Labour leaders predict 60[%] of the 43,000 Jiu Valley miners will eventually opt for redundancy. Up to 56,000 miners across Romania... have already signed up for severance pay... They have been pocketing the equivalent of between \$US1700... and \$US2200... The Government says 110 inefficient pits will close[because it 'is cheaper to import coal from Yugoslavia and the Ukraine']... Those staying behind are resigned to complying with the general line of austerity promoted by the Government keen to meet the demands of Western creditors... What is certain is that the traditional militancy of Jiu Valley miners has all but faded away. They wreaked havoc on Bucharest streets in 1990 and 1991, ransacking opposition party offices and beating up anti-communist strikers... [who had been denouncing the] dictator Nicolae Ceausescu... Under communist rule, conditions deteriorated sharply at Jiu Valley mines, many of which date from Romania's 19th century drive for industrialisation. But the promise of high pay – miners still earn double the average monthly wage of \$US80 – plus free housing and fuel and electricity discounts lured thousands from Romania's less-developed south and east. Most of those... say they are returning to their native regions... Many people see departure as the only option... There are no jobs on offer... No one seems to have contemplated what they will do when the money runs out... "It's hell down there and it's hell out here too." - 1997

Coal-fired power stations currently provide 40% of Romania's power. The weight of nuclear power is increasing... [a]lthough oil and gas are... sources of energy... Romania... [is Eastern Europe's] only... significant oil producer... 314,000 barrels a day last year, higher than the 294,000 recorded a decade earlier. Yet a bigger push is needed to help step up production further, modernise 3,000 km of pipelines and improve pollution control at power plants. The World Bank is playing a leading role in backing a 20-year programme to help develop Romania's oil and gas industry... Exploiting the country's vast oil reserves is a main ambition of foreign investors... [The] President and General Manager... of... Renel (the Romanian Electricity Authority)... emphasises the importance of Romania's newfound independence from Russian electricity imports. "This country is in a better position than its neighbours..."

Hungarian males heading for early grave... World Bank figures show that the average life expectancy for Hungarian males between the ages of 35 and 69 is the lowest in Europe. Half the men in that age group are not expected to live past the age of 70. About 21[%] will die of lung cancer linked to smoking... [35%] of Hungary's seven million adults are smokers while one in five males is an alcoholic, according to a Central Statistical Office survey published in the newspaper *Nepszabadsag* at the weekend... Deaths from cirrhosis are soaring while... hypertension and depression... contribute to the high mortality rates... [However, t]he report said the high mortality rate was more the result of unhealthy lifestyles and environmental factors than the quality of health care services. Only a small proportion of Hungarians regularly eat fresh fruit and vegetables, 30.3[%] are overweight and 13.1[%] are seriously overweight... based on 5476 interviews with Hungarians between the ages of 15 and 64... [Incidentally, yesterday a] statue of the Soviet founder... Lenin toppled from its pedestal in a Siberian town and killed a 15-year-old youth.

...[Nicolai Lenin was the assumed name of Vladimir Ilyich Ulyanov (1870-1924), Russia's revolutionary statesman. A lawyer by training, Lenin was arrested in 1895 for socialist agitation and was subsequently exiled to Siberia. Living in Switzerland from 1900, he became the leader of the Bolshevik party and took a prominent part in socialist organization and propaganda in the years preceding WW1. He returned to Russia after the overthrow of the Tsar in 1917 and quickly established Bolshevik control over the revolution, emerging as Premier and virtual dictator of the new communist State. He took Russia out of the war and successfully resisted counter-revolutionary forces in the Russian Civil War (1918-21), but was forced to moderate his socio-economic policies to give the country a chance to recover from the dislocation caused by war and revolution. In 1918 he was severely injured by a would-be assassin, and died in 1924 before he had completed the reconstruction of the Marxist State.

...After Lenin's death, Joseph Stalin – one of Lenin's right-hand men – won a long struggle with Trotsky for the leadership and went on to become sole dictator. His large-scale purges gravely weakened Russia and the country only just survived Hitler's attack in 1941. Due to his policy of removing anyone whose power might threaten his own, Stalin stayed in power until his death...

'Stalin died a slow, angry, and painful death on March 5, 1953. He had suffered a stroke after retiring on the night of 1-2, but this was not perceived until the morning because of his concern for personal security. The top leadership gathered around his bedside. Beria – one of the nine-member Bureau of the Presidium – was delighted at his boss's coming demise and showed it – earning him the undying hostility of Stalin's daughter. Others in the entourage

were more circumspect. They found themselves in a predicament: How were they to choose Stalin's successor? How were they to ensure that no one acquired his awesome power? This would put their careers, and even lives, at risk. The country was also confused. Even in death Stalin took some with him. During the elaborate state funeral on March 9, some people were crushed to death in their desire to pay their last respects to the dead dictator. Collective leadership was the only possibility. When the first division of power was agreed to on March 7, the main beneficiaries were Malenkov, who became chairman of the Council of Ministers, or prime minister, and Beria, who stepped up to become first deputy PM and also headed the amalgamated Ministry of State Security and Ministry of Internal Affairs. Molotov returned to the Ministry of Foreign Affairs and was also a first deputy PM. Bulganin became minister of defence. To calm the population *Pravda* reported that the new collective leadership would "prevent any kind of disorder or panic." When Stalin died there was no title that identified the head of the Communist Party. Stalin had given up the title of general secretary of the party in 1934 and was afterward merely described as secretary of the Central Committee Secretariat. Malenkov's name appeared at the top of the list of secretaries on March 7. Hence he had succeeded Stalin as head of government and party. This nice arrangement broke down within a week: there was too much power concentrated in one pair of hands. The main beneficiary was Khrushchev. His name was placed at the top of the list of 5 secretaries of the secretariat. Khrushchev was now in charge of the party, although he was not formally made first secretary until September 1953. Malenkov, in choosing to remain PM, made a grave mistake, even though Lenin and Stalin had both occupied the office. Khrushchev now had a power base from which to attack Malenkov and win precedence for the party over the government. The primary goal of the new leadership was to ensure stability in the country while the power struggle at the top got under way. An amnesty freed prisoners from the labour camps but affected only the elite and their families and friends. Those in exile were allowed to return to the city of their choice. Molotov got his Jewish wife back, his associate Mikoyan his son, and Khrushchev's daughter-in-law also returned. There was a mood of optimism. Malenkov launched the New Course, an economic programme that promised higher living standards, and there was a promise to dismantle the worst excesses of the Stalinist legal system.' The 'Perestroika economic reforms were adopted at the Party's 27th Congress, for the 12th 5-Year Plan (1986-90).'

... "Everyone must vacate within 90 minutes!" As the announcement crackled over an intercom at the Communist Party Central Committee headquarters in Moscow, a worker stepped out of his office and saw pandemonium. Officials were frantically stuffing top-secret documents into briefcases and carrying piles of them to shredding machines. Shouting matches broke out as the shredders jammed. It was August 23, 1991, only 24 hours after the failed coup by communist hardliners. The President of the Russian Republic had just suspended the party's activities. Outside, an angry crowd demanded a war-crimes trial for party officials. Suddenly, the worker's boss rushed up and told him to destroy a thick sheaf of notebooks that he'd given to the worker earlier. As soon as the worker had received the books, he'd realized what they were: records from the "Special File" of clandestine Soviet funding of foreign communist parties. *The Russian people – the world – should know about this*, he thought. He put the papers in a safe. About 2 weeks later, the worker dropped the documents onto the desk of a journalist for the newspaper *Rossiia*. On October 2, 1991, the contents were splashed across the paper's pages under the headline, "Hard Cash for Hard Leninists." The publication of these papers – and subsequent revelations – make for a devastating indictment. They detail how the Soviets made direct payments to 98 parties and movements in countries around the world, spending over \$320 million since 1981 alone. The money was disbursed from the party's "International Fund to Support Organizations of the Left," bankrolled by Moscow with "contributions" from East Germany, Hungary, Bulgaria and Czechoslovakia. In addition, hundreds of communist-linked companies did business with the Soviet Union and gave a cut of their profits to local parties, sometimes even helping them keep afloat. Moscow also provided money, training, weapons and equipment to international terrorist groups. Besides the foreign communist parties, the Soviets relied on a wide array of front organizations to advance its goals vis-a-vis the general public. Chief among them was the Helsinki-based World Peace Council (WPC). With affiliates in 100 countries, the WPC was involved in organizing massive demonstrations in Western Europe to protest the planned deployment of US Cruise and Pershing missiles. Soviet control was nearly total. At WPC headquarters, all the national chief representatives had to be approved by the Soviet Party Central Committee. In return for well-paid jobs, they were expected to wage a permanent propaganda war on behalf of Moscow. The WPC was but one of a dozen or so such front groups. They included the International Organization of Journalists, the International Union of Students, the World Federation of Trade Unions and the Women's International Democratic Federation. Every one of them got Soviet cash – an estimated \$102m per year in all. While Soviet workers remained underhoused and poorly nourished, while the country's hospitals went without basic medicines, millions of dollars were being spent on foreign communist parties and front groups – all to perpetuate the illusion that the world was moving steadily towards a socialist paradise. If a day of reckoning is to come for the crimes committed during 74 years of Soviet communism, a place in the dock should be reserved for those who bled their people in order to give substance to this mirage.']

...*Six signatures that destroyed the old Russian Empire... Five years ago this weekend, six men met in a snow-bound hunting lodge... near the Polish border to sign a political death certificate. "We... state that the USSR, as a subject of international law and a geopolitical reality, ceases to exist," they declared in a three-page communique. Within three weeks the once mighty Soviet Union had vanished to be replaced by 15 separate states, plunged into an independence which some of them had barely imagined, let alone sought. Russia's President... took over the nuclear button while[the] Soviet President... warning of chaos and anarchy, reluctantly accepted the inevitable and moved out of the Kremlin into early retirement. Few toasts are likely to be drunk on the anniversary of the meeting in the hunting lodge, only one of whose signatories – [the Russian President] – is still in office... The pact to abolish the Soviet Union is still seen by its many opponents in Russia as the "Belovezh conspiracy" – a coup d'état by a small group of plotters in the pay of the West... who had concealed the full economic implications of the agreement... to destroy the historic Russian empire... To replace the Soviet Union, the... leaders improvised a new body, the Commonwealth of Independent States, with a single economic space and a joint military command and foreign policy. But within days sharp differences emerged... And it soon became clear that each state would have its own foreign and economic policy, and its own currency. The logic of setting up 15 independent states had not been fully thought out, least of all by Russia... Though Russia's Parliament voted by a big majority to ratify the Belovezh agreement, it soon came under attack from communists, nationalists and even liberal politicians who felt that Moscow lost far more than it gained.*

...[the] Russian President... was [re]sworn in... yesterday, promising to uphold the constitution and protect human rights. The President, in his first public appearance since June 26, spoke slowly and somewhat woodenly as he swore the oath on a special leather-bound edition of the Russian constitution. [The President], aged 65, had two heart attacks last year and his disappearance in the run-up to the inauguration had prompted speculation that he was ill again.

...Since[Russia's] President... fell ill four months ago, the most intriguing question for Kremlin watchers has been – who rules Russia? There is no easy answer... [The general who was the President's security adviser and newly appointed representative to Chechnya], but was also considered a]... Kremlin troublemaker... has been sacked. [The PM] is a low-key number two. The opposition points an accusing finger at[the current] Kremlin chief-of-staff... saying he has assumed the role of a regent. But more and more often another name slips in among the influential figures behind the scenes – ...the President's younger daughter. Opponents and experts say that while [the President] is ill and awaiting a heart operation due next month, [his daughter] has exerted some influence on affairs of state despite having no official position. Further hints of this emerged this week. "Between the first and second round of the [presidential] election [the President] was not concerned with anything and did not want to be concerned," [a]former chief-of-staff... said in a newspaper interview. "The only person to whose opinion he listened was his younger daughter..."... said... [the former chief-of-staff], who was sacked after [the President's] re-election... Both [the President's] wife... and [his younger daughter], a mother of two and a mathematician, have said they opposed his decision to run for a second term. "No one knows how much time fate has given you and I would have liked my father to live for himself, to spend time with friends, grandchildren and children," she said in a newspaper interview in June.

...The grandson of [the]Russian leader... was ordered to have a shave on his first day at a top English public school. [The grandson], aged 17, arrived for his first week of term at the \$33,790-a-year Millfield School sporting a moustache.

...The Russian Minister of Defence... has appealed to [the]President... and the Government for urgent funds to ease a crisis in the Army before matters get out of control. His cry for help provoked an immediate response... [The President, who] is in hospital preparing for heart surgery... told the P[M]... to convene a special cabinet meeting on Army financing and announced that a new defence council would meet on Friday.

...Talk in the Kremlin of an early ceasefire in Chechnya looked premature yesterday as Chechen rebels stormed the Russian Army headquarters in the region as a week of heavy fighting showed no sign of let-up. Military sources told Russian news agencies that... [i]t took over an hour to repel the attackers. The raid added insult to injury after seven days in which well-disciplined guerrillas have humiliated Russian troops and inflicted hundreds of casualties. It boded ill for a ceasefire... [A] Reuters journalist... who managed to make his way through the fighting and out of the ruins of the Chechen capital, said large central and western areas of the centre still appeared to be in the hands of the rebels, who last week launched their biggest offensive in 18 months. Hundreds of civilians streamed out of Grozny, hungry and exhausted after a week spent cowering in basements. Troops, holed up in bunkers and fortified buildings, continued to exchange fire with the rebels across the city. The only Russian soldiers [the journalist] saw in the open were dead. The Muslim guerrillas patrolled many streets wielding Kalashnikov assault rifles and the rocket-propelled grenade launchers which have destroyed wave upon wave of Russian armour... "We're going to stay until the Russians leave," one... said.

...Chechen separatists are taking the fight to Russian troops outside the capital, Grozny. Twenty Russian troops were killed and 37 wounded in an ambush in southern Chechnya, the Interfax news agency quoted a federal command source as saying yesterday. The agency... described as explosive the situation in Chechnya's second biggest city, Gudermes, and said about 50 rebels were active in Argun, the third largest town.

...Seventeen people, including six children, were confirmed dead after a powerful blast... levelled a military apartment block... in Kapiysk, Dagestan... on Saturday... The... Interfax news agency... report said 39 people were still unaccounted for, and 511 people were taking part in the rescue operations... The Russian security council secretary... blamed opponents of the Chechen peace process for the explosion. War-shattered Chechnya, where a fragile peace has reigned since the end of August, lies just west of Dagestan in the north Caucasus region... [T]he vice-premier of the Chechen coalition Government, told Itar-Tass news agency that Chechen leaders had issued a statement condemning the blast. He said Government leaders believed the attack was directed against the peace process in the Caucasus and that some so-called third power was active in the region attempting to derail it.

...Russia's P[M] yesterday flew to the site of an explosion that killed at least 43 people in a building housing Russian servicemen and their families. As rescuers continued to dig through the rubble... [s]ome officials said there might be a link between the explosion and Chechnya, where an uneasy peace is holding after a 21-month bloody conflict... [However, a]uthorities have several theories about the explosion, including revenge from organised crime groups angry about a crackdown on caviar and sturgeon poaching in the Caspian Sea, or on the smuggling of drugs and weapons from neighbouring Azerbaijan.

...Russian police are hunting for the gangland bombers who slaughtered 13 mourners at a Moscow cemetery yesterday... The odds are stacked against the police, who rarely clear up gang murders. Yet the massacre... has managed to shock a nation where mafia killings have become commonplace in the chaotic five years since the collapse of communism.

...The victims included the widow, mother and uncle of... a veterans' leader whose murder in a bomb blast on November 10, 1994, was being commemorated by about 130 people gathered around his grave. Investigators said the killing was linked to a bloody feud between two rival branches of a charity set up to help disabled victims of the Afghan war. The State Duma lower house asked Russian prosecutors to open a full investigation into the... Afghan War Invalids' Foundation, while some politicians said it was time for a wider crackdown on tax breaks enjoyed by non-profit organisations. "It is well known that these organisations spend between 2 and 5[%] of their revenue on their ostensible field of activities. The rest all goes to bandits," [a]liberal politician... told Ekho Moskvy radio... [The] *Sevodnya* newspaper quoted tax inspectors as saying criminals had used the foundation, which benefited from tax and excise exemptions on imports and exports, to launder money and send it out of the country. At the end of 1995 the foundation and other charities lost their rights to import alcohol and tobacco without paying duty, a scam which is estimated to have cost the Russian treasury billions of dollars in lost taxes.

...[Russia's] President... yesterday announced the creation of a special commission to improve tax collection to provide cash to pay off a huge backlog of wages to state sector workers, servicemen [('Russian soldier conscripts are paid just £2/month')] and pensioners.

...In Russia a job is no guarantee of a pay cheque... Millions of workers have not been paid for months. Miners, musicians and teachers from St Petersburg to Sakhalin are staging more and more strikes and demonstrations, demanding their pay and protesting a 70[%] decline in the buying power of those wages since 1990... Western labour experts on Russia express puzzlement over how a significant segment of the workforce can go without pay for up to six months. Among the possible reasons, they say, are union disarray, fear of unemployment and a national psyche not fully geared to striking... As a result, workers find second jobs to make up for low or no wages. A Moscow neurosurgeon works as a night watchman... Workers sometimes get their pay in shoddy or basic goods... Trucks pull up periodically behind cash-strapped government ministries and state-subsidized companies in Moscow, dispensing cheese, eggs, bread, potatoes or sausage instead of cash to sullen workers carrying vouchers... People scrape to get by, and wait for things to improve... But... [there] are worrisome signs that the deteriorating pay situation may be reaching a critical stage. Overdue wages and social benefits have more than tripled in a year to about 40 trillion roubles (\$NZ10.20 billion). The Labor Ministry counted 8856 strikes lasting a day or more last year, a huge leap from 514 in 1994, and the number is soaring again. In two of the largest walkouts since the Soviet collapse, coalminers and Far East energy workers staged huge strikes this year that ended only when the Government came up with billions of roubles in back wages. Hunger strikes, too, are starting to occur regularly. - 1996

A desperate battle for survival against hunger and disease... a pale... boy[stands] very quietly by the open door of the bedroom. Behind him his grandmother lay on the bed, a tiny wizened woman. She was too weak to get up. Neither she, [the boy], nor his father and mother had eaten for three days. This scene of human misery is not a description of Victorian London, nor Zola's Paris but is a contemporary story of a small town, not 320km from Moscow, Yuzha in Russia's Ivanova region... The plight of [this] small town... epitomises the Russian economic nightmare... Like many such small towns all over Russia, Yuzha's economy has collapsed. The [family's] fate, like that of the entire population of Yuzha, is linked to that of the town's main factory, a textile plant built before the Revolution which produced uniforms for the Soviet Army. The break-up of the Soviet Union halted the flow of cheap cotton, and one by one the textile mills of Ivanova region went to the wall. Yuzha's factory now employs 1400 people where once it employed 5000. Soviet planning policy and market reforms have both been blamed for the town's plight... [T]he first deputy head of the town's regional administration, is not sure who is at fault anymore. He seems to stoop under the weight of the catastrophe which has befallen his town; a place where mothers sell their blood to feed their children... It is not just the local economy which has failed the... family, their Government has also deserted them. Pensions and benefits are not being paid. [The boy's] mother... last received unemployment a year ago. Her mother's pension of 290,000 roubles (\$[NZ]50) and child benefit of 58,000 roubles... have not been paid since January... In his seven years [the boy] has known little else other than want and hardship. Unfortunately there are many more like him. More than 1557 of the town's children are considered to be living below the poverty line... Russia's social safety net is in shreds, and families like these are falling through it... [A] plasterer, last worked six years ago. He sits on the broken bed in his flat which he shares with his wife, and four children. The reek of poverty hits you as you

walk through the door. In the gloom (the electricity was turned off two years ago) you can make out the peeling wallpaper, the broken bits of furniture. There is no sign of children's play except for one little drawing of a bear on the wall... The tools which have been essential to the family's survival during the pitilessly cold winter months stand in the hallway: [the plasterer's] bicycle, his fishing rod, and his drill for boring through the ice. He can catch about 1.4kg of fish a day, which... sells... for 8000 roubles. That is enough to buy a litre of milk, and a loaf of bread, or 2.7kg of potatoes. [The local] head of administration... [says: "The authorities in Moscow] promised us a market, but we haven't seen any market. All we can see is our poverty. In the old days there was always a plan, and now there isn't." ...The town's factory was bought a month ago by a company called Onyx. "They are new Russians from Moscow," she confided. What they intend to do with the factory neither she nor anyone knows. The director hangs up the phone when she calls. So she sits and waits, as do the citizens of Yuzha. In the meantime Yuzha is a town which is dying. In 1996, 182 babies were born, but there were 599 deaths. There are other equally discouraging statistics. The infant mortality rate is 24 deaths per thousand. Poverty and disease walk hand-in-hand. As well as having the distinction of being the poorest region in Russia, Yuzha has the highest number of recorded cases of tuberculosis; 33 last year, and 14 cases already this year. [One woman] and her friend... are both 22, and pregnant. They profess not to dwell much on what the future will offer their unborn children, other than hoping it will be a better one. Their more pressing concern is their diet which consists almost solely of potatoes and bread. Today, however, they are going to be fed three square meals by the town's soup kitchen which operates a feeding scheme for Yuzha's neediest people... If the citizens of Yuzha are searching in vain for the promised land, in Moscow it is already here. For some people at least the new economy has delivered the goods. As another day begins at Moscow's Russian International School, a steady stream of BMWs and Mercedes cars deliver their precious charges to the entrance. Rivalry between children here takes the form of one-upmanship over the make of car, or which exotic location the family will fly to for their next break. [One child], fashionably tanned, and just back from Florida, lisped: "We have just been to Disneyland, and for Easter I am going to Paris."

...Russia pays high price of freedom – fear... The end of state control has left most Russian people worse off, a visiting professor of criminal law tells... For 30 years he has conducted research into criminology, deviant behaviour and social control. Things have never been worse, he says... The crime rate continues to soar with a huge rise in violent crime. Between 1985 and 1995 murders increased from 8.5 to 21.4 in 100,000 – N[Z] averages around 2 in 100,000 – and for serious bodily harm from 19.9 to 41.7. There were almost five times the number of robberies and assaults increased by 6.5 times. These are the official statistics. The real figures are much higher, says... [the professor, because] many crimes were never reported as victims have no confidence in police or the legal system. "More and more the police are there to make money for themselves, not to protect the population." Surveys of victims in St Petersburg suggest a crime rate at least 10 times higher than the official statistics. In... 1991... 12[%] reported being victims of crime that year; by the 1994 survey the figure was more than 30[%]. Everyone is afraid, he says. "I don't feel safe. Every night, as I return home, I wonder if I will become a victim too." ...The cycle of violence, crime and fear is a long one. There is corruption at all levels of government and bureaucracy... and high levels of imprisonment throughout this century have criminalised large sectors of the Russian population. Organised crime has burgeoned with the introduction of a market economy from 1989, after decades of state control and private businesses being illegal. Around 50[%] of the country's banks are controlled by mafia-type organisations, he says... Business may now be legal, but you couldn't run a business legally even if you wanted to... "If I want to set up a business I have to bribe an official to get access to a building. Bribery is illegal, so already I am committing a crime. I need a licence to conduct my business. I have to pay another bribe for this. Then I have to pay money to gangsters for protection. And because it is impossible to run a successful business when you have to pay up to 85[%] of your profits in tax, people don't give true information about their profits, and that's a crime." ...Now there is no stability, no security of employment, and the widespread corruption and high unemployment rates provide a wide social basis for organised crime. Russia is going further and further along the path of criminalisation... and he can see no solution. [Due to Russia's socialist past, 'businessmen feel like criminals – so they behave like criminals.'

...she] comes from a place where murder occurs next door. The police saunter over to take the body away, and generally nothing more happens. It's a place where her mother, a doctor, is still waiting for December's pay and friends who work in a bank – of all places – haven't been paid for nearly three months. [Her] birthplace breaks her heart. Khabarovsk, in Russia's Far East, has grown into a city the size of Auckland. It straddles one of the world's last great pockets of natural resources which has everything from gas to gold. "We have everything in Russia but corruption is everywhere," says the 26-year-old judo exponent. "If you want something you have to pay huge money. You can't buy something delicious. Prices are always going up, I don't know how other families survive." She says her family is lucky that her engineer father still gets his salary monthly. But it's those problems which bring her to [our] land of affordable milk and honey.

...Life expectancy has plunged to its lowest in years in Russia... The W[HO]... said life expectancy had dipped in all 15 republics of the former Soviet Union, but the worst hit was Russia. The average Russian man could now expect to live 57.4 years compared with 61.1 years in 1981 – and nearly 64 years before[the current] President... started Russia's painful transition to capitalism. Health services were a cradle-to-grave right of every Soviet citizen, but they slipped into a crisis after the start of market reforms brought unemployment, disorder and stress. The data pointed to a growing health gap between East and West... Life expectancy was more than 75 years for men in Greece, Sweden and Switzerland and also in Israel, Japan and A[US], and more than 81 years for women in Canada, France, Japan, Spain and Switzerland... [The data shows] that although N[Zers'] life expectancy compared favourably with the world average of 61[, and NZers]... are living longer than they used to... comparison with other OECD countries was less flattering... Thirty years ago, N[Z] men had the seventh-highest life expectancy in the 25 countries in the [OECD], but now they rate only 13th. Female life expectancy has slipped from 10th to 17th over the same period... N[Z] had high mortality rates, compared with other OECD countries, for ischaemic heart disease, respiratory diseases, breast and bowel cancer, motor vehicle crashes and suicide. [● An article published last year said 'the homeless in London faced a life expectancy of 42 years, robbing them of 34 years enjoyed by the average Briton.']

...RUSSIA'S ROBBER BARONS They started in business by running rings around the lumbering Soviet state; now they're taking it over... They are forming new power centres, built mostly around commercial banks and natural-resources companies, that control huge swaths of the Russian economy. Anyone doing deals in Russia's hot short-term bond market, where trading totaled \$[US]100 billion last year, will have run across them. They dominate the country's trade in arms and precious metals, as well as its production of copper, nickel and a quarter of its oil. They control the No. 1 and No. 3 television networks, the Visa bankcard network, a big chunk of the pulp and paper industry and an increasing portion of the food processing industry... Though largely in favor of reforms to the market, it remains to be seen how dedicated Russia's new elite is to economic liberalization over the long run. This group, after all, is not made up of ideologues... Many of these businessmen, like America's robber barons at the turn of the century, bend the rules of honest competition... [A] Princeton professor... writing in the *Nation*, dubbed them a "semi-criminalized oligarchy" that has made ordinary Russians "suffer unduly and unjustly." ...But unlike the communists they whipped and the managerial old guard they are shouldering aside, the robber barons offer at least a chance that Russia can begin fulfilling its vast economic miracle. Nice guys, alas, seldom lead revolutions.

...Once, Russian schoolchildren aspired to be cosmonauts above all other professions. Times have changed, to say the least. These days, young Russians would rather grow up to be mobsters or prostitutes... a news agency said yesterday. The most popular profession of all? Accountant.

...In Russia... crims are getting more audaciously imaginative. A seven-man gang has been caught posing as tax officials in the Siberian city of Abakan. They waved phoney documents when arriving at the homes of the wealthy and carted off expensive possessions – ostensibly in lieu of unpaid taxes. Some victims were beaten up for being slow to co-operate. But not one complained to the police, because, it's believed, that might focus attention on their tax status.

...ORGANISED crime in Russia is a growing security threat to the U[S], says a taskforce led by[a] former CIA and FBI director... Nearly 8000 crime groups operating in Russia... had made alliances with criminal organisations in 50 other countries... [He believed that the US] President... should use diplomacy and espionage in more aggressive efforts to fight Russian crime... [which, according to his] report, could turn Russia back to authoritarianism... Equally important for the U[S], was the danger Russian criminal groups might get their hands on nuclear, chemical or biological weapons. [The danger is compounded by the fact that 'scientists at Russia's germ warfare plants are amongst the state workers who haven't been paid.' Other former Soviet republics are also a growing security threat to the US. For example, the 'President of Belarus – where criticism of the leader is illegal – openly admires Hitler and wants the state to return to Stalinism.']

...Leaders of other former Soviet republics blamed [the] Russian President... yesterday for the failure of their post-communist grouping and for conflicts on their soil. The Kremlin leader, clearly chastened after being put on the spot at a summit of the... Commonwealth of Independent States... said the CIS... would have to be completely reorganised... Several CIS leaders... [said] few of its agreements were ever implemented. The summit session lasted more than twice the allotted time and ended abruptly when the Kremlin leader and the summit host, [the] Moldovan President... unexpectedly left.

...[Russia's President plans] to take tougher stance in fight against economic crimes... "The President's address will include special measures on the decriminalisation of economic life and the suppression of the basic conditions that feed corruption,"... He would demand that all channels of state spending be brought under tighter control and that their property and powers be more clearly defined... [He] envisaged a stronger role for the tax police and for the Federal Security Service (successor to the Soviet-era KGB) in the fight against economic crime. Any officials demonstrating "excessive wealth" would be subject to more thorough checks. Last week, [he] gave the Interior Minister... "carte blanche" to crack down on economic crimes, which cost Russian state coffers billions a year. The Government often blames tax dodgers – companies and individuals – for chronic delays in paying wages and pensions. ['Russia receives 15% of its revenue via tax, compared to 80% in the US.']

...yesterday, as part of a requirement of the President's] recent anti-corruption drive[, Russia's PM –] ...who is reported to have vast riches... [–] declared his... and his [wife's]... personal wealth at... 268 million roubles... [(\$US50,000). By the way, f]ed up with promises that their "cheque is in the mail," Russian teachers have gone on strike demanding \$US1.2 billion... in back-pay.

...UNPAID workers in one Russian village will at least look good, now that the local government has hit on a new form of barter. Workers in Kalevala will be offered pay in the form of trips to the hairdresser... [I]n addition... workers will be rewarded with free fishing licences – so that, well-coiffed, they can catch their dinner in nearby lakes.

...[the] Russian President... has proved an ace fisherman on holiday in the Karelia region... His wife... said he had caught 20 fish in one day... but not without a little help... The secret, said a fisheries commissioner, is rather fishy. "We were told by the city administration to make sure [the President] had a good time and that's what we're doing. There are probably an extra 10,000 fish..."... dumped in his lake.

...[the] Russian President... flogged the Finnish head of state in a sauna during a visit yesterday. "I used a Russian birch switch to spank the [Finnish] President very well," [he said.

... 'THE PRESIDENTS OF THE US & RUSSIA, ARGUABLY THE TWO MOST POWERFUL MEN OF OUR TIMES AND ROLE MODELS FOR OUR MALLEABLE YOUTH – A SEX-ADDICT & A DRUNK!']

...The Russian President... stood up the Irish P[M]... on an airport tarmac in 1994, because he was too ill to get off his plane, says [the president's] former bodyguard. The... [president] was accused by critics at the time of being drunk, but... his... bodyguard and adviser for 11 years, said the Russian leader had suffered a heart attack or mild stroke... [The president] had got up in the night while flying over the Atlantic to go to the lavatory. But he had then collapsed. Doctors treated [the president], who feared a diplomatic scandal if he did not greet [the Irish PM]... "You have disgraced me in front of the whole world by doing this." ...["The president] was shouting so loudly that he must have been heard outside... Every time he stood up, he fell over... Naturally the president was assumed to have been drunk."

...Earlier this week... a senior communist deputy... led a parliamentary move to remove [Russia's leader] from office on health grounds, saying the 65-year-old President was too sick to lead the vast country. The vote was not conclusive and... lawyers ruled the motion legally void. But it helped fuel a sense of drift and paralysis in a country where the President holds most power and his absence puts ever more pressing issues on hold. [The President] caught pneumonia just two weeks after returning to work from a half-year absence during which he had a heart bypass operation in November. [The President's] aides said he briefly visited the Kremlin two days ago but his doctors say he needs two or three weeks to recover... [However, he might not get that long. He] faces a key test today when deputies decide whether to approve his Government's 1997 budget. The Communist Party, the largest faction in the State Duma (lower house of parliament), has said its support for the spending plans hinges on the Government's readiness... to... swiftly... pay wage and pension arrears to millions of impoverished Russians. The Government, battling a deep economic slump, has already agreed to raise spending in several areas in its efforts to win over the opposition.

...A hoarse President... said yesterday that he was in full command of Russia despite a respiratory virus... keeping him confined to a sanatorium.

...[the Russian] President... said yesterday the thing he wanted most after regaining consciousness a year ago following major heart surgery was to claim back his biggest symbol of power – the nuclear "red button" briefcase... with the codes needed to order the launch of... nuclear missiles... [The President] issued a decree hours before going under the knife which passed control of Russia's nuclear button to his number two, [the PM]... Minutes after the effects of anaesthesia weakened, [the President] signed a decree claiming the nuclear button back.

...[she] will always rue the day she over-slept and arrived an hour late for work. She was sentenced to 10 years in dictator Joseph Stalin's... Gulag camps. She ended up serving a total of six years, cutting logs in a prison brigade in one of the Soviet Union's bleakest, most remote corners. Now aged 71, she is one of several hundred former prisoners still living in the Kolyma region 8000km east of Moscow. And like many of the millions sent there during the Stalinist terror half a century ago, [she] is still dreaming about leaving for good... Historians estimate that at least two million died during Stalin's rule in Kolyma's camps[(and '20 million in total due to purges and collectivisations between 1926 and 1955')], which were notorious for their bitter cold, isolation and cruelty. The overwhelming bulk of those who survived... left in the 1950s and 1960s after Stalin's death. But some remained, often because they simply had nowhere else to go, and over the years they found it ever harder to escape a region cut off from rail and other transport links to the rest of Russia... "After my sentence, I had no one to go back to in Leningrad... All my relatives had either died of hunger in the war or at the front," said [the woman], who survived the 900-day Nazi siege of Leningrad before being exiled to Kolyma. "Today, of course, I'd leave if it was possible." ...[another woman, aged] 77, earned her ticket to the Gulag in 1946 by refusing to dance with a drunk officer from Smersh, the Soviet wartime anti-spy service. During her decade in camps near Magadan, she bore a daughter with a Belgian prisoner. As happened with many other camp veterans who remained, the child would root her in the region... Yet even today the city is short on comforts. A gloomy array of badly made pre-fab housing and abandoned construction sites, it rarely sees sunshine. Conditions were so austere that the mass settlement of the region began only in the 1930s when the Soviet Union decided to develop its rich gold mines using prisoners as the overwhelming bulk of the workforce. For veterans of the Gulag, there are constant reminders of the past... [The] old barracks are still surrounded by barbed wire since they now belong to the... special police... Perhaps most eerily, camp survivors sometimes see the handful of remaining ageing ex-guards of the Kolyma police state administered by the NKVD, the KGB's forerunner. Like their former inmates, they stayed for family or other reasons and today suffer the same woes as their ex-prisoners. "A few days ago I saw the guard who once gave me an extra piece of bread and she was begging in the street," said[a] 67-year-old... [woman] who was 17 when sentenced... [to] Butugychag, one of the most notorious... camps, and home to a

radioactive uranium mine. "I gave her 100 roubles and said 'you once gave me the last piece of bread.'" ...Some of Stalin's victims, however, say they were happy living in the region after their release... [A]n 83-year-old Leningrad native who spent 12 years in the Gulag system after his 1934 arrest, lost an arm during a gold-mine accident but seems unusually cheery in recalling the past. After his release he rose to become deputy director of a factory, earning eight times more than he would have at home, with six months' holiday for every 30 months or so of work... But even an enthusiast... has had enough. He plans to return to his birthplace, now renamed St Petersburg, next year. Unlike most ex-prisoners in Magadan, he was given an apartment for the one he lost long ago, so he has somewhere to go.

...THE deputy governor of St Petersburg... knew he was a marked man. As head of the city's privatisation committee, he had made enemies by refusing the demands of local gangster businessmen to sell several state assets at a fraction of their worth. So recently, as Manevich (36) drove to work along Nevsky Prospekt, with his wife by his side, a rooftop sniper pumped five bullets into his body and killed him. In Moscow, an extraordinary battle over the richest jewels in Russia's privatisation programme is tearing apart the six-man oligarchy that pooled its resources last year to ensure [the Russian President's] re-election... More fireworks are expected... when the Government sells 47% of Rosneft, the country's fifth-largest oil company... Last month... the powerful head of Oneximbank, won control of 38% of Norilsk Nickel, a giant nickel-mining company, and 25% of Svyazinvest, a telephone business... [The Oneximbank head was also] made a deputy [PM] and put in charge of the economy... His victory was denounced by his former allies... [One of them, a 50-year old] whom *Forbes* says is worth \$US3 billion, was made effective head of the National Security Council... But [the 50-year-old], who also obtained an 80% stake in Sibneft, one of Russia's top oil companies, is clearly not satisfied. He is angry with the press, too, and is suing *Forbes* for claiming... [in] an article titled "The God-father of the Kremlin"... [that] he used gangsters to build his fortune. What is not in dispute is that Russia is a violent land where crime pays. Last year about 40,000 people were murdered and 70,000 disappeared; Moscow had 50% more murders than New York. Dozens of bankers, business leaders and journalists have been killed... Last November, the *Wall Street Journal* reports, 13 Russians died and 50 were injured in a bombing war between local cigarette distributors... In 1992 when [a foreign tobacco company] tried to cut out exorbitant middlemen and sell its cigarettes direct by opening its own kiosks in St Petersburg, the booths were blown up, one by one, night after night... But... the new deputy premier... a [37-year-old] former physicist, said: "The most terrible time is behind us." The economy, which has shrunk 43% since 1990, should achieve zero growth this year and expand by 2% next year. Inflation has remained below 3% a month for 16 months... But for direct foreign investors Russia is still a decidedly dodgy place... Paul Tatum, an American hotel developer, tried to resolve his battle for control of the Radisson Slavianskaya hotel by publicising the issue. Shortly afterwards he was gunned down, in front of his two bodyguards. Other foreign investors have seen their investments disappear or been told they never existed. With crooked civil servants often working in league with local businessmen, foreigners find it hard to prove their claims.

...Where he comes from, [he] says... with a... smile, taking risks is a tradition... [T]he First Deputy Minister of Labour and Social Development of the Russian Federation, might not seem to be [a position] dicing with death. But the success of the huge reforms he's billed as master-minding is crucial – both to him and to the whole country... That's part of the reason he's here. Since 1990, when he first entered the Russian parliament, he has known about N[Z]'s public sector and labour market reforms – as any economist with an international perspective should... Statistics indicate that things are so bad... in Russia... that almost the only way is up. Life expectancy is equal to, or worse than, that of many [Last] World countries... The birth rate is so low and emigration so high that the country has a population loss of 750,000 a year. Crimes of violence and suicide are high... The vast majority of deaths of men occur at weekends, which is when everyone drinks... Alcohol consumption, particularly cheap vodka by men, is almost at twice the level considered by the [WHO] to be a sign of a country with a serious problem... [I]t's clear that a radical approach is needed. So radical, in fact, that [the deputy minister] has the impression, after three days talking to officials here, that Russia is further ahead than we are with its health reforms... Now private providers... will compete for public money which is allocated on a per person basis by private insurance companies. People will have an unrestricted choice of insurance companies which, in turn, will have[an] unrestricted choice of providers. [The deputy minister] agrees that for a former communist country, this is pretty much an about-face – and it's controversial. But the system is in such disarray the reformers had virtually no choice. Health workers have had no wages for two and a half months and drugs are in short supply. ['According to statistics, only 1-in-5 Russian children are now born completely healthy.']Education is undergoing a similar shake-up, and... [the deputy minister, whose] special charge is the drafting of pension reform... expects the Government to pass legislation in November giving equal access to public money for private and public schools, on a capitation basis... On the whole, [the deputy minister] is optimistic for his poor country's prospects. "We've already hit the bottom..." Meanwhile he and... a member of the Working Party on Labour Legislation... are on holiday, albeit a working one. [The deputy minister] paid his own fare to come here because, he says, he's been fascinated by [N]Z... for years. [Today] he's... off to watch the whales at Kaikoura.

...[a] Russian... pickpocket... hit the jackpot when he flinched \$US22,000... from the handbag of a woman taking the streetcar home after selling a flat... [Incidentally, the] Russian President... has ordered a full reorganisation of the Government, leaving only the P[M]... and a first deputy premier... in place. Interfax news agency said: "All other members of the cabinet resign."

...The Russian Government, in the throes of a deepening financial crisis, is scrambling for cash including a syndicated loan of up to \$US2 billion... and more help from the IMF, western banking sources said.

...After 10 days of scrutiny, an... IMF... mission to Moscow has said it will recommend the release of a frozen loan instalment of \$US700 million... The team... was "particularly encouraged" by the government's efforts to improve its woeful tax collection performance, which caused the international body to freeze the loan tranche in October... [T]he IMF board of directors will consider the IMF mission's recommendation on January 5. The move... "will become an important signal both for the financial markets and for the World Bank. - 1997

Leaders of the Group of Eight... countries, gathered yesterday to chart a strategy to help poor countries break the chains of debt and poverty and catch up in the race to harness new technologies... The G8 also wants to free up more money for health and education in [Last World] countries by speeding implementation of a debt-reducing pact agreed at last year's summit... The group boasted that the deal would wipe out as much as \$US100 billion of debt owed by the world's poorest states if they followed reforms supervised by the I[MF], but the initiative has stalled badly. Debt campaigners and [Last World] countries would like the strings attached to debt relief to be loosened. But, reflecting a widely held view within the G7 – the... world's richest... [countries – Canada's P]M... said the IMF's conditions were not too strict. "I think, for example, we don't want to give debt relief for them to go and buy arms and start wars. We're not interested in that." While affirming their backing for debt relief for the poorest states, the G7 is expected to reject the overtures of Russia, the other member of the G8, for a write-off of \$US42 billion in debt owed to rich-country Governments that it inherited when the Soviet Union collapsed in 1991. The Seven are likely to tell [the] Russian President... they will give Russia more time to repay.

...MEETING... one of the 'masters of business'... is a pretty nerve-racking business. Not, you understand, because the former president of the Soviet Union, the man who dismantled communism and ended the cold war, is unfriendly. Quite the contrary. In the flesh – there is rather a lot of it – he is cherubic, charming and exudes the most infectious, upbeat jollity of anyone I have met. He is, I must confess, a mischievous little darling. No. The reason I feel sick with terror, sweaty with fright, is because it's really him... The man who freed 300 million Soviets from the straitjacket of socialism. The peasant boy who rose to become Communist Party general secretary (like Stalin before him) and, rather than becoming a tyrant, changing the system because he believed it was rotten. [He is], you see, the real thing. In 20 years, the Spice Girls... will be forgotten. [The author of
