Labour and National have expressed serious reservations over [the]Internal Affairs Minister... approving a \$35,000 lottery grant for a Maori immersion school to send a cultural group to [perform in]China. The 12-year-old daughter of [the]Maori Affairs Minister... is a group member. His fellow Mauri Pacific MP... also has a daughter in the 10-pupil group from the Hoani Waititi Kura Kaupapa in Glen Eden. [The Internal Affairs Minister], also a Mauri Pacific MP, yesterday allocated \$35,000 from his discretionary fund to help the kapa haka group take up an invitation from the Shanghai Symphony Orchestra. His announcement came a day after [the Maori Affairs Minister] sought to distance himself from suggestions that [it] was influencing the funding bid by his daughter's school. [The Maori Affairs Minister] used ministerial letterhead for a personal letter supporting the \$50,000 bid, but told Parliament... it... wrote the letter because the school deserved [the money]... Labour's... member of the minister's subcommittee of the Lotteries Grants Board, said the grant was an abuse of the discretionary fund. "Very few schools get access to this fund, and most of them seem to be in West Auckland, where... both[ministers] live. Of the \$76,000 granted to schools... in the last year, \$75,000 [w]as... to schools in this one area." ...National's rep... on the... board, wrote to [the Internal Affairs Minister] urging him to decline the application. It was "quite extraordinary" that the school had asked for 100[%] funding for the trip. [The National MP] also noted that personal travel was included, such as a side-trip to Beijing. Asked if the grant looked like local favouritism, [the Internal Affairs Minister said it]... felt \$35,000 was appropriate. "Usually groups are expected to provide some funding themselves, and the discretionary fund is not bottomless. But I am confident the exposure this group will generate to millions of Chinese through its performances and via television and other media will be of considerable benefit to N[Z]." Labour has laid a breach-of-privilege complaint claiming [the Maori Affairs Minister] misled Parliament when [it] tabled the letter

about the funding bid. The Speaker has yet to rule... [Speaking of culture,] a deep and meaningful... [pop star – who performs at Ericsson Stadium on Saturday – believes:] “Entertainers have a prime responsibility to rescue the highest human values and translate them into a message of well-being.”

...music fans... [are furious with a] pop star... The singing star – famous for his hits *Livin’ La Vida Loca* and *Shake Your Bon-Bon* – has left thousands disappointed. [The singer] pulled the plug on last night’s Auckland concert nine hours before... go[ing] on stage. It has been moved to tonight. Fans – including many from the South Island – had to arrange more accommodation and some had to pay penalty fees to switch flights. [A couple from] Christchurch spent \$1500 to celebrate their 10th anniversary at the Ericsson Stadium show. “We’re pretty pissed off because we were due to fly home on Sunday. Luckily, the boss says I can stay,”... [The star]’s record company said the stage was not finished. “Because of [strong] winds we couldn’t risk it,” a Sony spokes[person said. “The star] insists everything is 100[%].” Hundreds of fans turned up at Ericsson refusing to believe the Latin superstar would let them down. “I’m spitting mad,” said [one, aged] 28. “I’d like to chop his bon-bons off if I got hold of him.”

...*Music wild [perso]n leaves big impact...* Who were the friends of Screamin’ Jay Hawkins? Certainly not the record companies, that cut him loose time and again and left him to drift for three decades until [Jay] died virtually penniless in Paris last year. Not the music establishment, which loved his startling R&B hit *I Put A Spell On You* when it came out in 1956, but never warmed to the flaming coffins and cigarette-smoking skull of his stage show – and certainly couldn’t cope with the flamboyant moaning and grunting of later songs such as *Constipation Blues*. His wives were less than impressed, too, as [Jay] married them, fathered their children and then took off for months at a time on the road, tom-catt[ing] his way around the world with every dancer, groupie or vaudeville queen [it] could lay his hands on. [Jay] worked his way through six marriages in the end, and the last two wives are still fighting over which of them should inherit his meagre estate. Hawkins was the original wild [perso]n, a true eccentric who liked to perform in a black cape with a bone in his nose as [it] belted out his darkly humorous, near-unrecognisable reworkings of music-hall and R&B standards. When [Jay] started out, there were rumours [the singer] was a cannibal. When word of his burning-coffin routine reached the broader public, [Jay] was blacklisted by the National Casket Company. But none of this, in the end, is more outrageous than the legacy of his own children. By his reckoning, there were 57 of them. Or maybe 75. Or even 76. Chances are [Jay] didn’t know about all of them, and [certainly] didn’t participate in any of their lives much beyond the initial act of procreation. When [Jay] died suddenly after emergency surgery to treat an aneurism in February last year, not one of his off-spring attended his lonely funeral at the Pere Lachaise cemetery, or accompanied his ashes as they were sprinkled over the Atlantic. Only the three children [Jay] had by his first wife... ever knew each other; quite a few of the others had no idea who their father was at all. Hawkins, nevertheless, did have friends, and one of them, his biographer... decided [it] would do her best to carry out one of his final wishes and get all his children together. [The biographer] set up a website called Jay’s Kids and invited submissions from anyone who thought they might have some of Screamin’ Jay’s wild blood in their veins. [The biographer] flew around the U[S], meeting the most promising candidates, asked them for their birth certificates and spent many hours seeking to verify the times and places where they thought they might have been conceived. Mostly [the biographer] went on gut instinct and the striking physical similarities many of the children bore to her friend and mentor. [The biographer reckons it] has tracked down 33 of his children, and one year after Hawkins’ death... invited them all to Los Angeles for a celebratory reunion. “The funeral was such a sad affair, so we wanted this to be a rollicking good party,”... The party was held in a flamboyantly decorated room at the House of Blues, the Southern Gothic-style nightclub on Sunset Strip that was otherwise almost deserted on a rainy Monday night. Screamin’ Jay video footage played on the television monitors above the bar and his songs blared out over the music system as the guests draped themselves over leopard-spot patterned couches. A preacher was on hand to bless the assembled company, but as [the preacher said, it] wasn’t there to perform a eulogy so much as to encourage everyone to have an unashamedly good time. A disconsolate collection of pale, fattening, middle-aged musicians who once recorded with Hawkins performed a celebratory number (“His seed is running wild, from Kyoto to the San Francisco Bay,” ran the chorus.) The son of... the Cleveland DJ who first put Screamin’ Jay... on the map, was there, and so was... the head of the Rock’n’Roll Museum, who has been petitioned to induct Hawkins into the Hall of Fame. The children themselves were rather reticent. According to [the biographer], 20 of them accepted the invitation. But only five showed up – the five [step-sisters] who have got to know each other best over the past year and who feel most inclined to accept the bizarre circumstances of their entry into the world. “I knew the true test of whether these [gals] were my sisters would be if they made a pass at my husband,” joked... one of... [Hawkins’] original three legitimate children, who still lives in Cleveland. “They all passed the test. Hey, they’re all our father’s children.” [The legitimate daughter], a plump, generous [perso]n who is about 50 years old and drives a night-time ambulance for a living, produced a home-made ragdoll puppet of an R&B singer and proceeded to dance with it to her father’s song *You Made Me Love You*. It was one of those evenings where it was never quite clear if the jolliness was genuine or a cover for some deeper morbidity. [Her] older sister... seemed to be having an altogether less good time and had to fight back the tears as [it] recalled the pain of childhood abandonment. “When I was 5, my dad went out to get milk and never came back,”... And they never spoke again. “I didn’t get the chance to tell my father I loved him...” Almost all of Hawkins’ children were brought up by poor, single parents. In later years, Hawkins could be found wandering the broadwalks in Atlantic City wearing nothing but his black stage cape. [Hawkins] was arrested repeatedly for flashing... in public. It was only thanks to... angels such as... the film-maker who used his music in *Stranger Than Paradise* and his untapped acting skills in *Mystery Train*, [plus the Rolling Stone guitarist –] ...who hired him to open for the Rolling Stones... [– that Hawkins] kept going at all.

...TILES from the pool where former Rolling Stones guitarist Brian Jones drowned are up for sale. [By the way, according to John Denver – the US singer who died last week after the plane it was piloting crashed into the sea – ‘music is the universal language’.]

...Bing Crosby is fighting crime in Wollongong, NSW, from beyond the grave. A shopping complex has discovered that repeated airings of his ancient hit *My Heart Is Taking Lessons* is forcing away gangs of potential troublemakers who often gather outside its doors. Two local councils are now in discussion with police about introducing Bing’s [romantic] crooning into other public areas to keep the local youths from hanging around.

...*A true Love story...* [The frontperso]n of Hole has optioned the book *Bye Bye Baby*, about the 70s Scottish pop rockers Bay City Rollers, with the hope of putting it on the big screen... The widow of Kurt Cobain... also plans to direct [the movie]... *Bye Bye Baby* chronicles teenage obsession with the boy band whose success turned dark. [One member] was charged with reckless driving after killing a 75-year-old; two members attempted suicide; the band’s former manager... was jailed for committing indecent acts with underage teens... Billy Lyall died from an Aids-related illness.

...*Tartan triumph turned to tatters* THE Bay City Rollers, unquestionably the most unlikely pop icons of the 1970s, are the subject of a candid special, *Behind The Music: Bay City Rollers*... [The documentary] traces the rise of the Rollers from their beginnings as working-class lads playing small Edinburgh pubs to their superstardom in the mid-70s when millions of girls around the globe would risk virtually anything for a glimpse of their tartan-clad heroes. *The Bay City Rollers*, who took their name from a city in the U[S], made anything in tartan a keenly sought fashion item. By 1975 they had their own hit television show, *Shang A Lang*. Even today scores of [gals] in their early to mid-thirties are still members of Bay City Rollers fan clubs. [A] Bay City Rollers historian... says the underlying devotion to the band is like carrying a guilty secret. “It’s kinda like herpes... It stays dormant for years then it pops up and you never know when it will.” Yet the fans had deserted the Bay City Rollers by the end of the 1970s, when... punk rock out-charted pop. Suddenly the royalties disappeared and the Bay City Rollers fell apart. *Behind The Music* talks to the band members, who claim they were done out of millions of dollars and left virtually bankrupt. “We have scores to settle,” [says one member]. “People put us through a real hard time.” [The band’s f]ormer manager... describes the band members as “five bitter and twisted [guys]. It] denies accusations of doing the Bay City Rollers out of money and having excessive control over the band members to the point of restricting their personal lives... [The manager, who] was jailed for a year in 1982 for indecent acts against young boys... is now a millionaire property developer...

[‘I bought a record, took it home and put it on the turntable, it made me want to kill everybody in the neighbourhood, burn and rob, not believe in God and quit my stupid job; I went to my mum’s room and I stole all of her jewellery, put it in a paper bag and sold it on a street corner, then bought a lot of drugs and got my sister drunk, stole the family car, stuffed her in the trunk, drove it off the edge of a cliff and stood there laughing; I already had dad’s chequebook so ran to the bank, took out all the money then went across the country spreading fire and disease – it was rock n roll that drove me to the other side’...

‘Next up we’ve got the b-side from *Pink Floyd*’s first single. The song’s first title was something about getting very stoned but they weren’t allowed to put that on the radio in those days so they had to change it to *Candy And A Current Bun*.’

...‘sell your soul for a tacky song like the ones you hear on the radio’...

‘Some people have to have a job, some people have to sit and stare at the same piece of wall paper every day; we get to stand in front of people and play our guitars. There’s something very different about playing in a big space when everybody’s come to see you. If someone buys a CD and takes it home you’re there in their living room, they’re listening to your little idea that you had as you were sitting on the bus.]

...What do stage performers have to do to earn a standing ovation and why, when one stands to applaud a performance, is one made to feel guilty because most patrons remain seated? I don’t get the opportunity to attend live shows often, so what have I missed in live show protocol? I was delighted by a matinee performance [I’d recently attended] but disappointed that the audience did not give the performers a standing ovation. Only three of us appeared to be standing in our section... Would someone please enlighten me?

There are many ways of showing appreciation in addition to clapping (or cheering) – the most obvious one being attending a concert in the first place, then listening to it politely. Obviously, unless members of the audience boo, heckle, leave during the performance or speak to the performers afterwards, the performers won’t know whether or not their endeavours were appreciated (at the extreme end of the scale is the phenomenon of audiences – usually teenage girls – screaming so loudly and constantly that no one in the audience can actually hear the music to appreciate it!). However, surely most people perform for the love of it – or the money – and not because they want the recognition of others; in which case performers shouldn’t expect ovations, or even desire them (if they need to hear clapping they can visit a seal colony). At least – unlike TV producers, who often dub laughter onto comedies for the benefit of viewers who they apparently believe are incapable of recognising when something funny happens – musicians seem to have so far resisted dubbing applause onto their records (excluding recordings of live performances); although, without listening to every record ever produced, that’s a speculative remark – all sorts of obscure and bizarre recordings have been produced, including a ‘12-track CD made out of 1000 baby sounds recorded over a year then marketed as *Jingle Babies*’. Can’t wait the see the video! [Note that if such a video did exist, it would’ve been cheap to produce (‘in NZ, the average cost of making a music video is between \$5,000 to \$10,000; in comparison, the average cost is \$300,000’ in America).]

Technology has dramatically changed the [American]music recording industry. In 1975, 421 million phonograph records were sold for \$[US]1.695 billion, and 110.8 million prerecorded cassettes for \$681.8 million. Compact discs had not yet been invented. In 1991, the sales of phonograph records were down to 26.8 million units for \$93.3 million, and prerecorded cassette sales rose to 429.1 million units for \$3.250 billion. But the sales of both were overshadowed by CDs, which sold 333.3 million units for \$4.337 billion.

NOTHING about... [him] reminds you of his tearaway years with Split Enz in the early 1980s. Greying, mild-mannered and softly spoken, [the musician] looks every bit the company executive with a course clearly charted and a steady hand on the tiller. But don’t let that fool you. Underneath... there is the born-again determination of the “moral crusader.” [The musician] has stayed in the roller-coaster world of the music business, but as one of its backroom organisers. Instead of being out there performing or producing, [the musician] now works on behalf of composers and lyricists everywhere, even if many of them have never heard of him, or of the organisation, APRA, whose [NZ arm the musician] controls. APRA (Australasian Performing Rights Association) has more than 20,000 members, with up to 3000 living in N[Z]. All of them... are being ripped off by well-meaning people who simply don’t know the legal ins and outs, and... it’s his job to stop that. “Public broadcasters give us no trouble... Every time radio or TV play even a 10-second soundbite it’s recorded, printed out, and accounted for. All their figures come straight to us, and we allocate accordingly to our members. With some pride, [the local APRA rep] adds that only 12[%] of the amount collected goes into overheads... Other areas are not so open-and-shut. “It’s background music that gives us the worst problems. Obviously, people don’t think about background music. It’s just part of the air. They don’t realise that they need a licence to play any music in public, even if it seems as though it’s not being heard. Just try opening up a boutique or a hair salon... nowadays without background music, and see how far it gets.” So the jeans place across the road in Parnell, pumping out [a NZ song] at 50 decibels is breaking the law? “Oh yes,” [the APRA rep] says... emphatically. And looking over the busy trading area of Parnell Rise, [the rep] skilfully runs down a liturgy that includes cafes, restaurants, hotels, waiting rooms and parks. Then... counts off the semi-private enterprises that depend on music for their activity, but take it for granted, like aerobics classes, amateur dramatics, dance classes, sports activities such as skating and gymnastics – even the music played at big matches. We were getting uncomfortably close to a Pythonesque “Nobody Escapes the Spanish Inquisition” so I interrupt to ask how so many could come to be breaking the law. “Why does everyone drive in town at more than 50 km/h?” [the rep] counters quickly. “It’s wrong, but everyone does it.” [However,]APRA has been flexing its muscles recently. A nationwide letter campaign last year to offices and shops provoked some abusive reactions down the telephone, with the more repeatable descriptions referring to “white-collar criminals” and “little Hitlers.” Even *Fair Go* put in an appearance, and tut-tutted about the association’s interfering stance. But [the rep] remains happily secure in the knowledge that [his stance] is right. And his sense of “moral crusade” is strengthening because[, having] seen the songwriting side of the game from the inside, [the rep] understands that APRA is the only way most composers will get something back from the work they do. “PROBABLY only 5[%] of our members in N[Z] make a decent living from the contemporary music scene... and the majority of musicians are out of work. Why should songwriters sit in a cafe staring bleakly at their coffee and hearing the overhead speakers relaying their work to everyone for nothing?” And if the cafe owner refuses to buy the licence can [it] be prosecuted? “Sure,”... but... since the annual fee is \$58 maximum, the cost of legal proceedings would be like using steam-rollers to crack nuts. [The rep] puts his trust in an ongoing education campaign, a basic respect among traders for other people’s work and, above all, constant niggling from APRA. Since much of the music played in this country comes from overseas, is APRA not just lining the pockets of others, rather than directly helping the situation at home? “It’s not our job to evangelise for N[Z] music... We share out to all composers on a frequency-of-play basis, no matter what.” [The rep] stops for a moment to think. “But remember, a composer in this country who writes music for something exportable like *Shortland Street* will do pretty well nowadays.” Just as [the rep speaks, the rep] is handed a message which... [the rep] shows me... It says that the recent compilation album from Crowded House is now into its second week as No 1 in the British charts. Point made. But if the play returns from such a high-profile group as Crowded House [– that features another Split Enz member –]are easy to monitor, the task of policing every local trader in the country who puts music over speakers, or down the phone, or simply leaves a radio on, would make even the most hardened bureaucrat blanch. [The rep] puts on his mild-mannered, seraphic look again and explains that, just the same, his returns keep going up over the years and the message is at last getting across. [The rep] doesn’t consider the odds, but enjoys the gradual progress. [■ NZ composers are thought to get about ‘20 to 25c/song.’ In comparison, the latest up-and-coming NZ singer/composer ‘receives \$1.40 for every record sold.’ Editor’s note: DJs used to be paid (and some may still be paid) by musicians – or at least by agents of their record companies – to play their records. Such financial deals are known as PAYOLA.

...tonight DJs will be playing] classic hip-hop, soul and funk at the Brass Bar... That's free. So it should be – they just play records, for God's sake! ...[the story of hip-hop doesn't belong in New York, LA or London. The true story begins in devastation, bad housing, gang wars and desperation']...

There is an excruciating sequence in the first episode of *Dancing In the Street*, the BBC's big (10 hours, \$12 million) history of rock'n'roll. A grinning [white crooner], in shiny jacket and tie, hops awkwardly from foot to foot, moves his hands as if... directing traffic, and sings *Tutti Frutti*. Awopbopalooobop sounds like polite conversation. This looks especially insipid after watching... "...the innovator... the emancipator... the originator... the architect of rock'n'roll,"... – or [the person who]"rattled New Orleans with the force of a hurricane off the Gulf of Mexico," according to the narrator – ...eyes blazing and body popping, shaking his nerves and rattling his brain. [The white crooner] evidently didn't grow up by those rhythmic railroad tracks in Georgia. But then there wouldn't be rock'n'roll without white guys imitating black guys. Fortunately, the racial interaction – which, the series stresses, worked both ways – also led to Elvis Presley... and Buddy Holly. And to the Beatles... and the Rolling Stones... psychedelia and the Grateful Dead; glam rock... and Ziggy Stardust; punk; reggae; hip-hop; techno... and other developments that have left middle-aged white guys behind. *Dancing in the Street*... has already screened in Britain, American and A[US] and been acclaimed as the definitive small-screen history of the music. It's not perfect. The hotel-room-trashing opening sequence is silly. The narrator sounds stuffy and the narration gets overwrought: the torch of rock'n'roll is passed down by generation to generation through decades of revolution. - 1996

Generation X boogies on down to the 70s... More than 20 years after [an actor – who'd previously portrayed a teenager in a TV comedy series whose title included the phrase 'welcome back' –]danced his way to stardom wearing a white polyester suit in *Saturday Night Fever*, *Generation X* is discovering disco duds... Disco gear is making a fashionable return, though this time... there are more forgiving fabrics with a bit of give and stretch... What's fuelling the... [latest fad? Well, apart from] "public acceptance of synthetic fabrics,"... [all] signs point to... [recent] films such as *Boogie Nights* and *Ice Storm*... The 70s leisure suits, bell-bottom trousers and sequined halters could electrify a disco hall. Now they're back – and ready to party like it is 1979. [Having paraphrased 'party like it's 1999', it seems appropriate to mention that a number of 'tickets for Millennium 3 – held at the Auckland Town Hall on December 31st – were stolen. The organisers had to issue new tickets and check the numbers of existing tickets at the door.'

...'dance is an art form in which the human body in motion is the instrument of expression. It developed from prehistoric use of the medium in religious ritual and from natural use of the body to express emotion or enjoy rhythmic movement. The history of specific dance forms rests entirely on evidence supplied by the graphic arts, literary sources, tradition, and analogy from contemporary primitive dancing, because no means of recording a dance pattern was devised until recently when such a system, called labanotation, was invented. Primitive people used dancing as part of a dramatic attempt to win supernatural aid in hunting, making war, or growing crops; such dances were performed by groups, who often evolved specific dances and trained their successors. Hand clapping, drums or other simple instruments provided the rhythm. Although the dance is favorably mentioned in the Bible, it was neglected by the Christian Church, probably due to association with pagan rites. But the Greek religious use of the dance as a component of the drama evolved into the theatrical dance of modern times. There is no history of secular dance before the 16th cent., when the folk dancing long popular in the countryside was adapted to court entertainment, especially in France. It is as a form of entertainment that the dance has grown in importance. Not only are there virtuoso performances of social and ethnological dancing, dancing is an important component of motion picture and television productions, and solo dance and ballet are performed on the stage by companies of great artists'. Editor's note: The 'NZ Ballet Company was formed in 1954 by a former principal danseur with the Royal Danish Ballet. The danseur was at the time conducting a school of ballet in Auckland for the Regional Council for Adult Education. Support for the group was tenuous to say the least, and it would not have survived the 1950s had it not been for the personality and dedication of the danseur, who was the company's choreographer. A national ballet had first been talked about in 1947, when the government made bursary grants to young dancers to study and gain experience overseas. During this early post-war period there was a growth of interest in ballet spurred on by a number of visiting companies, notably the Borovansky Ballet and the AUSn National Ballet Company. Borovansky and other companies included NZers among their dancers. The interest in ballet peaked in 1959 when the Royal Ballet visited and drew enthusiastic and large audiences during a national tour. This enthusiasm led to the funding of the NZ company by the government-sponsored Arts Advisory Council from 1960. The ballet company has had varied success artistically and financially since that time, including periods when it was virtually defunct. Even for the most experienced and skilled, ballet is a precarious living in NZ.'

...*Ballet dances on knife-edge*... Government talk of closing the Royal N[Z Ballet (RNZB)] has left the company under a cloud as it fights for more funding. The Minister of Cultural Affairs... said the ballet had been having financial difficulties and closure was one of several options... [It] wanted the ballet put on a par with the N[ZSO], being funded directly from the Government rather than through annual Creative N[Z grants, but] did not like his chances. The debate about where the cultural dollar should be spent was further fuelled when the Associate Treasurer... [declined to] support extra money for the ballet or the orchestra until "fair and reasonable" funding was made available to Maori Kapa Haka groups. Maori culture was a drawcard for tourists and while [the associate treasurer] did not expect it to get the same amount as the ballet... [the Maori MP] wanted recognition of its value to the country. The funding issue has been sparked by a call from the ballet for an extra \$1 million a year to keep it afloat. It now receives \$1.8 million in funding... The ballet's general manager... said the 44-year-old company had looked at 18 possibilities, including closing, but... did not consider that an option. The present structure and size of the company was right for... [NZ's population,] although an extra \$1 million of funding was needed a year to allow the company to tour a balanced repertoire... [T]he company had pushed its box office and corporate sponsorships as far as it felt comfortable and the only way to make up the shortfall was through further Government funding. "The question is, do... N[Zers] want it and are they prepared to pay? It can't keep going on as it has been, it's been a hand-to-mouth existence." ...the present size and structure of the company could not be sustained and a smaller company would not have the same ability to draw box office sales and corporate sponsorship... [B]allet's 250,000-strong community had to let the politicians know that the ballet was delivering what the country wanted and should receive higher funding. The [person] known for years as the [feminine] half of Mr and Mrs Ballet... said... her husband[and itself] have had a 40-year association with the company. [It] is a former dancer and ballet mistress and her husband has been described as the finest... classical dancer [NZ masculinity] has ever produced. [It] said culture was being cut from all areas of society and... feared there would soon be nothing left.

...Ballet fans have a guaranteed programme into next year despite the R[NZB] battling for its future. The [general manager]... said the company had a programme arranged for the first three seasons in 1998 but could not afford to plan further ahead... [T]he company's 55 permanent employees had been kept up to date on the financial position and the options being considered. And while they realised there was uncertainty about the future, it was practice as usual yesterday as the company rehearsed *The Nutcracker*, which will tour the four main centres in December. The Creative N[Z chairperson]... said the agency was right behind the ballet's quest... [but] wants the Government to make the extra money available through the agency, not directly from Government... as suggested by the Cultural Affairs Minister...

Costs are under control. Sponsorship has increased fivefold since economic crisis last hit the R[NZB] in 1993. Income from box office is running at 50[%] of the total, a rate bettered in the western world only by the A[US]n Ballet, who take nearer 60[%], but operate within a much bigger population. Artistically our ballet company is looking very, very fine. But... [its general manager] is not at all surprised by the current economic crisis... The cycle of financial disaster has repeated itself like clockwork every five years since the 1960s... Any downturn in the economy is immediately reflected in the country's discretionary spending. Tough times at the box office have been compounded, this year, by competition from *Riverdance* and *Phantom of the Opera*... What is really needed, according to [the general manager], is backstop finance of around [7%] of the company's current annual expenses – to cushion economic fluctuations and smooth out the ebb and flow of artistic risk. The A[US]n Ballet

operates with just that sort of financial safety net. [The general manager] is adamant that on \$6 million the RNZB runs a very tight ship. While the... [NZSO] supports 95 well-paid musicians, the ballet company has just 32 dancers, who will receive an average of \$29,000 in wages in 1997. Just one person receives more than \$40,000 and the starting rate is \$22,000. The company has experimented in the past with a troupe of just 12 and then 18 dancers. The trials "proved conclusively" that 32 is the minimum number required to perform works like *Swan Lake* and *The Nutcracker*, the backbone of the repertoire. The salaries of other people in the organisation are also below market rates for the level of skills they have... and "nowhere near parity with the NZSO." ...Creative costs amount to... 56[%] of annual expenses. Administration costs are \$720,000 (12[%])... and sundries, such as bringing in guest teachers and storage costs for sets and costumes, amount to \$240,000... Of the creative costs, many are fixed by outside factors. Music costs, including hiring the well-funded NZSO, gobble up 18.5[% of the creative costs]... touring costs are also 18.5[% of sales] and marketing expenses are 23[%], theatre hire is 10[%] and equipment hire and other miscellaneous costs make up the remain[der]. "Ballet," says the general manager... "is by nature an expensive art form... But this company... certainly deserves its place and it should be treated appropriately. How that is done now is a political issue." ...[Unfortunately, for the RNZB, some politicians have] a vision for the future of Maori performing arts... A Maori theatre cutting across all tribal boundaries and with all forms of art including kapa haka would have a wider audience than orchestra or ballet, says a leading Maori entertainer... "While the ballet and the orchestra are viewed as national icons they are... not drawcards for overseas visitors because there are much better companies worldwide. It's not an icon, as far as I'm concerned, if it's only promoting a culture that has been imported." ...funding for such a project would prove to be a stumbling block... However... the... associate treasurer... [recently] highlighted the lack of funding for Maori culture and art... The bulk of funding for Maori art and culture comes from Te Waka Toi, the Maori arm of Creative NZ... In the meantime... the... Russians are coming. But[the Maori entertainer will only] need... a couple of heaters to repel this particular [cultural] invasion.

...The *Great Moscow Ice Show* is skating its way here for the first time. With a tent the size of two rugby fields, three 12m containers of costumes and props, and more ice-making machinery than you can shake a popsicle at, the entire logistical exercise alone is estimated to cost over \$4 million... [T]he other major challenge in transit involves people... 23 of the 36 performers [are] aged between 16 and 22... [The NZ] based coordinator, herself from Moscow, says... "You cannot even apply unless you have competed internationally. Those selected then go through three years of training in juggling, acrobatics, trapeze and skating. The talent of these youngsters is incredible – many of them come from a long line of circus and show performers and were practically born on the side of the rink,"... With five of the cast having been awarded the top Masters of Sports and plenty of others set to follow... Kiwi audiences are in for a frosty treat.

...[the husband] drove almost 200km to take his wife... to the *Great Moscow Ice Show* for her birthday – but all they got for their \$70 tickets was a glimpse of the big top through trees. The Whangarei couple and other disgruntled ticket-holders arrived at Western Springs yesterday to find the gates locked and the international extravaganza on ice axed without notice. "I am really peeved," said [the wife]. "We booked and paid for the show last week, [and have got] a hotel for the night as a treat for my 61st birthday. The least they could have done is tell us it was cancelled." The show opened in Auckland on September 26 and was due to run until next weekend before going to Wellington and Christchurch. But the 50-strong troupe of acrobats, jugglers and performers hung up their tights on Saturday and it is not known whether the show will go on. Representatives of the Moscow State Circus Company said bad weather had hindered door sales... and [made] the tent difficult to work in... [The person] contracted to do marketing and advertising, said it had rained every day... The 2000-strong crowd on opening night had been almost a full house, but sales had dwindled since... The decision to stop the show was made "very suddenly" on Saturday and an announcement was made over the radio that afternoon... But scores of contractors said they had withdrawn services because they had not been paid. They had hired a lawyer... [The promoter confirmed] the show was cancelled because... [an electrician who] was owed money... [had] cut the power... The company has assured ticket holders they will be refunded through Ticketek. A meeting yesterday of company representatives, lawyers and financial officers discussed whether the show could reopen in Auckland. The Auckland-based promoter... of Global Trade and Tourism, met officials at Paradise Ice Rink to discuss moving it there... [T]he all-new show, which cost \$4.5 million to put on in N[Z], will go to Wellington and Christchurch as planned before heading to Britain...

The seemingly jinxed fortunes of the *Great Moscow Ice Show* have taken a turn for the better. When the ice skating troupe ran out of money for motel rooms, Rotorua took them under its wing... Black Magic Coach tours and the Rotorua Maori Cultural Centre set out to give the 49 members a roof over their heads at the centre's marae, and the chance for rest and relaxation... The group's interpreter... said the sightseeing and sunshine during their stay had lifted the group's spirits... "Rotorua was just very lucky for us. We are very pleased." ...Last night the troupe thanked the town for its hospitality by giving an impromptu show – without ice or costumes – in... a theatre at the cultural centre... in... return for a \$5 koha [(donation)]... The skaters had performed 18 of 35 shows in Auckland and were paid for just seven, the promoters running into financial difficulties... The skaters' tour continues to Wellington and Christchurch later this week.

...When a major show... is cancelled it affects not just those who have bought tickets... [It was the NZ promoter]'s unfortunate task to announce the cancellation of... *Lord of the Dance*... [– due to the] illness... of... the... [show's] starring Celtic tap dancer... – ...on Sunday after almost a year's work... 75,000 tickets had been sold for the... season due to start on Wednesday, December 10... "It's a significant loss to the city... We were going to be the second-biggest-paid arena show in the country. We're currently running No 4 [behind Dire Straits, [Wacko – both of whom were promoted by his company Pacific Entertainment – and the '70s rock icon once known as Ziggy Stardust]]..." With such telephone-number finance riding on *Lord of the Dance* – ...\$6 million taken in ticket sales alone – it must have been tempting... simply to announce a postponement. Full cancellations such as this are a rarity. "Yes, it's rare, but the insurers have agreed that this is so uncertain it's better to be quite definitive about it. That doesn't mean to say we haven't and won't be inviting [the Celtic tap dancer] back to discuss an earliest-possible rescheduling." Outside of Pacific's financial commitment – for most of which... they have insurance – there were ancillary benefits for the city, which would have seen money from performers and visitors spent in restaurants, bars, and... on... souvenirs... and... accommodation... The... crew alone were taking 90 single hotel rooms "spread across two or three hotels"... Then there was venue hire, casual staff at the venue over the season, franchise holders for stalls, security staff, stage hands and lighting riggers, transport for the performers, cancellation of advertising, the refunding or transfer of tickets to other shows... such as... *Riverdance*, a similarly conceived Irish dance show (which used to star [the ill tap dancer]) which arrives in Auckland in March... "...at least there is *Riverdance* for those people for basically the same price..." ...[Pacific Entertainment's owner] has long been a promoter who believes one show helps sell another... But beyond the immediate demands of the audience exist all those ancillary industries affected... And [the promoter] also notes the stage for the show – the biggest in the country when it is completed – is still being built in West Auckland. "...With outriggers for sound and video it will cost \$200,000 to build... It is being built especially to the specifications of this show but is modular and therefore useable for other shows..."

...Last week... [the] star of the Celtic dance show, cancelled all N[Z] concerts... The cancellation leaves 77,000 ticketholders with... tickets... worth... \$69 and \$79 each... Pacific Entertainment said ticketholders would get their \$6 booking fee refunded on top of the ticket price... Alternatively ticketholders can swap their tickets... This came as cold comfort for [one] Aucklander... who went to Ticketek for a refund and was told it would take up to six months. "We then asked if we could get *Riverdance* tickets and pay the extra \$10 and they said it wasn't possible. We could get... tickets... [to see two piano players] in early March... but not *Riverdance*. We had to kick up a stink before they finally relented. They have our money and I'd like to know what they are going to be doing with the interest if it is going to take them six months to pay out." Ticketek... would not comment and referred the *Sunday Star-Times* to promoter Pacific Entertainment. Pacific Entertainment... [– which had already spent] about \$230,000 in advertising... – ...said it had made it clear through the media that all ticketholders were to send in their tickets to Ticketek with

their details. "The refunds will be processed as soon as possible. If that takes six months, then it takes six months. You have to remember there are about 75,000 of them." [However, the]Consumers Institute chief executive... said it was unacceptable for Ticketek to take six months to refund tickets. "All I can say is that we have 100,000 subscribers and I can get a magazine out in a month."

...Fans who bought tickets to *Lord of the Dance* shows in Auckland will be refunded within two weeks, Ticketek[']s sales and marketing manager... said yesterday. All seven concerts have been cancelled because the show's star... became ill late last month... with bronchial asthma... in Brisbane... [Incidentally, twisting], pogo-ing or just tripping the light fantastic can be dangerous for your health. Statistics for the year to June 30, just released, show 198 people received \$367,000 in accident compensation payments for injuries sustained on the dance floor. Overexertion in the lambada stakes cost the nation more than accidents in bungi jumping (\$11,000 for seven claims in the same period) and parachuting (\$186,000 for 39 would-be skydivers)... Rugby remains the number one sport for injuries, with \$5.6 million of new compensation payments to 5184 players. Professional rugby, which now faces steeper premiums because of its high risk, recorded 52 [ACC claims totalling] \$83,000 in the work-related category. But the new head of the Accident Rehabilitation and Compensation Insurance Corporation... was pleased with a \$1 million drop in new sports injury compensation claims to \$26 million... Dance injury payments [have also dropped from last year's] \$391,000 for 134 people.

...*Sore toes and TUTUS*... [are] not helping members of the R[NZB] in the days before *The Nutcracker* opens in the capital. The Christchurch and Dunedin seasons have been very successful but, at this point, everyone in the company is tired and just a bit flat. It has been a rough year. Administration staff have pushed through grinding months of negotiations for a different – as in secure – financial base. Now they can only wait for the results... But there is no peace in the lull. Opening night in the capital has inconveniently coincided with their moving date, out of the Telecom Dance Centre, home for the past eight years, into new premises next to the St James Theatre. The eyes of the admin staff look alternatively hysterical and glazed as they rush about. The dancers too are calling on reserves of energy. A couple of weeks on tour, three up in each motel room to save money, on top of the unrelenting routine of class, rehearsal and notes, warm-up and performance, and the same again the next day and the day after, is not a glamorous experience. In the dancers' gloomy quarters in the Opera House a distinct odour of wintergreen, from liberally applied liniments, pervades the air. There has been an outbreak of ankle injuries because, [the]ballet master... suspects, of the heavy load of pointe work in *The Nutcracker*. "The relevés [repeated upthrusts on to the toes] of the Snowflakes... are full on!" ...[the guy] who dances the Nutcracker role, lies in the carpeted aisle of the Opera House, rolling about on a wooden massage roller, while... [waiting] to be called into rehearsal, indicating it is not only the girls who are feeling sore... [The master] is also busier than usual with a stageful of children, 18 altogether, from local ballet schools, who form two groups, performing alternate nights. The children, different in each city, are all marvellous, [the master insists as it schools the mice]... "...pick up your feet... Now, where's the other one? Lost behind the curtain? Come forward second mouse. Three big steps forward, not... one... Make it look... as if you travel forward the same distance as you go up. That is not quite what happens. But that is the illusion... it is all illusion." - 1997

My sister took her six-year-old son to the ballet and as [the son] watched the performers dance around on the tips of their toes, [it] asked his mum quite loudly: 'Why don't they just get taller people to dance?' ...[■] Dancers go through at least two pairs of pointe shoes a week, at \$100 a pair.

...*What is your least favourite body part?* [...]...my feet are the worst. I have terrible bunions from all that dancing... I have arthritis in my toes and I'm in pain a lot...['] But such dedication is vital in the competitive world of dancesport, as revealed in the new television series *Battle of the Ballroom*... Dancers... practise so intensely they see more of each other than they do of their own families... [● A] Wellington ballerina... is taking her final curtain call in Auckland this week after 12 years with the R[NZB]. Her last performance with our national company is in... *Seven Deadly Sins*, which runs at the Aotea Centre from tonight until Sunday. The 31-year-old, who took her first dance steps as a toddler, has decided to call it quits after a back injury... [received while portraying] the... Sugar Plum Fairy... [in] *The Nutcracker*... last year... continued to trouble her... The contemporary *Seven Deadly Sins* programme has seen her hang up her pointe shoes and tutu in favour of street shoes and a black trouser suit... "I've always enjoyed the fact that we've done both traditional ballet and contemporary works. You always have to keep doing that or you stagnate, and we're doing a lot more contemporary ballets... [although] surveys show the majority of audiences still prefer traditional ballet."

...*Dancing in sin in a surreal wasteland* Being a choreographer is a mug's game, [one] says of his task of turning R[NZB] classical dancers into contemporary performers for *The Seven Deadly Sins*. "Any other creative artist – a painter, a poet, designer or novelist – can create their own work in their own time, but a choreographer can't because you have to start working at a certain date, do the work from 9 till 5, and have people stand around watching you do it. How contrary is that to the romantic vision of the creative spirit?" [The choreographer] felt a lot of pressure in the lead-up... because [it] had only five weeks to temporarily undo the dancers' classical training and to choreograph the dance, which meant staying till late at night in the studio working out steps for the next day. It's a whole new vocabulary for dancers accustomed to learning standard steps and assembling them into a ballet, [the choreographer] says. Classical ballet demands a vertical spine and is very formal compared with the dives, rolls, stabs and the element of touch which [the choreographer] incorporates. One morning, when... beg[inning] with the dancers using massage, [the choreographer] realised that for many of them it was the first time they'd had physical contact with each other... While the seven sins of pride, envy, anger, lust, avarice, gluttony and sloth can be deadly, [the choreographer] has given each a positive slant as the work traces a universal search for humanity and grace... In this interpretation of a classic story, where Anna travels through America in pursuit of money to build a home, the work has been relocated in a surreal post-apocalyptic wasteland. Passages from a requiem by 17th-century composer Heinrich Schutz are woven into the main score... Dancers will wear clothes from [a]Dunedin designer... with whom [the choreographer] collaborated in his work *The Long Undressing*... As part of *The Seven Deadly Sins* season the company will also perform the lyrical *Protecting Veil*, by the Sydney Dance Company's [choreographer].

...It was meant to be a simple survey about the positive and negative aspects of learning ballet. But some of the answers given by 40 teachers and students to questions asked by [an]Auckland ballet teacher... have had the dance industry, if you'll excuse the pun, in a spin. Claims emerged of glass splinters being put in a dancer's shoes and a young ballerina pushed down the stairs by a rival's mother. [The] research also found some aspiring young ballerinas suffered from lack of self-esteem and felt pressured into losing weight. Those findings were acclaimed as ground-breaking at the Dance and Child International conference in Canada, where [the Aucklander] had been invited to speak. But after they were reported on the front page of the *N[Z] Herald*, there was a huge backlash from other N[Z] teachers. So just what is the truth? Is ballet really a breeding ground for anorexics, swarming with bully teachers and pushy mothers? Apparently, the answer to that depends on who you talk to – and the *N[Z] Gals'* *Weekly* found it hard to get anyone to actually talk to us about it. The ballet world had closed ranks. Several people agreed initially, then changed their minds, including [the Auckland teacher] herself. "I've talked about it so much I feel overwhelmed," [it] said, after being quoted in newspapers here and overseas and speaking on radio to... the BBC. [The Aucklander] added that, while [it] felt some of her findings, particularly the story about the glass in the ballet shoes, had been overplayed, [the ballet teacher] was standing by what [it'd said. The Aucklander] just didn't want to say any more. Next we approached the Auckland Ballet Teachers' Group, which, according to newspaper reports, was furious about [the study. One teacher said it]... didn't want to be quoted due to previous "media misrepresentation" but would fax through a press release. The eight-line release said, while the group accepted there must always be room for constructive criticism within the ballet industry, it refused to take seriously the finding of the study and had written to [its author], asking her to "justify applying her study's findings to N[Z] ballet schools as a whole". The press release was accompanied by a three-page document written by... [the] secretary of the Credo Society, which attacked [the

author's methods of, and reasons for, compiling her research. It used words like spurious, shoddy, farcical, flawed, pitiful, confused, meaningless, biased, contrived... you get the idea. Still none the wiser about the whole ballet debate, we thought we'd try the pupils. The first one we approached, a 16-year-old would-be professional ballerina, said [it]'d be happy to talk, including about the time her shoes were sabotaged. Then [the 16-year-old] phoned back. Sorry, her teacher didn't think it was a good idea. Next attempt: a 15-year-old also keen on a career in ballet. [The 15-year-old] agreed to talk on condition her real name wasn't used. Call me Giselle... Okay, Giselle, so what is the ballet world really like? "I think it depends on the ballet school you go to and who your teacher is... The school I'm at now is cool – they don't pressure you too much. The teachers are a bit harder on the ones who really want to do ballet professionally but I think they need to be. You've got to have the discipline if you want to succeed. At the last school I was at, there was a teacher who gave diet sheets to the girls [it] thought needed to lose weight. [That teacher also] had a few favourites and tended to make everyone else feel useless compared to them. But the other teachers were okay." Giselle reckons it's pushy mothers who are the real problem. "My mum's cool – [mum]'s never cared how well I do in exams or competitions as long as I enjoy myself. But some of the mothers are really demanding and make their daughters feel bad if they don't do very well. One... once said something really nasty about another girl being fat and everyone, including that girl, heard." Meanwhile Kelly (not her real name – [it] also wanted to be anonymous) reckoned ballet was largely responsible for her anorexia. "I might have been that way inclined anyway because I'm quite image-conscious but, when I was 13, my ballet teacher told me I could do with losing weight," said Kelly, who is 1.68m and then weighed about 62kg. [Kelly] cut out junk food and lost... 4kg. "But I couldn't lose any more. Then I got sick and ended up going down to just under 50kg. When I went back to school, everyone said I looked terrible. When I went back to ballet, everyone said I looked great." Kelly (now in her twenties and no longer dancing)... added, "If you want to do ballet professionally you need to be thin. You can't have a chubby ballerina – it's like having a short basketball player. If you're just doing it for fun, your weight is not so important but some girls do feel uncomfortable being in a class with thin girls and seeing themselves in the mirror alongside them." ...The final word goes to a group of pupils at the Auckland West Dance Academy, aged from eight to 11. So why do they do ballet? "Because it's fun," they chorus. What if it wasn't fun any more? They all manage one of those ask-a-silly-question looks. "Then we wouldn't do it," they say. Simple really.

...[a British m]odel... aged 23, married [a salesperso]n... 28, after winning a radio station competition for people prepared to tie the knot at first sight. In defence of this tasteless piece of marketing, the station argued that they were a "touchy-feely" pair who were clearly happy with "the physical side of each other." Apparently they were not touchy-feely enough because the answer to the question on everyone's lips was no, the marriage was not consummated on the wedding night.

...THE TWO strangers who met and married on the same day are embarking on a new life in a new city and are amazed more people don't share marital happiness. A... *Reader's Digest*... survey shows more than a quarter of [gals] and 18% of [guys] wake up wishing they were not married.

...this week... [the] marketing manager of Hamilton radio station The Edge... said the promotion – Two Strangers and a Wedding – was not part of a ratings war. However... the radio research manager at Research International, confirmed that... its twice-yearly... ratings survey was being done in the Waikato. Church leaders have condemned the wedding for trivialising marriage, and station staff yesterday closed ranks after the identity of the groom was made public before Friday's hotel ceremony. A 31-year-old Hamilton glazier... yesterday proposed by phone to [a]28-year-old... on the station's breakfast show. "I would love to be your wife," said the mystery bride, who has her hens' night tonight... The groom's parents, sister and three best friends selected the bride, which has prompted comparisons with arranged marriages in Asian cultures. "[90%] of marriages in the Eastern world work," [the marketing manager said. "50% of Western world] people get divorced today and we thought we could make this work." A retired Presbyterian minister and talkback host... will officiate at the wedding, and security is expected to be tight. The 72-year-old acknowledged initial unease about his assignment, but said the wedding would go ahead with or without him. [The minister] insisted the couple accept counselling from him afterwards. "This couple are anyway probably a lot better prepared than many of those I have married over the years."

...It just got stranger and stranger. In Hamilton yesterday, when strangers... exchanged vows as part of a controversial win-a-wife competition run by The Edge radio station, many of the guests were also unknown to the newlyweds. [A]Tauranga mother-of-two... was one of 15 people to win double tickets to the wedding, and even took a present. [The mother-of-two] says it has been wonderful listening to the on-air romance – "we feel like we know them" – and... did not feel uncomfortable attending the wedding of a couple [it] did not know. Many more thousands caught the ceremony live on radio, television or via the Internet in what is expected to be a ratings winner for the organisers. The celebrity couple have the option of sleeping in separate honeymoon suites at a Rotorua hotel tonight before jetting to Venice for a week-long honeymoon on Monday. [The groom], who shook his fiancée's hand when [it] joined him at the altar, describes his new wife as gorgeous. "I couldn't ask for anything better." The bride... admits [it] is an impulsive person. "It's just probably in the last few months I've decided I'd like to find a lifelong partner – and here [that partner] is." Her parents... say they are comfortable with their daughter's decision. They already have one grandchild and are hopeful of more "further down the track" as a result of the new union... [The m]arriage celebrant... likened the bride and groom to a blind couple who knew each other only through their voices. [The celebrant] told the congregation that millions of people in the world relied on their parents to make the right marriage choice for them. The Edge breakfast show co-host... said [it] would be disappointed if the marriage failed – "when you work so hard for it."

...What's love got to do with it? With many [gals] finding it harder to convince [guys] to "buy the cow" and take their place at the wedding altar, it is timely to see radio using a bit of ingenuity to bring Kiwi couples together in wedded bliss, sight unseen. Actually, this is not a uniquely N[Z] idea because the same gimmick was attempted in Britain... Needless to say, th[at] marriage didn't work. [The groom] had specified a tall, blond, beautiful, sporty type but hadn't reckoned on the whole package – in her case a pretty face housing a non-stop gob. [The bride] didn't realise her tall, dark, handsome, sporty type would sit around watching TV all day, drinking and belching in time to the advertisements. Unlike our prudish Kiwi couple, there was absolutely no talk of separate bedrooms on the honeymoon, and while the bedsprings were creaking and the cash prize being spent, all went smoothly. The stunt – which is exactly what it was for the radio station involved – was skin off nobody's back, except the two mugs involved. Once [the groom] was sleeping on the couch they ended up realising they had little in common and went their separate ways.

...The omens are not good for the couple who married in a Hamilton radio promotion... without having previously met. A stunt radio marriage arranged in Britain... ended in tears three months later with the groom accused of cheating on his new wife. And the couple in a similar marriage in A[US] split after only two months, with the first signs of distaste between bride and groom appearing on their Paris honeymoon. Both weddings were condemned by church and community leaders, but proved winners in the publicity ratings for the radio stations... [One of them,] a Birmingham radio station... set up... a wedding... [between a salesperso]n... aged 28, and [a]wannabe model... 23... The pair, who were picked from 200 hopefuls by a panel of relationship counsellors, including an astrologer, were followed by cameras to their Bahamas honeymoon and within days the strain was showing. [The bride] apparently refused to consummate her marriage until [it] got to know her husband. H[er husband] wasn't too happy about this. The strain was evident when the pair returned, smiling just a little less brightly, from their sunny honeymoon to the apartment they had to live in for at least a year in wintry Birmingham... A Sunday newspaper reported that [the husband] had had an affair with a dental nurse, and his new wife walked out. [The AUS]ns... initially gushed about the attractions of their new partners as they exchanged their vows just moments after meeting. But the flight to Paris for their honeymoon, 24 hours jammed together, proved just a bit too much. "The atmosphere became a bit stressful," [the bride] told the... newspaper. "My humour tends to be pretty sarcastic and [my husband] was not always appreciative."

...six strangers... will have the eyes of the world on them when they shack up together in a Wellington apartment. [Imitating a Scandinavian idea, t]he Edge radio station is locking up... [the six strangers from] Hamilton... Rotorua... Wellington... Christchurch... [and Dunedin, who are aged between] 18... and... 32... in their new \$5 million home at the Terrace Apartments at 6am tomorrow. Video cameras in the lounge, kitchen and bedrooms will broadcast their every move live over the internet. At stake in the radio contest is a \$10,000 cash prize. Each Monday, votes from the internet site and telephone voting lines are collated and the person with the least votes is booted out of the apartment. The last "Inmate" living there wins the cash... [In related news, t]he Ministry of Commerce [is facing] a multimillion-dollar lawsuit from radio stations which claim that rival stations broadcasting from the Sky Tower are drowning out their programmes. Furious FM stations which use the Waiatarua transmitter in the Waitakere Ranges... and the Ministry of Commerce, which authorised the Sky Tower as an alternative broadcasting site despite warnings about potential problems, will meet tomorrow. [The]... chief engineer of the Radio Network... said they... [had] been writing to the ministry in vain for a year seeking to have the power levels lowered before the... stations [that were switching to the Sky Tower] went to air... Hundreds of angry listeners have complained that they can... hear horrific crackling the closer they get to the Sky Tower. Some television sets are also getting interference...

Angry independent radio stations have condemned the Government's announcement of a non-commercial youth network, saying it placed their own futures under serious doubt... [L]ast night, the chair[perso]n of Mai FM... said... the... news... came as a "devastating blow," while... student radio station bFM blasted the move as a cynical ploy by National to grab the youth vote... But... [the] Government insisted the non-commercial youth network would boost the N[Z] music industry here and overseas... National's initiative includes the establishment of a music industry forum... to promote the development of N[Z] music... and an FM frequency for National Radio... [The PM] said in Auckland yesterday that the youth radio network and music forum would be more fruitful than the "dead hand of regulation" which some parties such as Labour proposed in the name of quotas... The youth station... could cost up to \$2 million to set up, although industry insiders insist more taxpayer money would be needed to make it work. [The PM] also pledged to give the industry forum \$200,000 a year of taxpayers' money... [The Mai FM chairperson] said: "Regardless of whether it is commercial or non-commercial, it will take listeners away from us. For a political party that embraces free enterprise, to take on the private sector in this way is quite unacceptable. Mai FM is a small, under-resourced company owned by Ngati Whatua. We have fought for seven years to achieve our position as the number one music station in Auckland, specifically in the youth market. This move not only threatens the company but the jobs of young Maori broadcasters and others." ...The chair[perso]n of the Radio Broadcasters Association... [also] accused National of doing a... free market... u-turn... RadioWorks Networks, which embraces The Rock FM, Solid Gold FM, Radio Pacific and The Edge were equally scathing. The managing director of RadioWorks... branded it a "ridiculous waste of taxpayer resources" and a duplication of stations already in the marketplace... N[Z] already had 68 youth-targeted stations... [The managing director] accused the Government and older music industry figures of meddling in an area they knew little about... The Government would be better to release additional frequencies on to the open market and let operators complete the development of their own networks across the country... [I]n May, the Minister of Communications... had stressed that National did not believe in distorting a level playing field. The minister had added that [it] was pleased the party had headed off a suggestion about a youth radio network. The commercial radio industry in N[Z] "embraced free enterprise," employing 1500 people, had 160 member stations and an annual turnover of \$170 million, said the minister. ■ 'The Ministry of Commerce estimates that in 1996 165 radio stations were broadcasting separate programmes on a continuous basis, compared with 64 in 1988. Of these, 122 were privately-owned, compared with 30 in 1988. New radio formats have emerged throughout the country, including classic hits, easy listening, country music and talkback stations. The Independent Broadcasters Association based in Auckland represents the private companies which operate independent radio stations. There are 54 members with stations in all metropolitan and provincial markets. Stations include both locally operated and network operations. News and sport are provided by Independent Radio News (IRN), based in Auckland. The Crown has reserved AM radio frequencies and UHF television frequencies throughout the country for use by non-commercial broadcasters. AM frequencies have been reserved in all communities with populations of 10,000 or more. Broadcasters may have access to reserved spectrum for non-profit community purposes. In each case, a licence is allocated upon application to an appropriate community organisation which is responsible for ensuring that all interested groups have access to airtime on the frequency. Use of reserved frequencies is restricted to non-profit activities. Access stations provide airtime on a non-profit basis to a range of minority groups in the community. At present there are eight access radio stations operating in NZ. All have been assisted in providing access to minority community groups by funding from NZ On Air (which in 1992/93 was \$1.8m')...

The Government is expected to throw out a Waitangi Tribunal finding that Maori have ownership rights over radio frequencies. But Maori leaders say dismissing the judgment would be seen by the rest of the world as denying a partnership with Maori people. The... tribunal has defended its majority finding – which has held up the sale of mobile communications radio frequencies – as necessary to protect the Maori language. However, it is understood the Government believes the decision must be blocked, as it could open up the way for claims on everything from genetic engineering discoveries to oil and gas reserves... The... Minister for Treaty Negotiations... told Parliament that "the issue is really whether the electro-magnetic spectrum was a valid taonga in 1840." ...[a Maori] Professor said... "The radio spectrum was a resource that existed before 1840 and still exists. The difference is we have found the technology to use that resource in a certain way. It was part of the reality which is subject to a treaty." ...Maori would probably want to have management of parts of the radio spectrum for themselves or joint ventures with the Crown... The Government is expected to rely heavily on the minority judgment... [which] finds the treaty is "a partnership, not a marriage." Therefore... the Crown does not have to share every natural or [hu]manmade asset, regardless of whether it is specifically listed in the treaty or not.

...The Waitangi Tribunal finding that Maori are entitled to a share of the airwaves reflects the principles of the treaty and has nothing to do with whether the airwaves were known in 1840, says... a lecturer in history at the University of Auckland... Asinine anti-tribunal arguments that the electromagnetic spectrum was unknown in 1840 lack grace. They seek to deny developments beneficial to Maori while ignoring others considerably more beneficial to Pakeha. Few 1840 Maori envisaged that signing the treaty would result in three million Pakeha living on nearly all of their land... The Treaty of 1840 was an agreement to share the then known resources and, by implication, those resources that at a later time would subsequently become available. Let's share the airwaves.

Radio was foreshadowed when James Clerk Maxwell predicted the existence of electromagnetic waves mathematically in 1864, and such waves were produced in 1884 by Heinrich R. Hertz. The first practical use of radio was by Marconi, 1895[(the Italian 'wanted it to bring peace, but his wireless was pressed into operation by all sides during WW1 – and, as a consequence, his company prospered; giving him wealth and fame, before consuming his life and family). 5 years after his initial success, other scientists were still puzzled by what appeared to defy their laws of the universe.']Sir John Fleming's invention of the vacuum tube, 1904, and Lee De Forest's invention of the triode tube, 1906, laid the scientific groundwork for the present widespread use of radio for communication and entertainment. The first commercial radio broadcasting station was KDKA Pittsburgh...

1903 [NZ's]Wireless Telegraphy Act authorised the Government to establish stations to receive and transmit messages by the newly discovered method of wireless telegraphy. The Act was so worded that further developments (such as radio broadcasting) were anticipated, giving the government the power to license future use of the airwaves... 1922... [The] owner of the International Electric Co in Wellington, a radio parts dealer, initiated a series of broadcasts to promote sales. [Two months later,] Radio Services Ltd in Auckland began broadcasting, essentially for commercial reasons. Retail customers were attracted by the novel idea... 1923... The Post and Telegraph Department issued a set of Regulations for

Broadcasting. Program content was strictly defined. There had to be a high proportion of local artists, advertising was totally prohibited and religion was to be emphasised during specific times on Sunday. A licence fee was set at 5/-... On Apr 1, 1925, a government scheme to unify existing licensed broadcasters into a national service was implemented. The receiver's licence fee was increased six-fold to 30/- a year, largely to finance administration. There was widespread dissatisfaction among listeners, who demanded a corresponding improvement in program content. On Aug 30, the Radio Broadcasting Co of N[Z] assumed control of the four metropolitan stations acquired under the scheme, with the first formal transmission taking place from a newly installed station at the N[Z] and South Seas Exhibition in Dunedin on Nov 17... Station 1YA in Auckland began broadcasting with a new 500-watt transmitter, a year after the intended starting date... [A month later] 3YA in Christchurch began broadcasting... from temporary studios in an old dance hall... Registered licence holders were increasing at a rate of 15,000 a month... 1927... Station 1YA arranged a program which enabled telephone callers to ask the announcer... questions about international affairs, which [were] then answered and discussed with them. In essence, this was the principle of what was to become known in the 1970s as "talkback"... Station 2YA Wellington, with a transmitting power of 5,000 watts, was opened... [in the same year]... The company's first provincial station, 2YB New Plymouth, was opened in partnership with the North Taranaki Radio Society on Apr 27, 1929. The [company] ceased operations on Dec 31, 1931, its function passing to the N[Z] Broadcasting Board, a government-appointed body... In a notorious incident, a [1935 broadcast by a reverend] from Station 1ZB in Auckland was "jammed" in an effort to prevent what the Government feared would be comment that might prejudice its chances in the forthcoming election... [The following year] 1ZB opened as the first station in the... newly elected Labour Government[']s... new government-owned commercial network. The network was extended in 1937 with the opening of 2ZB Wellington... 3ZB Christchurch... and 4ZB Dunedin... Commercial radio brought an upsurge in the volume of recorded serials... Personalities multiplied with the development... "Aunt Daisy's" program... was a major marketing influence throughout NZ... for... 25 years... 1943 For political and administrative convenience, the... National Broadcasting Service (non-commercial) [- set up in 1936 -]and Commercial networks were combined as a single organisation... [which, in 1946.] was renamed the N[Z] Broadcasting Service (NZBS), and... [after starting] television demonstrations in... 1959... [and introducing a] television licence fee of £4 a year... became the [NZ Broadcasting Corp in 1962]... 1964 The NZBC established a Maori program section... [and the following year] established the Overseas Program Exchange... supplying broadcast material of an indigenous nature to radio stations and organisations in various countries... 1966... The Broadcasting Authority was created to hear submissions and grant licences to radio stations in this year... 1971... The radio licence was abolished. The television licence fee was set at \$20... In Apr, 1975, NZBC ceased to exist and its functions were divided between T[V1, TV2] and Radio N[Z, though]... South Pacific Television (TV2) [eventually] ceased operating as a separate organisation and became the alternative channel of [TVNZ]... In a further administrative reorganisation on Feb 1, 1977, the Broadcasting Corporation of N[Z came into being and in]... place of the Broadcasting Authority, the industry's watchdog and caretaker functions were assumed by a Broadcasting Tribunal... 1973... NZ's television network changed over to colour transmissions... The colour licence fee was \$35... [In 1975 a] colour television licence... cost \$45, B&W \$27.50]. The fee was collected by the NZ Post Office until the late 1980s, when this task was transferred to a new agency called NZ On Air (NZOA). This transfer coincided with the setting up of a privately owned TV channel - TV3 - which 'started broadcasting on Nov. 26, 1989'].

The broadcasting fee needs to rise by \$25 a head to prevent local television and radio programmes from becoming an "endangered species," NZ[OA] says. The... present \$110 fee, [has remained] unchanged since 1989...

Despite growing use of television and radio content on local Internet sites, N[ZOA] is refusing to open its funding doors to Web developers. [The person] who runs the Radio N[Z] Web site (www.rnz.co.nz), described the situation as "moribund,"... "At the end of the day, it is exactly the same microphones and cameras used on television and radio to create content which we are transferring across to the Internet... My lawyers and the NZ[OA] lawyers disagreed with the interpretation of the Broadcasting Act to cover the Internet as a broadcast medium... [but the] delivery method shouldn't matter. The simple fact that we are using this technology to reach a far wider audience both locally and internationally should be supported,"... Another Web site developer... said NZ[OA] needed "to move into the new millennium[- NZOA] is sitting on its hands while the initiatives to place cultural, educational and entertainment-driven content on the Internet are passing them by,"... The... Broadcasting Act, [which was] first drafted in the 20s, has not been amended since 1989, well before the arrival of digital networking technology... [and, therefore,] specifically excludes alpha-numeric text in its definition of programming... [making it also] debatable if it can be successfully applied to streaming of audio and video material... A spokes[person] for the Minister of Broadcasting... told the... *Herald*: "There are no immediate plans for any changes to the terms of reference for funding in this area. However, there is a watching brief on emerging technologies to see if... changes are warranted."

...ITS VERY NAME IS LIKE A RELIC OF THE Cold War, dusted off and given an Asian sheen. Radio Free Asia, the U.S. government program beaming news and commentary with a pro-democracy flavor into countries like North Korea and Burma, sounds a bit like cranking up a Victrola in the age of WebTV. Yet the strains emitted from this radio network haven't exactly evoked a sense of sweet nostalgia among leaders of the... authoritarian regimes that prefer to orchestrate what information their citizens access... North Korea's Central News Agency condemned the broadcast as "sinister ideological and cultural infiltration," and a Chinese foreign ministry spokes[person] complained: "This action of the U[S] seriously violates the norms of international relations." This is in fact all too normal in East-West relations - and precisely what R[FA]'s supporters in Washington have in mind. After all, it was the program's ancestors, Radio Free Europe and Radio Liberty, that inspired U.S. lawmakers to redirect the rhetoric toward Asia. If that tactic worked in bringing down communism in Europe, they argue, why not try it in Asia? Better a radio program, says [one member of Congress], than a threat to withdraw most-favored nation trading status, a U.S. negotiating stance that especially irritates China... "The fact that the broadcasts are burrs under the saddles of unelected governments should not concern us greatly. We have to remember that what we want to do is improve our relationship with the people living in repressive societies in that part of the world." It was Beijing's 1989 crackdown on the Tiananmen Square democracy movement that first triggered interest in turning a tool of the Cold War against the Soviet bloc into a means of infiltrating some of the world's most tightly controlled societies: North Korea, China, Vietnam, Burma and Laos. The idea attracted bi-partisan support in Washington from the onset, yet it would be seven years before RFA's first broadcast, a Mandarin program, hit the airwaves last September. Apparent agreement of the ends quickly ran into disputes over the means. The U.S. already funded Voice of America; some in the State Department felt that creating another program was needlessly confrontational. VOA feared it would lose influence and, more importantly, financial backing - in an era of shrinking foreign-affairs budgets. Both programs survive, however, with RFA's staff of 65 in Washington now broadcasting in Mandarin, Tibetan, Burmese, Vietnamese and Korean. Programs for Cambodia and Laos are to be added later this year... Associating with RFA is no doubt a dangerous proposition, so much so that... a prominent Chinese journalist who was jailed for a year after the Tiananmen crackdown, backed out when [it] learned the program would... not... be called... the more benign name originally proposed, Asia Pacific Network... One Hanoi dissident who has contributed commentaries cannot be reached at all. The telephone company told his family it was ordered to cut their phone line... Predictably, the program has had its own internal controversy... and... RFA administrators are worried they will be infiltrated by double-agents working in Beijing. In addition, the network rarely has on-the-scene reports, but instead relies on wire services. Surprisingly, RFA's news content is not always flattering to the U.S. One report in Vietnamese, for example, talked of the lingering

effects of Agent Orange... Whether what they have to say is heard by anyone is unclear. Vietnam concedes that it is jamming the broadcasts and, indeed, the signal has been difficult to pick up in Hanoi. RFA officials insist the signal is getting through, although they acknowledge it is weak. "The first day it came through clear," reports a listener in Dalat. "The second day, there was nothing." Says... [the] general director of the Vietnam News Agency: "We have a lot of experience with jamming. First during the French war. Then during the American war. So we are quite capable." [Ironically,] Vietnam's loud protests have had the unintentional effect of stimulating interest among people who otherwise might not have known the program even existed. "Anything the government criticizes like this must be quite interesting," says a 31-year-old scientist in Hanoi. But in Beijing, there seems to be less of a buzz. Observes a liberal intellectual: "We are already getting VOA and BBC. We can even get onto the Internet. Starting this new radio will only make Beijing more angry and intolerant. They might just jam these other sources of information." Broadcasts into China are apparently not being jammed, and listeners in Burma have said they can hear the program. Transmission has been hampered, however, by a key technical problem: neighboring countries aren't letting RFA use their radio transmitters, so the broadcasts are being relayed from Saipan and the Pacific island of Palau. Even Thailand, which was given a \$5 million transmitter by the U.S. government last August, is not handling RFA, although it has a long-standing agreement to relay VOA's signal. RFA's... executive editor... curiously insists that his service never asked to use the transmitter, probably because Thailand would have refused, as it would have extracted too high a political cost in its fragile relations with China, Vietnam and other neighbors. Is [RFA] here to stay? That will depend on whether it is perceived to be working, whether Congress will keep paying its \$10 million annual tab and whether it survives geopolitical horse-trading. "The better Sino-U.S. relations become, the worse the situation for [RFA]," says a Washington source. "There will be a series of high-level visits this year. The Chinese could propose to the Americans, 'You close that radio station and show goodwill and we'll reciprocate.' The U[S] just may do it." U.S. diplomats in Hanoi have been hampered in efforts to open an information centre, as their Vietnamese counterparts complain that RFA makes government leaders wary of U.S. motives. Says... a government spokes[person]...: "What the [US] could not do with their B-52s and bombs they try to do with their lies and negative information."

...Westinghouse Electric Corp, moving to bolster its CBS Radio network, said on Friday it has agreed to buy 98 stations from American Radio Systems Corp for \$US1.6 billion... in cash and the assumption of \$1 billion in debt. The deal would make CBS one of the U[S]'s largest radio broadcasters with 175 stations, and the top station owner in revenues with \$1.4 billion in annual sales.

...N[Z]'s largest radio company, The Radio Network, is to shed about 130 staff over the next eighteen months. Most will go from provincial areas as the company moves to improve profitability. The cuts were confirmed by... TRN's major shareholder, the A[US]n Radio Network.

...[T]he Radio Network, is considering shedding up to a dozen provincial stations to refocus on its main markets and existing brands. TRN said yesterday it was talking to several groups about the possible sale of 12 stations from Tokoroa to Oamaru. Among stations being considered for sale are two that it has been required by the Government to keep on air as part of a "Kiwishare" deal intended to stop small communities being deprived of a local station. The stations, Radio Waitomo in Te Kuiti and King Country Radio in Taumarunui, were part of the Radio N[Z] commercial network acquired last year by a consortium including Wilson and Horton, and are the only local stations operating in their respective areas. TRN's acting chief executive... said the company had cleared the possible sale with the Government. Any deal would mean the "Kiwishare" obligations would shift to the new owner... TRN has already shed four low-rating stations this year and has signalled that it does not intend to renew its lease of the 1476AM frequency in Auckland, at present being used for airport radio, when it runs out next month. The latest sales would leave it with about 40 stations, mostly in metropolitan and big provincial areas. [The acting chief executive] said the network did not expect to slim any further. The remaining stations were still "very much the critical mass we were looking for,"... Potential buyers will not be required to use TRN's news, sport and advertising services, although... the company was keen to strike such deals. The Radio Pacific chair[person]... confirmed his company might be interested in buying three of the stations, in Taupo, Wanganui and Gisborne. Wanganui is one of the gaps in the talkback station's network. Its subsidiary, Energy Enterprises, might also be interested in expanding into Gisborne and acquiring another station in Taupo... However, it is questionable whether the Commerce Commission would allow the group to buy the Taupo and Wanganui stations, given its decision not to allow TRN to purchase Fifeshire FM Broadcasters in Nelson. Radio Otago, which has recently consolidated in the South Island, is expected to be among the bidders for the South Island stations. TRN's chair[person]... said last month that revenue had not been as good from the radio assets as Wilson and Horton would have liked because of the tough advertising market. But efforts to trim costs were going according to plan.

...Sponsorship for National Radio and Concert FM, and increasing automation at Concert FM, are being considered by a... team[of]... Treasury officials and Radio N[Z] board members... reviewing... future funding of RNZ, which receives \$19.4 m... from the public broadcasting fee... The review was instigated by the minister responsible for RNZ... The... Crown Company Monitoring Advisory Unit... has engaged the Advertising Agencies Association to look at sponsorship on [both stations]... Advertising on National Radio and Concert FM is not allowed under RNZ's charter, but low levels of sponsorship have already been used on Concert FM ('NZ's only fine music network') to help fund an opera series... A team member and senior adviser for the... advisory unit... said it was important that sponsorship did not detract from National Radio's strengths of impartiality and objectivity. But commercial radio operators see the move as state radio encroaching on their advertising base... [T]he Radio Broadcasters Association, said the idea was crazy. "The whole purpose of public radio is to provide programmes that otherwise would not be broadcast... [- due to their limited public appeal (][such as] the opera series) - then make every TV and radio owner pay for them via the NZOA fee.]"

...Taxpayers are to pay \$12 million towards Maori broadcasting in the next six months but no one is saying how the money will be used. The Government's Economic and Fiscal Update... also promises that \$17 million will be spent each year after that... A spokes[person] for the Minister of Communications... [and one for] the Minister of Maori Affairs... [both] said a key issue that had to be resolved was to assess what "arrangements are necessary in order to ensure commitment to Maori language programming, acceptability to Maori generally and accountability for the expenditure of public funds." ...News of the broadcast funds come just months after allegations that directors of Aotearoa Television News went on spending sprees. The [less-than-one-year-old] channel went off air in July and was wound up in the High Court, at Auckland, in September. The promised spending on Maori broadcasting was quietly announced last week - the same day as the [latest] cabinet reshuffle.

...Moves to rein in the troubled Maori broadcasting funding agency Te Mangai Paho are meeting strong opposition in Maoridom. A review of the agency has suggested incorporating it into [NZOA], making it subject to greater ministerial control. The Agency distributes... [about] \$13 million... - mainly to the 21 iwi radio stations, which receive \$200,000 each year. The agency costs \$1.1 million in administration. Its four-year history has been marked by criticism from Maori broadcasters and some politicians, and lingering controversy over the failed Aotearoa Television Network. [However, an] iwi radio station manager... said making Te Mangai Paho part of [NZOA] would be a backward step.

...N[ZOA] believes it has come up with a way to increase the public broadcast but avoid a public backlash. In a briefing paper to politicians, the funding body for local content on television and radio says it needs an extra \$24.7 million annually. NZ[OA] notes: "It is unlikely that the public would accept the 22% (\$24 a year) that is needed to cover the increases in the Consumer Price Index... since the last increase." NZOA suggests politicians increase the fee by \$11 to \$121, providing \$12.1 million. A further \$12.6 million from the fee could be diverted to [NZOA] if the taxpayer took over funding the Maori broadcasting funding agency Te Mangai Paho... In the wake of the Aotearoa TV funding debacle, the future of Te Mangai Paho is already up in the air... [The] Communications Minister... supports a small increase in the fee - \$5 to \$10. However, a spokes[person for the minister] was unable to confirm an increase was planned in this year's Budget... Government politicians, including [the PM

and his deputy], are also looking at a revamp of state television, including a possible cut in advertising from 15 minutes to 10... an hour. [However, NZOA] poured cold water on that idea saying it would benefit TV One viewers who consider there are too many commercials, but it would do nothing to reverse the falling level of local content... TVNZ has said the proposal would cost \$30 million in lost revenue, and [NZOA] says that for the same price it could provide an extra 450 hours of local television. [NZOA's executive director reiterated the point that there hasn't been] widespread opposition to the amount of advertising on television.

...The Government is considering proposals of cuts to advertising on TV1 to 10 minutes an hour... But the big worry in the industry is that politicians won't stop at TV1 and the push for fewer commercials will gain momentum. To avoid intervention, advertising and network chiefs are... planning a voluntary cut... The level of advertising may be a common source of conversation, but the TV networks and advertisers insist, correctly, that there is little evidence of widespread public dissatisfaction. However, there has been no rush by the industry to properly investigate how much dissatisfaction there is, at least not in studies released to the public. A November 1994 N[Z] Institute of Economic Research study on the success of TV policies, commissioned by the Ministry of Commerce, studiously avoided the issue. When questioned, they said there was no evidence of concern. An advertising industry survey was self-serving, couching it as a choice between advertising and paying a high broadcasting fee. The networks and advertisers say there is very real concern [about] the downstream effects of cuts – in either reducing the revenue for TV networks and their ability to make local shows, or possibly increasing the cost of advertising. [The newly appointed TVNZ chairperson says it]... is of a generation that does not like too many ads. "But there are some younger people I know who never even notice an ad. It's important we don't get captured by a few vocal minorities. Profit, in my mind, is not a dirty word,"... The fact is that in business terms, the suggested TV1 ad cuts and "public service" functions have come at a bad time for the channel. Because TV2's younger audience is more attractive to advertisers, TVNZ has been propping it up even more, moving high-rating shows from TV1, such as... *Fair Go*... and N[Z] *Living*. But, as has happened in the past, this has had a see-saw effect. TV2 has stabilised but TV1 is losing younger viewers... In the meantime TV3, with good management, has been slowly increasing its audience in its target audience – the 18 to 49-year-old group. This is the high-consuming group most advertisers want to reach. Five weeks ago TV3 made a breakthrough. TV2 has always dominated the 18 to 49 audience, with TV1 a distant second, and TV3 a close third. For the past five weeks though TV1 has fallen back to third... Last week TV3 attracted 30% of 18 to 39-year-olds, TV2 38% and TV1 24%. The shift illustrates the foibles of N[Z]'s highly commercialised TV system, and that some viewers are more valuable than others. [TV1] – the most popular station that still attracts 45% of our viewing time – is becoming less attractive to the people who count most in commercial television: Advertisers.

...TVNZ is expected to reveal plans this week that will reduce the number of commercial breaks on TV1 from four per hour to three. But instead of cutting the number of commercials it will screen the same amount per hour, with the three breaks being longer than at present... increasing the ad breaks by one minute to 4.5 minutes... The proposal does not affect TV2... Market research has shown that all three networks are breaking their existing self-imposed rules. TVNZ has always said it does not allow prime time advertising and programme promotions to exceed 14 minutes per hour. And TV3 said it did not exceed 14.5 minutes. But... [the most recent research] figures for TV1 showed 14.5 minutes [on average each hour] and TV3 15.9 minutes. TV2 had the most ads... – 16.7 minutes an [hour, or] 28% of its prime time schedule. Figures are not yet available for May.

...THE TV networks have broken their rules against excessive commercials for the second month in a row. The[y]... breached self-regulatory restrictions on prime time advertising in April and... research shows they've done it again in May. After a campaign to reduce the impact of advertising on TV1, the channel came very close to its voluntary maximum... showing 14.75 minutes an hour – a total which included 1.2 minutes of programme promotions. TV3 showed 15.2 minutes each hour, 3.1 minutes of promos. At 17.1 minutes... including four minutes of promotions, TV2 continued to show the most commercials... Both networks have concerns about the validity of the research because they include channel identifications and news updates. TVNZ's marketing boss... said the figures did not match TVNZ's and the company was trying to find out why they differed... [TVNZ has also pulled 'Sky TV ads from TV1 (even though Sky screens TV1 and TV2 as part of its subscriber service – and does the same for TV3, which it also advertises on) – because they were too successful']... Meantime, Sky are planning improvements to the Orange [channel by]... putting more breaks in their programmes to try to drag in advertising dollars. The new policy affects the few... formerly ad-free shows that now have three ad breaks. The bizarre thing is that the breaks are unnecessary. There are no ads. They are solely to promote other shows...

N[Z] viewers endure more television advertising than their A[US]n, Canadian or English counterparts but moves to chop it have drawn sharp criticism. The Minister of State Owned Enterprises... said viewers were fed up with TVNZ's high level of advertising and wanted better programmes. Although [the minister] ruled out an advertising free channel because of funding restrictions, [it] told the TVNZ board that the coalition agreement wanted advertising time on TV One cut to 10 minutes an hour. However, the executive director of the Advertising Agency Association... said [the minister]'s call was "commercially unattainable under the current environment." Fewer advertisements and better programmes would mean a hefty hike in the licence fee or "the Government would have to either put a lot of money in or accept that TVNZ would not make a profit." Television advertising within English-speaking developed countries was highest in America, with 15 to 17 minutes of non-programme time an hour... N[Z] was a close second, with 14 to 16 1/2 minutes. A[US] was about 13 minutes with a maximum of 15 minutes at peak times, and Canada was slightly lower. Britain rated the lowest at about 8 1/2 minutes.

...T[TVNZ]'s ratecard for next year, made public yesterday, shows it is dropping its average rate 4[%] on TV2, while increasing its average rate on TV One just 1[%]. However, businesses willing to advertise on TV2 during October and November are being wooed with official rates up to 10[%] lower than at present... While the move is seen in some quarters as a non-event, as TVNZ already offers huge discounts to most advertisers, the advertising industry has generally welcomed the move... [which] follows years of steady increases in ad rates at TVNZ, despite falling audience numbers. Since December 1995, both TV One and TV2 have lost viewers, with their combined average share of the total peak viewing audience falling from 78[%] to just 69[%]. TV2 has been hit particularly hard as TV3 and TV4 have successfully pulled many younger viewers.

...YOU'RE a babyboomer and of late you've been finding that daily dose of mass media just doesn't satisfy like it used to. There's a sense of unease which, as one of that grand cohort born between 1946 and 1964, you are unaccustomed to... because boomers shape society, not the other way round, right? What has happened? Half the television channels broadcast material that is starting to look a little alien if you wear easyfit blue jeans. Get used to it. Boomers don't set the trends any more – but that part of the population who do aren't easy to nail. If advertisers and media try too hard, they're sussed and discredited damn quick. Last year \$40 million was spent on advertising the teenage dietary staples of hamburgers, pizzas, fried chicken and pies. Another \$14 m... went on promoting the aerated drinks to swill them down. Advertising for records, tapes and CDs came to a cool \$33.8 m... These are all signs that youth culture is far from dead. Movie promotion cost \$7.6 m... and the pitch for the Jaffas (well, "novelty confections") was \$7.9 m... No wonder they need Clearasil for pimples and concealer for dark rings under their eyes – and cosmetics ads in 1996 totalled \$6.4 m... Just Jeans spent \$4 m... and Nike \$3.3 m... Levis trailed a bit, at \$1.5 m... which was just a modicum more than the advertising spent on computer games, like PlayStation, at \$1.4 m... There are 356,000 13- to 19-year-olds strutting their stuff the length of N[Z] and another 272,000 between 20 and 24 years. Just one-third of the younger group are in paid employment and two-thirds of the 20- to 24-year-olds work, more than half of them full-time. They have an influence far in excess of their numbers. But in looking at the "attractive youth market of people with dollars to spend and time to do things," says... [a] strategic planner at Bates Advertising, you have to move beyond the chronologically determined demographic... Kids in the 70s had a benchmark to rebel against... Kids in the 90s still "differentiate" all right but the process is far more sophisticated and subtle... To try to "get inside the head of youth," [her] team talks to the people they consider the real trail-blazers. These are the people who run the night clubs, the DJs, the fashion stylists, the animators and film-makers – and even the likes of the cult preacher who

says “God is the dance party gathering.” “Where these people go, so do youth,” says [the planner]. “So we are interested in them because we want to stay ahead of the youth wave.” [The planner] also consults with young people: students from Selwyn College which [it] describes as “a vanguard school with an overlap of tribes.” And... [the planner] has identified 10 common myths about this post-Generation X... *Myth One*: Youth is a time to rebel without a cause. *Fact*: The need to conform far outweighs the need to stand out... *Myth Two*: Youth Culture is confined to the 16-year-olds. *Fact*: Youth culture now defies age – witness the 45-year-old surfing preacher. *Myth Three*: Youth is cynical and apathetic. *Fact*: ...There are no safety nets under these kids and they know it. They are... the most pragmatic generation yet – because they have to be. *Myth Four*: Destination cyberspace. *Fact*: It is more likely to be the marketing manager who is heading for cyberspace. Youth has a wider reality... *Myth Five*: Anarchy and rebellion. *Fact*: Anarchy and rebellion is merely another style statement, aka body piercing. Youth is not out to change the world – it’s too busy trying to cope with its complications. *Myth Six*: ...Youth is changing the face of the world. *Fact*: [90%] of young people are just as uninteresting as their parents were. Revolutionaries change the world and they come in all shapes and sizes... *Myth Seven*: The big brands call the tune. *Fact*: ...this is the age of pick and mix and it’s simply not cool to be seen to be a brand slave. So even... big brands like Levis and Nike... hav[e] to work harder. *Myth Eight*: ...The trends and the role models all come from overseas. *Fact*: If it’s good they’ll find it here, there or anywhere. They found Hip Hop Pacifica in the backyard... *Myth Nine*: Youth is always looking for the Next Big Thing. *Fact*: There’s never a Next Big Thing. It’s lots of things happening simultaneously. *Myth Ten*: Youth does not want to be a target market. *Fact*: Youth is happy to be a target market.

...The advertising industry [i]s attempting to be more sensitive in advertising to older people. More brands [a]re targeting the over 60s and they [a]re fast learning to market to the age people felt, not to how old they actually were... [By the way, many multinational companies who operate in NZ] tend to source much of their advertising from A[US]. There is much debate about how effective A[US]n advertisements are in N[Z], with evidence suggesting they sometimes miss the mark here... that the Aussie efforts lose something in the translation. “The fact is... Kiwis are simply not the same as their Aussie counterparts, they have different values. I believe for that reason a lot of Aussie ads simply don’t work very well here.”

...WHEN Richard Starkey changed his name, [the drummer] probably never realised what a good investment it would be. Because, in Japanese, [his name] is a kind of apple and the former Beatle has been able to earn... [big] dollars by advertising Ringosutta, a well-known Japanese brand of apple sauce. By appearing on Japanese... [TV ads the drummer] is in very distinguished company. One of the best-kept secrets in Hollywood has been how happy top names have been to risk their carefully cultivated images by appearing in lucrative commercials in Japan... “There isn’t enough money to make it worth a big name’s while to cheapen their image here... [in the US,” says] *Entertainment Marketing Newsletter*’s editor]. “So they do it in Japan, where companies pay enormous amounts of money and swear the ad will never go outside of the country... [Some of them] do voice-overs endorsing a variety of products in the US, but they are never seen on screen. So huge are the sums that the big names... will do almost anything. In Japan, the name... Rambo [or] Rocky... means a leading brand of shrink-wrapped ham... Another action hero... has been paid... \$2m a year to star in ads promoting, among other things, Nissin Cup Noodles. Even [the singer-actor who has had 10 No 1 pop singles], whose whole career has been built on clever manipulation of her image, was paid \$3.1m to endorse a rice liquor named Jun. In Japanese “jun” means “pure”. [The singer-actor], dressed as a Samurai warrior does battle with a dragon, finishing it off with the closing line “I’m pure”. [Not even the Japs could believe that! Other US stars promote] Honda Civic cars, Keri skin-care products... Caffé Latte... Japan Airlines... Subaru Impreza cars... [and] a health drink... “...the average Jap... thinks... everything is bigger and better in America, so by using foreigners an advertising company can make its product look cooler...” One of the most popular actors with advertisers in Japan... earns... \$1.55 m... a year from Japan for just a few days’ work. Asked about how [the actor] felt about selling cigarettes to the Japanese, [it] replied: “Morally, I was torn... for about half a second.”

...In the new tradition of big American stars not cheapening their images by doing U[S] commercials but wallowing in making them abroad, [the singer-actor who has had 10 No 1 pop singles] is reported to have shot a 30-second Mitsubishi ad... for Japanese TV that will earn her \$16 million.

...AMERICA’S big-spending advertisers have a keen commercial eye on the Internet. Around 90% have a Web site and half [of] them sell or intend to sell products or services in cyberspace, according to the US Association of National Advertisers. Typical cost to set up a Web site was around \$238,000 – plus a hefty \$215,000 a year maintenance. But N[Z] Web advertising specialists digital Mediaworks promises building a Web site down-under won’t cause heartburn in company accountants... The one thing we can predict with some certainty about the Internet is that most people involved... [in] selling products or advertising their services... with it... will in time be shown to have been inept and naive in the way they used the Web. This has been a characteristic of virtually every new medium. It is the result of experiences from other media being transferred before users really understand the new medium they are dealing with. When the film camera was invented, it was used to record theatre plays in their entire length, which were subsequently shown to an audience. Similarly, the first radio news programmes consisted of newspaper articles read aloud. It takes time to adapt to a new medium, and come to grips with its unique nature. No one is struggling harder to understand the Web than the advertisers who are being asked to support sites by throwing money at them in return for a banner ad... [L]ittle is known about the impact these banner ads have, and how much business they really generate... Assessing the effectiveness of Internet advertising is clearly still a problem. Banner ads do not come cheaply, with... the *National Business Review* site... charging up to \$2083 per month for an ad in a prime position... Just as they did with radio and film, advertisers and their agencies are going to have to stumble along the Internet for a while yet, learning from their own, and others mistakes. • T[he]... amount spent on advertising in the U[S] alone in 1995 was a reportedly gargantuan \$US277.231 billion.

...Spending on U[S] advertising i[s] expected to rise 6.2[%] to \$US198.42 billion... in 1998. This [prediction] comes on the heels of a 6.6[%] rise to \$186.77 billion in 1997 over the previous year... On the global front... Zenith Media Worldwide [(a media-buying unit of advertising-holding company, Cordiant Plc)] said world ad spending – in major media – would rise to \$317.81 billion in 1998 from \$298.78 billion in 1997.

...THE WORLD’S FAVOURITE NEWSPAPER... READ IN OVER 60 COUNTRIES WORLDWIDE... [t]he International Express is the best of the seven day a week Express in one beautiful weekly, packed with up-to-the-minute news, business, sports, entertainment and Royal reports... Readers can subscribe at the special price of £24.70 for 3 months[, which]... is just a fraction of the weekly news-stand cost of other UK papers.

...While N[Z]ers may be used to a bit of nudity in their advertising, the British are only now starting to see traditionally taboo subjects like sex and death filter through ad agencies. However, the industry there still remains far more timid than in continental Europe, experts say. “British ads are generally pretty reserved about sex but in Europe anything goes,”... [the] global planning director for... [a London-based] advertising agency said. “In France, if you want to see naked bodies you don’t have to go to an X-rated movie. You just watch the ads on TV,”... [The] head of planning at [another agency based in] London, said “the Japanese are into toilet humour and the Swedes and the Dutch take a very honest up-front approach to what they can show in advertising. But in Britain there are a vast number of taboos.” ...taboos in Britain for advertisers included sex, death, “ugly [gals]” and homosexuality. Blood and references to private bodily functions were also non-starters in British ads – a factor that often caused headaches for ad agencies promoting commercials for nappies and feminine hygiene products, such as sanitary towels and tampons. British viewers are beginning to see commercials they never saw in the past, including those promoting products for problems such as thrush and diarrhoea. The appearance of such commercials, however, may not necessarily be the result of greater consumer tolerance, but the growth of products once available only by prescription but now available over the counter... [□ A] television commercial that likened eating chocolate to having an orgasm was “likely to cause serious and widespread offence,” the Advertising Standards Complaints Board has ruled. A [viewer] complained about an advert for Whittaker’s Peanut slab which screened at 9.25 pm during a netball test between N[Z] and Jamaica. The complainant’s grand-children had watched the game. The advertising agency concerned said the commercial had since been withdrawn, for “other reasons.”

...The Commerce Commission is cracking down on a scam which costs N[Z] businesses millions of dollars a year. The commission says crooked publishing companies are preying on small businesses and ripping them off by falsely claiming that the firms had agreed to place advertisements in magazines. The commission is warning businesses to be on the alert for the fraudsters, and to refuse to pay for any advertising that they did not authorise or were misled into approving. The salespeople from these magazines often play heavily on the line that the businesses contracted are making a donation to a worthy cause, said the commission[s] fair trading manager... "Generally, the magazines fall into two categories: those claiming to be published for employee associations or community groups, and those claiming to provide community services, often relating to children and their health, and road safety." The commission had received hundreds of complaints from the community concerning this practice, as did the police, Consumers' Institute and advertising organisations. The commission chair[perso]n... said that as well as costing the businesses that were conned into paying for services they did not want, the scam also cost legitimate publishers revenue. "Money that is pulled away through false invoices is money that does not buy genuine advertising in genuine magazines." • Seven Auckland publishing companies charged with breaching the Fair Trading Act will appear in court next month. The prosecutions follow a two-year investigation by the commission.

...The Automobile Association is threatening to go to... [court] if tyre outlets continue misleading customers. In its latest *Directions* magazine, the association said that prices for new tyres varied widely and customers should "shop around and haggle." Its survey of 50 tyre outlets in Auckland, Tauranga, Wellington, Nelson, Christchurch, Timaru and Dunedin showed savings were possible on imported and locally manufactured tyres... One outlet quoted \$110 for a Firestone Commuter... whereas another outlet quoted \$215 for the same tyre... "What happens is that you are quoted a 'retail' price of, say, \$215 and then told there is a discounted price of \$145. On comparison, the so-called discounted price seems very appealing. But, in fact, it is the normal price for that outlet, and probably higher than in other outlets in the same town." The association said it believed such a practice breached the Fair Trading Act. If it found the practice was continuing, it would lodge a complaint with the Commerce Commission.

...The squeeze has been put on Stefan's orange juice for falsely claiming... in advertisements appearing in magazines... brochures and on television... to be N[Z]-made, fresh, and delivered daily. Instead, the manufacturers used A[US]n juice which was... four to 10 days old before it was shipped to N[Z]... and added... preservatives to give it a shelf life of up to 30 days... The Commerce Commission took legal action against Stefan's Fresh Juice Company – an Enza subsidiary – and this week the High Court found the firm had breached the Fair Trading Act... [The judge said] the commission had proved all its allegations and ordered Stefan's to pay the commission's legal costs. However, [the judge] refused the commission's request for a court order forcing Stefan's to publish corrective advertising on the basis that the breaches occurred so long ago it was not necessary. Speaking after the court case, the commission's fair trading manager... said it had taken two years for the case to work through the High Court. In that time, the company had altered its promotional material so it was no longer misleading... [Incidentally, a]s the long-running Arnott's television advertising drama reaches its climax, with the public invited to vote for an appropriate ending to Michael and Jessica's love story, Arnott's itself might be wondering at the huge success of a campaign... initially seen as a mere rip-off of the milk-drinking Anchor family. Then again, the Anchor family... was itself a rip-off – in concept, at least – of a British campaign featuring a coffee-drinking couple trying desperately to sort out their love lives. The Arnott's campaign was created by Bates, whose creative director... inherited the campaign half-way through its 13 episodes when [the director joined the advertising] firm. "I have to admit, it was not my favourite campaign at the time,"... [The director] also had reservations about the Michael character, whom [it] found to be "a bit wet." As it turns out, [the director] was proved wrong on both scores. Research found the Arnott's campaign scored a 92[%] level for brand recognition, the highest recorded for a biscuit advertisement. The target market was clearly [gals], who embraced the Michael character with frightening ardour... "...Here is a campaign that completely changed the image for Arnott's, which was always seen as an A[US]n interloper. You must bear in mind that Arnott's was up against Griffins, a brand that is like mother's milk to most N[Z]ers. Yet it was able to record huge market-share gains." The ad worked because of the extent to which it managed to engage the consumer. To increase the level of engagement, the agency came up with the idea of making the public decide on their own ending, a ploy which added an interactive element. Arnott's opted for a user-pays 0900 number, rather than the free 0800, because it feared the whole interactive thing would collapse under a flood of calls in the first few days. As it happened, calls still flooded in, at the rate of 1000 a day – with 87[%] voting to marry off the two.

...Some people collect butterflies, or stamps, but [one NZer] collects retail adverts. [It] has a file stuffed full with them, some torn out and others copied from newspapers throughout the country. To qualify for... [thi]s file, the ad must be (in his opinion) poorly conceived and executed. And when you are talking about retail advertising, N[Z] has no shortage of ads in that category. [The collector] shows these ads to people attending his regular seminars as examples of what not to do when promoting your product. And yet it is relatively easy to do it right... "I tell those who attend my seminars they can learn most of what they need to know by looking at the front page of a newspaper... Both editor and advertiser have to attract attention, hold attention and deliver a message." The newspapers have, through centuries of experience, evolved a strong formula for getting their articles read, yet most retail advertisements still appear to be missing the basics... No editor would dare use a headline that makes no sense... yet the advertising pages are full of them. Other headlines simply sell nothing. [The collector] points to an ad for a make of caravans, which carries the company logo, followed by the headline: N[Z]'s Most Prestigious Motorhomes, above the picture of a motorhome. The reader's first response... is: So what? Who cares? Where is the benefit to the reader? "Besides, you never, ever put your company's logo in the headline. The place for the logo is at the bottom of the page." This follows research into reading patterns, which have shown that with a print ad, the reader's eye will be attracted by the picture, then will move to the headline for an explanation of the picture, then to the bottom right hand corner of the page to see who is paying for the ad (the logo). [The collector] has rewritten the caravan ad showing the same picture, but with the headline that urges readers to "Explore N[Z]" in the company's "new 5-Star Luxury Class Motorhome" (benefit), followed by a free offer of Best Camping Sites at the bottom of the page in order to connect with the potential customer's travelling frame of mind. Even big companies using big ad agencies could produce better ads... [His] advice: Stick to an uncluttered layout with picture, headline and copy, all of which relate to each other; use sentences in your ads, not bullet points (people don't talk in bullet points, so don't communicate that way); ...tell the reader to do something (hurry now, offer ends! etc); whenever you can, use personal words, connecting the business directly with its potential customer; show product benefit, don't show a lawnmower – show someone pushing it. The last point is the most important... "You don't buy summer shoes – you buy comfort, fashionable looks, and coolness, all benefits derived from the selling points." Many advertisers could improve their own ads enormously by... remembering that last point...

Their offices are the Ponsonby and Parnell coffee shops, where you see them huddled over their cappuccinos, reading an advertising brief or talking on... cell phones. They are the advertising industry's freelancers, offering creative, media and account service skills, who spring into action whenever one of the not so well-oiled cogs of the industry falls off. In the advertising industry, freelancers don't come cheaply. By and large, these freelancers are not in the coffee shops because they cannot find work (although some are), but because they chose to get out of the boiler rooms of a high pressure industry to breathe the fresh air on deck. One of the problems of the freelance industry is that the advertising agencies, who might have one or two favourites to call on, have difficulty knowing what is available and when. The freelancers themselves are not organised in an effective way. It is in recognising this problem that[an] advertising recruitment firm... announced this week it is testing the waters with a new service for freelancers. It has launched a contract division, based on a central register of freelancers that is still being compiled. "Our first priority is to attract sufficient numbers of quality people right across the communications field, and then promote the service on their behalf,"... [The firm's principal] says the number of freelancers has burgeoned in recent years as the dynamics of the industry changed. From the freelancers' point of

view, the high burn-out associated with the business has seen many leave the industry and come back to freelance, and others opt to have more control of their careers. The agencies, on the other hand, have become a lot leaner, with the tendency now to maintain only the core staff needed in creative, account service and media. If someone is sick, or the work load increases, agencies have to move quickly to fill the gap by employing a skilled freelancer. The Employment Contracts Act has also had a major impact on agencies' employment practice... The implications of not being able to fire someone is particularly serious in an industry where winning or losing a client can depend on the skills and attitude of a single person. "Some agencies will employ only on a renewable three-month contract basis because they are worried about things not working out,"...

Radio Pacific has been forced to cut costs, because of lower than expected advertising sales over the next few months. Radio Pacific's chair[person]... told shareholders at the company's annual meeting yesterday [it] was "a little nervous" about the slump in forward sales... The c[hairperson]... believed the slump was partly caused by the fact that Radio Pacific was still finalising arrangements which will see Energy Enterprises handling all Radio Pacific's advertising in the North Island. However, the network also appeared to be suffering from the current gloom that had hit the retail industry... "All the recent economic reports and forecasts are far from positive and that is particularly so for the retail sector. When businesses feel the pinch one of the first budgets they tend to trim is advertising." ...However, [the chairperson]... was still confident the company's recent purchase of the Energy stations and Radio Otago's North Island stations would improve earnings per share.

...Cole Porter was right. Birds do it/Bees do it/Even educated fleas do it. Do what? Advertise of course. Even Concert FM's doing it now. Not actually advertising, but doing "promos" – self-advertising bites that were first invented by t[v] and flash out 30 seconds of forthcoming delights. Promos, we have always been told, are "not really adverts." At Concert FM the station announcers do the voice-overs to these adverts – sorry, promos. They try bravely to zap up their station-master style into universal "advertising" mode but usually only manage to sound alarmed, as though a huge spider had just crawled out of the microphone. You can't blame them for feeling uncomfortable, though. Upfront advertising in classical music has always seemed like a contradiction in terms – food for fun, like when... [someone]e bent Heineken's slogan and claimed that Beethoven's symphonies were best because they refreshed parts the other symphonies couldn't reach. The more serious side is that today's influence of advertising might be so saturated into our lives that any arts, culture or entertainment activity is in danger of harming not just quality but interest itself by associating with the ad-[perso]n's juggernaut. It's not that I think that Concert FM is too musical to touch pitch (so to speak). It indeed should have sponsors and advertise. But before I get torn to pieces by the Friends of Concert FM let me add that any advertising needs to be "reasonable" and "appropriate." It would be really nice, thank-you, if only clever, enjoyable and obviously relevant adverts were used over short periods then replaced by even better ones. But will that happen? Of course it won't... Advertising is naturally pulled towards the aggressive and the blatant. The commercial radio people were right when they admitted recently that it's only the second job of a radio station to serve its listeners. Its first job is to deliver these listeners – in as large a consuming audience as possible – to the advertising sponsors. Are there any limits to the amount of advertising a small country can expect? We hear a lot about the self-regulating effect of the market. Yet even when TVNZ admits it might have overdone things and decides to reduce adverts it also increases promos. And, as [one columnist] pointed out... last Thursday, so-called documentaries are now becoming infected with disguised advertising. Nor can you avoid the ads on t[v] by going to the relatively ad-free cinema (many viewers have been trying this escape route). The cinema's increasing popularity has been spotted and advertising campaigns are at this moment poised to repossess the big screen, bumping off the useless but comfortable slides of dark-looking restaurants you'd be mad to eat in and bombarding you once more with endless strings of glitzy ads. Even in the open air the Big Plug can't be ignored since air traffic planners happily juggle flights to let Qantas and Air N[Z] both overfly a trans-tasman rugby match. But it's not a case of flying the flag for pride. It's more like flashing the logo for free. In a world like this, even classical music resigned itself long ago to having sponsors... Noting the sea of logos on... orchestra and opera companies... programme[s] can be neatly carried out with the same respectful bow the Romans gave to the gods before putting their money on the lions. Perhaps arts and advertisers are not natural enemies. But when advertising gets out of control and starts to seep into everything you find yourself constantly on your guard against whoever may be after your dollar, when the next pitch will be and whether you will be sharp enough to recognise it from the inevitable, built-in concealment. Hardly the best conditions for giving yourself over to enjoyment of either the arts or entertainment. For the sake of every type of performance let's hope that advertising hasn't yet got out of control. But the signs are that it will. • [4]... people... have lived... in a makeshift tent... on [a] platform – known as a human billboard – for the last 96 days. The person who stays the longest will win \$20,000 as part of a radio station promotion... [A 19-year-old gal and 3 guys], aged 26... 31... and... [25 –] have recruited families and friends to bring blankets and hot meals to help them cope with chilly weather... [The] 19-year-old... was not smiling yesterday; her lower lip was swollen after... it... [was] pierced... at the weekend... The 25-year-old has no plans to abandon the platform. "I've been here too long for that."

...The dogged determination of three Aucklanders left them each \$20,000 richer yesterday – and an Auckland radio station at least \$100,000 poorer. The trio, the last of 10 competitors in Radio Hauraki's "human billboard" promotion, climbed down from their perch above Fanshawe St yesterday after 164 days. The competition... had been expected to last a matter of weeks... [T]he Hauraki marketing manager... said it was obvious all three were determined to win and the promotion could have dragged on for a year... [so] the station... had... decided to pay off the three... A doctor and a psychiatrist had been kept on call around the clock, and contestants were medically checked three times a week. Added to the cost was 24-hour security. The station had imposed just a 10-day minimum for the original contestants when the promotion began. An earlier competitor... was disappointed... yesterday... not to share in the winnings. The... [31-year-old still claims to have been] unfairly disqualified... when... [the solo] father... was sure a security guard had told him to take a 10-minute break... [However, the solo father] doubted if anything could be done since it was his word against the security guard's. For one winner, the five-and-a-half-month experience is far from over... [The 26-year-old plans to] write a book about the experience. The screenplay writer... was thrilled to get the payout, but had entered to test his discipline and character rather than simply win the cash. His luck started before the competition even began, when his late application came in, just as another candidate pulled out of the final selection process... [In related news, in] 20 years' time we'll be driving home and see... laser light... billboards in the sky. - 1997

Hi-tech ad era virtually unstoppable... The next time you're at a televised event pay close attention to what's going on around the sidelines and on the pitch. Take a note, in particular, at the advertising hoardings. Then, when you return home, check out a television replay of the event and see if you can spot the differences. You might notice, for example, that your seats have been taken up by a huge advertising sign. Or that the banking billboard that was in front of you on the ground is now promoting a clothing company. Welcome to the world of virtual advertising... a controversial mix of illusions... Using the latest technology, television networks can custom-make the advertising their viewers see, regardless of what is actually at the event. A computer operator transposes the advertising wherever it's required. It can be static, but it also has the capability to include animation. It can be placed on the ground, over the crowd, across the top of a grandstand or on top of existing advertising hoardings. With games being beamed around the world, networks can offer specific advertising for specific countries, considerably multiplying their revenues. The dangers with the virtual advertising are the insensitive placing of ads. A virtual ad for one sporting manufacturer could... be placed alongside a rival sporting company. There is also the concern of a virtual ad being laid over the top of a ground ad... wiping out its TV impact. The first major battle front came when A[US]'s Seven Network and N[Z]'s Sky TV aired the Bledisloe Cup live from the MCG. Included were several virtual ads – at one stage the crowd appeared to hold up a sign promoting Reebok sports shoes. No existing signage was obscured. But it has angered the Melbourne Cricket Club... The problem arose when the MCC demanded a slice of the revenue gleaned from virtual advertising. Sky TV, which had the N[Z] broadcast rights to the game, got caught up in the wrangle when the MCC requested it sign a document handing over

rights to virtual advertising. Sky refused and [its] commentators... were barred from the ground and had to call the game from a Channel Seven suite in downtown Melbourne. The Kiwi TV build-up and post-match coverage were severely limited. The N[ZRFU], the rights holder for any virtual advertising used in All Blacks games, negotiated on Sky's behalf but... could do little. The broadcast (complete with virtual advertisements) went to air without an agreement, but now the battle is on. Sky[']s chief executive officer... has written to the N[Z]... and A[US]n rugby unions protesting the actions of the M[CC], owner of the MCG. Legal action has even been suggested. "The actions were absolutely unacceptable. I am real upset... I would be unhappy if the MCC was used again for rugby. Their actions were unjustified and particularly rude." ...[the MCC secretary claims to have told Channel Seven two months ago that] the new technology would not be tolerated "under any circumstances". Seven countered that the MCC was well aware no existing signage would be covered up. Just hours before the game, the club was threatening to ban the network's cameras from the ground, saying it would rather lose the broadcast than back down. Virtual advertising has already been trialled in N[Z], with team logos being placed over the in-goal areas for the Super 12 match between the Chiefs and the Northern Bulls. And it will be given further trialling during the coming NPC. [A former]All Black... whose company Carnegie Sports International owns the rights to the French EPSIS virtual advertising system, believes it is the way of the future. But... stressed last weekend's fracas showed it needed to be worked through carefully... Across the Tasman, the issue has heated up further in the aftermath to the Bledisloe battle and the MCC has said it would consider banning the live telecast of the AFL grand final, one of the highest rating television events of Seven's year, unless the network agreed not to include virtual ads. There are also doubts over the traditional Boxing Day cricket test at the MCG... [T]he network... said... [it] would not agree to access conditions which gave "non-exclusive licence of copyright" to broadcasts from the ground. The A[RU] was buying out of the argument, saying it was more than happy for virtual advertising to be part of its marketing plan and the problem lay with the MCC trying to change the ground rules at the 11th hour. One result could be that several events will move from Melbourne... This looms as a major blow to Melbourne, which prides itself on being the sporting capital of the world. Its ability to take the foreign game of rugby into the Aussie Rules-crazy state was a financial boom for all concerned... But now it appears any major sport needing to rent facilities in A[US] is going to go where the rental agreements are better, like Sydney. The new Sydney Olympic stadium is not putting any of these conditions on its hire and it has a 113,000 capacity. It could be the big winner out of last weekend's shambles. And if rugby wants to continue to make inroads into Melbourne, then the new Docklands Stadium, now under construction and with a capacity of around 65,000, is a rival candidate to the MCG. The one thing most players in the debate agree on is that the ads, controversial or not, are here to stay.

...Sony Pictures Entertainment has disciplined two advertising executives for their roles in creating a fictional film critic whose ecstatic appraisals were used to promote films released by Sony's Columbia Pictures studio. Company insiders said... [the] senior vice-president of creative advertising, and... [the] director of creative advertising, were rebuked and suspended without pay for 30 days, reported entertainment trade paper *Daily Variety*. [The director] created quotes attributed to [the]bogus critic... which were used in numerous ads for Columbia's... *Vertical Limit*, *A Knight's Tale* and *The Animal*. The controversy has created some discomfort for... the *Nelson Mail's*... American-born... features editor and film reviewer... [The NZ resident], who has reviewed more than 2000 movies... since 1975... has [the same name as the fictional] critic...

Wondered how advertisers get away with those outrageous 'infomercials'? ...[A] *HERALD CORRESPONDENT*... finds a couple who didn't. Being [the Briton] can't be easy. The bright, attractive 32-year-old Briton once enjoyed a millionaire's lifestyle but is now in a Tallahassee jail. [The Briton] is about to spend... Christmas in prison, with the prospect of another 21 to follow and no chance of parole. Her crime was to become wrapped up in the pseudo-glamorous world of "infomercials" – the daytime and insomniac-hour cross between advertisements and shows – in which dubious claims are made and fulfilment of wishes promised. Her only chance of an early release lies with [the US]President... who could include her in a list of people to whom [it] may grant clemency before leaving office... [T]he prominent British human rights lawyer and wife of [the British P]M... has been approached to act for [the 32-year-old. The 32-year-old] and her Mexican-born husband... 34, are the first people in America to pay for not telling the truth on airtime bought from television networks. "I had no idea that what we were doing was wrong," [the 32-year-old] said. "We were selling a product. It was [my husband]'s company and [the company] had lawyers, editors, scriptwriters, bookkeepers and more than 200 employees. It was on national television. If you know you're doing something wrong, the last place you'd do it is in front of millions of people." [Her] story began 12 years ago when [the Briton] met... an ambitious... Florida... business[person] with an idea. [Her future husband] wanted to make money from buying and selling repossessed property and... wanted to make even more from telling others how to do it. [The Mexican] made \$153.75 videos advising customers on how to find ideal repossessions to buy low and sell high[, but] wasn't very successful. His claims to have made it rich were false and few believed him. In 1992 [the Briton's husband] was forced into bankruptcy because [the Mexican] could not pay for the television airtime [it had booked. The husband] had to put his business... into [his wife]'s name, and that is where her downfall began. "I didn't take much notice of the business... and I signed everything that [my husband] put in front of me. Why shouldn't I?" But as the business grew, the deception became more profound. By 1996, when some \$900,000 of videos were being sold every two days, it was one of America's top three high-profile infomercials. [The Mexican] now promised viewers that if they could find the perfect repossessed property, [the businessperson] would buy it and split the profits 50/50. In return, punters had to buy extra courses and videos – now priced at about \$2000. But they soon discovered that the "perfect" repossession had to satisfy impossible criteria – high-value property in perfect condition with at least 50[%] equity ready to be snapped up. "The idea was that [the Mexican] would cover the debts and the previous owners would sign it over to him and pay rent," said... the assistant US attorney who prosecuted the case. "When they defaulted, as [the Mexican predicted 80%] would, they would be evicted and [the Mexican] and his partner would sell the property and split the money. From tens of thousands of customers, only 12 deals were done." Complaints flooded in. In 1997 the Florida Attorney General began to take an interest. The couple's home and business were raided at gunpoint and their assets seized; strangely, the infomercials were allowed to keep running. After a 10-week trial during which [the husband hired the lawyer who infamously got a black sports star off a charge of murdering his wife and her alleged lover,]for himself and a local attorney for [his wife], they were both found guilty of conspiracy, fraud and money-laundering charges. Investigators had found tapes of infomercial out-takes that proved some "satisfied customers" were actors and trappings of [the couple's early "wealth" – a house, a car and a plane – had been rented. Because [the Briton] signed so many papers, [the attorney is convinced it] knew what was going on. [The Briton is adamant it] did not: "I thought actors appeared in all commercials..." [Editor's note: The NZ channels TV1 and TV2 used to broadcast about 4.5 hours of 'home shopping' programming during daytime hours while TV3 broadcast about 3.5 hours of daytime infomercials and TV4 broadcast infomercials between midnight and 2pm. Currently, TV4 broadcasts infomercials and other advertising programmes (e.g., *Teletreader*) between midnight and 3pm at weekends, plus between midnight and 6pm during weekdays; TV3 broadcasts 1.5 hours of infomercials during the day on Saturdays, and 4.0 hours during Saturday and Sunday nights, plus 1.0 hour per day and 3.0 hours per night during weekdays; TV2 broadcasts 1.5 hours during daylight hours on weekdays and between 0.5 and 3.0 hours from midnight to 6am, but none at weekends; TV1 no longer broadcasts infomercials.]

...The Broadcasting Standards Authority has called for a clear boundary to be set between programming and advertising. In upholding a complaint against TV[1]'s *Good Morning* show... over an item on using soy products in cooking, the authority noted there was an increasing tendency to "blur the lines" between programmes which were editorial, advertorial, infomercial and/or advertisements. It said the Television Code of Broadcasting Practice, when next revised, should include a provision similar to those in the radio and advertising codes, which say advertising should be clearly distinguishable from other material. [A Whangarei viewer] had complained about a cooking demonstration by a representative of the International Soy Advisory Board. His protest was that the contrary view of the health-giving properties of soy had not been canvassed, and

that the cook was actually a representative of Sanitarium Foods, which makes soy products. TVNZ said the item was clearly a cooking demonstration, that there were many food products over which there was debate as to their health risks, and that it was satisfied the guest had the authority to speak on the subject of soy products[– although it wasn't satisfied that the complainant didn't have a financial interest in his contrary view! However, the authority] ruled that by failing to disclose the relationship between the nutritionist and Sanitarium, TVNZ had breached the requirement to be truthful and accurate on points of fact. "If an expert is aligned to product promotion, that ought to be made clear," the authority said... The authority also said TVNZ should at least have acknowledged the existence of a controversy over soy. It ruled TVNZ should read a statement approved by the authority summarising its decision... [■ A billboard] of busty blondes is keeping abreast of advertising standards – by air-brushing out nipples. The models in the perky poster for adult videos wear see-through body stockings. But there's nothing to see... "We wanted it to be raunchy but did not want anyone to complain, which may have meant taking the poster down, so... all naughty parts like nipples... had to go," [the manager] of Video Expo told *Sunday News*. "Also, we wanted a billboard that was eye-catching but didn't cause nose-to-tail collisions as people drove by." It's not just video stars who get the brush off. Even [an AUSn]supermodel... had to get her nipples removed for her underwear billboards. The Advertising Standards Complaints Board has no rules on nipples in advertising.

...A billboard outside St Lukes Shopping Centre that features semi-naked [gals] and promotes sex products has incensed an Auckland City councillor who wants it removed... The... council has asked the Advertising Standards Authority to rule on whether the billboard meets the criteria of offensive and objectionable advertising... [T]he manager of the chain of adult shops behind the billboard[– Video Expo –] said the advertisement was quite tame and no worse than a lot of other advertisements. "We could have been far more risque. We are aware that our product is not something that everyone totally agrees with... and we have toned it down quite a lot." [The manager] said the billboard had been set up at two other sites in central Auckland... last month before being moved to St Lukes[, but] would not say where it would be moved to next... [The]Balmoral ward councillor... said [it] was no prude... [and] would probably not be offended by the billboard if it was in one of the city's red-light districts... but it was not right to advertise pornographic videos, magazines and sex toys outside a family shopping centre... [Everyone the councillor] had spoken to since spotting the billboard on Monday, including her teenage daughter, felt uncomfortable about it... "It leaves nothing to the imagination and advertises a website, which means every kid in the neighbourhood can go home and type it into their computer."

...No sex please – we're French... THE CAMERA moves languorously across the tanned bodies of [gals] soaping themselves in the shower, lingering on buttocks and breasts. Only then does it travel down [a] wrist... to reveal a watch-strap. This advert... typifies the trend that has led Fr[ance's] Family Affairs Minister... to threaten advertisers who use sexist imagery with new laws... Although it may be one way of grabbing attention, the rise in sexist imagery in advertising is provoking dissent... The debate on "porno chic" has been heightened by a growing controversy over *Loft Story*, a French TV show... On the first night, two of the 15 contestants confined in a Paris apartment could dimly be seen having sex. The show has been denounced as dustbin... [TV. But many guys] have complained that the live feed on the show's website is not sexually explicit enough.

...Real-life knickers on line AN underwear firm is laying bare the private lives of three young flatmates on its website. More than six million people have peeped into the Auckland house... Live footage is sent to N[Z] firm Bendon's Hey Sister website... via live video footage from cameras in the kitchen, dining room and lounge. A bedroom camera was removed after fears about weirdos getting their kicks from seeing the girls strip off. One of the stars of the website... said [it] no longer noticed the... UNDI CAM[S]... in the house. "We are all completely oblivious to them now,"...

Bad and loving it Advertising campaigns which knock products are pulling in the punters in Britain... Guinness is capitalising on the time it takes to pour a pint by saying: "Good things come to those who wait." Softdrink-maker Tango says of its latest cherry-flavoured drink: "Don't slag it off until you've tried it. Then slag it off." Carmaker Skoda confronts its poor image in an ad that says: "It's a Skoda. Honest." For the first time in Skoda's history in Britain, there is a waiting list for one of its models... While we are talking about... cars[, in]... the land of the free... drivers are queuing up to get up to \$800 a month for carrying advertisements on their [private vehicles]. The fee varies mostly on the type of car – one that turns heads can command more than the average family sedan... Autowraps, has turned about 150 cars into mobile billboards in the past few months. "The car is the king of the outdoors, a natural medium for outdoor advertising," [the company's founder] said. Critics claim... [the e]ntrepreneur... is taking advertising to a new, excessive level. [Meanwhile, back in Britain, a 'London nightclub has installed advertising screens in the guys' urinal']

...H2O a commercial shocker On Sunday October 28, TV2 screened *Halloween H2O: 20 Years Later*. Great movie but it was ruined by all the adverts. It seemed like ads were running every seven minutes and usually lasted longer than the portion of the movie. I think this is a waste of money for companies advertising because people get so irritated by the ads that they really don't pay any attention to them. Maybe companies should pay more for advertising during prime-time movies, which will reduce their number... (Auckland) ● *They do. The bigger a programme's audience, the more advertisers pay. Which is why some series are pulled quickly if ratings are really dismal. They'd be costing the channel big bucks.*

...More ads than race laps My boyfriend and I sat down, like every year, to watch *Bathurst 1000* (TV1...). [My boyfriend] usually does not get out of his chair but did this year because TV1 had so many ads. It was pathetic. When the race started they showed the first three laps, then went to ads. Of the 161-lap race we only saw 89 laps... We were not the only ones cheesed off with this... (Christchurch) ● *One News was cut in half for Bathurst...*

I'm so angry. I sat down to watch an excellent Sunday Theatre, *Impact* (TV1...), which I taped, to find the ending missing, due to sport (Bathurst 1000) overrunning yet again... It's not fair... I realise there are a lot of sports fans out there, so why not a sports channel? ... (Auckland)

...I find the incessant trailers or promos on TV annoying and unnecessary. Many people buy *TV Guide* and newspapers, so are aware of what is on TV and what they want to watch. Seeing clips of... [our favourite programmes] several times a day for a week before an episode screens spoils the enjoyment. Then there is *One News* at 6pm which is previewed every quarter of an hour from at least 4pm. [Next,] promos run through the news every 15 minutes or so until [the programme they advertise] begins at 7pm. What useful purpose do these promos serve other than pack out transmission times? If viewers predominantly watch one channel, as we do, any amount of promos on another channel are wasted... (Napier)...

HAVE the viewing public of N[Z] gone moronic overnight? Then why does TV3 have to remind us throughout most of their programming that we are watching their channel? That 3 logo in the bottom right of the screen has become so irritating and intrusive I just can't get beyond it to enjoy the shows they provide. It's nothing short of graffiti and does nothing to enhance the joy of watching an otherwise good selection of drama. Is this the way of entertainment now? Can we expect to see the Mona Lisa with a McDonald's sticker in the corner of the frame? Go to the movies and expect staff to walk across the front of the big screen during the film holding placards for refreshments outside? Until corrected I think Two will be company, and Three much too crowded... (Glenfield, Auckland)

I DID not buy a 33-inch screen to see the picture ruined by this continual invasion of my enjoyment. It was bad enough when subscription stations started doing it, all but ruining the enjoyment of movies... But now, oh my God, a main network (TV3) has started this outrageous practice. If the rest start doing it, I feel I might as well throw my TV out the window. Most people... know what station the buttons on their remote take them to. Interestingly, the logo disappears while the ads are on. Why? Could it be because the advertisers don't want the impact of their advertising invaded? Advertisers are shown to be more important than viewers. If there ever was a time when a viewer might be confused with what station they were on, I would've thought it would've been during ad breaks since they are on all channels[– who seem to time their ad breaks to coincide with each other (and, sometimes, you can change channels – e.g., to escape an ad – and find it being screened simultaneously on another channel!)]

...NOW we finally know what the Tellydot promotion [– which required viewers to attach a cardboard dot sent to them through the post over the TV3 logo during a particular programme, then return the dot to TV3 in order to win prizes –]was all about. They were conditioning our minds for the introduction of logos. Come on TV3, we know what channel we are watching. Sky Movies tried it a couple of months ago but had to stop it because of viewer dissatisfaction. And don't try telling me it's to promote the channel. If that was the case, TV1, TV2 and TV4 would be doing the same... (Palmerston North) ● We've had many similar letters. TV3's response: "TV3 bugging a signal is a common practice internationally in multi-channel environments and is an important part of TV3's branding strategy."

...Burger King is to withdraw an ad... which... [allegedly] encouraged children to mimic dangerous behaviour. The... ad... showed a [guy] at a barbecue running around with his sleeve on fire before falling into a paddling pool... [T]he Fire Service... said children could not distinguish between a funny advertisement and a dangerous situation. Safety programmes told people to not run around but "stop, drop and roll" if clothing caught fire... A Burger King spokes[perso]n said... the... ad was intended for adults and encouraged people to be careful around barbecues.

...Burger King has been telling children watching Sky TV's Cartoon Network that they will receive a free... Pokemon watch... if they buy a children's meal. But the programmes originate in Hong Kong and often carry advertising not intended for N[Z]. So when... a... North Shore boy... aged 4, went to Burger King this week to collect his free watch, [the boy] was disappointed to find it did not have one. While admitting [it] cannot yet tell the time, [the boy] had still been looking forward to his free gift. "They didn't give me one..." Instead, they gave him what [the boy] called "a purple toy." His mother... has complained to the Commerce Commission, saying that Burger King should not be advertising what it is not able to deliver. Burger King[']s marketing spokes[perso]n... said the company had asked Sky to remove the ad... or add a disclaimer, but had been told it was not possible. Sky TV said that from [the beginning of next month] it would be able to replace the foreign advertisements with something else.

...[Parents of Barney fans are seeing red not purple over the colourful children's character. Hundreds of parents are angry at having to pay \$7 for their under-2s to see an Auckland show when they were told tots could get in for free. A Manurewa father said Ticketek had assured him that his 16-month-old son could get in free if it sat on his knee. But the dad had to pay \$7 at the Logan Campbell Theatre on Monday. And a Grey Lynn mother said a friend had to buy a ticket for her 5-month-old. "It was like holding people to ransom." Most parents forked out more money to avoid disappointing their children, but now want their money back. However, the general manager of toy distributor Hasbro NZ said refunds were unlikely as profits were going to the Starship children's hospital. Hasbro NZ was angry with Ticketek for advising showgoers wrongly. Ticketek said ticket policies were changed after the company was told that everyone needed a ticket for safety reasons, but denied staff told parents that all under-2s could get in for free. The company invited people to write in with their concerns and it would consider refunds on a case-by-case basis. About 18,000 tickets were sold for the purple dinosaur's six Auckland shows.]

...Ad-free TV for kids... Advertising-free children's programmes on... TVNZ and TV3 are envisaged in the Government's push for public service television. [The]Broadcasting Minister... will meet the advertising industry to seek support for a voluntary ban... And, in a more direct move, the board of TVNZ will also be pressed to adopt the policy... The minister, who has been depicted as "Booboo, the fifth Teletubby" in a Wellington poster campaign inspired by her bumbles in the House, was asked in Parliament whether the policy meant no advertisements during *Teletubbies*. Taking the gibe in her step, [the minister] replied: "The [fifth] Teletubby says there is an intention to reduce advertising, particularly around children's programmes." ...TVNZ[']s spokes[perso]n... said broadcasters already followed a voluntary code restricting advertising to 10 minutes an hour during programmes for preschoolers, and from 3.30 pm to 5.30 pm when after-school shows screened. "That is substantially less than during prime time." Broadcasters also made sure commercials met "G-rated" standards too... Parents the *Herald* spoke to said an advertising ban would save them from being pestered by toddlers and older children demanding fast food and toys. The president of the Early Childhood Council... warned parents not to get too excited, however. "They have to remember it's not just the advertising that is the risk, it's the programming too."

...Children seem to be smarter than [the Broadcasting Minister] gives them credit for with her plans for an advertising ban... Eyes fixed to the television screen, a group of boys sits mesmerised by the cartoon in front of them – that is, until a commercial comes on. [The]Pt Chevalier brothers... aged 10 and 8... and their cousins... aged 9 and 8, change the channel the moment their afternoon programmes are interrupted. Their eyes wander around the room for something else to focus on, and [the younger cousin] decides to play with his toy car instead. "I hate ads. I only like the TV ones 'cause I wanna see what other programmes are on,"... says[the 8-year-old. His b]rother... agrees, complaining that advertisements mean [it] is missing the programme. The boys' mothers... do not agree with... [the minister's] proposal to ban commercials during children's viewing times... [One] says her older children do pick up on what products are being advertised, but... does not think her children need to be protected from commercialism. "You can't just block these things from them, because in life they're going to come across advertisements. Why should they be sheltered from it? If they don't see a product on TV, they're going to see it when they walk into a store anyway. It's everywhere you go." ...[the other mother] believes the earlier children learn the meaning of the word "no," the better. "The minister is treating parents like they can't think for themselves... What's next? Are they going to take down all the signs in a dairy about sweets so they don't ask for them too?" ...But... [the chairperso]n of the Children's Television Foundation, said last night that the advertising industry employed sophisticated methods to get its message across. "While some families are doing fine to raise their children to be media smart, you can't be there all the time. A 3-year-old being targeted by a large company can't cope with that kind of pressure. They are not like adults. Things will grab them." The foundation did not think a blanket ban was the solution, but... it would be a good start until changes for more "responsible" advertising could be agreed on... Those who support banning commercials during children's television programmes claim advertisements encourage children to become compulsive consumers...

Does the young television audience exist to be instructed and entertained or targeted by marketers – or both? ...Make no mistake – children are in the crossfire of a battle over freedom of "commercial speech." The fight is apparently an "everlasting" one, in which those who would exhort us to spend our hard-earned dollars on their indispensable products "can never sleep, otherwise the freedom is lost." That was the message issued to the World Federation of Advertisers' congress in Korea... by N[Z]'s delegate, [the] Advertising Standards Authority director... [His] organisation, charged with upholding standards aimed at delivering socially responsible advertising, makes no bones about including children in its un-ending struggle. In this, it invokes the U[N] Convention on the Rights of the Child, of which Article 13 includes freedom to "seek, receive and impart information and ideas of all kinds." The authority's code of practice for advertising to children says this gives our junior citizens the right to receive advertisements along with other information. On the other hand, the authority is quick to emphasise that there are various fetters to that right, in another part of the UN convention that calls for appropriate guidelines for the protection of children from information that might harm their welfare. The authority's challenge is to persuade advertisers and media outlets to regulate themselves rather than wait to have it done to them by state legislators, a distinct possibility under [the]newly reinstated Broadcasting Minister... Sweden has banned all television advertising aimed at children under 12 and is pushing to have this extended to the rest of the E[U]. Which is why a move last week by our two main free-to-air television companies to tighten voluntary guidelines for advertising to children, almost half of whom spend more than three hours a day in front of the goggle box, was not entirely unexpected... Unlike many countries such as A[US], there is no law here restricting the amount of advertising on our television channels other than on Sunday mornings. But the Government does have a policy of working towards banishing commercials around children's television. The self-imposed guidelines prohibit any advertising, sponsorship publicity or prize offers during programmes for pre-schoolers for five hours a week on TV2 and for 10 hours weekly on TV3. For TV2, these ad-free hours are from 8.35 am to 9.35 am from Monday to Friday. For TV3, no advertising is allowed from 8.30 am to 9.30 am, or from 2.30 pm to 3.30 pm Monday to Friday... Paid advertising in

broadcasts for children aged 5 to 13 is limited to 10 minutes an hour, with another two minutes allowed for in-house promotions such as advance publicity for other programmes... For TV2, the restricted advertising times are from 7 am to 8.35 am and from 3.30 pm to 5 pm from Monday to Friday, and from 6 am to 9 am on Saturday. TV3, which screens more children's programmes but with a heavy diet of imported cartoons, restricts advertising from 6.30 am to 8.30 am and from 3.30 pm to 5 pm on Monday to Friday, and from 6.30 am to 9.30 am on Saturdays... Th[e]... Television Broadcasters' Council director... says advertising time limits cost the industry about \$6 million a year and television companies would face a tough time maintaining children's programmes with further revenue cuts. But advocacy groups point to heavy financial support by N[ZO], which spends almost \$10 million a year on normal programming for children. TVNZ will also be under Government pressure to provide for children under its proposed charter.

...Plans by T[TVNZ] to cut the number of commercials it screens late at night on TV One have been applauded by advertising agencies. The state-owned broadcaster will cut both the number of advertisements and promotional clips for its own shows from the end of the month in what it says is an experiment to see how viewers and advertisers respond. The trial, on weeknights only, will cut the amount of advertising screened between 9.30 pm and 10.30 pm from 12 minutes to eight... Promotional clips will be shortened from 90 seconds to 30... TVNZ denied the experiment had anything to do with the... Government. The... Coalition has indicated it wants to make TVNZ less commercially focused and the Minister of Broadcasting... has welcomed the move... According to TV One's general manager... the channel has been discussing the move for more than a year. A report TVNZ commissioned in 1997 revealed the organisation had one of the highest advertising ratios for a state-owned broadcaster in the English-speaking world... [By the way, Income Support] is spending up large on television commercials... The monitoring group Advertising Decision Support says the department spent \$178,480 in the week to July 24, behind only McDonald's, the National Bank, Telecom and Palmolive. [Already] under fire for overspending on staff training, [it] was the only Government department to feature in the top 20 spenders. Labour's social welfare spokes[person said]... "We already know the Government budgeted \$1.3 m... for [the department]'s... ad campaign. These rankings make it clear just how extravagant that is... [The department] is up there with major corporates... in its spending and advertising. It's hard to understand why an organisation with no competitors has to spend so much on branding. Beneficiaries have no choice about using [the department's] services."

...GOVERNMENT bodies spent at least \$35.5 million last year urging Kiwis to pay fines, and taxes, save for retirement, buy Lotto tickets and dob in fraudsters... By far the biggest advertiser is the Lotteries Commission. Its advertising and promotions budget rose from \$19.5m in 1993 to \$22.1m in the last financial year. [A commission spokesperson]... said advertising was crucial to its success in an increasingly competitive market. The... tide of information advertising is rising: five years ago there was no Department for Courts and no Office of the Retirement Commissioner. Now, both are ploughing big money into advertising. In the last financial year, the Retirement Commission spent \$1.2m on television ads and \$102,000 on brochures. Its present print and television campaign is costing around \$2m. The Department for Courts spent almost \$630,000... The vast majority of this was directed toward urging the payment of outstanding fines... Telling viewers about benefit crime cost Income Support almost \$1.3m and it spent \$2.4m on ads and brochures... Of all the agencies approached, only Inland Revenue reported a decline in its advertising budget, from \$1.2m five years ago to \$869,000 in the last financial year. However, that is set to rise in the coming year to \$3.1m. Advertising [by government departments] was seen to bring a variety of benefits, including greater awareness of obligations...

WHY DO THEY ADVERTISE? ...As you read [a newspaper or] magazine, you encounter advertisements that talk to you about the merits of a great number of products and services. If you have ever wondered why so much time and effort – and money – is spent on getting these messages to you, perhaps a word of explanation might be helpful. The basic answer is that *you* are important. No matter how hard the people in a factory work to make a good product, if you, as a possible buyer, don't know that the product exists... and where... you're not likely to buy it, are you? ...And how would you compare qualities or cost... In some way, each product or service you are offered has qualities that none of its competitors has. It is by building those qualities into its products and then drawing them to your attention that the advertiser hopes to get your business... *You* are the final judge. Your decisions spell success or failure for the advertisers... Without advertising, the economy would grind to a halt. And after all, we all advertise. You advertise what you are by the way you dress, the way you talk; how you present yourself to others. Thus, the advertising you see in [newspapers, magazines and elsewhere are] simply an extension of how you yourself behave.

IF YOU THINK ADVERTISERS ARE OUT TO INFLUENCE YOUR THOUGHTS, YOU'RE RIGHT... It's your right to choose. To make a well informed decision you need to know all you can. And advertising makes that possible. *Advertising. That's the way it works.*

That quote and the preceding one were part of a campaign promoting the notion that when consumers purchase goods or services this creates employment.

Approximately 900 people are employed in advertising agencies, and 200 in advertising-related services. Advertising revenue also contributes to the employment of another 9,000 people in the publishing, radio and television industries... Total advertising expenditure (media and non-media) in N[Z] for the year... was approximately \$1.9 billion. Of this, \$1.3 billion was spent on media advertising – television, radio, newspaper, magazines, direct mail, cinema and outdoor. The remaining \$600 million came from production and non-media advertising, such as promotions, and expenditure on advertising production. Forty-five percent of expenditure on media advertising (\$587 million) was made through advertising agencies, with agencies placing around 80[%] of advertising on television... [and] in magazines, 20[%] on radio... and... 15[%] in newspapers... At the end of March 1994, there were approximately 150 agencies, most of which (122) were N[Z]-owned, with the remainder (28... [- up] from 12 in 1983...) affiliated to multi-nationals by total or partial ownership (these tend to be the larger agencies)... The Advertising Agencies' Association of N[Z] is an incorporated body representing the interests of its... 42 member agencies... on issues affecting the advertising industry and agencies.

While advertising obviously *creates employment* within the advertising industry, if advertising manages to create jobs in other industries it can be at the expense of other jobs (e.g., if, due to advertising, a consumer changes brands, they are simply taking work from one supplier and giving it to another). Furthermore, the pro-advertising campaign made no effort to differentiate between the value of the employment it creates (e.g., society could do with the creation of more jobs in the education and health industries; society – and the education and health industries in particular – can do without, or would be better off not having, many of the new products and services currently being advertised merely to create employment)!

If you're interested in selling things [advertising ('the art of arousing the public's attention through various means of communication in order to induce them to buy goods and services or to influence their opinions on issues, people and institutions')] is **great. If you're interested in democracy it's awful.**

Another point worth noting about advertising is that, while it is apparently illegal to defraud, mislead or lie to consumers – especially in the US (yet it is okay in the US to, for example, sell 'sea monkeys' or 'pretend you're tourists wanting a passerby to take your photo when you're actually promoting the camera') – advertisements don't necessarily have to tell the truth (i.e., many misrepresent the abilities of their products or stretch the truth beyond recognition – often in an attempt to be comical – or make comments that are completely unsubstantiated). If every advertisement was required to tell nothing but the truth, those that, for example, portray germs as being scary cartoon-like creatures living under the toilet seat (causing over-sensitive

youngsters to become scared of using the toilet), make statements like ‘everyone’s favourite bread’ or ‘if it’s not Colman’s then it’s not mustard’, would be banned!

Fresh claims that television viewers don’t mind watching lots of advertisements are “the same old lie,” says a media watch group... [A spokesperson] for the “self-appointed watchdog” Media Aware, said the research proved nothing. “...There’s plenty of indignation out there. It’s one of the top 10 topics of conversation. Maybe people just figure it’s not worth complaining because nothing will change even if they do.” ...The... [TVNZ]-commissioned... Benchmarking Public Broadcasters report... says advertising levels have crept up on all three major channels... with commercials and self-promoting trailers now filling about 25[%] of each hour. Despite that trend, the report says “commercial load may not be a live issue with viewers” and quotes recent research in which most participants agreed that advertising was necessary. Most of those surveyed also said they did not want to pay a higher broadcasting fee in return for fewer commercials on TV1. [However, Media Aware] said the research featured loaded questions which elicited “the answers they wanted. They didn’t ask people outright ‘do you resent the amount of advertising on television?’” [The spokesperson] said it was up to the Government to regulate the level of advertising because broadcasters would never do so unsolicited.

...John Smith Pemberton, the Civil War veteran and morphine addict who invented... Coca-Cola... in Atlanta in 1886, might not have understood the Internet, but... would have recognised its power as a marketing and advertising tool. If ever [it] had been given \$25,000, [“I” would... spend \$24,000 advertising and the remainder making Coca-Cola. And then we’d all be rich.” Sadly, no one ever did give him \$25,000. While the product went on to make a lot of people a lot of money... Pemberton ended his life in debt. [Pemberton had] invented the drink as a replacement for a wine based on an extract of the Peruvian coca leaf, which had been found to possess invigorating qualities (not surprising; the extract of the coca leaf was, essentially, cocaine). With the temperance movement sweeping across the southern states, [Pemberton] was certain Atlanta would soon go dry. What [Pemberton] needed was a soft drink which was equally “invigorating.” His solution, a fruit-flavoured sugar syrup which combined the caffeine kick of the kola nut and the narcotic buzz of the coca leaf, was initially designed to be mixed with still water. Only when it was diluted by soda water, and became eligible for inclusion at the fashionable soda fountains of the day, did it take off. In a few years it became as solid a part of the young country’s mythology as the cowboy... Pemberton, seeking cash in 1887 to support his morphine habit... sold his invention to Asa Candler, who turned it into the mass-market product it became, and removed the cocaine along the way... TODAY, the Coca-Cola... formula is still a secret... [T]here may be two recipes. Or... half a dozen. And then again, maybe all the fuss about the secret recipe... is a complete sham. There is no doubt that what is sold in cans today and what... Pemberton mixed up in his lab are not the same. There’s no cocaine in modern Coke for a start. And it’s inconceivable that the company, expanding across the globe... [until its product was] on sale in more countries than belong to the... [UN,] did not eventually have to add enough preservatives to make it exportable. There is also no doubt that the... company has gone to great lengths to protect the very idea of the recipe’s confidentiality. In 1977, they pulled out of India because the Government demanded they reveal what was in their drink. They have defied similar orders in the U[S] and stubbornly ignored furious demands by a German Euro MP, who said customers had a right to know exactly what they were drinking. The secrecy is so much a part of the marketing image, it is too valuable to lose. “I talked to a senior Coca-Cola executive when I was researching my book,”... says... the [author of] *For God, Country and Coca-Cola*... “[who]... said... they couldn’t care less if people handied formulas about. They have spent over a century building the brand and the equity is not in some formula. It’s in the brand image. It’s down to the billions they’ve spent on the advertising.” For... [the] great-grandson of the [guy] who... may not have invented the drink but did name it and design the flowing script which has become the world’s most familiar graphic image – ...[but was] cut... out of the deal [Pemberton made with Candler, meaning] his family has none of the Coca-Cola billions... [–] that may be the ultimate humiliation... [The] great-grandson of the co-founder of Coca-Cola... [claims to have] custody of the recipe... [– although it is among] many issues to be settled in a divorce... [from] his estranged wife... [– yet, apparently, the] company whose secrets [the great-grandson] is trying to flog couldn’t give a damn whether it’s the real thing or not.

...Wars – and rumours of wars: don’t believe TV... The Afghan capital falls, and former President Najibullah is beaten, dragged behind a jeep, and shot in the head. His corpse is strung up in public, his mouth, nose, hands and pockets stuffed with cigarettes and banknotes... The Pakistani newspaper *Dawn* primly observed that “public hangings or other such acts of vengeance will only provide further encouragement to critics of political Islam who let no opportunity pass without equating Muslim militancy with blood-letting and terrorism.” True enough, but that rather misses the point. This sort of savagery is not exclusive to Muslim extremists. In war-torn Sierra Leone, one of the militias took to chopping off people’s arms at random earlier this year: terrorism gone mad. In Sri Lanka last month, as Government troops closed in on the Tamil Tiger headquarters at Kilinochchi, Tamil rebels rigged as human bombs launched a mass attack on the column. As soon as night falls in the hills of Burundi, the reciprocal massacres of Hutu and Tutsi villagers by the two tribes’ army and guerrilla forces resume. Surely the world is drowning in a tidal wave of violence. Surely the pundits who see ethnic hatreds and religious fanaticism as the driving forces of the post-Cold War world are right. Surely the television is right. No. Television has a very small screen, so even the smallest of wars fills it completely. It is what... [is] called a “linear” medium, which means that only a very few wars, genocides and so on will entirely fill its limited space for foreign news. And since every television news editor in the world lives by the axiom “if it bleeds, it leads,” news of war comes first... [T]elevision images overpower any rational analysis suggesting that war is in decline, and the media do not strive officiously to put matters in perspective... The result is that most of the world’s people live with the paranoid delusion that while things are pretty safe around here, the rest of the world is a bloody mess. Even the print media often succumb to this delusion, but at least in print rational analysis stands a fighting chance of competing with the pictures. So let us do some. Ten years ago there were a lot of large wars under way in the world. “Large,” for these purposes, means at least 10 dead a day, or let us say 4000 dead a year. Some of those wars, like Guatemala, Lebanon, Namibia, Eritrea, and Cambodia, were already more than a decade old in 1986. Others, like Sri Lanka, the Punjab, Iran v Iraq, Afghanistan and El Salvador, were relatively recent. But they all tended to last a long time, they were generally internal to one country and they usually killed more civilians than soldiers. The remainder of the list included the long war in the southern Philippines and the even longer war in the southern Sudan; the wars in Ethiopia, Somalia, Angola, Mozambique and Nicaragua; and (just squeaking in under the wire as a “large” war) the conflict in Western Sahara... All but four of those wars are now over. The wars in Sri Lanka, Afghanistan, the southern Sudan and Somalia continue but the first two show clear signs of an approaching end. And apart from sub-Saharan Africa, the only new war of a comparable scale that is raging today is the fundamentalist insurgency in Algeria. There was a rash of short wars in the southern fringes of the former Communist empire in 1992-96, as inextricably tangled ethnic groups living in mostly mountainous terrain sorted out their post-imperial relationships: Croatia, Bosnia, Moldova, Georgia, Armenia v Azerbaijan, Chechnya, Tajikistan. Two of those wars, Bosnia and Chechnya, certainly qualified as “large” at their height. But *all* of them are now over, or at least in long-term remission. There are... other conflicts in the world that we also call wars: Northern Ireland, Corsica, and Spain’s Basque provinces in Europe, Peru’s Sendero Luminoso and Mexico’s Zapatistas/EPR in Latin America; East Timor and Kashmir in Asia. But these insurgencies kill an average of only one person a day, or one person a week, which makes them a qualitatively different phenomenon. Besides, most of them are in decline – and most of them were already under way 10 years ago anyway. This leaves only black Africa, where there have been big new wars in Rwanda, Burundi, Liberia and Sierra Leone. The last two wars may now be ending, but the twin Hutu-Tutsi struggles in Rwanda and Burundi, though well below the genocidal levels of last year, continue to take a heavy toll. The rise of wars in the middle belt of Africa is deeply worrisome, above all to Africans, but the overall

conclusion is clear: worldwide, warfare is in steep decline. From eighteen large wars a decade ago, we are down to nine today. And if we omit the middle belt of Africa, we are down to three (of which two may soon end). [95%] of the world's people have never seen a war, except on television. Some three-quarters of the world's people now live in places at least 1000km from the nearest large war. The world is not falling apart. It is more peaceful than at any time in the past half-century. Universal brotherhood will not arrive any time soon, but [if] the television lies[, television] can't help it... [- unless sport continues] changing television. To assuage the hunger for sports, new channels are being launched at a tremendous pace. In America, ESPN, a cable network owned by Capital Cities/ABC, is starting a 24-hour sports news network; in Britain, BSkyB, a satellite broadcaster partly owned by [News Corporation], has two sports channels and is about to launch a third. Because people seem more willing to pay to watch sport on television than to pay for any other kind of programming, sport has become an essential part of the business strategy of television empire-builders such as [News Corp's tycoon]. Nobody understands the use of sport as a bait for viewers better than [him]. In particular, sport suggests an answer to one of the big problems that will face television companies in the near future: how can viewers, comfortable with their analogue sets, be persuaded to part with the hefty price of a new digital set and a subscription to an untried service? The answer is to create an exclusive chance to watch a desirable event, or to use the hundreds of channels that digital television provides to offer more variety of sports coverage than analogue television can offer. In the next few years, the main new outlet for sports programmes will be digital television. To understand how these multiple effects have come about, go back to those vast sums that television companies are willing to pay. In America... total spending on sports rights by television companies is about \$3 billion a year... Advertising revenue is the main recompense that television companies get for their huge investments in sport. Overall, according to *Broadcasting & Cable*, a trade magazine, sport generated \$5.2 b... or 10[%] of total television advertising revenues in America last year. The biggest purchasers of sports rights by far in America are the national networks. NBC alone holds more big sports rights than any other body has held in the history of television. It can, obviously, recoup some of the outlay by selling advertising... [but the] biggest growth in revenues from showing sports will increasingly come from subscriptions or payer-per-view arrangements. The versatility and huge capacity of digital broadcasting make it possible to give subscribers all sorts of new and lucrative services. In America, Direct TV and Primestar, two digital satellite broadcasters, have been tempting subscribers with packages of sporting events from distant parts of the country. "They have been creating season tickets for all the main events, costing \$140-220 per person per sport," says... a Californian consultancy. In Germany DF1, a satellite company jointly owned by Kirch and BSkyB, has the rights to show Formula One motor racing. It plans to allow viewers to choose to follow particular teams, so that Ferrari fanatics can follow their drivers, and to select different camera angles. In Italy, Telepiu, which launched digital satellite television in February, plans to offer viewers a package in September which will allow them to buy a season ticket to live matches played by one or more teams in the top Italian soccer leagues. The system's "electronic turnstile" is so sophisticated that it can shut off reception for subscribers living in the catchment area for a home game, to assuage clubs' worries that they will lose revenue from supporters at the gate... THE logical next step would be for some clubs or leagues to set up their own pay-television systems, distributing their games directly by satellite or cable. If they do, not all teams will benefit equally. In America, football has an elaborate scheme to spread revenues from national television across teams. But in other sports, including baseball, the wealth and size of a team's local market mean large differences in rights from local television. The New York Yankees make over \$70 m... a year from local television rights. At the other end of the scale, the Kansas City Royals make around \$6 m... a year. Not all players benefit equally, either. Television has brought to sport the "winner-take-all" phenomenon. It does not cost substantially more to stage a televised championship game than a run-of-the-week, untelevised match. But the size of the audience, and therefore the revenue generated, may be hugely different. As a result, players good enough to be in the top games will earn vastly more than those slightly less good, who play to smaller crowds. THE lure of money is already altering sport and will change it more. Increasingly, games will be reorganised to turn them into better television... Sports traditionalists resist changing their ways for the likes of... [News Corp's tycoon but, in] the long run, the players and clubs hold most of the cards. The television companies are more likely to be their servants than their masters. - 1996

BSkyB... reportedly has withdrawn a £40 million... bid for broadcast rights to Welsh [rugby] matches. A newspaper report said BSkyB had also pulled out of similar proposed deals with Ireland and Scotland, believed to be worth around £26 m... each... [- perhaps to enable BSkyB's owner.] News Corp Ltd to buy the Los Angeles Dodgers baseball team... for... \$509m... [Incidentally, a] four-year, \$586.16 m... deal[has been signed] between the US PGA and three major [US] television networks.

...Split between three big rivals, A[US]n pay television players have decided to restructure after losing millions of dollars in attempts to dominate the market... Television is well known for its ability to drive people mad. No, not the poor viewers who have to watch endless repeats of M*A*S*H or of fatuous A[US]n soaps. The malady also besets those who own the networks. A decade ago... [it was three prominent businesspeople - including the sailor who won the America's Cup for Perth -] who had a rush of blood and paid a billion or so to buy commercial free-to-air networks. They each lost a bundle - [one] being the only survivor thanks to the strength of his Westfield property empire. This time around the dollars are larger, and the losses, too, will be truly mammoth as... three... new players strive to make a go of it in pay TV... Foxtel, a cable joint venture between... News Corp... and Telstra, has the most subscribers at 200,000 despite having little of its own programming. Optus Vision, merged recently with new age telecommunications carrier Optus Communication, has around 180,000 cable customers and has the option of going satellite. The third is Australis Media, a financially challenged listed entity controlled by an offshoot of [US] cable giant Tele-Communications Inc and [the News Corp tycoon's] homegrown media mogul... [rival]. It has around 105,000 people receiving microwave signals, although it too has satellite ambitions. In the two years that pay TV has been on air, the three groups have lost countless millions. Optus Vision this year will have \$A340 million of red ink, while Australis is running out of money after only late last year having to be bailed out by financiers. Both Foxtel and Optus Vision's... owners are confronted with the likelihood of each making \$A1 billion writedowns. Now the three groups are prepared to concede that it is time to stop being silly. Last Friday, an agreement was reached between the [the mogul's and tycoon's] camps which could kick start an industry-wide restructuring. [The News Corp tycoon's rival] has sold his Australis junk bonds to [the tycoon], giving Foxtel crucial leverage because it can formulate a deal with TCI then the two have enough votes to merge... It seems that [the mogul, tycoon] and Telstra could become a powerful force in pay TV, just as they intended several years ago when the[y all]... formed an ill-fated joint venture... to bid for satellite licences. Australis is a key in any restructuring, despite its poor financial position, because it has a 25-year, \$A4.5 billion programming agreement to supply Foxtel with nearly all its content. Without that, there would be no Foxtel, yet the cost of it is enormous. Australis also has valuable microwave and satellite licences which are handy in the upcoming digital, direct-to-home age. The A[US]n Competition and Consumers Commission knocked back a merger between Foxtel and Australis a couple of years back, but any new proposal would be viewed differently because the industry is now more strongly established. Then, the worry was that Optus Vision would not survive. Not that survival now is by any means a certainty. Core Optus shareholder Bell South is reported to have wanted to liquidate the pay TV business, but instead it is finalising an agreement to sell its 24.5[%] shareholding to equal British partner Cable and Wireless. As of last week, C&W is firmly in control at Optus having installed the former head of its Mercury telephone business in Britain as the new Optus chief executive. The merger between Optus Communications... and Optus Vision... should bring cost savings. The company also is planning to tell its Hollywood movie studio suppliers that they will have to sell their product more cheaply. Optus reckons it can cut its pay TV losses in 1997-98 to something like \$A200 million, which is still a lot even if said quickly. It is planning, however, to become part of the industry restructuring so that it can stem the losses further and eventually bale out of pay TV to concentrate instead on broadband services like video-on-demand, internet, cable telephony and home shopping. The Optus view, which sounds sensible, is for the industry to share infrastructure

– be it cable, microwave or satellite – and compete on programming. That way, the ACCC should have no qualms. And, surely, customers couldn't care whether they had a cable system or a dish on their roof. All that they want is five movie channels, four sports channels and endless re-runs of M*A*S*H and home-grown soaps. The real worry is that, with pay TV currently costing between \$A40 and \$50 per month, the cost will double for those who want the complete package. There is no guarantee, therefore, that it will ever make much money for anyone unless there can be one supplier such as [News Corp] has in the UK with the vastly profitable BSkyB service.

...*Sky comes down from the clouds*... An ill-handled management shakeup at... [BSkyB] just as digital television appears on the horizon and competition regulators are suddenly flexing their muscles... [is why] analysts aren't urging investors to buy... [despite a 23%] fall in BSkyB stock[in the three weeks] since June 17... BSkyB made a stunning turn-around from the brink of insolvency in the early 1990s to become Britain's most profitable broadcaster, but now it and the pay-television industry are at a turning point. "The industry is undergoing tremendous changes, from BSkyB having a monopoly to there being several players in the game... People have to figure out what the consequences of that are." Moreover, BSkyB faces the changing broadcast landscape without its formidable chief executive... who will move to a non-executive board post at the end of the year for health reasons. Also leaving is [the chief executive's] protege and deputy managing director... who will exit day-to-day management to become a consultant to the company. Competitors got a more immediate boost on Tuesday, when British and E[U] competition authorities forced BSkyB to drop a one-third equity stake in British Digital Broadcasting... a digital terrestrial service that will eventually penetrate the 75[%] of British homes which don't subscribe to cable or satellite services. Yet another threat emerged on Wednesday when a consultant's report to the chair[person of British] football's Premier League asserted that the network's £640 million... four-year broadcasting deal represents only one-half of the rights' true value. The consultant's solution: Take back the rights and sell game packages directly to broadcasters. As well, questions abound regarding the influence of [the tycoon], whose News Corp holds a 40[%] stake in BSkyB and whose daughter... [aged] 27, now is BSkyB's programming director. Many investors wonder if the... [tycoon] has dynastic ambitions that might be at odds with their interests. On the positive side, [the] chief executive designate... is highly rated by industry participants... Speaking from London, [the former chief executive] scotched rumours that [it] was set to emerge as an equity partner in... [the tycoon]'s planned buyout of... Sky Network... [The NZer claims to be unaware of what the tycoon]'s intentions were with Sky in... [NZ. His] reasons for stepping down from BSky-B last month... were legitimate, [the NZer] maintains. "I have asthma." ...[his] seven-year reign at BSky-B saw it transformed from a company losing \$33 million a week to one that made more than \$500 million pre-tax profit last year... British industry sources doubt that [the NZer] is headed for retirement though it[is] also considered unlikely that [the tycoon] will want him to join a competitor.

...News Corp has posted an annual profit of \$A720 million... down... from \$1.02 billion last year. The fourth quarter profit of \$274 million was dragged lower by earnings from its [US] Fox Broadcasting network. A dividend of 1.5c was declared, unchanged from last year. News Corp owns 49.44[%] of NZ[']s Independent Newspapers Ltd[, whose]... managing director... was paid \$437,976 for the year... In the previous year his [pay] package was \$457,058.

...From humble beginnings, Sky Network Television Ltd looks set to become the South Pacific cornerstone of [News Corp's] global pay television empire. A deal valuing Sky at \$700 million to \$800 million is expected to be announced by... Independent Newspapers Ltd on Monday. Analysts say INL itself will take a little less than half of the broadcaster. But another [News Corp] company, BSkyB, will take between 5 and 10[%], securing control for... News Corp... Some politicians have claimed the tie-up was timed to pre-empt any move to introduce restrictions on cross-media ownership. The television industry... says a likelier explanation is a coming change of regulations [in AUS]... From July next year, pay television companies from outside A[US] will be allowed, for the first time, to broadcast foreign content directly to A[US]'s 18 million viewers... Come July Sky will be able, with the right satellite connections, to broadcast to both [AU]S and N[Z], delivering a sizeable market for the sports rights on which [News Corp] has spent billions... [News Corp's] satellite empire already extends around the world. In Britain, 40[%]-owned BSkyB, once losing \$24 million a week, now dominates the pay television delivery market, and last year turned in an operating profit of \$770 million. It plans to go beyond the mere broadcasting of scheduled programmes by introducing interactive services, such as internet access, home shopping, and home banking... ASkyB is gearing up for a \$US1 billion launch in the U[S] later this year, and JSkyB will follow in Japan. Deals have been struck with operators in Europe and Latin America. All up, [News Corp's tycoon] has estimated that [his company] will have to spend another \$4 billion on his global satellite dream before [it] starts to get his money back. The vast scale of his ambitions in delivery markets goes hand-in-hand with plans to dominate content. His avowed intention is to tie up the screening rights to major sports world-wide, and to use them as a "battering ram" to break into new television markets. In addition to southern hemisphere rugby, [News Corp] holds long-term rights to screen the [US NFL], English cricket and Premier League soccer, and the Five Nations rugby tournament. Programming is distributed by Fox Sports in the U[S] and Sky Sports in Europe... News Corp will be looking to fit [NZ's Sky TV] into its global plan, detailed by [the tycoon] last year. "Digital broadcasting will enable us to deliver filmed entertainment, television, audio services, and data to hundreds of millions of people all over the globe. This capability has the power to transcend the internet – by delivering data quicker and more cost-effectively through multimedia satellite delivery platforms," [the tycoon] told shareholders. "Once we have established our platforms around the world – a goal which is well within reach – the potential for our company, and our investors, is truly awesome."

...Six months ago, the business community was eagerly awaiting media company... [INL's] interim result. A last-minute delay in its reporting date triggered speculation it was poised to announce an investment in pay TV operator Sky... But it was not to be. Twenty-six weeks on, and there is a certain sense of *deja vu*. Another result, and still no deal with Sky. INL shareholders must be anxious to know what's going on since a Sky stake would expose them to a new medium. The fact it needs a bright new business is shown by INL's latest results. After a dip last year, it has managed to claw back to another record profit... of around \$56 million... but the upside is limited. Its [US] operations, which mostly consist of community papers in Texas and California, again performed poorly, producing a loss. Its A[US]n operations, which accounted for nearly half its revenue, were also unimpressive. However, Gordon and Gotch, the troubled book and magazine distributor foisted on INL seven years ago by its controlling shareholder, News Corp, has been significantly restructured and is expected to perform much better over the next few years. In N[Z], INL has managed to wring a healthy profit out of its businesses, despite weak advertising revenues. It has done this by screwing down costs and benefiting from lower newsprint prices. Its net debt is now down to \$28 million, a reduction of \$38 million during the year. A revaluation of its mastheads has also helped boost shareholders funds to \$921 million, probably in readiness for the Sky deal. With... News Corp no doubt prodding it from behind, INL has always harboured ambitions to get into television. Flush with cash, it looks like it might finally sign on the dotted line. The real question with Sky is its profit potential. It hints at breaking even this year after a \$20.6 million lost last year thanks to its growing subscriber base. But two factors threaten this outlook: looming competition from cable companies and Sky's shift to satellite broadcasting. The latter requires costly investment and the plethora of Sky channels will fragment its audience... If the Sky deal goes ahead, investors will probably need to be patient about a payoff. If [it]... falls through, they will almost certainly demand INL return most of its cash pile to them in a special dividend or buyback.

...[existing Sky TV] shareholders are likely to push for a float when the new board meets following yesterday's purchase by I[NL] of a 48[%] holding. However... the... INL chair[person]... said that... the company had no plans... [to] float... at this stage... [In international news,] Fiji Television Limited, which is run and part-owned by TVNZ[(with whom it)]... recently signed a new \$100,000-a-month contract... for the supply of programmes[]... is under increasing Government criticism with the Acting P[M]... yesterday accusing the network of being insensitive on religious and cultural matters. [The acting PM], who is also Education Minister, said F[TV] had failed to meet its undertaking to provide cross-cultural and

cross-religious programming... [S]o far the only local cultural programmes aired on F[TV] were provided free by the Government's National Video and Television Centre and the South Pacific Commission. "F[TV] has failed to satisfy the agreement... The cultural programmes are provided by somebody else and that's not enough." [The acting PM said FTV]'s... religious programmes... solely involved one religious group from overseas and continued to ignore local organisations... Her comments came after the Government announced it was revoking F[TV]'s exclusive television rights, a clear move to put the network under greater pressure in the face of some criticism from viewers about its programme content... F[TV] was launched eight months ago with an eight-year licence. There was a provision to extend that licence for a further four years. It provides a free-to-air channel and two pay channels. Last week the Government granted a licence for a Fiji Hawaii joint venture, Fiji Vision, to set up a rival service, providing at least 15 pay channels, four of which would be given to the Government free for the purposes of cultural and educational programmes... F[TV] has called a special board meeting next Monday to discuss the Government's action and is also seeking legal opinion.

...[there was anxiety aplenty for the TVNZ broadcaster (r:p1165, ln68 + I, p1017, ln19) who is the host] of *This Is Your Life* last week when... the [show's subject – an All Black who is the *greatest No 7 in the world* –]seemed determined not to attend the rugby awards at which [it] was ambushed. Seems the [No 7] doesn't particularly like formal occasions and had been booked for an engagement in Fiji. When strings were secretly pulled to have the Fiji trip called off, [the No 7] was still resisting pressure to attend the awards night. The producers finally called on [his] All Black coach... to extract a commitment from [the No 7] to attend. Even then, [the No 7] was 45 minutes late. "We were like nervous wrecks," confesses [a spokesperson for] Touchdown Productions. Still, judging by the ratings, all the tension was worthwhile. It was the most watched show of the week, pulling 24[%] of all viewers, and [the spokesperson] is looking forward to more shows next year. A subject has been chosen for the first *This Is Your Life* of 1998... [In related news, a recent] study, *Transforming Government Enterprises*, by Professors... of Auckland University, analyses the formation, or transformation, of the Electricity Corp, CoalCorp, TVNZ, Works, and Government Computing Services... to operate as successful businesses and be as profitable and efficient as comparable businesses not owned by the Crown. They cite TVNZ Ltd as an example of the problems that can arise when that brief was mixed with non-commercial objectives... TVNZ was to have the "predominant objective of reflecting N[Z]'s identity and culture and to encourage N[Z] programming." ..."The problems of continued ownership are most severe for those SOE's such as TVNZ Ltd which, for strategic reasons, wish to diversify and to stay abreast of fast-moving technologies or... need a major injection of risk capital in order to expand into new markets," the study says... However... TVNZ's return on equity between 1989 and 1992 averaged 11.8[%]. Over the same period A[US]n TV companies made losses 37[%] of the time, and averaged a return of 7.7[%] when they did make a profit.

...During the last decade we have experienced the almost complete erosion of BBC-style television broadcasting by T[TVNZ], all in the cause of becoming more commercially competitive and reducing the financial burden on the taxpayer... [A NZ] *Herald*... editorial on this subject... [said] that the retiring chief executive [of TVNZ] would "...sooner taxpayers' money be spent on schools and hospitals and social redistribution rather than making elite programmes for a minority." The present sorry state of television has left this... country's intellectual elite, or anyone who has reached university entrance-level education... with programmes designed for the lowest common denominator, or persons with an average intellect of a third-former. The dumbing down of state broadcasting can probably go no further. Many would agree that now all that taxpayer funding is doing is subsidising TVNZ's principal customers – the advertisers. Let us privatise TV One and Two. The advertisers are wealthy enough to pay their own costs and let us heed [the retiring chief executive]'s advice and use the funds provided by the Government for TVNZ for other more useful purposes. There is no reason why this "elite"... should continue to pay licence fees.

...I sometimes wonder where the television industry was when the brains were handed out. Earlier this year (as with other years) TVNZ and TV3 were placing self-congratulating ads regarding the TV awards they had won, while around the same time, Sky were announcing that they had signed up their 300,000th subscriber, we have every other shop renting videos and recently [the NZ *Herald*] published an article stating that the number of movie visits had increased about 25[%] for the year; i.e. television viewers are deserting in droves. Now we have... Total Media saying "While N[Z] TV carried more advertising than A[US] and the U[S, NZ]ers also watched less [TV]." Did Total Media never hear of cause and effect.

...In several weeks T[TVNZ] will release an interim profit... likely to have its executives running for cover. Suggestions are... it could be... half last year's profit of \$22.9 m... But even with such bleak tidings on the horizon, TVNZ is to spend... \$8 m... on lifting its holding in Sky... from 16.3[%] to 17.49[%]. What's more, the [S]OE can raise its holding... up to 20[%] without ministerial approval, according to a statement of corporate intent tabled with the Government at the beginning of the year. Such a move would cost... \$16 m... based on the \$308.9 m... price I[NL] paid for a 48[%] stake in Sky this week... [T]he shareholding was bought from the [US]-based HKP Partnership of Time-Warner, TCI, Ameritech and Bell Atlantic.

...[TVNZ plans] to spend... hundreds of million of dollars over the next five years on the rights to key sporting events, as competition between the major broadcasters for high-profile sporting entertainment continues to hot up. TVNZ's latest interim report showed it was committed to spending \$291 million on programme rights at the end of June, compared with \$105 million at the same time last year. The nearly three-fold increase is a huge jump on previous years, and comes at a time when the... broadcaster is facing falling revenues from advertising, and is undergoing a major restructuring intended to trim costs and refocus on its core operations... The spend up[, which includes]... rights to the next three Summer and Winter Olympics and the next two Commonwealth Games, as well as local rugby, cricket and netball... has prompted TV3 to question how its rival will be able to justify its outlay, particularly as it is unlikely to recoup the cost of major events such as the Olympics. TVNZ admitted earlier this year that it had made a "sizeable" loss on its coverage of the Atlanta Games. TV3's managing director... believed TVNZ had "grossly overbought" because of paranoia about TV3 and TV4. However, competition with Sky was also to blame... The sort of money pay-TV was able to offer was putting "incredible pressure" on free-to-air broadcasters around the world. At the end of last year, Sky was committed to spending \$219 million on programme rights for various periods up to 2003. In his last annual report, TVNZ's former chair[perso]n... highlighted the escalating cost of sports rights as one of the main challenges facing TVNZ... [● Back in 1972 the chairperson] of the Auckland Rugby Union... [said that rugby would] lose thousands of dollars because of a live network telecast of the... test between... [the Wallabies and the All Blacks, after the then NZ Broadcasting Corporation had] announced it would pay \$8750 to televise the game – by far the highest price it [had] ever paid for a sports fixture.

...SUBSCRIBE to Sky or miss out completely on televised rugby – live or delayed. Analysts have warned that could be the scenario facing rugby fans this time next year... Sky's contract with News Corp gives the pay-TV broadcaster the N[Z] rights to screen all rugby of provincial level and above in N[Z, AUS] and South Africa. The 10-year contract has another eight years to run. Sky also signed a three-year contract with TVNZ that allows the state broadcaster to screen delayed coverage of certain major games. That contract expires at the end of next year. Sky was prepared to make a deal with TVNZ, for an undisclosed but considerable sum, because it needed money to offset the cost of its deal with News Corp. TVNZ was keen to sign the deal because rugby commands such high ratings. But when the contract comes up for renewal... Sky's balance sheet will be a lot healthier[, which means]... the company will have three options... It can roll over the contract in its present form, choose a middle ground with reduced coverage for TVNZ, or slash coverage completely. Which course Sky takes will depend on how it weighs the revenue it stands to gain from extending the contract, against the extra subscribers it is likely to attract if it becomes the only source of televised rugby, live or delayed.

...A phone call from his dad... convinced... [the son that it] needed a new camera. "The All Blacks were playing Scotland in Dunedin on a really windy day. The aerial camera work was atrocious... My dad rang from Wales to check it wasn't me who'd filmed it because it was so bad. I knew then that if people who knew nothing about TV were complaining about it, then it was time I did something." So... [the freelance camera operator] jumped on a plane to Toronto and convinced camera giants Wescan to give him the latest in film technology – a gyro-stabilised camera which looks like a monster golf ball with a black eye. [The son] had the resume to impress the... suits[, having] worked for the BBC and ITV in London before

[being] approached by Sir Peter Blake to sail non-stop around the world with him on catamaran Enza... [His] images from on board during the historic circumnavigation, using a compact video camera, earned him a swag of television awards... [The son] then went to the America's Cup and used the gizmo for the first time, catching OneAustralia split like a banana and gurgled to the bottom of the Pacific, and] used the camera again during the Olympic yachting at Savannah. The latest version, insured for \$1 million, arrived in Auckland three weeks ago... It's a powerful piece of machinery. From 2500ft above Eden Park, [the son] can zoom in on... [an All Black's] bootlaces. The son] has a working relationship with Helicopter Line in Auckland... A similar camera has been brought in from England by... rival Auckland helicopter company Hele-Tranz. The FLIR Ultramedia camera, attached to the nose of a helicopter, was used at the Olympics on the equestrian, kayaking and mountain biking courses. On the first day it was assembled, the camera shot film of a high-speed police chase in Auckland, which was broadcast around the world.

...High bandwidth frequencies, which could be used for national or localised HDTV (high definition television) broadcasting or[sending] high speed interactive data into businesses and homes, go up for auction next week. Six 26 gigahertz frequencies, along with VHF-FM sound, VHF-TV and UHF-TV spectrum licences will be offered. According to the Ministry of Commerce there has been "a fair amount of interest" in the 26GHz offerings – [3] in the 150MHz range and [3] at 500MHz... An obvious candidate would be Clear Communications, which is continually evaluating options to achieve independent access to the local loop currently owned by Telecom... First Media... knew the auction was coming but hadn't put much thought into it. Sky Network executives refused to comment, claiming the imminent float of the company here and in the U[S] prevented it.

...Sky T[V] is tipped to make a... debut on the sharemarket – seeking up to \$150 million from investors. A decision on timing is expected to be made this week but a prospectus has apparently already been prepared. It is likely that a listing of American Depository Receipts – allowing Sky shares to trade in the US – will be sought in tandem with a local listing. Early indications are that Sky's owners will be trying to get the issue away at about a 20[%] premium on the 210c a share... which I[NL] paid in August for a 48[%] stake. Sky]... generates around \$180 million in cash a year... While Sky requires substantial funds for its planned move next year into digital broadcasting, it has recently set up a \$250 million banking facility. At the time INL bought, interest-bearing debt was \$169 million... [But after] years of substantial losses, [Sky] has finally broken even this year with a net profit of \$2.3 million for the six months to June... Sky's other shareholders are T[VNZ] with 17.49[%], Heatley Jarvis Investments with 17.01[%], Todd Communications (9.44[%]) and Tappenden Construction (8.06[%]). Each increased their respective stakes recently when INL bought its 51.5[%] holding from the U[S]-based HKP Partners and quickly sold down to 48[%] so as not to consolidate the holding. While some might sell a portion of their shares, none are thought to be keen to exit completely at this stage. The push to list Sky began... six months ago after the failure of a proposed deal that would have seen INL take an 83.2[%] stake in the company, leaving T[VNZ] as the only remaining shareholder.

...T[VNZ], in an about-turn, is selling shares in Sky Television in an upcoming float. Until now all the indications from the state-owned asset have been that it wants to increase its holding (now at 17.49[%]) in the country's largest pay television operator... TVNZ recently put its hand in its pocket for around \$7.7 million to pick up some of the shares sold by INL... The shares were bought at... the same price INL paid... It is understood that a report by... the global co-ordinator of the Sky float, values the shares at 284c each. Assuming \$173 million of debt, that puts Sky's equity value at \$870 million. If such a price were achievable, TVNZ's total stake would be worth \$152 million. If TVNZ only decided to sell the shares it bought from INL, it would make a handsome \$2.7 million profit for little effort. TVNZ has viewed its holding in Sky as strategic. Both compete for programming, especially live sport... And in a further development, TVNZ is understood to have set the wheels in train for the possible sale of its... transmission arm... BCL[, which]... is TVNZ's most profitable business and has long been touted for sale... INVESTORS excited by talk of Sky... seeking a sharemarket listing... got a[n]... extra fillip... last week... wh[en]... Telecom pulled the plug on its subsidiary, cable TV company First Media, a Sky competitor... Sky's chief operating officer... said Sky had always regarded TVNZ and TV3 as its major competitors, and had not lost subscribers to First Media... First Media would continue to serve its existing customers, as required by their contracts, but would halt its market expansion, which had been mainly in the Auckland area... [I]n a report prepared for INL before the media company took its 48% stake in Sky... investment adviser... Bancorp identified five existing and potential competitors: ...First Media, Clear Communications, Saturn Communications, regional electric power utilities, and A[US]n pay-TV operators. Clear Communications, like Telecom, makes most of its money from its phone operations, but it is 25% owned by British Telecom, which is involved in pay television in Britain. Bancorp noted the company had announced cable trials in selected areas, though with minimal roll-out, and expected Clear to pursue a joint pay TV and telephone strategy. Clear[']s corporate communications manager... said last week the company was not providing cable service, although this was one of many options it was considering... If the threat of competition to Sky from across the Tasman has been lessened, that still leaves Saturn Communications. The Lower Hutt company, with US and Canadian parents, had a fibre optic network accessible to 16,000 homes and 2300 subscribers at the end of June, offering about 40 channels. Saturn plans to build cable – for television and audio – to reach 500,000 homes, or 40% of N[Z] households, over the next few years, according to a report filed with US regulatory authorities... [Sky plans] to launch a satellite service, offering up to 30 channels... next year... In the past six months, more than 10,000 customers have signed up for the satellite service, which offers just two channels at present.

...Telecom's decision... to scale back its efforts with its cable television offshoot First Media have been seen as inevitable and wise in the industry and by analysts... It is perhaps not surprising that the head of one of First Media's rivals in the pay TV market agreed with the rationale behind the move... Saturn's modelling showed that pay TV alone could not be profitable on the kind of network First Media has been building... Telecom is estimated to have spent about \$70 million in the venture. But it will truncate the network once 65,000 homes are passed in Auckland and Wellington towards the end of the year. In a significant shift in public stance, Telecom's chief executive... said this week that the bulk of First Media's business had always been expected to come from high-speed data services such as the Internet rather than the highly publicised cable business. But those services can now be channelled through cheaper new technologies such as ADSL which use existing copper wire. ADSL is on trial by Telecom in the Wellington suburb of Khandallah... And while ADSL is widely viewed as being unsuitable for video, that may ultimately not be the case with trials by British Telecom at present testing ADSL as a vehicle for video... Telecom is confident it will be able to deliver compressed movies... across the country using the existing telephone lines by the end of next year... Nevertheless, it seems likely Telecom would like to quit the pay [TV] business altogether. But in addition to an unspecified number of customers to service, it is believed to be locked into long-term contracts.

...Cable television is... bringing... the choice of the latest feature films at the flick of a switch. In Auckland, Telecom subsidiary First Media is now laying cables in Remuera and Glenfield after hooking up an undisclosed number of customers in Pakuranga and Howick. Customers pay \$15 to \$32 a month and can select films they wish to watch through a service called Near Video On Demand, which starts the film within 30 minutes. The prices are similar to video rentals – \$7 for new releases and \$5 for other films – but the advantage is convenience... The market is even more vibrant in Wellington, thanks to competition from rival cable company Saturn... First Media's programming director... said it was "street warfare" as the companies raced to lay cable and link up customers... By the year's end, 75,000 homes will have cable outside their door if they want it.

...Cable television companies want to add to the number of overhead wires on the... skyline. Rather than burying their business underground and out of sight, the companies are negotiating with... electricity suppliers for the right to put their cables on the existing power poles. The overhead option is considerably cheaper for both power and communications companies, but an eyesore for residents... The visual impact of the cables may become an issue here, as it has in A[US], but the cable companies say the extra lines will make little difference... [However,] First Media... has already run into problems in Remuera, where residents objected to the odd-looking junction boxes it began installing on footpaths. The same boxes are found throughout Pakuranga and Howick, and are due to appear next in Glenfield. A Telecom spokes[person]... said the Remuera project was

on hold... Battles have raged in Melbourne and Sydney as residents complained about loss of views, with television cables strung at different heights to power and telephone wires. As well, some councils have taken steps to bill the cable companies for the use of air rights.

...Channel Seven[’s chairperson]... has accused the Federal Government of making A[US] look like a “media banana republic[]” because]... the Government seemed determined to allow his competitor [– Australis’ media mogul –]to gain control of the Fairfax media group... [and] proposed changes to foreign media ownership regulations threatened the capacity of his Seven network to grow internationally... [By the way, News Corp’s tycoon – recently] dubbed the world’s unofficial Minister of Communications – is making tax minimisation an art, legally. His empire is only paying 7.8c in the dollar in tax on profits, far less than other media organisations.

...In the mid-80s, [the]tycoon... renounced his A[US]n birthright and became a[US] citizen. The move allowed him to comply with [US] law, which prohibits foreign ownership of television stations, and helped extend his global entertainment and media empire – which already included key newspapers in A[US] and Britain – into America. The empire today includes 22 [US television] stations, the 20th Century Fox movie studio, a huge broadcast network (Fox), *TV Guide* magazine and, in Britain, BSkyB. The [US subsidiaries provide hi]s company, News Corp, with the vast majority of its revenue and profit. But... the... [tycoon] has paid corporate income taxes at one-fifth the rate of his chief rivals in the U[S] throughout the 90s, according to corporate documents and company officials. There is no suggestion from [US] authorities of any impropriety in the way[the] 66-year-old has done business. The international tax and accounting strategies employed by News Corp may, in fact, make [him] a model for the 21st-century entrepreneur – a captain of industry who operates under so many flags that it is hard to know where his allegiances lie or how his businesses function. News Corp, in its most recent fiscal year, reported paying \$US103 m... in worldwide taxes on operating income of \$1.32 b... (an effective tax rate of 7.8[%])... By contrast, [US]-based competitor Walt Disney Co’s effective tax rate was 28[%]. Viacom Inc – the parent of MTV and Paramount Pictures – paid 22[%]. Time Warner Inc, a [US] media and entertainment company roughly the same size as News Corp, paid 17[%]... News Corp’s tax rate has averaged 5.7[%] this decade, while Walt Disney, Time Warner and Viacom have averaged 27.2[% to 32.5%. Although the tycoon became a US] citizen in 1985 – and the [person] behind such American staples as Bart Simpson, and... the LA Dodgers – News Corp has remained incorporated in A[US]. Consequently, it is not clear how much – if any – of News Corp’s income tax payment last year went to the [US] Treasury, despite such highly profitable [US] operations as Fox TV. While declining to provide specifics on News Corp’s [US] taxes... the company’s general counsel, said: “We had a lot of start-up businesses in the US that lost money and that creates [deductions and credits that offset taxation]. It has an effect on the amount of taxes we pay.” [The tycoon]’s holdings are many times larger than they were a decade ago and span five continents. Because his publications and television stations influence the culture and politics of dozens of countries, a biography... dubbed him “one of the most powerful [guys] on earth”... Two features particularly stand out in News Corp’s operation, with regards to its financial picture. First, by remaining A[US]n, the company is able to utilise arcane accounting rules which have pumped up reported profits and greatly aided... periodic acquisition sprees. Under [AUSn] accounting practices... News Corp legitimately reported that it earned \$561 m... last year. Under the tougher rules required of [US]-based corporations, however, News Corp would have lost \$155 m... according to documents filed with the Securities and Exchange Commission. The A[US]n difference helps portray News Corp in a more favourable light to investors. Second, News Corp has mastered the use of the overseas tax haven. The company reduces its annual tax bill by channelling profits through dozens of subsidiaries in low-tax or no-tax places... The overseas profits from movies made by 20th Century Fox, for instance, flow into a News Corp-controlled company in the Caymans, where they are not taxed... Figuring out how News Corp arrives at its taxes is difficult because of its sheer sprawl and complexity. News Corp’s organisation chart contains 789 business units incorporated in 52 countries, including... Cuba. A one-line listing for each operation consumes 10 pages of small type in its annual report. News Corp does not reveal much about these businesses. It is impossible to tell from published documents, for instance, how much profit and revenue each unit generated, even in such major operations as 20th Century Fox and the Fox network. The overall financial picture is further muddled by complex inter-company borrowings. [The tycoon] himself once conceded that the company’s intricate financial interior confused even some of his most senior executives. “One of the things I would never attempt to calculate is how News Corp arrives at its tax rate, or why,” says... a Wall St analyst... “[The tycoon] is perpetually able to have the best of both worlds. [The tycoon] doesn’t tell as much as people would like to know, and... doesn’t have to” – except for meeting minimal disclosure standards required by regulators[in the US]... Some other multinationals adopt similar tax strategies, of course. For example, [US] drug companies for years reduced their... taxes by assigning huge research costs to their [US] operations – and huge taxable profits to tax-exempt subsidiaries in Puerto Rico and Ireland. Inland Revenue Service officials say [US]-based companies face taxes on these subsidiaries if they are more than half controlled by [US] shareholders. But that doesn’t apply to News Corp. As for playing by A[US]n accounting rules, the IRS said it would treat any effort by a [US] company to reincorporate in A[US] as a taxable transaction, exposing it to a massive tax bill... News Corp’s tax structure has, however, drawn interest from governments on at least two continents in recent years. Officials in A[US] have highlighted News Corp’s use of tax shelters to minimise its A[US]n tax bill... Israeli officials late last year went beyond merely studying News Corp. Tax authorities in Jerusalem and Haifa raided a News Corp subsidiary in an investigation into whether it had schemed to evade taxes on \$150 m... in income. News Corp vigorously denies any wrongdoing... [Incidentally, a] consortium of Israeli and foreign companies have agreed to lay a \$US80 m... undersea telecommunications cable between Israel, Cyprus and Italy.

...There will never be a better time for entrepreneurs in N[Z] than at present, as long as they don’t get caught up in their own hype, and can meet the challenges of the ever-changing world of technology... [– where] computers, satellite television, and most importantly chips or integrated circuits, [are]reinventing themselves in an 18 month cycle... That is the word from... [someone] who has probably put more cable television networks together than anyone in the world, and enjoys the thrill of being at the forefront of change... “We used to think in terms of five years to replace things, it is now 15 to 18 months whether its new software or whatever. If you understand the pitfalls... know what to watch for... and have a modicum of skill... you might profit and benefit from what’s happening.” North American born[, the entrepreneur] and his wife... bought a 22ha site overlooking Cable Bay in the Far North in 1990. [The entrepreneur] began to develop a business plan to service the local community with cable television – an undertaking [it] was intimately familiar with, being the 54th cable network [the entrepreneur] has set up. The couple now have permanent residency and a son... who is two years old. “I get a great deal of satisfaction in being on the leading edge of the entire South Pacific. We have more television channels here than anyone in A[US, NZ], or anyplace else south of the equator. You have to go to Buenos Aires to find a cable channel that offers more,”... The family-owned company, Far North Cable TV, provides... television programming for the remote communities of Mangonui, Coopers Beach, Cable Bay, Chucks Cove and Taipa, using nine satellite dishes. [The entrepreneur has] negotiated contracts with content providers for 80[%] of his channels – the rest are free to air. The family has invested \$640,000 in the business and has laid co-axial cable beside 900 homes with about 300 subscribers. As N[Z] becomes more confident with the idea of channel surfing, [the entrepreneur] believes penetration will naturally hit 50[%] over the next couple of years. Subscribers pay an entry-level fee of \$25 a month for 15 channels, 44 channels including two from Sky costs \$75 a month but most take 42 channels at \$50 a month. “It pays all of its operating costs, it pays the interest and the principal of the money we borrowed...” [The entrepreneur] estimates it’ll take five years to pay the bank off. As a pre-teen, [the future entrepreneur and author, who]... has lost track of how many books [it] has written – somewhere around 15... – ...became keen on amateur radio and was “a quick self learner” on anything related to science and technology[, before taking up] an interest in the cable television industry in the 50s when... barely of voting age... But the career path [the future entrepreneur] took for a time was journalism... “On my wall there’s a photograph of John F. Kennedy on the back of

a train – you don't have to look closely to see that's me shoving a microphone in his face. I spent a couple of months with the Kennedy campaign on the road." ...[the future entrepreneur, who had] trained in journalism at the University of California... went on to the American ABC radio and television network.

...Dow Jones and NBC... confirmed they will merge the European and Asian operations of cable channel CNBC with Dow Jones' Asia Business News and Europe Business News. No financial details have been given, but both Dow Jones and NBC will take charges against fourth-quarter earnings because of the restructuring... [In local news, if you've been unable to get up in time for *Telstra Business* on TV One (6.30 am weekdays), now you can pick up bits of the show at more acceptable hours... TV One has added streaming video capability to its Web site... which lets Internet users watch selected daily business news video clips. [The]TV One-Online content manager... said that while the service was still experimental and the quality not ideal, rapid improvements in both bandwidth and video-streaming software would push broadcasting frontiers. "I'm looking forward to the day when we can stream the whole programme,"... The technology used is Real Networks' RealVideo, which comprises a video server hosted and managed locally by ITvideoV Network... coupled with RealPlayer – a video plug-in that works with both Netscape and Microsoft Explorer Internet browser software... About 25 TV stations around the world including Fox News... are broadcasting TV programmes on the Net.

...The Ministry of Commerce believes its new Internet-based auction system could save a lot of time and money – once the bugs are fully ironed out. The bugs were cited as the reason for this week's cancellation of the auction of radio frequencies – although BellSouth had threatened to take the ministry to a judicial review over lack of notification and consultation of the... process. [The auction] project manager... was confident of the system's robustness... "Our system is a very complicated mechanism. It is designed to take a large number of simultaneous hits. The entire population of N[Z] could get on and bid... [Y]ou can put multiple bids in and watch and see what you can afford..." The Ministry... invested \$50,000 developing the system which is based on technology used by the U[S] Federal Communications Commission... for allocating radio spectrum...

In 1995 the Government accepted that the nation needed a well-run public radio service with the Radio N[Z] Act, and gave it security of funding... Audiences have responded with enthusiasm and R[NZ]'s ratings have increased in a very competitive market. The act required public radio to balance programming, broadcasting standards, audience response, social responsibility and business viability. These are all things that should apply to a television channel; however, the channel would need to be in public ownership for social responsibility to be an important factor... The last time anyone [in NZ] tried to get television which paid even token lip-service to social responsibility was in 1987 when the Broadcasting Tribunal... [ignored the concerns of rural] groups... that a third channel could be introduced in Auckland before their areas can receive the... [TV2 signal (the) 100 residents in the coal town of Seddonville, 50km north of Westport... can get only TV1... – between 10,000 and 12,000 [NZers] cannot see TV2... and... [a]bout 2000 people living in small, remote pockets... cannot get TV1) and]... awarded the warrant for a third television channel to TV3. It was to be identifiably N[Z] in character; it was bound under the conditions of its operating warrant to an initial target of at least 26.5[%] of programmes that reflected and developed N[Z] culture and it was a commercial failure. Overseas programme rights were needed and TVNZ had them for 19 of the top 20 British programmes, six of the top 10 from the U[S], six or seven from A[US] and 64 mini-series. Politics can override economics as we saw when the Government removed any limit on foreign broadcasting ownership for the sale of TV3. N[Z], with the population of a city in world terms, has a proud history of both innovation and compromise when it comes to broadcasting... "Television is the only medium that counts for me. It is the biggest platform and you should fight, kick and bite your way onto it." So said Dennis Potter, the English writer and playwright who used television in more innovative ways than any other broadcaster. It mattered so much to the miner's son from the Forest of Deane that [Dennis] was prepared to use violence to get on it. What are N[Z]ers prepared to do for it? ...[the] Professor... who headed [the Iron Maiden]'s committee of inquiry into the BBC's finances and who was a staunch advocate for deregulation, says that there is a case for the preservation of programmes that tax-payers might want, but as consumers might not bring into being. It is the same argument that says the public is willing to pay rates to support public libraries though they may rarely take advantage of them. Good broadcasters can act as trustees of the public interest with a responsibility to broaden and deepen the public taste... [■ T]wo British companies have visited N[Z] this year to look at BCL, while the former]... TVNZ chief executive... is also eyeing the asset for A[US]n telecommunications company Optus, which... [it now heads. NZ] investment company Infratil is also believed to be keen... TVNZ... said yesterday the board... planned to sell its stake in Clear Communications next year... [but one] investment TVNZ has confirmed it is keen to hold onto its share in Sky TV... as it provided mutual benefits for both companies.

...Turmoil in the world's sharemarkets has failed to dent investor enthusiasm for the float of pay TV operator Sky Network... Applications from small investors and Sky customers... closed yesterday. Applications from institutional investors closed on Monday. Broking sources said the... organisers would be forced to severely scale back applications. They said... the firm co-handling the float, was advising other broking firms that the issue had been seven times over-subscribed. Sixty-five million shares... were being offered. Most – 49 million – were new shares, with the remainder coming from T[TVNZ] which was reducing its shareholding. The price for the shares, estimated at between 220c and 240c each, will be set on Tuesday... Of the shares... 70[%]... have been allocated to... overseas... investors.

...Those lucky enough to get shares in Sky Television could find their investment will pay for a year's subscription when it lists today. Despite the shares being issued hitting the top of the pricing range at 240c, demand for them has been such that pundits are picking the shares to list at least at 270c in trading. That equates to a \$300 gain for shareholders with 1000 shares. The unofficial word is that the issue was 11 times oversubscribed. That is even taking into account overallotments, which stretched the issue to nearly 65 million shares. Of that, 6.5 million shares were allocated to the retail market. But, given the level of demand, only Sky subscribers and those with firm allocations from their brokers will get shares. Around four million shares were allocated to brokers. Sky subscribers, scaled back to 1000 shares each, made up the balance. Institutions also got severely scaled back, with some missing out altogether. Demand was such in the N[Z] market that the allocation here was upped to around 40[%]... The balance was to go mainly to the U[S] market... Sky shares began trading on the [US] Nasdaq market at 4.30 am this morning...

A... successful Sky Network... float[has] given investors something to cheer about amid the continuing gloom and uncertainty surrounding Asia's financial crisis... Sky [listed] at a 33 cent – or 13.75% – premium above its issue price of \$2.40... Sky listed first on the Nasdaq exchange last week, and its closing price of \$2.70 was the N[Z] opening price... "The Americans... appreciate... an immediate yield."

...In some parts of the U[S] more than 60[%] of households subscribe to a pay television network. In N[Z] 21[%] of households subscribe to Sky and according to a... survey the[average] audience share for Sky's five channels in these households is 29[%]... – ...Sky Movie Channel has the highest viewing share with 40[%], followed by Sky Sport (33[%]), Orange (12%), Discovery (11%) and Sky News (4[%]) – ...compared with 26... 23 and 19[% for TV] One, TV2 and TV3, respectively. The growth of pay television can be attributed to one main factor, programming. Free-to-air stations depend heavily on advertising and they have to broadcast a wide range of popular programmes over an extended period to maximise this revenue. Pay television, on the other hand, can attract new subscribers by broadcasting one or two "must see" programmes. As a consequence pay broadcasters aggressively compete for these "must see" programmes.

...SKY Television is poised to lift viewing numbers from 300,000 to half a million... I[NL's] managing director... told INL's annual meeting on Friday... [that Sky's s]atellite service, which began operating in June, raised the number of homes able to get the service from 900,000 to 1.3 million. But only analogue services were available at present on satellite, which confined Sky's broadcasts to the Sports Channel and Orange. "One of the first jobs of next month's Sky board meeting is to begin the process of making the transition to digital transmission." ...through digital

transmissions[, Sky hoped to be]... offering subscribers 60 channels of high-quality viewing... by the year 2000... [T]hese developments would also give Sky the chance to move into impulse pay per view, near video on demand, home banking and Internet services.

...As pay television rivals battle to move across to digital technology, the Minister of Communications... is concerned that subscribers here are already missing out on some of the basics. "I'm disappointed that we've had fibre cable for nearly five years and there's been no attempt to provide cable modems. A[US] now offers household connections to the Internet using cable modems, which are massively faster than your normal modem. How is it that they're so different? Why can't we have them here?" ...[the minister] currently has access to 24 channels of television on Telecom's First Media cable TV, including free to air channels. "I am disappointed with First Media since the first trial. It started with the Sky service as well but because of court action over who can do what, Sky still can't come to our house via cable. It's not likely to be resumed even though Telecom dropped its bid to buy Sky. The court injunction still stands... I find it very frustrating – the whole suburb of Pakuranga has fibre into the home and you can't get three or four of the best channels including ESPN and the sports network, unless they get a UHF aerial on the roof," ... The general manager of First Media... believes cable modems are not standardised. "If they are by the end of the year we'll move," ... And while Sky is no longer able to be broadcast across the Telecom-owned cable network, it has already moved to extend its offerings. Sky has used up its nine channels on UHF which it broadcasts to 290,000 homes and has started a new business beaming in digital multi-channel satellite-based pay TV.

...Pay-TV programmes that are heavy on sex and violence appear bound for a late-night graveyard in a revamp of television rules recommended by the Broadcasting Standards Authority. The body, which administers the codes of broadcasting practice under the Broadcasting Act, wants uncut R18 programming on all channels to be screened only after 10 pm. The call has angered pay-TV networks that operate under separate rules from free-to-air channels which allow them to screen uncut R18 content from 8.30 pm. In its review of pay-TV codes released yesterday, the authority said there should be common programming standards for all television in a single Code of Practice. In the authority's view, not allowing R18 programmes before 10 pm is the only way for parents to feel secure that their children are not exposed to adult programming... Ironically however, the proposed stipulation on adult content will also mean free-to-air broadcasters could screen uncut R18 movies after 10 pm, and show R16 material between noon and 3 pm. However, TVNZ and TV3 are also unhappy at being lumped in with the subscriber operations for the sake of achieving one industry standard. Both networks believe they have little in common with pay-TV. The proposal is unlikely to make a difference to overall content on television. The authority says its recommendations will not alter the... Act's requirement for networks to meet standards of good taste and decency. The... country's pay-TV operators, Sky, Saturn... and First Media, vowed yesterday to fight the changes and to support "their customers' right to choose." In a joint statement, the companies said they were "responsible programmers" who carried out their own preliminary qualifying for subscribers, who must be at least 18. Sky said the research for the review "appeared to be a direct contradiction" to findings in its 1997 annual report which showed that of the 206 complaints about programme content in the year to June, none related to pay-television. As well, the recommendations ignored technology such as R18 restriction cards and pin numbers which allowed controlled access to pay services.

...*It ain't broke but they'll fix it* Nice place, the 60s – if you like... clean-cut conservatism and conformity. But why exactly has the Broadcasting Standards Authority, with its pay-TV review released last week, decided to time-warp us back to that not-so-swinging decade? The authority certainly appears to have stepped aboard the Tardis and teleported to local television's days of yore by proposing that uncut R18 material should screen only after 10 pm on all channels – including... pay-TV. Their rationale for revisiting the bad-old-good-old days is the result of two years of consulting and market research. According to the authority's surveys, 73[%] of those questioned believe R18 material "causes" violence in society; 91[%] think adult programming has a "bad effect" on children... But what is the evidence – apart from the views of some thousand respondents to the authority's survey (85[%] of whom have rules about what their kids watch) – that children have been affected by the present regime? Where is the evidence screening uncut R18 material at 8.30 pm on a pay-TV channel is directly injurious to society? ...All three pay-TV operators offer cards or pin numbers which restrict access of adult material. And subscribers can choose every month to cancel their contract if they don't like what they see. The authority's response to this is that only 500 out of 305,000 subscribers use the cards – "possibly" because they block out all R18 programming. Yet the body's research says 73[%] would use such technology. In the end, it... looks very much like the authority is attempting to doctor something that ain't a dud. What it should be doing is trusting the intelligence of viewers to decide when to use the switch marked off.

...*Television exposes children to casual sex, rape, abuse and much else[, but does] it harm them?* ...In the wake of reports that 13 and 14-year-olds are to be charged with war crimes in Rwanda, of the horrifyingly high number of children who are survivors or perpetrators of sexual violence, and a recent research finding that children are entering puberty as young as eight, you can be forgiven for wondering what childhood has become in the late 1990s. Children are no longer young innocents who inhabit the "walled garden" of childhood where they are insulated from the adult world. But was it ever so? In fact, the notion of childhood as a vulnerable and protected state is relatively recent. It arose in the western world out of 19th-century attitudes towards children who were treated as little adults, useful in factories for their small size and pushed to the limits of their endurance in appalling working conditions. In many countries today, this is still the fate of children. But in western countries laws were made to protect children when the "Save the Child" Christian campaign began in earnest, and compulsory schooling allowed the idea of a "proper" childhood to spread. The ideal of childhood as characterised by innocence and dependence became entrenched in the early part of the 20th century and reached its perfection by the 1950s. With the advent of television and the discovery of the child as consumer, and the decline in parental authority and emergence of children's rights, more recently children have demanded and received access to an adult world that had formerly excluded them and held unquestioned power. Despite this, the romantic view of childhood has remarkable tenacity, especially in western societies where adults seek to protect children from a perceived dangerous outside world, to maintain their so-called state of innocence. The mass media are seen by some as serpents in the garden who tempt and corrupt the morals and values of our vulnerable young. Every week-night on television children can tune in to soap operas and sitcoms, both local and foreign, which provide windows into the world of adult relationships, which can involve casual sex, messy relationships, Aids, rape and abortion. Many argue that exposure to such fictional portrayals of adult sexuality robs children of their innocence and shortens the span of their childhood. But it can also be argued that the flip side of innocence is dangerous innocence and that in attempting to protect children adults are in fact denying them autonomy and creating a state of oppression which places them in greater jeopardy. [One commentator] makes the provocative statement that the notion of childhood innocence is itself a titillation for abusers and that innocence is an ideology used to deny children access to knowledge and power, therefore increasing their vulnerability to abuse. It may be very difficult to find a causal relationship between children's viewing of storylines about incest or sexual abuse on programmes such as *Shortland Street* and the knowledge gained making them less vulnerable to abuse, for such an idea challenges popular beliefs about the nature of television's effects and the sensitive nature of the subject matter is bound to incite complaint. Nevertheless, I suggest that when such content is matched with discussion with a caregiver, such an outcome becomes a possibility... [As] a doctoral student of film and television at Waikato University, [I am aware that watching] soap operas and sitcoms is one way in which children gain knowledge about sexuality and in a way in which sensitive issues can be raised for discussion within the family. Many parents appreciate the fact that the issues arise on a television programme, removing personal experience from the equation and inserting fictional characters which can allow for a potentially less damaging or embarrassing discussion. Some caregivers welcome the opportunity to discuss topics like safe sex, monogamy, promiscuity and homosexuality with their youngsters, while others reserve their right as parents to keep such topics off their children's agendas. The middle ground is held by those who will discuss issues of sexuality but draw the line at explaining terms such as "menage a trois" or "slut" to their nine-year-olds. Such discussions represent a delicate balancing act between... the desire to protect children from more explicit sexual knowledge... and... the need to furnish answers to burning

questions... An implication of the later, liberal view is the fusion of adult and child worlds, while the former conservative approach requires that these worlds remain separate.

...Research apparently showing a causal link between crime and screen violence will soon be released by the British Government. The two-year study... could put pressure on ministers to bring in tougher censorship. The report, entitled *The Effectiveness of Video Violence on Young Offenders*, compares the reaction of normal youths with that of violent and non-violent offenders. The 120 youths in the sample were each questioned in detail about one video shown immediately after screening and after three and nine months. The co-author... told the *Sunday Times* the provisional findings showed... [that:] “Videos cannot create aggressive people... [– between 3% and 10%] of young people grow up in violent homes, either as victims or witnesses... [–] but they will make aggressive people commit violent acts more frequently.” [Ironically, another ‘new study suggests that children are not as affected by nasty videos as traditionally thought and that TV news coverage can be more disturbing.’]

...The outrage and disgust expressed by the world, towards the actions of photographers at the crash[that killed Princess Di], is justified, but in my opinion highly hypocritical. Why is it not acceptable for photographers to shoot a person dying in a car wreck when we have images just as disturbing and real on our television and in... video shops? Take for example the rash of “reality television” shows... with such titles as *When Planes Go Down*, *Real TV*, and *When Animals Attack*. One... showed a police[officer] being hit by a car. We were told the [officer] died. These programmes are neither news shows nor informational nor educational. They are deliberately placed in prime-time slots to capture the largest segment of audience, with one objective. To make money. They are supposedly entertainment but there is another term for these – snuff. It seems that if you deliberately kill someone, and film the act, it is illegal. But if you film someone else injuring or running down a living human being and sell that to a “reality programme,” it is not. The exploitative nature of these shows is appalling. Unfortunately not enough people have objected to date – including myself – so they continue. [‘It worries me that TV could fall victim to the all too common phenomenon whereby something truly original is bastardised and homogenised in a coldly calculated attempt to find appeal amongst the masses, thus snuffing out any spark of creativity, leaving the artist frustrated and the public deprived.’] But how do we decide what is acceptable and what is not? And just as importantly, who decides? NZ[OA] funding goes to the stations that broadcast “reality TV” shows and therefore, no matter how much television management deny it, that money indirectly pays for them. The body set up to help decide what is acceptable[on NZ television], the Broadcasting Complaints Authority, did nothing, as far as I am aware, about objections to the show *When Animals Attack*. In fact, shortly afterwards *When Animals Attack 2* was broadcast. *When Animals Attack* was given a later evening slot, after the “goodnight kids” time, but then ads for the programme, showing graphic segments aired during the late afternoon. What’s the point? Either a show is deemed unsuitable for younger viewers or it is not. The slow flow of trash TV has become a current and by indications will soon become a flood. Civil libertarians will say that we should be allowed to choose what we want to view... that any form of censorship is an infringement of human rights, specifically the right of freedom of expression. But when does freedom of expression turn into the proverbial shouting “FIRE!” in a crowded cinema? Where is the line drawn? They will also say, that I have the ability not to watch these shows if I choose[(i.e., I have the freedom to own a television and the ability to choose to never use it – because I don’t like any of the programmes shown on it – although, while I continue to own a television, I don’t have the freedom to not pay for the licence fee which indirectly funds the purchase of programmes I don’t want to watch!). However,] my concern is not just for myself, but for the community at large. What will happen in the future if the community is continually provided with a diet of dross for our minds? We are aware that what we put in our stomachs affects our health, so why do we continue to deny the effect of what we put in our minds? It has been proven that people become consciously immune to images over time, but of the subconscious no one really knows. Consider the example of a jury at a real murder trial. At the beginning police waited nearby to give support to anyone affected by the pictures of the murder scene. There were gasps, cries of shock and some people felt nausea on the first day. But just a few days later jurors were so used to the pictures they could easily pass them around without need of support. The media will sometimes claim that what they show does not have an effect. Well all I can say in response to that is “Advertisers – demand all those billions back cause your ads are not affecting us.”

...If TV2 dies, can we have its gall? It should somehow be punished for the outrageous cheek displayed in the announcement of a new publicly-funded... (...\$1.2 m... of broadcasting fee money)... comedy series poking fun at reality TV. TV2 might not have started the reality ball rolling (take a bow, TV3, for *Hard Copy* and the local trend-setter *Real TV*) but in this year of turmoil at state t[v], it has swiftly become a leading proponent of the clip show quickie. The current schedule reveals *Great Escapes*, *Real Emergency*, and *Strange Universe*. Last week we got a repeat of... *When Animals Attack* while this Saturday brings *The World’s Scariest Police Chases*. Having subjected viewers to such unmitigated trash, it now wants us to have a good laugh... via a show called *Newsflash*. The shows being lampooned are undoubtedly worthy of such treatment, scraped as they are from the bottom of the international t[v] barrels. At a time when TVNZ is desperately interested in saving money, it has bought this trash in bargain lots and then – in a risible attempt to give some of it a local face – wrapped around some “presentation” from[local comic] superstars... But a channel can’t have it both ways: “Watch this, it’s really interesting,” one night; then, “Isn’t this stuff a load of cobblers? Ho-ho,” the next... If TVNZ really wants to start feeding on itself, how about a comedy about a state-owned broadcaster that goes through an excruciating restructuring – ...then leaves... all the bosses in jobs they already hold? Or... a quiz show – *Haven’t Got a Clue!* ...It would be unfair to suggest that the Canadian club over at TV3 and TV4 offers better programmes than TV2. The Mounties themselves couldn’t find a decent show in parts of their schedules. But TV2 has gone too far in expecting us to laugh about having had our intelligence insulted – and having us pay for the privilege.

...[TVNZ’s boss] is probably not [someone who has] regrets, but... could be excused for worrying that a simple phrase might return to hang around his neck like so-much pongy, sea-going poultry. “Great N[Z] Television” was the catchery a couple of months after his April appointment as TVNZ’s head of television and it has since become the title for the state-owned broadcaster’s on-going navel-gazing. [The boss] loves that kind of stuff. Dubbing TV One the “rich channel” and TV2 the “risk channel” was another statement of the obvious offered as what [the 41st US President] famously called “the vision thing.” While such wordplay is part of what leaders do – setting goals in simple terms – there are cynical troopers who believe the whole thing is merely a cover for “Great... Downsizing.” Others who have seen the touchy-feely executive exercises think it’s just a “Great... Load of Cobblers.” But who could stand up and oppose the literal ideal of... GNZTV...? In this year of the wrap-around reality show, most would welcome “Goodish... Television” or even “Doesn’t Suck... Television.” ...quality has little to do with catchphrases from on high and everything to do with clever and committed television makers – producers, writers, directors, crews and actors or presenters – who often work on a shoestring and know that television doesn’t have to aim for the lowest common denominator... For much of the year, TV3’s *Inside N[Z]* documentaries stood as a sometimes lonely reminder that there’s a healthy TV talent pool. Finding the money to keep that base working comes down to tussles at the networks and N[ZOA] where priorities are set and ratings analysed. If [TVNZ’s boss] can pull the right funding levers, and help good television makers through the uncertainties of TVNZ’s restructuring and threatened privatisation, maybe [the boss will] be able to take some responsibility for the next batch of decent local product. But... [if] there’s no improvement over the next year the phrase will not be forgotten, [and] an increasing odour will become apparent as it hangs limply around the neck of its proponent.

...N[ZOA] is threatening to cut money for TVNZ and TV3 documentaries if the networks do not end a scheduling war. The funding agency says it is frustrated by an upcoming timetable clash between the networks’ local documentaries – both of which have been funded by broadcasting fees. TV3’s *Inside N[Z]* series returns first tonight at 8.30, but will go head-to-head with TV One’s *Tuesday Documentary* at the same time next Tuesday. TVNZ says it had the slot first – it has shown documentaries on Tuesdays at 8.30 for the last decade – and has slammed its rival for putting *Inside N[Z]* on the same day and time. TV3 says the slot was the “best environment” it could find for *Inside N[Z]*. The state channel had not been

screening documentaries in the slot since last year, and TV3 had got there first this year. N[ZOA]... is not interested in the merits of the networks' arguments, only in the consequences for viewers. Both shows were of the same genre and attracted similar audiences. "Regardless of which broadcaster is right or wrong, it's not a good deal for viewers. It is frustrating for us, because from the surveys we do, documentaries are the most popular type of programming that we fund. The result is that viewers can only watch, effectively, half the documentaries that NZ[OA funds]."

...NZOA] is getting tough with the TV bosses and demanding more say on timeslots when the networks play programmes subsidised from the public broadcasting fee. The tough new stance to scheduling will mean an end to programme overlaps like the Tuesday night battle of the documentaries on TV1 and TV3, in theory at least. Starting next month, funding contracts will include a clause that the networks cannot schedule NZOA-funded shows against each other. And they will have to play programmes in the timeslot they promise when the public funding is handed out. NZ[OA's] chief executive... said there would be no exceptions... "We have been badly burnt in the past, providing substantial amounts of public money for something to appear at one time, only to find it shifted,"... NZ[OA] stepped in recently when TV1 tried to screen at 3.30pm, the award-winning kids show *Mirror Mirror*. The show was moved to a time when its target audience of young viewers would be more likely to watch... NZ[OA]'s board was also disappointed last year after putting a lot of money into the TV2 drama series *City Life*, only to see it shifted to a later timeslot where fewer people would watch it. The clampdown goes further, and indicated just how soured relations have become. "Levels of broadcaster contribution will be examined carefully to ensure fee payers are not over-subsidising commercially successful programming,"... The new stance marks a turning point for the TV system, where public money is used to finance commercial hits. Until now, the channel bosses have had open slather to take public subsidies while making record profits. NZ[OA] has even kept some details of public spending secret because networks regard the details as "commercially sensitive". Until it adopted the tougher stance, [NZOA's] main influence has been a "politically correct" clause, where they have to insure minorities... are reflected. Now, NZ[OA] is saying public-funded shows cannot be used as fodder for ratings battles. But the networks question whether the rule is realistic... TV3[s] programme director... said NZ[OA] was "in La-La-Land" if it thought there could be no clash of local shows. "How do you decide who has the right to a timeslot. Is it first-in, first-served?" ... "NZ[OA] is sending a strong message," says [the programme manager of TV4 (TV3's rival to TV2)]. "But with an increasing number of channels and the variation of TV scheduling it will not always be possible to comply,"... TVNZ[s] commissioning boss... said for competitive reasons broadcasters should decide when programmes are shown and nobody else[, adding that AUSns and USers] chose between two or three local shows, and competition was a mark of maturity for local TV... [NZOA] may be getting tough with networks over competitive scheduling, but it is toeing the industry line over increasing commercialisation of programmes. Sponsorship and incidental advertising – plugs inserted into programmes to help reduce the cost of making shows – are used by TV3 and TVNZ to help finance local programmes. The savings allow NZ[OA] to fund new local projects while the networks reduce budgets. NZ[OA] insists there is no public disquiet about excessive advertising, sponsorship and a blurring of lines between ads and programmes. [But in] this situation public money is being used to keep the quantity of local shows up, while the overall quality [of] service falls.

...The first credit at the end of Tuesday night's television documentary *Fatal Denial* acknowledged "the assistance of the Land Transport Safety Authority and the Road Safety Trust." That "assistance" was almost 40[%] of the \$200,000 budget. N[ZOA] contributed \$100,000 – it gives more only in exceptional circumstances – and... T[VNZ], whose new boss has promised a doubling of documentary output, chipped in \$25,000 – much of it by way of the facilities it made available to the filmmakers. Who could object to the authority's using its money to fund a hard-hitting documentary about the toll of drunk-driving? Well, the Hotel Association for one. Its Wellington president... says the (authority-funded) advertising campaigns about drink-driving "bully honest citizens" and are "over the top, expensive and probably useless." I'm not going in to bat for the Hotel Association here[, although his] comments put me in mind of... that [often quoted reply when someone has denied everything: "Someone] would say that, wouldn't [someone]?" But it is worth remembering that one person's public good is another person's propaganda. And it's worth wondering whether documentaries deserve the name when they're substantially – or even wholly – funded by interested parties. The flagship *Tuesday Documentary* slot has been filled in recent weeks with films which advanced the commercial interests of an Irish dance show and a British comedian's feature film. And, while no one (except [the Hotel Association's president], perhaps) would question its worthiness, Tuesday's programme was also advancing a cause. *Fatal Denials* producer... says the film was expensive; it needed painstaking research and many stories had to be abandoned when bereaved families had second thoughts about taking part... add[ing] that the L[TSA] sought at no point to influence the documentary's editorial content. The thought never occurred to us, of course. But if the show's researchers had found, say, that the authority's advertising campaign was not lowering the rural road toll, do you think we would have heard about it on Tuesday night? ...the director of commissioned programmes for TVNZ... does not believe that independence is compromised. "Documentaries are not current affairs... They don't debate issues. They're like essays or columnists. They take a point of view." Within limits, of course. Next Tuesday's slot will be occupied by *Rubber Gloves or Green Fingers*... funded by NZ[OA] and TVNZ, which nails its makers' anti-pesticide colours firmly to the mast. It was controversially amended after TVNZ's lawyer feared it might attract defamation suits. That documentary's producer... says documentaries that advance a view belong to a noble tradition... and a point of view vigorously expressed is better than the pretence of objectivity. But we always deserve to know whose view is being advanced – and who's paying.

...God (and sponsors) defend N[Z] News of public funding for an epic documentary series N[Z]: *The Face of the Century* has flushed out another project which aims to look back on our past 100 years. Encouraged by the success of TV One's *5.30 with Jude*, which... has just passed 100 episodes and... incorporates heavy sponsorship, a new company, Documentaries-Are-US, is pitching a historical series which will come at no cost to the broadcasting-fee payer. With the working title N[Z]: *A Hundred Years of Tasty Yeast Extracts*, it will use state-of-the-art digital image enhancement to incorporate sponsors' messages and products into programmes about key moments in the nation's past. [The] producer... formerly with TV-U-Like, is adamant that editorial integrity will be paramount and that viewers will easily be able to identify the sponsors' messages... A travel company (Gallipoli Getaways!) has been lined up to sponsor a segment on... W[W1] and pharmaceutical companies are vying for the chance to offer anti-depressant cures during coverage of the Great Depression of the 1930s. Moving firms have first option on the classic shots of furniture being moved into the first state houses... Digital sound alteration will enable [a mountaineer] to proclaim: "We knocked the bastard off thanks to [my sherpa] accepting payment on this international card." ...[a] rugby great... will be seen to utter that [it] is "absolutely... in need of a scientifically developed sports drink, preferably blue." ...Airlines are keen to cash in on Sir Robert Muldoon's musings on trans-tasman travel and IQ levels and the segment on Think Big is expected to be surrounded by promotions for slimming studios. "It's win-win, really," says [the producer]. "The viewer gets a well-made, informative show and the sponsors are offered a unique chance to be associated with some great personalities and events. Some academics and critics from competing media organisations may quibble about encroaching commercialism, but our research tells us that the viewers welcome a bit of colour and a few familiar products amidst all that boring black-and-white footage..." ...[In related news, NZOA] has sounded a warning about a lack of growth of local programming on our television screens. The public broadcasting funder revealed yesterday that while local content hours had doubled since 1988, the percentage as a proportion of total television hours has "reached a plateau" over the last two years at just under 20[%]... "Programmes featuring our faces... voices and... views on television aren't a luxury, they're a necessity if we want to be a vibrant and informed society,"... the organisation's chair[person]... said. Funding for local content was under rising pressure with more channels operating and the broadcasting-fee collection operating at about maximum efficiency. The fee supports about 30[%] of local television hours.

...You can see more of N[Z] on air. Gays and lesbians are out there – but there are many other minority groups represented on television. N[ZOA] spent more than \$10 million of broadcasting fee money on special interest programmes (which contributed to 85[%] of the cost) during its 1996/97 financial year. These programmes included: • *Agritech 2000* (\$360,000 of broadcasting fee money) • *Asia Dynamic* (\$920,000)... • *Praise Be* (\$556,000) • *Religious specials* (\$162,000) • *Tagata Pasifika* (\$1.1 million)... • *DisAbilities* (\$1 million)...

No one can claim British officialdom is unsympathetic to the disabled. TV licensing regulations state: “A colour licence currently costs only £91.50 for a whole year. If you are registered blind and produce your local authority certificate you pay £1.25 less...”

Remember the *Herald* story (scoop!) about the poor disabled doggy[(r:p1064, ln35)]? Well, a dogfight broke out as our rival television channels pursued the story. We hear... [TV One got to the dog-owner’s] house first... and spirited both [the owner] and dog away to the beach. Things turned sour when the TV3 crew turned up and started filming, to the chagrin of... [the TV One team-leader, who told the owner] that the footage was of no use to [TV One] if TV3 got it as well. Eventually [the owner] decided enough was enough, and departed. No doubt about it, top-flight telly-journos are relentless in the pursuit of cutting-edge current affairs... [By the way, a] Government announcement yesterday that it is proceeding with a scoping study of TVNZ has renewed speculation that either TV2 or... [TV One], or both, could soon be put on the block. In a joint statement,[the] Finance Minister... and [the SOE]Minister... confirmed TV One was not being considered for sale. However, it is understood the scoping study will look at the whole of TVNZ... One industry source yesterday estimated the Government could get around \$500[million] to \$600 million for TV2[– which]... produces most of TVNZ’s profits... [–] based on a figure of around five to six times its operating earnings.

...N[Z] First may have to bow to cold economic logic and agree to privatise T[TVNZ] after a defiant P[M] yesterday flouted the coalition agreement by signalling TV One was up for sale. [The PM]’s intention, presumably it is more than kite-flying, has highlighted dilemmas facing N[Z] First over the future of the state television company. Either the coalition parties stick to their agreement – and watch the revenue-generating capacity and value of T[TVNZ] shrink in the face of exploding competition from UHF, satellite and cable channels – or N[Z] First agrees to realise the current value of the company despite promising an end to such “strategic” asset sales... [The PM]’s “spring-time for the coalition” speech also foreshadowed shifts away from “monopolistic state agencies” towards a greater private sector role in health, education, welfare and accident compensation. The onus is now on him to deliver. TV One could prove a litmus test of the public’s appetite for this agenda. TV2 has long been mooted as a candidate for privatisation, although the coalition agreement suggests keeping it in public ownership, with its management contracted out to the private sector. But T[TVNZ] bosses have warned ministers the two major channels are complementary. Splitting off one would reduce revenue, the sale price and operating efficiency. If N[Z] First still wanted to keep a partly-commercial TV One, it would have to ask the public to swallow a huge rise in the public broadcasting fee. Asked after his Auckland Chamber of Commerce speech whether [it] would sell TV One as well as TV2, [the PM] replied: “We’ve got to look at the lot... should we run television stations? The answer is ‘no.’” Asked again about a possible sale, [the PM] replied: “Certainly [channel] 2 and probably both.” The [Deputy PM and NZ] First leader... refused to comment on those remarks last night, after earlier appearing satisfied with the tenor of [the PM]’s speech notes... [T]he minister responsible for T[TVNZ] also was [not willing to comment. One suggestion was that [the minister] did not want to be accused of upstaging [the PM].

...The NZ] First deputy leader... last night put his branding iron in the ground to oppose the sale of TVNZ[, and]... signalled that any other departure from the coalition agreement, or “contract,” would be vigorously resisted... [Four] other NZ First MPs... expressed opposition yesterday to the sale... However... asked if the credibility of the... agreement was threatened over the possible sale... [NZ First’s leader] said: “...if you’ve got an asset that is one day worth \$1 b... and later on worth \$150 m... [have you] acted responsibly by doing nothing about that?” ...[□ A] TV3... poll last night found... the Government is... out of step with public sentiment in its plans to sell T[TVNZ]... The message from the poll is clear: 54[%]... against either channel being sold... 17[%] support the sale of both channels and 21[%] support the sale of TV2. The remaining 8[%] have no view.

...The public’s preference is to transform TV One into a public non-commercial channel. It may happen. TVNZ is already selling off bits of itself, and the assets of TV2 are by themselves a worthwhile purchase for a private media operator. A public Channel One would be cost-effective by applying the publisher-editor principle – like Britain’s Channel Four, which is one of the world’s newest and most profitable public broadcasters. The channel concentrates on its core business of broadcasting. Overheads are kept low. All programme production is commissioned by editors from independent producers... N[ZOA] allocates \$46 million towards local television production from its \$96 million broadcasting fee income... [If NZOA] allocated the entire \$46 million to Channel One – and not to support private commercial channels – it would contribute 61[%] of Channel One’s estimated annual cost... [of] \$75 million... The licence fee could be increased... to \$144 to cover the estimated shortfall... Such an increase would not be necessary, however, if Channel One accepted corporate sponsorship as the Public Broadcasting Service does in the U[S]. Sponsorship is different from commercial breaks crammed with advertisements. The sponsor buys an association with the programme and gets its logo and message before and after the programme... With revenue from sponsorship and overseas sales, Channel One could soon make a healthy profit. That would keep pressure off the licence fee while giving the public what it wants and democracy what it needs. So, if the public wants this and it is affordable, why doesn’t the Government want us to have it? The answer is political. The small minority of N[Z]ers who want to sell all of TVNZ includes Act’s supporters... Act’s ideology dictates that public television has no place in N[Z]... Now captive to Act for its survival, the Government is playing politics with broadcasting... [W]e need a nationwide campaign for Channel One to get the Government to listen to the rest of us...

[AUS]’s two media moguls... are expected to be among the bidders for TVNZ if the Government proceeds with its threats to sell off state television. [The respective moguls of Australis Media and News Corp] are widely seen as the only investors likely to have pockets deep enough to afford the assets, although [Australis is currently facing financial difficulties. However,] interest is also expected to be shown from some smaller broadcasting companies. Hints by... [the PM] for the public to “watch this space” follow denials earlier this year by TVNZ’s new chair[person that it] had been appointed to sell the [SOE] to the highest bidder. [The new chairperson] is overseas and was unable to be reached for comment. However, TVNZ’s former chief executive... has welcomed as “terrific news” the Government’s hints that it is considering selling both TV One and TV2, along with all of TVNZ’s other assets. [The former chief executive], who left TVNZ two months ago to head A[US]n telecommunications company Optus, has made no secret in the past of his belief that TVNZ should be sold... “I’ve always been of the view that TVNZ should be in private hands. I don’t see it as a public service broadcaster, I see it as a commercial broadcaster and because of that I see it as too risky for governments to hold on to.” While acknowledging there was a “perfectly respectable intellectual view on the other side,” [the former chief executive] could not think of any reason why a sale would not be good for TVNZ. The [SOE] was likely to be a “voracious user” of capital in future, and therefore it was better off not being owned by taxpayers... [The former chief executive] would not be surprised if there was interest from N[Z] companies such as INL... However, it is expected that INL, which has [News Corp] as a controlling shareholder, could face problems, given that it has now secured a majority stake in pay-television operator Sky TV. Canadian media company CanWest, which owns TV3 and TV4 as well as the More FM radio group in N[Z], is also considered an unlikely buyer because of its existing media interests. Media company Wilson & Horton, publisher of the N[Z] *Herald*, has ruled out any possibility that it might be interested in the assets. Wilson & Horton’s managing director... said the company considered free-to-air broadcasting “even tougher” than pay television... “But let’s face it, [the Australis mogul] would be in like a robber’s dog probably.”

...The... [PM] wants the Government out of the television business... But privatisation of both channels will stymie long-held ambitions by public broadcasting advocates that TV One could be converted into a true non-commercial channel. The news has... also... come as a shock to those who

had come to believe that TV2 would likely be sacrificed to keep TV One in state ownership. And it flies in the face of the campaign to keep both channels Government-owned so that profits from the commercial arm could help finance a public channel... T[TVNZ]'s competitor is pleased with the Government's direction... [H]owever... the... managing director of... TV3... could see some sense in the Government retaining an interest in TVNZ, particularly TV One, for the likes of Maori broadcasting. One of the world's best-known state broadcasters, Britain's BBC, is facing problems of its own with debts of some £35 million. Part of the BBC's problem lies with the fact that unlike its competitors, it is a public sector corporation and is prevented by public accounting rules from borrowing to finance its ambitious plans.

...As the N[Z] Government contemplates selling T[TVNZ]... the British Broadcasting Corporation celebrates a notable birthday by trumpeting the importance of public broadcasting... Gentle retirement is the last thing on her mind as Britain's favourite aged aunt turns 75 this month. "Auntie Beeb," as the BBC likes to call itself, is determined to remain the heart and soul of the British media world as it hurtles into a... digital television future... Digital may still mean little to British viewers but its cornucopia of pay-per-view sport and Hollywood movies virtually on demand... is likely to transform the media landscape... BSkyB... plans a 200-channel digital service in Britain early next year. Cable companies are set to offer a rival service while a terrestrial version – with fewer channels but delivered through conventional rooftop aerials – is also likely to begin in 1998... [In response, the] BBC plans additional, free digital TV channels plus joint-venture subscription services based on archive programming. It wants to offer these on all digital "platforms" – satellite, cable and terrestrial... By the end of next year, Britain may have more than 250 subscription channels. Digital compression... allow[s] television companies to squeeze more channels into the same bandwidth... Near-video-on-demand (in which a film plays on several channels at once, allowing viewers to pick a convenient start-time) is the most promising application, but its success is far from certain... Broadcasting an analogue satellite channel costs around £4.5 million. Divide that by 10 for digital. Providing the set-top boxes needed to process digital signals for normal televisions, however, will be costly. Broadcasters expect to subsidise them. Even so, television companies are stepping warily into the digital future. Nobody is really sure that there is much money to be made, but all are scared of missing out... But regulating body Ofcom fear BSkyB's domination means consumers will buy its box and only its box. In theory, BSkyB would then be the gatekeeper, allowing only those broadcasters it wanted into the digital market[, although]... in a few years the set-top box will be replaced by a television with built-in digital technology; [and] European manufacturers and governments have agreed that those integrated television sets will be open to any broadcaster... The BBC, set up on October 8, 1922, continues to be funded by an annual licence fee levied on all households with a television set, and does not carry commercials. The licence costs... £234... and pays for two television channels and five national radio stations. The BBC's critics say the system is out of date in a digital world in which pay TV channels will claim a growing share of viewing. But the BBC argues its unique source of funding will enable it to remain a touchstone of quality as viewing fragments. "We aim to be a trusted guide in the potential confusion of the media marketplace,"... said... the BBC's director of corporate affairs... The BBC vows to remain faithful to the ethos of... its founding father, who wanted a broadcaster able to "educate, inform and entertain" the nation, free from political interference and commercial pressure. It was with that aim that the BBC launched daily radio transmission in London on November 14, 1922. Now led by [a] controversial director-general... the modern BBC is determined the media future will not belong exclusively to commercial giants, such as... News Corp and... Microsoft... In radio, the BBC is spearheading the development of digital services – which should again mean more choice and better quality reception. It is also experimenting with online services, calling the Internet "the third broadcast medium." However, it continues to operate on a tight budget. With licence fee rises closely linked to inflation for the next five years, [the director-general] has vowed to boost efficiency by a further 20[%]. His tough methods have already transformed the BBC's finances in the 1990s through a war on "waste and inefficient practices." The BBC shed 1700 domestic staff last year – around 8[%] of the total. [The director-general] has made enemies who deride him as a [person] who knows the cost of everything but disregards the value of quality programming. Such complaints have been relatively easy to dismiss when voiced by disgruntled former staff. More embarrassing for the BBC hierarchy was an unprecedented revolt last month by leading radio and TV presenters over the corporation's plan to axe editors for individual news programmes. The BBC put the plans on hold following the revolt, which gave it much unwanted publicity on the front pages of British newspapers. The opposition to further cuts lends greater urgency to moves to boost income from BBC Worldwide – the corporation's commercial arm. Worldwide plans to exploit the BBC's huge library to feed the growing global appetite for quality programming. The net benefit from Worldwide's activities was just \$183.2 million last year, against licence fee income of around \$4.7 billion. But the aim is to treble Worldwide's earnings over the next decade. To that end, the BBC will next month launch three subscription channels in Britain. The channels are the first fruits of a partnership with [US]-controlled pay television group Flextech. No licence fee funds go into the venture and all BBC profits will be ploughed back into regular TV and radio programmes. The financial ballast for the deal comes from [US] cable TV giant TCI, which controls Flextech. Worldwide has [already] launched two channels in Latin America in partnership with Discovery Communications, a company in which TCI is again a key shareholder. A BBC-branded channel in North America is also under consideration... The future will present the BBC with many challenges but it has proved highly resilient and adaptable, pioneering television in the 1930s and later weathering the launch of commercial and subscription rivals. It continues to account for more than half of all viewing and listening in British households, a lead which [the director-general] is confident it will maintain. "Every householder will be a major consumer of BBC services in the digital age... The BBC will still be watched and heard more than any other single broadcaster in the UK."

...The BBC's enduring popularity means its 75th birthday has almost taken on the quality of a state occasion. The Royal Mail has issued commemorative postage stamps... The Queen is due to visit the corporation's central London headquarters at Broadcasting House on October 29 to open a new visitor centre... expected to attract... 250,000 people a year... [Meanwhile, production of its] \$25 million... costume drama... series... *Nostramo*... based on [a] novel about a [guy] reopening a silver mine in a... volatile South American town in the 1890s... [is] due to start... this week...

SWORD in hand, charger at the ready, one of literature's most popular heroes prepares to come to the rescue... of the BBC [The network's bosses] are hoping that their new... drama *Ivanhoe* will restore honour to the BBC's historical drama department after the defeat it suffered with the hugely expensive flop *Rhodes*. The three-part *Ivanhoe*... took three years to make and has a cast of more than 2500... Sir Walter Scott's medieval hero[is] a noble young Saxon... influenced by the best of Norman ideas... who returns from the Crusades determined to clear his name and reclaim his lands after accusations of treachery. In his quest, [the hero] wins the love of... [a Saxon princess, who is betrothed] to the heir to the Saxon throne... and the beautiful Jewess Rebecca[, who is]... falsely accused of witchcraft... With Hollywood throwing many tens of millions of dollars at costume dramas such as *Rob Roy* and *Braveheart*, creating an epic for \$15 million has been a major challenge for *Ivanhoe*'s makers... [In local news,] TVNZ should be dismantled or sold and replaced with one public broadcasting channel, says Labour's broadcasting spokesperson. It]... wants one state-funded channel which does not have to return a profit to the Government, with no more than seven minutes of advertising an hour.

...N[Z] First may agree to renegotiate the coalition agreement to allow the sale of TVNZ, with the proviso it stays under N[Z]-owned control and that N[Z] – including Maori – content on screens is guaranteed. That is one of the trade-offs to be considered in the dealing which will have to take place if the P[M]'s push for further privatisation eventuates. And [the PM] acknowledged yesterday what is already apparent: that the coalition agreement is a flexible document which can be varied along the way by mutual consent. The Associate Treasurer... [and member] of NZ First, described the agreement as a "guideline." ...[however, the] policy of no further State asset sales was promoted by [the NZ First leader] as non-tradeable during the election campaign. In the coalition agreement, his party ended up with a list of six strategic assets that would not be sold, including T[V] One. The Minister of Maori Affairs... said yesterday... "I have some concerns about the sale of TVNZ, full stop... It belongs to the

nation. It doesn't belong to some Government that comes in and out. Having said that, I haven't had the opportunity to talk to my colleagues about it..." ...One Network News last night reported an unnamed TVNZ executive as putting the value of the company at over \$1 billion... TVNZ made a net profit last calendar year of \$60.6 million on revenue of \$457.9m... It returned dividends to its shareholder, the Government, of \$62.4m... Immediate speculation on potential buyers centred on... INL... and Australis, [although]the junior player in A[US]'s three-pronged pay television industry, will go into receivership after racking up losses of more than \$A775 m...

Pay television operator Australis Media has filed a writ in the N[SW] Supreme Court seeking damages of... \$NZ2.7 billion... against Telstra Corporation and News Corporation for the collapse of its three-way joint venture to be the largest cable tv operator. Australis [- which had indicated it was interested in buying TVNZ when news that the local SOE might be sold first broke -]is on the brink of going into liquidation.

...[the PM]'s stated intention to sell T[TVNZ]... is extraordinary, unprecedented, and quite out-of-line with broadcasting policy in other Western countries. Every other major democracy has at least one state-owned or supported channel. It is the same kind of cavalier approach as when the National Government suddenly changed the law to allow broadcasting companies to be 100[%] foreign owned. No other Western democracy allows that either. The simple consequence is that our broadcasting heritage is up for grabs to the highest bidder. The media barons... must be salivating in anticipation of the spoils they could acquire. No wonder that certain parts of the media are eagerly espousing the sell-off, with or without declaring a vested interest. Why would our Government, or any Government, be floating a policy so remarkable and so contrary to the national interest? Deliberately or otherwise, the P[M] missed the point in his attempts at justification... [The PM] is right to imply... [that] ministers... should not... be involved in the running of television companies... But the issue is not the running of companies; it is the ownership of public assets, and the purpose to which they are put. Apologists for the sale of TV One will no doubt argue that television is just like any other business... But this is to miss another key point. Television is not like baked beans, or cars or any other business whose staple is consumer products. Television is about hearts and minds, it is about programmes that affect peoples lives and influence how they view the world and their place within it. It provides most of the information people rely on to carry out their role as citizens participating in a democracy. It is true that radio and print are also in the business of hearts and minds. But television has so much more impact as to place it in a special category. If it was necessary to leave National Radio in public ownership when R[NZ] was broken up, it is even more vital that the public retains ownership of a television channel. Yet now [our PM] is apparently contemplating the sale of TVNZ holus-bolus with no suggestion that any new public channel be created to take its place. This is all the more surprising given that TV One is not any old commercial channel. It is really a partly public service channel subsidised by its profitable sister TV2. It is the channel for news and sport, for quality N[Z] and British dramas, for documentaries and special events. Many N[Z]ers regard it as their channel and are not slow to complain when it falls short of their expectations. Some viewers may be lulled into a false sense of acceptance of a sale of TV One by being told that ownership doesn't matter; what you see on the screen won't change. Anyone who believes this is simply ignoring the evidence. Global media tycoons... like to control their interests. Not only do they influence the editorial line their papers or channels take, but they impose strict financial targets unimpeded by notions of social responsibility. The likely consequences of that sort of regime are much less news and current affairs, less [free-to-air]sport, fewer documentaries and quality shows. Commercially marginal programmes... would be unlikely to survive. Then too a commercial operator has no incentive to commit airtime to minorities. A [media mogul] doesn't have to front up to a select committee to justify his schedule. Which leaves bleak prospects for Maori programming, or educational television, even off-peak. There are those... who seem to think that N[ZOA] could be relied on to provide the programmes beyond the limited commercial menu. But N[ZOA], already strapped for funds, is likely to insist on broadcasters paying an increased share of the costs for some programmes, notably documentaries. A hard-nosed foreign owner may well respond by saying they can get cheaper and more popular programming elsewhere. N[ZOA] has no leverage with broadcasters - if they don't want the programmes, they can't be made to screen them. Myths abound as the politicians scramble for arguments. The multi-channel digital future does not mean that TVNZ must be sold - free-to-air channels are likely to prosper into a ripe old age. Only they can provide the sense of national identity and the shared experience relished by so many viewers. Furthermore, TVNZ is profitable enough to manage its investment strategy for digitisation, capital investment that can be spread over a number of years.

...The only way T[TVNZ] can possibly keep up with its private-sector cousins in television the world over is to join the family. The alternative is a future as a dinosaur increasingly unwanted by audiences and advertisers alike. I have just returned from Washington, DC, where I attended the annual conference of public service broadcasters from 25 countries. Confusion and concern for the future were the features of the conference, except for the big two of the industry - the BBC and PBS from the U[S]. This is not a debate about... an outdated concept of what is good for the people or the nation. It is a debate about the allocation of scarce resources owned by us all and about the way we choose to communicate via our most powerful medium[, in which]... the rules... are changing... almost daily. It is absurd for N[Z] to claim our television system has any of the ethos of a PBS which deliberately presents itself as the elitist alternative to the main networks and raises \$US300 million in voluntary tax-deductible donations from its 5.5 million viewers (...4[%] of the viewing audience). Neither can we claim for TVNZ the 75-year-old tradition of the BBC... largely funded by a compulsory inflation-indexed annual licence fee... paid by 20 million households... Right now we rely on the market to a considerable degree to provide the television we want, and can afford, both as a community and as individuals. This will not change radically if TVNZ is sold. However, now is the time to determine what we want from our television operators. This is not a new notion. In the U[S], just this year, the Federal Communications Commission (with the support of [the US]President...) laid down that commercial operators must provide a minimum level of children's television in a day.

...['TV CAN HELP YOUR KIDS We've all been warned that tv is a bad influence on kids - lowering their school marks and turning them into zombies. But haven't we all, at some time, been startled to hear a kid come out with unexpected knowledge gleaned from the flickering screen? An Auckland staff nurse was amazed to hear her 3-year-old learnedly discussing the different ways cheetahs and leopards stalked their prey. 'I'd never talked with her about this. It was obvious my girl had picked it up from the Sunday documentary.' The nurse and her husband have also seen their girl learn new words and numbers by watching programmes like *Play School* and *Sesame Street*. Tv can numb kid's minds - or expand them. Overseas research indicates that youngsters who do best in school watch about 10 hours of tv a week; those who watch more - or less - score lower. NZ kids watch, on average, 17 to 20 hours of tv a week.' ● 'When under-3s watch tv it can affect their natural process of mental development; the risk that they will develop ADD at school age increases by 10%/hour.']

...TELEVISION and... electronic games, particularly those with violence... are being blamed for rising stress levels in children which lead to a new mental disorder. It is known as Stressed Out, Survival-Orientated Humans (SOSOH) and is hitting children as young as four. The symptoms are hyperactivity, disruptive behaviour, learning difficulties and poorly controlled movements. If these sound similar to the widely recognised Attention Deficiency Disorder or Conduct Disorder, you are not mistaken... [A] visiting neurobiologist and author from the U[S] says such]... stress could be caused by inadequate diet or sleep, child abuse, pressures to conform and perform, rigid education systems and poor vision or hearing. However, it is just as likely to be "recreational" stress... According to [the neurobiologist], children's brains respond to events on t[v] as if they were real, causing the nervous system to prepare for a physical response. "Our brains are very sensitive to quick movements, sudden noises and colour changes that might signal danger, so we prepare for fight or flight to protect ourselves... Children are in survival mode in their own living room. One of the immediate reactions is to quit talking because how can you talk when you are being chased by a sabre-toothed tiger?" ...In a stressful situation the body produces adrenalin and a chemical called cortisol, which decreases memory and learning... [C]hildren also have an instinctive desire to imitate observed behaviour without reasoning whether it is right. "They mimic anything, including destructive and anti-social behaviour.

Up through to age four, children cannot distinguish between truth and fiction on [tv].” ...a member of a White House Task Force on Innovative Learning, [the neurobiologist said it] would ban t[v] for children under eight, to give their imagination time to develop... The best thing parents under pressure can do is to become good stress managers and pass that on to their children, [the neurobiologist added]. ● ... Japan was in a state of video shock yesterday after a t[v] cartoon based on Nintendo’s popular “Pocket Monsters” characters triggered convulsions in... children throughout the country. A spokes[person] for the Tokyo Fire Department, which carried out a national survey, said at least 618 children suffered convulsions, irritated eyes and other symptoms from watching the cartoon... About 120 children, aged from three upwards, were still in hospital last night with epilepsy-like symptoms... Doctors who treated the victims said children went into a trance-like state... The blame was put on a scene depicting an explosion followed by five seconds of flashing red lights from the most popular character “Pikachu,” a rat-like creature... The cartoon, *Pokemon*, aired every Tuesday in Japan, has an audience of millions of children and is the most highly rated programme in its time slot... Other children were stricken when they watched replays of the offending scene in news reports of the earlier victims... Executives of TV Tokyo, the network that broadcast the programme, said they had been inundated with calls. “We have to find out all the facts, and find out the actual medical explanation,” they said... [But] an expert on juvenile epilepsy, said bright flashes of light and colour from a t[v] screen could trigger a phenomenon known as “television epilepsy.” Doctors have known that children are susceptible to such seizures since even before the dawn of t[v], but it has become more evident with the spread of t[v]. The seizures, albeit unpleasant, were not dangerous and spontaneous recovery was the norm.

...Outraged Japanese mothers yesterday demanded that television networks adopt technical standards for animated programmes after... [more] than 700 mainly school-age children were rushed to hospitals after watching bright flashing lights on the popular *Pocket Monsters* programme on Tuesday night. “We are gravely concerned at this escalating race, this competition by the television networks to show ever more stimulating images, targeting even children,” the country’s largest mothers’ organisation... the New Japan Housewives’ Association... said... The National Parents and Teachers Association of Japan said the incident would awaken parents to the fact that they must monitor what their children watch on television. The group, which does not object to animated programming per se, said the Government should think about legislation mandating screening devices in television sets, known as “V-chips” in the U[S]. The method allows parents to blank out programmes they do not want their children to watch... An executive at a leading producer of animated programmes said the... incident... probably... would... lead Japan to develop technical standards for animation production[, although]... the... incident would not cure Japan of its animation addiction or lead to a cut in the amount of time devoted to animated programming... Japanese animation is a multi-billion dollar a year industry and cartoons have dominated television programming and movie theatre line-ups for decades. Many Japanese animated films and programmes are popular outside of Japan.

...AFTER hundreds of viewers, mostly children, became sick while watching the same action-packed scene of a television cartoon, [Japanese] broadcasters have agreed to create guidelines to keep it from happening again... [In the meantime,] TV Tokyo has cancelled the programme until the cause of the reactions becomes clear. The network has also urged video stores to stop renting all episodes of the show... [Speaking of cartoons, the] Homer Simpson style of parenting is sometimes not far removed from reality, says a N[Z] school principal. Speaking at the Dannevirke High School prizegiving, [the principal] said that although... *The Simpsons* has its humorous side, the family’s behaviour should also be a warning... [T]he behaviour of the father... in particular should raise concerns. [The principal] cited Homer’s complacency in ignorance, his continual search for the quick answer and his inability to realise life has changed. “Like a growing number of parents... Homer... is willing to skip on his responsibilities as a parent and concentrate on his own pleasures rather than the future of his children... We enjoy his antics on screen but many of us do not realise that [the character] is a parody of ourselves.” ...parents who supported their child’s right to do anything they wanted at school, on the basis of human rights, were not doing their child any favours. “By failing to teach their children that with rights there are associated responsibilities, they are not only selling their children the wrong message, they are setting society on a path of destruction.”

...[‘D’oh! Homer’s a father figure] HOMER Simpson is the perfect dad. The TV character who hangs out in seedy bars with low-lives is a good role model, a British conference on fatherhood was told. A psychologist said many dads could learn from Homer Simpson, who was utterly devoted to his kids and loved watching TV with them. “In many households like The Simpsons, the father is a rather benign figure who comes in from work late at night,” said the psychologist, who also praised Homer’s willingness to chauffeur his children to social events.’]

...There are television milestones, and there are television landmarks. In the first category, you’ve got... “I’m Gay”... though [a comedian’s decision to announce that via her programme i]s more like a millstone. But the new season of *The Simpsons*, which begins tonight on TV2 at 7.30, is most surely the latter. *The Simpsons*, which has defined post-modern television for our generation, has become the longest-running animated series in telly history, replacing that other modern Stone-Age family, *The Flintstones*. Bedrock makes way for Springfield as the ‘toon town of the century. *The Flintstones* ran for 166 episodes between 1960 and 1966, only *Astro Boy* had come close with 104 programmes. *The Simpsons* passed that mark in the U[S] in February with its 167th episode, which will screen here in [about three months time]. In true *Simpsons* style, tribute was paid to Fred and Wilma with the modern show’s own take on *The Flintstones*. So what has been the secret of *The Simpsons*’ success? American television has plenty of families but this may be its only *real* family. Those who work on the show reckon it comes down to other things as well: they never use the same joke twice; every episode is rewritten an average of five or six times; they’ve never hired “sitcom writers”; no network brass allowed; thinking big; not being nasty. Simple things perhaps but, by Homer, it works.

...[‘The second coming of (Homer).] AFTER 10 years of shattering television conventions with *The Simpsons*, its creator has finally set his sights on a new project. Titled *Futurama*, the new animated series is centred around the exploits of three characters who live in the year 3000. There’s Fry, a 20th century guy who has just woken up from 1000 years in cryogenic suspension, Leela, a one-eyed alien with a no-nonsense attitude, and Bender, a kleptomaniac robot with a drinking problem. “Bender is our Homer. The idea is that Bender shoplifts, drinks, smokes, is very corrupt and I thought in this way, parents can’t accuse me of providing a bad role model – because it’s a robot,” laughs the creator, who admits that his vision of the future is in many ways a response to a childhood obsession with science fiction. “This show is an opportunity to both honour some of the conventions of science fiction and satirise them. With *The Simpsons*, it’s this fictional town and there’s the equivalent of Denny’s and stuff like that. On *Futurama* it’s the same thing except we’re doing the whole universe, so it required a little more planning.” *Futurama* has been in development for more than three years. One popular trademark of *The Simpsons* is celebrities voicing animated versions of themselves. You might think being set in the year 3000 would preclude *Futurama* from continuing this tradition, but the creator has figured a way around that. In the year 3000 of *Futurama* there exists the technology to preserve human heads in jars. “Heads in a jar is basically our excuse for being able to use celebrity cameos. Any celebrity who wants to do *Futurama* is more than welcome on the show, but they have to agree to play their disembodied head preserved in a jar of oil that keeps them young in the future.” And the creator remains so optimistic *The Simpsons* will not falter that the creator even has the show screening in the year 3000. Join pizza delivery boy Fry on the ride of his life at 7.00pm, Sunday, on TV2’.]

...One in five [NZ] adults... has problems reading a bus timetable, understanding the instructions on a medicine bottle or filling in a job application... [– skills considered necessary] to get them through everyday life... [– while 30% have] some difficulties with printed material... A Ministry of Education international adult literacy survey... found... [that adults] with lower literacy levels watched more television each day and had fewer books in the home... [Incidentally,] TVNZ confirms it has given 1700 staff a \$150 gift pack to mark new channel imagery on TV2. But a company spokes[person]... has dismissed reports that the gift pack, to mark bulging TVNZ profits, originally included a pair of boxer shorts festooned with the slogan “I Only Wanna Be With Two”. TVNZ insiders say the gift pack would have cost the company \$250,000, although \$100,000 was covered by deals for free advertising time. Well placed sources told the *Sunday Star-Times* boxer shorts were removed before the gift

packs were handed to staff... [after TVNZ's group chief executive... deemed them an inappropriate gift, according to an inside[r]... The decision was made prior to the controversy over the spending spree... of Aotearoa Television in which... [a] NZ FIRST MP... bought an \$89 pair of underpants.

...It hasn't been a good year for community television, what with the fiasco at Aotearoa and the collapse of ATV. One who knows this better than most is... [the] founder and chair[person] of the proposed Auckland community station Triangle Television. In recent months [the founder] has heard every silk underpants joke in the book. But despite all this negative publicity for the concept, [the founder] is hopeful... Aucklanders... will... [be] broadcasting to Aucklanders via Triangle's Sky Tower aerial by next March. With a broadcasting licence already in hand – gained last December to its delight and surprise against the heavily favoured Sky TV – the only obstacle in the way now is the \$1 million needed to buy a transmitter and get the channel up and running. The hunt for new financial members of Triangle's incorporated society is now on. Triangle's plan [– which goes under the slogan 'I am on television therefore I am' –] is for a do-it-yourself style television that sort of grows on you. Any person, or group, who can front up with the cash – \$700 to \$800 an hour, prime time, \$350 off-peak – and a broadcast-quality tape of him or herself can have a go. Triangle will provide the soapbox, and roster programme output, but it doesn't plan to make programmes itself. That's over to those wanting to spread their message. Already there are expressions of interest for around 80 hours of programming a week. From ethnic groups, sports clubs, city councils... even a political satire group. One involves a group of West Auckland schools who are looking at a regular spot to broadcast the work of 150 media study students. Groups will have to produce their own programmes, but can offset the costs involved with up to six minutes an hour of advertising. [The founder has] seen production quotes as low as \$1500 for 30 minutes. If this all sounds a bit like Albert Park in its "Jumping Sundays" soapbox days of the late 1960s, well, why not? ...Television always had the potential to reveal a community to itself... Triangle's appeal is... a tantalising sniff of anarchy. Front up with the hire of the soapbox and you can be in every home in Auckland, telling it your way. Reckon you can sort [the mayor] out over Britomart Hole? Well, line him up, if you can, pay your money, and it's over to you... Of course there is the little problem, in such an environment, of trying to maintain political "balance" within each programme. To cope with this, Triangle is seeking exemption from existing broadcasting standards rules about biased programmes. It will offer right of reply to aggrieved groups, however.

...Media-savvy and cynical sound like cool things to be and that is why I'm a card-carrying member of that generation born in the 60s known only as X... By all accounts, we Gen-Xers – children of the nuclear threat and economic shocks – do not have too much time for the powers that be. We are too busy cultivating the art of knee-jerk irony and revelling in being a tricky target market. The telly programmers are falling over themselves to reel us in with a plethora of new channels, so understanding of our bad surfing habit they have built that quick-flick quality right into the shows. Yet last weekend, this Gen-Xer took a sabbatical from the bright surfaces and giddy personalities of those channels... So what was a signed-up Gen-Xer doing lolling on the couch, the idiot box tuned to TV One, succumbing blissfully to the voice of authority? Lapping up BBC doco *People's Century*, actually, basking in the scholarly tones of the narrator and marvelling at the programme's power to give shape to the morass of events which is history... *People's Century* goes in for the dramatic development – the environment one week, civil rights the next. It constructs a coherent plot from a myriad of sources and draws conclusions. All of which is refreshing for a youth channel refugee. Gen-Xers could be handicapped when it comes to making history. History's first television generation and advertising market from birth sometimes has trouble seeing the subject in terms other than products and what people wore. We loot history on our channels with the best of them, really old stuff like Greek myths and the Celts in the European dark ages. In our period dramas – *Hercules*, *Xena* and the soon-to-start *Roar* – the sexy outfits steal the show. There is local history, too. Take... *The Drum*, for instance, giving us the low-down on the European settlement of Canterbury. Apparently the colonists were inspired by a mania for knitting. [The presenter's] interpretation was not factual but it was instinctual, imaginative and confirmed the obsession with clothing. As a narrator [the presenter] was well accessorised, flapping on about the first ships in a Victorian-style gown. For her real-life ghost stories segment, [the presenter] wore a long white nightie in which to "co-exist with the dead" in the cemetery. But [the presenter]'s quick take on the dead compels me to confess of another retreat into well-researched historical fact – the excellent home-grown series *Epitaph*. The brainchild of [its presenter, who is an] actor... the series is founded on painstaking sifting through archives, a solid base which makes the drama of the retold events all the more powerful. It's television history at its best, stylish without pretension, colourful rather than whimsical and any irony comes from the material, not the presenter. "History is more or less bunk," said Henry Ford. Later [Henry] qualified that cynical statement. Let's hope when Gen-X fades into the distant past, there is someone around with the authority to tell a few true tales of the time.

...Britpop fans rejoice – the new British version of MTV music television is scheduled to hit N[Z] screens from next Wednesday. T[TVNZ] last night confirmed that its foray into youth television will be via the global music network which claims to be the world's biggest, reaching 281 million households through the U[S], Europe, Asia and A[US]. Unlike most other MTV viewers, who receive it via cable or satellite, N[Z]ers will watch it free-to-air on the channels occupied until today by the Horizon regional network. Under a deal finally sewn up only yesterday, TVNZ will insert local advertisements and, in time, local content into the new 24-hour MTV service being generated in the U[K] from Tuesday. Programmes will generally run 12 hours after going to air in Britain. The channel, which is to have its headquarters in TVNZ's old Shortland St buildings, is unlikely to have come cheaply for the state-owned broadcaster; the satellite costs alone runs to \$1 million a year. But TVNZ says broadcasting the networked new channel will be less expensive than running Horizon, with its costs in different regional centres. MTV is a powerful answer to CanWest's TV4, which... had already procured – and promoted heavily – elements of MTV product such as *Beavis and Butthead*. TVNZ's head of television... said that MTV was more than just music videos, it was "a complete youth entertainment channel." ...In addition to a variety of music video programmes, MTV UK also offers style and sports programmes, "rockumentaries" and soaps. Special music shows include *Unplugged*, which puts artists in an acoustic concert setting and *Star Trax*, in which stars reveal their favourite music. MTV launched in the U[S] in 1981... It is owned by Viacom Inc, an entertainment company which in 1995 had revenue of \$US12 billion.

...SKY viewers will eventually have a choice of three different MTV music channels. TVNZ started this week with the British MTV channel and plans to include some local programming in four or five weeks time. But Sky is planning satellite feeds of two American MTV channels – M2, which has alternative music, and M1, aimed at a more mainstream audience. The two Sky services are expected to be up and running on satellite TV next April. MTV bosses told *TV Guide* the aim of the music channels is not so much to have people watching for hours on end, but to dip in and out. They expect the MTV UK service will be popular with Kiwis. "The best American stuff appears on UK and with the great music in Britain at the moment it is a nice synthesis for N[Z] taste... It will depend what local stuff is put on it to appeal to the local market." Meantime, as *TV Guide* went to print, TV4 bosses were going to court to appeal a decision that allowed the new TVNZ channel to screen programmes claimed by both channels. As a result, some shows like *Beavis and Butthead* may end up screening on both channels.

...Did you feel sorry for [an actor] when the embarrassing *2People* folded, leaving him unemployed? Don't. [The actor] was overheard boasting last week [that it]s on such a good retainer with TV2 [it] doesn't need to work again for some time. Presumably his *2People* partner... has the same deal. But why? They are actors who need scripts before they can open their mouths, unlike the natural talent of [the local MTV presenter,] who only needs to engage his brain first.

...NEW YORK executives have the final say for the on-air look of local shows on its MTV youth channel. MTV has 300 million potential viewers worldwide on pay television, and the youth marketing empire has been careful to ensure local content fits with its on-air image and "values". MTV also maintains the right to veto the choice of a presenter for local shows. By all accounts MTV has been pleased with the content of N[Z] shows made with a tiny proportion of the budgets that would be allocated in the US. Still, tapes of local content must be regularly sent to New York.

TVNZ says MTV offers opinions, which are valued, but MTV recognises N[Z]ers were best able to assess the local market. Apart from minor adjustments to local shows *Wreckognize* and *Video Hits*, the only notable comment so far has been that... [the local presenter] is somewhat heftier than the MTV standard skin-and-bones presenters... But the stateside scrutiny is an unusual case of cultural colonialism on a public channel required to reflect N[Z] culture and identity. TVNZ responds by comparing itself... to McDonald's... "McDonald's requires that its franchise holders produce a burger in a certain way in a certain kind of store. MTV obviously wants to protect its brand and its logo, and they have a right to ensure it represents their values." MTV won't be the first or last franchise to demand N[Z] maintains its international brand values. Sky is subject to approval for big changes to its HBO branded movie channel, and CNN has expressed reservations to Sky in the past about allowing competing services on its news channel. But the MTV arrangement illustrates the extent to which TVNZ has been prepared to forsake autonomy in return for access to an international brand, affecting the relationship between broadcasters and their viewers. Elsewhere, organisations with a financial interest are getting a say in what we watch. Advertisers and the government-appointed board of NZ[OA] also have some control in the detail of what we get shown. Nowadays, broadcaster approval for a new show often depends on it having a sponsor upfront, and potential investors are involved in the very creation of a programme, including choosing the presenter. N[ZOA] has used its control of its public purse to influence the content of documentaries. Perceptions of editorial interference led to the breakdown of an earlier arrangement where the current affairs programme *Assignment* sought funding from NZOA. It was also suggested it would be good to have a Maori film crew for an *Assignment* programme about Maori leadership, and to have [a Maori entertainer] as presenter. NZOA points to the Broadcasting Act to justify this intervention. But the role of the funder remains an anomaly in a TV system promoted to the public as independent and ruled by the audience. At the top levels of TVNZ there has been another chink in the armour that ensures the company remains independent. [The]TVNZ board chair[perso]n... and other government-appointed members are banned from direct involvement in decisions about programming. But until a replacement is found for T[TVNZ's] former chief executive, [the chairperson] is acting CEO involved in the minutiae of state television. [Now the chairperson – who is also chairperson] of AMP and a director of Mercury Energy – has chosen to hold the position of "editor-in-chief" of the country's biggest news organisation. There is nothing to indicate [that it] would be anything but an independent arbiter in any issues. [The chairperson stresses her intention to] seek advice from senior news executives if an issue comes up that requires her to act in her role as state television's highest ranked journalist. But after parliamentary accusations last year of political interference, a government-appointed editor-in-chief has raised eyebrows in the newsroom.

...T[TVNZ] says it will run its channels as three separate businesses, but is leaving major activities including sales and marketing as combined operations. A new structure unveiled yesterday by the company's head of television... has TV One, TV2 and MTV as more independent with heads reporting to [the head-of-TV (general manager), who] said there was no suggestion that the channels were being separated for sale... The heads for each channel will be announced during the next week... There would... be overall cooperation for the benefit of the company... [There would also,] however... be a creative tension at times between the ambitions of the channels and the company's broader needs... [In related news, a 17-year-old declares]: "The media has gone out of its way to bring too many new services to the young at one time. They are trying too hard and have made the wrong assumption we will watch anything. MTV, for example, has no relevance to N[Z], and that's why it doesn't appeal to young people the way [Auckland channel] Max does with its strong emphasis on local talent, local shows and being a local station..."

...The plug has been pulled on the Auckland music channel Max TV. Staff of the 4-year-old station were told only yesterday that transmission would end at midnight tonight. Twelve full-timers will lose their jobs following the sale of Max's four frequencies for an undisclosed sum to the TVNZ-owned transmission company... Broadcast Communications Ltd (BCL)... [Max's] managing director... believed TVNZ had a role in forcing the sale of the channel's frequencies[, although]... Max's advertising revenue has fallen since the launch of TVNZ's music channel MTV[, so]... keeping the channel going in an increasingly fragmented market would have taken more capital investment than could be maintained.

...IT was a poignant moment at midnight on Wednesday as [the local]love song *Not Given Lightly* faded out and the screen turned into black and white stripes. Auckland's Max TV had been killed after five lively years of transmission. Its fans – a cumulative audience of around 250,000 – are reeling at the loss. Max set its own standards, taking risks with over-the-edge shows... It didn't patronise and it had a passionate commitment to local content, especially alternative music. Few people know, for example, that the video for Darcy Clay's bent hit single *Jesus I Was Evil* was made using Max's editing equipment. But it's a risky business, being a tiny independent tiddler in a sea of corporate whales. T[TVNZ's] general manager... announced at the launch of the MTV-UK channel that Max's days were numbered. However, even MTV Europe[s] head... admitted at the launch "MTV was chart-driven but Max is hip". But in the end Max succumbed to commercial reality: A lack of capital. Advertisers had drifted away from Max – and its managing director... is bitter about that. "A lot of the agencies are intimidated by TVNZ... [T]here was a lot of whispering going on – don't get offside with TVNZ, forget Max, they won't be in business another month. We were up against it." ...BCL's press release on Tuesday stated it purchased the frequencies "following the decision by Max Entertainment Ltd to close its Auckland-based youth music channel...". "That's absolutely untrue... TVNZ are saying we approached them. That is balderdash... too." However, BCL[s] managing director... says [his Max TV counterpart] is arguing semantics. "To sell the frequency you must have made the decision to close the business down. Yes, we approached him initially, on the basis that we'd heard... there were a number of interested parties and we joined the queue." Says [his Max TV counterpart]: "The reality is I got a phone call from an executive at TVNZ on the Tuesday (the week before last) saying [TVNZ's general manager] wanted to see us so we went in and after a bit of a chat [the general manager] stood up and said, 'What will it take to buy the frequency, what price will you take?' I could have fallen off my chair. We have never given the possibility any thought... but... [how] many months could we have gone on?[" Max's general manager and his partner]... walked away with "a seven-figure" sum... Public reaction to Max's closure has been vociferously anti-T[TVNZ], but... "The villain is the system that gives taxpayers' money in big part to TVNZ and then as a business decision they've used that money to clout the local competition because they've got themselves stuck with MTV-UK, an import that isn't working. They should have bought Max not MTV..." [Max's general manager also] attacks NZOA's policy, which cannot grant funding to a regional channel even when it is screening a high quota of NZOA-funded videos. "We screened in a city which has a third of the country's population... I believe the youth of Auckland should say no to their licence fee." When MTV launched earlier this year, [TVNZ's general manager] said it would carry "the greatest concentration of N[Z] music you've ever seen". However, despite... [shows like *Wreckognize* (whose) hosts were poached from Max] local content will always be limited because MTV is "brand protected" by MTV International... MTV[-NZ's] general manager... says, "We do play a reasonable amount of local music, about 10 clips a day and *Video Hits* on TV2 is very supportive as well. We'll do anything we can to support local music within the restriction." And there's the rub. Max may have gone belly-up – but when it was running, it was "restricted" only by the imagination of those who created it. RIP.

...We don't know how lucky we were... In years to come, sad old Doc Marten-ed neo-youngsters will gaze into their alco-pop and remember the second half of 1997 as a golden age of television. For just over five months they could roam happily between a purpose-built new channel aimed at the youth market (TV4), a state-of-the-art international music channel with some local icing (MTV), and, in Auckland at least, an irreverent, risky local music station (Max TV). And, yep, in our relentlessly commercial television market, it was all too good to be true. With Max gone, it would be nice to think MTV could take its place as a hothouse for young telly talent and a platform for local music. But given TVNZ's trademark defensiveness, its attention will probably shift now to regional television, [with] the scheduled arrival next year of Prime... in Auckland. MTV, which was a cheap replacement for Horizon and a response to CanWest's TV4, is unlikely to command sufficient TVNZ budget to greatly increase

local content in the short term. That's a shame. In *Havoc*, the shoestring MTV operation has created one of the year's success stories. [Its presenter] and his sidekick... are smart enough to know that while the "screenager" market is voraciously interested in happenings overseas, it also takes delight in things New Zild. They'll at least be back on MTV next year as will the locally-fronted hip-hop show *Wrekognize*... Local content has also been disappointingly minimal on TV4, although it too has a worthwhile flagship show. *The Drum* (financed from the broadcasting fee, mind you) is another welcome look at ourselves courtesy of talented new presenters. The cost of making such programmes, however, means that TV4 and MTV will struggle to commit to much more local content. And that's where Max came in. Its "programmes" often tended to be people talking at the camera, interspersed with music videos... Some of those faces... [are] now with *The Drum*... MTV[-NZ and MTV-UK, after being] scouted by the big guys, but all that did was create a chance for another wannabe banging on Max's door. It won't do any good banging there now. And given the constraints at MTV and TV4, there might not be much point in trying TVNZ or CanWest either.

...CanWest yesterday reported net earnings globally increased \$C39.7 million... or a record 38.8[%] in its year to August 31, 1997. Included in it was an operating profit before amortisation of \$C25.55 [million for NZ] operations, up 81.5[%] on last year... [A]ll of the N[Z] profit was from TV3... The CanWest vice-president of global operations... said it had moved to full ownership of TV3... [By the way, media company INL has met NZ's PM] to discuss the possible sale of TVNZ... The meeting took place in [the PM]'s office "a couple of weeks ago,"... CanWest said it had also discussed the matter with [the PM].

...TVNZ] wants to cut 20[%] of its news staff... [The PM] wants to privatise T[TVNZ. RNZ] has already cut its services to the point where[its] chief executive... said in her annual report last week: "Cloth-cutting has left holes in our service, most particularly in the depth of regional and special interest representation." Radio's *Rural Report* has been axed; the nightly children's show *Ears* has been replaced by a weekly programme; the Correspondence School is being banished to Access Radio, although R[NZ] insists that this is not a cost-cutting measure... In both television and radio, the idea of public service broadcasting is weakening as broadcasters emphasise audience ratings and making money... Yet democracy depends on informed voters. People in every part of the country need to have access to free information about political, economic, technological and social developments. They need to have ways to get in touch with one another, and to contribute to public debate, about current issues. These things can be achieved partly without state-owned broadcasting. This newspaper, for example, keeps people informed and provides a forum for them to have their say... But some people can't afford to buy a newspaper every day, N[ZOA] does not fund news, and with privately owned media there is always the potential that material which attracts advertising will squeeze out important information and opinions. So a true democracy needs at least one source of general news that is both free to everyone and not dependent on advertising. We have also made a mistake in selling off community radio stations (mainly to the owners of this newspaper). After next July, when these stations are expected to stop taking R[NZ]'s news service, there will be no free news coverage of local community activities that is not dependent on advertising... If we really believe in democracy, we simply can't afford to run down or sell off public broadcasting.

...TV channels safe but assets up for sale... The coalition Government is being tipped to stick to its original policy of keeping both TV One and TV2 in public hands. But the growing resistance to the sale of a channel is not expected to prevent TVNZ from selling off many of its other assets... The Natural History Unit, based in Dunedin, is understood to be close to being sold... So too, the Avalon Studios in Wellington's Hutt Valley... TVNZ is also trying to sell the assets left over from its experiment with regional television, and has announced it is keen to sell South Pacific Pictures, best known for producing the home-grown soap *Shortland Street*. A possible sale of... its transmission arm... also appears to be back on the agenda, despite the TVNZ chair[person stating recently]... that the business was "certainly not" on a list of assets being reviewed.

...T[TVNZ]'s new chief executive... is promising a more businesslike focus at the state-owned broadcaster when... [the] former chief of Ansett N[Z] and current general manager for Ansett A[US]... takes over the job in February next year... His appointment... as the replacement for [the former chief executive], who left four months ago to head Optus in A[US, comes at]... a time of considerable uncertainty at TVNZ, which is believed to have deterred many of those approached about the job... Although trained as a teacher, [the new chief executive]... did not believe his lack of experience in the media was a disadvantage, given that TVNZ was full of people "who know a hell of a lot about television." ...In the meantime... TVNZ pulls the plug on... [its] 9 am... educational slot... next month... During its lifespan eTV has been something of a graveyard for high-quality programmes... that just aren't, well, sexy enough to hold their own against the competition in or around primetime. But some of us have appreciated at least having one daily slot for programmes that the commercial imperatives might categorise as "worthy but dull." TVNZ says there's not enough money to keep it going and that the Internet, video and dedicated education channels might prove more appropriate vehicles for an educational service.

...T[TVNZ] last year forked out more than \$710,000 to its top-paid employee – but won't name the staff member... The company seems to have set a new record for state-owned enterprises... The number two earner at TVNZ was paid between \$420,000 and \$430,000 and a third staff member received between \$310,000 and \$320,000. The figures include salary, bonuses, payments for projects and programmes production, including cars and superannuation contributions. A TVNZ spokes[person]... said the company paid "market rates" in what was a highly competitive business... Last August the company said its [former] chief executive earned between \$360,000 and \$370,000... Broadcasting sources speculated yesterday that... [the presenter of the current affairs programme *Holmes* was] the most likely candidate... However... [s]peculation that... the... broadcaster... took the biggest pay-package was tempered by the possibility that [it] is not an employee but instead contracts his services to the state-owned company... Neither [TVNZ's new CEO nor the broadcaster] would comment yesterday and TVNZ cited the Privacy Act in declining to name the top earner.

...The right to publish when the myths turn to muck... How much does the public have a "right" to know about the private lives of public figures? The question rides on the coat-tails of Thursday's announcement by [a TV One] broadcaster... that his marriage to [a] former children's t[v] star and now medical student... is over – and that, in his case, a third person is involved... [The] editor of *Metro* magazine, makes daily decisions about what morsels of people's lives are appropriate fodder for readers... [and, speaking from personal experience,] says that if you are in the media then "it is an occupational hazard that your own life will come under scrutiny..." But, "the public's right to know? It's the media's right to publish. It's pretty hard to justify publishing a lot of that stuff on any high moral ground such as the freedom of information issue – what it is, is you are publishing probably for a commercial reason." The result can be painful. Following a N[Z] *Herald* Weekend Magazine profile of his former wife... [in which the former wife claimed the broadcaster] left their marriage as [it] was about to enter hospital[, the broadcaster claimed that his former wife] was mistaken. Whoever is right, once again their private spat is public property... The... editor of *New Idea*, says of [the broadcaster's] decision to issue a statement: "It was right and correct... It not only puts an end to the speculation but [the broadcaster] also has people who care about him and who don't want to be put in the situation of trying to answer questions. People who are in the public eye, who seek publicity as a way of continuing careers, have to expect that people are going to want to know the good and bad about their lives,"... Relationship Services, says of celebrities: "Often we tend to set them up as models and so tend to judge them by a different set of standards – more unrealistically and unfairly..." [The editor of *Metro*] admits... "I've been wrestling with my conscience over some of the gossip pieces [in *Metro* magazine's Felicity Ferret column]. I've been looking at an item on somebody spotted trotting happily out of a colonic irritation clinic... [Y]ou begin to think what is fair and what is not?"

...[a TV1 broadcaster's] new relationship is on shaky ground... after less than four months... [The current affairs presenter and host of *This Is Your Life*] (47) announced in August [that it] was involved with [a] TV journalist... (25) and had separated from his wife of five years... (32). They have two children... (9) and (5)... [The temptress], a Wellington Polytech journalism graduate, was previously a writer with *More* and *Next* magazines and left this year to work for Horizon Pacific Television before moving to TVNZ. [The journalist] still works in the same newsroom [as the

broadcaster] on the breakfast show... [but] moved out of... [hi]s apartment two weeks ago... [The broadcaster], in Christchurch this weekend, was not commenting...

[A TVNZ broadcaster's] former lover... has resigned from TVNZ, just days after details of her soured relationship with the millionaire... were revealed in the media. In a statement from [the journalist] and the network, the reporter... [who dumped the] broadcaster... last month... blamed health reasons for her resignation. [The journalist] has been on stress leave and then annual leave from TVNZ's *Breakfast* show... [The journalist claims to have] developed... the eating disorder bulimia... in the past two months. A letter from [the journalist to the broadcaster] was also published in which [the journalist] asks for a financial settlement from the 47-year-old broadcaster. [The journalist] would not say what [it] would do next.

...a... TV star... ha[s] joined a NZ] supermodel... as new entries to one of N[Z]'s most exclusive groups – the million-dollar-plus club... [The supermodel], whose \$8 million stash doesn't include any of the assets of [her estranged] rock star husband... takes 27th spot on the list – up the chain a bit from [the] actress... (said by the *National Business Review* to be capable of earning more than \$1 million a week from her *Xena* role and endorsements) but a million miles from the richest [perso]n in the land, [the] brewery boss... who's worth \$325 million... It has been speculated that [the actor] earns \$US28,000 a week playing *Xena*. That may sound extreme but think about it: [the star of *Seinfeld*], whose half-hour show hovers around number five in the national US ratings, gets \$US1,000,000 a week... [While t]he cast of *Seinfeld* win ratings behaving like big babies[, the NZer]... works a one-hour weekly show that hovers around number nine[in the US – 'but is number one in Turkey']!

...*'On Top of the world* Imagine life where you mingle with popstars and you're one of the UK's most popular TV personalities. Add a supermodel as a step-sister and you have some idea of the world inhabited by one *Top Of The Pops* presenter. TV Guide asked him: *Is it tough work?* No, it's not hard work. *If you could rule the world for a day, what would you do?* Collect all the money I could and put it in my account for tomorrow. *You wouldn't jet down to NZ for the day?* I'm not coming. I've heard that AUS and NZ are the two places where you find the biggest spiders and most dangerous snakes in the world.'

...*'When aged 16 it left school to become a panelbeater. 3 decades later, it is the richest person in NZ with a fortune estimated at \$1.2b after rebuilding AUSn food ingredient company Burns Philp. The investment magnate has topped the latest Rich List, rocketing from 6th last year. As the country's first individual billionaire, it has nearly double the wealth of his nearest rival, The Warehouse founder, estimated to be worth \$655m. Last year's winner was pushed to 3rd-equal with merchant banker Mr F, each with an estimated \$570m. A supermodel and Xena still make the list, worth \$20m and \$15m respectively.'* ■ *'A survey by an Indian financial newspaper added 22 names to its list of billionaires in rupee terms (\$NZ39m) – taking the total to 110.'* *'The number of millionaires around the world rose to 7.1 million, despite the global economic downturn and difficult financial markets. A report written by brokerage group Merrill Lynch said that although the number of millionaires grew by 200,000 the 3% increase represented a slowdown from other years.'*

...America's] television queen... is staying on as host of the most popular American talk show until the end of the decade. [The queen of talk] made the much-awaited announcement jointly with King World Productions, the company that syndicates ...he[r] Emmy Award-winning... [show], which is watched daily by 20 million people across the U[S]. "I want to use television not only to entertain, but to help people to lead better lives," [the]... talk-show host... [– who] has made a second \$US1 million... donation to... a black [guys'] liberal arts school in Atlanta, to provide students with scholarships [– said as it]... kicked off her show's 12th season. There had been some doubt as to whether... one of the nation's richest entertainers as well as an actress and film-maker... would continue or move on to other projects. Earlier this month, the stock of King World Productions tumbled on rumours that [the queen of talk] would quit... There had been speculation that [the actress] might resume a career in Hollywood... According to *Forbes* magazine, [the queen of talk] earned nearly \$160,000 million from her show last year. Her net worth last year was estimated at \$662 million.

...THERE'S nothing like a hot series to make actors believe they are worth megabucks. Convincing producers, though, is an entirely different matter. Every season, actors in shows flying high in the ratings will threaten to leave if their already fat pay packets aren't further inflated. Their demands for improved fringe benefits, too, can border on the bizarre... Usually, if it's clearly in both parties' interests, there is compromise and the show continues. However, the participants in this game of brinkmanship can get pretty hardnosed. Producers are becoming increasingly adept at countering threats by hinting none too subtly that stars, no matter how bright, are not indispensable. Hence *The X-Files*' Agent Scully's much-publicised cancer experience, which features in the episode on TV2 on Monday... It's a gripping storyline, of course, but at the same time it's hardly a coincidence that Scully's life-threatening experience was written into the show about the same time [that the actor]... was making noises about being undervalued and perhaps moving on to other things. Details of any behind-the-scenes details haven't been made public, but having shown that Scully could be credibly written out of *The X-Files*, it is highly likely that [the actor] settled for rather less than... asked for. And it's also a near certainty that Scully will recover from her cancer.

...[the 'X-FILES' star is suing the show's producers 20th Century Fox for selling repeats of the show to Fox-owned TV stations and cables at below-market prices, cheating the actors out of millions of dollars of percentage profits. The network has no comment on the lawsuit but expect to put up a vigorous defence in court next month. The star has also indicated it won't be returning to the show after the upcoming seventh season.']

...In an unprecedented linking of t[v] and cinema, the \$NZ98.5 m... *X-Files* movie shot this year... will serve as the concluding episode of the TV series. The last [4]... episodes... build up to the cinema version, the plot of which is secret. At the same time... the series['] creator] will publish a novel based on it. In addition, a whole line of other *X-Files* books will be coming down the chute, including a young adult version, two "making-of" volumes, and a scrapbook on the movie. □... Quotes of the day: "I woke up this morning and I was still alive, so I am pretty cheerful." – former *Goon Spike Milligan*, who is 79. "I've had real jobs in my life. This is not one of them. This is not hard." – American actor... about his new sitcom...

[We first saw her in the comedy movie] smash *Ace Ventura: Pet Detective*. Then, on a roll, [the actress] nailed down the top billing in *Friends*, an ensemble comedy revolving around six immature, relatively young adults bumbling through life in Manhattan. *Friends* has become an international smash hit. With the little work-stoppage help from her friends, [it] managed to get a pay raise this... season – going from a mere \$US40,000... an episode to a generous \$US75,000. ["We've seen our pay go from \$25,000 an episode of *Friends*, to \$40,000, and now its \$75,000. We practically went on strike to get the last increase. But when you consider the hundreds of millions the producers make out of this series, we deserve the extra cash."]

...the actress who plays Phoebe in *Friends*] is thinking of leaving to make films... But executives want her to stay and have promised her up to \$150,000 a show. The rest [of the cast] won't get anything near that. [In further TV news, the mogul who produces *Melrose Place* is offering a guest-star 'a colossal \$300,000 an episode. "That's \$100,000 an episode more than the current queen of the show gets," an insider reveals. The mogul has leaked to executives it would be prepared to shell out a \$1.2 million signing-on bonus to secure the guest-star. The producer says: "The actress would walk away with \$4.8 million for the projected 12-episode deal." The show's reigning queen has sworn revenge, warning the mogul: "If the guest-star's in, I'm outta here!"]

...the queen has] renewed with the show for another two years (at a cool \$600,000 per episode!)

Jurors who thought a[n actress]... could portray a sexy vixen while pregnant awarded her... \$US5 million... for emotional distress and wages lost after being fired from the TV show *Melrose Place*. The 34-year-old... contended in her breach-of-contract and pregnancy discrimination lawsuit that one of the producers of the steamy Fox TV show said: "Why do[n't you] just go out and get an abortion. Then [you can work]." The actress, who was fired in March 1996, said the verdict was a victory "for every [mother and] for every child that's not born. I know a lot of actresses who are afraid to announce that they are thinking about having children because they are afraid of being written out or written down, or whatever... I hope it gives other[s]... confidence to know producers are not going to have that ground to stand on." ...Spelling Entertainment[']s] attorney...

would appeal... The producers contended they had a... clause in her contract allow[ing] them to fire her if her appearance changed, and the producers argued that pregnancy-discrimination law carves out an exception for actresses because of the need for dramatic believability. [The actress] was fired before... appear[ing] on *Melrose Place*. [The actress then] returned to her job on the daytime CBS soap *The Bold and the Beautiful*, where [it] plays a sexy psychologist. [The 34-year-old] said the *Melrose Place* producers could have used TV magic, including body doubles and creative camera angles to hide her pregnancy, as they did with the show's star. To underscore her point that [it] could be pregnant and sexy at the same time, [the 34-year-old] – who is in her eighth month of another pregnancy – wore tight mini-skirts to court each day. Her pregnancy barely showed... □ *SEINFELD*'s [three co-stars]... are keeping NBC executives on a tightrope, refusing to close deals for another series before the network announces its new season lineup tomorrow. Reports indicate the... co-stars have sought \$US1 million each per episode – equalling what [the show's] star, producer and co-creator... is expected to receive – more than \$20 million over a year. The last network counter-offer was said to be around \$300,000. While some sources said last week the impasse would be resolved, others reckon negotiations could collapse, sending *Seinfeld* into a spin. *Seinfeld* without Kramer? Unthinkable.

...Salary deals no laughing matter [THE STAR OF] *SEINFELD* is no longer the most popular toy in the box. [Another stand-up comedian] is the new sheriff with a deal for his new season of *Home Improvement* of \$1.25 million per episode, which makes him the highest-paid sitcom actor on television, up from his previous \$750,000 per episode contract and passing *Seinfeld*'s previous record-breaking deal of \$1 million per episode. No word yet on whether *Seinfeld* and company will return for another season, but insiders are predicting it will be a heated negotiation so that one stand-up comedian can beat out the other – in the ratings and the bank! - 1997

...the most successful sitcom in the world, will be broadcast in America for the last time on May 14. For 133 million... [USers,] the hour-long finale... will be the end of an era. For the television networks, it could signal the start of another. *Seinfeld* has long been the jewel in NBC's prime-time crowning glories and, as such, the company has found advertisers happy to pay \$NZ975,000 for a 30-second commercial during the show. However, for this farewell episode, it is seeking a record \$3.3 million for each of the 20 slots. As [the show's main character] would say: "Are they crazy?" Possibly. Advertising slots during last month's Super Bowl – which also drew audiences of around half the population – went for a comparatively meagre \$2.2 million. It remains to be seen whether advertisers will pay the \$67 million NBC seeks from the final *Seinfeld*. But NBC's bullish rate card reflects a trend towards higher prices for rights to popular programmes and sporting events. The NFL is to receive \$30 billion for television rights to eight years of American football, while the medical drama *ER* is making NBC \$22 million an episode for three years. These record sums say as much about the state of entertainment business in America as about the popularity of the NFL, *ER* and *Seinfeld* – which is syndicated to around 100 countries. As fast as TV companies increase their spending on content, their target audiences are fragmenting amid the clutter of channels and competition from other sources of entertainment. In this battle, only the glitziest and most star-studded offerings stand a chance of rising above the crowd – and for this, companies must pay. "There is a tremendous glut of product there, as well as this need to keep spending more and more to exceed the quality standards established by other producers," says [a] New York media consultant... As if consumers are not already overwhelmed by choice, the war for ratings, and the cost of securing them, will intensify as digital technology offers consumers even more choices. In the U[S], cable subscribers get around 75 TV channels. By 2010 it is estimated that, thanks to digital compression, 1000 will be available. For the TV entertainment giants – ABC, NBC, CBS and Fox – this is not encouraging. Their market share and operating margins are steadily dropping and most are marginally profitable or losing money. Similar symptoms can be seen in the movie and music industries. "There are just so many hours in the day and it looks like we've reached saturation point,"... The answer, according to corporate thinking, is to create a brand franchise that becomes a cultural touchstone drawing in revenue for years to come. Advocates of this strategy look to *Lion King*, the animated film released in 1993 that has made around \$5 billion from film, video, soundtrack, TV and merchandising sales. [However, while] spending more on blockbusters... companies are spending less – or nothing – on mid-range fare... How long the entertainment giants can sustain paying more for less is an open question. But for [the star of *Seinfeld*, when asked if it] would continue if... paid \$17 million an episode, the answer was clear. "No, I wouldn't... It's not about the money." ...[Incidentally, an actor] will receive a whopping \$3.8 million an episode to make several guest appearances on *ER* next season – that's twice as much as [the actor got when it] was a regular on the show... [But a 35-year-old] turned down an amazing \$60 million to stay on *ER* as nurse Carol Hathaway "...to start a family."

...ER's... Dr Peter Benton... is laughing all the way [to the bank. The actor who portrays the doctor ha]s just struck a deal with the producers which will pay him a \$[NZ]60 million salary over the next three years. While... his co-star... [is] paid... \$72 million... [In another TV deal, the a]ctors on the show... *Friends*... are now getting \$2 million a week as part of a massive pay rise.

...ALL THE WAY TO THE BANK... THE news this week that the cast of *Friends* have signed a... contract renewal, with each earning \$US750,000... an episode... [(the stars) had asked for... (more)] got us thinking – what exactly do they do for the money? So we sat down with the... abacus during this week's episode and counted. Here's the breakdown... Number of lines the six said during half-hour (actually 24 minute) show: 161 Number of lines each: Joey (26), Rachel (44 – high count due to scenes with visiting sister Jill), Monica (22), Ross (29), Chandler (26), Phoebe (14) Word count of all their dialogue: about 2600 Which means the average number of words per character is: 433 So, average dollars earned per word: \$US1,732 ...number of canned laughter outbursts per episode: About 105... Costs this many dollars per laugh: \$US42,857 Oh and remember to roughly double it for Kiwi dollars. Nice work if you can get it huh? And these people want to be in movies?

...DESPITE the *Friends* cast's burgeoning film careers, [the show's] creators... reckon there's no reason the Central Perk gang can't keep on amusing viewers until they're old and grey.

...It all nearly ended in London for [a] *Friends* star... (who's there to do a play) when [the actor] made the mistake common to most Americans, looking the wrong way as [it] stepped off the kerb. [The actor who portrays Chandler on the popular comedy show] was struck a glancing blow by a bus that skidded to a halt. Concerned folks gathered as [the actor] groggily got up to explain [it] was okay.

...MORE THAN FRIENDS... Fireworks lit up the night sky over the Malibu coast yesterday as [a movie] heart-throb... and [a] *Friends* TV series star... celebrated their wedding in a \$1 million ceremony. [The bride], aged 31, and [groom], 36, were married under a white tent at the beachfront estate of [a] producer... It was the first marriage for each and they have been together for 2 1/2 years... A who's who of young Hollywood... were invited to the glittering ceremony... [An actor], who co-starred with [the groom] in *Fight Club*, attended the wedding with [an actress – who is set to do a movie with the actor who portrays Chandler –] as his date... Most of [the bride]'s co-stars from *Friends*... were present. The... [bride received an early wedding present when, a]long with other key members of the cast[, it]... renewed her contract at a reported \$US750,000... for each episode... A bidding war immediately erupted to secure the exclusive rights to the superstar nuptials, with the couple vowing to give the money to charity.

...May 4 is deadline day for the cast of *Friends*, who'll find out if their demands for \$[NZ]3 million a week for a seventh season are met.

...It's an offer they can't refuse – but the pressure's on [Rachel] A megabuck scheme to save the hit sitcom *Friends* could see the demanding cast pocketing \$[NZ]240 million in a secret reunion deal. It's well known that the comedy that made... [the six co-stars] household names is coming to an end because the cast feel they have outgrown the "twenty-something in the city" series and wish to spend more time on their personal lives and film careers. But in a bid to keep the... series going, NBC and Warner Bros have come up with a tempting offer for the six cast members... "Don't believe all the hype that this is the last series of *Friends*. There's already a secret deal that's going to bring them all back for another two years – that's so over-the-top they can't turn it down. They've offered the cast a little bump, and it's double what they currently make!" says an insider.

"The offer is for six hour-long shows spread over the year, not the 24 episodes they're used to cranking out. Since the shows will be special two-episode double partners for syndication purposes, this means just under \$6 million for each hour-long show. With residuals and such, that's almost \$40 million each a year for a third of the work they're doing now. It's an incredible offer – anyone who turns it down is a fool!" Given the enormity of the offer, there's unlikely to be a repeat of the carnival that surrounded the last *Friends* contract extension, which ended at the close of year six when the cast refused to make a deal until a mere 36 hours before the network had to announce its autumn schedule. Because of all the drama surrounding those negotiations and the non-enjoyment the cast are getting out of working on the show, no-one expected an attempt to do a[nother] season. But with a resurgence in public popularity, thanks to... [the] character Rachel being pregnant, producers and writers have new exciting storylines to give the show a fresh perspective. While a pregnancy may have saved the dwindling ratings of the show, ironically, a baby on the way could also destroy any chance the stars have of getting their hands on the huge packet. The whopping \$240 million deal will become redundant if one of the stars has to pull out and with [the actress who portrays Rachel] planning to start a family with her husband... the actress now faces the pressure of conceiving right away or having to wait another two years, until the renewed series has been completed. "[The actress i]s not yet pregnant, but they're trying like mad to get her so," says an insider... [The actress] would like at least two children, while [her husband – the star of films *Seven* and *Seven Years In Tibet* –] wants seven... Asked... just last week... whether [Rachel]'s TV baby was making his wife clucky, the \$20-million-a-movie star remarked, "I can deal with clucky." [His wife] has always laughed off any speculation about a pregnancy, but with a big cash windfall for all her colleagues at stake, this time the actress is wishing the rumours were true. "It's a now or never situation for [the couple]..."

...Earlier this year, [the] *Friends* star... picked up a gossip magazine and read that her marriage... was on the rocks. And that seemed strange because [her husband] was there, right in the same room, as... [t]he good girl... was reading the article. "Gossip is... hard to stomach... I can't help but get infuriated when it messes with something sacred, especially with my marriage. The press said we were separated and I was living in a hotel. I was like 'Aaargh!' But [my husband] was the voice of reason, which... t[he] actor... is most of the time. [My husband] said, 'Just wait three weeks and, when we're still together, they're not going to know what to do.' And sure enough three weeks later I read that we'd rekindled our love!"

...**PUSHING THE FRIENDSHIP...** *If they agree, all six can have a huge fee to do another season, but that could wreck more than one marriage* Some say money can't buy love, but it seems everyone has their price, and the stars of TV sitcom *Friends* are no exception. They're currently being tempted with \$300 million plus to sign up for one more season. And at least two marriages could be in for a rocky ride as a result. It appears... [the six friends] are being forced to choose between fortune and fame, and their personal relationships. Under the terms of the \$300-million agreement, all six stars of the show must agree to the new deal. This would mean breaking the pact they had previously made, agreeing to complete the current series and quit as a group. If the stars agree to the new deal, both... [Rachel and Monica] will have to put on hold their most precious wishes to start a family with their respective [husbands. Rachel and hers soon]... will be separated... as [the actor] heads to A[US] to shoot *The Fountain*... [The actor] is said to have real estate agents searching for a house in Sydney where [it] can live during shooting, in the hope that his wife will join him. It seems the handsome [actor] is hoping the relaxing atmosphere away from Hollywood will help the[m]... to conceive the child they so dearly want. After two false alarms this year, the couple have begun to look for help from in-vitro fertilisation... But there's still a chance they'll be able to conceive naturally. There seems little doubt [the actor will ask Rachel] to make the break from *Friends* and instead concentrate on their marriage and... baby plans. Meanwhile, [Monica and hers] are in weekly counselling sessions after a miscarriage this year. Tensions are heightened by [her husband]'s lack of starring roles and the new *Friends* offer has made things worse. Close friends say [the husband] has even moved into his own bedroom at their... Malibu home. Rumours suggest [it] is envious of his wife's income, as his career appears to have been locked into minor parts or leads in alternative films, such as *Stealing Sinatra*, a telemovie based on the 1963 kidnapping of Frank Sinatra Jr. [It] also stars in the horror movie *Eight Legged Freaks*, about giant spiders. With the latest offer – a bonus of \$10 million each for a[nother] season, on top of the \$40-million pay cheques they won in contract negotiations... – the producers of *Friends* have well and truly put the cat among the pigeons. To complicate things, they have also thrown in a catch to rock their stars' egos – if the full cast won't agree, they'll snatch away [the] 39-year-old... for her own Phoebe show. "Everybody said this would be their last season and at the time, they meant it," says a *Friends* insider. "But money talks. NBC, which distributes *Friends* in the US, wants another series next year, but they insist all the cast must agree to appear. They're willing to pay more... If [the cast] doesn't accept, the network has offered [one actress] her own series based on Phoebe." When [the actress who portrays Phoebe] told her famous castmates of the offer at a... party at [Monica's house, Monica and Rachel] immediately responded, "Does that mean we can't get pregnant?" Our source says... the show's six stars fear there's a real risk of bitterness and jealousy developing in the close-knit group if some turn down the new offer, especially as [Phoebe] has been chosen to have her own spin-off series. "[Phoebe] isn't the most popular person among the *Friends*," one acquaintance admits. "[Phoebe] hardly talks to anyone and there's long been friction between her and [Rachel and Monica]. The other girls are already envious of how [Phoebe] juggles her TV work... movie[s], hubby and kids." Phoebe herself said recently... "I... sometimes wonder why so few of my friends want to play with me."

...Hugh... has rubbed his latest screen conquest up the wrong way. Hugh had some heavy kissing scenes with [a] Brit TV star and film novice... on the set of *Love, Actually*, leaving her with a shocking case of stubble rash! So much for [hi]s clean-cut image... Charming Hugh... has [also revealed how it] almost underwent needless surgery after suffering pain in his testicles while on holiday in India. "I saw the top testicle [doc] in all of India, [who]... said, 'You have a twist in your testicles and they will have to be untwisted'." Hugh was unconvinced, however, and sought a second opinion from a doctor in London... "[The British doc] said, 'On no account go anywhere near an operating table. If you had a twist you'd be in the most diabolical pain of your life.' It turned out I had no more than a strain from playing golf – a syndrome I now call 'golf ball'." ...Surprisingly, Hugh has missed out on the year's biggest screen lover part – all puns intended. Word is [a US actor] will play rather well-endowed porn star John Holmes in *Wonderland*... The movie is about Holmes' involvement in a very real 1981 quadruple homicide on Los Angeles Wonderland Avenue... For those unfamiliar with the late John's resume, [the stud] made 2000 blue movies and slept with 10,000 [gals before it] died of AIDS at age 43. In a surprising piece of casting, *Friends* sweetie... [Phoebe] is set to play Big John's wife... It's a meaty role, but the timing could be tricky for [the actress] – hot goss says [Phoebe] recently told the *Friends* cast [it]'s pregnant again. The sitcom's producers won't write a pregnancy into the show and will just shoot around her, but *Wonderland*'s makers may not be so flexible... Speaking of mothers-to-be (and isn't everyone these days?), [*Sex and the City*'s star]... has big plans... as if that isn't obvious. We know her bub's due next week, but [it]'s just revealed her long-term goal – the US presidency... Is this just crazy mum-to-be hormones talking? Maybe [her] fellow preggers *Sex and the City* star... would like to be Queen...

I LOVE *Sex and the City*, the television show based originally on... Manhattan society... tidbit... columns in *The New York Observer*. I love it because... those sex-crazed... [gals] Carrie, Miranda, Charlotte and Samantha are such successful, busy, professional[s that] they only ever have time to meet for breakfast, brunch, detoxifying body-wraps, lunch, manicures, an afternoon snack, massages, cocktails, pedicures, dinner and nightcaps... and then breakfast again, after being shagged silly all night. I think they may be workaholics.

...*The Real Sex and the City* (TV3 tonight), is a reality series about four New York [gals]...

GET ready guys – a hot new TV show is matching single girls with their ideal m[ates]. Four successful Sex In the City-style [NZers] will move into an Auckland city apartment for seven weeks while they search for the perfect partner. TV2's new series *Single Girls* will give them free guidance and expertise, and film them on their ...hunt for Mr Right. Communicado, the production company behind *Single Girls*, held auditions this month. More than 100 hopefuls applied to take part in the programme... "These [gals] have got the career and the car, now all they need is the

companion,” said [the]producer... “We’ll be looking at all kinds of ways to find a partner for each of the girls. Personal ads, a few blind dates, consulting astrologers and personality experts. It will be lots of fun but serious too, and the girls will be treated with the utmost respect.” The four... [contestants,] aged 25-35, will produce an identikit of their ideal [guy], including a personal profile. This will be compared to the partner they end up with after six episodes. The four couples then travel to an exotic location for a romantic holiday and hopefully a future together.

...It’s not easy being the new chick on the block but [a]22-year-old... is taking the whole kiwiflatmate internet experience in her stride. “It’s like being in a huge time warp,” laughs the Pukekohe youngster, who entered the mansion during a flood of controversy, which saw [one gal]flatmate... lose the plot when asked to leave after getting the least amount of votes and [a guy flatmate] doing a disappearing act at 2.30 in the morning. “It feels like you’re on a plane that’s just not going anywhere[,” says the new chick], an aspiring opera singer[who] says the cameras in the house don’t worry her, even the ones that capture life’s most intimate acts. “It’s just part of life,” says the gorgeous blonde. “We’re all born naked.” In fact, [the chick] reckons the shower is the best place for her to showcase her singing talents. “You get great resonance in the shower, great clarity in your voice and I figure if people see me singing in the shower then it might inspire them to do it too.” Check out her lungs on www.kiwiflatmates.com.

...been dying to find out what’s been going on... at kiwiflatmates.com but can’t afford to log on to the website? TV2 is offering viewers a chance to go behind the scenes of the Auckland mansion where five Kiwis have been living... under the constant gaze of cameras. A one-off documentary this week looks at what drives the participants and creators of the latest reality experiment. The five... don’t pay rent, their bills are paid for them and they have access to a fridge full of alcohol. In return their every move is recorded on one of 20 cameras in the house. Only the toilets are a safe haven and the cameras have no night vision... [(]Internet viewers... pay \$40 to gain access to the bedrooms...[)]. The [l]andlords... put everything they have into the project but it’s turned out to be more costly than they’d thought. Their goal is to create an international flatmates website.

...[TWO] KIWIFLATMATES... have found romance among a web of deceit on the net. [One], 22, appeared as the good girl on kiwiflatmates.com – an internet stunt [in which the antics of] five young Aucklanders... were broadcast 24 hours a day over the net. Viewers voted for the most popular flatmate, who won \$4000. A documentary screened last week on TV2... showed [the 22-year-old] winning the cash. But the doco also showed the flatmates constantly feuding. They also argued with the landlord after the girls showered in their bikinis rather than let viewers see them naked. The programme showed [the 22-year-old’s new partner], 24, urinating on his contract and walking out of the flat after a row with the landlord. But the flatmates’ “bad boy” [– who also did an early morning disappearance –]clicked with... the [winner]... “We were buddies straight away,”...

STUDENTS are baring all on the internet to win free rent for a year. The Vodafone Flatmates competition has put cameras into four student flats – with some revealing results. Two flatmates were so desperate to win, they ripped off their clothes to get extra votes. Net surfers all over N[Z] – as well as Brazil, Puerto Rico, France, Germany and South Africa – have logged on to the website in the past two weeks. Internet viewers vote without music, TV or books. Every burbling thought and childish spat caught on hidden cameras and microphones and beamed into our homes – including the week in review and late night screenings of the naughty bits. Even George Orwell – who came up with the original concept of a big brother dictatorship – couldn’t have envisaged a future as horrible as this. Who are the producers exploiting? I suppose you could say the contestants and their greed for \$250,000. But they knew what they were getting into. If they didn’t they are too stupid to suffer much. The sadistic producers use quite sophisticated psychological techniques to exaggerate the emotions and twist the reality of the morons trapped in the flat from hell. I could not believe they wept watching a video from one member they had cheerfully voted out the week before. Earth to flatmates – hello? Voting people out is a cunning device. It plugs into everyone’s worst primal social fears of being unpopular. Hang on. Maybe it’s an extremely clever sociological experiment and can be justified to [the Broadcasting Minister] as a vitally necessary educational programme on the effects of psychological pressures on small groups. Then again, maybe it’s just a load of completely meaningless bollocks.

...OK I’ve really tried to ignore it but if I don’t say something I’m going to explode. I know its proudly brought to you by[my employer the] *Sunday News* but *Big Brother* (TV2, 6.30pm Tuesday to Saturday) and its eviction special (6pm Monday) truly suck. It’s the pits. The worst. Can TV sink any lower than this disgracefully crass piece of exploitative voyeurism? I doubt it. A bunch of bored youths and bimboes stuck in a house without music, TV or books. Every burbling thought and childish spat caught on hidden cameras and microphones and beamed into our homes – including the week in review and late night screenings of the naughty bits. Even George Orwell – who came up with the original concept of a big brother dictatorship – couldn’t have envisaged a future as horrible as this. Who are the producers exploiting? I suppose you could say the contestants and their greed for \$250,000. But they knew what they were getting into. If they didn’t they are too stupid to suffer much. The sadistic producers use quite sophisticated psychological techniques to exaggerate the emotions and twist the reality of the morons trapped in the flat from hell. I could not believe they wept watching a video from one member they had cheerfully voted out the week before. Earth to flatmates – hello? Voting people out is a cunning device. It plugs into everyone’s worst primal social fears of being unpopular. Hang on. Maybe it’s an extremely clever sociological experiment and can be justified to [the Broadcasting Minister] as a vitally necessary educational programme on the effects of psychological pressures on small groups. Then again, maybe it’s just a load of completely meaningless bollocks.

...We have a new role model. It is one of the housemates on the recently concluded reality show *Big Brother*. Her name is [not worth mentioning here but I think the gal] is a phenomenon. Bold and brassy to some, vulgar to others, [the gal] nominated six times for eviction by her flatmates but saved [each time]by popular vote... is fondly remembered for her “bum dance.” Reality shows have been a brilliant development for commercial television. They take ordinary people and lock them up. You don’t have to pay them, other than wave the carrot of a prize for the survivor and dramatic tension arises out of the pressure cooker effect. They can be funny, nasty, petulant, flirt, tease and wobble their bottoms. Is this a sickness? Or is it just a perfectly natural development in which instead of speculating about what goes on in other people’s lives, we get to watch it actually happening. Why have state-of-the-art peephole cameras and sound equipment which can record rats mating, if we don’t use them to capture the essence of human existence? Set aside then any notions of the dumbing down of TV and accept the fact that reality TV makes money and people watch it. Add to this the corrupting effects of directing and makeup... and you can see the problem. Quality television outdid itself and viewers are not going to put up with it anymore! There is a new name for this new brand of TV: Bum Dance Television. Do we really want a polished news duo delivering seamless news stories? Or would we rather watch a normal premenstrual [gal] suffering a bad hair day and a bloke so pissed [it] thinks that a story about a senior public servant’s aversion to breasts is that funny, [the drunk] falls on the floor laughing? The latter quite clearly. The presentation of the weather is a contentious matter. Every town insists that its temperature is taken in the wrong place. Bum Dance Weather would... involve... beat[ing] out a compromise. Sports are already pretty well given over to Bum Dance with news stories of rugby players hitting everything from ranch-slider doors... to members of the public... We’ve seen film of [an All Black winger/centre] wobbling around and the every action and reaction of our sports heroes are analysed, dissected and ranted about on talkback radio. There is a notion that when it comes to current affairs, there are two sides to every story. But the audience demands more. If we have learned anything from reality TV it is that life is such a meaningless jumble of push and shove that order can only be brought about by voting the worst story – the weakest link – off the news. Let the public decide whether Bosnia makes way for the octuplets, or Nancy the Performing Pig stays while Russia goes. The biggest sighs of relief will come from TV management and the office of [the Broadcasting Minister]. You don’t need a charter if television is a canvas on which every bum has its day... [While on the topic of bums,] like many other viewers, I spotted a blooper in the first instalment of *Pioneer House*... A roll of toilet paper could be seen in the loo, but around the year 1900 rolls as we know them today, had not been invented! The normal household practice, although it may seem primitive today, was to cut up newspaper into squares. I believe it was quite some time later until toilet rolls were introduced.

...JOURNALISTS love knowing other people’s business – it’s why they become journalists. The only way the public can stick their noses into other people’s business – from the comfort of their own homes at least – is via reality TV. We get the unadulterated version of other people’s lives in *Life on Tape* (TV2). It’s rather like watching the neighbours through the curtains – and it’s almost as sad. Ten Kiwis get [a] video camera to record special moments in their lives. [A y]oung mum... weighs 113kg and wants to lose weight... [One couple] earn \$37,000 between them and are entering any competition they can that might help them towards a deposit on a house. [Couple two, who] had to give their adopted baby back after 10 months are... travelling to Russia to adopt another child. There’s also the attention-seeking [gal] who spent hours filming an argument with her

boyfriend. It's hardly riveting stuff. You have to spare a thought for editors who had to hack the series down to watchable segments. It might be unadulterated, but *Private Investigations* (TV One)... follow[s] private eyes at work... [and] features more adultery than you could shake a stick at.

...I DID it. I watched the final episode of *Temptation Island* (TV3, 7.30pm Monday). I must be a masochist. It would be less painful to be hung by the privates and whipped with a bamboo cane by a [perso]n named Madam Lash than sit through another such hour-long rancid dollop of awful American adolescent angst. Thank God it's over. They rounded up one of the most egotistical and neurotic collection of himbos and bimbos ever to leave America. Then they separated the couples and subjected them and their tempters to various ritual humiliations. And then the producers brought the frustrated lovers together again so we would watch them cough to being "intimate" with someone else, cry a lot, and then profess undying love for each other. It was truly demeaning and relegated human emotions to the status of tacky entertainment.

...I'm starting to get sick of 'adventure island' shows. We've had *Survivor*, *Temptation Island*, *Internet Island*... *Treasure Island* and a couple more. The first one was quite good, actually. The second was alright. But by the third it started to get boring. Please make *Internet Island* the last...

Stranded in purgatory MAROONED on an island so harsh that human life disappeared long ago, the quest is one of survival. The 36 hardy souls on this uninhabited, unforgiving place are acting out a dubious fantasy: to be Robinson Crusoes for a year. And one has already fled. The rest are fending for themselves, battling against the elements, far from the comforts of the real world. But not from the glare of cameras. This, after all, is the [age of reality TV] and it just wouldn't be right if their every move wasn't caught for what the makers have dubbed the ultimate fly-on-the-wall television documentary. Welcome to *Castaway*... an expensive flagship project from the BBC which is charting the real-life stories of a motley crew of strangers who applied to be stranded on the tiny island of Taransay, off the far north-west coast of Scotland, for... 365 days... The official blurb talks about how it is a fantastic social experiment in sustainability and interaction. Which is all very worthy. But in TV land, ratings are God. And the reality is that viewers want the "MacTruman Show" to provide all the usual range of emotion – sex, violence and the full spectrum of human suffering. Who's sleeping with who? Why have they fallen out? Just how hard was [the assault victim] punched? That's just for starters. This really is a castaway documentary with a difference. A[n author]'s characters in *The Beach* found splendid isolation in a sun-soaked paradise. The BBC, on the other hand, has uncovered a landscape so brutal that when the winds blow hard it is impossible to stand up. If some of the locals on the neighbouring island of Harris are to be believed, the producers have bitten off more than they can chew[... while]... one of Scotland's most respected journalists and broadcasters, believes the project is dangerous and stupid. "This is going to go wrong, and badly... You cannot flirt with nature on this particular Atlantic frontier and not expect to get comprehensively ravaged by her. These poor sods with their suburban escapist fantasies are being shamelessly exploited. Despite the assurances, I simply do not believe they know what they're letting themselves in for. The first drowning or death by exposure will presumably bring the 'experiment' to an end. It is a shameful, disgusting business and it should be stopped before a tragedy is allowed to occur at the behest of the lowest common denominator television." ...though there is evidence that settlements existed on Taransay during the Bronze Age 4000 years ago, the population reached its peak in the 1830s, when 16 crofting families called it home. The last family left 60 years ago, and... the island [i]s now watched over by some sheep, a small herd of goats and a pair of golden eagles. When the new arrivals first stepped onto the island... the *Castaway* project had already been dogged by controversy, and a degree of bad luck, which no doubt had the makers rubbing their hands with glee... Just before their guinea-pigs set foot on their new home, the producers expressed the hope that no one would have to leave at any time during the year-long stay. But after just two days many had been struck down by flu and were taken to hotels and self-catering accommodation on Harris to recover. Some have complained... the accommodation is completely unsuitable for children, and four... castaways were left with no belongings when a helicopter dropped their crates 60m onto rocks on another island. And, yes, all the castaways have been shocked by the severity of the weather. Some newspapers have had a field day, branding the... exercise an unqualified disaster and a waste of TV licence-payers' money. But this is a project where the success lies in interpretation. Problems like flu and roofs becoming detached in high winds are what this kind of programme should be all about. Real people experiencing real problems in extraordinary circumstances... Judging by... [show]s so far, most of the group are at each other's throats all the time... □ *Castaway*... began screening on the BBC [two months ago]. So far there are no plans to show the series on N[Z] television.

...*Survivor* spin-offs can be very lucrative. According to [a]bongo-playing waitress... no sooner had [it] been booted from *Survivor II: The A[US]n Outback*, than [it] was sought by *Playboy* to drop her gear for an undisclosed sum. [The waitress] had already turned down a paltry \$10,000 to bare her breasts on [a talk show]. Meanwhile, Queenslanders are up in arms after *Survivor* castaways were filmed nicking coral from the Great Barrier Reef to give to other contestants. There's a \$100,000 fine for this indiscretion, but the episode showing the theft topped its ratings time slot...

THERE is already betting on who will win the A[US]n outback series of *Survivor*. Favourite, at four to one, is... a 32-year-old army intelligence officer from Texas. A US TV reporter who got close to the set told the *Today Show* that while the contestants might have been doing it hard on wombat stew and reptile relish, the 230-person crew had their own tent village with games, TV and bar.

...There have been thousands of applicants for A[US]'s own version of *Survivor* and Network Nine is eagerly sifting, hoping to get the show on the road as quickly as possible to cash in on the format's huge popularity. In the meantime, *Survivor II: The A[US]n Outback* addicts are holding their own survival parties to help them overcome the loss of their favourite programme. Party hosts have organised *Survivor*-style games, bush tucker nibbles, witchetty grubbs, snake lollies and trivia nights to fill in the gap left by the series... [Incidentally, one viewer has expressed] disgust at *Fear Factor* ([US])... when contestants had to consume an egg with an unborn chick inside. A[noth]er viewer asks did]... contestants really eat roaches...?

...Questions are being asked about how real the reality shows are following revelations body doubles were used in *Survivor: The A[US]n Outback*. [The] producer... who always maintained the show was completely real, admitted 16 stand-ins were used during the... shoot. These included "pick-up shots" to capture wide-angle views after the fact and a swimming race in the Herbert River was later re-staged with body doubles so a chopper crew could shoot uncluttered aerials. [The producer wasn't] embarrassed about the trickery and it had not affected the million-dollar victory of [a 40-year-old]nurse... "I couldn't care less – I'm making great TV," added [the producer as it] headed for Kenya to start on *Survivor 3*. Meanwhile, Network Nine is in a quandary about taking *Survivor 3* in case the dates clash with its home-grown *Survivor*, already off the drawing board and into packaging... Nine's offering... [is] the most expensive produced here and... [shoul]d... outrate the [US] version because Aussies like to watch Aussies.

...*Reality check*... Forget *Survivor* and *The Osbournes* – get ready for the next wave of reality programming as networks prepare to revive television classics as reality hits. In development is a *Green Acres*-style show, with a rich upper-class family being relocated from their luxurious city life to a more basic, middle-American existence. With no bank accounts or Bentleys, the cameras will follow the former socialites as they try to land jobs and buy their own groceries. "There's going to be wonderful humour in this show, as there is with anyone who's a fish out of water;" [the] executive producer... says... Also in the works is a series tentatively titled *The Real Beverly Hillbillies*. The concept will see a lower-middle-class family move into ritzy Beverly Hills, and each week the cameras will follow them as they try to blend in with their rich and famous neighbours.

...This week we dedicate this column to a post-*Survivor* special. Look, *someone*... watch[ed] it, according to the ratings, and they may like to know what's happened to all those resourceful, likeable, not-in-the-least-bit-annoying Americans since [a guy known as] Rich... finally nabbed the million bucks... The now respectfully named Richard (millionaires have certain standards, it seems) has had numerous marriage proposals from [members of both sexes] and, amazingly, only two pieces of hate mail. But the police made a proposal as well – stop abusing your 9-year-old son or we'll lock you up. Seems that when Richard got back from the island the lad had put on weight, so [dad] had him out jogging at 4.30 am. When the child wanted to stop, [dad] allegedly roughed him up. [Dad] was arrested, but the charges have been dropped. [Richard] has had another downer with a

\$US500,000... book deal falling over. To be titled *Survival Skills For Life: An Owner's Manual*, the book got vetoed by CBS under the terms of the strict contracts the Survivors signed up to. More happily, [Richard]'s doing the talk-show circuit, had his home renovated, appeared on the Emmys and the MTV Awards and is part of an advertising campaign for milk. No, we don't get the connection, either. What of the other Survivors? They've all sprouted agents and new careers. [One] has a fishing show on ESPN and a guest spot on *Jag*, [while another i]s introducing videos on VH1 and appearing on *Nash Bridges*, and [a third] will appear on the soap opera *The Guiding Light* and is medical correspondent on a TV magazine show called *Extra*. Sad ol' [survivor four]'s just after the money – friends are asking fans to “send a... buck to [our mate].” Perhaps the weirdest spins-offs relate to the show itself. A spoof movie of *Survivor* is already being planned; the lead singer of the rock band Survivor (remember *Eye of the Tiger* from *Rocky III*?) is suing CBS for breach of trademark; and the series mastermind... is planning a new reality series in which volunteers fight for a place on the Mir space station, culminating in the winner being launched into space. No, we're not kidding.

...[Britain's v]eteran interviewer... has launched a vitriolic attack on reality television shows, vowing never to interview any of their participants. “God knows what's happening to TV,” [the interviewer], 67, snarled last week. “It's something I'm totally in despair about. We'd never dream of having a *Big Brother* person on the show or any of those cheap and silly entertainers there are now.”

...How much more reality can we take? It's cruel, it's voyeuristic and humiliating. That opening introduction leaves no doubt to where the BBC's *Panorama* programme wants to take us in the rise and rise of reality television. How far is television prepared to go to keep us tuned in and turned on, asks [one] reporter... We hear from media experts, psychologists and lawyers that it has already gone too far. “The problem is not just in damaging contestants, but us as viewers,” warns a boffin from the University of Stirling. [America's r]eality TV king... sums up the opposing viewpoint: “This is only television! My God, there are other issues in the world.” The British reality programme *Big Brother*, which did not screen in N[Z] (presumably, TV2 thought the AUSn version – which included a Kiwi – would have more relevance for local viewers)), made celebrities out of its contestants, and two of those... want to set the record straight and let us know that their television selves were really evil twins manipulated in the editing suite. “At the end of the day we were just pawns in a game,” says [one]. “The public thought it was real... it was just a game show.” [The other says it] wanted to disappear from view after her 15 minutes of fame. “I think the term reality television is totally misleading. It is a production, it is highly edited... it is *not* real.” [A spokesperson for] Endemol Entertainment International, the maker of *Big Brother*, is asked if [it or the company i]s concerned for the safety of people in the long term. [The spokesperson] points out that the programme is a big commercial success and that it would not be in the company's best interests to endanger people. [The reporter] crosses the Atlantic to show how damaging reality television can be. [The reporter] talks to a lawyer in the case of [the person] who shot a [gay it] found out was his secret admirer during a “television ambush” on... [the king's] afternoon... talkshow. In typical US fashion, a civil case was brought by the dead [gay]'s family against show owner Warner Bros, and they netted \$US25 million... The court agreed there was a link between [the killer]'s action and the embarrassment [it] suffered on the talk show, although at his criminal trial the prosecutor declared that people are responsible for their own actions. [The king] offers his thought of the day on the attack against reality TV. “Television cannot go into the area of censorship.” Then [it turns on the reporter]. “When you are doing this interview you never gave me the questions ahead of time. You never figured out if this story would hurt my feelings. At some point we have to stop passing the blame. People have to be responsible for their own behaviour.” Perhaps it's not a case of how far television will go, but rather when will viewers tire of watching ordinary people fight, fall in love or play mind-games with their co-contestants on tropical islands?

...Evidence is mounting that guests on a BBC daytime television chat show were bogus, and a newspaper has interviewed “guests” who claimed they were not what they seemed to be. Britain's state broadcaster has launched an investigation and suspended two producers and a researcher after the... *Mirror* reported two incidents, one in which an unmarried actress claimed to be a battered wife and another when two “sisters” in a feud were strippers who had never met. Each received around £75... for appearing on the show after being supplied by an agency in West London... The BBC said two agencies had been used to provide guests on four items for the show, contrary to guidelines. The claims are just the latest in a string of embarrassing disclosures for broadcasters after other well-publicised cases of faking... [By the way, police] were called to a Brisbane house after neighbours complained of a savage domestic dispute. But on arrival they found a 30-year-old... alone in his ruined home. Questioning revealed the [30-year-old] had destroyed his house after becoming enraged with a television game-show contestant who had given the wrong answer.

...A[US]'s first interactive drama series is about to be filmed for Austar's 400,000 pay TV customers. It's called *Fat Cow Motel* and will be shot mainly in Queensland. The 13-parter is described... as “a ground breaking entertainment experience with the audience set the task each episode to solve a whodunit style murder mystery”... The \$2 million *Fat Cow* is aimed at 16-39-year-olds and is believed a world first... Austar audiences will also be provided with clues via their... digital radio... mobile phone... e-mail, [or the] Internet...

PERVERTS are using Pokemon to lure kids ...to hardcore internet porn sites. *Sunday News* discovered several sick websites listed during searches for Pokemon details. The cute TV, film and computer game characters are loved by thousands of Kiwi kids. One site included obscene photographs of adults indulging in sexual activity. None of the porn sites had any official link to Pokemon. The search also revealed hate sites for people who loathe Pokemon. These featured bad language, racial slurs and threats against Pokemon fans. Many of the sites were American. Pornographers based outside N[Z] cannot be prosecuted by our Internal Affairs department.

...Turkey's broadcasting watchdog has ordered a TV channel to stop airing the popular cartoon series *Pokemon* after two children leaped from balconies, believing they had superhuman powers. The Radio and Television High Council also penalised the private television station with a one-day blackout in response to a Health Ministry complaint, a council spokes[person] said. A 7-year-old girl and a 4-year-old boy were injured in falls from high-rise buildings in separate incidents last month. The ministry linked their accidents to the Japanese series.

...An eight-year-old girl in Shanghai, China, broke her back in a fall from a sixth-floor window while trying to fly like a popular television character... who has superhuman powers... [The girl was] the third child injured in the city this year trying to imitate Princess Huanzhu... [In related news, the US] President raised... \$[NZ]3.6 million... for Democrats at a star-studded Hollywood gala at the weekend after calling on the entertainment industry to limit the violence children see in movies and on television. “There is still too much violence on our nation's screens, large and small,” [the President] said in his weekly radio address to the nation... noting that experts estimated that by the age of 18 “the typical American will see 40,000 dramatised murders.” ...[then it] said all Americans needed to search for ways to prevent a repeat of last month's tragic massacre by two teenagers at a Colorado high school[, and]... also chided the Republican controlled Senate for approving a gun control measure... “riddled with new loopholes” and[inadequate] to... control firearms[, before asking]... the movie industry “to re-evaluate its entire ratings system... [and urging] movie theatre operators and video storeowners “to enforce more strictly the rating systems on the movies they show, rent and sell.”

...WITH the heat on between *One Network News* and *3 News*, television ratings figures have never been watched more closely. But did you know if 677,000 N[Z]ers switch on to *One Network News* during a particular week, or 246,700 turn on to *3 News*, those figures are based on data received from 440 PeopleMeters distributed throughout the country? That's a maximum of 1050 people aged [5+]... People who live in caravans, boarding houses, motels, hotels or institutions cannot be included. That also means if there are thousands of people watching the Melbourne Cup – in pubs or the TAB – it's not measured. PeopleMeters are installed in a home for a maximum of three years; the distribution... is based on census information. PeopleMeters, owned and operated by [the research company] which contracts the data to the networks on a daily basis, have been used since 1990. Before that, methods such as a personal diary system were used and in the days of a single-channel broadcast the then-N[ZBC] conducted its own research. PeopleMeters are a strictly quantitative measurement, used by broadcasters to assess and predict audience behaviour

with the aim of enticing advertisers... The essential information... is not the *numbers* of people watching a programme but *audience share*... [M]eters do not measure enjoyment of a programme and there is no system in N[Z] for doing that. In Britain, the BBC also measures “qualitative” ratings through the British Audience Research Board to gain feedback and information for schedulers – not advertisers. There are four components in a PeopleMeter: • A monitor which sits on top of every TV in the household to show who is watching and what signal the set is tuned into... • A VCR “smartprobe” which measures what TV programmes are taped by the household (the VCR info... is not used in the ratings). • A data storage unit and modem which collects the data from each monitor. • A remote control handset with buttons for each person in the home plus guests, so if four family members are watching... they will each push their identification button. The... system can only work if participants use it honestly. They must use the remote when they switch on and off. Based on “coincidental surveys”, [the research company] records a 91% compliance factor. But the system is not foolproof. The figures were distorted in a famous incident last year because the “bunny ears” on a PeopleMetered TV set in Northland were moved and pointed to another transmission mast, falsely registering the viewers were watching TV4 instead of TV2. The result: *Ice TV* had unusually high ratings in the 5 to 9-year-old demographics – as did the infomercials. Just that one household made the difference between a real reading of 0.9% and a false one of 2.7% – or 2709/8127 viewers. That’s quite an anomaly for advertisers. Calls have been made for an increase in the number of meters but as advertisers have pointed out, who would pay? The other question commonly asked is: do you know anyone with one?

...I am studying at Waikato University and recently discovered the way TV channels find ratings. For those who don’t know, about 470 households hold the key. Their TV set is monitored. However, you must be a house owner to be eligible for this. Already that draws out hundreds of thousands of people. I know lots of people who loved *The West Wing* and hate how it has been scrubbed, just because the people in those 470 households didn’t watch it much. A new method has to be thought up in order to have proper ratings and therefore popular programmes won’t get scrubbed or be moved to horrible slots... • *Your information is incorrect. Renters are included in the survey panel, which is supposed to be a ‘mini-NZ’ – covering the country’s demographic of ages, sex, ethnic groups, incomes and the like. New households are added to the panel as others are rotated off. The survey base is proportionally larger than say Britain’s but the organisers say even doubling the number of peoplemeters would barely reduce the margin of error which is 3[%]. In any event the networks [only] go with the peoplemeters as a measuring guide.*

...Time to take a stand on TV for the sake of our children... A year ago, when I was teaching media studies in the U[S], someone sent me an article about a conference on cultural imperialism at Canterbury University. Scholars and students from universities all over N[Z] had come together to discuss the issue of whether, having so recently shrugged off the colonial bonds, we were once again becoming colonised by the aggressive penetration of world culture. I was reassured to learn that we were judged to be in no immediate danger. True, the participants agreed, our media were now saturated with [US] programming and our children, most of whom had never played a game of basketball, were wearing Nikes... and Chicago Bulls T-shirts. Our choice of a Friday night take-out was more likely to be K[FC] than fish and chips. But it was all harmless fun, more damaging to the waistline than the national psyche. Uniformly, our academics came to the comfortable conclusion that, as usual, good old Kiwi ingenuity was shining through. N[Z] youth were not buying these cultural products hook, line and sinker, but were “appropriating them” – a fancy academic term for pirating them and transforming them for one’s own harmless enjoyment. You can imagine my surprise when I came home last year to find that, in my absence, the place had turned into a little banana republic. I can’t put it more bluntly. Or, as my 14-year-old son says: “What’s the point of coming here? We could be back in Ohio... and it’s cheaper there.” The Government is talking about the challenge of digital t[v] and the prospect of endless channels. There is a perception that the media is expanding, but the truth is that we are seeing less and less of ourselves... [– though tv] cameras may for the first time show the Youth Court at work, after recommendations for expanding media coverage... In the early 1970s, when I was working in the media here, there was a tremendous surge of creative energy and national pride. Today, the local media has been largely co-opted for the service of the global free-market economy. Why struggle to create a local identity when you can buy one for half the price? Why? Because our youth are at risk. The potent messages our children are receiving are absorbed at an age when identity-forming is of prime importance. Do media make a difference? I once worked on an ad... for the household cleaner Vim that involved smearing a bath with Marmite and wiping it off. Within a week the sales of Vim... doubled. I have been travelling around the world now for 25 years and I have no doubt that there is a direct relationship between the health of a nation and the percentage of positive, life-affirming messages in its media... Before I left N[Z], Kiwi pride was developing. Like many post-colonial nations we were in the process of defining ourselves by our differences – as in we are not British, we are not A[US]ns and we are certainly not [USers. 12] years later all the bets seem to be off. Our media have become saturated with cheap, bottom-of-the-barrel [US] reality and tabloid shows, and local production that mistakes sensation for sophistication. The cost is cheap but the price is high. In a fascinating experiment in media effects, [a]sociologist... surveyed parents of young children about their perception of danger from strangers within their community. Uniformly the parents believed that it was no longer safe for their children to play outside. Instead, they stayed isolated in front of t[v] sets watching scenes of violence and brutality that only reinforced their sense that the world was a dangerous place.

...We may have known about homeless children in Brazil, or girls forced to work as prostitutes in Bangkok, but the worldwide abuse, neglect and exploitation of children has many forms. If there’s one thing *Innocents Lost* (TV3 tonight) highlights, it is the myriad of ways in which the world’s most vulnerable citizens are robbed of their childhoods, their innocence and, in some cases, their lives... [J]ournalists... travelled 112,000km to 21 countries and spoke with hundreds of oppressed youngsters. It’s as bad as you could imagine and then worse. In Guatemala City... [the biggest threat to] street kids... apart from glue-sniffing, is the police who routinely torture and kill. In the Ural Mountains, 14-year-old boys... on remand... [or] serving prison sentences for petty crimes... are... kept behind bars 23 hours a day... in a former gulag... In Greece, children with disabilities are tied to their beds in institutions. Some are there simply because in traditional Greek culture a genetic defect in the family can harm the marriage prospects of siblings. In the United Arab Emirates, boys sold or kidnapped from Bangladesh are forced to become camel jockeys. Often they are... not given enough food – smaller jockeys mean faster camels. They will usually be working in the stables of a multimillionaire. When they grow too big they have to leave, but if they manage to get back to Bangladesh they will no longer be able to speak the language. Some were so small when they were taken that they don’t remember their families. Deeply affecting is the plight of many children in Africa forced into domestic slavery – because they have food and shelter they are ignored, but they lead lives of neverending work and misery. Most are beaten by their masters. In Ghana, girls are enslaved by priests of the local religion, who are the arbiters of justice. Many are paying for a crime in the family, sometimes generations before. They become a “wife” of the priest and must stay forever. Sexual abuse is rife. Costa Rica is now the destination for many [guys from the US] who want sex with young girls. Most seem to think the girls are prostitutes by choice but as one youngster, who is supporting her mother and 11 siblings, says, “Necessity wears an ugly face.” All of these countries are among the 191 that have signed the U[N] Convention on the Rights of the Child. Throughout *Innocents Lost*, children state articles of the convention, but even the most basic of its aims would have no meaning to the children interviewed. That is the question not asked by the documentary-makers. If the convention is so ignored by governments around the world, what good is it? ...[■ At 11.30pm tonight TV1 is screening] BEWARE: PICKPOCKETS AT WORK[. a o]ne-off British documentary about the world of pickpockets and the people whose job it is to stop these crimes. Former pickpockets divulge how they make thousands a day.

...Thousands of violent young offenders... [held in British] prisons and residential units... are being fed a constant diet of... video nasties to keep the inmates occupied... fuelling further generations of aggression. A British forensic and family psychologist... said video violence was dangerous when viewed by those with aggression – and often copycat – tendencies... [P]eople who had grown up in violent families had distorted ideas about physical confrontation and provocation. Video nasties merely reaffirmed and reinforced those ideas, justifying aggression as normal... “They bring

R18 movies to show these offenders, often despite their age, so the group is kept quiet... [These are] the most vulnerable people, already with distorted ideas, and... [we] wonder why they offend when they come out." [The psychologist] expected that many institutions, including those in N[Z], had a similarly flawed practice... [N]ew results from a British study... [show that some 64%] of... violent offenders preferred aggressive videos, compared to 11[%] of... non-offenders... One of the most important considerations from the research was the availability of violent images to those already known to have committed violent acts... The copycat syndrome was always a real danger. One offender had made a clawed glove, similar to the one on *Nightmare on Elm St*, which was found with blood on it. The victim was never found. Another violent youth picked up from a video the idea of slashing victims' Achilles tendons so people could not run away. "[The offender] thought it was a good idea that [the offender] had never thought of. That shows you the influence these movies have on some people."

...The entertainment industry loves to say it influences people... But when it comes to the influence of violence in some movies, television, music and videogames on behaviour, the [entertainment industry gets] prickly. In the wake of recent atrocities, the industry has turned typically defensive... [The chairperson] of Viacom International Inc, raised the battle cry at a conference of cable-TV professionals in June. "I'm outraged by a lot of what we hear blaming the media for what's going on... I don't think we have anything to be ashamed of." Now some entertainers and executives say this armour is starting to come down. In private, they are willing to talk about an evolving sense of responsibility. "I am more sensitive than a year ago because of what is in the air," says the head of one major film studio. "Not that I believe [violent entertainment] causes street violence. But there is validity to the idea that it is a contributing factor, along with guns." A recent Writers Guild conference devoted a panel to discussing the recent carnage. They called it "Guns Don't Kill People, Writers Do." This hand-wringing coincides with... [the release of a report by the] Centre for Media and Public Affairs... estimating viewers... in the US... see one scene of serious violence every four minutes while watching feature films and TV series[, plus increasing]... pressure from the U[S] Government and the public. In a new *Newsweek* poll, 78[%] of respondents said violence in the media deserved "some" or "a lot" of the blame for the recent mass shootings, a higher percentage than blamed the increased availability of guns (70[%]). The Federal Trade Commission is investigating the marketing of violent entertainment and games to children. "I don't want to take on Washington," says one studio head. "We've passed on three projects recently that were too violent." The Motion Picture Association of America is pressing all its members to staunch the gratuitous flow of blood. Beside rating films, the trade group approves all advertising, including trailers and Web sites... The board occasionally bounces ads for showing too much blood... The public's appetite for destruction may also be waning. In the mid-1990s... an orgy of blood... filled summer screens... But as the movies got dumber, audiences turned elsewhere. Only the cyberpunk hit *The Matrix* carries a high body count this season. Hip-hop... has taken a step back from the brink... today's thugged-out MC offends more with sex than violence. The makers of violent videogames are building in parental controls. Parents can now set the ultrabloody *Kingpin: Life of Crime*, for example, to run at a lower level of brutality; children need a password to change levels... This urge to purge violence could have an aesthetic downside. The violent benchmarks of the '90s – ...*Reservoir Dogs* and *Pulp Fiction*, the cinematically graphic raps of NWA – have been some of the decade's most bracing and relevant art. They were unsettling. But the alternative, so far, has been soulless sex movies like *Eyes Wide Shut* and... bland pop... Of course, the cleansing may not be permanent. "Everyone is pulling back for a while, letting the politicians claim victory over Hollywood," says one producer of art-house movies. "Then it's back to business as usual." The real reason there are no *Diehard*-style gunfests this summer, says... a box-office analyst, comes down to two words: *Star Wars*. No studio wanted to put its potential blockbuster against... [a] sure thing. The market for mayhem... is cynical. [A] French director... once said, in response to a complaint about gore, "No, that's not blood; it's red." After the recent brutal events, such nonchalance comes harder, both inside Hollywood and out. No one wants to look like the cigarette manufacturers, who testified that their product did not cause cancer. The public is calling the media carnage blood. And they are seeing red.

...DUE TO SOME VIEWERS' CONCERN ABOUT THE VIOLENCE IN THE REAL-LIFE DOCUMENTARY WHICH WAS TO SCREEN AT THIS TIME, IT HAS BEEN REPLACED BY OUR USUAL PROGRAMME OF FICTIONAL VIOLENCE, WHICH YOU CAN ENJOY WITHOUT HAVING TO CONSIDER REAL-LIFE CONSEQUENCES!

...Those "real" t[v shows of US] police raiding homes and making arrests which rate so well on N[Z tv] are in trouble. New... rulings mean their makers may have to can some of their more sensational footage. The US Supreme Court has ruled that the police violate peoples' privacy rights when they take t[v] crews or other journalists along... during arrests or searches... [T]he justices said that... "Even the need for accurate reporting on police issues in general does not justify allowing journalists to accompany police onto private property." The American Civil Liberties Union hailed the ruling and said the police must be guided by the Constitution and "not by the demands of the infotainment industry." The association backed a Montana couple who sued [the] Government... for violating the Constitution's Fourth Amendment ban on unreasonable searches... after... agents took along a CNN camera crew while raiding their ranch. Here in N[Z a] prominent Queen's Counsel and long-time civil libertarian... said the decision was probably a timely reminder of what was "fair and reasonable" in the circumstances. That in itself changed with public attitudes as to what they were prepared to accept and what was over the top... In the Montana case... agents were seeking evidence of the poisoning of bald eagles by [the couple] when they broke into [the ranch]... CNN aired the footage although [the couple were] later convicted only on a minor charge of improper use of a pesticide... But the justices ruled that [Montana's Government and agent]s... cannot be sued because it was not clearly established when the raid... occurred that such media access was unlawful... [P]roducers... expect the next push by the Criminal Defence Lawyers' association will be against street-arrest sequences... [T]he *Washington Post*, said the... Supreme Court... ruling... did not restrict reporters' rights to join police officers at work, or photographers' rights to take pictures in public places such as streets, parks and government buildings.

...It came to mind recently as I wandered through a couple of U[S] Supreme Court decisions that there is an occupation... totally beyond my understanding: t[v] programming. A hunt down the local ratings for police programmes that in my humble opinion are class acts is doomed to disappointment. There languishes *NYPD Blue* at 97, while *Homicide, Life on the Street* is notable by its absence from the top 100. Yet a programme based on pointing the camera in the right direction and hoping for action attracts viewers in droves. Our very own *Police* regularly rates in the top 10, sometimes reaching as high as 3. Programmers know best. That is why *Police* wins a 7.30 or 8 pm slot and the crafted police dramas I would have on at peak time usually coincide, for most viewers, with the call of the pillow. But *Police* and its genre raise some unsettling issues. Last July, its producer described the purpose of the programme as being "to demystify the work of police... and exalt the work done by them." That is very similar to the line presented to the... Supreme Court during hearings recently. Media organisations stated that their role in what are described as "ride-along" ventures with police showed the public "the difficulties and dangers facing law enforcement officers, the legal restrictions that confine their discretion, and the social ills they seek to redress." Cynics, of course, might suggest that such claims are a... load of rubbish... They might suggest that programmers have seen the ratings and have cried, "...give me more." ...[how]ever, the news organisations at the centre of the Supreme Court cases were not from the entertainment side of the industry. One case involved the *Washington Post*, the other CNN. In the first, police executed an arrest warrant on a Maryland residence. A reporter and photographer from the *Post* accompanied police... The scenario went something like this: the police and *Post* staffers turned up before dawn at the home of the parents of an alleged probation violator. The door was opened by their 9-year-old-daughter... her father, still in his underwear... was confronted in his living-room by three plainclothes officers with guns drawn. They forced him to the floor. His wife then entered the room, dressed only in a negligee. The... [*Post* staffers] took it all in, including photographing the [father] with an officer's knee in his back and a gun to his head. As it happened, their son was not at his parents' home. They were dusted off and left to contemplate the experience – and the pictures were not published... Late last month, the... privacy amendment won over the freedom of speech amendment. There has naturally been some comment suggesting that real t[v] will never be the same again. For sure, major

ethical questions revolve around the balance between the right of privacy and the freedom of the press. But I keep coming back to the picture of the innocent [citizen] on the floor with the gun to his head – amid all the pandemonium in that room. A good time to have media witnesses.

...The local t[v] juggernaut rolls on – okay, so maybe it's a Mini and it's... heading for the off-ramp, but let's enjoy it while it lasts. Speaking of things vehicular, one local production that has appeared almost unheralded is *Motorway Patrol* (7.30 tonight, TV2), a fly-on-the-cop-car series about the work of Auckland's officers out there every day on our busiest roading network. Now, most "reality" shows are the devil's spawn as far as I'm concerned. What earthly reason is there for watching helicopter footage of a runaway crim colliding with a truck on a [US] highway? None. It's not funny and it's not clever and I don't know who they think they're impressing... [A]nother annoying aspect is that they give the good ones a bad name. I... missed a BBC series last year called *Crash!* because I thought it was going to be a load of old reality rubbish. Turned out it was an excellent history of the car and its inherent dangers. In Britain, things have got out of hand with reality shows, with much controversy over faked scenes in so-called documentaries. Fines have been paid, film crews run out of town. I... thought *Motorway Patrol* would be another fruitless, low-cost exercise. What would it tell us? That it's busy on Auckland's motorways? (yes), that there are accidents? (ho hum), that there are a lot of jerks out there? (oh, boy...) And I realise that the rest of the country is probably sitting back in their comfy chairs and laughing as the traffic outside rolls slowly by on their wide, clean streets... But for Aucklanders, with our love affair with cars 'n' motorways, this programme is like a romantic dinner for two followed by a night at the hotel of our choice. We all know about traffic chaos and all of us have cursed the council and the horse it rode in on, but the system can't always be blamed for the level of human folly on display here. Lies, impatience, stupidity, drunkenness – usually... before the [first break for] ads. It's rare for anyone to say to the officers when they get to the scene of an accident, "I lost control," although one sorry young [driver] did last week after his too-heavy trailer jackknifed on the Southern Motorway. I think there was something in that for all of us... [Be] honest. And make sure your trailer's not too heavy for your car... Whether it's the influence of the cameras I can't be sure, but the officers remain remarkably calm as traffic backs up from Harbour Bridge to breakfast. One even took an irate father aside to tell him now wasn't the time to be "laying into" his daughter, who had just had a minor accident. You forget, too, that accident scenes are one great big whodunit when the patrol arrives. The confused, shocked and guilty may not reliably relay the events. Thankfully, and no doubt due to its 7.30 time slot, *Motorway Patrol* hasn't gone in for the serious accidents. There's quite enough of that next on *Middlemore*, which I've only managed to watch for 10 minutes through half-closed eyes. Maybe... there'll be... more peace, love and understanding out on the motorway. Now, where's that bus timetable...

REGARDING *Motorway Patrol*... on TV2 on Monday... I am absolutely disgusted with what I witnessed. I can't believe TVNZ had the audacity to televise such a meaningless act of cruelty to animals. In the very first segment they showed a cow being shot dead because it was supposedly a hazard to Auckland's southern motorway system. However, the animal made its way to a suburban cul-de-sac and was trapped, where I no longer believe it was a hazard. The police and the animal control officer found it necessary to shoot the animal. I would like to know why such an extreme measure had to be taken. Doesn't this country have tranquillising guns or ropes to lure an animal safely back to its home? I am very angry and upset with the police who joked about it being a steak dinner, and Animal Control who pulled the trigger on a defenceless, non-aggressive animal. With this on prime TV, it doesn't teach children a very good lesson on how to treat our animals. If gun-happy animal control and police officers can go around shooting them, then kids won't care about their welfare either. ANIMAL LOVER (Auckland)

...What on earth is TV2 thinking by [broadcast]ing *The Chimp Channel* at 5.30pm, Saturdays? Wasn't there enough cruelty to chimps with the tea parties of the 1960s? *The Chimp Channel* is blatant cruelty to animals. One chimp had two lit cigarettes in his mouth. Are we trying to give them lung cancer, too? What sort of message are we sending to children – certainly not respect for animals? I have written to the Broadcasting Standards Authority and urge others to do the same until this disgusting show is taken off... Regarding *Plastic Surgery Ruined My Life* (TV1...): Why is it in this country there is a law that if a [guy] exposes himself in a public place it is a punishable act yet if [the guy] undoes his trousers and exposes himself on TV in front of thousands of viewers it is not unlawful? It may be said that the excuse is that you have been warned. What an excuse. Is there one law for the country and one for TV1? What next will they show under the guise of a health documentary?

...Just yanked from TV in the States after a public outcry, despite sky-high ratings: *Confessions*, a show in which serial killers and rapists confess their crimes in grizzly detail... ■ [A]... film version of... *M*A*S*H*... was banned in US military installations for 'reducing war... to total idiocy'...

Back in the 70s, when [US] TV networks knew to a moral certainty what was good for the public, [a] comedian... built a routine... by lampooning "the seven words you can't say on TV." ...the networks still won't permit those... words to contaminate the airways... [but the] industry's once-sacred codes of conduct have been eroded by changing times and tastes... "People used to complain that television was aimed at the mind of a 12-year-old. Now it seems aimed at the hormones of a 14-year-old[," says]... Washington's nonpartisan Centre for Media and Public Affairs... [Incidentally, television] starts in US, 1939[; placed 9th on the]... TOP 10... Events of the 20th C... [1st = US] drops atomic bomb, 1945[; 2nd = people]... first walk on the moon, 1969...

[The mini-series'] \$50 million cost makes... *From the Earth to the Moon*... the biggest project filmed at Disney's central Florida studios... [In related news, r]eferring to her lead role in the \$US25 million... mini series *Joan of Arc*, [the actor] said, "It's the first time that somebody who is still a virgin will actually play Joan of Arc, queen of the virgins." ...One thing is sure, [the actor] has so far avoided the common career pitfalls of her peers. [The actor] hasn't starred in a formulaic teen slasher flick or a "cool" sitcom. The 1.75m-tall... [actor] is instead carving out a career as a sophisticated alternative screen figure for America's youth. So far [the actor has] witnessed the end of the world in last year's blockbuster *Deep Impact*... and can be seen in... *Eyes Wide Shut*... The 17-year-old was picked for greater things this year by *Vanity Fair* magazine in a story that looked at 14 actors whom the writers thought most likely to eclipse [the current brightest young stars] at the box office in a year or so.

...Film-makers have long had a fascination with Joan of Arc, for her story is compelling on almost every level. Convinced [it] was acting under divine guidance, this peasant farmer's daughter led the French army to a monumental victory over the English at Orleans in the 15th century, only to be betrayed by her king, captured by her enemies, declared a witch and burned at the stake at the age of 19. Pronounced innocent 25 years later, [Joan] was canonised a saint by the Roman Catholic Church only in this century... With the exception of Carl Theodor Dreyer's 1928 masterpiece, *The passion of Joan of Arc*, [the]... French film director... [- who made the \$NZ\$60 million-plus... film, *The Messenger: The Story of Joan of Arc* [- says it]... was dissatisfied with how film-makers have depicted Joan, including the recent CBS miniseries *Joan of Arc*...

WHO issues these 'poets' with their 'licenses'? ...the mini-series *Joan Of Arc*... did not make clear how carefully Joan was examined (physically, as her chastity was all-important to 15th century minds and doctrinally) before being entrusted with troops for Orleans. Regnault, the Archbishop of Rheims, disliked the business but "went along." When Joan became an English prisoner, the Duke of Bedford's wife ascertained that Joan was still a virgin... [T]he English did not arrange a rape so that [Joan] would be discredited... Oddly[; although]... France's greatest heroine and long reviled in England, [Joan] really saved England. France had four times the numbers and wealth of England so had the kingdoms stayed united there would be no English language today and[, perhaps, no soccer]...

The \$NZ\$2 billion bid by... BSkyB television group to take over... the "Red Devils"... could be overtaken by... the mega-rich Travelers Group – which is reported to be preparing a rival offer of up to \$2.3 billion... Whatever happens to Manchester United, [News Corp's tycoon] has certainly started something. Britain's Sunday newspapers claim Japanese electronics giant Sony Corp has targeted... Newcastle United in a \$730 million takeover bid.

...The \$2 billion takeover of English soccer club Manchester United [by a media tycoon] is all part of his grand plan to buy control of the television rights to the world's most popular sports, according to A[US]n analysts... News Corp Ltd would recover the high cost of buying Britain's most

successful soccer team in recent years by broadcasting their games across its BSkyB, Fox and Star television systems globally, the analysts said... [The media tycoon] owns about 30.5[%] of News Corp's voting shares and News Corp owns 40[%] of BSkyB... In March, News Corp's Fox television network bought the Los Angeles Dodgers baseball team... and in April bought a stake in a new Los Angeles sports arena that gave it the option to buy stakes in the Los Angeles Lakers basketball team and the LA Kings ice hockey team. Fox already owns 20[%] of the New York Knicks basketball team. In A[US], News Corp owns the Brisbane Broncos... and has stakes in four other rugby league teams... Up until the last two years, [the tycoon] has been largely content to negotiate with a sport's governing body to buy the rights to broadcast the sports. In January Fox paid \$US4.4 billion to broadcast the N[FC] games for eight years and Fox also has the local broadcast rights for 22 of the 30 major league baseball clubs in the U[S]. BSkyB paid £647 million two years ago to renew its broadcast rights for English soccer's premier league, and in 1995 News paid \$US550 million to broadcast rugby games played by the dominant Southern Hemisphere sides until 2005. But analysts said the escalating prices paid for these rights has forced [the tycoon] to try to buy the teams granting the rights to buy leverage in any negotiation.

...[in AUS this month, the tycoon's] heir apparent... was being feted as "the prince of print". His father... had just given the clearest indication yet that his eldest son would succeed him by appointing him senior executive vice-president of News Corp... putting him in charge of [US] print operations. "Congratulations," I say... when I meet him at his office in Sydney. "Or commiserations," [the son] retorts with mock gloom. As chair[perso]n and chief executive of News Ltd, the A[US]n arm of News Corp, [the son (aged 27)] is already working without let-up. [The eldest son] insists the appointment means nothing in terms of succession. His elder sister... is head of BSkyB and his younger brother... is deputy publisher of *The New York Post*. [Their father] is thought to be racing the three against each other... before deciding who should take the reins. [The eldest son] denies any rivalry... Would [the eldest son] like to succeed his father? "It is probably one of the best jobs in the world... but I have to say at the moment I am so busy that I am just taking one day at a time." ...[the eldest son] may have been parachuted into a role of extraordinary power by virtue of his surname, but... appears to have acquired the self-assurance to go with the position, albeit combined with his own maverick style... [The eldest son] has shaved his hair to within a centimetre of its life and his shirtsleeves are rolled up to reveal a tattoo of a rock-climbing gecko on his left forearm... [Furthermore, there] cannot be too many business executives who burn joss sticks in their offices... "I'm a bit stressed out and I need it to relax me," [the eldest son] explains. The stress is not caused by his new appointment... but by an attempted burglary at his home the previous night. A few weeks ago his garage was ram-raided and his BMW stolen. This time they were after his Ducati motorbike but triggered the alarm... [The eldest son] has a reputation for being as driven as his father. After a day in the office, [the eldest son] rushes to business dinners and then continues with international business calls until the early hours. Although [the eldest son] loves sailing and won last December's notoriously tough Sydney to Hobart race, which claimed six lives, [the eldest son] rarely has time for it these days... [Is the eldest son] missing out on his youth? "Sometimes I'm tired and I'm driving home on a Friday night to change for a business dinner and I see people my age going out to nightclubs and having fun and I think: 'Gee! What am I doing?'" Nevertheless, [the eldest son] cannot imagine life any other way. "Our [the children's] personal life and business have been so interlinked since we were born that it is really hard to say where one starts and the other finishes." [The eldest son] grew up in New York and remembers the tables strewn with newspapers at meal times. From a very young age, the children were drawn into discussions about layout and content and encouraged to express their opinions. "We were always having debates and arguments and if someone didn't storm off upset, then it wasn't a successful dinner... I was studying a lot of Greek philosophy – which was probably a mistake – and one of the key questions in Aristotle's ethics is: 'What is the telos, or purpose, of a human being?'" I decided it was to take on responsibility." So [the eldest son] began work in the A[US]n branch of his father's empire, fast-tracking through the ranks to become chief executive at the age of 24... "I enjoy the opportunity to lead and I don't take it lightly,"... Is [the eldest son] ruthless enough? "Ruthless isn't a word I use so much. Sometimes you have to get angry, but you don't have to throw things at people every day." ALTHOUGH [the eldest son] idolises his father and ends every telephone conversation with him with the words, 'Love you, Pop', [it] has no illusions about his father's popularity. "I always knew [pop] was controversial. You had to have a pretty thick skin from an early age about people slagging off your dad." Does [the eldest son] always approve of what his father's papers are doing, even the more sleazy or intrusive investigations carried out by his tabloid newspapers? "It doesn't bother me." ...[the eldest son] is engaged to... the A[US]n Wonderbra model who lives in New York. The couple met nine months ago and are planning to marry at the end of April... Once married they will divide their time between New York and... Sydney... Recently, [the father] has found his own life the subject of scrutiny after splitting from his wife and, it is rumoured, becoming engaged to [a 31-year-old... who works for [his] Star TV in Hong Kong.

...Heaven only knows how the Vatican looks upon the spectacle of [a]papal knight... canoodling in the autumn mists with an employee young enough to be his daughter. Such is the Church's regard for decorum that an embarrassed stammer was the only official response from the prince of the church who invested the media tycoon earlier this year with the highest lay honour of the church. But while Wall Street analysts and [the tycoon]'s own executives trade gossip about the media magnate's ruptured marriage and the new, much younger... [mistress, a spokesperson for the] Cardinal... of Los Angeles said only that [the tycoon] would not be required to surrender the papal order's sash and medal, which are bestowed on people of "unblemished character" in gratitude for their good deeds and generosity... But lesser lights in the church... [are upset]. "There was a lot of comment at the time – a quiet controversy – that [the tycoon] was not a suitable candidate," said a priest who witnessed the January 11 investiture ceremony at the St Francis de Sales church in... Sherman Oaks, where [the tycoon and his] wife... were both anointed members of the papal order... "...Her good works, character and generosity are of the first order. So I guess the deal was that if [the wife] became a Dame of St Gregory, [her husband] became a knight." Another witness recalled that initial misgivings about inducting [the tycoon] were heightened at the ceremony's end. It was then that [the tycoon], raised a Presbyterian, lined up with the faithful to receive Communion, which the church says can be given only to practising Catholics free from mortal sin. "It put the priest in a difficult and embarrassing position... What was [the priest] to do? Send an honoree back to his seat[and kiss goodbye to a potentially large collection plate]?" Perhaps the incident made an impression on [the tycoon. Perhaps it] repented. How else – other than hypocrisy – to explain a stinging editorial that appeared just two months later in his *New York Post* when[the US] President... a Southern Baptist, received Communion during a visit to South Africa? Assailing the President for carrying on with [someone] other than his wife, the newspaper railed against "scandalous behaviour" and cynical "photo-op spirituality." ...[While on the topic of the tycoon, a]n Internet company plans to offer 42... channels in competition with[News Corp's] pay TV broadcaster Sky from next month. The Auckland-based Internet Group, known as Ihug, has spent 18 months and \$2 million developing a satellite-based package called StarnetTV. Subscribers will be offered access to the Internet along with the television channels, some of which are already offered by Sky. Ihug has... 400 subscribers to a "fast" Internet service and hopes many of its 60,000 standard subscribers will convert across with the lure of the television channels. "We try to out-technology our competitors because we don't have the marketing power Telecom and Sky have," said[the group's] managing director... StarnetTV will initially broadcast six channels to the Auckland area from the Sky Tower. Another six... will be added next year along with 30 pay-to-view movie channels. The package will cost \$88 plus GST a month. Sky has signed... 40,000 customers for its digital TV service, which is expected to include 20 channels by the end of the year[at a cost of '\$9.99/week plus a \$299 joining fee', and now has '260,000 and 90,000 subscribers respectively for its aerial and satellite' services]...

This week's question... asks: "Why do I lose the picture on this new-fangled, state of the art digital Sky TV at the most inopportune moments?["] ...it's a sure bet most of us have felt the fury of "rain fade". It has an uncanny knack of happening in the midst of extreme tension, such as a prolonged All-Black attack camped just outside the opposition goal-line, or extreme emotion, that tragic break-up between star-crossed lovers that

has you reaching for the hankies. “Rain fade” occurs when the signal from the satellite, which orbits 24,000kms above us, cannot penetrate storm clouds or heavy rain – or any other dense atmospheric condition. As the signal is digital, any significant corruption of the signal will render the picture unwatchable whereas ‘analogue’ signals (UHF, VHF) can transmit the image with whatever effects it is hit by, such as a passing plane. Sky TV... says rain fade is a situation that is hard to fix, although the equipment does normally self-correct after... a few minutes... [P]hone lines at Sky hot up with irate callers every time a storm passes through, but these are normally from people who haven’t previously experienced the problem.

...Sky has lost its right to replay rugby World Cup matches after a TVNZ decision to screen all the games live. The rights to the cup have always been held by TVNZ, but the company is said to have stepped out of an “understanding” with Sky under which TVNZ would have shown live only the All Blacks games, the semifinals and the final... It has also withdrawn permission for Sky to run a special rugby channel for its digital service... [A spokesperson said Sky was disappointed but] had not lost any money with the new arrangement. “We’re just pleased everyone can see the games live.” TV One[’s] assistant programmer... said that no one in a position to comment was available last night.

...T[TVNZ] had no agreement with... Sky over shared coverage of the rugby World Cup, says the state broadcaster. The network had always planned to screen live all games in the World Cup competition and had no “understanding” with Sky over rights to minor games... “We have for the past four months been running newspaper and television ads telling everyone that every game will be live, free and uninterrupted on TV One,” [a spokesperson] said. Sky’s decision to can the coverage was a commercial one... [By the way, nine] New York... bars have the facility to take a live world cup feed[and, to] recoup their costs [will] charge \$40 per person.

...The... Welsh [Rugby Union has]... suspended its ticketing manager and his assistant after a series of blunders that embarrassed Rugby World Cup Ltd... [Observers are predicting that fans may be] locked out of... [some stadiums] despite empty seats inside... because of ticketing dramas... [The latest drama meant] 75,000 tickets printed for the second semifinal had to be pulped because they had the wrong date on them... [Sales for] the 67,000-seat Murrayfield [currently] average... 7000... That is not surprising with tickets at \$120 to \$150 and carparking at \$60 to \$100.

...*Thieving rat-faced dregs?* “IT IS said that rugby is a game played in heaven and unfortunately your love of it has landed you in hell.” – ...a... magistrate... fines four English[people] caught trying to sell fake World Cup merchandise.

...THE secret scandal behind rugby’s richest contest has been revealed. Rugby bosses will make a staggering \$210 million from the 1999 world cup. Yet children... are... [employed by] Indian factories... to make match balls used in the tournament... [for a company which] boasts a \$30 million a year turnover... At the Solo International factory in the suburbs of Jalandhar City... our reporters found the first link in the Gilbert manufacturing chain... Much of the work is done by illiterate children from... the lowest rung of Indian society known as the Untouchables... They work in appalling conditions... in slum workshops next to open sewers in stifling heat, their hands covered in calluses... stitching plastic laminate and cotton balls together. Others handle dangerous chemicals – including zinc oxide, sulphur and acids – as they prepare the bladders... “The chemicals are highly dangerous. Some of them will kill you.” The finished oval segments are sent by rickshaw to another factory, Savi International... Inside... one boy – who looked about 10 – was at the end of his 12-hour shift and struggling to stay on his feet. In the last three months Savi has made a million Gilbert rugby balls. [The factory’s owner] said: “It amazes me that the balls for the World Cup are made in India and we do not play rugby. But it’s God’s will that Gilbert has made me what I am – rich.” ...The children train for up to two years by stitching third quality, non-match and non-replica Gilbert balls for seven rupees – 30 cents – a day. A novice eight-year-old would struggle to complete two balls a day. For trained children, the going rate for stitching match balls is... 75 cents... Replicas are on sale... for \$150... Ironically some of the Gilbert balls carry a UNICEF logo which pledges the eradication of child labour... The boss of... Gilbert Ltd [claimed to be] unaware child labour was being used... and... has promised to investigate... [In local news,] TVNZ is considering legal action against Sky TV as its public battle with the rival broadcaster hots up. The network’s chief executive... confirmed yesterday that the... [network] was talking to its lawyers about Sky’s decision to strike a deal with TV3 for the free-to-air rights to prime rugby games... Another possibility it was exploring was whether Sky was operating as a monopoly under the Commerce Act... TVNZ was deeply concerned it was forced to spend huge sums on sports coverage that could otherwise be spent on local programmes “in a market where a single player can effectively have a monopoly position on key sports properties”. Sky has cited TVNZ’s plans to get into pay-TV as the reason it decided to snub the State-owned broadcaster over the rugby deal... Ironically, the public falling-out between TVNZ and Sky comes just a few weeks after TVNZ stressed the two players needed to stay on-side, for strategic reasons.

...New battle lines have been drawn in an escalating television war which will be watched with the fascination and intensity that are the trade marks of the best soap operas... Over the years I have received payments from TVNZ, TV3 and Sky. Currently I remain host of [a show] on Sky, a half-hour in-depth interview with top performers in the world of sport. I was involved in interviewing and presenting on TVNZ’s “Sportsnight” for three years while previously having appeared quite regularly in the “Sin Bin” segment of TV3’s Mobil Sport. All of which has given me an insight into the workings of the various television networks involved in sport in this country. Unquestionably, the decision by Sky to make TV3 its free-to-air broadcast partner for the upcoming domestic seasons of cricket and rugby is the biggest blow that TVNZ sport has ever suffered. Quite simply, without the rights to rugby, cricket and league, TVNZ sport is stuffed. Most N[Z] sports fans want to talk, view and read about their stable sporting diet. In winter 80[%] of that diet is rugby with league getting perhaps 10[%] and all other sports a share of the other 10. In summer cricket has a similarly dominant position. I’m not arguing the rights or wrongs of this situation. I am simply stating the facts. Ten years of taking sports talkback on radio have indoctrinated me totally in the twin belief “rugby rates,” and “cricket gets calls.” For variety, and the host’s sanity, my radio programme occasionally deals with other sports but sadly the moment that happens the talkback lines go dead. TVNZ retains the rights to th[e]... rugby World Cup, motor racing and netball. The first two of these events will carry them through to March and then for the first time they will face the reality that has very nearly crippled TV3 in the past. No rugby. The knee-jerk reaction by TVNZ... [of] complaining about a “secret deal” and “two overseas-owned television moguls deciding what the N[Z] viewer can watch” was predictable and pathetic. TVNZ has had the high ground for so long that it lost touch with reality. The moment TVNZ and Sky failed to agree on telecasting the World Cup rugby matches, a clear split emerged. TVNZ’s stated intention of getting into the pay television business meant this split quickly became a gaping chasm which is now... the size of the Grand Canyon... TVNZ aren’t about to throw their hands in the air and surrender. Once they have finished throwing insults they will run to the government seeking a change in legislation “in the interests of the N[Z] viewer” or some similar equally meaningless platitude. What they should do is sit down and accurately evaluate the N[Z] sporting scene, something they have arrogantly avoided doing for decades. In the short term three of the four big sports have slipped from their grasp. Now they have to think laterally and innovatively about what is left for them and get on and do the business. Some minor sports should be the major beneficiaries. Meanwhile TV3 have their first real opportunity to challenge the major free-to-air broadcaster. If they use their rights to rugby, cricket and league as a basis for novel, fresh and innovative sports programmes they will quickly gain a sufficient group of viewers who will then stay with them to watch news, current events and other programmes. And what about Sky? At the moment they are virtually in control of sport on N[Z] television. They would be wise to look back at how they got this powerful. If they become arrogant, lazy, bureaucratic and out of touch with their viewers in time they too will lose the No 1 slot.

...No doubt it’s hard for sports-obsessed state television to see the loss of rugby broadcasting rights – coming on the heels of losing cricket – as anything less than the end of civilisation as they have created it for us. But we may hope that when the tantrums are over someone within the organisation will notice that there is more to civilisation than sport... [A]s we witness what seem to be the death-throes of free-to-air sport on TVNZ, there’s a chance for state television to go cultural instead – if only to make use of all those redundant outdoor broadcast vans... Mothballing them seems senseless when other opportunities beckon. [The redundant rugby commentator] bringing us Opera Live from Aotea Centre, with [his

sidekick] down in the auditorium bringing us crowd reactions. Well, maybe not. But... [all that TVNZ]’s masterminds have to do to get an idea of what I’m on about is to tune into our very own free-to-air grown-up television channel... Triangle and... [the channel which] comes from A[US] – Prime. On Friday, for instance, Prime had a 65-minute documentary on [a musician that was] part of an on-going weekly arts spot. This followed the sixth part of a documentary series on the Great War... But it was the [art] show which got me all nostalgic for the bad old days when state television saw itself as a public service provider. Those were the days when the arts counted, when local performers were allowed to show their faces on the telly... There were even talk shows and current affairs programmes where topical issues were debated live. But I won’t go down that trail here. The [music-based] documentary jogged my memory back to the days when state television showcased our own national orchestra... [T]hese days we see an orchestra about once a year on state TV and that’s only as back-up artists for the Mobil Song Quest. Even that concession to culture is ruined by TVNZ’s decision to drown out the middle of each aria with chatter about the contestant from [the] host... We’re told made-for-television drama is prohibitively expensive. If so, why not film live performances from Sky City Theatre and Downstage and the Court Theatre? And why not the same for local bands? TVNZ... say they can’t afford it... [but] why don’t they put together the sort of sponsorship package for the arts that they organised for the America’s Cup and round the world yachting? [□ ‘The AUSn Broadcasting Authority, under pressure from the film and television industry, will appeal against a court ruling allowing AUSn commercial television networks to include NZ programmes in their domestic quota’ – ‘the AUSns are scared that their culture is under threat of improvement’]

...when asked why it screened *That 80s Show* (aimed at older teens) at 7.30pm then *Malcolm in the Middle* (aimed at younger teens) at 8pm, TV3 replied that ‘viewer numbers would be adversely affected if *Malcolm in the Middle* was shown first’!

...IT’S teenage television at its best – a case of back to the future for The Tribe. While the futuristic kids-in-power storyline has seen the show develop a cult following the fashion is catching on too. Next year... the producers of the hit TV4 show... plan to launch their own fashion label with a parade in Wellington. Modern tribal clothing like that on the show will be sold in a line of chain stores in February.

...N[Z tv] channels are rejecting locally made children’s... programmes that are earning international acclaim – and millions of overseas viewers... *The Adventures of Swiss Family Robinson* and... *A Twist in the Tale* are two series produced by Wellington-based Cloud 9. The company also makes *The Tribe*, which screens on TV3. [Cloud 9’s c]hief executive... said *A Twist in the Tale* had sold in Japan – “an almost impossible market to crack” – where it was screened by the state broadcaster. The programme, aimed at teenagers and young adults, pays homage to classic television programmes such as *Alfred Hitchcock Presents*... and *The Twilight Zone* in telling supernatural and paranormal stories which have an unexpected twist. *Swiss Family Robinson*, filmed in Wellington and Fiji, had sold around the world, including to the Disney network. [The chief executive said] it was “eccentric” that the programmes were not shown locally. Local broadcasters, especially TVNZ, should support and champion local talent. TVNZ’s head of content... said there was nothing wrong with the programmes, but they were not considered “must-have.” ...they were simply not the type of programming TV2 was looking to acquire.

...N[Z] sees less of itself on air than other countries. A survey measuring the levels of local content on television... – including news, drama and children’s shows – ...in 11 countries placed N[Z] last on the list... [L]ocal content accounted for 24[% of NZ television, just ahead of]... Singapore 24.5... while in Ireland the level was 41[, in AUS 55], in Britain 78 and in the U[S 90. The other]... countries studied were: Canada 60, Norway 56, Finland 55, South Africa 48, Netherlands 40... Seven of the 10 overseas countries surveyed had yearly licence fees similar to the system dumped by our Government last month[(funding will ‘come out of general taxes in future’)]. The fees ranged from \$51 a year in South Africa to \$303 a year in Britain. The researchers found that, unlike N[Z], European countries and South Africa had some form of regional content quotas, and a number of countries ensured diversity by having quotas for independent producers. The authors... said N[Z]’s small population and economic base meant we could never emulate public broadcasters such as the BBC. But our situation is similar to Ireland’s... The... head of the NZ Broadcasting School and co-author of the report, [which]... comes a decade after NZ[OA] began... said it would be timely to review how deregulation was working. The study showed N[Z] was alone in its hands-off approach to the industry... Authorities needed to consider carefully how they would handle the future... [because we are] in danger of being left behind in the multi-channel, digital age of television.

...[NZ’s] Culture and Heritage Minister... has promised to investigate introducing a quota system to bolster the amount of locally made television programmes... [during] a ministry review of cultural content on radio and television... [The minister claims to have] an open mind as to whether such a system would work. “I am very disappointed at the low level of local content[, although] am not sure the significance of local content is appreciated by N[Zers.” The minister]... blamed the poor showing on a historic degree of cultural cringe as well as the high cost of making local productions... An overseas drama could be bought by a television network for about \$10,000 an hour, whereas a local production cost up to \$500,000 a hour to make... [T]he managing director of South Pacific Pictures, welcomes the review. “Everywhere around the world, people prefer to watch their own product...” [Ironically, the promise of a review comes as g]overnment-established organisations are blaming each other for the plug being pulled on 57 years of broadcasting news in Maori on National Radio. The three daily Maori news bulletins had their final airing last week after finance ended by the... funding agency, Te Mangai Paho[, whose chief] executive... said... “We said we would provide some financial assistance for a period of one year only... For [others] to lay what has happened at our doorstep is mischievous. We gave \$5 million for 21 iwi stations while National Radio has \$22 million funding.” The programme development manager at National Radio... said that... it was looking at other ways to ensure the Maori language was retained. “There is now the opportunity to widen our current programmes with a bilingual format...” [A] veteran Maori broadcaster... [bemoaned] the loss... “It breaks my heart to see what has happened to what was a world-class service.”

...A survey finds younger viewers are turned off by too much Maori culture in programmes... Young viewers voiced their opinion of local television through a \$30,000 survey designed to help N[ZOA] develop a strategy for young programming... The results indicated... boys wanted action shows with violence and “overtly sexual girls,” while... girls prefer programmes that feature... “cute boys,” love relationships and murder mysteries[, plus]... the type of clothes they like to wear and strong role models... NZ[OA] said the survey showed where youth television was working and where kids were dissatisfied. It found most children were turned off by too much Maori language and culture in a programme. One teenage Maori boy said: “Too much Maori and I change the channel.” Both Maori and non-Maori said they wanted to understand what was being said... NZ[OA]’s television manager... said 27[%] of the funding authority’s budget went into programmes for children and young people. The authority wanted to find ways of doing more children’s programming, but this would require more Government funding or the television networks assuming a bigger share of production costs. Programme makers said the funding issue was causing them to lose talented animators, editors and presenters.

...Child’s play big business for TV... ANYONE who thinks pre-school children’s television is the low-rent end of the TV industry hasn’t seen the kind of dosh that the big overseas TV networks are prepared to pump into new shows these days. Take, for instance, the new BBC series, *Tweenies*, which debuts on TV2 on Monday. This new show, designed as a follow-on from the younger-age-group *Teletubbies* series, had a budget of some \$23 million for the production of 260 episodes. It is serious money by any standards, but a broadcaster as big as the Beeb is willing to put up that sort of stake knowing that the rewards, in terms of both ratings and merchandising, can be significant... Ironically, *Teletubbies* screens here on the rival TV3... and was accompanied both here and overseas by a storm of controversy about the Tubbies’ speech. That show answered its critics with its huge success with its target audience. “Children are much more sophisticated these days... The respect for the pre-school audience is growing all the time and they’re a lot closer to us than we’d like to admit.” When you see some of the stuff adults are prepared to watch, it is hard to argue.

...T[ele]tubbies helped... BBC earn a record \$220 m... from overseas sales of [kid]’s TV programmes last year. *The Tweenies* are selling even faster than the *Tubbies* and are poised to become... BBC’s most successful show ever. In [8] months since their launch, the cuddly stars... raked in \$45 m...

Is the BBC a meanie as the Tweenies go up against the Greenies? The Tweenies are the latest children's television craze, but behind the scenes an Auckland[er]... has accused the BBC of stealing the idea from her. [The Auckland] believes the BBC has ripped off her characters, the Galatic Greenies, and have fine-tuned them into their own show, the Tweenies, which is making millions world-wide. The graphic designer has sought legal advice about suing the BBC for breach of copyright – but the BBC has denied stealing her idea. [The Auckland] now faces an agonising dilemma. A successful claim could win her millions, but the cost of taking the mighty BBC to court would be enormous... [The Auckland had] approached the BBC to make a show based on her characters... The BBC wrote an encouraging letter back to her, explaining the corporation was assessing her proposal. They urged [her] to send in further material... so [the Auckland] sent in a full storyline to back up her idea, involving... aliens with a mission to clean up planet earth. About five months later, the BBC again wrote to [the Auckland], rejecting her idea. Just one year later... the Tweenies were launched and immediately won the hearts of little children around the world. And [the Auckland] claims the Tweenies... are a direct rip-off of her own idea... point[ing] out many similarities between her own characters and the Tweenies. 'They have the same wave, are wearing big basketball boots and their proportions are the same. If the Tweenies were wearing baseball caps, they would be the same... Plus the Tweenies talk about creepy crawlies, and my story has a character called Creeping One Claw. All through the episodes there are little things that sound like my story... When I first saw the Tweenies I recognised them straight away. When I saw they were from the BBC, I just felt cheated.' [The Auckland] had not patented her... idea, because it would have cost thousands of dollars. The talented Auckland[er]... first developed her idea... in 1996, and... hired an artist to draw the figures for her. In a bizarre twist, [a] celebrated... clairvoyant... warned [her]... that someone might try to steal her idea. '[The clairvoyant] said they would go world-wide, they'd be on TV... [However,] someone might steal my idea, but make a few changes to it first.' After this warning, [the Auckland] was careful about who [it] approached about her great idea and would get potential producers to sign documents before revealing her story. But [the Auckland] failed to take the same precautions when dealing with the BBC. 'I really thought I could trust the BBC. They seem above-board and an old institution. So I was quite relaxed about giving my stuff to the BBC.' [The Auckland add]s that of the people [it] sent her idea to, the BBC staff were also the only ones who did not return her pictures and stories. [The English-born Auckland] now believes that no-one will pick up her own idea for the Galatic Greenies, because they are too similar to the Tweenies.

...THE Battle of the Bobs has broken out on kids' TV. In the TV3 corner, wearing overalls and brandishing a hammer, is cute animated handy[person] Bob the Builder. Taking up the challenge for TV2 and sporting a pair of unusual square pants is cartoon character SpongeBob. Both are big hits overseas – SpongeBob in American and Bob the Builder in Britain – and have been snapped up by the rival channels. SpongeBob, on TV2's Saturday morning show Squirt, is a square yellow sea sponge who lives in a pineapple in the subterranean city of Bikini Bottom... [(this cheerful but)] innocent yellow sponge who works as a fry cook... makes me feel the world is not such a bad place after all... Bob the Builder, TV3 weekday afternoons, is a cheerful work[er] who lives in a cottage in an English village... SpongeBob has a thrill-seeking surfer-girl squirrel pal called Sandy Cheeks, while Bob the Builder has nice, reliable Wendy working in his office.

...ROBOT WARS[, in which t]eams compete to build remote controlled robots which then battle it out against each other[, rescues tonight].

...They're the consumers' champions and they're donning battle gear for another season but this time they have a rival... A second front has opened in the battle to defend the innocent consumer against dodgy dealers, sharks, shysters and cons. Until now, TV One's *Fair Go* crack troops were the only division in the field of television consumer advocacy. Now a bunch of rookies are muscling in on the action on rival channel TV3's show, *Target*. The *Fair Go* team have topped up for the occasion of their new season launch before. But 1999's look, with the combatants all decked out in military uniforms, is by far the most serious. [The *Fair Go* General... the show's most seasoned campaigner, says the dressing-up is just a bit of fun playing on the team's mission as "battlers who go out and fight for people." But yes, the image also has an underlying message. "The context is that it's the first time there's a battle on for the consumer slot." *Target*, with its product advice and hidden camera tests of trades[people] at work, takes a different approach from the classic *Fair Go* style of tackling rip-offs and seeking justice. Although it's pulled enough viewers since it began last month to make it a top-rating TV3 show, it's a babe-in-arms compared to the ever popular local telly institution *Fair Go*. Still, [the General] isn't about to dismiss it lightly... Competition may be the best guard against complacency but [the General] is proud of last year's efforts made when the show still had the battleground to itself. "There were so many good, solid, strong and interesting stories. We've had years with funnier stories, we've done some sillier things in the studio but last year we had really strong journalistic work." Others thought so, too. The show won international honours last year – a bronze medal for community service programming at an international film and television festival in New York. After 22 years in the business of exposing rip-offs, the formula is a tried and true one. But with the arrival of *Target* on the scene, will there be any changes this year? Evolution will occur, [the General] confirms, in the *Fair Go* manner of minor alterations. The set has been given a make-over and the theme tune's had a jazz up... And like all happening people and outfits, it now boasts a Website, which will detail the cases. Another new addition will be sub-titles for the hearing-impaired. Time to ask the perennial reporter question to the ancient and venerable. [The General] has been on *Fair Go* for 15 years. What does [the General] hold as the secret to its long-running success? "The most important thing is it's an honest programme..." ...And it's remained unpretentious, avoiding pomposity and bogus sleekness. True, the *Fair Go* philosophy is not corporate-mission-statement slick: "Investigation, confrontation, humour" but it certainly sums up its willingness to go out there and irritate the bad guys. Once the show has decided to sink its teeth into a cause, it keeps on biting. Justice may not prevail but this doesn't mean cases are shelved... The rules of battle have changed over the years, however. "The public relations industry is much more sophisticated, so companies represent themselves much better than they used to. It's much harder to get to the bottom of issues, it's much more controlled." But... the public are also more aware of their rights. "*Fair Go* is almost part of the nation's psyche. There's nobody who doesn't know what it is and how it operates. And people trust the show." As for the villains, [the General] believes the Kiwi sense of fair play means they can escape damnation – if they make a true confession. "Kiwis are very accepting of people who make mistakes if they sort them out..." [The General], who turns 50 this week... is more committed to the show than ever. The satisfaction [it] gets from being a crusader on a telly show of real social service value makes the job. "There's the dimension that *Fair Go* helps people. It's five people whose working life is aimed at sorting things out for the consumer – with the help of a powerful TV show, the only thing that can take on big companies... I... see no reason why it can't be around in 10 years' time, the ratings and letters coming in suggest it will."

...The *Fair Go* reporter... is a [gal] on a personal crusade to rid the country of a black knight... [It] has vowed to put an end to... [t]he... serial scammer[']s... shonky schemes... "*Fair Go* has revealed eight scams in the past year... and they just keep on coming." Top-rating *Fair Go* returns for its new season this week... and [the reporter]'s continuing battle with [the serial scammer] kicks off the series. It's become more than just another story for the 36-year-old award-winning journalist... "I can't believe so many people have been ripped off and yet the authorities seem powerless to stop him. It's heartbreaking to hear the countless stories of people who've lost money and have no way of getting anything back." *Fair Go* first exposed [the scammer] early last year with a scam selling dodgy Levis jeans. Trusting consumers were completely caught out... Next were fake Italian cosmetics, business shirts, laptop computers, home PCs and running shoes. The... consumers either got nothing for their money or sub-standard goods. [The scammer] has a history of scams dating back to... 1990... The flamboyant entrepreneur financed his high-rolling lifestyle with schemes involving bogus airfares and advertising. At one point, [the scammer fled NZ for AUS, where it] was soon up to his old tricks, conning Aussies out of millions of dollars in scams which ran from theatre tickets to dodgy Sheridan bed linen. When A[US]n authorities cracked down on him, [the scammer] headed home and set up shop again. [It]'s now been banned for life from trading in N[SW] but Kiwi consumers are still at risk. Just this month, another scheme, this time pushing digital cameras and Sony PlayStations, hit the market... As the list of scams grows, the show is

campaigning for stronger consumer protection against rogue traders. “Why should the [black k]nights of this world get away with ripping off people and not be held accountable?” asks [the show’s] new producer... “If it hadn’t been for *Fair Go* continually warning about these scams, more consumers would have been stung.” ...The *Fair Go* team is promising more bite this season. [The team]... will be joined for the first time by their new canine mascot... The Bouvier des Flanders is a great icon for the show... “...the kind of dog you’d wouldn’t want to mess with but with winning charm – the perfect consumer watchdog”. Benson will be on screen with the rest of the team, Wednesdays, at 7.30, on TV One.

...Would you leave a tradesperson alone in your home after seeing the shocking behaviour of some of them on TV3’s *Target*? The makers of the... consumer show *Target* hoped spy cameras hidden in homes to test tradespeople would uncover examples of shoddy work and unprofessional practices – and they did. But... also caught on film, to their surprise, were workers indulging in some dodgy – and, in some cases... deviant – activities while left to their own devices. TV viewers have been appalled at some of the things tradespeople... got up to... [– s]ome of the worst acts involved rifling through underwear drawers, sniffing knickers and masturbating... [–] and even industry leaders agree something must be done...

Power of ‘Awful Truth’ Truth No 1: Superman was the superhero who was supposed to fight the never-ending battle for truth, justice and the American way. Truth No 2: ...the lardy, scruffy bloke found on TV4’s *The Awful Truth* on Monday nights at 9.30, ain’t no Superman but... is a superhero. Truth No 3: There’s more truth, justice and the American way in this loopy, liberal journalist’s half-hour of t[v] than... well, than in anything since the last time [this guy] was on our screens. It says much that his new show – which is a cross between *Fair Go* and Monty Python... – seems so refreshing, surprising and edgy. What that means is... t[v]’s become such a predictable, sanitised medium that *The Awful Truth* looks and sounds more dangerous than it probably is. What it certainly is, is funny. From the title sequence, which declares one of the world’s five media moguls to be the antichrist... to the two short stories (which last week variously stuck it to Washington hypocrisy and a private health insurer’s duplicity), it has you hooting. But... the second story suggested the show has real guts. [The journalist] took *The Awful Truth* into bat for a young father... who was about to die because his health insurer, Humana, wouldn’t pay out for a life-saving pancreas operation. Using blackly satirical humour (including a mock funeral complete with bagpipes and mourners) and foot-in-the-door, ass-kicking reporting, [the journalist] delivered a universe of embarrassment to the company involved and a pancreas operation... For once, a studio audience’s cheering seemed appropriate. But if [the journalist] has a message “we believe in freedom of the press, we just don’t own any of the presses” – [it] also has a formula just like any other TV producer/presenter. [It] knows how much most of us hate politicians, big business and media manipulation. [It] knows, too, that they’re soft targets that don’t take much to make them look stupid. But what [it] really understands is the power of the camera. People might be able to ignore people, but people can’t ignore the unflinching eye of a TV camera. At least [it]’s using that power to fight the good fight. Truth No 4: *The Awful Truth* is awfully good, if only because it reminds us that t[v] can be a tool for good, not just a place for not-so-good entertainment.

...Why dive deep into the shallow? SOME Americans have a propensity to analyse mundane aspects of their culture and elevate them into “social signifiers” or anoint them with some lofty psychobabble. Mostly this is harmless stuff. Once someone starts applying paradigm shifts and pan-cultural symbolism to pet rocks or bulimic supermodels, you might as well let them get on with it. They’ll go away or grow up soon. [But some don’t – like, for instance, t]he mastermind behind that cornerstone of afternoon television for 35 years, *Gilligan’s Island* [who] says the reason critics and CBS executives didn’t like his show initially was because they didn’t understand the cast of seven were “a social microcosm” of America. At this you cry, “Enough, already!” A microcosm? Lemme see, there were elderly uppercrust sophisticates, an actress, a whitebread girl-next-door, a handsome young professor, the gruff but lovable Skipper... In [the mastermind]’s world view no blacks, Hispanics, veterans of foreign wars or Jews need apply, obviously. [The mastermind] offers his alarming opinion – with all the eyeball engaging certainty that it is fact – in a tedious documentary *Gilligan’s Island: Underneath the Grass Skirt* (TV3 tonight, 7.30). If the original show wasn’t insulting enough to your intelligence, then this look at the making of the show, the casting, the stars’ backgrounds, their subsequent careers, the movie-for-television and so on, certainly will be. It’s a long self-indulgent hour and much of what is said is utter nonsense. High ratings are interpreted as meaning critics who savaged the show were somehow wrong. (No, it’s rubbish, it’s just that a lot of people like it.) Or that it was somehow an escape from the nightly news footage of carnage from Vietnam. (Oh, c’mon, we’re getting close to it being a social signifier if we go down that route.) Yes, [the actress] was a serious actress who caused trouble on the set because [it thought it] was the star, and yes ...Gilligan... was busted for marijuana possession. [The actor] should have been arrested for wearing that silly hat into his 60s... If there’s anything worth sticking around for in this trivia programme about a trivial show (which ran for three seasons, it just seems like more) it is near the end when we are told [the mastermind] wants to remake the original series “with a multiracial cast.” I’m surprised [the mastermind] didn’t call that a paradigm shift.

...NOSTALGIC LOOK AT THE MONKEES IN the 1960s, a manufactured group not only piled up hit after hit on the record charts, but delighted television audiences with mad-cap adventures. The Monkees popularity was so high that at one time their albums were outselling The Beatles and Rolling Stones combined... [The cast] are interviewed about their life and TV career in *Hey Hey We’re The Monkees*, on TV4 at 8.30pm, Sunday.

...Has life been true bliss for the Aussie version of the Popstars telly-created music biz phenomenon? ...THIS WEEK, the five girls of Bardot have been entrenched in an inner-city Sydney rehearsal studio practising for their first full-length live concert. Their performance will be filmed for a one-hour *Popstars* special to be screened in A[US] tomorrow night and N[Z] on Tuesday week. The day after sees the release of their album *Bardot* and with advance orders of 100,000, it will no doubt, like their single *Poison*, rocket straight to the number one position on the A[US]n charts. When it comes to the pop charts, a “sure-fire hit” is often promised but seldom delivered. When it comes to *Popstars*, the formula is undeniable – wide TV exposure through a voyeuristic docusoap equals huge record sales. The N[Z]-born concept has proved once again it works but what Bardot have yet to prove, and what their N[Z] counterparts True Bliss are struggling to achieve, is longevity. But from the glowing praise Bardot have been receiving from a mostly fawning media, and in the opinion of their minders and masterminders Warner Music... Bardot could well be on their way to international, not just parochial, success. They are already counting the N[Z] success of the show as exhibit one. There’s also hot interest for the show and the band in South-east Asia, and the TV production company, Screentime, is flogging the show to other overseas markets. While the initial 13 episodes... have been extended by two more (the last episode will feature the girls travelling to N[Z]...), the show will wrap up within a month in A[US]. Then the hard work begins to keep the momentum going without the benefit of an average 2.4 million viewers glued to their TV sets every Sunday night watching the girls. Warner Music[s] managing director and *Popstars* selector... goes so far as to claim Bardot could single-handedly save the A[US]n music industry. “CD sales are low. We are experiencing a very soft market at the moment. What we needed was a phenomenon that brings people back into record stores. Bardot have done that,”... But the machinations were well in place to ensure the success of the *Popstars*. As well as Warner Music... looking after the music and management side, tabloid magazine *New Idea* was given exclusive access to the band to build the ongoing hype and Austereo (A[US]’s largest FM radio network) were also enlisted in the project, ensuring radio play. The objective was to have not only a successful TV show but a world-class music act as well. “I think we learnt from the N[Z] show. They were recording a song a day but we’ve had a lot more time to prepare the songs and spent time in the recording process to get the quality we needed,” says another of the *Popstars* selectors, now their manager... The ongoing juggernaut will include a national concert tour, a promotional visit to South-east Asia, upcoming TV specials, video package releases and licensing products, including a Bardot clothes label... The first album isn’t even in the stores but a second... is already being discussed with the likely inclusion of song-writing efforts from the girls themselves (they are signed to a three-album deal). “*Popstars* is a TV programme, but Bardot is an act and we are treating them in that way. We weren’t going to sign an act that wasn’t worthy... There was a lot more to the audition process than was shown on TV – we really assessed their character and... ability so we would get it right. But obviously for one we got it wrong.” [The director] is referring to [an] original member... who was dumped in

controversial circumstances. “[That girl] came across as such a confident person. We didn’t spot the problems until [it] started working and living with the other girls.” [The original member]’s ignominious departure may have caused a ratings surge with many media speculating it was staged deliberately, but [the director] felt it put the whole project at great risk... *New Idea* broke the story that [the original member] was caught pilfering money from the purses of the other girls. [The magazine’s e]ditor... stands by the decision. “It was the story and we had to report it. Our lawyers cleared it so we ran with it,”... While [the original member] denied the claims in a TV interview [it] has not sought to clear her name or take action against *New Idea*. In fact, [it] has used the incident to propel her own solo career, recording demos and scouting her own record deal. Which may be the point, or the irony, of the whole *Popstars* exercise. While the chosen five bathe in the glory, those who did not quite make the cut are utilising their brush with TV fame. The five who were not chosen from the final 10 have already formed their own band, Poptarts, and appear regularly on a weekly TV comedy show, *Good News Week*, to great acclaim. Rival record company Festival Mushroom Group utilised the TV audition process to scout their own band. They have brought together three of the hopefuls... (all early rejects), to form a group called Tatu. “We chose them according to their vocal talents, not their popstar looks or their dance moves,” says A&R[’s] director... Their first single, already recorded and released, is appropriately titled *Imperfect Girl*. It seems Andy Warhol was right. Everyone gets their 15 minutes of fame. Or, in some cases, their 22 minutes plus ad breaks.

...NEVER have I seen a TV show as unnecessarily cruel as *A[US]n Popstars*... When phoning some [contestants] to tell them they had not made it to the Sydney audition, the camera was kept on until the [contestants] cracked and started crying. The judges took a delight in saying humiliating things about the contestants. No doubt all the [contestants] were made to sign a form promising not to sue for defamation of character in exchange for the dubious honour of being allowed to audition. The judges were extremely hypocritical in pretending they were not judging [the contestants] on their looks when they obviously were, as classically goodlooking [contestants] who couldn’t sing were chosen over larger [ones] who could. Why pretend it wasn’t a beauty contest? NZ *Popstars* was bad enough, but this was shocking.

...*FLOP STARS*... THE girls from Kiwi show *Popstars* are reduced to singing in pubs while the brains behind the top-rated programme stand to make millions. Two of the TrueBliss stars... have been performing in a karaoke bar while spin-off versions of the show are sold worldwide. Producers are negotiating to sell the format to America and Europe in million-dollar deals. But [the karaoke singers] say they are living “on the bones of our arse”. [The smaller of the two karaoke singers], 21, said: “We were stupid enough to sign away certain things at the beginning because we wanted to be out there singing. We didn’t realise we were entitled to certain things. We feel like guinea pigs.” ...[the karaoke singers – plus the] other band members... – each signed a two-page contract saying they would not benefit if the show’s format was sold overseas. [The show’s p]roducer... sold the format to TV company Screentime, which then made the smash-hit Aussie version. [The larger half of the karaoke pair, also] 21, said: “We did feel a sense of betrayal... We thought [our producer] could have tried harder to sell us to A[US] rather than the concept. But, then again, A[US] wasn’t that interested in a Kiwi band. The Aussie girls get a hell of a lot more say about what goes on – which we didn’t get.” ...The A[US]n offshoot, Bardot, has been enjoying star status and members have been showered with gifts... [The smaller half of the karaoke pair said it] and her band members felt manipulated. “We were so easy and open, bending like a piece of Playdough,”... [But the singer] didn’t want to be bitter and would rather concentrate on recording TrueBliss’s second album later this year... [although the group is still] waiting for record label Sony to give them the nod – and the money – to go ahead. [The karaoke singers], who rent a flat together, [and] have been singing in a friend’s pub on Auckland’s North Shore... have spoken out against rumours circulating in the music industry that the label had dropped the group... and... w[ere] tired of media reports about divisions between the group and its managers... Besides... the... band members were now concentrating on TrueBliss as a group in its own right and separate from the *Popstars* documentary concept. “We are trying to be... positive, and sometimes we just want to tell the media to stop trying to ruin things.” ...Meanwhile, [the 3rd member]... has rejoined her old band[, and a 4th member has]... scored a job hosting TV2 music show *Ready To Roll*... [The 5th member] now lives in Dunedin where [it] had returned to hair-braiding... and... has married [an] All Black...

The All Black tour at the end of [next] year could screen live in as few as 24,000 homes after Sky was outbid for the broadcast rights by a pay television company a fraction its size. TelstraSaturn is expected to announce the deal today, while TVNZ says it is negotiating with the pay TV operator for the free-to-air broadcast of the test matches... Sky Television said it had pulled out of the bidding once the price rose to \$2.93 million for a package of the All Black tour, the six nations competition and the European rugby club championship. TelstraSaturn has 24,000 pay television customers, solely in its Wellington region, compared with Sky’s 392,000 subscribers for its satellite and UHF-based services. Under the existing setup, only those 24,000 TelstraSaturn customers would see the games live.

...Rugby fans will have to buy another “set-top box” if they want to watch [next year’s] end-of-year All Black tour live on television. TelstraSaturn, which has won the rights to the tour, is pinning its hopes on a joint venture satellite service with TVNZ to get the November games into more N[Z] homes. A decoder to receive the signal would cost viewers at least \$200. “We are examining with TVNZ a direct-to-home satellite platform which we hope to launch in April,”... The company’s 24,000 Wellington customers pay \$31.95 a month for access to its cable service. It plans to start an Auckland service late in the year. THE NZRFU yesterday expressed concern that many viewers would miss seeing the... matches live. TV One will screen delayed broad-casts of the test matches... Sky TV... pulled out of the bidding for the games when it reached \$3 million.

...Will... the cricket matches in Sharjah [be] too hot to handle? Sport can be a soap opera... say academics, but it is one melodrama that [gals] do not want their [guys] to watch. The battle of the sexes is increasingly a sporting contest. Couples in a new British survey have cited time spent watching sport on television as a major source of matrimonial upset. Half of those surveyed for *Total Sport* magazine said they argued with partners about the amount of time spent in front of the box, and N[Z] relationship guidance counsellors agree that sport-watching causes similar clashes here. [Guys] derived pleasure from watching sport because they felt included and thought of players as mates, explained... an Auckland University film and television lecturer. “...[guys] feel the same involvement with sports as [gals] do about soap operas.” But with up to 10 hours of rugby and nine hours of league on the main free-to-air channels on a typical winter weekend – and 24 hours on Sky Sport – [gals] are crying foul... [over repeatedly hearing: “]Not tonight, darling, the game’s starting...” ...[a spokesperson from the Guy]’s Centre said it was a common complaint that [guys] did not communicate because they were watching too much television.

...Watching too much television may increase the lifetime risk of teenage girls succumbing to breast cancer later in life, according to recent American research. The study of sixth grade girls found that those who watched more than 13 hours of TV a week and did less exercise had earlier periods than those who watched less than 9.9 hours a week. ‘There’s evidence that getting periods under the age of 12 slightly increases the risk of breast cancer,’... [the] executive director of the NSW Breast Cancer Institute... agrees... ‘Obesity also increases the risk of breast cancer. Although these are slight, there’s no doubt our children’s lifestyles are worrying when you compare them to lifestyles of 20 years ago. Back then, kids played on bikes, went on walks and spent a lot of time doing physical activities outdoors. But today, many of them spend a lot of time watching TV and video games, eating junk food and surfing the internet.’ ...● [It’s estimated that during its life the average person spends] 12 years watching television.

...In Rome, one is advised to do as the Romans. In New York, where emulating the ways of seasoned locals can sometimes land an un-schooled visitor in trouble, the safest way to take the measure of this city is to switch on the television and view what N[Y]ers view. This could be said of any culture, of course: sheep dog trials and darts tournaments probably tell you as much about how the Brits take their pleasures as *Baywatch* does about those things which excite American imaginations. But what makes Gotham City so different, even from the rest of the country, is the sheer

and bizarre breadth of offerings piped into your living room via the squat black boxes of integrated circuits that sit atop almost every TV. The shows make it to air because, many innocent years ago, City Hall insisted that the system's operator reserve a certain number of slots for "community access." What they had in mind were broadcasts of school meetings, and local worthies pushing uplifting causes in the name of the common good. What they... ended up with is rather different. Here is a random sampling of the stranger shows that aired at 2 am on N[Y]'s non-profit community stations on one day last week. Channel 72: An unchanging picture of a waterfall accompanied by religious music and an unseen narrator urging viewers to remember that extra-terrestrials are God's creatures, too. ("If you are involved in an alien abduction, please make every effort to have your host accept Jesus Christ as his Lord and Saviour.") Channel 69: A home shopping network for knife collectors... featuring a [gal] in a bikini wielding a battle-axe while her... co-host urged viewers to remember that a display of crossed claymores "adds a touch of class to the entry foyer of any home... even if you don't have a foyer." Channel 67: An overweight drag queen in sequins sitting on the toilet with a cat and ranting about herpes. Channel 66: Another drag queen, [this time] in a leather G-string and a pendulously breasted 60-something former stripper debating whether [the US President's daughter] is gay. Consensus: [The daughter] isn't but her mother might be. Channel 53: A [guy] squashing Barbie dolls with a lump of wood. Channel 51: An artist explains why [it] has festooned a hotel room with drippy, glistening stalactites of melted cheese. Channel 42: Grainy news footage, repeated over and over again, of a Japanese boar hunter being gored on a hillside... Channel 35: Graphic massage parlour ads, including one starring a fat, near-naked [guy] in a dog collar being whipped by a [gal] wearing a Nazi cap and not much else. Channel 34: Two gay and greying film buffs wondering why they've never read about [the former *ER* regular]'s girlfriends. "You should give him a call..." said the first. "[The actor] might have a soft spot for flatulent old fags!" ...In between, there were specialist commercial stations, each devoted exclusively to one of the following: romantic movies, science fiction flicks, recipes, faith healers and Latin American beauty contests. There is even a channel populated by jolly [guys] in plaid shirts hauling fish from sylvan lakes... [T]he philosopher and futurist... who predicted that [t]v would shrink the world to a global village... had it almost right: But it's hard not to conclude that N[Y]'s programmers regard every citizen as the village idiot... [Incidentally, actors in US] TV shows are being told to speak faster to make their characters appear more intelligent. Scriptwriters' have upped characters' word count... [a]nd producers... have hired dialogue coaches to help actors keep pace with the increased word rate.

...IN AN episode of *A Cook's Tour*, the series in which [a] swashbuckling New York chef... travels the world in search of the perfect meal, [it] sits down at a restaurant in France to tuck into what looks like a great steaming bowl of soup. After the first taste [the NYer] looks none too impressed, but manages to eat it graciously before his hosts. Just what the steaming slop was, I couldn't make out. "Oh, that was tete du veau... It is a classic French dish, and is usually a delicacy... God, I was so ill on that trip – the worst I have ever been..." It's quite an admission. After all, [the NYer] is unlike any other television chef... more likely to be eating a poisonous blowfish in Japan or roasted sheep testicles at a tribal camp in the middle of the Moroccan desert... [than to] pose prettily in [its] kitchen... creating picture-perfect dishes... *A Cook's Tour* is about going to the ends of the globe to discover the rarest, strangest, and often most unappetising cuisine possible... In an interview with Viva, the 47-year-old... executive chef for N[Y] restaurant the Brasserie Les Halles... says most of his roving culinary experiences are positive, although there are those [it] would prefer to forget, including the tete du veau moment. [The NYer] had passed the restaurant which featured the dish on its menu for three days before... din[ing] there. Each day the restaurant's sign declared the dish of the day was tete du veau, which meant the dish on special on day three was the same one as on day one, so the ill effects were... not surprising. Still, eating dodgy veal in France is nothing compared with dining on the still-beating heart of a cobra sliced from its chest in front of [the NYer], who then had to drink the bile mixed with wine... in Vietnam, a country [it]'s mad about.

...And now, [our roving] *Herald correspondent*... samples the lousy playing but saucy cheerleaders of... [the] XFL. One of the few joys of a cold, bleak American winter is that every year, just when the days are shortest and the weather at its most miserable, something nice happens – the football season finally ends. For couch potatoes who cannot get particularly excited about the spectacle of large [guys] in crash helmets running into each other, it is a blessing. At long last, after four months of saturation coverage, the TV networks are once again free to cover comprehensible sports – like basketball and, sigh, golf in warmer climes. Even BMX... racing, monster truck rallies or curling, which some of the harder-up cable channels broadcast when they can find nothing else to fill the screen, make a welcome change after the N[FL] season has reached its limp climax with the Super Bowl's annual gush of mush. Now, unfortunately, that has changed. Last weekend, amid a blitz-krieg of ballyhoo, the [person] who made professional wrestling America's highest-rated TV sport kicked off his own football league: the XFL – the X standing for nothing in particular other than canny marketing. Sports fans were warned to strap themselves into their recliners because, with the NFL season just concluded, they could expect a whole new ballgame. The [person] behind the XFL is... trying to put the full nelson on professional football, which would seem to be even more vulnerable [than professional wrestling] to a predator bold enough to tear up the rule book. To understand why, consider the Super Bowl, which sums up the sad state of the sport these days. It was won two weeks ago by the Baltimore Ravens, who walked all over the hapless New York Giants. But it would have been more entertaining to watch meat rot. For six ad-choked hours, commentators tried to inject some excitement into the interminable pauses, time-outs, penalty reviews and countless other interruptions that are the game's most prominent feature. During the course of the entire afternoon, the ball was in play for just 16 minutes. When the TV ratings were released, it came as no particular surprise that the game had drawn the second-lowest viewership in Super Bowl history. Even more discouraging for advertisers, who paid up to \$3 million for a 30-second spot, the number of [guys] under 50 who tuned in was pitiful. They are the people who drink beer, buy cars and use razors – the very customers all those sponsors wanted to reach. One week later, [the person]... who has described himself as P. T. Barnum's heir... unveiled his version of gridiron. On the field, eight teams with names such as the Memphis Maniax... the New York Hit [Guys] and the Chicago Enforcers tackled harder, played longer and talked dirtier than their NFL counterparts. The XFL's other big draw was bouncing on the sidelines, where [the heir] assembled cheer squads of silicon-enhanced strippers, who periodically ventured into the grandstands to be pawed and slobbered on by the crowd. If that wasn't enough excitement, giant screens also flashed the news that the cheerleaders would shower with the players after the game. As for the action on the field, anyone could tell the teams were made up of second-raters at best. There were dropped passes, waddling defenders, receivers who could not move fast enough to catch a bus let alone the ball. Will it matter? Probably not. After all, everybody knows [the heir]'s weekly wrestling show is a scripted put-on, but it has been pulling more viewers than Monday Night Football for most of the past three years. True, last weekend's ratings were not as high as [the heir] and NBC, which owns half of the XFL, would have liked. But there is plenty of time to whip up interest. Anyone for letting the cameras follow those cheerleaders into the showers? Bet on seeing it sooner than later... [] Four members of a Bulgarian state television camera crew have been fired because they were so busy watching scantily clad... performers in a nearby field... that they missed last week's historic total eclipse of the sun. As the moon closed over the sun's orb at the dramatic moment of totality... television viewers throughout Bulgaria saw nothing but a blank screen... The television chief issued a public apology.

...Red-faced Thai airport officials apologised yesterday after hundreds of people were shocked to see a pornographic video on televisions throughout Bangkok's domestic and international terminals. [The] airport manager... said heads were rolling after live coverage of Thailand's Southeast Asian Games football final against Vietnam switched suddenly to a 20-second clip of a... [couple] engaged in their own horizontal sporting event... [T]he official responsible at the firm which delivers the airport's television entertainment [has] been sacked and... seven others had... their pay cut... [By the way, US] television changed on the night of January 25, 1996, and it's only now becoming clear how much. It was a Thursday. The CBS network needed to schedule something for a... graveyard shift, so it aired an independently produced special called *World's Most Dangerous Animals*. The show collected film clips of horrifying moments from nature documentaries – an elephant stomping on a trainer, a bear attacking a [human], sharks swallowing prey. They built toward a punchline endorsed by People for the Ethical Treatment of Animals: that

people are most dangerous for what they've done to nature. In his Los Angeles office the next day, [a]Fox executive... scanned a printout that showed nearly one-fifth of people watching television the night before had tuned into *World's Most Dangerous Animals*. Those are hard numbers to ignore. That day, Fox ordered its own special of the most visceral video, minus the message. *When Animals Attack* aired four months later, and a television genre was born. Reality shows, which appeal to Hollywood's love for cheap thrills and the just plain cheap, are the hottest and most controversial form of television on today. Its makers are Hollywood's renegades. Shocking! Deadliest! Scariest! True! The titles of many reality shows scream like headlines in a tabloid newspaper. Some are more entertaining than the programmes: *World's Deadliest Swarms* or *When Good Pets Go Bad*. They are truly the first... shows created with the remote control in mind. What channel surfer would click away when... [it] sees a building collapsing or a [guy] putting his head in an alligator's mouth. The most dramatic segments share characteristics with forbidden fruit and horror movies: you shouldn't be watching, you want to cover your eyes, but it's too hard to resist. A car races through an intersection, trailed by police. An officer ducks behind his cruiser door to avoid gunfire. A soaked survivor dangles above raging floodwaters on a rope ladder suspended from a helicopter. A [gal], thinking no one is watching, urinates on the desk of her boss... People gather in living rooms with their friends to watch [Fox's] specials, just as they would a football game... "We're basically tapping into people's emotions – adrenalin, fear, excitement," [the executive] said. "I think it's what all of television does, whether it's fictionalised or whether it's reality." ...Fox is also familiar with *When Critics Attack!* No one admits to respecting the shows and they make many people angry. [An]NBC executive... called Fox's video of animal attacks "one step short of a snuff film." "They're reprehensible," said... a Temple University professor who studies violence on television. "They exploit the worst fears and nightmares of people." [The Fox executive claims to simply be] trying to entertain. "If I were doing news, then I would have some sort of social responsibility,"... Lines between news and entertainment had already been blurred by shows like *COPS* and *A Current Affair* when the present crop came in vogue. The roots stretch even deeper through the lowbrow entertainment of tabloids and freak shows. *Candid Camera* was a television ancestor, as well as those home video shows in which dad plays catch with his son and gets smacked in the head by a baseball. Now they've been turbocharged for the late 1990s. "What are the worst of these shows but a carnival barker trying to get you into the tent?...", said [the person] who runs Termite Art Productions in Hollywood. [It's] worked for years on the fringes of Hollywood, producing documentaries for MTV and VH1. Now, because of shows like... the upcoming *Redhanded*, where acts of revenge are caught on tape, [the person is] in demand. His company made *World's Most Dangerous Animals*. [The person responsible is] still proud of the show, and happy to deliver a progressive message when most prime-time television avoids politics. But [it's] distressed by what came next. "I feel like I opened up Pandora's box with *World's Most Dangerous Animals*... I've been trying to put it back in the box for the last few years." [The person responsible] doesn't even want to be described as a reality-show producer. Too many shows are exploitative, clips just designed to shock. [The person responsible] worries about shows desensitising viewers to violence. Shock them so much they'll become numb to it all – in real life and on television. "You've got to ask yourself what are the consequences of your actions,"... The omnipresence of video cameras has made life easy for reality-show producers. Cameras are everywhere. They secretly watch the movements of office workers, supermarket shoppers and ATM users. All of these cameras provide a mother-lode of material... The... programmes are pulled together from many sources... [T]he industry's leader... negotiated with prisons for video of inmate riots that [were] made into *Prisoners Out of Control*, then [worked] with security firms for the workplace scenes in *Busted on the Job*. Researchers employed by [the industry leader] comb the Internet for strange stories and investigate whether anyone has a video. Hollywood agents peddle compelling video for ever-increasing prices. The most frequent sources are the libraries of local news stations... Often, producers take news events – tragedies – and repackaged them as entertainment months later. [The industry leader] used footage shot... on a beach vacation that caught an offshore plane tumbling and crashing into the water. "When I started to watch that, I had no idea what was going to happen... A lot of television, with comedy or dramas, you know what's going to happen. This is what television isn't – it's unpredictable. It's more dramatic than anybody could write dramatically."

...[a s]hamed British TV star... is fighting back, throwing himself into getting fit again whilst staying in the world's most expensive hotel, the seven-star Burj al-Arab in Dubai. While there, [the TV star] spoke publicly for the first time since the inquest into the death of Stuart Lubbock in a late-night drink and drugs orgy at the presenter's mansion. [The balding presenter] gave an hour-long TV interview in which [the TV star insisted it] never gave the victim cocaine and claims new evidence shows the [victim's] horrific anal injuries were inflicted after [Stuart] was taken by ambulance to hospital. "I can't be any more sorry about what happened. But I am not responsible for his death. I know I can live with myself." A former drink and drug addict, the 50-year-old has been dry for 18 months and says [it] wants to make a TV comeback. But [the TV star who has separated from his wife and now has a NZ boyfriend,] accepts that may not be what the public wants saying, "I cannot force people to love me."

...[A] CORONATION Street beauty... has told of her five years of hell at the hands of a celebrity-stalker. Her ordeal was revealed as [the stalker] appeared in court on a harassment charge. Police had repeatedly warned [the stalker it] would be arrested if [it] continued pestering stars. His victims include seven other Street actresses... [The deluded stalker, who] refused to comment after being remanded on bail... believed that all the babes [it] bothered were in love with him. When police went to his home [the stalker] begged them: "Please don't arrest me, I won't do it again. I know I will be locked up this time." Manchester city magistrates heard how [the stalker] would wait outside the soap's Granada Studios for [the beauty] to arrive and then throw his arms around her and beg for a kiss... Earlier this year [the stalker] was accused of writing spooky letters to [the actress] who plays 13-year-old schoolgirl Sarah-Lou – and of stalking [the actress] who plays Torah Battersby. [Torah], 19, received a love letter... telling her: "I would die for you." [The 19-year-old] spoke out after 20 people from the soap held a meeting... to discuss their fears about [the stalker]. Police were told of their concern and confronted him at the Granada TV gates and warned [the stalker it] could face five years in jail unless [it] left his idols alone. Last year [the stalker] sneaked into the memorial service for Bryan Mosley – who played Alf Roberts – and sat leering at the stars. His most infamous moment came when [the stalker] lunged at... Spice Girl... outside a hotel. When confronted [the stalker] said: "The stars really love me. They really love the attention. I'm just an autograph hunter. I've been doing it for 21 years and I can't see what the bother is."

...A GAY TV show featuring explicit paedophile scenes has shocked Christian groups. [The]Christian Heritage leader... is calling for a boycott of TV4 series *Queer as Folks*. [The leader] also wants Christians to refuse to buy any products advertised during the show, which starts next month. *Queer as Folk* is about two gay friends from Manchester... and what happens when one gets involved with a youth and the other with an older [gay]. The pilot episode caused an up-roar when it screened in Britain because of its explicit gay sex scenes [involving] a 15-year-old boy... [AUSn TV] channels and TVNZ would not broadcast the eight-part series... But TV4[']s communications manager... said the series was an honest portrayal of gay relationships... TV4 would[, however,] be reducing some of the sex scenes to comply with [NZ's] broadcasting standards authority. [An authority spokesperson] said the onus was on the network to decide what scenes were appropriate. "But I am aware that our counterpart in England... received... complaints about the show," [it added]... ■ THE British public is just like *The Royle Family*, according to a new survey... 60[% of Brits] tune in for an average five hours a day... [Brits who] live to the age of 70... spend 20[% of that time or]... 14 years of their lives glued to the TV...

A *Reader's Digest* survey [found] that... characters... in the UK Channel 4's *Brookside*... live to an average [age] of just 24. That is 14 years younger than in Sierra Leone, the country with the worst life expectancy in the world... Most [characters] in... *Eastenders* can expect to live to 45.

...The slaughter of cast members on *Shortland Street* appears to have become a massacre, with another nine actors tipped to go from the top-rating show. The sweeping changes have occurred after maker South Pacific Pictures brought in an A[US]n consultant to assess the show. Th[e actor]... who has played Nick Harrison since the show first aired in 1992, will stay, along with [the actor] who plays ambulance officer Rangi

Heremaia. Also to escape the cuts [is the] Auckland actor... who plays coffee shop owner Waverly Wilson. One insider who was at the West Auckland studios the day the cuts were announced described the [redundant] actors as “quietly horrified” and said they would have difficulty getting the kind of regular, well-paid work that *Shortland Street* represented. They would also take a spectacular drop in salary from the up-to-\$3000 a week paid to some core cast members. Actors who play smaller, temporary roles receive \$325 a day. But those in front of the camera are not the only ones to get their marching orders – at least one storyliner was told to leave last week. Storyliners link up plots. One source said the new-look *Shortland Street* would be based “on the bones” of the programme that viewers had become familiar with. Most industry insiders... said South Pacific Pictures wanted to make the soap grittier and put more emphasis on the medical dramas at the clinic. The company yesterday denied that staff had been told the changes were being made as a result of a fall in ratings... [B]ecause episodes are filmed 12 weeks in advance[the sacked]... actors would continue to appear on the TV2 soap for a “considerable time.” ...*Shortland Street* is one of N[Z]’s most successful home-grown dramas, with about 700,000 viewers tuning in each weeknight. It grabs a healthy 15[%]-plus of the viewing audience aged 5 years and over and regularly hits 20[%] and over in the key 18-39 demographic.

...Here comes [the P]M... on a white charger promising change. “Quality TV” is on its way, and the “crassly commercial” can head for the door. We all nod sagely. That’s what we want. It’s time we had it. But do we agree on what this “quality TV” is? ...an American academic working at the University of Canterbury, is wary of the term “quality.” ...[the] author of a book on “tabloid TV” about to be published in the US, says that when politicians talk about “quality TV,” they are usually talking about ensuring that television reflects their own middle-class values and interests. The dominant definition of quality is also a generational one... and part of the furore over “dumbing down” is related to the growth of programming for young audiences. “Often, this is programming older audiences simply don’t ‘get’ – their kids understand it much better than they do. I do think a lot of so-called quality television is very good,” [the academic] concedes. “But I get very suspicious of the term when it’s used to discredit other forms of popular taste.” Entertainment verses education is a core part of... [the Broadcasting Minister’s] position on the “quality” issue. “Quality, whether in fiction, comedy or documentary, is what makes you stop and think, preferably from another perspective,” [the minister] says. “Have we had it in N[Z]? Some TV programmes have made me sit back and think, but there hasn’t been very much.” [The minister] also wants local programmes to cover a wider range of subjects. “We should broadcast a range of programmes that reflect our diverse interests... In N[Z], many people love brass bands. Yet rarely does such music get a slot on TV. That is what we mean by diversity. It’s not what I might watch. But it is one part of a range of interests – gardening, opera, science, history, architecture, mechanics... We also have to make sure there are programmes that tell N[Z] stories, play N[Z] music, feature N[Z] talent – programmes that celebrate who we are and which reflect us back to ourselves.” This may be music to the ears of TV2’s general manager, [who]... is among many in the industry who are waiting for a fuller explanation of what the Government might mean when it says TVNZ should produce more quality programming and less of the crassly commercial... Soap operas, for example, have not been regarded as “quality.” But [the academic] argues that shows such as *Shortland Street* should be, because they often cover crucial issues about personal relations, sexuality and race relations, and sometimes even public policy issues such as the privatisation of health care. Of course *Shortland Street*’s N[Z] origins and focus mean it is likely to flourish in the new environment heralded by [the PM and the Broadcasting Minister]. The planned TVNZ public charter will place a strong emphasis on N[Z] culture, heritage and artistic achievements... Many other academics have a more traditional view of what constitutes “quality,” and their views are more likely to match those of [the PM and the Broadcasting Minister. The]... head of the Masters of Communication programme at the Auckland University of Technology, believes most viewers can identify what is quality TV and what is not. “Most people can discern between programmes that have depth and merit and programmes that are merely distracting or formulaic,”... And most viewers could see the “inherent worth” of a... wildlife series as opposed to *Baywatch*. “Almost all know that from the wildlife series we’re getting more than distraction and entertainment. It’s TV at its most powerful – it teaches people something.” ...[the] chief executive of N[ZOA], also sees a difference between programmes that merely distract their audience and those that engage and educate. “[However, s]ometimes people do want to [just] ‘blob out’ – watch things that don’t require a significant mental commitment and involvement,” [it add]s. “They’re happy to sit back and watch... *Mitre 10 Changing Rooms*...” ...TV2’s top six programmes last year were *Dream Home* (local), *My House My Castle* (local), *Shortland Street* (local), *Veronica’s Closet* (American), *Motorway Patrol* (local) and *Weddings* (local).

...Just how low can you go with television programmes? *Who Wants to Marry a Multi-Millionaire*, shown recently by the Fox network in the U[S], must have come close. That was the one in which [a blonde], aged 34, was selected from 50 potential brides, who preened and paraded in front of a self-made millionaire who watched hidden from view. The [contestants] introduced themselves, were asked some *Dating Game*-style questions, after which [the blonde] found herself married to [a] San Diego comic and real estate developer, [aged]... 43. The show attracted massive criticism, a big audience and produced a stampede of future applicants to the Fox Website (which crashed). It didn’t last of course... [The] bride... went on a short expenses-paid holiday with her husband then annulled the unconsummated marriage... Pretty soon it emerged that a former fiancée of [the groom] had taken out a restraining order after claiming [it] beat and threatened to kill her. A... critic described the show as a cross between “spin the bottle and a cattle auction.” And the candidates who missed out... were also relieved when the millionaire hove into view on their backstage monitor. The room erupted with “Whew. God forbid it was me,” one contestant recounted. Such tacky shows (to be shown on TV3 [next Friday] at 7.30 pm) are blamed by the big [US] networks on the need to try to stop their audiences drifting to racier, no-holds barred offerings on a multitude of cable television channels... [Incidentally, AUSn] band Savage Garden... became an unwitting player in the fallout... from the American TV programme... [The] controversial show... used the US chart-topping Savage Garden song *I Knew I Loved You* without permission of the band. The group’s manager... says Savage Garden will be seeking absolute breach of copyright from the TV show [it] describes as “train-wreck television”.

...THE MADE-for-TV marriage that hit the headlines in the American *Who Wants To Marry A Millionaire?* hit the rocks not long afterwards. Cue for the *True Hollywood Story* team to enter the picture with... *The Million Dollar Mistake*, screening on TV3, 7.30pm Saturday... [The groom] proposed... in front of 33 million TV viewers. But the newlyweds returned from their honeymoon to a media firestorm, as restraining orders... surfaced, his status as a multi-millionaire was questioned and [the bride] came under fire for falsely portraying herself as a Gulf War veteran.

...TVNZ is preparing to give away \$1 million to a quiz show contestant in a local version of the international hit *Who Wants To Be A Millionaire*. The show, to screen on TV2 next year, will be made by Touchdown Productions, sources say. But the million-dollar question is whether the Government will consider the contest jackpot a wise use of company money under TVNZ’s new brief to make shows that reflect N[Z] culture. It is understood that TVNZ backed down from a \$1 million offer for the rights to the first All Black test match against France next month after [the P]M questioned the value for money. Sky is thought to have paid half the amount offered by TVNZ. TV3 confirmed it would screen delayed coverage of the... test... TVNZ is among the more than 70 countries that own the rights to make *W[ITBAM]*, which ha[s] screened in 30 countries. Contestants must answer a series of multiple-choice questions to move up the ladder of prizemoney towards the jackpot. TV One starts screening the British version of the show on Sunday week. Ten people worldwide have won the top prize: six from the U[S] and one each from France, South Africa, Portugal and Israel. The show screens weekly in the US and Britain, while A[US]’s Nine channel has screened its version intermittently...

IT began with a “vague idea” scribbled down on a scrap of paper. When it was developed and went to air, however, *Who Wants To Be A Millionaire?* created all sorts of television history. The British quiz show, which begins on TV1 at 8pm, Tuesday, was an immediate sensation, so successful that it has been licensed to dozens of countries around the world. At the heart of *Millionaire*’s appeal is the £1 million prize for answering 15 questions. The show doesn’t rely on celebrity guests or novelty stunts. More than 10 million phone calls from would-be contestants were received when the super-prize contest was announced. Up to 19 million viewers a night watched as hopefuls faced the challenge. It has been

acclaimed as the most successful quiz show in TV history. In the planning stages, however, the risks for the producers were huge. There was no money in the bank, contestants weren't to be seen until they arrived at the studio and there was an unprecedented decision to transmit the show on successive nights on prime-time television. It could have been a recipe for disaster, but the "vague idea" was a winner and has already gone into its seventh series.

...[someone who]'s newly rich... reckons [it] has never been much of a risk-taker. [It] may decide to change that, however, after the gamble of a lifetime paid off – to the tune of \$[NZ]3.4 million. A cousin of [the Prince of Wales]' special friend... the... 58-year-old garden designer... is the first to win the top prize on the hit... show *Who Wants to Be A Millionaire*, and... is still in shock over her new-found wealth. But as soon as the news broke, viewers criticised the win, saying... [her] background and wealth make her less deserving of the prize money. The [designer]... won her fortune... [by] correctly telling... that King Henry II was married to Eleanor of Aquitaine. T[he t]eetotaller... who kept her cool throughout the competition, clasped her hands to her mouth as... [the show's] host... told her [the answer was correct]... Throwing her arms around her tearful daughter... who was... in the studio, [the winner] said, "It's amazing. I feel wonderful, I feel rich." Her cousin... is... "amazed and delighted" at her relative's win... [The designer] rang the show's hotline 75 times in a bid to become a contestant – the calls costing \$3.40 each. "After a few weeks British Telecom called, telling me my phone bill had rocketed. But I carried on thinking that even if I won only a small amount it would pay the phone bill."

...*Major scandal*... The strange case of the *Who Wants To Be A Millionaire?* winner caught cheating is revealed in a Prime TV documentary... this week. Early this month, [a]British army major... 39... and [a]lecturer... 52, were found guilty of conspiring to defraud the show's makers, Celador International, of the show's top prize... The episode featuring [the major]'s... win was never aired because of suspicions all was not well. The cheque was cancelled the next day. The[y]... were arrested... after Celador alleged that [the major] had won via a "coughing code" with [his]accomplice... who sat in the audience and signalled correct answers... A[US's] *Who Wants To Be A Millionaire?* host... backgrounds the case in *Who Wants To Steal A Million?* (at 7.30pm Thursday...), followed by the first airing of the one-hour show featuring [the major]'s co-called winning performance.

...*Courting fame*... *STREET LEGAL* may have been screening only for a few weeks, but already [the]co-star... who plays rookie lawyer Tim O'Connor, is getting used to being recognised in the streets. [The actor] is pleased, however, that it is the more laid-back kind of public recognition that you get in N[Z], because having recently returned from New York, [it] has seen first-hand the kind of idol-worship that any showbusiness personality in America can suffer. "I watched the lead singer of... just an average band... walk through Times Square... and here's some little guy covered in tats with his little cap, swaggering through the square – and [it] was absolutely, totally mobbed. It was amazing." [The actor] concedes that N[Z] does not have the population to form such instant mobs, but... is still happy with the fact that even an international star like [the British singer of hit songs like *Angels* and *Millennium*] could walk down Queen Street recently with no more hassle than some friendly Kiwi greetings.

...[the] Government has gained the rights to film the first dawn of the millennium from Mt Hakepa on the Chatham Islands. Through the Millennium Office, the Government was the last cab off the rank in seeking the rights but the... [local] families last week struck a deal allowing host broadcaster TV3 to film from the mountain. The Office expected to announce the deal any day but family... [sources] confirmed a one-off payment of \$200,000... It allowed the landowners to negotiate deals for still photography and Internet images and explore with TV3 selling access to the hilltop to other television companies... The money is to be paid into the Bevan Lanauze Memorial Charitable Trust for the benefit of the 55 inhabitants of Pitt Island. Bevan... died in a fishing accident... [T]he money would be spent on education and community projects. There may be a few hitches yet. London-based... Millennium Adventure Company have said they have agreements giving them first access to Pitt Island. However, the... family consider those contracts null and void due to non-performance.

...TELEVISION One and Telecom don't want Kiwis to put their millennium messages in a bottle. Instead they'd much rather Kiwis put them on home video and send them in to TVNZ as part of the Telecom One N[Z] Challenge – and the sooner the better. Messages, memories or greetings will be screened as part of a marathon 30-hour broadcast from 6pm on December 31st to midnight on January 1 2000. As well as playing the home videos, TV One will have cameras around the country to capture the New Year's celebrations. TVNZ[']s chief executive... says the aim of the Challenge is to get as many N[Z]ers on television as possible. Ideally the message will be between 5-30 seconds long – and can be funny or serious.

...YOU WERE BORN TO BE ON TV. You have a talent that no-one else in the world possesses – An attitude that can't be manufactured, a skill that can't be taught, a quality that can't be reproduced. It is the ability to be yourself. Only you, a N[Z]er living right here, right now, can fill this role. Perhaps the greatest role ever created. To become part of the most ambitious television event of all time. The Telecom One N[Z] Challenge will take the lives of all 3.8 million of us and put them on screen in a world record breaking, live 30 hour television special. It's a celebration of who we are and what we want to be in the future. A snapshot of what we think and feel. A permanent record of our nation at the turn of the millennium. During the... night of the broadcast more than 60 camera teams will be in operation throughout the country, so you can participate no matter where you are. That's our challenge, to get every single N[Z]er to take part. It's a challenge we know you'll rise to. We'll give you more information about your starring role over the coming weeks, so, as they say in the world of television, stay tuned.

...Immortality beckons. The Telecom ONE N[Z] Challenge is giving everyone who sends in their Millennium home video wish the chance to win the starring role of a lifetime. One N[Z]er, or group of N[Z]ers will go down in history as being the first to welcome in the new Millennium on TV ONE. So when people ask 'Where were you at midnight on Dec 31st, 1999?' you might be able to say 'I was on TV, representing the whole of N[Z].'

...the Use[r]... who plays psychiatrist Frasier Crane, is the highest paid comedy actor in television history, reaping \$[NZ]1.97 million an episode for another three seasons of the show... *Frasier*... that won 16 Emmys in its first five years... [The actor] who plays Frasier's brother... is paid \$1.38 million an episode while [the]British-born actor... who plays Daphne, has joined the ranks of the world's highest-paid TV stars with... \$500,000 an episode.

...Just how much are TV presenters worth? In the case of [one presenter], the figure her agent suggested had network bosses spluttering over their salads in the restaurants of New York. "This can't happen – [it] wants more than we pay movie stars," said one executive. [The presenter] had been co-host of America's oldest and most-watched breakfast programme, NBC's *Today Show*, for 10 years when her contract came up for renewal. [The presenter] had been talking about the grind of early morning TV, the 5 am alarm, and how [it] wanted to spend more time with her two children. [The presenter also] had other suitors, from rival network CBS to... Dreamworks, which was promising to turn her into the next [US queen of talk. The presenter] could name her price – and her agent did. The deal agreed on, even by the inflated standards set by [US] news anchors down the years, is staggering: \$US65 million... over four and a half years. It makes the 44-year-old the highest-paid news journalist in the history of television, giving her £2 million a year more than... ABC's... acknowledged "queen" of current affairs... In television, only... [the] star of *Frasier*, and [two]talk show hosts... can match or exceed [her] new pay packet. As a transatlantic comparison, [an interviewer (r:p1684, ln10)] recently signed a three-year £3 million... contract with the BBC to present and produce programmes – a deal for which the BBC was heavily criticised as extravagant. There were no such complaints when NBC announced its agreement with [the 44-year-old, who said it] intended to stay with *Today Show* for the duration of the new contract – "God willing and the creeks don't rise". It was a typical folksy response from [the presenter], and one which left others to tackle the bigger questions raised by the deal: is [the 44-year-old] really worth it? Is any... journalist really worth... \$US16 million a year? The *Today Show* is about to celebrate its 50th anniversary. It was America's first network breakfast show and, for most of the past 10 years, by far its most popular. The programme has a familiar format, kicking off with news and current affairs at 7 am before shifting into a

softer mix of lifestyle features and celebrity interviews over the course of three hours... [The 44-year-old – who] isn't the prettiest person on the set, or the most illuminating interviewer... – ...shares hosting duties with... a handsome but bland talking head who in another life might have played the lead in a daytime soap[, plus] a newsreader... and a jolly, fat weather[perso]n... The most commonly used phrase to describe [the 44-year-old] is, "...so ordinary". Yet her life and career have been far from ordinary. Born into a wealthy family in Virginia, [it] graduated from university in 1979 and went straight into journalism, to the then-fledgling CNN, as a newsdesk assistant in Washington. [The assistant] got her first on-air experience a year later, when one of the newsreaders didn't show up. [The assistant] volunteered to stand in and, by all accounts, was terrible. "I never want to see her on the air again," her boss said. Undeterred, [the assistant] moved to an NBC affiliate in Florida, where [it] spent two years as a reporter, before moving to a Washington DC station where [it] won an Emmy award. [The reporter] landed a job as NBC's deputy Pentagon correspondent before graduating to the *Today Show*... when the programme was trailing its competitors in both influence and ratings. The turnaround was slow but inexorable. *Today* has led the morning ratings for seven years and [the 44-year-old] has won countless awards, notably for her campaign to increase awareness of colon cancer after her husband... died of the disease, aged 42. These days [the widow] is dating... a television producer... worth \$US600 million. But perhaps her greatest talent has been to subsume her obvious drive, talent and ambition beneath a veneer of ordinariness. "[The 44-year-old] is great because [it] is able to be the serious interviewer in one segment, talking to senators or the President, and to be Peter Pan in the next,"... said [the]... president of NBC News... after her pay deal was announced. As one of the NBC executives who brokered the deal, [the president] was hardly likely to come out and say the network had been roundly screwed. But the fact is that NBC couldn't afford to lose [the 44-year-old]. "The *Today Show* is... one of NBC's crown jewels. This was about protecting one of your crown jewels with one of your major talents," said... [the] producer of CBS's rival morning programme. Who knows, perhaps NBC did spend \$65 million for emotional and symbolic reasons, but most people doubt it. You don't need a business degree to work out that the real driving forces behind [the] deal were money and power. NBC had the former, [the 44-year-old] the latter. The *Today Show* generates an estimated \$250 million in advertising revenue for NBC each year, making it the most profitable programme in television news, if not the whole of television. A recent, admittedly unscientific analysis suggested that [the 44-year-old] was worth \$70 million of that \$250 million. In recent months, however, the gap between the NBC show and its competitors has been narrowing, largely because of improvements made by the other networks. For NBC to lose its star at such a critical juncture would have been damaging, financially and in terms of morale. No one is indispensable in television, but [the 44-year-old] has come close.

...TVNZ's newish newsreader... is off air... and the network is refusing to elaborate on why. Speculation on his future fronting *One Network News* is rife, though the company refuses to discuss the matter. It is understood that [the person] who stepped in last night, has been asked to be co-host for the week. [The newish newsreader]'s daughter... read the breakfast news yesterday and was expected to screen at noon, but left work suddenly shortly beforehand. Staff at the network have been told nothing... It is [the newish newsreader]'s second absence since [it replaced TVNZ's oldish newsreader last month]. Two weeks ago [the newish newsreader] was off air with what was described as a stomach bug. Rumours prompted TVNZ lawyers to warn the media against speculating that anything other than illness was behind his absence. Since [the newish newsreader] took the job, T[V] One's news ratings have dropped. Last week 52[%] of viewers watched its 6 pm show, down from the 58[%] in his first week... The drop is thought to have cost millions of dollars in advertising revenue... TV3's news rating stood at 28[%] last week, up from 22[%].

...TVNZ last night sacked... [its newish newsreader – who] has retaliated with threats to sue over the dismissal. The astonishing public brawl follows three days of silence from both sides... since controversy erupted over [the newish newsreader's] return to TVNZ – and the dumping of... [the oldish newsreader, who] looks set to return to weekday bulletins as the channel battles its unprecedented public relations and ratings disaster. In what some insiders are calling the biggest climbdown since its about-face on the scheduling of *Coronation St*, TVNZ is understood to be sending out an SOS for [the oldish newsreader]'s return. And the management jobs of those responsible for the... debacle might be on the line. "[The oldish newsreader] can add a couple of noughts to his salary package," said one source. "If [the oldish newsreader] came back the viewers who left us should come back with him." [The oldish newsreader] is refusing to be drawn on speculation [about his] return. "At the moment I am continuing to read weekend bulletins and doing my *Assignment* story,"... The strength of viewer reaction against [the oldish newsreader]'s sidelining has surprised TVNZ staff and [the oldish newsreader, who] said the support... was "fantastic and I'm grateful for it"... Asked if [the oldish newsreader] would relish the chance to rejoin [his former newsreading partner, the oldish newsreader] said: "I will think about that when I'm asked." But colleagues say TVNZ has no choice but to recall him. They say [his former newsreading partner] cannot be teamed with a younger anchor on a permanent basis. "You look at news teams around the world – it's always an older [guy, younger gal] tandem. You can't have an older [gal] with a tomboy," said one. [The newsreading partner] is the linchpin of the bulletin and would not be too happy for her partner to highlight her as older." [• In 1981 the former newsreading partner and the newish newsreader were presenting partners, fronting the regional news programme *Top Half*. Since the birth of TV3, at 6pm weeknights, the pair were broadcast into the country's living rooms from different channels. The pair had an "unwritten rule" not to discuss their respective channels but they couldn't help a friendly dig now and then. "My old *Top Half* partner would ring me up and say, 'Why did you lead with that rubbish about the royal family? What a load of garbage,' and I would have found out TV One would've led with it but didn't have the pictures in time." In 1995 the newish newsreader was excited about his job, laughing off rumours it could be joined by a presenting partner – "for now, I'm a one-guy band.""]

...TV's dream team became a nightmare... A report last week said [that TVNZ's newish newsreader] felt cold-shouldered by colleagues angered by the treatment of... [the oldish newsreader. "The newish newsreader is] used to being adored", said [one] source. But insiders say they do not believe the team at *One Network News* would be overly and consistently hostile towards [their newish newsreader. Others say the newish newsreader] was never happy in the new job, for which [the newish newsreader] is said to receive a salary of \$400,000, and this translated to his demeanour in the newsroom... [They say that the newish newsreader] found the more journalistic role of the *One* anchor's job beyond him. [The newish newsreader] has never trained as a journalist, but was required to do more of his own writing at TVNZ... [and] control business graphics on screen... The... [newish newsreader] has also been shocked and depressed by the reaction of viewers, who have voted with their remotes, dropping the news' audience share... from about 65%... Friends and family have been reported as being concerned for [the newish newsreader]'s health over the pressure to perform in the face of the plummeting ratings... TVNZ started chasing [the newish newsreader] for its 6pm news slot as far back as 1991 when [the] then-programmer... pushed for him to move from the late-night news to pair with [his former *Top Half* newsreading partner – and oust her oldish newsreading partner. However, the news] and current affairs boss... got [TVNZ's] chief executive... inside in his fight to retain [the oldish newsreader. TVNZ's former late-night newsreader] was wooed to TV3 in 1994 – and a star was born. [At TV3 the newish newsreader] went on to win Best Presenter gongs at the Qantas Awards and the *TV Guide* Film and Television Awards. His relaxed professionalism and off-the-cuff humour also won him scores of fans... [Unfortunately, however well-liked the newish newsreader] was at 3 *News*, the ratings remained static – around 5%. Last February, TV3 decided to lift its game by pairing [the newish newsreader with a co-anchor. The newish newsreader] quit the day before the new partnership was due to go on air... reportedly reluctant to be part of a two-headed act because [the newish newsreader] was "upset that TV3 would concede its only point of difference" with *One Network News*. Legal discussions followed over [the newish newsreader]'s breach of his employment contract, which was eventually settled out of court last July. The doors began to creak open for [the newish newsreader]'s return to the mother ship – and [the oldish newsreader] to be cast out as the alien. But his arrival... [back at TVNZ exposed its viewers'] strong sense of loyalty and fair play.

...AN EXHAUSTED [newsreading anchor] has broken her silence over TVNZ's presenter reshuffle, saying the last few months have been among the worst in her life. "We have all suffered terribly," [the anchor] said of the three month public furore... [The anchor] was speaking out exclusively to the *Sunday Star-Times* in an effort to end the "dreadful misinformation and misconceptions" that have dogged the affair and to pay a public tribute to both her screen partners. "I want to lay some ghosts..." To be fair to TVNZ, [the anchor] said, its intentions in reuniting her and [the newish newsreader] had been good. "They wanted to get on board someone who was so popular and to keep [the oldish newsreader. 'The Top Half partnership'] kept coming up in their research. They genuinely thought this was what people wanted and were blown away when it wasn't the case." ...[the anchor has] tried to support both [her newish and oldish newsreading partners] through the turmoil – as they had supported her in the past. "I love them both dearly... I owe [the newish newsreader] a huge debt... [The newish newsreader] helped me enormously when my confidence was at rock bottom when I was on *Top Half* [TVNZ's Auckland regional news service from the 1980s], while my newsreading partner under the nationwide news format (which replaced the regional format)... and I were mates at the NZBC in Christchurch a long time ago. [The oldish newsreader] was a surrogate godfather to my daughter... and [the newish newsreader] is godfather to my son... I admire him for turning up night after night and enduring a barrage of hatefulness and criticism,"... But... "I would really like to correct that impression [that the newish newsreader] had a hard time from other staff. People bent over backwards to make him welcome..." [The anchor] had been in touch with [him] since his sacking last week and [said the newish newsreader] would "get through this"... [As for the oldish newsreader: "That person] has performed brilliantly for so long and has had an unwarranted hard time from people who've said [the oldish newsreader is] lacklustre and no-talent; really cutting, ruthless stuff – just a bunch of nasty people venting their spleen for no good reason. Maybe they thought [the oldish newsreader] was an easy target because [it is too] unassuming and shy... [to fight back." The anchor confessed to being] deeply hurt by criticism of her as "nice", too emotional, weak or "flim-flam". "It does hurt enormously and I don't think I will ever come to terms with that sort of thing. However, if you are out there you have to expect some people will loathe you on sight." ...[the anchor also] wanted to bury the "media myth" that [it] was the linchpin of the presenting team. "I do not accept that I have been the star. We are a team and you are only as good as your partner."

...[NZ TV]'S newsreading phoenix... hesitated before agreeing to return to his old job. [The oldish newsreader], who started back on primetime bulletins last Monday, after six weeks in the weekend wilderness – and immediately triggered a long-awaited ratings surge for *One Network News* – says it was not an immediate decision. "In my mind I had moved on... I was looking ahead..." But ultimately... it was loyalty to TVNZ, the viewers who supported him, and his colleagues, that brought him back. [Didn't the oldish newsreader] feel the urge to ratchet up his contract or rub their noses in [his bosses'] embarrassment – make them suffer? "Not one little tinsy bit. There is no point in being bitter. This was a business decision of theirs and I never took it personally[– though] I thought they were wrong and they have been proved wrong. They have admitted they made a mistake and I accept that in the spirit in which it was said." And yes, [the oldish newsreader] IS getting more money than before. But no, it is nowhere near the "one or two noughts" some colleagues suggested... could [be added] to his package... Some sources suggest, however, his package reflects the fact that TVNZ bosses have been forced to recognise that [the oldish newsreader] – for years regarded as lacking the X factor – now has real star status.

...TVNZ's board is gloating about the organisation's first boost in total audience share for its two free-to-air channels... since the industry was deregulated... more than a decade... [ago, as rival] *3News* has continued to suffer from [the oldish newsreader's return to *One Network News*]... TV One's overall viewer share now stands at 57[%]. In addition... the overall performance... has soared. Yesterday, the company announced that its [annual] profit... rocketed to \$45 million... An improved profit will also see the Government get a bigger dividend this year... A final payment of \$21 million will take the... total dividend... to \$31.5 million. It was \$21 million in 1997.

...[NZ's PM] lashed out at media and Opposition "double standards" as [the PM] faced pressure over [its claim that a] broadcaster... received \$1 million when [the newish newsreader] left TV One. [The] Labour leader... accused [the PM] of turning Parliament into a farce as the [PM] dodged questions yesterday about why [it wanted the newish newsreader]'s settlement made public but would not disclose the amount paid to [the] former Fire Service chief executive... [The PM] was forced to apologise on Tuesday for [its claims about the newish newsreader], who is still negotiating with T[TVNZ] over his departure... [The newish newsreader]'s lawyers requested an apology and discussed the wording with [the PM's staff. The PM] told Parliament yesterday that [it] had made the point that the same rules should apply to exit packages for all staff of [SOEs]. The Government was going to "fix" the issue of exit payments for state sector managers and directors, the details to be released in three weeks. [The PM] had earlier said [that it] got the detail regarding [the newish newsreader] wrong but was right about the principle that... TVNZ and R[NZ]... journalists... should have their employment deals subjected to the same scrutiny they demanded from others... [The PM's] comments came as [the] J[Tourism Minister] confirmed that two former Tourism Board directors would repay \$340,000 in unlawful exit payments which they received last December – but would then receive new, lawful payments... [B]oth... had suffered losses "and it seemed reasonable to negotiate a fair settlement to address those costs." A settlement would save taxpayers the cost of a legal battle... [The minister] expects to make public within days the settlement... [A TVNZ spokesperson] could not say whether details of any payment to [the newish newsreader] would be made public once the affair was settled.

...You can always tell when [PM]s are in trouble. They start blaming the media. Then they start blaming state-owned television and radio for not toadying to the Beehive. [The PM] was displaying these symptoms during another awful week. But the best indicator of how much [the PM] is struggling were the glum faces of National colleagues in Parliament yesterday. They sat in silence, lending their leader no support and leaving [it] to wilt in the face of Opposition ridicule during [the PM's] bizarre question-time performance... [The PM] tends to self-destruct at the most crucial moments. On Monday morning [the PM] reshuffled... cabinet, joking that if there was any more trouble of the kind bedevilling [the] Government in recent weeks, "I'll want to know why." By late Monday night [the PM] had created sufficient trouble on [its] own by wrongly alleging that [a newsreader] had picked up \$1 million from T[TVNZ]. That mistake ruined an otherwise perfect performance on *Crossfire*, T[V] One's new current affairs programme. Beehive speculation is that[, being *Crossfire*'s debut, the PM] simply got carried away. [The PM] has suffered previously from overconfidence in the heat of battle... The problem is that having stumbled, [the PM] finds it difficult to get off [its] high horse. In the belief that attack is always the best form of defence, [the PM digs itself] deeper into the mire, a weakness Labour happily exploits. Yesterday's example was [the PM's insistence that the newsreader] disclose to taxpayers how much [it] eventually gets from TVNZ by way of any compensation. But then [the PM] u-turned and refused to tell Parliament how much [a former chief executive] got as a golden handshake when [forced to] resign... from the Fire Service... That [the PM was breaking its] own rule and thus undermining [its] own argument did not even dent [the PM's] self-righteousness.

...Parliament's Speaker has thrown out another privileges complaint by Labour against the P[PM]. It was the second related to [the PM's] erroneous claim that TVNZ had paid out \$1 million to [a] newsreader... Labour claimed that a personal explanation read [by the PM] to the House on Tuesday contained errors and that [it] misled the House. [The PM] said that at no stage had TVNZ contacted [it to verify its] version of events before running a report on Thursday last week saying [the PM] had privately said [it] made up the figure of \$1 m... The story had been run on [Independent Radio Network] bulletins earlier in the day. [The PM] was asked by many parliamentary reporters at a press conference an hour before the TVNZ *One Network News* at 6 pm whether [it] had, in fact, said [it] made up the figure. No fewer than 15 times [the PM] refused... simply saying [it] did not intend to comment further... Parliament's Office of the Clerk says that in the past 40 years, only six cases involving allegations of deliberately misleading the House have been referred to the privileges committee and none has been upheld. Meanwhile... the country's highest-paid broadcaster, has received a pay rise of... \$140,000 from T[TVNZ]... His latest pay rise, which brings his income from TVNZ

to nearly \$770,000, is revealed in TVNZ's... annual report. In it, the company records the salary bands of its top staff but not their names. However, it is no secret [that the broadcaster (aged) 48] is the company's top earner... [A] TV One news presenter [(r:partner, p1698, ln41), aged] 47... is believed to be the country's second highest paid broadcaster earning between \$500,000 and \$510,000. Industry sources suggested TVNZ offered [its highest paid broadcaster] a pay rise in part to dissuade him from seeking the... \$91,570... Auckland mayoralty – a move that caused much internal strife last year between [the broadcaster] and his television bosses... The TVNZ pay rise takes [the broadcaster] into the \$1m-plus pay bracket, including his salary for hosting the ZB network's nationwide breakfast programme. It is understood his pay from the radio station comes to at least \$400,000 in a package including his new Jaguar sports car. [The broadcaster] is in a unique position in N[Z] broadcasting, holding down two extremely high-profile jobs, both of which give him considerable bargaining power when his contracts are renegotiated[– despite neither job requiring the host of *This Is Your Life* to have much personal knowledge, even though one job involves fronting the country's only primetime current affairs show (a position which enabled him to over-promote his family name by simultaneously displaying it in three places on the screen during a 1997 Anzac Day special)!] As one source said: "For many, the salary from just one of those jobs would be quite enough to get by on..." TVNZ's annual report also showed it had 72 staff earning more than \$100,000 last year, including four earning between \$280,001 and \$540,000.

...The... TVNZ [news-anchor] saga has taken a dramatic new twist. The parties have failed to reach an out-of-court settlement and are heading for arbitration. [The newish newsreader] is suing TVNZ for terminating his \$400,000-a-year contract after [it] had read the TV One news just 24 times. A statement of claim has already been lodged at the... high court. If the case is settled the parties are likely to sign confidentiality clauses.

...The job of T[TVNZ's] boss... is on the line after the multimillion-dollar payout to [a] former newsreader... The TVNZ [boss]... is understood to be taking legal advice on his position as chief executive as [it] scrambles to defend the decision to dismiss [the newish newsreader], who has been awarded compensation thought to be as high as \$6 million. [The TVNZ boss, who] is under fire for his apparent failure to consult the board... did not want to comment last night... [The] Broadcasting Minister... yesterday stepped up her criticism of the salaries paid to broadcasters... [The newish newsreader] quit his \$400,000-a-year job at TV3 after the network decided to pair him with [a] co-anchor... and went to TVNZ, where his contract was reportedly worth \$700,000 a year. But after 24 days the state network bowed to viewer demand and reinstated [the oldish newsreader, whom the newish newsreader] had replaced. TVNZ's [other newsreading partner] earns about \$560,000 and her co-anchor, [the oldish newsreader], about \$500,000, according to TVNZ sources... TV3[']s newsreading [duo]... are said to earn around \$150,000 a year. [The minister] said the salaries of presenters were out of control and [it] would be asking questions about the "bidding war" between networks for celebrities. "We're making gods of people who are actually human beings. Instead of spending money on news stories and deeper analysis of issues, we're spending it on presenters." [The minister said it] had "reasonable confidence" in the TVNZ board. "I don't actually have to have confidence in [the chief executive] – it's the board that has to have confidence in [him]." The chief executive... has pointed the finger [of blame] at former TVNZ head of television Neil Roberts, who died of cancer in November 1998, for the original contract with [the newish newsreader]. In a statement released at the weekend, [the chief executive] said the deal was "driven" by Mr Roberts and that the board and management "had some time ago put in place systems and procedures to ensure that a commercial presenter contract of that magnitude on those terms could not be entered into again." ...a lawyer and former wife of Mr Roberts, said [the chief executive's] statement was "deplorable and very unfortunate" and seemed "a very convenient way of passing the buck."

...TVNZ[']s chief executive... threatened to use all the resources of the state-owned broadcaster against [him], the newsreader claimed last night. And as the bitter battle between [the newsreader] and TVNZ intensified, the network responded to his exclusive interview with the *Herald* by threatening to take out an injunction against the newspaper... [The newsreader's] comments came as papers on the arbitration case were made public by a High Court judge who said there was "serious public interest" in the documents. TVNZ is challenging an arbitrator's ruling giving [the newsreader] \$5.25 million after [it] was sacked by the network. The arbitrator's ruling revealed that [the newsreader] was taking anti-depressant drugs, including Prozac... Speaking from his home in Epsom, a relaxed [newsreader] said: We had a six-year contract. They chose to break it." ...TVNZ said it sacked [him] for non-performance... [The PM] said last night that the TVNZ board would be called to account by the Government. "Millions of dollars have gone up in smoke in the settlement and now more will be spent on legal fees and public relations smoke-screens."

...New [newsreader] twist TVNZ bosses will attempt to get out of paying [a] dumped newsreader... by saying [it] was sick. Sources say the network wants to use details of his medical records – including information about prescribed drugs and treatment – in an attempt to overturn the \$5.8 million settlement. "This is an extraordinary story of what happens when someone is sick and won't take sick leave," an insider said.

...The [sacked newsreader] case took a new twist last night after lawyers for TV3 served papers on TVNZ. They ask a series of questions about the sacked star's \$750,000-a-year contract with the state-owned enterprise. TV3 bosses are considering legal action against TVNZ – and also against [the sacked newsreader] – if they find the newsreader was "enticed" into leaving them. [The newsreader] quit TV3 in February 1998, refusing to co-anchor the news[, then signed to co-anchor the news]... for TV One... TVNZ is appealing against an adjudicator's decision to award him \$5.8 million. The money is his full salary for the six years of his contract – rising from \$750,000 to \$850,000 per year – plus legal costs and interest. The High Court in Auckland ruled on Thursday that \$5.2m must be paid into a bank account for [the newsreader] despite the appeal.

...HOWZAT for a heavenly hourly rate? [A newsreader] scored \$241,000 for every hour [it] read the TV One news between 6pm and 7pm. That's more than the [PM]'s annual wage in 60 minutes... TV insiders say it will take 650 primetime 30 second adverts to pay for [his] \$5.8m settlement.

...THE final cost of the [sacked newsreader] affair will top \$10 million... The dumped newsreader will get \$6,537,000 from TVNZ. But [his] old bosses at TV3 are determined to go to court. They want \$3.2 million from TVNZ, claiming the state-owned broadcaster induced the newsreader to break his contract and switch channels. [The newsreader], 52, has pledged to give \$1 million to charity if TVNZ pays his legal fees. Last night that looked in doubt... The \$6.5m payout means [the newsreader] earned \$270,000 an hour at TVNZ.

...TVNZ's secret payout – possibly up to [\$0.5m] – to rival TV3 over its unlawful enticement of... [a newsreader brings] to nearly \$7 m... the cost of the state broadcaster's ill-fated dalliance with the former newsreader. TVNZ... yesterday confirmed a settlement but refused to reveal the amount.

...TOP stars are threatening to quit TVNZ as a bitter row over their pay escalates. One popular presenter said: "It's not a good environment at the moment. We're being slapped in the face." At least eight TVNZ personalities... have each had their pay slashed by between \$20,000 and \$40,000... [A weekend newsreader, who's wife – the] Breakfast host... – is expecting their second child... said: "I'm not prepared to comment." But another TVNZ source said: "I know [that newsreader] is pissed off and is considering his future with us... The reductions are a slap in the face for those who have worked hard to build up their credibility." One TVNZ insider claimed the staff were paying the price of the [newish newsreader] fiasco. Sacking the former news anchor... cost the network \$7 million... "TVNZ's divide and conquer plan has worked. People resent the pay differences and there is dissent." ...TVNZ's two main newsreaders... are protected from the wage round because they have long term contracts.

...AN[angry broadcaster] is consulting lawyers after his \$150,000 pay cut was made public – apparently by his bosses. The broadcaster blames TVNZ[']s chairperso[n]... for leaking details of his salary cut from \$780,000 to \$620,000... claim[ing the chairperson's] conversation with a reporter was a breach of contract and demanded a public apology from his boss... "If a company doesn't feel obligated to honour a contract it has signed what is the point of having a contract?" [The broadcaster said it] and other presenters who have taken 20-30[%] pay cuts were "paying for the [sacked newsreader mess]. The chairperson said it... had discussed payments to presenters with a reporter... But insisted [it] had not named names. "If you read [the NZ Herald article] carefully you'll see I don't ever refer to [the broadcaster as such]." The chairperson refused to apologise... saying: "I didn't comment on his salary. I'm quite adamant." [The broadcaster then said it] would talk to his lawyer tomorrow. "The impression from the

article is I believe at odds with that view. I give TVNZ my unreserved loyalty. I have with my colleagues for 12 years produced a five-nightly peak-time current affairs programme that has continued to be popular and remained relevant to a wide N[Z] audience. It has earned TVNZ, a publicly-owned asset, tens of millions of dollars. I don't think it's unreasonable for me to expect loyalty and discretion. It's not the money. It's the principle. It's the privacy."

...The demise of two high-profile A[US]n television presenters this week has highlighted once again that – [the US]President... apart – office affairs can harm your career. Channel Seven[’s] current affairs host... and[the network’s] designated Olympic Games anchor[perso]n... face an uncertain professional future after the fallout from their relationship. Their case has also raised questions about privacy and whether morality or simply ratings was responsible for their fall. The pair’s romance apparently blossomed when they were assigned to cover... [a story together] in Greece in May. It became public only two weeks ago, when it was revealed that [one presenter, aged] 36, had left his wife and three young children to move in with [the other presenter, aged 34. The adulterer] fronts the *Today Tonight* show that immediately follows Seven’s primetime news bulletin. The problem for him and Seven, which has the most mainstream audience of the three commercial networks, is that [the adulterer] had been promoted as a rugged family [bloke]. Any extramarital controversy now, therefore, would smack of gross hypocrisy. Furthermore, [the presenter] has form, having previously left his wife briefly for another [lover] before returning home. As soon as the affair was made public, *Today Tonight*’s ratings dived, by about 12[%] in a week. That was enough, sources say, to convince Seven’s boss... that the affair was commercially damaging. [The adulterer] was taken off air. His final show... was last Monday... On Tuesday, when [the]fill-in host... fronted *Today Tonight*, ratings recovered. The following day, after a meeting between [the boss and the two lovers], the network issued two terse statements saying the pair’s roles would be reviewed. For [the 34-year-old], it meant being removed as a “Face of the Olympics” for the network, and [has thrown] Seven’s Olympics coverage plans into disarray... Seven bought the A[US]n broadcast rights for \$US45 million... and had groomed [the 34-year-old] for the past two years to be one of their three Games anchors... “[The 34-year-old] is one of the three major hosts of the 27th Olympiad,” a Seven source said... As part of the buildup, her face [has]appeared on the side of 2500 city buses... “Then there is the logistics, all the... magazines printed and the publicity shots taken of her.” Other insiders said the problem was not so much the liaison but that it had become public. At first the story appeared mainly in the tabloid press. But the broadsheets followed, with even the weighty national daily *The A[US]n* joining in. The newspaper’s Sydney chief of staff... told how [it had] popped into a local supermarket for milk and bumped into the couple. Was [the chief of staff] to ignore them, or try to get a photo to match one [it] knew another paper would publish the next day? [The chief of staff] grabbed a \$A22 disposable camera from the shelves. “I took a couple of pictures, then introduced myself and apologised for doing it, thinking they might understand that we’re all in the same business and they’d say, ‘Oh well, you’ve got your pictures, that’s fine.’ But [the adulterer] became abusive and accused me of invading their privacy.” Late last week, [the lovers]... remained defiant. Sources said they had not been sacked but had quit Seven in anger at being offered lesser roles, and had hired a lawyer. But [the adulterer] has his backers, including [a]fellow Aboriginal and boxer... “[The presenter]’s done nothing wrong by his own culture... I mean, polygamy. Aboriginal [guys] are allowed to have more than one wife.” [Editor’s note: The 34-year-old is unrelated to the NZ broadcaster who shares her surname (but whose office affair – like the US President’s – only affected his marriage and relationship with his children).]

...I SWEAR there are two [sides to the broadcaster]. One is charming, witty and entertaining, while the other treats his audience with much less respect than they deserve. The contrast was striking on recent consecutive nights of his TV programme. On the first occasion [the broadcaster was with the Queen’s daughter’s divorced husband’s NZ]-born daughter and her mother discussing pictures of them – apparently taken without their knowledge – that were published in a [magazine. The broadcaster] fulminated for about a quarter of an hour, denouncing the magazine and photographer for violating people’s privacy. This from [someone]... who has had countless unwilling subjects under the spotlight on his show! To cap this hypocrisy, the... cameras kept zooming in on the photographs, blowing them up to screen size. If the pictures were as embarrassing as mother and daughter said, they must have... felt a lot worse after this exposure. Next night, [the broadcaster] interviewed the very funny [actor who appeared on TV in *Mork and Mindy* and] was in non-stop mode and seemed willing to do the whole show on his own. [The broadcaster] handled the situation with aplomb, even when [it] came under severe time pressure. It was a delightful interview[, exposing the side of the broadcaster] I prefer.

...I WRITE in disgust at the shocking behaviour of [the host] on *Holmes* (TVI, [7.00 pm Tuesday, two weeks ago]. The broadcaster was interviewing NZ First’s leader[, along with a much misguided retired brigadier of the army, on the subject of whether the youth of today should have 12 weeks in military training upon reaching 18... Personally, I would love to see the plan work again, as today’s youth never seem to have learned the words ‘discipline’ and ‘respect’. Lives could really be turned around and many helped in so many ways. [But I digress. The broadcaster] was so rude, arrogant and lost his cool when his salary was mentioned by [the politician], who knew how to put the gabbling, ill-mannered [host] in his place... [□ The MP wa]s mistaken when [it repeatedly claimed the broadcaster]’s salary is funded by taxpayers... It clearly is not... *Holmes*... receives no NZ[OA] funding. Its sole source of income is from commercial advertising from car companies and other businesses. It is this revenue which pays for the production... Taxpayer funding does not enter into the equation – unlike [with the MP], who is paid from taxes, via the State Services Commission.

...WHAT do a supermodel, a top creative talent at... the Metropolitan... one of the world’s famous opera houses, and a... Xerox executive... who survived a hostage crisis in Yemen all have in common? ...[they] are all successful Kiwis living in the Big Apple and part of a new documentary series *Coming Home*. [Funded by NZOA and m]ade by Auckland production house Touchdown, the series looks at 24 N[Z]ers who have made a name for themselves overseas, and their relationship with the land of their birth... The series’ line-up... includes... [a]Hollywood film director (we count him as a N[Z]er although his place of origin is... [AUS];) head of the International Federation of the Red Cross and the Red Crescent for southern Africa[; the]... boss of the City Corporation, the body which runs London’s financial district[; and the]... creator of *The Rocky Horror Picture Show*... All of the subjects, with the exception of a couple, are filmed on a trip home to N[Z] as well as overseas... Some of the episodes have a geographical base, others look at people linked by similar fields of endeavour. But the point is what the big fish all have in common – their origins in the same small pond. “The basic thing in terms of their trip home is to try to explore their past – what sort of qualities about the way they were brought up that contribute to what you would say is a N[Z]ness, if that has anything to do with their success in their field, and to visit the friends, family and places that are important to them.” You can take the high achiever out of N[Z], but not N[Z] out of the achiever. The dictum is proved true, [the person]... who directed four episodes and produced the series... says, although each individual has his or her own way of saying it... While the series is a “celebration of Kiwis,” [the producer] concedes that the sample of interviews was, in a sense, self-selecting. Those who do not feel strongly attached to their country of origin, or resent the place, naturally did not want to take part. But most of the refusals from people approached were because they were too busy... [A]mong those who did take part, one common attitude stood out. “One... trait that seemed to go with success overseas was... a kind of humbleness. They were almost laconic about where they were and about their success, certainly not the kind of people to blow their own trumpet. And you could see that from friends and colleagues they had overseas, they’re just about all admired for those qualities. That was pretty standard.” While overseas recognition is probably always going to be a benchmark of success in N[Z], the producer says several of those interviewed were considering returning to base themselves here. [The producer] himself has spent 23 years as an ex-pat Kiwi working in London, for the BBC, ITV and Channel 4 networks. Although [the producer], like many in the programme, returned regularly for a “spiritual recharge” in clean, green N[Z], eventually the urge to stay home was too strong to ignore. Communications have made the world smaller

and it is now possible to base his international career in N[Z]. But the main reason for his return was pure Kiwi. “I got sick of London... [and, in particular,] the Northern Line. I just decided I was wasting too much of my life sitting on the Underground.” ...*Coming Home* [screens on]TV3... Wednesday, 8.30 pm.

...*Life trials of the rich and famous* [NZ's greatest diva] didn't do any opera on last night's *Holmes Special*... [but the primetime current affairs programme's host] sure laid on the Oprah. The... newly sponsored [broadcaster]... followed the model of... [the US queen of talk who] specialises in fawning interviews with the stars... as [it] quizzed our greatest diva. Of course [the opera singer] is a great “get” for any interviewer and – especially given her reputation for public prickliness – [the broadcaster] could be excused some nervousness. But there was something unusually starstruck about [the broadcaster] and that, with [the diva]’s own edginess (“You’re going to be nice, aren’t you?” wasn’t really a question), made for some squirmingly clumsy exchanges. Maybe, as a [guy] supposedly in touch with ordinary television watchers, it was right that [the broadcaster] be in awe of the [diva]... Then again, what would those folks in the heartland have thought of that tortuous banter about... Armani, money and houses? “You’re richer than me,” [the diva] claimed in one of a number of utterances which seemed to keep [the broadcaster] on the back foot. An early wander around her London residence had him... leading viewers to the star’s kitchen (drawing the revelation that nothing is ever actually cooked there) but we kind of hoped [the broadcaster] would hit form in a more settled chat out on the patio. Unfortunately, even in the fresh air and [following]fortified cups of tea, [the broadcaster] struggled to find the right tone, at one point lapsing into incoherence over whether [the diva] had become “posh” or not. To be fair, this remained a fascinating interview. [The diva]’s marriage bust-up seemed to have softened a persona which so often... tended towards the haughty... [The diva has] been reading a few of “those” books and offered such platitudinous pearls as “life is not a dress rehearsal”... Good interviewers will use whatever they can to win the confidence of their subjects but references to [the broadcaster’s] own personal trials proved a rather distracting counterpoint. [The diva] had found that the early evening was the worst time during the trauma of her break-up. [The broadcaster]: “I find that, too.” Did we need to know that? [However, the broadcaster] must have been doing something right[, because the diva] treated him to a visit to St Paul’s... and even a respectful chat with [Britain’s most popular musical producer], who said nothing very remarkable. [The broadcaster] also drew from her discussion of that dreadful dress [the diva wore when the diva] sang at the wedding of... [Princess] Diana (it’s destined for Te Papa – let’s hope it doesn’t scare the children) and of how nervous [the diva] was that famous day (“peeing-myself nervous”). The final duet in the park didn’t quite work. [The diva] was in fine voice but maybe [the broadcaster] was peeing-himself nervous.

...[the broadcaster] sits in his rented Takapuna flat surrounded by the trappings of material success – and tormented by angst. The satiny blue-green sea rolls on to the beach out front, the fabulous red XK8 Jag convertible with its walnut dash, and seats that hold you like a hug, waits in the garage below. The coffee tables are carefully arranged with copies of brainy British weeklies like the *Spectator* and *Economist*. The walls are thick with paintings – a Colin McCahon (“the last in his Titirangi series”)... – alongside photos of his kids... in various poses, and, a couple of... himself... Although the shrieks of kids at play drift alluringly through the open doors, you get the feeling the Armani-suited [broadcaster] doesn’t stroll the beach much. “Yes it is rather idyllic isn’t it?” [the broadcaster] says, loosening the shiny, fat-knotted tie. “But it’s been a big adjustment to come to live in a little flat when you’re used to having a nice big family home. It’s a difficult adjustment to make – to come home to an empty flat with no kids asleep in bed, no one to talk to...” Obviously this gleaming dream eyrie doesn’t come near making up for the anguish of his separation from [his cheated-on wife] and children... Or the public humiliation and betrayal [the unfaithful husband] suffered at the hands of [a]25-year-old former television journalist... – a person [the broadcaster] still can’t bear to talk about. It was an upset that could have cost him his job. A few [people are very disappointed it didn’t – especially during the mornings when the broadcaster] barely held his Newstalk ZB show together after the late nights, the drinking and emotional exhaustion. [The broadcaster] is more appealing off-air. The spot on his nose doesn’t seem so big, his gold-splashed green eyes (one blind after a long-ago car accident) are alternately more mischievous and soft... And then there’s the vulnerability. The need to be liked, to be popular – which translated into such a readiness to believe that even adulation-cum-calculated-love was made so real [the broadcaster] risked his marriage for it. Like [the US President, the NZer] made the huge mistake of thinking that his sexual vulnerability and need was safe with a very young [gal. And, like the President, the NZer has] lived to regret it... The young-girl-with-famous-[guy] phenomenon comes with the territory. At 48, [the broadcaster] is probably the most identifiable [guy] in the country... For more than a decade [it] has fronted two of the highest-rating news/comment shows in the country. His Newstalk ZB 6 am-8.30 am radio slot rated 19.4[%] – the most popular in the country – at last count. On television... [his] show (TV One 7-7.30 weeknights) scored 10th most popular programme overall ([although, interestingly, that rating drops] to 60th among 18-39-year-olds). At the time of his affair [the broadcaster] owned a mansion in... Remuera (government valuation \$3.37 million)... [H]is TVNZ salary... [is higher than anyone else at the network, yet when] TV One wanted someone in London in a hurry to wangle and charm and talk their way through the palace red tape surrounding the death of [the]Princess of Wales, it... [got instead someone] interviewing children stacking their bouquets outside St James Palace. And if [his television and radio jobs weren’t enough, it] also writes a weekly column in this newspaper, and a month ago clinched an unheard-of[-in-NZ] \$200,000 advance for his memoirs. Despite the schedule, [the autobiographer]’s already up to chapter 13.

...THE BEST place to start... the... \$44.95... autobiography of You Know Who... is on page 34, the beginning of chapter [3, where the broadcaster] starts the story of his... childhood... It’s... wonderfully evocative of provincial life in N[Z] in the two decades after... [WW2. The You Know Who]-haters – of whom, I’m astonished to find, there are many – may find things to satisfy themselves in the stuff about his work and his more recent private life, but genuinely interested readers will find much to admire... The story is put together adroitly, with flashbacks, clearly demarcated, mixing his work now and his adventures during the years... spent in the U[S, AUS] and Europe, which are... engagingly recounted, the word pictures about life in foreign cities well painted. “Drinking was always a factor in my life... I hated my father drinking and here I was doing it myself. At university we all drank excessively on Friday and Saturday nights but, even then, I knew I drank differently from most other people. I drank until I fell over and spent most of my early adult weekend life wondering... where I was when I woke up and resorting to alcohol heavily when love went bad.” As the book progresses, though, [the broadcaster] too often strings adjectives together, glibly, to describe people. And in one of the occasional, sudden explosions of purple rhetoric, about fame being a “Bitch Goddess,” that will exasperate even the most admiring readers, [it] dabbles in such infelicities as “everybody wants to be famous,” which is from the same stable as “everybody wants to be rich.” The famous and the rich patronise us and make themselves feel better by assuming we are all fiercely ambitious but have failed where they have succeeded. If fame were everybody’s priority, there would be no priests, no poets and no peace in the suburbs... [T]he best place to stop is at page 240, the end of chapter 20. Sadly, the parts of this book that will be most closely read – the beginning and the end – are those that are the least skilfully written and do him least credit. Chapters one and two, about the [infamous]1987... interview with [the San Diego skipper of the successful America’s Cup challenger *Stars and Stripes*], are bloated by hyperbole and self-importance: “We had been responsible for the biggest television moment since televised broadcasting began...” From chapter 21 on, the story is sad with the sense of his loneliness... [T]hese last few chapters are very shabby, not because of his behaviour – we’ve all behaved badly – but because [the broadcaster] writes of deep intimacies with others whether they like it or not, as though it’s so important that his life is opened up for our appraisal, that his version is somehow authorised. If there is some value in telling about his fumbings in cars with a [gal] half his age, I can’t identify it. The danger facing this... media [personality] is that his unremitting lust for the limelight, his yearning to strip himself in front of us like a beseeching lover, is so insatiable that [it] becomes a mere celebrity. It’s starting to happen as fame lacquers over his sensibilities... It’s not enough to tell us what [the broadcaster has done,] thinks and how [it feels – it] has to remind us of his large virtues and small vices... Celebrities cease to have a sense of self... Like [kids, they]... are defined by what others think of them, by

audience response... Adulation means approval... Criticism is chastisement... Thus [the broadcaster] now bridles when journalists ask perfectly legitimate questions, and... patronisingly puts down anyone who expresses dislike for him or his performances. [It] claims to be wise: "By the time I got famous in N[Z] I had acquired wisdom." ...Writers for centuries have said, in one way or another, that a [person who thinks it is] wise can never be.

...The All Blacks superstar, who yesterday scored three tries against Scotland, has been offered... \$3 m... for a tell-all book... by a British author... [Yesterday the winger]’s manager... confirmed the offer but would not name the author. [But it does say his client] has also been offered big money from N[Z] publishers to tell the remarkable story of his life... Last year [an]English journalist... wrote an unauthorised biography – *Blood and Thunder* – on the rugby giant. The book sold well in Britain, where [the winger] is adored by rugby fans. His rugby status is such that last month [his]... website took more than 200,000 hits... [In related news, America’s First Wife] reportedly agreed to accept a \$US8 m... advance for a memoir about her... scandal-fraught and politically tangled years in the White House. The *Washington Post* said yesterday that the advance... was just shy of the record \$US8.5 m... Pope John Paul II got in 1994 for his book *Crossing the Threshold of Hope*. Citing a source close to [the First Wife], the report said the book would include “a dignified discussion” of her marriage and her husband’s impeachment... Simon & Schuster[, which] beat Talk/Miramax and Penguin Putman in a bidding war for the... memoir... has published three of [her] other books... *It Takes a Village*; *Dear Socks*, *Dear Buddy*; *Kids’ Letters to the First Pets* and the recently released *An Invitation to the White House*... All... profits from her previous... books... went to charity... Her White House memoir is[n’t] expected to be published [until 2003 as its subject is currently hoping to make] the transition from [First Wife] to US Senator... [The wife] is not covered under Senate ethics rules until... [it] takes office, and under those rules book advances are not limited by restrictions on outside income. But the sheer size of her book contract has sparked debate about the propriety of the deal.

...[the US President i]s expected to be “exceptionally frank” about his affair... and the other sexual indiscretions of which [it ha]s been accused in his newly completed memoirs. And why wouldn’t [it] be – they’ll bring in at least \$[NZ]20 million in badly needed cash, much of it still owed to lawyers who defended him in the impeachment trial.

...[the fact that the US President could receive a ‘record £6.5 million advance’ for his memoirs suggests there is lots of money to be made in the biography business, yet NZ’s] leading biographer says [it] will be forced to abandon his chosen career because of a lack of funds. [The biographer], who this year won four awards... in the Montana Book Awards, including the Montana Medal for non-fiction, said [it] was unlikely to “commit biography” again because of the lack of financial support for such writers. [The writer], 56, has written seven biographies over the past 25 years, [but says]... producing such books had always been a struggle and [it] no longer had the stamina [it] possessed in his 30s and 40s. [The 56-year-old] said it took three to five years to research and write a full-length, professionally-constructed biography. “In N[Z] there are no literary fellowships that last more than a year. And, at what euphemistically could be called mid-career, I have had and exhausted all the one-year fellowships for which I am eligible.” More than any other factor, the lack of two, three, or even four-year fellowships restricts the ability of N[Z] authors to produce histories and biographies written to the highest possible standards. “Such multi-year fellowships exist as a matter of course in countries such as A[US, the US] and the U[K.]” The 56-year-old]... had turned down potential commissions to work on biographies about non-N[Z]ers because his passion was to write about N[Z] history and culture... Last year [the biographer] applied to Creative N[Z] for funds to research a biography of [a NZ]-born sexologist... who has lived and worked in the U[S] for the past 50 years. “It was my first application to C[NZ] for a major grant. I asked for \$36,000 which, if I lived very frugally, would have supported one year’s research in the U[S]. I thought that with my track record, I had some chance of success, particularly because they have given this amount of money previously to biographical projects that did not need research as extensive as this one. They gave me \$18,000, which would barely have funded six month’s work out of the five years required.” As a result... the project... [was] abandoned... “I’ve accepted an invitation from the University of Waikato to go on salary for two years as a senior research fellow to write a history of that institution.” ...[the biographer] is disappointed university and National Library fellowships would not fund individual writers more than once.

...The National Library’s right to free copies of every N[Z] book, magazine and newspaper is under challenge. A[n A]lmany publisher... is defending charges that it failed to supply copies of 10 books as required under the National Library Act... The legislation requires publishers of all printed material to “deliver at that person’s own expense” three copies of their book, magazine or newspaper to the library... The company is arguing, in the Auckland District Court, that the law requires it to pay only for delivery costs, and the Government should pay for the cost of producing the books... [The p]rosecutor... said the bulk of N[Z] publishers complied with the requirement, which was not a large cost per book[– whereas each]... charge, brought under the... Act, carries a maximum \$1000 fine... [The] challenge was a test case and could have international implications because other countries, including A[US] and Papua New Guinea, had similar legislation... [The] Judge... reserved his decision...

SO you thought readers were quiet... types totally absorbed, utterly alone and all curled up on the couch. Not necessarily so. Reading has sneakily evolved into a group activity. It’s become a team event. Book groups are flourishing. And though some readers liken them to a modern-day... Sewing Circle, they do come with a highly-polished, sophisticated aura of approval. Indeed, any serious reader who is not cosily in with a group of book worshippers may well feel like that poor little match girl, who died shivering in the snow. These groups of avid readers can demand and get special attention. Dymocks Booksellers... has risen to meet continuing requests for information from new book groups by publishing a special newsletter. It launched [two months ago] and already goes out to 30 clubs. Groups buying in bulk get a 10[%] discount and the retailer promises not to lead readers astray over duds on the bestsellers’ list. “...We won’t advise... an average read. We don’t want to waste their time. We... would recommend *Angela’s Ashes*, for instance, but not *A Monk Swimming*.” The backbone of this trendy, monthly, my-sofa-or-yours activity, however, is the Workers Educational Association (WEA) in Christchurch, which supplies reading programmes and lends books at minimum charge to book groups all over the country. The scheme began 25 years ago, copying a similar Melbourne programme. And it is unfailingly popular recording a growth rate of 10[%] a year. The surge in book groups is not confined to the Southern Hemisphere. Readers in the U[S] and Britain are also keen to get together and talk about books... “When you have read a book you don’t want to waste it. You want to be able to talk about it... People come across lots of ideas and concepts when... reading and they want to thrash them around...” WEA’s readers... are predominantly [gals]... Each group member pays \$30 per year. In return the group is sent a list of 540 titles, mostly fiction. They include the latest Booker Prize winner and hallowed classics. The group then chooses 25 titles and is sent 10 for the year. Each member receives a copy of each title – along with book notes to aid discussion at the monthly meeting that follows. Other non WEA book groups operate differently. Some buy the same book, read, then discuss it. Others read different books and share their thoughts on them at meetings... [A w]riter... belongs to two book groups. One began as a share group... in 1985. After the share crash, 10 members stopped investing \$40 a month each in shares and turned their minds to a loftier subject. Books. They began with the WEA. “It was quite good, it gave us focus.” Now, however, they are on their own. Each member takes her turn buying a couple of books to build up the group library... [The writer] sees her... groups as no more than “a fun reason to get together.” It’s also a welcome opportunity to break out from the rather solitary life [it] leads as a dedicated writer and reader. And [it] can do so without walking away from her books.

...FROM time to time, after hearing reports of the booty to be had from writing for Mills & Boon, my friends and I have dreamed of knocking out a few quick romances then sitting back to enjoy the good life. But so far none of us [has] succeeded. In my own case, I’ve got no further than discovering the marvellous address of the[publisher’s] English headquarters... – 18-24 Paradise Road, Surrey. The truth is, writing romances is hard yakker that demands a steady, disciplined approach... disciplined enough to produce two or three books a year... The rules for a Mills & Boon book are as strict as those for a sonnet – 50,000 to 55,000 words, told in the third person from the heroine’s point of view. Plots must focus, of

course, on the sexual tension between an attractive [hero and heroine]. How explicit the sex is depends on which series you're writing for – Mills & Boon Enchanted is more decorously worded than Silhouette Desire. But love-making is never to be taken lightly. Emotional commitment is essential. No bed-hopping tramps, thanks... By common consent, the world's reigning champion of the romance genre is Cheshire-based... [The champ] has produced more than 100 books in the past 20 years – and sold more than 50 million copies... Her stories have been translated into 28 languages and sell in at least 100 countries... "I've always been a romantic, I've always liked reading romances and however unrealistic the expectation might be, I genuinely do like people to live happily ever after." [The champ will visit NZ] for the first time this month to attend the Romance Writers' Annual Conference in Auckland... where [it] is a keynote speaker[– something the writer is] a little nervous about... "In common with a lot of other writers, I don't really have much confidence when it comes to public speaking. I haven't travelled much either. At heart I'm a real homebody." Home... is not a cosy little bungalow, however, but an impressive 14th-century yeoman's hall (a timbered country house, once the retreat of a royal courtier). Still, [the writer]'s not at all stuck-up... [coming] across in conversation as a practical, helpful, down-to-earth type... Apart from her success as a writer, [her] biography is unremarkable... in her early 50s, happily wed... for the last 26 years, childless ("by choice") but surrounded by... dogs and... cats. [The writer] was working as a secretary in the late 1970s when... the Mills & Boon company was looking for new writers. So [the secretary] decided to give it a go... [Her] latest book, *The Perfect Sinner*, is part of a series... It's easy to get the titles mixed up. Earlier novels in the series include *A Perfect Family*, *A Perfect Lover*, *Perfect Marriage Material* and *The Perfect Match*. I confess I'm hopeless at sorting out all the characters and their relationships to one another... How does [the writer] manage to keep everything straight in her head? Can [the writer] still remember every character in every one of her books? [The writer has] given birth to more fictitious people than Charles Dickens. "No. I can't remember them all... My readers are much better at that than I am – and occasionally they'll catch me out..." What about burn-out? After 100 books, isn't [the writer] just a little tired of the genre? "I did go through a bit of a burn-out phase a few years ago... But in recent years I've been concentrating on... [going] beyond the immediate love interest and delv[ing] deeper into the characters' background and psychology... I think that's helped to keep my writing fresh. Overall I haven't lost my enthusiasm..." ...[the writer is] keen to tell me about a N[Z] connection from her past. "When I first started reading romance fiction as a girl, there weren't any Mills & Boon books. I used to follow the serials in... magazines. One of my favourite writers when I was young was... Essie Summers. I guess [Essie]'s been a big influence over the years." [Essie Summers was the pen-name of Hawke's Bay author Ethel Snelson Flett, who died last September at the age of 86.] ...N[Z] has some of the world's top romance writers, with readers lured by passionate tales set in a South Pacific paradise. But that doesn't mean budding writers can simply weave yarns from between the sheets, add a few *kia oras*, submit the script... and expect a pay cheque... Having published 26 books, including novels, poetry books... and non-fiction relating to the Web world[. a]... Wellington writer... once turned her hand to romance writing. Her script was swallowed up in the 30,000 unsolicited manuscripts... Mills & Boon receives annually... [A]round seven new authors are found each year... [The Wellingtonian says a writer from Auckland] is one of the top dozen... Mills & Boon authors in the world... [The ex-journalist Napier (her pen-name) had her first book published by Mills & Boon in 1985 and her 28th will be released soon... "I was looking for something I could do at home because my second son had just been born... I knew if you had a book accepted by Mills & Boon you sold internationally... so I deliberately sat down to write a Mills & Boon romance." ...it took her 18 months to write the first one, an art... now pared down to 3-4 months... Napier is one of three top Mills & Boon authors in the country with another dozen or so writing for... Mills & Boon... The Romance Writers of N[Z] association has 250 members and groups in the four main centres and offers advice to... budding romance novelists... • *Romance Writers' Conference... includes two lunches, morning/afternoon teas and two tutorials... \$125 (no door sales)...*

Not all inventors are mad scientists, says [a] TV personality... who's putting together a book with a friend on N[Z] inventions What do marshmallow Easter eggs, bungy jumping... disposable syringes, tranquilliser dart guns, childproof bottle lids, silent burglar alarms... heat detection cells for fire prevention... and tricky manoeuvres on the rugby field have in common? They're all things [a presenter on] *Ice TV*... can talk about at length since... [starting] work on a new book... celebrating our homegrown inventions. "The idea is, N[Z]ers can invent resourceful stuff from basic ingredients... The book will be full of the things we're proud of being ours – and things we didn't even know were ours." The book's title, *Number Eight Wire – 100 Examples of Kiwi Ingenuity*, is based on the concept just about anything can be knocked together with enough imagination and a supply of number eight fencing wire. "The irony is it isn't a N[Z] invention, even though it's the mother of so many N[Z] inventions... It's just a kind of wire which is used all around the world. But nowhere else makes marshmallow Easter eggs." [Hi]s personal foray into inventing has been less than successful. "I did try to invent the no-study exam technique while I was at university... Strangely enough, it didn't work. [However, I]ve discovered all inventors go through phases when they have little success..." More recently, [the presenter] had an idea while out on the golf course – [it] decided a portable computer which could record and analyse scores would be the perfect way of improving his handicap and putting him on the way to earning his first million. "Then my friend pointed out... [that] there was already one of those in existence. That's the problem – you have to get in early, like the 1880s,"... [The presenter] was happy to play the mad scientist for our photo shoot, [but] has discovered eccentricity isn't necessarily a characteristic of every inventor. "They're all guys who have some ability with their minds and hands; who, in the process of doing the things they enjoy, find a better way." The fact [that the pair] have only found [guy] inventors so far is a situation they want to rectify. "We want to hear from [gal] inventors too... There must be some out there." Dividing his time between *Ice TV*, his job at Channel Z and writing the book means [the presenter] has little free time. So [the presenter is] looking forward to the day [the presenter] sees the book on store shelves. "It will be a difficult birth – like all inventions," [the presenter] says. • ...William Shakespeare, picked as Britain's [hu]man of the millennium, was hailed yesterday as an international superstar, but scientists felt Charles Darwin or Isaac Newton should have won. The choice of the playwright in a poll of BBC radio listeners – [Shakespeare] just pipped wartime leader Winston Churchill... [while] Darwin... came only fourth, just ahead of... Newton... – provoked a heated debate about his perennial appeal... [A biologist] said: "What Shakespeare really did was tell us what we already know but in a very beautiful way, whereas Newton and Darwin transformed the way we thought about the world." ...[in response, one] Shakespearean actress... said: "[William Shakespeare] is known in our house as the [person] who pays the rent." ...[the] Royal Shakespeare Company spokes[person]... said: "The Japanese see more Shakespeare and put on more productions of his plays than we do in Britain. [Shakespeare is] a better international currency than the euro." The *Guinness Book of Records* now ranks Shakespeare as the most filmed author with 309 versions of his plays.

...THE TERM coffee-table book takes on a whole new meaning with the launch of an enormous book of photographs from the king of sin, [who shares a famous surname – but that's all it has in common with Isaac] Newton. *Sumo* which weighs in at 30kg, is 70cm tall by 50cm wide and comes with its own stand... (you can't buy it separately, either). Fashionistas, fans of photography and fetishists will get to see this publishing phenomenon when it is launched at Dymocks stores... next Wednesday... [T]he German publisher, is quoted as saying [it] took on the enormous challenge because "I wanted to build a monument to the most important photographer of the 20th century." A copy of that monument, signed and numbered (out of only 10,000 worldwide) will set you back \$3800. [The actor married to the actress who plays Rachel on *Friends*] has three... The 480-page book covers every aspect of... [the career of the photographer], who is 79... ranging from fashion shoots to celebrity portraits. If you balk at the cost consider this: a single print by [the photographer] costs between \$7000 and \$22,000 with some fetching \$150,000, depending on the image and its size.

...Thought up on a train and scribbled into life at cafe tables, boy wizard Harry Potter has become the hero of children worldwide... Y[ou can't] plug it in, it doesn't beep or produce simulated explosions... Yet this particular product has the children of the late 1990s – often said to have the

concentration span of gnats – queuing to buy it so they can go home and spend hours in quiet, focused solitude... What's going on? ...*Harry Potter and the Philosopher's Stone*, [its author's]... first book... appeared in 1997 and changed, as if at the touch of a wand, the landscape of children's bookselling and reading. Since then children aged about 8 to 12 have been wandering around with a *Harry Potter* book pressed to their face when, according to parents, previously they would have carefully ignored any encouragement to read for themselves. Stories of this kind multiply like mushrooms once you start looking for them. [One boy], aged 9, loved being read to but simply wouldn't do it for himself... until [it] came across *Harry Potter*... Now there's no looking back and [the 9-year-old] is ploughing his own way through *Lord of the Rings*... Parents and even some non-parent adults [also love *Harry Potter*], to the extent that the publisher, Bloomsbury, has brought out an "adult version" – same story, more sedate cover – for adults to read while maintaining their dignity. The books tell the adventures of the eponymous Harry, who as a baby was orphaned under extraordinary circumstances and brought up by his beastly aunt and uncle (who make him sleep in a cupboard under the stairs). Harry eventually discovers... [his parents were] famous wizards... and begins attending Hogwarts, the boarding school for young wizards... Throughout the stories... good and evil are at loggerheads, and the threat of the ultimate personification of evil – Voldemort, whose name many wizards dare not speak – looms over Harry, who is a kind of Chosen One for the forces of good. The second... book, *Harry Potter and the Chamber of Secrets*, arrived a year after the first... and together... have sold around 800,000 copies in Britain and the Commonwealth, with deals set up for sales in the U[S], Germany, Italy and Japan. Both... won gold Smarties Children's Book Awards, which are voted for by schoolchildren across Britain. The number of copies sold and the sums paid for the various publishing deals vary from report to report, but suffice to say that where *Harry Potter* is concerned, the numbers always contain a lot of noughts... Britain's *Daily Telegraph* comments... [that the] 34-year-old... stands to be a millionaire by the time... [the author] is 40. Now No 3 has arrived in the bookshops. *Harry Potter and the Prisoner of Azkaban* has been the subject of a hyped marketing campaign by Bloomsbury which has become a news story in its own right. The *Daily Telegraph* had it on its front page on... the day the book was released at 3.45 pm (the time was supposedly chosen so that children wouldn't be tempted to play truant from school to get their hands on it as early as possible). Advance orders for... *Azkaban* were so high that the book was printed eight times before it was even released – that's 3,000,000 copies, compared to the average British print run for a children's book of 20,000 – and, thanks to advance orders over the Internet, it pushed... [itself into] the No 1 slot on Amazon.com... before the new *Harry Potter* had even been read by anyone. This week the... books occupied the top three places in the U[S]'s bestseller list. *Vanity* magazine dubbed the fictional hero "the most powerful kid in Hollywood,"... However, the author herself... has bowed out of the hype. Refusing all interviews, [the author is probably] sitting in an Edinburgh cafe ploughing on with *Harry Potter* No 4... [Having] signed a contract to produce seven *Harry Potters* altogether, with one appearing each year[, it's]... under extraordinary pressure... [The author] was, by her own description, "a swotty little git with National Health spectacles" who went on to get a degree in French and Classics at the University of Exeter, worked with Amnesty International in London, lived in Manchester with a boyfriend, and went to Portugal to teach English and get married... On leaving her husband, [the author] went to stay with her sister... in Edinburgh[, where]... followed... six months of writing in conditions of poverty. Eventually [the author] got an £8000... grant from the Scottish Arts Council[, which enabled her to complete]... the 80,000-word manuscript... [and send] it to Bloomsbury, which offered her an unprecedented £62,000 advance – an extremely percipient move as [the author] has cast a spell over the fortunes of the publisher. Where Bloomsbury used to be at number 20 in the list of top children's publishing imprints, by the second half of last year it had rocketed faster than a speeding broomstick to number 10... Inevitably, more and more people are wanting a slice of the pie. [US] rights to the novels were bought by Scholastic, who paid a six-figure sum for the first one alone. It then changed the book's title to the dumber *Harry Potter and the Sorcerer's Stone*, which the *Times* in Britain called a pointless change. "What next?" it asked, adding, "Warner, that's what." Warner Bros has indeed snapped up the film rights to the first two books for a reported seven-figure sum, against intense competition from other companies. Sometime within the next [fe]w... years the books will be turned into live-action movies, probably with a[US] boy starring as Harry. Fans worry that the entire story will somehow be transported to an un-British set, something the film's producer has not discounted. This is hard to imagine, as the entire series is a clever pastiche of British society, mores, schooling and character. But Hollywood, of course, will do what[ever it wants to]. Needless to say, Warner also controls all merchandising rights... [The author] has expressed the wish that as many people as possible would read her books... [W]ith her rags-to-riches story, [the author] must truly have a fairy godmother, because this wish... is coming true... ■ A first edition of... *Harry Potter and the Philosopher's Stone*, has just sold for \$22,000. [When the book was first released] it... cost... around \$30.

...How wrong could they be? ...Nine publishers including HarperCollins, Penguin and Transworld, turned down... [the] first *Harry Potter* book... [However,] *Lorna Doone*, the novel by RD Blackmore, received 18 rejections before it was finally printed in 1869. It has remained in print ever since... [T]he author of *M*A*S*H*, the book which was made into the hit TV series and film, suffered 21 rejections... James Joyce's *Dubliners*, one of the great works of modern literature, was rejected by 32 firms before it was published in 1914.

...It is a scandalous premise for a book: [the lead character] was white, widowed and middle-aged and [the other main character] was a very young girl. The novel is called *Lolita* and was recently voted the fourth best book published this century. It tells the story of Humbert Humbert and his doomed lust for an ingenue. Some have called it a paedophile's fantasy. I make no judgment save to note that it was a good book that I enjoyed reading. So did the panel of authors from the Modern Library, who placed it up there on a list topped by James Joyce's once-banned *Ulysses*. *Lolita*'s author... had to battle the censors in 1955 but I believe the task might have proved impossible had the book been written today. Consider [the recently made] film adaptation of *Lolita*, which is banned in the U[S] and unlikely to screen here because people are scared of the story's paedophilic overtones. Such is the public fear, verging on hysteria, surrounding teenage sexuality and adult predation that the merest hint of impropriety is enough to awaken the inner censor in conservative and liberal alike. It was all so different in the 70s for a 9-year-old boy dressed in grey school pants and a purple Goofy T-shirt. Imagine this picture of childhood innocence at a talent quest singing... *I Don't Know How to Love Him*. Remember the words? Let me refresh your memory: "And I've had so many [guys] before in oh, so many ways..." What could I have been thinking? At least I was only nine, but what were my teachers thinking? I imagine they thought it was a bit of a giggle, as back then paedophilia was not a constant threat to be guarded against. Today, parents and teachers might take a sinister view of a little boy singing... [a] musical exploration of sacred and secular sex... Sex is a hard topic for parents to broach with their children, yet society's desire to protect its most vulnerable members seems to have created a morals monster that is running amok. Much is made of the Internet as the new threat to childhood innocence. But the *Times Literary Supplement* recently reported that the monitoring of 3.5 million computer users turned up only 40 examples of children having sex. Also *Time* magazine published an apparent expose of kiddie porn that was fatally flawed. Ostensibly conducted by a team of researchers from Carnegie Mellon University, it was actually the work of an electrical engineering student. Despite all the hysteria, our children have not lost their innocence. But have we lost the plot? ...[By the way,] the enormously successful *Harry Potter* children's books... [are coming] to the big screen. *The Sorcerer's Stone* looks set to be the first of the adaptations, and it will have a mammoth budget of between \$250[m] to \$300 m...

Precious little magic for the Potter fans as police, press and parents fight it out... Parents fought, children wept and the author proclaimed herself "amazed." "Think of a stronger word and double it," [the author] said, shaking her head in disbelief at the mayhem. London's King Cross station had never seen anything quite like it. Two fathers, with weeping children clinging to their shoulders, bayed blue murder as they wrestled for a place near the crash barrier. Police rushing in to subdue the squall upbraided them: "If you don't cut this out, you'll have to leave before [the author] arrives." An immediate, snarling peace was established as police restrained a mother determined to get her child a better view by dangling him precariously from the bridge, 9m above the railway. Welcome to "Platform 9 3/4" – for Potterites the place where their young hero boards the

Hogswart Express at the start of each school term, heading for adventure armed with nothing but half-baked spells and an insipid group of friends who drive some critics to distraction. But what should have been the happiest day in a month of book-publishing Saturdays descended into farce as... 300 children watched in dismay when the press formed a scrum and trampled both them and their bemused parents underfoot. "It's a shame," said [one mum, who'd come with her 7-year-old son... "This should be an event for the kids, but it's full of people rushing around with their mobile phones. Where's the fantasy and magic in this?" A disappointed [7-year-old] whispered: "I thought there would be flying owls." The waiting is over and Harry Potter is back. The frenzied speculation of the past few weeks has woven its witchcraft: many of the initial 1.5 million... [copies of] *Harry Potter and the Goblet of Fire*... printed have already been sold, and every child in Britain and beyond with a taste for magic and three-legged dogs called Fluffy is agog with excitement to learn which of Harry's friends dies, which girl [Harry] has a crush on, and whether the new Defence Against the Dark Arts professor lasts longer than the last. [When the author finally arrived at Kings Cross by dismounting] from the trademark light-blue Ford Anglia of Harry's cruel uncle with engine oil on her calves, [it] set off instinctively towards the bank of keening children. But [the author] was jostled instead towards the baying scribes and snappers... "I suppose [the author]'s just a normal person anyway, just like anyone else,"... sadly concluded... [another 7-year-old, who'd been too excited to sleep the night before but now [was] perched on his father's shoulders and staring glumly from the back of the crowd... [The author] had the look of someone who had been outfoxed by her press office. Each time [the author] tried to move towards her small fans, [it] was pulled back by the press pack, surrounded by flashing cameras and gesturing sadly towards her young readers with frustrated goodwill. "I'm sorry," [it] called to a group of children who had left... Durham at 5.45 that morning... "I'm not allowed [to come and talk to you] – the police... told me." The police... surrounding her looked ashamed, and the one who had his book signed moments before tried to hide it... [A girl], 10, was frantic. "It's ruined," [the girl] sobbed. "The book won't seem nearly as magic now." Reasoned her mother: "[My daughter]'ll get over it. It's all been a bit too much. [My daughter knew it] probably wouldn't get her book signed, but... did hope to get a smile." [A boy], 9, avoided the madness and retreated behind the ticket office to read his new book in peace. "[The author]'s just a normal person. Harry's my hero, not her," [the boy] said gloomily. As the train chugged away, heading to the next press call in Didcot, [the author] leaned out... and waved for all [it] was worth. "Oh God, I'm sorry....," [the author] called unhappily. "It was nice meeting you all." "And you," called one polite little voice...

From *Chekhov to Alice in Wonderland and The Simpsons*, N[Z] is the literary equivalent of Timbaktu... From Jules Verne to Aldous Huxley... international authors have long been fascinated by this small Pacific nation. N[Z] is... where long-lost uncles arrive from and friends of the family are sent to. It's exotic and strange – but we still speak English and take milk in our tea... Andy Warhol, in January 1987, declared N[Z]'s arrival – one of the emblematic pop artist's final acts before... d[ying] from complications after a gallbladder operation. "People are out. Countries are in," Warhol told *ChaCha* magazine. "You want to know how to make a country like N[Z] famous? You don't need to. I hear about N[Z] every night on TV. The America's Cup. I watch the races. N[Z] is a very 'in' country." Warhol also told the interviewer that [it]'d heard there were "lots of pretty girls in N[Z]. In New York it's hard to tell the difference between girls and boys." ...In 1949, not long after the first use of the atomic bomb acutely demonstrated the fragility of human existence... Huxley let us off the nuclear holocaust hook. *Ape and Essence* is set in N[Z] – one of the few countries to escape "that judgement"... "Such nice people! And the civilisation they represent – that's nice too... in a quiet provincial way, thoroughly cosy and sensible and humane." Early opinion on N[Z] varied. In 1840 English essayist Thomas de Quincey predicted the country was, "destined to a giant's career. It is a youthful Hercules that will throttle the snakes about its cradle". Russian writer Anton Chekhov begged to differ: "It's barbarity! It's New Zealand." And when Alice plummeted down Wonderland's rabbit hole, [Alice] found herself speculating on the exact location of the "Antipathies": "But I shall have to ask... is this New Zealand or Australia?..." ...Even Superman once battled a giant moa... "Incredible," exclaims a 1973 Superman. "The moas of yesteryear were flightless... but this one stays airborne by thrashing its feet at super speed." ...In recent years, Homer Simpson in... [a] *Simpsons* comic... has crowned himself the prime minister of N[Z] (and declared war on Australia)...

BOOKSTORE WARS: WILL CONSUMERS BE THE WINNERS? ...When Borders opens its doors today, it may well change the face of book and music retailing in Auckland... – although ask its competitors and there is a great deal of suspended judgment... Borders, an expansionist [US] chain, is a big market player with a reputation for creating what retailers refer to as "a destination store," a place you go to just to be there... Borders Group Inc, headquartered in Michigan, claims it is the world's second-largest retailer of books, music and other informational, educational and entertainment products." The company has around 280 super-stores across the States and, increasingly, around the world... Borders keeps long hours – 9 am until midnight every day – and the Auckland store, located... beside Aotea Square and with extensive Queen St frontage, will have high visibility... Borders is not a heavy discounter but is competitive, says... Borders' operations director for the Pacific Rim... But Borders doesn't come without some local scepticism and the belief it will simply transplant its [US]-style operation into this market. As the manager of a Queen St music store says bluntly, "...there's a corporate arrogance which comes [with mega-chains] but they'll learn we're not a 51st state of the... [US]." Knowing the US or AUS[n] consumer is no guarantee of knowing the N[Z] one... Compare bestseller lists here with those across the Tasman or in the North Pacific and, local content aside, our tastes can be quite different... But Borders will certainly make its rivals up their game... Yes, retailers admit, Borders' arrival means a sharpening up and they will watch the longer hours it operates – but none are considering changing to counter them... – and everyone is curious about how events-based Borders can be this far from the international-author-and-artist circuit... Borders is good, they say, but they've seen big companies come here before. And where are they now, they ask rhetorically... One inner-city record retailer recalls the experience of HMV and Brasch music stores: the former from London, the latter out of A[US]. Both thought they knew this market and came in making huge promises and some threats... [N]either... survived... Border is of that ilk... says [the retailer]. Incidentally, 'in 1990 2 billion books were sold in the US at a cost of \$US19.043 billion. General retailers sold almost half the units, with college stores, schools, direct mail, and libraries accounting for the balance. The percentage share of subject categories has remained virtually unchanged over the years, with sociology and economics leading and followed by juveniles, fiction, medicine, science, technology, religion, history, literature, biography, philosophy and psychology, and business. The average price of a hardbound book rose from \$24.64 in 1980 to \$39.91 in 1990, and of a mass market book from \$3.36 (in 1985) to \$4.47. The number of titles issued annually peaked in 1989 at 53,446, declined to 41,223 in 1991, then rebounded slightly in 1992 and 1993.'

...Sponsors] called it a magazine launch, but in many ways the debut of *Talk* magazine was more like an elaborate striptease. Fuelled by a... star-studded and controversial party and the polarising celebrity of its creator, the new magazine became a national media sensation – days before anyone had a chance to read it. "I've never seen so much advance attention paid to a publication," said [a] New York publicist... The mood was upbeat at Monday's sumptuous reception for *Talk* – held at the foot of the Statue of Liberty – and who could blame the corporate backers, Disney's Miramax division and the Hearst Corporation, for feeling cocky? Once again... the queen of spin... is the talk of the town, much as... [the] editor... was at *Vanity Fair* in the 1980s and then the *New Yorker*. This time, however, [the editor is] inventing a product from whole cloth, hoping to create a mass circulation, general interest monthly blending pop gossip and literary culture... "There is a sense... [that] those two worlds can't be brought together... but... that's what we aim to do with *Talk* – to admit we all like to picnic, that we can take the time to read a serious article on page one, then turn the page and escape with a photo essay about a movie star. We want to convey this high-low culture." Ultimately... it was a game of seduction. "There are so many ways to get into someone's head now, with TV, radio, the Internet and e-mail, you've really got to create magazines that cater to all of this distracted attention span and competition." In an age of ever-increasing niche marketing, this is a daunting mission, and experts say [the editor] will need more than buzz to conquer the already glutted magazine market. Professional reactions to *Talk* are mixed: some praised its edgy gumbo of celebrity news, splashy graphics and thoughtful writing, while others panned it as a confused jumble not likely to connect with readers. The first issue was a busy 254-page melange of photo essays, celebrity chit-chat, political analysis and trend stories. Leafing

through *Talk* is a bit like surfing the Internet: in a flash, you move from [the First Wife]'s views on adultery to a picture of [a scantily clad actress] with a whip and then on to a scathing piece about [US] foreign policy in Iraq... [The editor] decided to print the magazine on thin paper to have an informal European feeling, but *The Sunday Times* of London said *Talk* had a strangely dated feel in trying to emulate mass magazines like *Life* and *Look*, both now defunct. The *New York Observer* remarked that the magazine "is sometimes dull, sometimes even laughable..." The knives are out... [but as] celebrities and star-gazers munched shrimp and pate on Liberty Island, [the editor] had the last laugh. While [the First Wife] didn't attend, paparazzi and cultural critics alike were fascinated by the presence of more than 1200 VIPs... And the fallout from [the First Wife]'s discussion of her husband's infidelities continued, filling news pages, dominating talk radio and providing fodder for late-night TV shows. "It's all been terrific," [the editor] said with a wry smile. "And it shows that some celebrities are unifying characters, at least in the way we pay attention to them..." The magazine's main goal is to reach a base of 500,000 readers, of whom 300,000 or more would pay \$5.50 for it. The first issue may be newsworthy, said [a] rival magazine editor, "but can [*Talk*] keep doing this month after month"? ...[In related news, British celebrities] dodging tax on payouts from glossy magazines will now be scrutinised by six special investigators. Stars can charge up to \$3 million for exclusive stories.

...N[Z]'s magazine industry is celebrating some circulation turnarounds. Sales took a hammering in the middle of last year, with analysts blaming everything from the Asian crisis... and... the death of Princess Di... to... a flood of overseas publications on local shelves. But some titles are bouncing back – including... *Metro*, which had seemed in terminal decline. While the latest Audit Bureau of Circulation figures reveal the A[US] *Gals'* *Weekly*, *Cleo* and *Time* are still among the circulation drifters, the NZ [*Gals'* *Weekly* and *Listener* have risen in the past six months – although they are still behind figures of a year ago. The new Qantas-award winning magazine... *Grace*, has taken a knock, dropping from a circulation of 25,692 in December last year to 19,125 in June[– comparable to *Metro*, whose]... 19,556 circulation is still short of the 21,044 it registered a year ago... *New Idea* continues to rise – up from 59,039 to 67,070... its [7]th consecutive audit increase. Also on the increase are lifestyle magazines, including... INL's *NZ House and Garden*... It now sells 57,892 a month. *Boating NZ*... reach[ed] a new high of 15,128. [TV *Guide* remains the highest-selling weekly, though its] latest figure of 241,356... is... down from last year's 258,806... [*Gals'* *Day* has regained... lost ground, with an increase of 3732 [to make] its... circulation... 165,914], while the *NZ Gals' Weekly* remains 3rd with its circulation virtually unchanged at 126,640. INL magazines... says the way of the future is "niche" magazines. But [an] Auckland University lecturer... warns the industry will have to fight to keep its market share in the face of competition from t[v] and the Internet. "I'm not sure people will have... money to buy magazines in the future,"...

Readership figures sometimes lie If you're a magazine that's selling like hot cakes, you probably try to ignore them. If you're a magazine that's not selling like hot cakes, you probably quote them regularly. Readership figures – long a source of bitter debate – are under fire again after an attempt by the country's biggest-selling computer magazine to clarify why its readership numbers went horribly wrong. Concerned at what it perceived as confusion in the market, IDG Communications, publisher of N[Z] *PC World*, earlier this year pushed for changes to the way readership surveys are carried out. However, it admits to being more than a little annoyed at the results, which supposedly show the U[S] edition of *PC World*, which sells a mere 350 copies in N[Z], is equally as widely read as the local edition, which sells around 13,000 copies. *PC World* has now had to be withdrawn from the latest list of readership data. "The whole thing, instead of becoming less confused, became more confused," said IDG Communications... "Obviously we're... not particularly happy that it's had to be pulled out, on the other hand, it's not in anybody's interest to have unreliable data out there." The chair[person] of the joint industry committee set up to oversee such research, [the] Newspaper Association Bureau chief... agreed readership data remained a contentious issue in the industry because of the big effect it can have on advertising rates. While most publications were reasonably happy with the way circulation figures were collated, many were less happy with the pass-on rates ascribed to their titles. Two of N[Z]'s biggest-selling weekly magazines, [*Gals'* *Day* and the *NZ Gals' Weekly*, have been battling for years over pass-on rates, and business weekly *The Independent* also continues to complain long and loud about its pass-on rate compared to rival the *National Business Review*. [The chairperson] had little doubt people surveyed by research companies did sometimes get titles confused. The joint industry committee was working with research company AC Neilson-McNair to try to lessen the confusion... But meanwhile, publishers are welcoming the possibility of further competition in the field. [The company] which conducts the most widely quoted readership surveys in A[US], is attempting to boost its profile in N[Z] by pitching a new range of products to advertisers. The company, which has twice lost out on winning the contract to supply newspaper and magazine readership data in N[Z], is at this stage playing down its intentions in the media market. However, the [person] currently managing its N[Z] operation... confirmed the company intended to bid again for the contract when the tender comes up for renewal in two years.

There are over 2,300 magazines available in N[Z] on a regular basis. Of this number, 58 are listed with the N[Z] Audit Bureau of Circulations as being either published in N[Z] or NZ editions. Most of these local magazines (34) are published monthly, 11 are published on an alternate month basis and six are weeklies... [Speaking of the local publishing industry, the NZ] Press Council, like its counterparts in A[US] and the U[K], is now a member of the World Council of Press Associations which was formed in 1992... The N[Z] Press Council is a self-regulatory body set up in 1972... The council has six scheduled meetings each year, with special meetings held as required... It has as its primary duty, the investigation of complaints against newspapers and ruling on these complaints... Over the... years the council has adjudicated on more than 550 complaints against newspapers... A great number of complaints concerned disappointment by correspondents that their letters have been among those not selected for publication [in a] 'letters to the editor' column. In this respect the council has reaffirmed in a number of occasions that it upholds the discretion of an editor to choose what letters to publish as long as that discretion is reasonably applied... Under its constitution the council exercises jurisdiction only in respect of publications which are published by members of the Newspaper Publishers' Association... and of the Community Newspapers' Association. Each newspaper which has a complaint against it upheld is obliged to publish the council's decision in full. The council does not accept complaints against other publications although there is a possibility of an expansion of its coverage in future.

Christchurch's newspaper war in 1934-35 was the industry's toughest. The *Star*, an evening paper, began in 1868 in opposition to the four-year-old *Mail*, which the *Star* disposed of with a price squeeze. By the 1930s' Great Depression, the city had two morning papers – the *Press* and the *Times* – and the afternoon *Sun* opposed the *Star*. On Nov 19, 1934, the *Star* halved its price to one penny, a move copied by the *Sun* with its next issue and by the morning papers on Jan 1, 1935. All four papers increased their distribution areas to boost sales and most South Island papers were forced to cut their prices to meet the competition. On June 3, the *Press* and *Times* increased their cover prices to two pence. Intense mediation brought a settlement leading to the *Sun's* demise on June 29. The *Times* stopped publication on the same day. The *Star* bought the goodwill, copyright and business of the *Sun* and the *Press* did the same with the *Times*... [While on the topic of NZ's publishing history, a] love story which used the backdrop of early battles in the N[Z] wars is regarded as NZ's first novel. Called *Taranaki*, it was written by Maj W Stoney and published in 1861 by W C Wilson... ([who] later founded the *N[Z] Herald*.) The second novel set in NZ... was published the following year. [The novel was written by an English gal] who never visited NZ but corresponded with immigrant relatives... N[Z]'s first native-born writer to earn an international reputation, Katherine Mansfield was born Kathleen Beauchamp in Wellington on Oct 14, 1888... As... the third daughter of... a wealthy business[person, Katherine]... was sent, at age 14, to Queen's College, London... to complete her education. [Katherine] returned to NZ three years later but sought eagerly to go back to England[, and] left her homeland for the last time when... 19. But memories of her N[Z] childhood were to provide the settings for most of her work. After a brief marriage to a singing teacher... soon after her return to England, Mansfield ([Katherine] had taken her maternal

grandmother's maiden name as part of her pseudonym) married an editor... [WW1] and the death of her brother... profoundly affected her writing and ill health led her to spending much of her later life in Italy, Switzerland and the south of France... With a belief that her failing health had spiritual causes, Katherine entered the Gurdjieff Institute for Harmonious Development of [Humanity, where Katherine] died three months later in 1923... Samuel[Butler] (1835-1902)... must be regarded as historically the greatest literary figure associated with this country... The most celebrated product of his life in NZ was *Erewhon* (1872), a utopian novel whose setting was a mythical land beyond the mountains behind his sheep run... in the western foothills of Canterbury... [Butler] also wrote a series of works of scientific controversy – *Life and habit* (1877), *Evolution old and new* and *God the known and God the unknown* (1879), *Unconscious memory* (1880), *Luck or cunning* (1887) and *The deadlock in Darwinism* (undated). [Butler] held the belief that Darwin was wrong in banishing the concept of 'mind' from the universe, and... maintained the transmissibility by heredity of acquired habits – a view discounted then but gaining intellectual ground today. Butler wrote travel books, a life of his grandfather, commentaries on Homer (whom [Butler] claimed was a [gal]) and Shakespeare, translated the *Iliad* and the *Odyssey* and in 1901 produced *Erewhon revisited*. His autobiographical novel, *The way of all flesh*, was published post-humously and remains his best-known work.

...A *Dictionary of NZ Biography*... was published in two volumes by the Internal Affairs Department... [in 1940, the same year that the] Jessie Mackay Poetry Award was inaugurated by PEN. Early winners included... James K Baxter... [– 'widely regarded as the most gifted poet NZ has produced' –] the grandson of... a foundation professor of Canterbury University College... [and the son of Millicent and Archibald (the author of) *We Will Not Cease*], which] was a... book for a new generation... []. James Keir] Baxter... died in 1972.

Born in Dunedin on June 29, 1926, James... was the son of... a legendary conscientious objector during WW1[– Archibald suffered] imprisonment, confinement to a mental hospital and torture by "crucifixion" (being bound to a post between the front lines in France)... This symbolic martyrdom became part of family legend... In 1937, the family left for Europe... settling briefly in France before [James] and his older brother... were sent to Sibford boarding school in England. At Sibford [James] suffered "undesired sexual enlightenment" and other "barbarities of the dormitory" at the hands of what [James] described as "amateur sadists and sodomites"... That "private hell" continued in 1940, when [James] enrolled at King's High School in Dunedin. As the son of a well-known pacifist in a country dominated by patriotic warmongering, [James] experienced violent bullying... James[, who 'began to write poetry at the age of 7',] ...was haunted by inner demons and an urge for self-destruction which saw his dreams of a Utopian community... [– at] the... Jerusalem... mission station on the Whanganui River... – ...collapse amid allegations of drug use and immorality.

Local poet steps into international fame It's a big buzz for [a]Glen Eden poet... to see his work in print as part of an international poetry book... [The ecstatic poet] hopes his poem could launch a writing career... [Hi]s poem *Sanctuary* was chosen to appear in... *Between Darkness and Light*... as part of a poetry competition run through www.poetry.com... As a semi-finalist [it] is eligible for a grand prize of \$10,000. The creative writer has written many pieces of poetry but this is one of his shortest... "I normally write quite long poems but there was a word limit for this competition... In my youth I wanted to change the world, but with the dawning of wisdom I realise I can only change myself and *Sanctuary* is the compass I used to guide me through the seas of confusion and self doubt... This poem is a reflection of my inner quest for equity, freedom and peace..."

Th[is year's] Nobel Prize-winning... poet... aged 73... [– the 4]th Pole to win a literature Nobel... [–] has been described as the "Mozart of poetry" who combines "the fury of Beethoven"... Her works range from socialist realism to comparing Josef Stalin with the Abominable Snowman... This year's... prize was the richest since it was first awarded in 1901 – ...[NZ]1.63 m... The award will... also... reap a rich harvest for her... German publisher, [who]could barely contain his glee at the world's biggest book fair in Frankfurt... "Sales are bound to go up. They always do with a Nobel winner,"... When [a poet became Ireland's 4]th Nobel literature prize-winner last year, his publisher reported... \$1,132,246... worth of extra sales in the first three months afterwards. "[The Irish poet] sells better than a winner of the Booker Prize (Britain's premier book award). That is pretty amazing for a poet..." said... [the] publishing director of Faber and Faber... [A US publisher who] boasts 20 Nobel prize-winners among his authors... agreed that an author's path to literary glory could be paved with gold after landing the world's most famous literature prize. - 1996

...best known for his first book, the 1948 Pulitzer Prize winner *Tales of the South Pacific*, which became a Broadway musical and film... James Michener, the author of a long list of bestselling books, captivated his readers one last time when a note [it] wrote shortly before his death was distributed at his funeral yesterday. In the typewritten message... Michener assured his friends that [it] had lived a full and happy life and was not afraid of his impending demise. [James] died at his Austin home last Thursday at the age of 90 after choosing to stop life-sustaining kidney dialysis treatments the week before. "It is with real sadness that I send you what looks to be a final correspondence between us. The medicos have left little doubt that this present illness is terminal. I approach this sad news with regret, but not with panic... I savour every memory as they parade past. What a full life they made. And what a joy they bring me now; what a joy your recollection of them gives me now. It is in this mood that my final days are passed," [the letter] concluded. Michener was remembered yesterday as an author who wrote prolifically about the world and the people [it met as it] travelled to virtually every country on the globe... "Michener's deeds have enriched the world and thousands of people in it. [James] exalted ideas and possibilities and... did it while pursuing far-ranging interests all over the globe, his only navigator his own curiosity," said[the] University of Texas vice-president... Michener, an orphan adopted by a Pennsylvania Quaker family, rose from humble beginnings to become one of the giants of American popular literature. During a career that spanned 50 years, [James] wrote more than 40 books that sold 75 million copies.

...IT'S been a disappointing year for celebrity authors... [One actor] who was paid \$5 million for his follow-up to *Couplehood* – which stayed on the *NY Times* bestseller list for 30 weeks – saw his new book *Babyhood* drop off after only seven weeks. [An actress], who was paid \$6 million for her first book, unimaginatively titled *Book*, saw it disappear after only three weeks on the list... The only winner, it seems, is [a comedian], who has already lasted six weeks on the bestseller list with his book of comic observations, *Dirty Jokes and Beer*, for which [the comedian] earned \$3 million.

...[the comedian] has an apology to make... Flanked by the rest of the cast [of his self-named comedy series] at the Warner Bros lot in Hollywood, [the comedian admits to being] a big fan of *The Full Monty*, the hit British film about six [guys from] Sheffield... who do striptease to beat the dole. "I've seen the movie three times and it could have been set in Cleveland. It was so right on with the working-class sentiment and everything, so I wanted to do a tribute – rip it off, actually." [So the comedian] and four other [guys] talk on the show about doing a striptease "like they did in *The Full Monty*." And yes, [the comedian] confesses, "We went totally nude. Sorry," says the overweight [comedian] with his trademark crewcut... "My apologies to everybody in the world who has to see my naked ass." ...lanky Lewis on the show, and a regular on... [the] British improvisation comedy series *Whose Line Is It Anyway?* – confesses, "And it's the first time I had been totally naked since we originally cast the show." That's [the type of comedy the Warner Bros cast do] – recklessly rude and straining at the shackles of sitcom's formula. It's what you'd expect from a creator whose first book, released this year, is called *Dirty Jokes and Beer*. "They gave me such a big advance [\$NZ4.5 million]... [that] I'd have to outsell the *Bible* for them to make their money back." [The comedian says the character it] plays in the show is the person [the USer thought it] would have become if [it'd] never become a stand-up comic. "I'd end up being in this dead-end job and taking whatever [rubbish] people fed me. But thankfully I got a little ambition and set some goals in my life, so I didn't have to end up like the guy on the show." ...[In related news,] America's foremost magicians are locked in a bitter feud that has each wishing [it] could make the other disappear... [The pair] have sued each other over the

two things most important in their world of smoke and mirrors: The secrets of their tricks and their credibility. No magic wand seems capable of easing their hurt feelings as [one accuses the other] of a “malicious” and “vicious” vendetta and [the other] calls his rival a crass publicity-seeker. The bitter potion was mixed three weeks ago when [the other] filed suit in Florida accusing [one] of causing a breach of contract between him and his publisher. For good measure, [the other]’s \$75 million suit also names Lifetime Books, which published his *All the Secrets of Magic Revealed*. Faster than you can say “abracadabra”, [one] pulled his own legal rabbit from a hat, naming [the other] in a \$67 million defamation suit against *Paris Match* magazine. [One said the other] was behind an article that alleged [one]’s romance with [his German] supermodel... fiancée... was a sham... for the publicity.

...A[n A]uckland author... pulls no punches: his latest work is crushingly, mind-numbingly boring and [it] swears readers will fall asleep within 20 minutes. *The Cure For Insomnia* is the tongue-in-cheek title of a collection of what [the author] calls some of the most boring works on earth. From the Linwood North School Committee report from pre-decimal currency days, to... Hegel’s *Concept in General*, the book was “completely ridiculous but absolutely necessary for the time,”... However boring, the book does offer helpful, although hardly apocalyptic advice. Example: Pears’ *Dictionary of the Toilet* tells us a [gal] looks taller in stripes and according to the same principle, a stout [one] should avoid plaids... [The Auckland] said the book is really one long joke and the guarantee of a cure for insomnia should not be taken seriously. The insomnia cure is likely to get a better test drive across the Tasman. Most of the first print run have been sold to A[US], with only a few hundred ordered by N[Z] bookstores.

...After a Canterbury University survey found many students lacked general knowledge, questions are being asked: Just what are these kids reading at school? ...Apart from a rotated list of Shakespeare plays for [7]th-formers there is no set reading list for N[Z] secondary schools... In some cases the books selected depend on the pupils who attend the school... The... New Plymouth Girls High School acting head... said... “...as a traditional girls’ school, we still use the classics [like] Austen... and Shakespeare particularly *Romeo and Juliet*...” At Otago Boys’ High School, books reflect traditional and modern texts. [7]th form students this year are reading *Slaughter House 5*... *Once Were Warriors*, and *A Clockwork Orange*... The [6]th form list included... classics such as *Of Mice and [Guys]*... and *Brave New World*... Auckland’s Hillary College has a roll of 400, all of whom have Polynesian heritage, so the English works taught have a Pacific flavour... The elite Senior College of N[Z], a private school which has dedicated itself to excellence, has a range of... [works by NZ authors, including] *the bone people*... [which won a] Booker Prize... While most schools say they want to increase their number of... [NZ writers, with] the price of novels... at a... \$20... minimum... cost is a barrier to some... “...most... would have contemporary fiction from the last 10 years but it is getting harder... economically... for schools especially the smaller country ones...” ...[furthermore,] New Plymouth Girls High and Otago Boys both mentioned the expense of replacing books as hampering the number of Kiwi authors taught... “[But there] is more interest in our own culture – the emotional ties to England and English literature are being lost.” ...it would be a pity if N[Z]ers studied only local texts without doing wider reading of English and U[S] literature... said... the... Education Advisory Services secondary English spokes[person, though NZ]... secondary schools... are years ahead of their A[US]n counterparts in recognising multi-culturalism.

...[the writer] was just an average North London school teacher until his novel *Fever Pitch* catapulted him to literary and cinematic stardom. Now Hollywood is in million-dollar bidding wars over rights to his books about the lives of ordinary guys... [By celebrating] the disappointed dreamers, the unlikely lads who, in the ’90s, have come to an understanding of their weaknesses and failures[, the writer]... has found a way into the modern consciousness that others have missed... Bright, but with no great immediate ambitions, [the writer] drifted into teaching after graduating from Cambridge University... [The writer] contributed occasional pieces to London magazines, which brought him into contact with the capital’s literary set. But that was it. By the early ’90s [the writer] found himself, like so many [guys], headed for middle age and nowhere much else. [The writer] seemed to have already got where [it] was going in life. [However, a] friend remembers how [the writer] announced one evening that [it] was going to write a memoir about football. “It didn’t really register. I mean, we were all busy writing and it didn’t seem a particularly good subject.” ...Published in 1992, its slightly seedy... autobiographical account of life as a football... fan who would rather see Arsenal win the league than himself win the pools, caught the public mood... The project, however, was not merely football. *Fever Pitch*... was also about [guys] in a post-feminist world... In the view of... [the] editor of *Esquire*, the *Fever Pitch* phenomenon would not have happened in the ’80s – the decade of the yuppies. It required the more reflective climate of the ’90s. “Suddenly this book comes along and people think. ‘I don’t have to be thrusting, successful and dynamic’. Historically, British [guys] have never been encouraged to admit that they have weaknesses. For many... this was the first book that said, ‘Don’t worry, it’s normal to be confused’.” ...[the writer] achieves that effect by holding up a mirror to the crowds, allowing them to see themselves as they really are, while granting a form of literary absolution. With [the writer] at your side, you can still swill lager, roar on the lads at Highbury, play old cassettes of the Stranglers and eat chicken tikka masala straight from the container – yet still be a sensitive, caring [guy], yearning for a grown-up relationship that continues outside the bedroom, prepared at least to address the issues of responsible parenthood... It was such a telling admission that [the editor], for one, thinks [the writer] is well worth Hollywood hammering on his door with millions.

...[a publisher] says it has signed [the] best-selling horror writer... to a three-book deal that bucks the trend of multi-million-dollar advances. “[The terror-monger is] taking a much smaller advance for a bigger share of the profits,” said a... spokes[person for the publisher], without elaborating. Sources close to the publisher said [the terror-monger] signed for almost... \$[NZ]3.25 million... per book and a 50[%] share of the profits. The deal... calls for [the terror-monger] to deliver a novel, a collection of short stories, and a nonfiction book on the craft of writing.

...*NOVEL FEAR*: ...the best-selling horror writer... fears people imitating the horrifying scenarios in his books – particularly a 1977 book... “If there’s anything that I regret in my career, it’s publishing the novel *Rage*... Never crossed my mind at the time, but it’s a story about – ...I’m even hesitant to speak of it.” In the book, written under [hi]s pseudonym Richard Bachman, a... student brings a gun to school and kills his teacher.

...I AM very worried about people who read a LOT of [the terror-monger]. A non-stop diet of *VIOLENCE* and *BLEEDING CORPSES* and possession by *EVIL SPIRITS* could lead to severe literary malnutrition. Not that this possibility will concern [his] millions of fans. Unlike [many other novelists, however, the terror-monger] does not believe because [it’s popular it]’s also great. In fact, [the terror-monger] has modestly and accurately said of his works that they are like Big Macs... [The l]atest McKing burger... *DESPERATION*... [will cost you \$NZ]44.95. - 1997

“GOD MADE ME the kind of person who wanted to write stories,” [the terror-monger] says. “There’s... a simple and egotistical idea at the bottom of it all, one that has sustained artists from time immemorial. It’s the feeling that ‘I’m great... I’ll be rich and famous and never suffer again.’...”

‘You came to talk about the play... Let me discourage you... It isn’t literature, it doesn’t mean anything... It was written to entertain. Like horror [stories]...’ - The Crying Of Lot 49

An apparently empty town in the Nevada desert... inspired *Desperation*, in which supernatural evil has run amok disguised as the local sheriff. *The Regulators* superficially takes the same set of characters, including the supernatural being, and transposes them to suburban Ohio, in which the killing agents come straight out of Saturday morning merchandising cartoon sci-fi and cable reruns of *Bonanza*... Despite his attempts to give both books different personae, the... double act’s genius remains in the conjuring of evil out of ephemera, of a malevolent universe lurking behind the Walmart shopping trolley banality of everyday, small town America, a world in which ancient, bloodthirsty demons crack... jokes and sing... tunes.

Weird. But then that is his business... Popular fiction's most prolific terror-monger has had a hell of a year. Not only has... [the terror-monger] brought forth, in his own expression, twins... but... has... just completed a "death row" serial thriller – *The Green Mile* – released in six parts, *a la* Charles Dickens, to gross more than any of his megabuck-earning single books...

WHEN the novels of Charles Dickens first appeared in monthly serialisations, it was not unusual for crowds to gather at the publishers, anxious for the latest twist in the tale... As a device for maintaining suspense, the serial has since transferred to the screen, via the cliffhangers of Saturday morning picture shows to the never-ending drama of the weekly soaps. Now one of the written word's biggest money-spinners... is attempting to resurrect the serial as a novelistic genre. The biggest cliffhanger in *The Green Mile*... is whether [the terror-monger]'s legion of fans will feel swizzed at having to cough up £1.99 a time for a mere 92 pages. Of course, in the end they get the full novel at rather less than the cost of a hardback, but it is still almost twice the price of a paperback... "The green mile" of the title is the walk along death row to the electric chair. The most notable characters are an illiterate, improbably gentle giant, sentenced to fry for the rape and murder of two young girls, and an intelligent-seeming mouse... [The terror-monger] modestly declines to compare himself with Dickens, though I am not sure [it] really needs to, given his own commanding position within modern popular fiction... Dickens was ever a populist... And... also shared another quality with [the terror-monger]: appreciation of a nice little earner[– although only the terror-monger has been able to earn from having his stories turned into screenplays]

...*'a script doctor is getting rich by telling writers how to get rich.* It's the stuff dreams are made of: the average original screenplay fetches upwards of \$US250,000 from Hollywood studios. And a college professor for 21 years considers it his mission to help new writers develop that stuff and those dreams. Part of the challenge is making them understand what Luke Skywalker has in common with Malcolm X. "Every movie is about the same thing," the professor declares. "Identity." Legs together, arms half upraised, the long-haired, bearded professor is like a modern Messiah giving the Sermon on the Movie as it stands before about 40 people who have each paid \$US225 for his two-day seminar at the New School in Manhattan. The professor also received hundreds of unsolicited screenplays from writers requesting critiques. The professor used to charge nearly \$US5000 a script. "Now I charge substantially more. I raised my fees because I thought it would chase people away. But I've actually gotten busier." The 53-year-old, who *Variety* once described as "the Jewish mother of screenwriting," isn't adverse to sex and violence in film, as long as they advance the story.' □ 'Hollywood stars are living proof that money can't buy brains. And now their stupid antics are revealed in *Movie Stars Do The Dumbest Things*. The book's author says, "Face it, being a movie star ain't rocket science. Hollywood's stars have huge egos, huge salaries and huge amounts of free time – the perfect recipe for doing the dumbest things."']

...They're the so-called video paparazzi, or in some circles "stalkerazzi," who earn a living hounding stars and selling footage to an ever-increasing slew of tabloid television shows. "Celebrities are the ones out with their new boyfriends or girlfriends and they don't like to be caught while they're doing that," says [one] freelance videographer... "That's too bad. That's part of life. They have to expect that." Enter... [the star of the] movie *Batman and Robin*... [The former] *ER* TV hunk... simply doesn't want to take it anymore. [The actor] has refused to do interviews with *Entertainment Tonight* and *Hard Copy*, both shows produced by Paramount Pictures Television Group, after *Hard Copy* aired a segment about his girlfriend... [It] was particularly angered because the segment broke a deal the actor had with Paramount[']s... president... to keep him off *Hard Copy*. "I understand I'm a celebrity... I make a good living, I don't ask anybody to feel sorry for me and I don't expect anyone to. But I think that we all should be afforded certain civil rights and some of them you can't put bounties on people's head and have people try to jump in your window for \$300,000 to get a picture of you and your baby,"... [His] boycott of *Entertainment Tonight*, which unlike *Hard Copy* relies on celebrity co-operation for its interviews, has gathered steam. Lots of it. [A number of actors and at least one high-profile director]... have... all... signed up. Such shows, they say, have gone overboard. Following telephone conferences with [the hunk] and other celebrities, Paramount executives implemented guidelines for such coverage. The executives said their shows would reject footage in which the subject was harassed solely to provoke a reaction, footage that shows the celebrity's home address, unauthorised footage of celebrities or their children in the privacy of their own homes, or footage known to have been illegally obtained. And now [the hunk] has taken it upon himself to be the TV tabloid watchdog. Every night... [the actor] videotapes the show to watch its use of paparazzi video... While [his] campaign targets *Hard Copy*, [the actor says it] would like to see tabloid TV in general clean up its act. "The point is, you fight a war basically one battle at a time and that's the only way you win and get inroads,"... But will his efforts make a difference? "The truth is, I... honestly don't know... At least the people who are involved will be able to say, 'Hey, we gave it a shot.' That's all you can do." ...What, if any, effect [Paramount's new] policy will have on *Hard Copy*'s coverage won't be known immediately. Paramount officials refused to comment beyond the news releases. But [the videographer], who has sold his footage on a regular basis to *Hard Copy* – including an infamous videotape of [a couple of actors] arriving home with their new baby – says [it] has followed those rules anyway and that they won't affect the way [it] nabs celebrities. "I don't break the law..." In the [baby shots case, the videographer] hid inside a van parked across the street from [the couple]'s house. The videotape showed [the husband] approaching the vehicle, spraying shaving cream on the windows and smearing them. The altercation that followed was not videotaped, but [the videographer says it] was punched in the nose and kicked on the ground. Jurors acquitted [the actor] of assault charges. Like most freelance videographers, [this one] seeks clues to stars' whereabouts from daily trade magazines. [The videographer] picks his prey, keeping in mind that exclusivity is the key, and hunts them down. Video in hand, [the videographer] shops it around to his regular contacts at *Hard Copy*, *American Journal*, *Entertainment Tonight* and, before it was cancelled, *A Current Affair*. While [the videographer] won't reveal how much h[is type] earns a video... it's anywhere from hundreds to thousands of dollars.

...*The top earners*... [#1] is at the top of her profession and knows [that means the actress is at the] stage where they will pay her almost anything [the star of *Basic Instinct*] wants or, as [#1] puts it: "They'd pay me to play Lassie." They are supposedly paying her \$9 million for her latest film *The Last Dance*... And[, nowadays, #1] gets to say no to nudity and to pick her co-stars – that's power! [#2, aged] 33, is purportedly the most bankable [gal] star in Hollywood. In the business they call her "Gimme" Moore. [Gimme] employs the largest team of assorted staff in the business and runs her own powerful production company... [Her husband (#3)] can pull \$20 million a picture, but [the wife]'s power is such that [it w]as... offered \$14 million to show all in the [box-office flop *Striptease*. #4], 28, queen of the SSS (sex-symbol syndrome) came from nowhere. [#4] originally wanted to be a vet, but Steel Magnolias brought her an Oscar nomination for best supporting actress the same week that Pretty [Gal] exploded at the box office. Her star waned for a while, but [#4] will command around \$16 million a film in 1996. [#5], 29, is an opera singer's daughter who became Hollywood's sweetheart with *Speed* and *While You Were Sleeping*. Asked if [it] was getting \$8 million for her next movie, [#5] shrieked with amusement and replied: "What paper do you get? I read this morning that I was getting \$12 million!" In fact, for her first project of 1996 *In Love And War*, [#5 will] rake in \$16 million! [#5 has, however, 'fessed up to being hooked on – wait for it – massage and acupuncture. The body indulgences are costing her \$3850 a day and while the perky actress admits her obsession is selfish and decadent, who's surprised to hear it's got no plans to stop or scale down her lush treatments.'] ...Once a supermarket checkout girl, [a 38-year-old] is much more than a pretty face... [and, therefore, will] make about \$9 million a film next year, and... get to call a lot of the shots. For instance, if the script calls for nudity, [#6 can] say no – and the scene goes, not... [her. #7], 33, began her career at the age of three as the bare-bottomed poster child for Coppertone sunscreen. A two-time Oscar winner, [#7] is a Yale graduate, has directed her own films and is a Hollywood power with her own company Egg. Price: \$8 million. [#8], 34, hit the big time with her famous extravagant sexual scene in a restaurant in *When Harry Met Sally* in 1989. Beneath the sweet blonde looks is a steely, some say ruthless, [person who] has a degree in journalism from New York University, is married to... actor[#9], and heads up her own company Fandango Productions. Her box-office rating is worth \$9 million a film next year. [#10], 42, is the original Hollywood fantasy: the small-town girl who wins a beauty contest and becomes a film star. Often described as a "pout on legs", [the 42-year-old – who's actor

husband once hit a stalkarazzi for videoing their baby –]reportedly receives \$5 million a movie... [#11], 38, is a feminist spirit in the body of a bombshell[who] has her own production company Genial Pictures, which [it] runs with her third husband... a... Finnish director... [#11] changed the face of [gal] buddy-buddy films with *Thelma And Louise*, is a member of Mensa and is politically active. Her rate is around \$8 million. [#12], 46, was the first black actress to command a superstar salary. Born in New York, [#12] has a past that includes poverty, drugs, single-parenthood, abortions and work as a cosmetician in a funeral parlour and as a bricklayer[before it] got an Oscar nomination for *The Colour Purple*... For... a grandmother... to receive \$10 million for [a film] was unheard of... [before] *Sister Act II*... but you'll be hearing plenty like it again. [#13], 31, has a multi-million-dollar international company that includes advertising, television and merchandising divisions. The supermodel Body from Down Under has moved into firms and fronts *The Fashion Cafe* chain in the US... and has just signed an ad deal with Miller beer in the US... The Sirens star's latest role is... in *The Mirror Has Two Faces*... [for which the Body is expected] to earn \$12 million... [#14], 46, dominates serious film roles as no actress has before. The dual Oscar-winner is a throwback to what used to be called "a classy dame" and has been a Hollywood leading star for almost two decades. But... still commands top fees – about \$7 million. After the success of *Clueless*, [#15] has been given a two-picture, \$13-million deal with a studio for 1996. The dewy-cheeked star says: "I've worked like a dog all my life and I've earned it." [#15] is just 18 years old. [They're 'Hollywood's richest gals, the stars who spend \$thousands – without batting an eyelid – on gowns they'll wear once. They're so rich they need entire rooms to house their wardrobes. And when they say they're going home, they could be talking about any one of five or six opulent houses' ...

The 'sci-fi hit *The Fifth Element* pulled in so much money worldwide that our favourite platinum blond will collect \$25m for his next *Die Hard* movie.' ...the husband of the most bankable gal star in Hollywood – and star of films like *The Fifth Element* and *The Sixth Sense* – 'may be receiving a whopping \$NZ35 million to make another *Die Hard*.' However, another actor (r:Another action hero, p1655, ln27) 'will be making *Terminator 3* for \$45 million'!

... 'They may want to reconsider the *One Flew Over the Cuckoo's Nest* star's involvement, since his agents don't consider asking for a \$75m fee anything like a joke.' By the way, a colleague of his 'was paid \$25m to play the US President in *Air Force One*, 100 times the annual salary of the real President' ...

An actor] has signed a... \$22 million... deal to play a[n adulterous] Southern governor said to be modelled on[the current US] President... *The New York Post* said... the movie *Primary Colours*[is] based on a novel of the same name... [which] was loosely based on [the President]'s 1992 campaign.

...The ultimate showbiz triumph could be a celebrity with healing powers. Well, if you're among the gullible, you may believe [the star of *Primary Colours* claim to be able to] heal with his hands. [The actor apparently] learned the art while studying at the controversial Church of Scientology – and has cured a flight instructor and several movie co-workers of minor ailments by laying on his hands. "I've really learned how to heal... I can transfer my spirit and power to others." Now, could this be a publicity stunt for his new movie, *Phenomenon*, in which [the actor] plays a guy with healing powers? The thought of St John of Hollywood doing miracles is too much to stomach!

... "The movie people told us it was going to be great for business, but they lied..." ...In the film... [the actor] plays a small-town garage owner struck by a blinding light on his 37th birthday. [The character] suddenly develops super intelligence, but his new genius soon creates problems when the townspeople turn against him. And people in Auburn, northern California, where *Phenomenon* is being filmed, are certainly turning against [the actor] and his movie colleagues for "destroying" their livelihoods while the film is being made. For while [the actor] will be paid a staggering \$25 million to make his newest film, the people of Auburn claim they are going broke. Many shopkeepers are complaining that filming has totally disrupted their lives and businesses. They claim that security guards employed by the film production company have been heavy-handed and turned away customers during filming... "The shoppers can't get into my store because the security guards won't let them in. It's outrageous. It's as if they are imposing a curfew. They are deciding who can and can't walk down the street. This is the worst month I've had since I've been in business. When the Disney people asked for permission to film here, they never said it would be like this. They haven't apologised for the inconvenience they are causing..." ...sentiments [that] are echoed all over the picturesque old gold mining town... Meanwhile, the usually high-living... [actor] has abandoned his luxury life-style and settled into small-town life to shoot his... film. - 1996

[The star of *Phenomenon*'s real-life wife] has won a court order to keep away a [fan] who wrote her a letter laced with sexual innuendo and references to her husband. A judge ordered [the letter-writer] to stay 150m away from the actress, despite his contention that the letter was a satirical joke that backfired... [The actress] broke into tears at reading the letter, which was delivered to her on... a Miami Beach set of the Disney movie *Holy Guy*].

...in *Pulp Fiction*, [the husband of the *Holy Guy* actress] twisted his way back into the big time... [However,] *Saturday Night Fever*, which is doing the rounds on Sky's movie channel, [proves that the actor] always had a dynamic, seductive way of moving... But neither of those astonishing gyrations predicted the brilliance of his little sequence in *Michael* [– a film about a smoking, bed-hopping archangel – in which the actor] seems to be radiating sexual power. [Michael] may represent God on earth, but [it has also] got the devil in those hips. • *Michael opens next month*...

Two new movies unmask contrary aspects of the American psyche... [The star of *Phenomenon*] trips the light fantastic as an angel in *Michael*... while... [the] *Blue Velvet* director... [– who says, "I see films more and more as separate from whatever kind of reality there is anywhere else, they are more like dreams]" –] ...continues to walk on the wild side in *Lost Highway*... Neither may make much sense – but they're a buzz to watch. [Speaking of which, 'for those that haven't seen the year's biggest movie *Independence Day*, do so now. For those who have, see it again']...

According to *Variety* magazine, the... [m]ajor movie studios earned \$8.2 billion at box offices in 1996... [The] top-grossing movies were: *Independence Day*, \$456m; *Twister* \$361m; *Mission: Impossible*, \$271m; *The Rock*, \$201m; *The Nutty Professor*, \$192m.

...In 1977, *Star Wars* cost \$US9.5 million... and raked in... \$322 m... in the U[S]. This year, *Speed 2: Cruise Control* cost \$145 m... [while] *Batman and Robin*... carries a Gotham-size price tag... [S]tudios are betting they can make a killing from mega-budget films. But some studios... get killed themselves. With costs soaring and the market saturated, profits on most expensive films are shrinking, depressing the earnings of the huge media companies that back them. "Making films this expensive is bad business. You can't keep living on less and less profit," said... [the] president of worldwide production for... 20th Century Fox, which made both *Star Wars* and *Speed 2*. This... summer's blockbusters must break through record clutter: 54 films released on 800 screens, compared with 51 last summer. While those films' \$4 b... price tag is 11[%] higher than last year, the total domestic box office for the period will grow just 5[%] to \$2.43 b... The cost explosion is driven by the public's appetite for expensive special effects, rising pay for top stars and costly marketing... The results can be disastrous... Cinergi Pictures is being liquidated following flops including *Judge Dread*... and *Evita*... Carolco Pictures' \$90 m... bomb *Cutthroat Island*, which earned just \$9.9 m... at the box office, helped drive the studio out of business... News Corp will not go out of business if *Speed 2* crashes, but it could lose \$50 m... once the theatre owners' take, as well as production and marketing costs, are sliced from its expected \$128 m... in revenue from theatres, home video and television... However, News Corp and Viacom may have spared themselves the summer's biggest bloodbath by postponing the release of their disaster movie *Titanic* until December. With a record production and marketing budget of about \$245 m... the film will take a huge loss unless it becomes one of the highest-grossing films ever.

...THE SILLY SEASON The new action films in the U.S. are big, loud and dopey, near exhaustion if not extinction... Melodrama at its best involves conflict between intelligent good and cunning evil. But it's easier just to have smart people do dumb things. The noble intentions of *The Lost World*'s team of scientists – trying to protect the dinosaurs from a group of papacious hunters – are undercut by some laughably inane fieldwork... [For example]; they kidnap a *T. rex* baby to mend its leg while Big Mama prowls closer. It's knaves vs. fools in the Jurassic jungle... Even the otherwise canny Disney cartoon *Hercules* has an isn't-it-funny-that-a-whole-Greek-marketplace-falls-down scene... Something is wrong with Hollywood if the answer to every story problem is a crash... What [modern films] lose in personality, they make up in body count. In these

sociopathic action films, the hero has a bad case of blood lust. The psychos, like the... serial killer in *Con Air*, are comic, sympathetic characters... [Interestingly,] movie stars didn't always have to act like commandos to assert their machismo. How many bad guys did Clark Gable or Cary Grant kill in their careers as Hollywood heroes? Precious few, because life – even a villain's life – was held more precious then. Maybe the old movies were naive, but we'll take naivete over the thoughtless, numberless carnage that makes the modern action film a Bosnia for fun and profit... Jokiness is the current handmaiden of brutality. Violent death provides the punch line for the string of gags that is the modern action movie. And when the stars aren't killing off the supporting actors, they are cracking wise – lamely. All right, nobody goes to *hear* an action movie, but the verbal humour in *The Lost World* didn't have to be so stilted. In *Con Air* and *Batman & Robin* the lines have the rhythm of wit but not the content... But Hollywood hardly knows what to do with its human stars. [#5] became one as the resourceful bus driver of *Speed*, yet in the sequel... can only squeal, hide and get kidnapped... [for] \$NZ22 million. In *Batman & Robin* the guest villains are... Poison Ivy and... Mr. Freeze. [The actress playing Poison Ivy] has sexy fun with her villainous eco-freak, but [the actor playing Mr Freeze – the star of the *Terminator* movie series –] is encased in an icy truss of a costume that obscures his rippling charisma. Memo to the *Batman* team: next time you pay a star \$25 million, let us see him.

...Welcome to the 90s movie: more celebrity names above the title than you can shake a script at, enough toys and T-shirts to fill a Warehouse, an advertising budget to keep a [advertising executive] in lunches for a year. At least. Taking it to new heights is *Batman and Robin*... which... has, as they say in [gals' magazines, the former] *E.R.* hunk... as the dark and hooded one[; another gal magazine favourite] as the troubled teen Robin with the ultimate Valley girl[(#15)]... as his sidekick Batgirl; [plus the two] guest villains... With all this star-power, you expect a plot too? ...Aw shucks, you don't watch *Batman* movies for the story. You watch 'em for the really bad puns and the special effects.

...*Tinseltown loses its shine* HOLLYWOOD is waking up to its own real-life disaster movie as a succession of some of the world's most expensive films have been released to indifferent reviews and dismal box office returns. Hailed as the beginning of the year of the blockbuster, the opening of the traditional summer season of Hollywood's biggest and brashest offerings has instead brought mixed fortunes, with some studios likely to lose millions of dollars. The biggest casualty so far is *Speed 2*... The most expensive summer release, it cost 20th Century Fox \$217 million and has recouped just \$46m. Other disappointments include Sony's *Fifth Element*, a sci-fi thriller... which in more than a month has taken \$90m but cost \$134m to make. Many film... [studios] are attracted by big-name stars and lavish special effects because they believe profits are guaranteed, despite huge outlays. One example of that seems to be the latest *Batman and Robin*, starring [a former *ER* hunk] as the caped crusader. Despite poor reviews, the film has taken \$63.4m towards its production costs of \$180m. Warner Brothers still hopes it will join the others in the *Batman* series by eventually moving into the black. ['With a worldwide average of 1-in-10 films breaking even it's a risky business' – yet the] conventional wisdom is that overseas returns and videos compensate for a poor reception in the US. Nevertheless, box office revenues for the first four weeks of summer are down 7.5%. The competition for cinema-goers is also worse because this year 11 films with budgets of more than \$102m are being released, compared with just four in 1996... The crushing success of some films has also elbowed out weaker rivals... [The] dinosaur epic *The Lost World*, the sequel to *Jurassic Park*, has taken more than \$300m and is still in the top five after more than a month. Costing \$104m, it is the only summer release so far to have recovered its costs. Studios have also been careful to avoid coming up against *Hercules*, the new Disney cartoon based on the Greek myth, which is expected eventually to recoup its \$112m cost five times over. The total bill for this summer's releases comes to more than \$1.5 billion. It would have been higher but for a last-minute decision by Fox and Paramount to switch their hugely expensive and troubled thriller *Titanic* to a December opening. The impact of too many blockbusters is likely to be on the kind of films we will see next year. Heads are turning at the unexpected success of *My Best Friend's Wedding*, a romantic comedy that has revived the fortunes of [actor #4]. It cost only \$61m and, with a \$34m opening weekend, is certain to be one of the models for next summer... [But the big-action genre should receive a boost next summer with the release of the special effects-laden *Matrix*. The star of *Speed* has] graduated to the \$10 m... club... [with] *Matrix*, which puts him in the same league as the biggest stars in Hollywood. The script for his new film, about a futuristic world created by a computer, also raised eyebrows with its \$1 m... price tag...

Hollywood writers have lost the thrill of the chase scene – but they have few choices in a studio system that loves fast action and special effects. "Sometimes I want to thumb my nose at the system, but I always wind up liking what I'm writing," said [the person] who is working on the screenplay for *I Dream of Jeannie*, a film based on the popular television series. [The writer], who wrote speeches for [the current US] President... in 1991 and 1992, joined other screenwriters at the Writers' Guild forum where many complained about the lack of character and plot development in films which have dominated the box office this year. [However, while] writers scoff at the big-action genre, industry insiders admit such films are hard to turn down, especially when studios pay writers as much as \$NZ9 million a script... The Writers' Guild minimum rate is \$60,000 for a low-budget movie costing less than \$6 million and \$130,000 for movies that cost above that amount... [The problem is compounded,] many writers say[, because] there is very little middle ground between huge blockbusters costing more than \$225 million and low-budget independent films. Modest, middle-budget films costing \$35 million to \$90 million are becoming extinct... Meanwhile, opportunities for scriptwriters are shrinking on the small screen as NBC and CBS both recently opted to drop one of their two movie-of-the-week slots. "TV movies are marginally more expensive to make than episodes for a series," said... a Writers' Guild board member. "This is an economic move by the networks and it will cost a lot of writers work and tension. At the same time, it may improve the quality of TV films." ...Agents, who help writers to secure contracts[for a 5-10% share of those contracts], bear some responsibility for the state of affairs, according to... a partner of the United Talent Agency. "Due to the competitive nature of the business, agents are afraid of losing a client [writer] [– so they avoid] telling clients the truth about projects. That's why we're getting such lousy movies..." [The person] whose writing credits include the critically acclaimed *My Dinner with Andre*, in which [it] also starred, said: "Most movies should never have been made because most movies are evil and horrible." ...[In related news, the NZ actor who starred in *Jurassic Park*, the AUSn actress who starred with her husband in *Eyes Wide Shut* and an AUSn Oscar winner... have attacked A[US]n Government plans to drastically cut film funding. A letter to... [the AUSn PM] signed by actors, producers, directors and industry bodies said the proposed cuts would have a crippling effect on the industry. The Government is expected to almost halve its annual \$A140 million... funding.

...The Film Commission chair[person says NZers]... will continue to occupy "a cultural [last]-world status" in their own country unless funding is boosted for film-makers. N[Z]ers saw more films each year than A[US]ns or any European nationalities... yet N[Z] films took less than 1[%] of home box office receipts. That compared with 50[% for French films in France. NZers]... are the world's fourth-keenest movie-goers[per capita], with more than 8.1 million movie tickets sold between January and June... [– or] more than \$46.5 million... [in] revenue... excluding GST... – ...says the Motion Picture Distributors' Association. This compares with just over six million... [tickets and revenue of] \$36.1 million... in the first half of 1996.

...N[Z] movie-makers should forget short films and focus on features. That's just one recommendation... from... [someone] whose mission is to help turn ideas into reality... With the Film Commission's decision to pursue the idea of no-budget films... many in the industry were keen to hear [someone speak] at this month's Screen Producers' and Directors' Association conference in Wellington. Droll, informed and with the incisive pragmatism of the lawyer [someone] trained to be, [someone] brought opinions which sometimes bordered on heresy in some circles of the N[Z] film industry. But as president of Next Wave Films, which provides finishing finance to low and no-budget English language features, the New York-born, Los Angeles-based [someone] was the one to listen to... "Shorts will help your craft, but they don't necessarily help your career. Feature films get seen by critics, get into festival programmes and so on... [Y]ou can win at Sundance with a short and still be back in the same place a year later looking for finance for a feature," [someone] said, referring to an annual film festival in the U[S] which has become an important forum for film-makers... [Someone] is amused by comments about non-payment for services on some small N[Z] films. "There aren't really union

issues on no-budget films in the States because, aside from a few actors who might be members of the Screen Actors Guild, nobody's in unions. But then when I'm in N[Z, AUS] or Canada they're talking about exploitation! I thought exploitation was where people had no choice and had to work in horrible conditions or for lousy wages. But these are completely voluntary campaigns to get a movie done for nothing. It's also different in the US because there's no Government funding, so when film-makers decide they're going to make a movie, they may not know what budget they're going to make it at, but come hell or high water they are going to make this movie. Here, there's a nurturing and a supportive structure, and as a consequence of that... film-makers will sometimes write a script and go to the funding bodies, and they'll say 'No.' So they'll go away and write another script. In the US they are going to make that movie and they don't care who says no." [Someone] tells of a film-maker and his friends back home who have "so far spent maybe \$US180,000... on this movie and have maxed out 57 credit cards... [B]ankruptcy is chasing the guy down the block and... his movie [still isn't done. However, someone] scorns the notion of film-makers changing projects to suit financiers, or by trying to second-guess the market potential... A series of articles [someone] wrote for *Filmmaker* magazine advanced the case of no-budget films based on the successes of *Laws of Gravity* (made for a mere \$NZ59,000), *El Mariachi* (\$11,290) and *Clerks* (\$43,085). These titles validated the no-budget approach, but... [someone also sees] the need for some finance to get such films to completion, so mooted the idea of a reviving fund which would allow film-makers finishing finance of up to \$100,000. [Someone] approached investment bankers and, on March 2 this year, Next Wave Films was launched. Already they have received 225 films through their door... Next Wave can [only] financially assist four films a year, but just as important they have an extensive data base which allows them to put various creative people in touch with each other, provide ideas for promotion and marketing, offer advice on how to get films into crucial festivals and, where necessary, tell film-makers their project has no life-expectancy at all... [Someone] sees enormous potential for the Internet. "One of the biggest problems right now is distribution... The Net gives film-makers the opportunity to interact with audiences directly. You could put examples of your movie on the Net, [people] see... them and send... \$15 to buy a cassette – and all that money will go to the film-maker." [Someone] also notes people in their teens and twenties are Web-literate. The question is how to get them into cinemas. *Clerks*, aimed at that demographic, wasn't successful theatrically, but once it went to video "people saw it and told their friends and had parties and watched it – and it sold 60,000 cassettes on video... [T]he wholesale was \$60 per cassette... That's a lot of money!" Into this global village comes Next Wave with advisers in... England... A[US and NZ]. "We're on a mission here," says [someone], "and we're going to change the world!"

...A Bombay film-maker who held up an express train... recently in a... rail station... in the state of Rajasthan... allegedly... to shoot an action-thriller in its passenger cars... appeared in court yesterday. The magistrate stayed the arrest of... the [Bollywood] film-maker, and granted him bail, but ordered other actors and actresses to appear next month to face trial.

...When the movie *Kama Sutra: A Tale of Love* premiered at last year's Toronto International Film Festival, someone remarked to its director and co-writer... that this picture would either get her thrown in jail or make her very rich. [The director] just smiled: the former prediction very nearly came true during the filming of what its maker calls "an ancient modern love story" when [the director] was working on location in India. "One night I had a dream that I'd been arrested. I came downstairs, bleary-eyed at four in the morning to go to the next day's shoot, met up with my production team and said, 'Guys, I just dreamed I was arrested. Isn't that hilarious?' They shuffled their feet, looked down and then replied, '...it's not a joke, because yesterday five [officials] came for you'." Although [the director] had received permission from the Government of India to film *Kama Sutra* there, [the director] and her crew were subjected to a constant campaign of harassment from bureaucrats and officials who, in an effort to extort money, threatened to have her arrested for making pornography. According to [the director], however, it's the Indian cinema and its hypocrisy that is pornographic. Nudity is forbidden on screen there. Lovers can't even kiss. Instead there are [scenes of "guys and gals] dressed in weird mini-skirted Western garb [who] endlessly ride the air in overt references to copulation". To Western eyes these films have a campy and surreal charm, but [the director] isn't having any of it. "Their indirectness makes these films even more deadly and pernicious... I just lament this." In search of an antidote, [the director] went back to that third century Indian classic... The original *Kama Sutra* was not just the "popup manual" of sex positions that made it popular among self-consciously liberated Westerners three decades ago, [the director] tells us. The text was also a source of wise counsel in the politics of love... It was essential to the success of her picture that [the director] found exactly the right actor for the pivotal role of Maya – a servant girl whose sexual assurance sets off a plot whose tangled complexities rival one of those erotic Hindu sculptures where limbs and bodies intertwine so exuberantly it's difficult to tell just whose hand is on whose shapely, chiselled haunch. Finding Maya was rather like the search for Scarlett O'Hara, except [the star of *Gone With The Wind*, the director] says laughing, didn't have to take off her clothes quite as often... [The director] looked at up to 700 Asian [gals] in Canada, New York and London. ([It] ruled out using an Indian actor because of the nudity.)

...Once, the public couldn't get enough of [Gimme] Moore. Now... they've seen too much... Two years ago... [Gimme] was basking in the glory of being the highest paid actress in movie history. Today her latest film, *GI Jane*, has had its release delayed – because the star is too unpopular. The decision, by Disney, is unprecedented and a chilling reminder of how the mighty can fall so fast in Hollywood[– where the 'average career is five years (and only 1% make it'). Gimme], who shaved her head for *GI Jane*, had much of her own money tied up in the \$NZ125 million production. It is the story of the first [gal] to try out for the U[S] Navy's crack Seals unit. It was to have been Disney's key entrant in the northern summer holiday blockbuster stakes at the box office. Now *GI Jane*, for which [Gimme] was paid \$12.5 m... will not be seen until next year – by which time the studio hopes her stock will have risen with the public. [USers currently] think the 34-year-old mother-of-three has become a flagrant exhibitionist who shows too much of her body too often. This has contributed to the failure of her three last movies – *The Juror*, *The Scarlet Letter* and *Striptease*... The actress who had Hollywood's moguls eating out of her hand because [#2] could do no wrong has suddenly become a bit of a joke in the business. Last year [the actress] pocketed \$18 m... to star in *Striptease* – far more than her husband... was earning for huge hits like the *Die Hard* series and *Pulp Fiction*. But *Striptease* bombed and [its star] was ridiculed for her stripping and her figure... [The actress] was asked to re-shoot scenes at a cost of \$1 m... after preview audiences criticised her... [However,] *Striptease* was voted the biggest turkey of the year and made [its star] a three-time loser – a fate worse than death in success-or-bust Tinseltown... Critics [had also] voted... *The Scarlet Letter*... the Worst Movie of the Year... Now [Gimme] Moore is being called "[Gimme] Less" with the news that [it is making her next] picture – for a \$17 m... pay cut! ...Even if topped as Hollywood's highest-paid actress... [#2] vows: "I will never stop acting." The past 18 months have been less than kind to [her. Before *Striptease*, Gimme] was secretly photographed on a beach showing thighs that had clearly sold out to cellulite. The photo went around the world and an appalled [Gimme] began a frantic fitness regime – emerging with thighs shaped like a power lifter's. Critics put her figure under the microscope and decided [Gimme] has changed shape several times. It was reported [Gimme had] had liposuction on her thighs, stomach and bottom, pockets of fat removed from behind her knees and had her first breast implant in 1992. [Gimme] now has a 36C bust. In *Ghost*, made eight years ago, [Gimme] was soft and feminine with a pear-shaped bottom and chunky legs. In *Indecent Proposal*, [Gimme] was slim with shapely legs, the result of strict dieting... Psychologists believe a childhood sight defect which left [Gimme] blind in her left eye made her hate books and obsessed with improving her image. [Gimme] has never been afraid to show what [it has] got... Born... in Roswell, New Mexico, [Gimme] became a wild child, hanging out with strange characters and posing nude for girlie magazines... [More recently Gimme] appeared... on magazine covers where her modesty was protected once by body paint, by [an] Aucklander... There was also that famous naked and pregnant pose on the cover of *Vanity Fair*.

...G[oodness, Gimme] Moore is small! When you meet her it's like peering down the wrong end of a telescope. You expect a muscle-bound giant and in prances this child. How on earth did [Gimme] get to be a star? I mean, [Gimme] has some obvious disadvantages: her skin is... not very good;

her... famous green eyes... are more piercing than beautiful; her build is almost freakish... at 35, [Gimme] really is like... an anorexic 12-year-old with a very large and rounded bosom. So here's a Hollywood sex goddess, which goes to show how weird the movie business is... Is [Gimme] a great actress? Or has sheer determination propelled her to become Hollywood's best paid actress over the past decade...? ...[Gimme] turns out rather refreshingly to have plagues of insecurities about almost everything, including her looks... personality and body. Conversely, [Gimme] is pathologically determined not to fail... [and] particularly seems to like parts that reflect this determination (her director in *Ghost*... memorably observed that "[Gimme] doesn't like to smile on screen") and her latest part of Lieutenant Jordan O'Neil in *GI Jane* is undoubtedly remarkable in that respect... Two years ago [Gimme] admitted in *Rolling Stone* magazine that... [it considers herself] "kind of a plain Jane." ...[Gimme] had feelings of "self hate" about her body... which makes you fear for her eating habits. In *Vanity Fair* it emerged that [Gimme] was horribly sensitive about her lack of education and had been in the past afraid to buy a book "in case it was the wrong book." (When I asked, [Gimme] looked at her PR [person for inspiration before saying, "I'm not] reading anything at the moment... my frame of reference is all the movies I've seen." Most depressing of all, [Gimme] once told the... magazine *McCall's* that when younger, "I had an essence in my life that I was nothing." This may all sound a bit dramatic and even grovelling, but [her] childhood justifies this level of insecurity. It had all the horror of a modern-day Cinderella. [Gimme] was born... to teenage parents. Her father... was an advertising sales[person who]... moved the family roughly twice a year in a bid to escape his debts... When... 12, [Gimme] developed a crossed eye which required two operations to correct. At 13, [Gimme learnt the salesperson] was not... her father... When [17, her step-father] committed suicide. Her mother, meanwhile, developed a drinking problem and [Gimme], as if in sympathy, followed suit. They were poor... So: grinding poverty, cross-eyes, suicide, alcoholism, misplaced parents, constant upheaval. With this baggage, it is extraordinary that [Gimme] is able to hold down a job at all... At 18, [Gimme] met a 30-year-old guitarist... and married him... The relationship lasted four years, during which [time Gimme] made her first, embryonic moves into acting. [Gimme] beat 1000 other wannabies for a part in *General Hospital*, then slogged her way through some truly terrible films... [until] 1984... the year [it] was cast in the brat back film *St Elmo's Fire* and was finally on her way. The story of how... [Gimme] was cast... adds to the Cinderella quality of her tale. Her fairy godmother was the director... who happened to walk past her in a corridor at Universal... "...I told my assistant to follow her and find out if... this incredible-looking... racehorse... was an actress."

...It's tough at the top for Hollywood's brats... It can't be easy, after all, getting up every morning with only a maid, a personal fitness trainer, a chef, two make-up artists, a masseur-cum-therapist, two wardrobe aides, four security guards and a personal astrologer to help you make it to breakfast. Ordinary people don't realise it, but stars acquire responsibilities, on account of their being so interesting and beautiful. It is easy to mock. Who didn't snigger when[an] actor... demanded, while filming *Ace Ventura 2*, that his studio supply him with a special cook to prepare lettuce and gnats for his pet iguana? [Although an actress once complained that her lettuce was the "wrong sort of green", when it comes to fussy eaters, the star of *One Flew Over the Cuckoo's Nest* takes the cake by insisting on being the first on a film set to eat – which, considering the star is often late, makes for some angry and anxious staff!] What ordinary people also forget is that [actor]s work very hard... [Well, some] work four months a year. Often, they... stand around all day while stunt[people] get blown up and dropped off high buildings. No wonder [Gimme's husband], after a long day snarling at a camera, needs a couple of helicopters to get him home to his wife. Why two...? Well, the first one might break down. Or its colour might clash with his shirt. Obsessed with their own importance, most stars are now too self-absorbed even to pretend to be nice to their public, or to the media upon which their careers ultimately rely... [Gimme's husband] is currently the undisputed champion of celebrity cheerlessness. During the Cannes film festival this year, his new film, *The Fifth Element*, opened with modest success in the U[S], but nobody would ever have known it from [the actor's] fixed scowl. Invited to talk about negative criticism of the film, [#3] bluntly announced that "nobody up here pays attention to reviews... most of the written word has gone the way of the dinosaur". No it hasn't...! Here it is biting you in the butt! ...Defenders of Hollywood hedonism often claim that star demands are no more outrageous today than... [in the past]. Yet few stars of old flaunted the contemptuous, unsmiling narcissism that seems to have become routine today. [The star of *Ace Ventura*, who also starred in the film *Dumb and Dumber*,] may have been joking when... [demanding] an extra cook for his iguana, but the saddest part of modern celebrity is that so many demands are utterly serious.

...Now it's stupid and stupider... America might be the land of the brave, but Hollywood's got to be the home of the dumb. What a history of halfwits the old town has: Abbott and Costello, Gilligan, Gomer Pyle, Wayne and Garth, Forrest Gump... This list goes on and on, proving that stupid is as stupid does, but also that morons make moolah. And now (although they're four years late here)... [we can watch] the latest line in Hollywood pinheads, *Beavis And Butt-Head* (8.25 tonight, TV4), apparently the most retarded heroes of all time. There's no doubt they are America's most wasted... If only their show wasn't half as dumb as they are. Some critics have labelled it a post-modern poke at its MTV audience (and so, one would assume, TV4 viewers), saying it's 30 minutes of uncivilised amoral fun. It isn't – it gives the idiot box a worse name. While a show like *The Simpsons* offers dumb – Homer especially – it also serves inventive satire which smart-bombs its targets with cleverly layered humour. *Beavis And Butt-Head*, on the other hand, is cudgel comedy, with no foil to its antiheroes' inanities... Now... there... is... more than gob and "naked babes" on the mind of its creator... [after his decision to] make... a... *Beavis And Butt-Head* [movie]... "Hey, isn't there a word for when something happens when you like don't expect it," said Butt-Head... last week... "You mean ironic,"... "No way..., it's like an English word." "Cool?" asks Beavis. "[No]... stupid," blurted Butt-Head. "It sucks too," whined Beavis.

...the Oxford-educated father of two is laughing all the way to the bank with the worldwide success of... [his] film, *Bean – The Ultimate Disaster Movie*. Get ready for his sequel, *Bean – The Ultimate success story*... [H]owever you measure success, it is remarkable that [a] young-looking thirtysomething is listed in *Forbes* magazine as being worth \$NZ125 million... [after] his black superhero Spawn begat a line of top-selling action toys, an animated television series that aired on the U[S] cable network HBO this year, and a live-action film... As the film tells it, Al Simmons... is a highly efficient assassin working for a secret government agency. When [the assassin decides that it] wants out his superior... has him killed gruesomely by being torched. Five years later, in a shadowy existence in a netherworld, the hideously disfigured Simmons makes a pact with the Devil: in return for being allowed to return to Earth once more to see his wife[. Al]... will lead Hell's Army in the Armageddon. After his return home Simmons is equipped by his new master for his ultimate task[. and] becomes the immortal superhero Spawn with a living suit... But Spawn... doesn't like being told what to do[. wavering]... between his instructions from the Devil's messenger, Clown... and his advice from Cogliostro... an emissary of the forces of good. It's a dark vision. But... his creator... says Spawn has become popular because [the character] is flawed. Establishment superheroes like Superman, who always make the right call, have created a hunger for something closer to the ambiguities of real life... *Spawn* the franchise is a success, [its creator] believes, because "a lot of people are like me, just got bad attitudes, but they're locked in a system and too afraid to do anything. I think most people are frustrated at their job, they don't trust the Government. And so *Spawn* taps into the Generation X mentality and the youth in us. You can be 65 and be youthful: it's an emotional thing, not a physical thing." [The creator agrees that Spawn represents himself. "Yeah, Spawn's got a bad attitude, so... I'm just like him. [Spawn] doesn't care about... heaven and hell... just wants to get back to his wife... [who is named after] my wife... It's not by accident... [Spawn] doesn't care about being a superhero. I don't care about being rich and famous. I just wanna send the message that the Cinderella story can still exist out there." In this case [the creator] isn't only Cinderella, [but is someone who has] achieved that quirkiest of 90s culture roles... [– being able to] sit in your room all day drawing comic books and become a millionaire. Suddenly the world seems a much stranger place.

...[the] movie machine... garnered the top spot on the *Forbes* business magazine's Top 40 list of the world's highest-paid entertainers, earning \$US313 m... in 1996-97. [The director], ranked No 1 in 1994 and 1995, fell to No 2... last year... below... [the queen of talk, who's] talk show empire put... [her] at No 3... in... 1996-97... with gross income of \$US201 m... The release of the *Star Wars* trilogy earned [its] producer... who wasn't even ranked last year, a... total of \$US241 m... [The figures are] based on a two-year running total of earnings... Coming in... [4th after being] ranked 10th last year... was [the] author... whose books on dinosaurs gone amuck were turned into the [director's] hit... films... The Fab Four came in fab-fifth... moving down two spots from last year's No 3 ranking. [The comedian who starred in] *Seinfeld* moved up from 11th place to No 6... [after taking] in \$US94 m... Rounding out the top 10 are [a] magician... with \$US85 m[(r:one, p1709, ln3); the horror-monger] author... (12th last year) with \$US84 m...; [the actor (r:p1167, ln52) who stars with his wife in *Eyes Wide Shut*] (17th last year) with \$US82 m...; and [the actor who played Mr Freeze] (7th last year) with \$US74 m... [● A fan] obsessed with... Hollywood's top director, who's currently filming *Saving Private Ryan* in Ireland... allegedly planned to stalk, handcuff and rape him, according to prosecutors' statements released yesterday. [The] Deputy District Attorney... made the allegations during secret... grand jury proceedings against [the accused], aged 29, who was caught several times at... the... director's... Pacific Palisades residence... [After the movie machine] heard about the stalker his immediate reaction was "disbelief." But later, "...I became completely panicked and upset and very afraid..." ...[the director's] stepped up security for his [kids while they're] sightseeing and going to school in London."

...Hollywood[']s top] film director... faces the threat of industrial action over pay rates. British broadcasting union BECTU will shortly ballot its members on the... set of the... \$NZ110.45 million... movie *Saving Private Ryan*. Members are [also] complaining about... the use of inexperienced staff and unsafe working practices which they say are putting lives at risk... "...we had 1000 [extras running around with] guns and firing blanks,"... Strike action could... [put their careers at risk, because the Malaysian PM], a sharp critic of Western values, is in Los Angeles seeking Hollywood's support for his vision of his country becoming a media and entertainment hub for Asia... □ [The movie machine is]... one of the hottest creative trios in Hollywood history... [at] DreamWorks, the studio started almost three years ago with \$US2.7 billion... in private backing... In DreamWorks SKG's first film *The Peacemaker*, which opened in the U[S] this week, the former *ER* actor... plays a military intelligence officer trying to rescue New York from a terrorist's nuclear bomb. His bigger role may be to help save... DreamWorks[, which] has been anything but a winner, delivering duds such as the cancelled television sitcom *Ink*... the slow-selling album *Older* [by the wanker/singer... and poorly-received computer games such as *Someone's in the Kitchen*. The studio is betting big... [and the] stakes are high. DreamWorks plans to spend around \$500 million over the next 15 months to release nine films... The studio faces a long battle... Analysts... question whether [the] *E.R.* television series idol... – whose other film efforts, *Batman and Robin* and *One Fine Day*, were box-office disappointments – can ever carry a hit... *The Peacemaker* cost \$50 million to make... *Prince of Egypt*, a \$70 million animated feature about the life of Moses... is an even bigger gamble. No Hollywood studio other than Disney has ever produced an animated feature-length box-office smash. [Furthermore, because] of the film's biblical theme, DreamWorks may not be able to count on merchandising tie-ins with fast-food chains... DreamWorks executives also have said they expect the film's... audience to be children over 12 and adults – two groups that no studio has ever relied on to support an animated film... Of course, DreamWorks has been hurt by some nagging and costly distractions for its top brass. [One of its trio of directors], for example, is feuding with former employer Disney, which [its former employee has] sued for \$250 million... his [alleged] cut of the Disney animated films [the director] helped make. And... Hollywood's most successful director, has spent much of the past three years fulfilling a contract with... Universal Pictures, finishing films such as this summer's \$228 million box-office hit *The Lost World*... Management is also wrestling with finding a permanent home for the studio, as plans for a high-tech headquarters on a \$6 billion seaside project stalled because [the] developer... ran short of money. For now, DreamWorks operates out of [the most successful director's] production headquarters at... Universal Studios. DreamWorks officials could not be reached for comment. [However, the] studio's backers, such as... Vulcan Ventures, say they are not worried... DreamWorks also attracted investments from Microsoft Corp... and Korea's Cheil Foods & Chemicals. For all the early mis-steps, nothing bolsters the confidence of DreamWorks' backers as much as the track-record of the three [shareholder's] represented by the SKG in the company's name... "They have never failed, and they're not about to start now," said... [the] president of Creative Artists Agency and [the most successful director's] agent. DreamWorks investors can only hope... [the agent is right. The big-S], who directed films such as *Schindler's List*, *Jaws* and *E.T.[: The Extra-Terrestrial]*, will direct about a third of DreamWorks' features in coming years, studio executives say... [The big-G], meanwhile, made a fortune managing top[music] acts... and producing film hits such as *Interview With The Vampire*... [The big-K] – who as Disney studio chief produced the highest-grossing animated film in history, *The Lion King* – is overseeing *The Prince of Egypt* and planned animated films such as *Antz*, *Shrek*, and *El Dorado: City of Gold*.

...The Broadway version of *The Lion King* has won over the public and even sceptical critics. The public appeal of the Disney production – which cost up to \$NZ32.5 million, the largest budget in Broadway history – was predictable after the 1994 animated movie netted \$1.2 billion worldwide. But the musical has surpassed even Disney's expectations. "It's very rare, very satisfying and very humbling,"... the head of Disney's animation and live action division, told *USA Today*... [S]ales for the weekend's four shows yielded a record \$6 million, according to *Variety* magazine.

...Almost a decade after the release of the ground-breaking *Who Framed Roger Rabbit*, where toons and real-life actors cavort together on screen, Disney is mulling over a sequel to the film. But sources quoted by... *Variety* say the new movie will be no mere follow-up *Roger Rabbit II*. The story instead will [follow the latest studio strategy (prequels) by recounting] what happened before – in other words, the rabbit's long journey to fame and stardom on the silver screen. The original film cost \$US55 million... and brought in \$US400 million... In other movie news, [an AUSn actor] will give the writer of his last film a chance to direct him in his next drama, titled *Parker*... [about] a tough loner seeking justice after being wronged years before... [The actor, best known for his roles in *Braveheart* and the *Lethal Weapon* trilogy,] has agreed to team up with [the] *Conspiracy Theory* writer... – who also wrote... [the] up-coming film *The Postman*... Meanwhile, [the actor claims its]... role as a paranoid, maniacal cab driver in... *Conspiracy Theory* wasn't all research. "I know what it's like to feel paranoid," the A[US]n... says. "I've had my phone bugged. I have people who want star gossip. They follow you around, stake you out. They eavesdrop on your life. It's not always so nice." ...[However, something which might compensate is having a \$NZ]58 million... pay day. That's what [the actor will] be getting for the long-anticipated fourth instalment of his *Lethal Weapon* movie series. [The Catholic actor] has long resisted the idea of resurrecting his role as [an] on-the-edge cop... but for that sort of money...

The money's rolling in now for... [one actor] but... to celebrate the success of his latest movie... [its] told the world about his flirtation with heroin... and... confessed [to previously being] a rent boy... "I didn't set out to hustle but this guy offered me such a massive amount of money – it was like a year-and-a-half's pocket money..." ...[once it]d "got the hang of it," [rent boy] had "all sorts of clients" and relied heavily on the work... "Acting is a bit like being a prostitute,"... [the actor says. By the way, i]n the new No 1 movie in the U[S], *Jackal*, one of the stars of *Pulp Fiction*] kisses a gay guy – then later kills him. The smooch was [3's] brainchild, says *USA Today*... Universal Pictures... people want to make it clear that [the] character, a wily assassin... doesn't shoot the guy... because... [it is gay but] to avoid detection. The film was re-edited to make that clearer.

...[an actor] once described himself as "a [good guy] in a bad guy's body". [The actor] is still best known for his role... as Mr Blond in *Reservoir Dogs* – slicing off a cop's ear while poncing about to the strains of *Stuck in the Middle with You*... And here [the actor] is to meet me at the bad guy's hotel, the Chateau Marmont in Los Angeles... Now [the actor is] revisiting, promoting his new movie *Donnie Brasco*... It's a mob movie set in the 1970s, graphic and hard but with an emotional dimension – a kind of love story, about the bonds between [violent guys]. Even so, in one scene [his character] Sonny Black... saws the feet off fellow gangster Sonny Red... which, I tell him, is a little gruelling if you're in the front row. Not in the least put off, [the actor] enthuses: "In real life when they chop their feet off, they throw one in a bag down the river and another in the dumpster so

it's impossible to get all the parts back together." ...The film... is meant to demystify and deglamorise mob life... [although:] "I've been invited to become involved in organised crime should I give up acting," says [the actor], who grew up in Chicago... "People identify me with the characters I play. They forget I played the father in *Free Willy*, and that I killed a monster in *Species*. I've played a lot of good [guys], but they'd rather see me beat the shit out of someone[.]" says the actor who... was brought up a Catholic... [but, if it] hadn't gone into the movies... would... "be in prison"... "One of the first things I ever stole was a stereo from the youth lounge in the church during service..." Did [the actor] feel guilty? "No. I had some tunes in my bedroom, which was nice. Besides, the priest was hitting on my mother and I knew it... Growing up, I was never in the same place for long. I was always a new kid at school, always the outsider, so I tended to hang out with outsiders, underdogs and losers. They were a bad crowd, but more fun than the class president... But by the time I was 21, I had figured out that getting into trouble was a one-way street..." ...[however, his new] friends are Hollywood bad boys... [and the actor] seems to find a comfort in their renowned wildness... [The creator of *Reservoir Dogs*] is another friend, although after *Reservoir Dogs* they fell out. [The actor says the creator] wrote Vincent Vega in *Pulp Fiction* for him. "I'd been asked to play a part in *Wyatt Earp* and I really wanted to do a western, so the *Pulp Fiction* role went to [the actor who had starred in *Saturday Night Fever*. The role resurrected that actor's career – leading to roles in *Phenomenon*, *Primary Colours* and *Michael*]. If *Wyatt Earp* had made \$500 million within five seconds of opening, everyone would have said I was a genius. I think I made the right choice. Nobody else does... But we're [all] friends again now." There is now some talk of a follow-up movie [with the creator] – *The Vega Brothers* – starring [himself as one brother and "Michael" as the other brother Vincent.

...the brother who came to acting via singing, the *Independence Day* and *Guys* in *Black* star... is Hollywood's newest \$US100 million [Black Guy]... The much-in-demand actor... has already signed film deals that will net him \$48 million before the end of the year... And [the actor is] humble, too. "I owe all my success to God..." says [the actor], who reads the Bible... ■ [The big-S 'is rumoured to have optioned the rights to *The Bible* for \$1,320,000,000. Wonder if the big-S will be playing God?]

...*Black for more* After lengthy discussions, Sony has given in to Black Guy's demands for a whopping \$100 million paycheck for the sequel to *Guys in Black*. Although the original movie grossed over \$1 billion, its producer the big-S scooped \$220 million. Black Guy was left fuming when studio bosses refused his demands for more cash on top of his \$10 million fee. With merchandising and video sales on top, his paycheck could double, making him the highest-paid actor in history.'

...often described by his peers and co-workers as an actor with relentlessly boyish enthusiasm, the description that causes Black Guy the most laughter is the one offered by his *MIB* co-star, who calls him "not only the perfect co-star but Jesus-like". As comfortable as it is playing movie star, the actor's passion for music will never wane. "There's nothing in entertainment that compares to being on a stage when someone recognises you for your music. *Nothing* compares to that – except for boxing and knocking someone out. I love the ability to go back and forth. My music always informs the next couple of years of films. When I get back in the studio, producers and writers know that they're on the forefront of fashion, of slang, of technology".'

... 'It's a show. We perform for you, like monkeys in the zoo'.

...A team of eminent Chinese scientists have intensified their search for the legendary half-human half-ape Bigfoot (known as "Yeren" in China) after verifying reports from a hunter who says it sighted the Yeren in the wild. Hundreds of other people have also reported sightings of the mythical creature during the last several decades. State media reported that a team from the prestigious Chinese Academy of Sciences has focused its search for Yeren in the remote forests of Shennongjia Nature Reserve in central Hubei Province. The group found 40cm footprints, brown hair and gnawed corncobs in the same area where the hunter spotted the beast. The Yeren was described as being 2.5m tall, having long, red hair and moving rapidly.'

...A controversial] piece of film, which for 30 years has been regarded as the most compelling evidence for the existence of Bigfoot, the North American "abominable snow[perso]n", is a hoax, according to... "a makeup secret only six people know"... [The person] behind the *Planet of the Apes* films and the elder states[perso]n of Hollywood's "monster-makers", has been named by a group of Hollywood makeup artists as the person who faked Bigfoot... The claims contradict the findings of a forthcoming study by the North American Science Institute, that the creature is real. It has analysed the footage and detected the movement of skin over muscles which could not be duplicated by the wearing of an artificial costume... "Very high computer enhancements of the film show conclusively that, whatever it was, it was not wearing a suit..." ...[the elder] (75), who won an Academy Award for his ground-breaking ape masks in the *Planet of the Apes* feature film in 1968, is now in frail health and lives in seclusion in a Los Angeles nursing home... refus[ing] to confirm or deny the reports... Bigfoot hunter... Roger Patterson... emerged from the wilds of northern California with the celebrated film... that turned Bigfoot into a worldwide cult... The film was hailed as positive proof of Bigfoot's existence by British and Russian scientists and expeditions were organised to try to capture the creature. The episode turned Bigfoot into the world's favourite monster and even spawned the popular *Harry and the Hendersons* TV comedy series[and film. A film recounting Bigfoot's discovery was also made]... Patterson died in 1972 convinced [that the hunter] had filmed a real Bigfoot. But... Hollywood's KNB Effects Group... told a Bigfoot investigator...: "It was like a gag to be played on the guy who shot it. The guy never knew it was a hoax his friends played on him." [The investigator], editor of *Strange* magazine, who studied the background of the Patterson film for a year, said [the elder] created monster suits for the *Lost in Space* television series of the mid-1960s which look very similar to the creatures in Patterson's films... [E]xperts say that only [the elder] possessed the knowhow to create a suit which... [they] have termed a masterpiece... [Furthermore, the elder] was also known to have participated in another Bigfoot hoax: the Burbank Bigfoot – a 2.2m carcass painstakingly built over a plaster cast of the actor... best known as Jaws in the James Bond films.

...In his second outing as 007, [the latest incarnation of James Bond] shows a caring, sensitive side[– despite]... the inevitable bed-hopping... As [the incarnation] fields questions about his latest Bond movie, *Tomorrow Never Dies*, it seems an odd dichotomy that [it] has made his fame and fortune playing a macho [guy] who started life 35 years ago and is stuck in a time warp. But [the actor insists that it] does not play James Bond as a cartoon character... Critics are hailing [him] as one of the best reincarnations of 007... [In his latest mission, Bond is up against] a mad media baron intent on world domination using worldwide satellite links to manipulate and manufacture the news... [– including] fooling the British into believing the Chinese are threatening war. The film has all the Bond ingredients: gags, gadgets, eye-watering stunts and gorgeous girls. The dashing secret agents' 18th outing follows [the latest incarnation]'s debut in *GoldenEye*, the most successful Bond film, earning \$NZ830 million worldwide.

...MOVIES offer plenty of choice over the [holiday] period... For adults and older teenagers *Devil's Advocate*, *Tomorrow Never Dies* and *The Jackal* are three of the big movies during this month... *The Jackal*... [is about] a ruthless assassin who has been hired for \$70 million by international cut-throats to eliminate a top person in the U[S] Government... *Tomorrow Never Dies* is... a hi-tech account of what happens when media power is in the wrong hands... [while] *Devil's Advocate*... is... about the eternal struggle between power and weakness and good and evil... For lighter entertainment, children and their young-at-heart parents can sit back and enjoy Disney's... *Flubber*, a modern version of the 1961 comedy, *The Absent Minded Professor*. Another movie destined to be a big hit... is *A Simple Wish*[, about]... a young girl who desperately needs some magical help... The big one for teenage girls is likely to be *Spiceworld: The Movie*... The \$NZ44.8 million film is the biggest project yet from the feisty pop phenomenon... The film, shot on closed sets in and around London during the summer, reportedly tells a glamorised story of the... Spice Girls' rise to stardom... For those aged 15 or older, *Titanic* is predicted to be a winner... *Titanic*'s writer-director... spent five years researching the vessel and the story of its sinking.

...[the director] made his mark with films such as *The Terminator* and *Aliens*. But with *Titanic*, [it] took on a monster that spun out of control... *Titanic* is the costliest movie of all time. Originally scheduled to open in July, the release date was shunted back again and again as [the director]'s

story of the doomed oceanliner was delayed because of problems with the optical effects. Estimated to have cost \$285 million, with the interest charge for the six-month overrun at... \$10 m... Paramount put up \$60 m... and has the US distribution rights, while Fox is shouldering the rest... and has been given the foreign markets. The December release date has to be troubling for... Fox because the studio had several big productions on tap for the end of the year: the animated *Anastasia*, the sci-fi film sequel *Alien Resurrection*, *Home Alone III* and *Great Expectations*. Fox also faced a tough decision on whether it could release *Titanic* in foreign markets on the same date as the movie opens in the U[S]; it is actually opening in N[Z and AUS] one day ahead of America. Sources said [the director] offered to deliver the picture for an August US opening, but Fox officials took [hi]s side and fought with Paramount officials to allow him to make the movie [it] really wanted... *Titanic* was shot over eight months (about two months longer than scheduled), in locations in Mexico, Nova Scotia, England and Los Angeles. Its budget swelled from an already hefty \$110 m... A large portion of the money allocated... went to build a new studio in Rosarito Beach, Mexico[, including]... a replica of the ship – a 90% scale, five-story-high reproduction of the ill-fated luxury liner. Many of the... massive... cast and... crew of 800 people – 80 electricians, 30 lifeguards, and 100 stuntpeople in one scene alone... – ...have spoken of the ordeal of making the movie, describing it as about as strenuous as filmmaking ever gets, citing 90-hour work weeks (with actual shooting done mostly at night to simulate the late hours of the disaster)... On hand were about 50 medical and emergency personnel and the production was beset with accidents... and one “prank” when the crew were fed PCP (angel dust – a drug that once led to a ‘guy’s death after the user became convinced it was a mole and buried itself in its backyard’)). “These people are getting banged up horribly,” [the director] admitted to a reporter as they watched one scene that resulted in two broken ribs and a sprained ankle. Extras had to be tied down to make sure they weren’t washed away by the hundreds of gallons of water. “I wish I could do that in every scene,” [the director] was heard to mutter. “Tether them so they can’t go to the bathroom.” ...The stars, normally molly-coddled on a shoot, expressed shock at [the director]’s behaviour. “If anything was the slightest bit wrong [the director] would lose it,” [the film’s fictitious heroine] told the *Los Angeles Times*. “It was hard to concentrate when [the director] was losing it, shouting and screaming.” [The English actress complained of suffering] hypothermia and nearly drowned twice. [The director], who frequently dived into the water to shoot scenes himself, was unimpressed. “We’re in combat mode here.” Toward the end of the shoot... [the director was] jabbing injections of B-12 vitamins into his legs and swigging back shots of livid green wheatgrass juice to sustain his unrelenting stamina. But some of those who have seen footage from the film, including excited cinema owners, say [hi]s single-minded obsessiveness may have paid off. “It’s an epic in the scope of *Braveheart*,” says the composer. “The sinking is almost secondary to the romantic story...” According to crew members, [the director] sees the film as his *Doctor Zhivago*, a “four-hanky tear-jerker” set against one of the greatest tragedies of the 20th Century. [The director] has high Oscar hopes for his film and won’t be too troubled that... it cost so much. At the very least, *Titanic* is unlikely to receive the critical drubbing that... Universal Pictures’ *Waterworld*... – ...[the] previous record-holder... – ...received.

...[the] director... appeared to go into the production of *Titanic* with long blond hair last year[but] emerged with decidedly less on top, much of it now grey. Considering that *Titanic* is the most expensive film in Hollywood’s history, it’s probably understandable. The follies of some Fox executives have probably taken a similar battering because of this high-risk project. The whole thing drips with irony. Here we have a film... about a supposedly unsinkable vessel, that in fact sunk[, by a director who]... is no stranger to upping the ante with each of his spectacular special effects creations. After his ground-breaking *The Terminator* in 1984, his last venture into deep sea sank badly with *The Abyss*... And while... [the 23-year-old actor playing the hero] (an Oscar-nominee for *What’s Eating Gilbert Grape*...), is now considered a box-office name in Hollywood, the same can’t be said for the other half of the screen romance that has been put at the heart of the saga – [although locals will recognise the heroine from her]... big screen debut [as a 16-year-old in the NZ-made] *Heavenly Creatures*, playing... the real-life teenager who murdered her friend’s mother[, and the actress was]... Oscar-nominated for her role as the hapless Marianne in *Sense and Sensibility*... [This time the] English actress... plays a bored rich girl travelling upper class, [while the hero is] a poor young artist in steerage. [The director] at first was hardly sold on the idea of [using the 22-year-old English actress – the director] had... in mind... young Americans like [the hero’s co-star in the most recent version of] *Romeo and Juliet*... Yet the British actress knew [it] was destined to play Rose, the beautiful Philadelphia aristocrat of [the fictitious part of the director]’s story – even if... [it meant dying] her hair red. It was her determination that won her the role. But it was probably a tougher role than [the actor] expected... *Titanic*... proved to be a... production full of horror stories of ego clashes, creative differences and logistical problems... [including constructing a] five-storey-high reproduction of the liner... to sink into a 77 million-litre seawater tank in northern Mexico. Not to mention the two difficult dives by special submarine to the real wreck under 3660m of water in the North Atlantic... The real *Titanic* sank on the night of April 14, 1912, taking 1522 people with it. [The director] has been obsessed with the story for years[– perhaps even before the first film about the disaster was made! The director] says it was like the end of an age of innocence and absolute faith in technology. “It’s a metaphor about the inevitability of death. We’re all on the *Titanic*,” [the director] adds. Metaphors aside, [the director] has chosen to make the romance between... [the hero and heroine] as central to the film as the ship itself... A lot rests on the idea of these two being in love amid awesomely pending doom... “They’re teenagers, and it’s about the slaughter of innocence,” explains [the director – in case we missed the point of it all. *Titanic* hits cinemas] nationwide... next Thursday...

Titanic... took... \$NZ77 m... at the U[S] box office over the weekend, giving it the top spot and boosting the chances... it... will return a profit... By comparison, M[GM]’s latest James Bond film, *Tomorrow Never Dies*, took [2]nd place, grossing \$27 m... during the [4]-day holiday weekend. Time Warner’s post-apocalyptic epic *The Postman*... opened to just \$5.3 m... cementing Warner’s Bros most disastrous year at the box office since 1990.

...Why size ain’t everything... The end-of-year launch of *Titanic*... [wa]s the film industry’s biggest gamble yet at a time when the money-making potential of low-budget movies has never appeared higher. Once promotion and publicity are added to the... production cost, the... disaster epic will have to clear \$517 million before it turns a profit. Critical reaction to the opening around the world was mixed. Jokey allusions to shipwrecks and watery graves were not lacking. By contrast, the story of six unemployed steelworkers in one of Britain’s murkier provinces who become male strippers to make ends meet has had blue-collar workers in the American Midwest standing on their seats and cheering. *The Full Monty*, which could probably have been financed out of *Titanic*’s drinks budget, has cleared \$260 million worldwide... [C]osting in the region of \$9 million to make[, it] is well placed to emulate... *Trainspotting*, named by *Variety* as the most profitable film of 1996 in terms of its investment. Yet it owes much of its success to [US] backing, financed by Fox Searchlight and distributed by Miramax, the Disney subsidiary... In its resemblance to television drama it could have been produced by Film on Four, the feature film arm of Channel 4 Television which has contributed massively to the renaissance of the British film industry with – in addition to *Trainspotting* – such titles as... the \$8.6 million... *Four Weddings and a Funeral*, *Secrets and Lies* and *The Crying Game*, all money-spinners in the U[S]. The last two years have seen a huge increase in British film production: 128 films were made last year at a cost of just over \$2 billion, up 84[%] on 1995. The most significant contribution came from [US]-produced films made in Britain, a total of 25 films for an input of \$1.2 billion... Other evidence of the thriving market for small-scale features was... the \$70 million taken in the U[S] alone by AUS]’s \$6 million *Shine*... [T]he 1997 Academy Awards were dominated by *The English Patient* and other modestly-scaled, independent features... Meanwhile, Hollywood continues to place its faith in size and special effects... The titles – *Titanic*, *Volcano*, *Flood* – convey the trend... However... *The Lost World* took more than \$1 billion worldwide... The agreeably tongue-in-cheek [Guys] in *Black* – continuing, along with *Contact*, the space invasion theme set by last year’s *Independence Day* – came a close second with \$950 million, while at least eight other films covered their costs with over \$345 million.

...One Miramax movie is among the most beloved romantic epics in years and swept the Academy Awards. The other Miramax title is a bloody low-budget slasher film whose biggest prize was an MTV movie award. By all accounts... *The English Patient*, which cost \$US27 million and has grossed \$US77.9 million... should have clobbered *Scream*, and yet the grisly thriller is proving far more popular in [US] cinemas and video stores.

In fact, *Scream* is more profitable than almost any 1996 movie except *Independence Day*, on the basis of cost against return. With a reported \$US100 million... theatrical gross and the number one spot on the video rental charts, *Scream*... cost about \$US15 million... has resuscitated the horror genre, nearly moribund a decade ago. And it has further established Miramax's exploitation film label, Dimension Films, as one of Hollywood's biggest surprise stories. Once a purveyor of crummy B-movies such as *Children of the Corn 2* and *Hellraiser III*, Miramax's violent sister label is now turning out relatively sophisticated scary movies worthy of critical attention, including the rampaging mutant cockroach movie *Mimic*, opening in the U[S] next week... Dimension's first release was *The Crow*, a movie several studios passed on following actor Brandon Lee's accidental on-set death[after being shot by a bullet that was supposed to be a blank].

...Everyone is shooting Versace in Miami. Up to eight different film projects are competing to put the life and violent death of the Italian designer on the screen... Film companies are sniping at each other over different conspiracy theories and the merits of each other's productions. They are competing to sign up relatives and friends of Andrew Cunanan, the gay serial killer blamed for the murder. The houseboat where [Andrew] committed suicide has already been snapped up by a film producer, who has bought the rights to it until 2000. Filmgoers will not have to wait that long... The scramble to be first to the box office has been accelerated by the death of Diana, Princess of Wales, who... [had attended] Gianni Versace's funeral... [but industry] experts believe the "feeding frenzy" to make the first Versace film will produce a wave of tacky box-office flops... [The] chief financial analyst at Yeager Capital Markets in Los Angeles, said: "I can't imagine we are going to see a seriously theatrical film. Even [the alleged murderer]'s father is developing a script in which his son is a saint – a saint who murdered five people." ...ABC... has commissioned a television film that is also sympathetic to Versace's slayer... The makers of the first film into production admit it is not an artistic effort... "It's important to be the first movie out. I don't care if everyone thinks I am an exploitative sleaze – the curiosity factor has got to be immense." ...Others are not far behind. Seiko, a Japanese/Filipino production team, is talking to Cunanan's father[, who] believes the mafia used his son to kill Versace. A dead songbird, the symbol of a mob slaying, was supposedly found near the designer's corpse... [● It's often said that c]elebrity can kill you... [T]he poster boy for America's great cautionary tale for writers... is... [Truman] Capote (1924-84), the uneducated arriviste from Monroeville, Alabama, [who] sneaked into the postwar jetset as court jester, raconteur, father confessor, partygoer and giver, scandal-monger and manipulator. And decades before gay liberation, [Truman] wore his homosexuality like a flamboyant badge of honour... The author of the lapidary *Other Voices, Other Rooms* and the innovative *In Cold Blood* and host of the party of the century (his legendary Black-and-White Ball of 1966) died a pill-popping alcoholic, his literary reputation in decline, deserted by many of the prominent friends [it] had publicly betrayed... [T]he prince metamorphosed to frog in 1975 when instalments of *Answered Prayers* appeared in *Esquire*. His thinly veiled portraits of people who had regarded him as a friend took malice to new lows... Lying, of course, is what fiction writers do for a living, but Capote notoriously tarted up the facts about real-life people into a more alluring confection... [His] dearest friend... suggested that "[Truman] makes things the way they should have been"...

John Lennon's [Japanese] widow... is about to sign a contract with Columbia Pictures for a... film on her life with the former Beatle... [who was] shot down in New York in 1989... [The wife is even] prepared to cede Columbia the rights to Lennon's songs *Imagine* and *Give Peace a Chance* as part of a contract that would add at least \$100 million to her fortune, put at \$600 million, the British *Sunday Times* said. The... version of Lennon's life put across by [the wife] may well arouse controversy, as her detractors have accused her of being responsible for the break-up of the Beatles. □ [A s]upermodel... reported by Britain's *Sun* newspaper to be "dying to break into films,"... has landed a \$1.2 million deal to star in her first film... a futuristic drama called *Woundings*. The London-born waif is believed to have secretly enrolled in acting classes to further her ambition.

...Aspiring actors seeking a meteoric rise to stardom are lining up for an intergalactic first – a made-in-space film shot aboard the creaking Russian space station Mir. Forget the *Star Wars* trilogy, let alone *Star Trek*. This would be shot by real astronauts with an out-of-this world backdrop of, well, space. The idea is the brainchild of [a] Russian movie director... who already has a galaxy of stars in his sights. [The director] has asked, and been turned down by, [a British] Oscar winner... and... also hopes to approach big-name Hollywood actors such as [the star of *Michael* and the star of *Forrest Gump*], who at least can lay modest claim to other-worldly experiences in the film *Apollo 13*. [The director] is planning to have the film shot next year on a... budget of \$NZ130 m... [and claims to have] received take-off permission from the Russian space agency. "We already have... 20 applicants, all... Russian, who are all undergoing medical tests" to assess their suitability for space travel... For cost reasons, professional astronauts – normally more used to dicing with death on the ageing Mir station in between serious scientific tests – will look after the cameras, lighting and sound. [The director]'s repertoire to date has been rather more earthbound, with films about cops and robbers. The latest plot is hardly space-age either, although it has been based on a 1994 science-fiction novel. A scientist flees to the security of outer space to warn an unsuspecting world of an imminent catastrophe, and when the Russians and Americans send a glamorous TV [presenter] up there to kill him, they fall in love.

...*God Bless American propaganda*... Here's proof positive that it's going to take more than the collapse of communism to stop America fighting those damn Russkies. Its makers would defend it as being simply a high-altitude, high-octane thriller which it certainly is. But (and notwithstanding its star's feeble-minded disclaimers in these pages last week) the depressingly simplistic political subtext makes it also a rather unsubtle piece of propaganda for the supremacy of the values of middle America... [T]he presidential plane (known as Air Force One) is the setting for the entire drama. Hijacked by Russian zealots after a visit to Moscow, the aircraft and its passengers are held hostage by terrorists (Russian ultra-nationalists... replace the commies of [the 40th President]'s "evil empire") to force the release of their leader. There are no prizes for guessing who takes the bad guys on (or who wins), but what's interesting is the characterisation of the President[, who is] joined on board by his wife and teenage daughter (the film's First Family [even] has more than a passing resemblance to the [current First Family])... This President's jaw juts resolutely when [it] promises in a speech to root out political terrorism. But, when... defending his family, his lower lip trembles just enough for us to know that [the President] really loves them. So when the hijackers begin executing hostages we're invited to be less worried about mourning the dead (the film has a high body count but is not very explicit) than the danger to Mrs and Miss President. In this sense, the aircraft is an airborne version of Hollywood's all-American home. By extension... [the President]'s triumphant "Get off my plane!" is not just a signal that the good guy won: it's vindication of apple pie, the Little League, the constitution and McDonald's. No one would deny that *Air Force One* delivers action by the planetload. But for all but the most simple-minded, all the excess baggage may make the flight a rather bumpy one.

...[an AUSn actress and her US actor husband (r:p1715, ln8) have bought a] \$20 million Gulfstream G3 jet aircraft, which seats 10, costs around \$15,000 an hour to fly and has marble bathrooms and a registration that includes the family initials. But the [aircraft is] not the only getaway investment the [couple] have made... They've also invested a slice of the profits from [hubby's] mega-hit movies *Mission Impossible* and *Jerry Maguire* in a \$5.25 million holiday home in sunny Seaside, Florida[, and in a]... spectacular \$635,000 luxury 15m cruiser, complete with \$250,000 worth of extras including a \$10,000 state-of-the-art sound system[, which] is now bobbing in Sydney Harbour, awaiting the arrival of [its new] Captain... and first mate... Sources say [the captain] bought the boat for [his first mate], to moor in front of their... \$4.2 million... harbourside mansion and grab a front-row seat for the 2000 Olympics... [Hubby] spares no expense to make his family comfortable[, spending]... around \$4.4 million renting a Notting Hill mansion and on other costs for their stay in Britain during the filming of *Mission Impossible*.

...[#4.] best known for her role as a prostitute in *Pretty [Gal]*, is to star opposite [the Brit best known for being arrested by LA police for receiving a blow-job from a prostitute in a vehicle, Jin] in a new romantic comedy set in Britain... [about a US] actress who falls in love with a seller of second-hand books... who owns a shop in Notting Hill... The author of [Hugh's other] starring vehicle *Four Weddings And A Funeral*... which earned... \$600 million worldwide... has produced the scrip but... insists it is not a sequel... *The Notting Hill Film*... is expected to cost... \$50 million... [Incidentally,

#10] felt strongly enough about playing Lynn Bracken, the Hollywood call girl... in *LA Confidential*[, about]... Los Angeles Police Department detectives running amok in the early '50s, that... [it] was, almost literally, willing to lose her head. "The part called for me to be a platinum blonde... And back in those days... Grace Kelly[and] Marilyn Monroe... couldn't just use highlights the way I usually do. They had to dye it solid... so at the end of the movie, it was in such poor shape that I just shaved it off." ...*LA Confidential* presents a fearfully corrupt police force the world thinks is a model of decorum, characters who believe in "doing what they do for justice" no matter how savage and even murderous their acts may seem, all operating in a city that likes to pretend it's paradise on Earth when it's really seething with corruption... When the film was screened... at the Cannes Film Festival, *Newsday*... wrote... it "has aroused [US] filmgoers' spirits here in the same way *Pulp Fiction* did (at the) 1993 (festival)."

...*Rocky*... has done a number of talk shows in which [it]'s been praised endlessly for his performance in *Cop Land*... a character piece in which [the actor] plays a paunchy, half-deaf and slow-witted New Jersey sheriff who goes up against a coven of corrupt New York cops... *Cop Land*, of course, is not the first time [Rocky] has attempted to reinvent himself. For years, [Rocky] tried to get a version of *The Godfather, Part III* off the ground with him in a lead role. In 1983, [Rocky] directed a musical, a sequel to *Saturday Night Fever* entitled *Staying Alive*. It was even gaudier and almost as badly received as *Show Girls*. And there was that disastrous period in the early 90s when [Rocky] tried comedy with *Oscar* and *Stop! Or My Mom Will Shoot*. That final public failure prompted... [his decision to] go... back into what [Rocky] did best, no-apologies action films. [Rocky] signed the biggest personal contract of all time with Universal, \$94.5 million, for three pictures specifically required to be big-budget action films. "But then I got on the set on *Daylight* [the first film of the deal, which had him leading trapped commuters out of the Lincoln Tunnel], and I wasn't comfortable at all. Whatever I once had that made me enjoy doing that, I had lost it." ...So... the... Miramax co-chair[person thought of him when it] received the script of *Cop Land*... [– although Rocky] originally resisted the idea... "Here's somebody offering me one of the best roles out there, and I'm arguing against it..." But his fears were calmed by... [the script-writer, and Rocky] quickly agreed to put on the 15kg that... [the role] needed.

...Hollywood's middle-aged macho brigade – [the star of the *Rocky* series of movies; the star of the *Diehard* series; and the star of the *Terminator* series – have] been invited to a birthday bash in Austria celebrating Harley-Davidson's 95 roaring years of motorbike-making. The tourism board of the lakeside resort of Faaker See said the movie-star owners of the growling [US]-made bikes had been asked to come to the \$US40 million... party along with... 25,000 other Harley owners and a[n]... expected... crowd of 250,000... at the... shindig, being organised under the banner "Where the hell is Faaker See?" ...[In related news, the star of the *Terminator* series] didn't have much trouble convincing a Vancouver shop to send its customers out the door pronto so [the actor] could spend big bucks in private. After 45 minutes, however, all [the actor] had managed to part with was \$96.30... And [the actor] wasn't the least bit sheepish about the huge disservice... just done the store manager.

...A looming rent rise is behind the decision to move Auckland's oldest china shop out of Queen St – its home for the past 120 years. [The shop-owner]'s annual rent would have tripled [to] around... \$187,000 under the new landlord, Force Corporation, which is developing a \$75 million entertainment complex on the block between the Civic Theatre and Aotea Square... [T]he rent had previously been below market prices because of a six-month renovation/demolition clause... In the Force plan, back streets Myers Lane and Bledisloe St will be built on and the new structure will contain 12 cinema screens on two levels, a 450-seat giant screen Imax cinema, a Planet Hollywood restaurant and merchandise shop, an interactive games centre and restaurant "boulevard." Planet Hollywood alone is forecasting a million visitors a year and the forecast for total visitor numbers is three million... Rent would total \$6.5 million, including the return from Force's joint-venture multiplex operation with A[US]n cinema operator Village Roadshow... Force... had the capacity to carry out the Queen St project at the same time as its Argentinian expansion on six locations, after a cash issue in April... The Queen St project will extend to the Aotea Square border and incorporate a new visitors' centre... [The architect] said the development... would include the latest material and technology, but in sympathy with the scale and detail of its neighbours... After the Civic block project, Force will turn the St James Theatre opposite into a live theatre and rebuild on the site of its other cinemas there... Planet Hollywood, owned by and featuring some of the world's biggest movie names, [including *Hollywood's middle-aged macho brigade*.] was started in 1991 and has 66 restaurants. Imax, which has a cinema screen 10 times the normal size, is a Canadian venture that evolved out of Expo '67 in Montreal.

...Giving a new dimension to the big screen... It's 3D cinema... but not as we know it – the tacky cardboard glasses have gone, replaced by electronic headsets intended to take viewers "as close to reality as you can get." At least that is the claim being made by A[US]n company Cinema Plus, which will shortly begin building N[Z]'s first Imax giant-screen cinema. The company... has a 10-year agreement with Imax which is likely to see six to eight giant-screen cinemas built in A[US and NZ] over the next five years. And when they say giant, they mean *giant*... Imax screens are generally around 25m – or eight storeys – high. Its Auckland screen... will be 25m across. A normal cinema screen is just 7m wide. Invented by an A[US]n and developed by a Canadian, Imax technology has been around for 30 years but has only recently become a commercial success. The biggest Imax screen in the world opened in Sydney last year, pulling in more than 600,000 customers in its first nine months. Although the number was lower than... predicted, business had since picked up and, according to... Cinema Plus[s] managing director... was performing ahead of expectations. A Melbourne cinema is due to open next March, with one in Adelaide later in 1998 and in Brisbane in early 1999. The Auckland cinema, which will cost roughly \$5 million to develop, is expected to open either late next year or early in 1999. Wellington and Christchurch are also being eyed. Although Imax films are extremely expensive to make (the cost of an average 45-minute film is around \$11 million), there is no shortage of stock. More than a dozen new films are now being made each year, featuring such spectacular sights as the burning oil wells of Kuwait, the view of Earth from the Mir space station and breathtaking aerial shots from the top of New York skyscrapers. The latest Imax documentary, due out early next year, records N[Z] climber Rob Hall's tragic expedition to Mt Everest last year and is already being hyped overseas. Just last week, Sydneysiders got their first chance to see a 3-D Imax film, *New York 3D: Across the Sea of Time*. The 3-D projection technology has its origins in military technology, which Imax has adapted for commercial use. The headsets, worth \$650 each, contain liquid crystal lenses to create the illusion of three dimensions... Once... investors were dubious about the future of such technology. But with 160 Imax cinemas now established throughout the world, the company believes it has achieved the critical mass necessary to be taken seriously. In the last three months alone, it has signed deals for 36 more cinemas... [J]ust over a third of Imax's customers are tourists... School groups are expected to make up 6 to 7[%] of... Auckland's... customers. [The screen will have up to six films on rotation and 13, one-hour sessions a day starting at 10 am].

...The old may make way for the new in Auckland's inner-city movie market. The future of the St James and Mid City cinema centres seems in doubt, their owners having joined forces to run a planned 14-cinema development next to the historic Civic Theatre... Force Corporation has... b[ought] land and buildings adjacent to the Civic for a \$76 million retail and entertainment centre... The only certainty was that the historic St James lyric theatre would be retained, because it was legally protected. The Hoyts N[Z] Cinemas general manager... refused to comment on whether its four-screen Mid City centre would close. Council officials have predicted there is room for only one cinema multiplex on Queen St.

...Force Corp... is negotiating with the Auckland City Council to build a multistorey car park in Mayoral Drive for... its... patrons... [– a]lthough... it would be available for general public use... No decision had been made about how many parking spaces would be provided... The managing director of Force Corp... said the car park... would certainly be convenient, but... was not essential.

...last week... [Force Corp's executive chairperson] talked about the 1987 crash and his days as managing director of one of its biggest casualties, Chase Corporation. The notoriously media-shy [executive chairperson] was worth \$75 million before Black Tuesday... But most of that wealth was on paper, and most of it went west. Chase, which had a market capitalisation of \$1.4 billion before the crash, was worth less than \$20m two years later when it went into receivership. "We were funding things at 16% that were yielding 8%..." ...The company made the *Wall St Journal's* early 1988 list of the world's 10 worst companies... But it was fun while it lasted... [and] as the crash and its aftermath slammed one door shut, it blew

open another. This time for... [his] private company Force Corp. The post-crash financial troubles of the country's two cinema chains, Hoyts and Pacer Kerridge, meant they could not cash in on the trend to multiplex developments... Village Roadshow was looking for an entry to the N[Z] market which Force, with property in suitable locations, could deliver... Chase shareholders had long memories, so how hard was it to re-enter the public gaze? "I was very hesitant... But it was a way to grow the company... It's nice to know you can come back again, to see you can still do it... The market will really punish you if you make a mistake today. Before, if you made a mistake, inflation would look after you and you could still sell the site for more than you paid for it three months later." ...Today, Force... has no debt, money in the bank and exciting expansion plans... Force operates 46 wholly owned cinema screens and 18 in which it has a financial interest, in Auckland and Hamilton. That gives Force about 38% of total box office receipts. Hoyts, which has a more even geographical spread, has most of the rest. Force has no plans to move south of Hamilton and attack its rival. The local market [- which has 'more cinemas per head of population than the US' -] is too mature and the capital costs of setting up cinemas too high... Once the... \$75m entertainment centre [next to] Auckland's... Aotea Square... is completed, along with the expansion of the company's Rialto arthouse movie chain, there won't be many domestic growth opportunities left for Force. Hence the company's move into Argentina and... Fiji, where it has a stake in a six-screen multiplex in Suva... The Latin American foray is by way of a joint venture with Village Roadshow and... [a Latin American businessperson], in which Force has 25%. It was sparked by a tip from a [US] studio rep, who suggested the Argentinian market was due for revitalisation... Argentina had simply lost the cinema habit. In 1985 the country had 70 million cinema admissions; last year it had dropped to 20 million. In a country with 10 times N[Z]'s population, Argentinians go to the movies 0.6 times a year, compared with four times for N[Z]ers and six times for [USers]... Last December, the joint venture opened its first complex, a 10-screen multiplex in provincial city Mendoza, and plans to open another six complexes, four... in Buenos Aires, with a total of 74 screens, by December 1998. Force's share of the cost is estimated at \$48m.

...The trial of the Pacer Kerridge Corporation executive chair[perso]n... on fraud charges involving \$15 million opened yesterday... The jury was empanelled last Thursday after a mammoth four-and-a-half-hour session. Six hundred people were written to by the court and more than 200 attended for the empanelling process before the final 12 were selected. A few dozen more were kept waiting on standby over the weekend in case some of the chosen 12 found a reason to be stood down. One juror's employer, which... the judge... called "a large commercial organisation" and which is understood to be a bank, sent the court a letter asking for its staff member to be discharged on work-related grounds. [However, the] judge said it was not possible to discharge jurors on work-related grounds. Jurors could [only] be discharged if they found they had some connection with the case, or parties or witnesses in it. [The judge] said the employer's letter, stating its employee's job was in jeopardy, was "an entirely unacceptable approach for an employer to take. It at least borders on contempt of court." ...[the judge] expected a letter of apology to the court... [from] the unnamed organisation... The trial is scheduled to last 12 or 13 weeks and is unusual as a white-collar case for having a jury. Other big cases arising out of the 1980s, such as the Equiticorp criminal trial, were heard by a judge sitting alone.

...[a former] child movie star... [has backed] a call from Actors' Equity for legal safeguards to protect young actors from exploitation. The actors' union is upset that its attempts to introduce legal protections have failed so far, while a new code of rights is pending for animal actors. [The former star (aged] 26), who has been acting since... [aged] two, said there were no guidelines covering chaperones and hours of work when [it] started out. At nine [the actress] shot to fame for roles in [the locally-produced] films, *Smash Palace* and *Scarecrow*, and hosting a TV show, *Kidsworld*. By 12 [the actress] had already spent a year in Los Angeles, trying her fortunes in Hollywood before returning to Auckland... [It] was not uncommon for her to be filming until 3am or 4am, then be back on the set for work later that morning. "When you are young you can deal with it. But there needs to be some rollover clause so that actors get an eight hour break... It is in the interest of people making films to look after the actors because if they are exhausted they are not going to perform[very well.]" ...now an Auckland University fourth year law student, [the 26-year-old said fame] and falling behind with schoolwork were harder to deal with. "As a child you are less resourced to deal with that... and you lose your childhood..." [An] Actors' Equity organiser... said it was ironic animals... were to have new legal safeguards, while child actors didn't have the same protection. "It's outrageous. Pets have vets on the set... There are general requirements for children under 14 to be supervised at all times, but they are not always supervised by the most suitable person." ...Chaperones for child actors on set were recommended in union guidelines, backed by actors agents, but they were voluntary... The union had [also] complained that a loophole in child labour regulations, which included a ban on work between 10pm and 6am for those under 16, meant they did not cover child actors. This was because actors were usually classified as self-employed contractors, rather than employees, even if they were only 11 or 12 years old. "It is not hard for production companies, if they are audacious enough to do so, to work child actors unreasonably long hours and for minimal rates without breaking the law... We don't want a ban on night work. We accept that children might have to work late, but not at the expense of getting a full night's sleep..." Actors' Equity, a division of the Northern Distribution Union, has kept a dossier of cases of substandard working conditions. They include an 11-year-old... and a 9-year-old [who] worked from 1pm until 8.45pm. The only food provided was a chocolate biscuit each. [The] 11-year-old had soiled her pants because [the child] was too intimidated to ask the film crew where the toilet was. In another case, the chaperone of a child away filming on location for three weeks did not notice the actor's bed did not have sheets. The union is also investigating a complaint a child contracted hypothermia while on a film shoot last year. Actors' Equity has tried to introduce an enforceable code... but... the... [talks] broke down because the Screen Producers and Directors Association could not accept the maximum hours recommended by the union, which varied from seven to 10 hours, depending on age. [The association's] executive director... said her group was keen to settle the issue, because it was holding up a new "pink book" of guidelines over engagement of performers... However, [both]... parties admit they have reached an impasse. The union has also asked the Labour Department to amend its Health and Safety in Employment Regulations to cover all workers engaged as employees or contractors[but a department]... adviser... said... "If they want... the regulations changed they need to put pressure on the Government to tell us to change them;"... Production companies were still obliged under the wider implications of the Health and Safety in Employment Act for the welfare of workers and associated people.

...Special effects scenes of [an actor] travelling through space to meet an alien civilisation in the Hollywood sci-fi adventure film *Contact*[, which]... is based on a 1985 novel... were made in N[Z]. Local audiences] will be able to see the scenes when the \$US90 million... film begins its run through the country [in a fortnight]. Weta Digital, the Wellington special effects company that worked on *The Frighteners*, *Heavenly Creatures* and many episodes of the television programme *Hercules* and its spin-off series *Xena, Warrior Princess*, spent about 3 1/2 months working on *Contact* earlier this year... While *The Frighteners* involved 570 special effects scenes and a staff of about 50, the 48 scenes on *Contact* provided work for about 20 staff... The Warners Bros film was rushed to an early release in the U[S] soon after Weta finished its scenes... "It was amazing how fast they got the film into theatres. It was a matter of less than two weeks after the effects were completed,"... Weta's effects producer... said[, adding that] hopefully the scenes would "open up people's eyes" to the N[Z] special effects company, which... collaborated on the film with Hollywood special effects heavyweights Sony Pictures and Industrial Light Magic... *Contact* is also remarkable because[the incumbent US] President... has protested about the use of footage of himself speaking at a news conference about space aliens... [and] interacting with some of the characters in the film... The scene[s were] made possible through the use of digital imaging technology that allows actual television footage... to be spliced into the film.

...Hollywood is compiling a list of the top 100 [US] movies to celebrate the centennial of the silver screen. "This is a landmark moment for... the great art form of the 20th century," said... [the] director of the American Film Institute... at an institute news conference to announce the project - "100 years... 100 movies." Ballots were sent to a "blue-ribbon panel" of 1500 people involved in movies... from actors, directors and cinematographers to screen writers, distributors and exhibitors... Four ballots were sent to[the US] President... and his wife... and[the] Vice-

President... and his wife... A team of the institute's historians came up with a list of 400 films from which the top 100 will be chosen... The list includes... [the] 1941 classic *Citizen Kane*... [the]... 1968 masterpiece *2001: A Space Odyssey*... *The Wizard of Oz* (1939), *Psycho*... 1960, and... *ET: The Extra-Terrestrial* (1982). *Ben Hur* (both silent and sound versions), *Casablanca*, *The Birth of a Nation*, *The Godfather*, *The Searchers*, *Star Wars* and *Chinatown* are also on the list... *Ishtar* is not on the list of candidates for movie greatness[, but one of its stars]... appears in seven of the nominated films – from his 1967 debut in *The Graduate* to 1988's *Rain* [Guy. Two]... movie icons... appear... in nine of the 400 films... The top 100 feature films will be selected on the basis of critical recognition, major awards won, popularity over time, historical significance and cultural impact... "American film-makers set the standard for the world,"... [was the reason given for why] the list was restricted to [US films].

...[44] countries have submitted films in the hope of being among the five Oscar nominees for best foreign film at the 70th... Academy Awards... one short of the record 45... in 1994 and include... Democratic Republic of Congo, Luxembourg, South Africa and Ukraine... for the first time. - 1997

To Oscar winners go the spoils: box-office gold and a slingshot effect on the careers of those who climb the stairs of Hollywood's pantheon at the Academy Awards on Tuesday night (NZ time). The best picture can snare an extra \$35 million post-Oscar from intrigued movie-goers, though if it is *Titanic*, it may not get as big a boost since it has already seriously soaked the box office. "There are lots of awards, but the Oscar is the big one," says... [the] American Film Institute's creative director. "People feel they have to see the winner, because that's the one everyone is talking about." Previous winning films got box-office boosts immediately after they received their Oscars. *The English Patient* climbed 175[%], *Braveheart* 178[%], *Forrest Gump* 127[%] and *Shindler's List* 89[%]. Even Oscar nominations are written in gold, with audiences pouring in to see best picture contenders the week after they were announced on February 10... *L.A. Confidential* got a whopping six-fold bump in revenues, *The Full Monty* 158[% and] *As Good As It Gets* 48[%]... For the principal actors and directors, being nominated has probably improved their lives already, and their boost gets even bigger if they walk off the stage with a golden statuette.

...Big is back in Hollywood. And nowhere will that be displayed more brightly than at the Oscars tomorrow, where big stars and big-budget movies will overshadow last year's darlings, the independent filmmakers. The 70th annual Academy Awards... also marks the comeback of several once-fading stars such as... [one who] found fame 30 years ago as the dope-smoking Captain America in *Easy Rider*... [A]n influential film critic at the Chicago Tribune, predicts [Captain America], aged 58, will take the best actor Oscar for his portrayal of a [n] aging beekeeper... in *Ulee's Gold*... But [the 58-year-old] faces stiff competition from [the star who won an Oscar for *The Graduate* and this year is nominated for its work o]n *Wag the Dog*, his *Easy Rider* co-star... for *As Good as it Gets* and [another]... neglected favourite... that... wrote, directed, financed and starred in... [the] luminous small work... *The Apostle*... But [the star of *As Good as it Gets*] is a Hollywood favourite, and his role as the neurotic writer is the strongest [the actor]'s had in years. The best supporting actors also have their comeback tales, starting with... a top draw of the 1970s who once posed nude in *Cosmopolitan* magazine, had a failed marriage and a career that fell into near obscurity. *Boogie Nights*, pulled [him] back into the limelight for his portrayal of a porn movie director who takes on a father-like role for his troupe of actors. It was a part [the actor] shunned when it was first offered to him, but one that earned him a Golden Globe award as best supporting actor in a drama... In 1997, the independent film *The English Patient* swept the Oscars with nine awards, but this year the billion-dollar blockbuster *Titanic* is expected to win a boatload of honours. When *Titanic* last month won its Golden Globe for best drama, [its]director... asked the awards show audience, "Does this prove once and for all that size matters?" The answer tomorrow from Oscar-voting members of the Academy of Motion Picture Arts and Sciences is expected to be a resounding yes.

...The Academy Awards will be announced this afternoon. Major studios have plastered the usual giant vote-persuading bill-boards around Tinseltown to attract the attention of the Academy of Motion Pictures Arts and Sciences' 5722 members. Some estimates put the spending on advertising as high as \$US50 million... Movie magazines have run full-page ads in the lead-up to the awards... N[Z]ers have put about \$18,000 on the Best Actor race with Centrebet... In the U[S], betting on the Oscar race is illegal in some states, but that has not stopped bookies from giving the odds for fun... [One] Las Vegas odds-maker... has been handicapping the Academy Awards for more than 25 years.

...Last year's Academy Awards honoured the independents. Today, the 70th Academy Awards are likely to mark a return of the major studios to Hollywood's rite of spring, with the shipwreck saga *Titanic* favoured to win big. But as trends come and go, one Academy Awards feature never changes: Price Waterhouse – the accounting firm that year after year delivers "the envelop, please." Price Waterhouse began counting Oscar votes in 1936. There was no sealed-envelope secrecy in those days. The results were given to reporters before the ceremony even began. But in 1940, guests arriving at the gala event were astonished to read about the winners in an early edition of the *Los Angeles Times*. Oops. After that, a veil of secrecy descended on the balloting, and it has yet to be violated... Sometimes the race is close... "In that case we recount the ballots to make sure of the results. Once we had a tie." That was for best actress of 1968... Price Waterhouse makes sure the ballots go to the 5371 eligible Academy voters, then six to eight employees count the ballots... It's curious that in this computer age the Academy ballots are counted the old fashioned way. "We've often talked about whether we should computerise it," says... [the person] who retired last year after 21 years as the firm's [representative] at the Oscars... "For reasons of security, we've stayed away from it. [But e]ven in a computerised system, you still need to touch each ballot once..."

...[the actor] whose arched eyebrows and sardonic voice have made him a Hollywood legend, walked away yesterday with the third Oscar of his extraordinary career. [The actor] has been nominated on 11 occasions, the most for a [guy. The] star... who won as best actor in 1975 for *One Flew Over the Cuckoo's Nest* and as best supporting actor in 1983 for *Terms of Endearment*, is now tied... among [a pack of] performers with three Oscars. Only [one actress], with four, has more Academy Awards. At the end of his acceptance speech yesterday [the latest three-time winner] dedicated the Oscar to a list of dead people... His personal life could have come from a screenplay... At 37 [the actor discovered the person it] thought was his mother was his grandmother and his two older sisters were really his mother and aunt. Known as a party animal and rogue about town, [the actor]'s... 17-year relationship with... [an actress] ended unhappily... after [the actor] fathered a child with... [someone] young enough to be [his] daughter... For someone who started his Hollywood career as an errand boy at MGM, [the actor] has become a legend since his breakthrough in *Easy Rider*, which coincidentally also starred... one of [his] rivals for this year's Academy Award. Before *Easy Rider*, [the Oscar-winner] spent a decade making second-rate horror and motorcycle movies and seemed destined for a career as a B-movie star. Since then his trademark smirk and no-nonsense acting have made him a popular favourite. As well as critical acclaim [the actor], who has just turned 60, has been a shrewd business[person]. As Batman's Joker [the actor] reportedly netted \$US50 million for his share of the profits... [His] co-star in *As Good As It Gets*... proved that an actress can go from television to the big screen and reap the respect of her Hollywood peers. [As] the only American actress nominated for best actress at the Academy Awards, [the co-star] took home the Oscar for her role as a salt-of-the-earth waitress... The win came on the same day that... [her] TV series co-star... announced that they would both be back next season for their hit show *Mad About You*. Each is expected to make about \$US1 million a show and be given time to do film work. [The actress], who... is involved in three films in development at Sony Pictures Entertainment... [and] has won two Emmys for her performance in *Mad About You*, was convinced from the outset that [her Oscar-winning character] was a dream role and fought for it. [*Titanic* collected Best Director – prompting its director to declare: 'I'm the king of the world!']

...The most expensive and most profitable film in cinema history... climbed to the top of the Academy Awards' roll of honour, winning 11 Oscars, including the award for best picture. *Titanic*, which this month passed \$US1 b... worldwide at the box office... [-] the movie... had generated \$US516 m... in foreign business on top of its \$US402 m... take in Canada and the U[S, and]... steamed past former first-place holder *Jurassic Park*, the 1993... thriller that earned \$US913 m[-] ...now shares with 1959's hot ticket, *Ben Hur*, the distinction of being the most Oscar-honoured film...

The success of *Titanic*, a Paramount picture, is widely seen as a sign of a resurgence of studio power, a signal that the members of the Academy who vote on the Oscar winners are keen to honour their own again after several years in which smaller independent films and foreign, often British, stars loomed large in the list of winners. [The director]'s films – which include the two *Terminator* titles and the disastrous *True Lies* – have never been seen as Oscar material except in the technical areas where budget has always played as big a role as skill in ensuring award success. But *Titanic* changes all that... [The star of *Terminator* (who recently) killed the family labrador by backing over it with his Humvee military vehicle... PS: [the best actor Oscar winner has also been] having pet disasters, having... nearly killed his son's pet Shih Tzu... when [the star of *As Good As It Gets*] accidentally caught it in a swing while driving golf balls from his lawn[– t]he poor little dog needed 57 stitches[)... joked at one point that *Titanic* "may actually show a profit that no accountant can hide" – a reference to the creative bookkeeping by which studios routinely show a hugely successful film as having made a loss for tax purposes... The 70th awards ceremony paid due tribute to Hollywood's long and glorious history. [One old-timer] was given a special Oscar for lifetime achievement for his elegant musicals such as *Singing In The Rain* and *An American in Paris* – and... accepted it in style, snuggling up to the statuette and singing... *Cheek To Cheek* from the 1935 musical *Top Hat*. • In strictly mathematical terms, *Ben Hur* remains the biggest Oscar winner in history. It won 11 of the 12 awards for which it was nominated; *Titanic* won 11 of 14.

...When the film industry's biggest names rolled up to the Academy Awards, stepped from their limousines, offered a few soundbites and showed off their designer threads, many might not have realised that their days as top-billing stars were numbered. Blinded by the paparazzi's flashbulbs, it may be difficult for Hollywood's old guard to recognise that a shift is under way. The actors, directors and producers who have driven the industry for a generation are getting old. Who bought the tickets that propelled *Titanic* to billion-dollar box-office takings? Who ensured that *Scream 2* and *I Know What You Did Last Summer* each took in twice as much as... *The Postman* and... *Mad City* [– co-starring the actors from *Phenomenon* and *The Graduate* –]combined? Teenagers. Stars and executives, many in their 50s, are terrified. Cinema audiences are no longer dominated by their generation, part of the largest demographic boom the world had known. An even larger crop of consumers is taking over. In the U[S] alone there will be 50 million teenagers by 2005. And whatever they want, it will probably not be what their parents want. An annual survey by the industry weekly *Variety* shows that the number of so-called "A-plus" stars capable of "opening" a block-buster film has dropped to four: [the star of *Mission Impossible*; the star of *Braveheart*; the star of *Air Force One*; and the star of *Forrest Gump*]. And even they are more a hedge against failure than a guarantee of box-office success... Teenage movie-goers... don't demand \$30 million stars, and... will go to see the same film again and again. Hence *Titanic*'s billion-dollar take. By comparison, older movie-goers – the baby-boomers – are tricky to please. They're less available, more susceptible to critics... The shift in Hollywood was clearly illustrated recently when Planet Hollywood, the troubled "eatertainment," signalled that it was searching for younger, upcoming stars to take over as celebrity boosters from [its three] action dinosaurs... But it's hard to see the "baby [actors]" ...taking on the thankless task... [When the three dinosaurs] made their way up the red carpet for an evening of back-slapping and schmoozing, it was not for the last time – but their auras may seem fainter. "It's the way of the world," says one Hollywood producer. "The people who thought there would never be another culture look around – and find that there is." ...So Hollywood is concentrating on mega-budget, effect-laden flicks... with plenty of merchandising opportunities and international appeal, or buying up smaller, independently made films which carry less financial risk and offer big profits if they score. *The Full Monty* and *Mr Bean* are the envy of the industry, having both taken more than \$300 million for an outlay of about \$25 million. Though *Titanic* has now sailed past the... \$NZ3.6-billion... mark it will make no more money for its principal backer, Fox, than... *The Full Monty* will make for its subsidiary... – about \$150 million. A full 215 days after its [US] run began, *The Full Monty* still took almost \$750,000 last weekend in the States alone – and, to the delight of the studio, there are no big name stars raking off a percentage of the profits.

...[a NZer is after a % of the film's profits, claiming it's 'a ripoff of his *Gals Night Out* – a play that toured Britain before *The Full Monty* was made.' Speaking of touring, when] *United Travel Getaway*... went to Los Angeles, home of celluloid celebrities, [the crew visited]... Tinseltown, where people can experience what it's like to be a star – complete with Oscar awards, limousine, red carpet, fans and paparazzi. "It was... kind of cheesy but great to pretend and experience the glitz and glamour... the fake fans screaming they loved your last movie, and photographers snapping away..."

...Oh, Hollywood! How dost thou love thyself? Let us count the ways! Last year, the entertainment industry bestowed a whopping 3182 trophies on itself at 332 separate ceremonies – nine awards handed out every day of the year. Still, at least it's a fine excuse for a spot of over-the-top glamour... [T]he latest backpatting ceremony [was] the Screen Actors' Guild Awards. [Incidentally, 'people often say to me, "What's Los Angeles really like?" They say, is it really all palm trees, pink flamingos and people in leather shorts and people saying, "Let's do lunch," or is it, as a lot of people suspect, actually full of a lot of illegal immigrants working for next to nothing, who are deeply discontented, and the answer is, of course, that it's both.']

...We have all heard that everybody gets their 15 minutes of fame at some time in their lives, but in LA that just ain't enough. People here want it all day, every day, and if they can't have it themselves, they'll make sure they're standing damn close to someone who does.

...*HOLLYWOOD'S little helpers*... [Personal assistants are] sherpas to the climbers of the entertainment peaks and granters of wishes to the too-rich and too-famous. It might be sushi at 4am. It might be a private plane to Tibet by tomorrow. It might be exotic animals or a party, or prostitutes for an afternoon. It might just be laundry. But it's always something... "You take care of their personal lives. You work ungodly hours – you don't have a personal life. But that's okay." ...The average job pays about \$65,000 a year, although more difficult stars have to pay more.

...in Hollywood 80[%] of the celebrities divorce; incompatible schedules, ambition, career pressure, endless rumours, alcohol abuse – these are the reasons Tinseltown couples have been splitting like atoms in a nuclear reactor... [● The new] French... movie... *Le Divorce* is about contrary French and American standards for marriage, adultery, divorce and affairs... The 23-year-old beauty... [who portrays] Isabel... freely admits that after three months filming *Le Divorce*... in France, [it] was heartily sick of Americans... "Sometimes I[d] be walking down the street and... hear some American and... just go, 'Of course they hate us, of course they can't stand us. We're the most annoying, boisterous creatures in the world.'..."

...*HOLLYWOOD* [is] hooked on happy pills *HOLLYWOOD* is feeling no pain... as a deadly... drug craze sweeps the movie industry. Prescription painkillers, so-called happy pills, have replaced cocaine and heroin as addictive drug of choice for the rich and famous, turning the town into the Valley of the Dolls once again. The hottest new drug is Vicodin, or "vikes" as they're called on the street. But if they're not available, Percodan or Percocet, called "perkies" of course, are just as powerful... [(Vicodin is not available in N[Z], nor are any pharmaceuticals containing its main ingredient, hydrocodone... perkies are made up of oxycodone)]... Vikes give a feeling of euphoria without any telltale nose twitching, residue powder or needle tracks – and there's no drug paraphernalia needed to ingest them. And, unlike alcohol, there's no hangover. From superstars to supermodels, bus boys to business executives, thousands are popping pain pills – getting high at parties, at home, even at the office... The drug problem is Hollywood's worst-kept secret. During the Golden Globe awards in January, [one] presenter... asked ...a... film funny[guy and cast-member of TV's *Just Shoot Me*]... whether a joke [the *Melrose Place* star had] made had hurt his feelings. [The funnyguy] shook his head and quipped: "Anyway, I found 10 Vicodin in my gift basket." And it was an industry inside joke when Homer Simpson revealed on the kiddie cartoon show *The Simpsons*, of all places, that [it]d once been happily hooked on pain pills. In image-conscious LA, the painkillers are a perfectly acceptable means of getting "wasted", America's popular term for being drunk or high... Vicodin, and another brand, Lortab, known as "pinkies", are the most prescribed pain drugs in the US, costing about \$50 for 100... tablets. That's 50 cents a tab, although addicts pay street dealers \$3 a pill... On the Hollywood party circuit, vikes are in much greater demand than ecstasy tabs. And the hip crowd even throws "Vicodin Sunday" soirees, where bowls of the drugs are left out on the coffee table like Pebbles. A Tinseltown party veteran says: "Painkillers are more acceptable than other drugs. They're talked about openly. You wouldn't tell somebody you're doing heroin. But if you say you've just popped a couple of

vikes, nobody bats an eye.” ...an addiction-recovery specialist for the MusiCares foundation, which handles drug-addicted rock stars, says: “They’re safe, they’re legal – that’s the appeal.” But [the specialist] warns they can become very addictive, adding: “Vicodin detox is harder than heroin detox. It stays in your system longer.” ...About 12[%] of patients who begin using painkillers for legitimate purposes become addicted. The figure is much higher for those who first take the drug just to get high... These synthetic drugs are called opioids and deliver a sedative effect and a feeling of wellbeing similar to opium. Excessive opioid use can cause kidney and respiratory problems and destroy the liver. And 10[%] of all overdoses in America involve hydro or oxycodones... There are many hidden dangers... Common side-effects include dizziness, vomiting and constipation. But at its more severe stage, Vicodin can lead to blood disorders... and even death... Last year, an overdose of vikes killed millionaire playboy Guy Snyder. And Don Simpson, [a]... high-profile drug abuser... [– “s]ex, food, drugs, [Don] had a compulsion for them all[; Don] was a garbage can[” –] ...who produced blockbusters such as *Top Gun*, died in 1996 of a heart attack induced by a cocktail of drugs... Some diehard addicts mix diet pills with vikes or perkies for a pharmaceutical cocktail equivalent to a dangerous speedball. Anxiety drugs like Xanax, Ativan and Valium, consisting of benzodiazepines, are also in constant demand among the film jet-set, although they don’t carry the same euphoric high and are under stricter drug controls. Pill-poppers build up tolerance... and can end up popping... 30 tabs a day. Although three at once would knock out a normal person, regular users need larger doses to feel “right”. Prescription drug abuse hasn’t been so widespread in La-La Land since it was raining Qaaludes in the ’70s.

...*Addicted to excess*... HOLLYWOOD is known for its excess. Excessive wages, excessive budgets, excessive awards shows. Now the drug problem that has long bedevilled the entertainment industry is causing concern not just on account of its excess, but for being unstoppable. The result, as the Hollywood bible *Entertainment Weekly* reports, is that “recovery from addiction has practically become LA’s second-biggest industry.” ...Actors’ careers in jeopardy is only one factor. The other is Hollywood’s growing realisation that rehabilitation is now a routine part of life for many of its recidivist drug users[; including the star] of *Frasier*... and... *Friends* star [Chandler]... Centres such as Malibu Promises... are the immediate refuge for fallen stars. The 30-day treatment at Malibu Promises begins with detox, then a daily regimen that includes group and individual therapy as well as physical workouts... “I think rehab is just absorbed into the culture,” says... [the] author of *Blow*, the non-fiction book about how Hollywood met cocaine, which has been made into a film... “The cycle seems to be: you do a little rehab, you go back to work, the rehab didn’t take, so you go back to drugs, you do a little more rehab... That’s going to be our next story – that rehab doesn’t really work.”

...*As Hollywood studios brace for strike action, a new book reveals their bloody history of union-bashing and the often incestuous relationship between studios, unions and mobsters*... THE studio chief did not like the idea of one of his stars dating a black singer, so [it] asked a mobster to bump him off. The mobster refused and also declined requests to blind the singer. If it sounds like something out of the movies, that’s because it is out of the movies – but it is real life, not a script. The studio boss was Columbia’s Harry Cohn, the s[inger]... Sammy Davis jun. A book has just been published... in the U[S] that looks at the extraordinary history of the film world and the... relationship between studios, unions and mobsters. It zooms in on the bloody union battles of the past, when pickets set cars on fire and reds were seen under every studio bed. The film industry strikes of the 1940s had a resonance that echoes today. At stake was nothing less than control over an industry that was essential in forging people’s consciousness... The same holds true now. Already, the mere possibility of an entertainment industry shutdown is getting about 10 times the press coverage an actual strike in any other sector would receive. This time around the... writers are still at loggerheads with the studios, but the battle has become one of payment for cable and internet rights and intellectual property... But there may be lessons for both sides from the previously unpublished material about the bitter Hollywood strikes of the 40s... One movie that Hollywood has never produced and probably never will is the story of its own unionisation... It would be quite a movie... [Ironically, the threat of strike action in LA comes as the BBC is planning] to compete with Hollywood... The BBC’s new director-general... [want]s to transform it into a world-beating producer of big-budget films. The BBC’s director of television... will be put in charge of a new unit to produce films which could compete for Oscars... “This is a logical way for the BBC to develop... to deal with the most important players in the film world,” a senior BBC executive told... the *Sunday Telegraph*... yesterday... [The director-general] is expected to announce the formation of the new unit today as part of the BBC’s broadcast review. [The director-general] also intends to remove entire levels of bureaucracy and create a more streamlined managerial structure... 500 [to] 1000 jobs are expected to be cut... The *Sunday Express* said the BBC would probably cut several key political programmes, which might anger the Government. Last week, [a Government spokesperson]... wrote to the BBC and complained about the quality and volume of the BBC’s coverage of the E[U] summit in Lisbon. The restructuring plan for the BBC follows demands from [the] Culture Secretary... that the corporation make savings of £1.1 billion... [In local news,] Planet Hollywood, ...one of... the... biggest drawcards... [to] Auckland’s newest entertainment complex... still [needs] to find a local partner to join... its... celebrity co-owners... The Auckland franchise... is on the market for \$2.8 million... The... chain... of... 87... restaurants... worldwide... [made] a \$100m profit in 1997.

...[one of Planet Hollywood’s celebrity co-owners – #3 –] has put his hand up to open[NZ’s first] Planet Hollywood restaurant... [“The star] wants to come down here because [the star’s been to AUS] and loved it so much but never got a chance to get to N[Z].” However, because the star no longer loves his wife so much, Gimme is unlikely to accompany him! By the way, a planned]... \$80 m... merger of cinema operators Hoyts and Village Force has been put on hold by the High Court after objections from the Commerce Commission. The two A[US]n-based companies are planning to merge their overseas interests, including those in N[Z], as part of a cost-cutting measure in response to slowing industry growth. However, the move raised strong objections from independent cinema operators here, who feared a merger would create one dominant player which could dictate terms of supply to film distributors and freeze smaller operators out of the market. Between them Hoyts and Village operate 132 of this country’s estimated 290 cinema screens, but account for... 80% of box office takings, which last year totalled \$110.6m... But in spite of the size of the planned merger, neither company sought Commerce Commission clearance for it to proceed, as they maintained it would not lead to any lessening of competition. That prompted the commission to launch its own investigation... As a result, both [operator]s... have agreed to a deed of undertakings, which effectively puts the merger on hold until a full hearing is set down to determine the matter, which could be several months away.

...The... Planet Hollywood... restaurant planned for the Force Entertainment Centre on Auckland’s Queen St will open, despite the chain losing... almost \$US250 million in the last three months... Bosses say... the restaurant chain... can’t pay off its debt... [However, it is] trying to introduce a crop of younger shareholders, among them [the black star of *Guys In Black* and the guy star of] *Titanic*.

...The head of the N[Z] Motion Pictures Distributors’ Association... said *Titanic* became the biggest earner in local history on Tuesday, when it passed \$7.5 million at the box office. It now leads *Forrest Gump* and *Once Were Warriors* as the most successful films in N[Z] cinemas. The most attended film... is... still *The Sound of Music*, but... the industry long ago replaced admissions with revenue as the main measure of a film’s success.

...Just months after ramming a schoolboy’s head into a fence post... after youths set fire to a sign outside his house... [an] actor... has told A[US]n magazine *Sunday*: “In real life, I never get angry”. [The actor], who escaped conviction after accepting diversion in the North Shore District Court, told the magazine [about finding] it hard to switch off the brutal energy required to play Jake the Muss in *Once Were Warriors*.

...*Jake goes straight* [The actor] was the villain of the piece for *Once Were Warriors*... Cook the [guy] some f...g eggs, [wife] – it’s perhaps the most famous line from a N[Z] movie and one which has haunted [the actor since it] played Jake The Muss... Jake orders his wife to make his friend those eggs and when [the wife] refuses, lays into her with the full force of his temper and fists. Seven years on from *Once Were Warriors* the line is still whispered behind [the actor]’s back and shouted out by the guys collecting his rubbish. It is, [the actor] says, irritating. So when [the actor] had the chance to play the hero in the Kiwi movie *Crooked Earth*, you would think [it] would have jumped at the chance to shake off Jake’s bad image. But

[the actor] hesitated when the producers asked him to play a war veteran and town saviour. [The actor] wanted to be the bad guy – again. It took some persuasion on the part of the production team, which included [the *Once Were Warriors* producer... to talk him into tackling his first lead role as a good guy. Described as an action-packed saga, *Crooked Earth* takes a classic theme – conflict between two brothers – and reworks it with a N[Z] twist... It is [hi]s first home-grown feature since... repris[ing] Jake for *What Becomes of the Broken Hearted*... [The actor] has jetted all over the world to appear in Hollywood films like *Barb Wire*, *Speed II* and *Six Days Seven Nights*[... allowing the Kiwi to sample]... the Hollywood good life – even if some of those films haven't exactly been blockbusters material... After *Crooked Earth*, it was quickly back to the bad guys roles and the Hollywood lifestyle. [The actor] travelled to A[US] to play bounty hunter Jango Fett in *Star Wars: Episode II* which will be released next year.

...This year saw the loss of one of N[Z]'s most prized treasures. Television and film star Kevin Smith lost his life... in China leaving his childhood sweetheart... a widow and their three boys, [aged] 11... nine, and five... without a dad. Sadly, Kevin was on the brink of international stardom at the time of his death. After 13 years in the industry, the 38-year-old had scored a role in a Hollywood... movie *Tears of the Sun*... alongside [#3].

...*One of God's better people* The country mourns the death of actor Kevin Smith, on the way to becoming N[Z]'s next best thing in Hollywood... As the leather-clad, bicep-bulging Ares, God of War, in the TV series *Xena: Warrior Princess*... Kevin... won worldwide fame after years of acting with little recognition outside his home country... Right now Kevin should have been snatching some time with his family and preparing to go to Hawaii to start filming the blockbuster... [Guy] of War with [#3]. Hollywood had finally beckoned the boy from Timaru. It was, quite literally, a dream come true. [Kevin ha]d come close to landing some big roles in the past but always narrowly missed out. Yet Kevin kept on knocking on Hollywood's door. "I'm incredibly happy but there will be unfinished business if I don't try Hollywood again," [Kevin] said back in 1996. Smith... died on February 16 after... falling from a three-storeyed... film-set castle in China... Members of the public are welcome to attend.

...A... plea for extra shields to stop movie-goers plunging... from escalators at Auckland's Force Entertainment Centre has been shunned. The Occupational Safety and Health Service... fears the barriers on the escalators – which criss-cross up... 20m through the centre of the new complex – are not enough to prevent a fatal fall to the marble floor below. The service is particularly worried about teenagers fooling around on the escalators or riding the hand-rails four floors up. The escalators meet the national building code, but four months ago[an] OSH inspector... wrote to Force Corporation strongly recommending that it consider installing extra protections. A complaint from a Manurewa [resident]... that a teenager had almost fallen from one of the upper escalators while fooling around with friends sparked OSH's inspection, but the incident was outside its jurisdiction because [the complainant wasn't] an employee. [The inspector] cited two accidents at the Finance Plaza in 1991 and 1992 and another at the Sky City Casino where people riding the moving handrail on escalators died after falls. Plastic barriers were installed at both buildings after those accidents. Although [the inspector] agreed that people should not ride the handrails... "unpredictable human behaviour" coupled with its being an entertainment venue could cause a similar accident... Her branch manager... was disappointed guards had not been put in place... Force[']s managing director... did not respond to requests for an interview... on Tuesday and Wednesday. Last night [the managing director] refused to comment, saying it was important to speak to the centre's architect this morning... [The] Auckland City Council... building development manager... said the escalators had just been issued with a compliance certificate and [it] was comfortable that Force met the building code... "I do not believe it is really an issue," said... [a council] building inspector who also checked the escalators... "[But y]ou can't legislate against stupid people."

...A group of high school students tried to catch their friend Danial Gardner as [it] fell backwards over a barrier at the Imax cinema complex. But their desperate lunge was too late and the 16-year-old fell five floors to his death in front of his horrified friends, who had been waiting near the ticket counter to see *Scary Movie* at 4 pm on Friday. Now his family want answers after being told the Force Entertainment Centre in Queen St was "an accident waiting to happen." Danial's father... said his son, a fifth-former at Sacred Heart College in Glen Innes, was celebrating the start of the school holidays and a friend's birthday when the accident happened. "Danial moved backwards to lean against the barrier and... just disappeared over the side..." Danial fell 30m and landed on a table at Borders bookstore. The table remained untouched yesterday, with books scattered on the floor. A bunch of white lilies marked the ledge where [Danial] fell. The death follows a[n] OSH safety inspector's plea... for extra shields to stop moviegoers falling from escalators... Despite Friday's death, it seems unlikely Force will be prosecuted. OSH... officers examined the scene on Friday night but an investigation was unlikely because it was not a work-related accident and therefore not within the service's jurisdiction... [Danial's father] has not been inside the Imax complex himself, but has heard bad safety reports from mourning family and friends who have visited the family's Papakura home since the accident... "If Danial's death can prevent this happening to someone else's child, then it has not been in vain." ...the autopsy showed no sign of alcohol and drugs, "as we expected. [Danial] was just a normal kid, sensible and someone who cared for others... I haven't looked upon Danial as a son, but as a gift... [Danial] was more than a son. [Danial] loved his mother... cherished her. I don't know how [Danial] would handle it if [Danial] could see the way [his mother] is suffering right now." ...A Force spokes[person] said all handrails and barriers within the complex complied with standards but [it] expected that management would review that today.

...The ledge in the Imax cinema complex where Danial Gardner fell to his death may be below the legally required height. Three experts have told the *Herald* that the building code regulations say that a barrier between a change of floor levels in a non-residential building must be at least 1m high. But a check by the newspaper yesterday showed that the ledge at the Queen St centre is only 94cm high... The new measurement has prompted a change of thinking by... OSH... officials, who previously said they had no reason to investigate Danial's death, just over a week ago. But a council spokes[person] said last night that the council still believed the building complied with the Building Act... No one from Force Corporation could be contacted yesterday. The company had previously said that it would not discuss the accident until an investigation was complete.

...Danial Gardner's shoes remain on a shoe rack outside the front door of his south Auckland home and his room is just as [the 16-year-old] left it... "For a change, it was actually a bit tidier than it normally is," his mum... says with a wry smile. But Danial will never be coming home... Danial's parents... and his sisters... (18) and... (14), are still coming to terms with the shocking loss of their much loved son and brother. The lounge of the family's Papakura home is full of flowers, cards and letters from family, school friends, teachers and even strangers touched by Danial's death. A photo of Danial's Ardmore-Marist under-17 rugby team stands proudly alongside numerous other pictures of the teenager, a self-confessed sports fanatic who was always ready with a smile or a joke... The Gardners are composed and dignified as they speak about their love for their son but [his mother admits it] is not ready to accept Danial won't be returning to his room in the basement of their home... The family was overwhelmed by the support at Danial's funeral. More than 600 mourners farewelled the popular student, who excelled academically. Most were young people and the Gardners were touched by the anecdotes of their times with Danial. "I think it was a tribute to Danial so many young people were there, especially as it was the school holidays... We found out [Danial] was a lot more popular with the girls than [it] let on,"... Now all the Gardners want is to ensure other families are not touched by a similar tragedy. [His father] says the shock is slowly being replaced by anger, especially at the reaction of the cinema complex's owners and government agencies to his son's death. "...nobody wants to take some responsibility for making such a dangerous place for young people... The attitude of people, from Imax to OSH... and the council – all ducking for cover, hoping this will go away – makes me angry. Unless something is done, it will lead to another child's death..." ● OSH... says it is investigating the incident. As we went to press Force Corporation began work to raise the barrier.

...Safety inspectors cannot lay charges over the faulty installation of a loudspeaker that fell on a child in an Auckland cinema. The speaker fell 4m, striking [the] 12-year-old... on the right shoulder as [the girl] watched a movie at the Force Entertainment Centre... Its wires also scratched her left arm. O[SH] has just completed its investigation into the... incident... [I]nspectors found the wall bracket holding the speaker was “not fastened as well as it should have been.” However, the actual cause of the speaker’s fall and whoever was responsible could not be established... Even if someone was found to have broken the law, it was too long after the installation of the speaker for a prosecution to be made... [P]rosecutions under the Health and Safety in Employment Act must take place within six months of an offence... [T]he act required all practicable steps to be taken to ensure safety and any breach carried a maximum fine of \$50,000. The building’s safety was cleared by the Auckland City Council and OSH did not think it practicable to expect building operators to check every fixture and fitting after receiving a building warrant of fitness. The acting group manager of Auckland City Environments... said checking the fastenings of the speaker was not part of the council’s inspection process. The chief executive of Village Force Cinemas... said all speakers in the theatre were removed and reinstalled soon after the incident... [In related news, the Civic Theatre]’s place in the hearts of Aucklanders was reaffirmed yesterday, as... [u]p to 25,000... passed through... [it]s doors to view the results of a... \$42 million restoration... After tomorrow, the civic will be open only for performances and will not be open to the public during the day... Entertainment yesterday on the main stage and in the downstairs Wintergarden area was reminiscent of the Civic’s heyday in the 1930s and 1940s.

...the property company behind Auckland’s new \$75 million entertainment centre, has decided to bail out N[Z]’s first Planet Hollywood restaurant after a fruitless... two-year search for a local investor. The hunt was thwarted by serious financial problems facing the [US]-based company which founded the chain... The chain plans to close up to 20 of its... restaurants after losing more than \$US243 million [in a single] year. It confirmed yesterday that it would restructure to try to stave off bankruptcy... In May, Planet Hollywood Asia dropped its asking price for a half-share of the franchise... to \$1.8 million, and agreed to waive its franchise fee, during talks with... [a local investor], who pulled out at the last minute[... allegedly]... because the Singaporean company wanted too big a slice of the restaurant’s sales... However, [the]... broker... handling the deal, said: “[The local] was offered a fantastic deal but the reality [is it] was pipped at the post [by Force].”

...The Force will soon be with us – that mystical, other-worldly power to convince otherwise sensible earthlings to trade billions of dollars of hard-earned dollars for hats, toys, T-shirts, games and myriad other paraphernalia linked to the *Star Wars* movie phenomenon. By next month *The Phantom Menace*, the first episode of the much-anticipated *Star Wars* prequel trilogy, will be omni-present. The images will be on Pepsi Cola cans and Frito Lay crisp bags, in Pizza Huts, in toy shops and computer outlets, in bookstores, even on sheets, towels and blankets. Oh, and you can watch it all pass before your eyes in the movie theatre, too... distributed by... 20th Century Fox... In the U[S], tens of millions of dollars will already have been made by all those with a piece of Hollywood’s most lucrative licence, even before cinema doors open... “It will be a very expensive year,” promises the editor of... a popular Internet Website devoted to *Star Wars* memorabilia collectors. “But it will also be an exciting one.” ...Internet traffic is jammed on some 300 Websites as aficionados trade gossip about plot lines, light-sabre technology, action sequences, even computerised special-effects techniques... November’s release of a teaser trail saw millions of grown[ups] queuing up for the box-office loser *Meet Joe Black*, purely to get a two-minute glimpse of [the advertisement]... In New York, there were reports of whoops and cheers at the mere sight of the [director’s production company’s] logo; in Los Angeles, audiences for *The Siege* jumped 1147[%] the day the trailer was shown... [S]ince the first *Star Wars*... merchandise built around Luke Skywalker, Darth Vader, R2-D2, Princess Leia and Obi-Wan Kenobi has grossed \$US4.5 billion[... or]... four times the box-office take of the first three movies. Although there is never a guarantee when it comes to predicting what toys and games children will demand from their parents, retailers and licensees of the new *Star Wars* merchandise are betting princely sums on that past performance. The... toy giant Hasbro and its newly acquired sister company Galoob Toys beat competition for the exclusive [US] licensing rights from rival Mattel by paying... [the director’s] production company... some \$US610 million. Industry insiders expect Hasbro will earn \$US5 billion of sales from *Phantom Menace* and the other two prequels... Much of the new merchandise remains a fiercely guarded trade secret... [The director] has forced... his staff... and... all licensees – and every would-be buyer who saw some of the goods during February’s American International Trade Fair in New York – to sign strict confidentiality agreements. The media haven’t got a look in. Nor have retailers – and if they try to sell the new merchandise before the official... starting gun, [the director (who)]... raked in a cool \$800 million... for... the... year[)] ...has warned, they will be permanently banned from selling any *Star Wars* products.

...Well, it didn’t take long for *Star Wars Episode 1: The Phantom Menace* to be pirated. The first popcorn was still being munched at its preview when CD-sweatshops in Macau began distributing digital copies over the Web. Downloading, though, involved more commitment... than most of us possess – more than 24 hours by satellite was the experience of one dogged techie I know who was determined to be the first geek in N[Z] to view it. A VCD version is also available... which takes about 16 hours... [E]lectronic cinema arrived last month when the low-budget *Dead Broke*... was premiered simultaneously in a theatre and on the Net... The site featured [a] 30-minute movie *Peephole* earlier this year.

...Being a fan [of a movie star once] took dedication and persistence... Weeks later, if you were lucky, back came the reply... to... [your] letter... – it was a signed photograph with “love always...” ...Today, you can express your adoration in a matter of seconds on the Internet. Suddenly, the stars are clickable. The stuff of dreams is as close as your keyboard. You may be the girl [the star of *Titanic*] has been looking for all his life, so go pledge your love right away at www.celebrityemail.com/celebrityemail/index.htm, where you will find him along with [his *Titanic* co-star, the star of *Phenomenon*] and 100 others. If there isn’t a known e-mail address, *Celebrity E-mail* will redirect your message to the most appropriate Website... or send it by snail-mail via US Post. And it’s not just screen-stars you can click on to – you’ll find writers, politicians and sporting legends on the Net as well... [T]hey also have an “Inhuman” category... Search by name, location or claim to fame – from a high of 734 (politicians) to a low of [3] (crime fighters)... Don’t just yearn after the supermodels seen in the glossies – you can pester them in person at *Supermodels... Realms of Magic*... or the *Actress Archives*... where the icons of the present... mingle with the gorgeous ghosts of the past... Lest we forget, kneel with me beside the tomb of the immortal Sarah Bernhardt in the cemetery of Le Pere Lachaise in Paris... From one end of the spectrum (*Babemania*... which despite its cheesy name is a good guide to celebrity sites) to the other (*Famous [Gals]*... which emphasises cleavage rather than accomplishment), the girl of your dreams is on the Web. As for the boy of your dreams, try [Guy] *Celebs on the Web*, where [the star of *Mr Bean*] rubs shoulders with [the star of *Meet Joe Black*] – although you won’t find those legendary if somewhat disillusioning pool-shots of [the star] which are floating round the Net.

...The... 23-year-old... has starred in 12 films, though most cinemagoers know only the [3] most recent – *Titanic*, *The [Guy] in the Iron Mask* and *Romeo and Juliet*. Yet by this month 11 biographies will have been published... In addition... fanatics can browse... 400... websites [dedicated to him].

...the latest] Hollywood heart-throb... feels that his celebrity image is at times out of control and wishes [it] could escape to a secret island. “Sometimes I have no control over all this,” [the young actor] said after a weekend screening of his new film *The Beach* at the Berlin Film Festival. “This image is separate from me. I try to detach myself from it as much as possible. The force of “Leomania” in Germany was on display at the 50th annual Berlin Film Festival, where more than 1000 teenage fans crowded behind police barricades for a glimpse of the star of the 1997 blockbuster *Titanic*. A news conference with [him]... was broadcast live on television, and a tabloid newspaper offered \$NZ1040 in a front-page challenge for any Berlin girl who managed to steal a kiss from the American... In... [his latest] film, based on... [the] 1996 novel *The Beach*, [the actor] plays a bored American backpacker addicted to electronic games and devoid of values in search of adventure. [The American] and two fellow travellers learn about a secret island in Thailand unspoiled by tourism... But the paradise on the island doesn’t last. The evil sides of the characters emerge in the second half of the film – [the American] even kills a fellow tourist – to give the dark edge that... the director of *Trainspotting*, is

famous for. [The role] – as an unfaithful, spoilt, self-absorbed ingrate who coldly helps eject an injured friend from the beach community – is a far cry from his starring role in *Titanic*. Furthermore, the film is an original – unlike his other *most recent* films, all three of which were remakes].

...*Hollywood's secondhand dealers revive old shows* How do you remake a film or TV series that has been a hit without alienating those who loved the original? It's a tough call but there are plenty of studios and producers ready to have a go. This year a host of vintage television hits [have been] remade into feature films – including *The Mod Squad*, *My Favourite Martian* and *The Wild Wild West* – featuring the black star of *Guys in Black*. We've just had *Lost In Space* and *Mission Impossible* and there's going to be a *Mission Impossible 2*... *The Birdcage* showed how to do a remake well. But Disney's updating of the 1949 gorilla-comes-to-America hit, *Mighty Joe Young*, didn't set the box-office alight[, while the] almost scene-by-scene remake of... *Psycho* bombed and so did [#1's] attempt to emulate... [a] classic role in a reworking of... *Gloria*. Horror stories are one genre that hasn't been overdone as far as remakes are concerned. Universal has high hopes for *The Mummy*... to be followed by *Frankenstein*, even though... [another version of] *Frankenstein* fizzled in 1994... Hollywood... [is also currently] reworking *The Thomas Crown Affair*... and... the 1963 British hit *The Haunting*, this time titled *The Haunting of Hill House*... Even Mickey Mouse, who turned 69-years-old in 1997, is due to receive a makeover 'to reflect the edgier times and become a harried 90s creature.' ...The new animated movie... *Tarzan Of The Apes*... by Disney has just been released... Edgar Rice Burroughs's novel... was first printed in 1912 and there are some 43 movies of the same name.

...The [superstar currently making] the second *Mission Impossible* movie... [-] given the streamlined moniker of *M:I-2*... [-] in and around Sydney, [has]... sued a porn actor for \$US100 million... charging that the... "erotic wrestler"... spread a false story that [it and the superstar] had a gay love affair that wrecked [the superstar's] marriage to a [n AUSn a]ctress... "There is not a germ of truth to this vicious, self-promoting story," the lawsuit says. "While [the superstar] thoroughly respects others' rights to follow their own sexual preference, [it] is not a homosexual and had no relationship of any kind with [the porn actor] and does not even know him." The... [superstar] filed for divorce... in February, splitting up one of Hollywood's hottest couples and providing grist for tabloid newspapers, which have speculated on the cause of the marital troubles.

...[a superstar] has won a whopping US\$10 million judgment in his recent lawsuit against a gay porn star who says [it]... got down and dirty with the actor. [The d]efendant... admitted... lying and said [it] wouldn't actively try to defend himself in the lawsuit. This is the second judgment [the superstar] has won to quash rumours that [it was gay after the porn star] had told a French magazine, *Actstar*, that his hot and steamy homosexual love affair with [the superstar] led to the demise of his marriage with a [n AUSn a]ctress... and their eventual divorce.

...Money isn't everything, right? Fame together with money is. Or so *Forbes* figures. Using a formula that combines the two, the magazine says [the superstar] tops its latest Celebrity 100 list. Hollywood stars and athletes dominated the... third annual... list released this week... In its latest [list], *Forbes* first determined who made the cut by totalling up top celebrity earners in 14 categories. Then media attention and other "metrics of fame" were factored in. Last year's No 1, [#4], fell to No 15 despite her hit movie [about a crusader (r:p771, ln19)] and being the odds-on favourite for the best-actress Oscar... ["The actress] just didn't make as much money this year..." said... the senior editor who oversaw compilation of the list. Noting that *Forbes* considers itself a capitalist tool and not a pop-culture bible like *Entertainment Weekly*, [the editor] said: "Money gets the priority weight." [The editor] also said the rankings were not meant to suggest that [this year's No 1] wielded the clout of studio heads. [The superstar], who starred in... [the] box-office success, *Mission: Impossible*... vaulted to No 1 from last year's No 20. Not only did [the superstar] earn much more money... than in the year before (\$US43.2 million versus \$US27 million), but his media exposure increased dramatically... [The superstar] racked up 11 cover stories and 139,000 Web hits as opposed to one cover story and about 27,000 Web hits... Recently, [the superstar] has been making news because of his marriage breakup... ■ [The]... star of *Hannibal*... is poised to play... [the] boss in the upcoming *Mission Impossible 2*, pocketing \$10 million for just five days' work. And this was the chap who only six months ago said [it] was permanently through with acting.

...WHAT a feast! *Hannibal* has devoured all competition at the American box office after opening last weekend on 5000 movie screens – the biggest release ever. It didn't matter one shred that [the] *Silence of the Lambs* director... had bowed out because [it had deemed the]... best-selling sequel too violent, nor that [#7 – who co-starred in *SOTL* –] disapproved of the violent ending... *Hannibal* is a mega-hit. But perhaps the biggest factor in its success is Hannibal himself. [The actor] is superb. Again. "I was mildly disappointed that [#7 and the director] were not up for the sequel, but I didn't go out of my way to persuade them," says [the actor], who... did not complain either when the book's ending was changed for the film. "I liked the ending of the book, but I trust the decisions of the director, writer and producer. I don't get involved in the politics... of film-making... I'm too mentally lazy for that." ...But isn't [the actor afraid that it] has joined the pantheon of movie legends by playing a cannibal? "I don't care what I'm remembered for... I don't give a hoot." [The actor] is nevertheless fascinated that audiences are attracted to the dark, bleak side of the human condition. "It's more stimulating for audiences to see evil on screen... It gives us a thrill. I realise it's not everyone's taste to experience someone else's nightmare, but this film has excited a lot of people. Being safe, or... politically correct, that's the greatest cancer of all."

...HANNIBAL "The Cannibal" Lector is back – badder and more brutal than ever. Ten years after *Silence of the Lambs* [the actor] returns as everyone's favourite people-eater. And as in *Silence of the Lambs*, audiences will be shocked by the film but still cheer the character doing the shocking. Disembowelment, a shootout involving a mother and baby and [hu]man-eating pigs all feature this time. [The actor] is quick to defend the film. "...What do we want? ...to see Houdini not get out of the box. That doesn't make us sick people... It's like watching *Psycho* or *Jaws*..."

...*Jaws* took terror to a new level on its release... and has been blamed for dumbing down Hollywood... The theory goes that before *Jaws*, the 70s was a golden age for American movies, high-lighted by the subtlety and maturity of such masterpieces as *Chinatown*... and the *Godfather* films. After *Jaws* came a... steady decline. Movies were reduced to slick "concepts" and special effects, with quality diving, squealing out of the water.

...IT'S NOT just something in the water. It's something in the era – horror is hot again. Moviegoers have already had cheap *Jaws*-hand-me-down thrills with the recent *Lake Placid* (crocodile eats resort) and *Deep Blue Sea* (franken-sharks give new meaning to "scientific digest"). As well, there's been panto-horror *The Mummy* (Behind youuuu! Oh, never mind). But that's only the beginning of what is shaping up to be a severely scary millennium countdown at the multiplex... While those special effects-driven monster flicks are going for the adrenalin gland – or trying to bite your arm off – there's another batch of horrors designed to scare us in deep and meaningful ways, and already they've cleaned up at the U[S] box office. That success suggests there's an appetite for horror that's psychological, supernatural and beyond the grave, or involving pre-millennial twists on matters religious and apocalyptic. This movie annus horribilis has been spearheaded by two films from different corners of [US] film-making. *The Blair Witch Project*... has ridden an Internet-generated hype all the way from Web page to national magazine covers since its... [US] release. The mock-doco, about three students who go into the woods to unravel a witch legend, and which cost its makers just \$US40,000... has already topped \$US138 million in stateside earnings. The other horror phenomenon has been *The Sixth Sense*... which stars [actor #3] as a child psychologist with a patient who claims paranormal powers connected to an afterlife. The film, which has kept its star a low-key presence in its marketing, has grossed \$US225 million in the States and looks likely to become second most popular movie of the year to *Phantom Menace*... [B]oth *Blair Witch* and *The Sixth Sense* suggest that mainstream audiences don't want their horror films winking at them any more or pouring on the gore, but some other films of the late-90s horror season would seem to be putting the fear of God into us... [One actor] stars in two of them... in *Stigmata*... [the actor is] a Vatican investigator... searching for an answer to why [an] atheist... is suffering the wounds ascribed to Jesus on the Cross. And in *End of Days*... [the actor] is playing Satan himself, who arrives on Earth and must bed a virgin before millennial midnight to take over the rule of heaven and hell... Somewhere between *Silence of the Lambs* and *Seven*, serial killers wore out their welcome as 90s horror movie monsters. But the slasher-flick, the psychological horror film's bloodied brother, has undergone a post-modern reinvention in recent years... [The]

Scream series, which will soon unleash its third instalment, yucked it up with its knowing hey-this-is-like-being-in-a-horror-movie references and spawned the forgettable likes of *Urban Legend*, *The Faculty*, *I Know What You Did Last Summer* and its sequel.

...BURNING questions... confront us on the edge of the millennium: who... are all these kids... that [our] kids go to see at the movies? ...They're the products of the starmaking machinery which [News Corp's tycoon] perfected and which runs like a Beverly Hills version of a Detroit assembly line these days. Take a half dozen cute teenagers. Put them in a show on your TV network, like *Party of Five*, *Buffy the Vampire Slayer*, *Sabrina*. Write them up in your TV guide and supermarket tabloids. Make a record too, because with modern technology they don't have to be able to sing, and put it out on your label. All of a sudden the kids are stars and you can put them in movies. Which helps when you own a studio like, say, 20th Century Fox... The formula worked so brilliantly that the fairly routine teen-slasher flick *I Know What You Did Last Summer* was a box-office smash for Columbia Pictures and a sequel was only a matter of time. *I Still Know What You Did Last Summer*... reunited the cast a year after the first movie... This movie was made for an audience and that audience will love it. But if you're old enough to [not be a part of that audience], you're not the person who should be watching *I Still Know What You Did Last Summer*.

...You're a major Hollywood executive working on a film that contains some violent scenes. It could be a cheap horror movie... But it's a film whose violent content restricts it to an adult audience. And just once in a meeting, in a phone call, a memo, you mention that the film might go down well with kids. Months, years later, when you've completely forgotten the conversation took place, you could find yourself questioned by federal investigators or called before the U[S] Congress to explain exactly what your words meant. There's even a chance that one day you might face charges or be sued. Until a couple of weeks ago, this was just one of the many measures being debated in Congress in the panic that followed the Littleton high school massacre. Then[the US] President... stepped in and ordered the Federal Trade Commission and the Justice Department to investigate whether film, record and video-game companies are secretly targeting teenagers as the audience for "adult" products. The President's instruction to the entertainment industry was plain, "Don't make young people want what your own rating system says they shouldn't have." As American teenagers are Hollywood's biggest audience, [the President]'s speech threatened to turn the business upside down. In the short term, it's hard to see Hollywood having any choice but to play along. There's tough talk, of course. "These films that people say are so violent are also being watched in Japan, Europe and everywhere else in the world," says... [the] president of the Motion Picture Association of America, which provides films with their rating certificates... But concessions have been made. The season's finale of *Buffy the Vampire Slayer* was postponed because it involved violence at a graduation ceremony, leaving the audience stranded in the middle of a two-part story. Still, for Hollywood to turn its back on violence, it would have to reject its own past: all the Westerns, gangster movies and horror movies. And where do war films fit?

...Plunging to new depths... It's been nearly 20 years since... *Das Boot* went dive, dive, dive into the canon of classic war films. It was something rather rare in the genre. A German production for starters, it was a beautifully realised depiction of war. How it dripped with lip-biting tension, breathless claustrophobia and anti-war sentiment. How it told you so much more than you ever wanted to know about fighting a war in a tin can beneath the sea's surface. Evidently [the director of *U-571*] was watching – just not very closely. In his tribute to the Yank submariners who served in... W[W2], the American writer and director... is plainly seeking to deliver an American *Das Boot*, but instead rather hopelessly paraphrases [the German director]'s superior work. This is gung-ho film-making about gung-ho subject matter at its GI Joe worst, employing minimal subplotting and entirely no subtext to tell it like it in fact wasn't. It is a fictionalised account of a rather important turning point during the war, describing an attempt to snaffle a Nazi "Enigma" machine, a code generator which proved extremely difficult for the Allies to obtain and successfully break. The year is 1942 and battle is raging in the shipping lanes of the North Atlantic. Allied – particularly American – freighters are being sunk in vast numbers by German submarines which are able to communicate and target the good guys' shipping in secret, thanks to Enigma. In an opening sequence that sets the tone for the film, the title's German u-boat enjoys and suffers, in rapid succession, the success and disaster of submarine warfare. After sinking a freighter, U-571 is in turn crippled by an Allied warship and the Germans are forced to dispatch a please-help message home. Despite no Enigma, the Americans work out what's going on and dispatch a submarine to intercept U-571 and snatch its Enigma machine and code settings before a German support submarine can come to the u-boat's aid. America's S33, a... W[W1]-era sub, has the mission and heads out to sea... Of course, S33 finds U-571, then there's success, then failure, then success, then failure, then... well, inevitably it all leads to a death-or-glory proposition that is so entirely implausible it must be Hollywood... We know America conquered Burma with a little help from Errol Flynn. We assume most Americans now know their navy captured the enigma code from U-571, despite the caption at the end of the film... ● [The w]riter/director... says [it] based U-571 on several historical events – the capture of an enigma machine from U-110 by the Royal Navy in May, 1941... [(t)he U-boat had been depth-charged by a British destroyer; t]he Germans had opened the sea cocks and the submarine was sinking; t]he Royal Navy sent a boarding party who retrieved the code machine[– unfortunately, o]ne rating went down with the sub[marine)]... the British seizure of a short weather enigma cipher from U-559 in October, 1942, and the capture of U-505 by the US Navy in June, 1944.

...U-571... [is an e]xciting... suspenseful action flick based on the real-life capture of [the] Enigma code machine – which changed the course of W[W]II. Pity... the American's had to appropriate it from the Brits... I now am waiting for the next epic, 'how the [US] won the Battle of Britain'.

...When... [the] 16-year-old nephew... [of the director of the war film *Saving Private Ryan*] enrolled at a private school the staff and pupils were thrilled – until they learned that "[little-S]" was not quite what [it] claimed and "Uncle [big-S]..." was furious... IN THE spirit of forthright benevolence for which [it] was justly renowned, [the]... headmaster of Paul VI Catholic High School, a mildly illustrious establishment 32km south-west of Washington, DC, sat down at the end of last year and dictated a letter to the film director... It warned [the director] that his 16-year-old nephew, Jonathan, a pupil at the school, was squandering his privileges. Not to put too fine a point on it, wrote the head, the boy's work was extremely poor, and his attendance record was deplorable. While the headmaster appreciated having such a famous name on the school's books, and acknowledged [the director]'s generosity in paying the... \$12,000-a-year fees, the fact was that Jonathan would have to shape up or go. The letter was intended to give [the director] a timely jolt, and it did. The next day the film-maker's office telephoned to point out that [the big-S] didn't have a nephew called Jonathan, had never heard of Paul VI Catholic High School, and was dispatching his head of personal security to investigate. Which, in a nutshell, is how the slight, mop-haired figure of Jonathan... previously... of Tehran, came to appear in... the old courthouse in Fairfax, Virginia, charged with forgery and aggravated misrepresentation... [T]he best that can be said at this early stage is that, so far as hoaxes go, Jonathan[']s... seems to border on greatness. Although [the Iranian] spent an entire year in a class of teenagers, his real age may be closer to 27. And his show-business antecedents extend no further than a cameo role in a 1996 porn film, in which [it played]... a blonde-wigged transvestite cruiser in a Los Angeles lesbian bar. Young [Jonathan] is currently at liberty on \$15,000 bail. [Jonathan] lives with his mother... in Fairfax Square, a fashionable housing development close to the town centre, but when I hammer on his door early one morning there is no reply... [even though] his BMW is still sitting in a corner of the carpark. I notice that something has been finger written on its dusty flanks: "Give [little-S]... an Oscar."

...[the big-S says: 'The star of my movie *Saving Private Ryan*] is the most moral [perso]n I have ever known.' ...[the Oscar-winning star of the movie *Forrest Gump*] had two children... [with] his first wife... before they split up in 1985, and today... has been happily married for 11 years to... the... actress... mother of his two [younger] children... nine, and... four. "People ask us what's the secret," [the actor says when talking about the person it] met on the forgettable comedy *Volunteers*. "I think liking each other is a really good thing, along with respect, a sense of humour and Chinese food every Sunday!" Along with [an] unstable childhood came a fascinating exposure to diverse religious beliefs. "OK, hold on to your hats here... I was Catholic for a while and lived with an aunt who was Nazarene. My second stepmother was into the Mormon church thing, which my dad didn't care for too much. Then all through junior high school, my best friends were Jews and then I was a born-again Christian through high school, and

I went to the Episcopal Church for a while and now my wife is very much a Greek Orthodox, so I'm the U[N] of religion! Ultimately, God and the universe is a mystery to me and I'm totally happy being in the dark as far as what that mystery is... If anybody comes up to me and says they've solved the mystery of the universe, I just think one thing – you are the stupidest fool I've ever come across!" ...[While on the topic of religion, in the] new movie *Bruce Almighty* [the main]... character... rages against God... God responds by handing over his job to him.

...A doomed ship, space rocks, combat and comedy combined to propel Hollywood to a record year at the box office, pulling in nearly \$US7 billion... in North America alone... That... total was an increase of more than 9[%] over last year. Attendance also jumped more than 5[%], to 1.46 billion tickets sold, according to Exhibitor Relations Co Inc. Since 1988, domestic receipts have surged 56[%], while the average ticket price has gone up just 16[%]. Attendance has increased 35[%], while the population has risen about 11[%]... movie executives cited changes in exhibition, particularly the increasing number of megaplexes that offer dozens of screens, cleaner lobbies and more comfortable seats. "Finally, the excellent motion picture has the opportunity to play in the excellent theatre," said [the]Disney distribution head... [T]hree of the top five movies... had the studio bosses laughing all the way to the bank... Paramount and Disney had more than \$US1 billion each in domestic grosses, while 20th Century Fox topped \$US730 million and Sony and Warner Bros each neared \$US700 million... The boom in movie grosses, however, is being offset by increasing costs... Other movies joining the \$US100 million-plus club were *There's Something About Mary*... *Doctor Dolittle*... *The Waterboy*... *Deep Impact*... *Rush Hour*... *Lethal Weapon 4*... *The Truman Show*... and *Mulan* ([Disney's cartoon about a Chinese girl who pretends to be a boy in order to become a soldier]).

...*Boom times in Hollywood*... It's official: last year was a record-breaking... one for Hollywood. Domestic movie box offices rang up... \$US7.7 b... Unlike recent years, movie attendance also rose to an estimated 1.49 billion... slightly ahead of the... modern-day high for movie attendance of 1.48 billion admissions... Two young talents and a veteran were the hardest-working people in movies last year, reports *USA Today*. [An actress, 32, an actor, 23, and... the... [veteran], 71, each had major roles in five films. [The AUSn actress also] somehow found time to have a boy with her writer-husband... ■ [Having received]... a Golden Globe for her lead role in *Moulin Rouge*, [a]34-year-old... [recent divorcee (r:p1726, ln23)] is about to be crowned the new Queen of Hollywood after an amazing... offer to star in a movie version of the Broadway musical *Rent*. The deal will make her the world's highest-paid film actress ever... [A] source close to the negotiations... says... "[The actress ha]s gone through the toughest 12 months of her life. Her career's red hot, but her private life has been a disaster. But [the AUSn proved it']s a fighter who comes out on top, no matter what..." With talk of a possible Oscar nomination for *Moulin Rouge*, [the actress] says, "It would be really nice to be able to go to the Oscars on my own, because I've always been on [my ex]'s... arm. That would be nice, to earn it." ...[the actress] also hit the pop charts with her duet *Somethin' Stupid*...

Movies aren't stupid. They fill us with romance and hatred and revenge fantasies. *Lethal Weapon* showed us that suicide is funny[, and]... I never thought there could be a bomb in my toilet, but now I check every time... Movies... [are] my only escape from the drudgery of work and family...

Conspicuously devoid of charm or grace, [the]... generally witless retelling of the story of [an]Irish crime boss[, *Ordinary Decent Criminal*]... is most remarkable for having been made at all, particularly since it went into production within weeks of the premiere of... *The General* which tells the same story. But where that film – a flint-edged black-and-white drama by the [perso]n who gave us the 70s classic *Deliverance* – was a textured and morally ambiguous drama, this treats its subject matter as a jolly jape (the title is inspired by a line in which the lead character contrasts himself with the snarling thugs of the IRA)... It's the third feature to chronicle the exploits of... a psychopathic Dublin thug, which makes it easy to understand the outrage in England that 20[%] of its budget came from a lottery grant... The extraordinary conceit of the entire enterprise is encapsulated in its choice of painting for the art robbery – Caravaggio's *The Taking of Christ*. In a running gag, [the lead character] imagines himself as one of the painting's figures – and it ain't Judas... [In another new release about psychopaths,] one of the sexiest [gals] in Hollywood... must explore the mind of a demented serial killer to find clues to the disappearance of one of his victims... in the science-fiction thriller *The Cell*... The sultry actress and singer – who last year insured her body for \$1 billion[–] takes on the role of a child psychologist... [The actress admits] the movie is extreme and may have audiences holding on to their stomachs. "There are days when I'd think, 'Are we going to get away with this stuff?' It's very extreme... We're going to get a lot of stick for this. People are going to vomit,"... Despite [her] doubts about how audiences will react to the film, [the]... 30-year-old... says [it]'s waited for years to play a role like it. "This character is... the type of role I'd never seen before. I read it a long time ago when I was doing TV – when no-body would do a movie with me." ...■ *The Cell* [and *Ordinary Decent Criminal* both]open... on Thursday.

...[the sexiest gal in Hollywood denies it]'s got her curvy figure insured for \$US1 billion... P.S: [Is a Chinese actor]... the greatest action hero and biggest movie star in the world? His films trounce the likes of *Titanic* in Asia. And in his autobiography, [the actor recalls how it]... once scoffed to an American reporter: "There are billions of people in Asia... America is a very small market." ...[the actor] was born Chan Kong-sang (which means "born in Hong Kong" Chan) in 1954. As a burly toddler [it] became known as Pao-pao, or cannonball, the first of many sobriquets. At the Chinese Opera School, where [it] underwent 10 years of punishing physical training (but no education), the nickname Big Nose stuck. After his parents moved to A[US], Pao-pao was briefly anglicised to Paul, but... preferred... the name [it] was given when... on a building site in Canberra.

...A[n AUSN] comedian, writer and film-maker... has only been in N[Z] a matter of hours, but already [it]'s learned two things. That his first name is pronounced like "part of the body between the head and shoulders," and that we have a similar sensibility to A[US]ns when it comes to his film *The Wog Boy* and how it deals with those sometimes testy issues of culture and race... "The major markets are nervous and standing behind political correctness... but to me it's very encouraging that we in A[US and NZ] have a healthier sense of humour." ...[the] Melbourne-born and bred... Greek... tells of an interviewer from the *Washington Post* who "couldn't believe how free we were to make jokes about religion and race. And I said, 'isn't that what a free society is all about?' Of course, over there you can't make fun of anything, least of all someone's culture or religion. They could probably sue you." ...[however, the comedian ha]s been surprised no one from his own community has told him to tone things down. "That's the scary thing. I've been waiting for it but it hasn't happened, it's given me free licence. I want people to disagree, but everyone totally understands, like a whole nation of people in on the joke..."

...Q: What do you call [an actor] in a helmet? A: Hardwood. Yes, there are better jokes in *The Replacements*, which stars [the actor (r:p1712, ln36)] as a "couldabeen" American football star who gets a second chance at the big time, but not enough of them to live up to its formulaic clunkiness. There's certainly not enough to sustain all those seemingly looped scenes of on-field action – 39-hut!, throw, crash, bang, wallop, touchdown! And repeat until injury time, something this movie has half an hour too much of... It's not helped by a semi-concussed script or a soundtrack which can sound like a jukebox in an earthquake in its attempt to keep the stop-start sports action ripping along in between the speeches about teamwork, pride, second chances, oh, and teamwork. Not a lot of discussion about the politics of pro sports, though calling this *The Scabs* probably would have caused some problems in marketing. There is, however, some irony available if you consider this movie's attempts at commenting on rich sports stars who have traded their passion for the game for seven-figure salaries and lost touch with the fans. You could say the same about those who waste their handsomely rewarded talents making movies as bad as this.

...[if it wasn't for his marriage problems, one actor would be] having a very good year... [T]he former bartender is set to take home a cool \$100 million for his work this year... [due to] his \$20 million salary for three films and 10[%] of the gross of *The Sixth Sense*, which should guarantee him \$50 million... And then there are the future video sales of that film, which are estimated to add another \$10 million to his bank account. That should put the former *Die Hard* star above [the actor] who previously held the one-year record by scoring \$70 million the year [it] also won an Oscar for *Forrest Gump*.

...[Gimme Moore's estranged husband has] received a whopping \$165-million bonus for his smash hit film *The Sixth Sense*...

'AT the end of the day, it's really silly how much we all get paid,' said [#4] recently... Her current movie, *Stepmom*, netted her a thoroughly silly \$US17 million fee. Two years ago [#4] took home a mere \$US12m for *Conspiracy Theory*, so things are looking up. Not yet up enough, however. [#4] and a few choice colleagues – led by [#7 and #8] – are involved in a race to be the first [gal] to nail a \$US20m fee for one movie. Naturally, out of decorum, none acknowledges the race. But in an industry where earnings are viewed as the overwhelming mark of status, it's safe to assume that the figure is more than a passing concern for the contenders... In 1926, following the completion of *Flesh and the Devil*, [a Swede – who 'is considered by many the greatest of all film actresses' –] got the hump and went on strike to protest against the shortage of decent scripts and her measly \$US750-a-week salary... Greta Garbo demanded a raise... to \$US5000... When [Greta] did not get it, [Greta] went to Sweden and sulked for seven months until the studio changed its mind... After the Oscar success of *Kitty Foyle* in 1940, [its 'dancing queen' star]... went on to pull about \$US500,000 a picture – America's highest-paid actress in the 1940s... In... 1942, [an actress (r:p1177, ln12)] signed her first contract with MGM and was immediately put to work on her first feature, *Lassie Come Home*. [The actress] was paid \$US100 a week for three months. (Lassie, meanwhile, took home \$(US)300 a week.) ...In 1959 [the actress] demanded \$US1m for *Cleopatra*. [The film's producer] complied. The film bagged four Oscars but was a notorious flop and [her] handsome payday hardly helped a beleaguered Fox studio... The "calling" to convent life in 1992's *Sister Act* has never been so lucrative. [Its star, #12], whose big night is now hosting the Oscars, prayed and fasted for \$US9 m... and God answered – in abundance... [On a positive note, another movie queen (r:p1707, ln1) who can also]command millions per film... happily accepted a measly \$15,750... the actors' union minimum wage... for her starring role in the movie *Duets*. Daddy... was [the]director... While actresses' fees have improved... they are still lagging behind those awarded to their [guy peers. The young star of *Titanic*] recently entered the \$US20m-plus pay bracket (for *The Beach*), joining Hollywood's Big Six – the [star of *Mission Impossible*; the star of *Braveheart*; the star of *Air Force One*; the star of *Forrest Gump*; the star of *Phenomenon*; and the comedian who starred in *The Truman Show*]. Careless talk of telephone-number take-home pay always provides good betting-shop copy. But underlying all the hoop-la is a more serious issue. Why has it taken so long for actresses to finally hit the symbolic \$US20m mark? After all, \$US20m is strictly "old money" to [the comedian]. It was way back in June 1995 that Columbia Tristar[']s chief... announced that his studio would be paying [the comedian] the then record-breaking sum for *The Cable Guy*. After that, it was open season: a gold rush for the testicle-owning gender, as every action hero worth his vest pushed for the Big Two-O... According to industry lore, in response to [the comedian's jackpot, the star of *Phenomenon*] immediately demanded 20 million and one dollars for his next part. It's thought that this macho one-upmanship may well have lost him the vote from fellow actors in the Academy when Oscar nominations were divvied up for *Get Shorty*.

...it's not all fun owning mansions and hideaways all over the world. Ask [the star of *Get Shorty*], who can't just buy one copy of a CD [it loves – the star] has to buy no fewer than 12 copies so [it] can enjoy the music in all his homes, planes and cars... [(which makes us wonder how the star coped when his 'plane was grounded during a holiday in NZ, forcing him to hire a limousine for the 187km journey from Queenstown to Invercargill?). Incidentally, the actor]'s building a new home that not only accommodates his family but also has room for his Boeing 707 jet.

...Didn't realise [hi]s career was still flying high, but it seems [the actor] can afford a new \$22-million home to accommodate his personal 707 and his Gulfstream jet... [The actor]'s about to start building a new house in the exclusive Florida community of Jumbolair, where the plane-obsessed star-turned-pilot can fly home from a hard day on a movie set, land on one of the world's longest private runways... [–] where the rich can park their jets at the front gate upon landing... – ...and just saunter to his front door. [The actor, his] wife... and their... kids... will move in late next year.

...[a wife] will be screaming in silent agony when [it] gives birth to [an actor]'s baby later this month. Her only relief during the hours of labour will be to clinch her husband's hand. Both [the wife and the star of *Get Shorty*] are staunch Scientologists and follow the church's teachings about child birth, which include a strict no noise policy in the delivery room. "It's called quiet birth," says [the actor], who explains that it's important to avoid having the baby hear words because, "as [the kid] grows up and hears these same words, it stimulates memories of the pain of birth."

...[a r]etired film toughie... has wed in secret and is starting a new family – at the age of 77! "We're having a baby and [my partner] is as excited as I am," says [the]bride... 36, who comforted the star when his wife Jill Ireland died of cancer in 1990. [The actor] adds: 'Guys like [the actor who starred in the TV version of *The Odd Couple*], who had kids later in life, were thrilled... I've got the money to make sure our child will be taken care of if I pass away in 10 years or so.' [□ The TV actor, aged 77, and his wife, 27, had their second child in June' last year.]

...Celebrity magazines *Hello!* and *OK!* are battling for the first pictures of [an actor and actress]' new baby. The bidding now stands at \$2 million.

...[an actor and actress] were paid a reported \$[NZ]1.8 million for pics of the[ir] baby which a glossy British mag has run over 21 pages.

...N[ewlywed actors] are to receive \$3.5 million for selling their wedding photos to *OK!* ...The deal is the result of a bidding war between *OK!* and its rival celebrity magazine *Hello!* The Hollywood couple[, who] are worth an estimated \$750 million... received \$21,000 for photos of their baby...

IT'S just two weeks since the[ir] \$6 million New York wedding... [– t]he cake was 1.5m tall, had 20 layers and took 10 cake makers a month to complete... [–] but instead of heading off to some romantic destination for a honeymoon, the pair are individually taking part in a press day to promote their up-coming drama *Traffic*, in which they do not even share a single scene together! "[My *Welsh beauty*] and I have been on a honeymoon for about 18 months..." [the love-struck actor tells me] with a chuckle. "So we joke that we kind of like to do it all in reverse – first we do the honeymoon and then we... get married and then, of course, what we really like to do two weeks after we get married is a press junket!" The 56-year-old Oscar-winning actor and producer is clearly on top of the world. [It]'s been tipped for an Oscar nomination for not one, but two critically acclaimed films: *Wonder Boys* and *Traffic*... has married one of the most beautiful actresses in Hollywood[, and t]he couple also welcomed their son... into the world...

Is that 25-year age difference between [the spoilt Welsh beauty and her actor husband] beginning to be felt? They're reported to be snapping at each other and the root of the problem seems to be that [daddy feels his wife] is away too often, concentrating on her career. Recently [the actor] was left alone in Majorca [– at the house the former *sex-addict* gave to his previous wife, but gained shared custody of as part of their '\$85m divorce settlement' (much to the disgust of his new wife, 'who loves the house and doesn't want to have to share it with her hubby's ex') –] looking after their baby... while [mummy] was absent. Nor is [the husband] (who wants to be doted on) too delighted about her plans for more babies... [By the way, #1 – who starred with the husband in *Basic Instinct* –] caused more than a storm in a teacup when [it] demanded Beverly Hills hotel staff drain a swimming pool dry after her diamond ring went missing. Hotel executives knew better than to argue with the demanding diva, and at huge expense flushed thousands of litres of water down the drain – but to no avail. The devastated star of the new flick *Muse* fled to her suite in a flood of tears, only to find the sparkler where [the actress] had left it – beside the bed.

...TV GUIDE'S Los Angeles correspondent [revealed that late last year it] found herself caught up in a piece of [#1]'s 'Christmas generosity' which left the actress with a red face. [The correspondent] was one of 82 voting members of the Hollywood Foreign Press Association sent a \$400 Coach watch by [the actress] just days before they filled in their ballots for the Golden Globe nominations. "I, along with every single one of my... colleagues, promptly sent the watch back explaining... we could be held up to scrutiny if [#1] was nominated (and [it] was, for best actress in the comedy *The Muse*) and this could be misconstrued as a bribe... [N]ews of her gift was leaked to the media and [the actress] is now feeling a little mortified about the whole situation..." ...Meanwhile, [the actress] says that so far [it] has turned down the script submitted for... *Basic Instinct 2*... and will only reconsider if [it] sees a whole new script. "The studio is trying to force me to make up my mind and they say they've gone to [Gimme] Moore... to which I told them to go for it!" ...On a lighter note, [the correspondent] got to keep the *Bicentennial* [Guy] watch, marking the release of

th[at] movie, which garnered no nominations, and the giant orange papier-mache model of Kenny from *South Park* is still... in her garage looking for a home!

...The off-beat animated TV show... has been turned into a movie. [7Days] talks to its eccentric creators... THE TIMING of *South Park: Bigger, Longer & Uncut*... seems to be off. After all, the show's [US] ratings have halved in the year since it was hot. But *South Park*'s creators... say the timing couldn't have been better... [After all], the film took a year to make... And as for the ratings plunge, they say that's to be expected. *South Park* is made for a small cable channel, the Comedy Channel, and not everyone who has cable gets it. When it made the cover of *Newsweek*, *Rolling Stone* and *Spin* in the same month, the buzz drew a huge audience of viewers curious to see what it was all about. Half of them decided they weren't fans. But those who liked what they saw in the rude and crudely animated show continue to give *South Park* an audience 10 times the normal Comedy Channel audience and it is still one of the highest-rated shows on [US] cable. The movie is coming out while the [US] is still wringing its hands over the Colorado school shootings and politicians are pointing the finger at the influence of the entertainment media on young minds and coming up with ways to curb it... [Its creators] wrote *South Park*, the movie... well before the [Colorado school] shootings and its subject is censorship. Cartman, Kyle, Stan and Kenny, the 8-year-old cartoon stars of the television show, scam their way into an R-rated... (no children under 17 unless accompanied by an adult)... film starring Terrence and Philip, a flatulent and foul-mouthed Canadian comic duo. The kids mimic the dirty language used in the film, their mothers blame the film, its perpetrators' country, and [the US] President declares war on Canada. It's also a musical, with hilarious Broadway-style numbers such as *Lame Canada*... "We really wanted to do something other than just a 90-minute episode... and we thought making this a musical would be a way to justify it being a movie." It has rough menstruation and abortion jokes, and intimate... body parts take on a disembodied life of their own. Kenny, who gets killed in every episode of the TV show, is followed beyond death, ends up in hell and finds other residents include not only Hitler but also Gandhi and beloved comedian George Burns. And Satan is gay and having an affair with [the President of Iraq]... To get a commercially viable rating, they had to change the original title, *South Park: All Hell Breaks Loose*, because... titles have to be G-rated and the board told them they couldn't use "hell." When the Motion Picture Association of America board gave them a list of other no-nos, like bestiality jokes, "just to brass them off, we made them 10 times worse and five times longer, resubmitted it and we get it back with the comment, 'Thank you. That's much better'." ...The point of the movie, [says one of its creators], is that protecting the young is up to parents. "When I was 12 years old, my dad let me see pretty much anything I wanted because I was a pretty good kid. I could hear some dirty word and my dad would be like, 'That's a dirty word,' and if I was in public, or I was with the family, and I said that word, I got in trouble. It was something between me and my parents. It wasn't my parents fighting to keep those words away from my ear... because they're never gonna do it. What this is really all about is when Kyle says to his mother, 'I got in trouble and you just immediately went off and started war with Canada. You blamed Canada. Deal with me. I'm the one to blame. Be my mom.'" One of [its creators'] favourite jokes in the film is when the kids log on to the Internet, strike a warning about a Website's content saying "You must be 18," and the eight-year-old with his finger on the mouse button goes, "okay" and immediately clicks his way into the site. "There's your kid at home... and that's exactly how hard it is."

...Box-office gross-out... Gee, one of the characters on *South Park* is a pooh. Eewww, gross... *Scary Movie* [which] has out-grossed *Scream 3*, one of the genre which it parodies... starts with a fart joke. Later a [guy] gets his head penetrated from ear to ear by a penis and there are jokes about, and simulations of, oral sex. *Big Momma's House* opened with an remarkable display of flatulence by a [gal] with gastroenteritis... *Me Myself and Irene*, directed by [the] brothers who brought you *Dumb and Dumber*, included references to anal sex, erections, lactating... dildos – and there's a [guy] with a chicken shoved up his rear end. In the sequel to... [the] phenomenally successful *The Nutty Professor*, which has just started here, Ma Klump takes out her false teeth and goes... You can guess the rest. All these are big grossing movies. And pretty big on the "eewww gross" front... Because extreme violence barely raises a flicker of interest these days and truly distasteful stuff like *Hollow [Guy]* (nasty enactments of rape and voyeurism) passes without a murmur, offensiveness appears to be the new frontier. "Pushing the envelope in terms of sex is one way to shock the audience," says... Warner Brothers' entertainment president [who] might have added bodily fluids and excretions as well. Look around: the semen scene in *There's Something About Mary*... drinking diarrhoea in *The Spy Who Shagged Me*... urinating in *Big Daddy*... Some suggest there's nothing especially new in any of this... [The] cowboy parody *Blazing Saddles* in 1974 raised a small skink when bean-eating cow-pokes relaxed their sphincters around the campfire [the]... 1978 lowbrow fraternity house comedy *Animal House* has become a cult favourite and, stupid though they were, there were seven *Police Academy* movies made from 1984 onward. This is an irony-free area – much like Hollywood's America. "What sells today seems to be defined neither by irony nor by subversion, but by explicitness," says [the] screenwriter... who wrote *Trading Places*. Some might cite the line from [a] singer... at this point: "The trouble with normal is it always gets worse." If normal was *Blazing Saddles*, the argument goes it got worse with *Big Momma's House*. Perhaps if it wasn't for [a director's] parodies (*Blazing Saddles*, *Young Frankenstein*) we would not have had... *Airplane!* and consequently no *Scary Movie*. Of greater significance, however, is that the target demographic for Hollywood is moving relentlessly downward. Teenhood isn't just a phase that kids go through, it's a whole new market for exploitation. Appeal to them and you'll appeal to those who'll bankroll your project. Kids like fart jokes, everyone laughs when the fat [person] falls over, oral sex is something you can talk about now because the president was caught with his pants down. We should remind ourselves the phrase "semen-stained dress" entered the public domain not through a gross-out movie but the nightly news. Have Hollywood's morals gone down with [the president's] playmate? If so, it's a blow for any parent trying to tell their 12-year-old who liked the *Scream* series why they can't see *Scary Movie*. Or will the kids who hooted through *Nutty Professor* see Ma Klump take out her false teeth? Do they want to? That perhaps is the greater question: if movies are being made in this manner, who is driving it? "Money doesn't talk, it swears," said [a folk-rock idol]. Now it's saying "poo-poo" and people are laughing it up. No one... has ever lost money by underestimating the intelligence of the great masses, said [an] American journalist and social critic... – wisdom that Hollywood movie comedy-writers now have as a screen-saver. Whether such gross comedies are harmful is another matter. Many rightly point out it's not the end of the civilised world, but simply bad taste and low humour. We've had a little of it here: our soon-to-be-most famous movie director... had a notable early outing called... *Bad Taste*. And few would argue that *Meet the Feebles* gave Oscar Wilde a run for his money in the wit stakes.

...Hollywood's Kiwi lord of the reels When [NZ's top locally-based director was 10 years old it] pin-pricked holes in the celluloid of his Super-8 film *The Dwarf Patrol* to create the illusion of gunfire flashing from rifle barrels. The three films based on the classic fantasy trilogy *The Lord of the Rings* which... begins shooting next May will be worked on in his studios in Miramar, near Wellington's airport, by sixty special effects technicians deploying an array of computers more powerful than any in the country apart from Telecom's. The scale of the undertaking, to be made entirely in [NZ], beggars belief. At \$NZ264 million the budget is bigger than Te Papa's and represents... two thirds of our revenue from kiwifruit exports. It will, incidentally, propel the 36-year-old... to near the top of the country's rich list. Industry observers... joked that maybe the habitually dishevelled Wellingtonian will be able to buy some new clothes. The production, the largest ever undertaken south of the equator, is proof that the Film Commission's talent-priming role can pay off bigtime, not to mention a tribute to the perseverance and dedication of a [person] who can barely remember a time when [it] wasn't going to make films... [His interest started when it was 5] and... went to see the [original] film version of the television series *Batman*. "There was a moment in the movie when Batman and Robin slid down their fire... pole... Halfway down there's a jump and they suddenly transform into their bat costumes. It amazed me and I vividly remember asking my cousin who was older than me how they did that. [My cousin] didn't really know, of course, but... just said, 'Special effects' and I thought, 'Wow!' That really was the seed of fascination that

you can do extraordinary things with film that take you outside the normal world.” At 8... his... parents got a Super-8 camera for Christmas and the young [director] commandeered it. “I grabbed it straight away and got friends of mine and we made W[W2] movies and horror movies and I made little monsters out of rubber and plasticine...” Spurning sports and parties as a teenager, [the budding director] transformed his bedroom into an animation studio... So the 25-year-old who made the low-budget 16mm splatter picture *Bad Taste* was already a self-taught veteran. *Brain Dead* and *Meet The Feebles*, which followed, were in the same bloodstained mould, though boasted bigger budgets... [B]y the time [the director] made *Heavenly Creatures*... [it] was clearly a film-maker of some mastery. That mastery attracted the attention of... the maker of the *Back To The Future* films and *Forrest Gump*, who backed [the NZer]’s first Hollywood outing – the witty and ironic ghost spoof *The Frighteners*. Despite indifferent success at the box office it was enough to convince Hollywood there was a talent in Miramax worth going round the world for. [The NZer] had been slated to direct a remake of *King Kong*... but Universal, unwilling to enter a three-way race with Columbia’s *Godzilla* and Disney’s... *Mighty Joe Young* (about a 3m gorilla) pulled the plug. Eight months’ work came to nothing, but [the NZer] had “Plan B and it wasn’t a bad sort of Plan B.” Yet *The Lord of the Rings* nearly didn’t make it either. [The NZer] and his co-writers... had always planned to tell the story at epic length and the original producers, Miramax, had agreed to two three-hour films. Then, only six weeks ago, Miramax got cold feet. They said they wanted a single movie – three hours at most. “It would have meant literally cutting... half the script and doing a *Reader’s Digest* version and I wasn’t able to deal with that... I told them I couldn’t be on board even though it meant they would have to get someone else to make it. I would have spent the rest of my life regretting it.” Miramax... gave [him] three weeks “to find someone to make the film that you want to make.” A knuckle-whitening round of doorknocking in Hollywood followed before New Line (whose track record includes... [the] *Friday 13th* films... *Mask*... *Wag The Dog* and *Lost In Space*) made a suggestion beyond [hi]s wildest dreams: three books should make three movies. The rest, as they say, will be history.

...With planning for... *Lord of the Rings* well under way in Wellington, Warner Bros Video has released an earlier movie of J.R.R Tolkien’s trilogy... [M]ade... in 1978, [the]... animated version of the fantasy saga... tell[s] the early part of the battle between good and evil in the realms of Middle Earth and the struggle to claim the magical ring which gives its owner great powers. □ 7Days has 10 copies... to give away. To be in the draw, simply write your name and address on the back of an envelop or postcard and send it to... the... N[Z] *Herald*...

Fifty million copies of *The Lord of the Rings* books have been sold in 25 languages... Just as *Star Wars* is the defining myth of the technological age, so *Lord of the Rings* was central to the generation before it. Both are epics on the scale of the *Odyssey* or *Beowulf*, sharing the same combination of narrative force and spiritual grandeur. Darth Vader is merely the Dark Lord wielding a light-sabre. Voted “Book of the Century” in 1997... Tolkien’s immense saga is at last on its way to the screen... Wingnut Films will shoot for 18 months, post-produce for another 18. It will involve 33 principals, 1500 extras and 1200 computer-generated creatures. Adjusting the size-ratios of its army of extras alone – 183cm [humans], 122cm dwarves, and 100cm hobbits – will need endless skill and patience in the editing booth. Intense secrecy – paranoia even – surrounds... preparations. Miramax in Miramar has become a Black Hole from which no news can escape... Locations are similarly shrouded. By a happy accident of plate tectonics, N[Z] possesses the geographical extremes ideal for *Lord of the Rings*, a cinematic alteration of starkness and plenty. From the rugged magic of the Remarkables to the pastoral cosiness of the Waikato, this country might have been Middle Earth itself... But will *Lord of the Rings* translate to the screen? One thinks of movie disasters which failed to capture the essence of their subject – *Watership Down* springs to mind... [A] former International Mastermind, [current] Judge... of the District Court, [and] author of *Song of Middle Earth* for Unwin, Tolkien’s publisher[,] ...seems convinced the *Lord of the Rings* movie will realise the sweeping vision of its creator... As the [hu]man who knows more about *Lord of the Rings* than anyone else on Earth, Wingnut naturally consults him from time to time.

...Fantasy role attracts star... [A top] actress... has confirmed [it] will be in N[Z] in June to star in... *Lord of the Rings*. In an exclusive interview... [the actress (r:p1728, ln19) said it] would be in the country for six weeks to play the elf Galadriel, the wise queen of Lorien. “I believe they will be doing something interesting with my ears,” said [the 32-year-old], who read the JRR Tolkien book... at school. [The actress said the director] approached her to play the role in the \$360 million trilogy and... accepted it almost immediately. [The AUSn] was excited about working here for the first time. [The actress] had heard about the beautiful landscape, but admitted [it] knew little else about [NZ]. The blonde siren, who was nominated for an Oscar and who won the Golden Globe and Bafta best actress awards for her title role in *Elizabeth* last year... almost came here for a holiday and to see friends... None of the stars have yet spoken about their roles because they have been hushed by contracts... Meanwhile, [the NZer]... who shot to fame at only 15 years old playing a schoolgirl in [the director]’s docu-fantasy *Heavenly Creatures*... [is back in NZ for] the world premiere of her new Kiwi movie *Snakeskin*... [The actress] is enjoying being back in the country [it] still calls home, despite having lived in Britain and Los Angeles for the past six years. “I love N[Z]. I’m always heartbroken when I have to leave,” says the 24-year-old, who always makes the most of her visits back home with her mum... dad[, three brothers aged]... 22... 17... 13, and 10-year-old sister... “It’s the most beautiful country in the world and the people are so normal.” ...finding genuine people in Tinseltown is hard work and definitely the downside of what... the doe-eyed actress... considers her perfect job. “It’s a whole different culture in L[A]. People are so in to themselves and everything centres around success... When you’re working it’s the greatest place in the world – people like you and there is heaps going on – but when you’re not working it’s a whole different place.” ...Maintaining her dignity and individuality is important to [her], especially in LA where silicon-implemented, size-six, blonde actress-wannabes are a dime a dozen. “I once accepted a role then the producers told me I had to lose weight,” says... [the] size 10-12. “I basically told them to stick it. I said... I was this weight when they hired me, and I wasn’t prepared to change.” ...Her latest Hollywood project is set to be her biggest yet... Yet... [the gal who co-]starred... in *Ever After*... considers the low-budget road movie *Snakeskin* just as good, if not better, than her [US] films. “I think *Snakeskin* would... be one of my favourite movies, if not the most favourite movie I’ve done... You just don’t know where it’s going next.”

...Hollywood studios have approached N[Z] scriptwriters as possible strike breakers in case their own writers and actors bring Tinseltown to a halt. A prominent film and television writer... was “scoped out” by producers concerned about strike action... according to the N[Z] Writers Guild. The guild last week hosted an annual international conference attended by delegates from the Writers Guild of America, which, along with the Screen Actors Guild, is threatening strike action unless studios offer writers better pay and greater control over their work... The US delegates told the *Weekend Herald* that the quantity and quality of movies and television shows coming out of the States would be affected... The last time writers went on strike, in 1988, their action continued for 22 weeks and crippled the Hollywood film and television industry. Studios are looking overseas for writers, stockpiling scripts and fast-tracking film and television projects in anticipation of industrial action... [The NZ] Writers Guild chief executive... said the local writer... did not want to be identified, but was standing by the guild’s pledge of solidarity with its American colleagues.

...THERE will be spinoffs for the already buoyant N[Z] film industry from its counterpart across the Tasman, flying high last week at the opening of... [the] 24.3ha... Fox Studios, the \$585 million movie-making and entertainment facility owned by [News Corp’s] media giant... The facility is expected to significantly reduce the cost of film production for local and visiting overseas companies, including those from N[Z]. It is the largest film studio outside of the U[S], and will compete with Canada and Mexico for film production... Fox Studios A[US]’s chief executive, told the *Sunday Star-Times* in Sydney the company was already looking at the South Island very seriously as a location for a feature film set in the Korean War. “N[Z] is a very strong contender for the location. An announcement will be made soon,”... [The chief executive] also believes Fox will increasingly want to cross the Tasman to make movies... [The chief executive] also predicts Kiwis and their families will cash in on the closeness of Fox’s funparks, instead of travelling further to places like Disneyland... ● [The Fox Studio]... theme park includes a *Titanic* ride and a virtual reality *Simpsons* set and is said to be pretty cool. But Aussies are reeling at the entry prices – close to \$45 for adults and \$27 for kids.

...The country's "biggest film studio" is to be built in Waitakere City in a bid to cash in on N[Z]'s growing appeal as a film-maker's mecca. In a closed door meeting this week, council unanimously endorsed a decision to spend \$3m-plus to buy the former Enza cool storage sheds on Henderson Valley Rd and convert them into an 11,000sq.ft, multi-million-dollar facility, to be called the Auckland Film Commission Studio. "We are aiming to make the local film industry not only bigger but substantially bigger; a place where the [biggest director]s of this world would want to come on a regular basis," [the]Mayor... says. "It truly stacks up as one of the best investments we can make. Even if the movie business fails after five years we could flick it back to the private sector and double the amount." The 4ha site, used extensively to film popular television series *Xena: Warrior Princess* and *Hercules*... is already booked for three major film productions – one worth as much as \$130m... In the... heyday before *Xena* and *Hercules* bid farewell to television viewers, Waitakere helped reap \$203m of the country's then \$290m industry coffers.

...An absence of big-budget N[Z] feature films last year saw overseas investment in the industry slump almost 80[%]... Of the \$91 million pumped into the film and television industry by foreign investors, just 2[%] went to features... Feature films have previously made up around 50[%] of total foreign spending, including an exceptional \$46 million figure in 1996 when [the *Lord of the Rings*] director... made *The Frighteners*... [However, his] deal to make *Lord of the Rings* over the next two years would show a sharp rise in overall figures in coming years...

It's just as well we bought those F-16s. The might of N[Z]'s armed forces is about to repel an invasion of goblins. Military staff will be called in to fight as extras in battle scenes in... [the] *Lord of the Rings* movie... The Minister of Defence... said... members of the armed forces would be paid at normal commercial rates for the two or three days' work... [but] rejected suggestions that joining forces with hobbits on screen to save Middle Earth might not be the best advertisement for N[Z]'s armed forces, which are still blocked from war exercises with the U[S]. "If the media want to play silly buggers with it, well they can... but there's a much more serious purpose behind it and that's about jobs for N[Z]ers." ...The exercise was part of a Government attempt to help business projects with benefits to the country. Help was also planned with immigration of cast and crew...

For 404 days [the director], cast and crew... [will] simultaneously shoot... the three films, *Fellowship of the Ring*, *The Two Towers*, *The Return of the King*... Seventeen hundred people figure on the LOTR payroll[, including 145]... computer wizards... employed by... Weta Digital. Ten terabytes of computer power will be at their use as they create about 350 shots per film... Ninety eight per cent of those [1700 people are NZers. The film has s]eventy seven speaking parts... Two hundred thousand dollars worth of coffee [will] be... drunk each month by the LOTR production. Two hundred thousand dollars was spent on building the fortress of Cirith Ungol, including labour, one thousand cubic metres of polystyrene, thirteen thousand nails, thirteen thousand square metres of timber, one thousand kilos of plaster, and two thousand and forty litres of paint (and that's just one set among many). Forty gold rings were made by a jeweller in Nelson, and nine hundred suits of armour were forged in Wellington... A number bigger than, um, six hundred and forty-five million is the estimated budget in NZ dollars, not that anyone is letting on... Impressed?

...The family of J. R. R. Tolkien have been split by a feud over the long-awaited movie version of *The Lord of the Rings*... [O]ne of the late author's three surviving children, has severed contact with his eldest son because of a long-standing dispute sparked by the making of the £210 million (\$[NZ]719 million) film trilogy. The 77-year-old opposed the project. Now the eldest of his three children... has told how [it] was cut adrift from family affairs and banned from the board set up to protect his grandfather's estate after daring to suggest the movies were a good idea... Tolkien signed away the film rights to *The Lord of the Rings* for just £10,000 in 1968, five years before his death at the age of 81. Since then, the loss of what was destined to be a lucrative franchise is said to have been a consistent source of irritation to [the 77-year-old]. In stark contrast, [the]... 42-year-old criminal barrister... [grands]on, who recently finished writing his own novel, a courtroom drama, has actively embraced the making of the movies. [The grandson] met their director... two years ago, and will be attending next [year]'s London premier of the first part, *The Fellowship of the Ring*...

Fun ways to make money from home... Ever feel like you're stuck in a rut? Maybe the kids have started school and you've got time on your hands? If you're looking for ways to earn extra cash, read on... N[Z]'s film and TV industries are on a high and you don't have to be a whiz with a camera or a make-up brush to get a piece of the action. Movies like *Lord of the Rings* and *The Last Samurai* need hundreds of "extras"... the people with no acting experience and heaps of patience who sit around for hours on set waiting for their turn to be a face in the crowd... *The Last Samurai*, is being filmed in New Plymouth early next year so there's a good chance a few hundred ordinary Kiwis (especially those of Asian appearance) will get to... work... with [the star of *Mission Impossible*. The job]... suits people who have lots of spare time as extras are often needed on set for 12 hours a day. The pay is around \$12.50 an hour and usually includes a supplied lunch. "You get to see the stars, you learn a lot on the set and if you are really lucky, you might get one speaking line," says... [someone who] recruits extras for movies, commercials and TV series like *Shortland Street*... Renting out your home as a set for film or TV is another way to cash in on this growing industry. As a location manager, it's [one pers]on's job to find houses to use as sets and [that person]'s always looking for new properties. "Generally big, open-plan homes work well,"... With anything from 20 to 60 people working on a set, space is one of the biggest considerations... But it's the director who makes the final decision and often it comes down to whether a home has the right feel. Crews will move furniture around or bring in their own, hang pictures and generally create a bit of a shambles so a relaxed attitude to your home is important. "You need to be fairly flexible... about what's in your house,"... although commercial cleaners will generally sort out any mess the next day. Homes are most sought after for commercials and these usually take a day to shoot and a day either side to set up and clean up. Production companies pay from \$500 to \$1500 for the shoot day, depending on the budget, and about half of that for the other days. If the days are going to be particularly long, the company will often put families up in a hotel for the night. The best way to get your home known is to go direct to the production companies, who keep suitable houses on file. If the movie industry isn't your thing, how about weddings? Celebrants are in hot demand in N[Z] as more of us choose civil rather than religious ceremonies. It's a job that allows you to be self-employed, choose the hours you work and take as many holidays as you like... Good communication and listening skills are a must, as is compassion. Pay varies throughout N[Z] but a wedding can be worth anything from \$50 in a rural area to more than \$200 in Auckland. Apart from weddings and funerals, celebrants are used for naming ceremonies for babies, 21st birthdays, divorce... eldership and wisdom ceremonies and house moving rituals. For more information contact the Celebrants Association of N[Z]... With longer working hours a part of life, busy businesspeople are desperate for help with household jobs. This can include anything from cleaning and ironing to collecting mail and watering plants. If you've got a couple of hours to spare each day... why not set yourself up in business walking the dogs in your neighbourhood. Not only will you get fit but at \$10 a dog, walking three dogs at a time, you'll make money too... And finally, for all those exhibitionists out there, there's always a demand for models for life drawing classes... Any size or shape is okay for life modelling and in fact the bigger, the better... The pay is around \$20 to \$27 per hour and a heater is usually provided. Go direct to universities, polytechs, community centres and schools if you think you've got what it takes. ● [Obviously, there are a number of illicit ways to make money from home (e.g., home brew, homegrown), but – though fun – we can't be seen to condone such activities.

...a local director] doesn't know what's going to happen with his next movie, *Homegrown*. "Evidently they're having some trouble releasing it because it's about pot, which is really weird... They do movies about heroin... and... murder..."

...Thousands of mourners paid a tearful tribute to beloved Colombian comedian Jaime Garzon, calling his murder a national tragedy... Accompanied by many of the trappings of a state funeral, Garzon lay in state in Bogota and was honoured with a Mass in the vast Plaza Bolivar square outside Congress. Garzon, aged 39, who made his name with scathing parodies of politicians, died on Saturday when... hit by five .38-calibre bullets fired by two motorcycle-rid[ers]... Bogota is one of Latin America's most violent capitals, with 3500 homicides a year. A[n assassin] can be hired for less than \$100... The Government has offered more than \$560,000 for clues leading to [Garzon's] assassins... Garzon's death

sparked an outpouring of grief by rich and poor, reflecting the comedian's cross-class appeal in a nation that is deeply divided... About 80,000 people, including several Government ministers, gathered in the historic square waving white banners with the slogan "No More" and chanting for... an end to the long-running civil war... that has cost 35,000 lives in 10 years. In a tragic development, two people died and nine others were hurt when a footbridge over a highway in northern Bogota collapsed as scores of Garzon's admirers crowded for a view of the cortege bound for the cemetery.

...[a z]any Hollywood comedian... arrived in Auckland yesterday and received a President... style airport welcome in the form of a powhiri. Although here for the [NZ] premier of his latest movie, *Bicentennial* [Guy, the comedian]... was looking forward to sightseeing in both islands, fly-fishing and mountain-biking. The star of *Good Morning Vietnam*, *Dead Poet's Society* and *Mrs Doubtfire* said [it] had always wanted to visit N[Z] because of its "exceptional beauty." ...The 47-year-old actor said [a N]Z... film director... had convinced him to come for a holiday while the two were working on *What Dreams May Come*, the tale of a [husband] who visits hell to be reunited with his dead wife. "[The NZ director] told me N[Z] was the closest thing to Heaven on Earth..." [The comedian]... arrived by private jet from Sydney with his wife, children... and a group of friends...

[A comedian] stood before thousands of theatre owners at the annual ShoWest convention in Las Vegas... They knew who... [the comedian was: the star of films such as] *The Waterboy*... *Happy Gilmore*... and... *Big Daddy*... one of the few stars today who can guarantee sold-out theatres. But... the... comedian... introduced himself anyway. "My name is Adam... I am not particularly smart. I am not particularly good-looking. And yet, I am a multimillionaire... [whose] fiancée... is a... dark-haired, statuesque model..." The crowd laughed. They loved him. But not everyone does.

...Sonny... is a law school graduate who does not want to grow up[- Sonny] works in a toll booth one day a week, watches television and eats takeaways for the remaining six. Then, in a misguided attempt to impress his girlfriend... adopts Julian after the five-year-old is dumped on his doorway and pretends to be his biological father. His girlfriend promptly ditches him in favour of an older [guy] with "goals and a five-year-plan." As an act of rebellion against his own father, Sonny adopts a freestyle approach to bringing up Julian, and allows him to do whatever... [The star], who also co-wrote *Big Daddy*, seems to be carving himself a niche in mindless comedy for the masses. But there is no humour in watching a five-year-old, who has just lost his mother, wet the bed only to have the wet patch covered with newspaper and the child forced to sleep on top of it. Nor is it amusing to watch a youngster being taught to throw a stick in the path of rollerbladers so they injure themselves, or to urinate in public. Call me old-fashioned but this is not funny - it's cruel.

...[the star of] *Big Daddy*... is... glad to make movies. "I work hard on my movies, I put all my time into them..." ...Though the film may indicate [a] readiness for parenting, [the star] says it is not yet the time. *Big Daddy* is more an ode to his father. "My father as a parent was very involved in my life... would study with me and play ball with me and tell stories to me all the time. [Dad] was basically my best friend... We were the kind of home where you were only happy if someone in the house was laughing, so... [we] used to watch a lot of... comedy... movies... My father would call me in at midnight to watch them on TV - I was the only kid allowed to stay up past 12 o'clock..." ...On the subject of [his] \$US25 million... pay for writing, producing and acting on *The Wedding Singer* sequel, [the comedian] says: "I don't know what to do with that money. It helps me feel that any time a family member or a friend needs money, I can help them out. And that's a nice feeling... I ask my father what I should do with it and [dad] says, 'Give it to me.'" At 17, [the son] had no idea what [it] wanted to do with his life. [However, the son had] always been the class clown, so when [it] took to the stage of a Boston comedy club and was an instant success, performing seemed natural... His success in the movies was not swift... [appearing], almost unnoticeably, in the failed comedies *Coneheads*, *Mixed Nuts* and *Airheads*. The breakthrough came with the golfing comedy *Happy Gilmore*, which had enormous rentals on video and paved the way for the success of *The Wedding Singer*... and... *The Waterboy*... [The comedian] is still very much a big kid... "By not growing up I think I'm just trying to be happy. I'm in search of happiness... That's my goal."

Happiness, we have seen, is the ultimate goal of human striving, for the sake of which everything else should be sought and to the consummation of which everything else should be ordered. It is the complete good, the whole that includes all other goods as its component parts... Hence the... pursuit of happiness is not a selfish individual interest... It is true that individual members of a society are parts of a whole. It is also true that the good of a part can be sacrificed for the good of the whole. But it is not true that individual[s]... as members of society are parts of that whole in the same way that arms and legs are parts of a human body. The critical error here consists in converting a metaphor into a literal truth... Residual difficulties remain for anyone who tries to solve this problem simply and neatly... [T]his is confirmed by the [history of religious movements]...

scientology... movement on the fringe of Christianity, developed in the USA [by science-fiction writer L. Ron Hubbard (1911-86) during] the 1950s, which strives to open the mind of adherents to all great truths and to self-determination[, and 'seeks to develop the highest potentialities of its members' (who sometimes canvass strangers on the street in order to have them sit a form of IQ test after which those deemed suitable are invited to join the cult)]. Jesus is seen as one of several important teachers. The Church's scientific and religious claims have given rise to much controversy, as have its methods of financial management, and in the 1980s it defended several lawsuits in the USA. Nevertheless it has a wide following.

Scientology is used in over 80 countries all over the world. It has the solutions. Scientology works because Scientology is about *you*... Read th[e] new... \$24.95... book *What is Scientology*[, which]... will reveal the priceless knowledge that helps you be successful. [Here's some comments from satisfied readers:]"Scientology is the only way to survive in this life." "I realised that I didn't have the tools to help me in my life. Scientology gave me those tools." You can continue with your problems... [or] find out how to handle life... The choice is your's...

"Scientology is a religion of the 20th century, and it teaches you how to help yourself," says... [a NZer who, soon] after chatting to an actress... joined the controversial Church of Scientology... [The NZer] knocks criticism that the church - with its star-studded congregation... - is a sinister organisation bent on brainwashing and extracting money from its members. "The money I have spent I feel I have got back a millionfold..." [The NZer] has bumped into Hollywood A-list stars at the Celebrity Centre. "The joke in Hollywood is that if you are not a Scientologist you are working with one..." ...Although [the NZer misses her home country, it] has no plans to return here. "N[Z] is a wonderful country... but there are only so many roles I'm going to be considered for."

...IN Hollywood these days... [the star of] *Mission: Impossible*... is God and... [another actor], who plays an angel in his latest hit movie[*Michael*], ranks among the Apostles. Beyond an ability to fill cinema seats, what they have in common is membership in the Church of Scientology, the aggressive, high-tech religion that occasionally gets into fights with governments and law enforcement agencies. So when Germany tried to crack down on Scientology, Hollywood rallied around the faith of its box-office winners. Late in January, 34 non-Scientologists from the American movie industry lambasted the Germans in a full-page advertisement in the *International Herald Tribune*. Addressed to [Germany's] Chancellor... the open letter claimed that Scientologists suffer "organised persecution" in Germany. "In the 1930s, it was the Jews," said the ad. "Today it is the Scientologists." Many Germans were outraged by the comparison to the Holocaust... Were [the ad writers] moved by principle or profit? "You mean," said one signer, "do we all want to be in business with... [the Scientologists], and would we sign a letter just to make them happy, make them like us? What do you think?" Other signers said Germany was morally wrong... [In] Germany... Scientologists are not allowed to be members of the major political parties and some states won't allow them to join the civil service, a move which [the] Chancellor... wants to extend to the Federal level... "This is actually persecution... [A]lso as part of [the German Government's] 15 point plan you have prevention of street canvassing.

Isn't this just thoroughly undemocratic?" "...not at all... Scientology... [is] an organisation that's near to organised crime, and we wouldn't... [permit] canvassing in the street [by] the Colombian drug mafia..." ...Scientology... [is a] religion without a god, it aims at spiritual growth through a rigorous series of self-improvement courses that can cost new members thousands of dollars. It claims to heal psychic scars through the use of a simple lie detector called an "E-meter," and it tries to promote a more effective form of thought called "going clear." The church has often been accused of brainwashing and fleecing its members and of intimidating its critics with threats and lawsuits. The church, which denies such charges, claims 8 million members worldwide, 30,000 of them in Germany.

...[the star of *Michael* 'has not suffered from the controversy of his upcoming movie *Battlefield Earth*, written by Scientology founder Ron L Hubbard. While anti-cult fanatics have started a website which claims the movie is nothing more than a recruitment vehicle for the religion, the actor denies this and has moved on to his next project *Swordfish* – in which it plays a bad guy who is the world's most dangerous spy hired by the CIA to coerce a computer hacker recently released from prison to help steal \$6 billion in unused government funds.' ■ Hollywood's "God" loves playing the action hero in movies – and in real life. Starring in movies such as *Top Gun* and *Mission Impossible* has given him a need for speed – the actor has his own \$50 million jet, \$180,000 stunt plane, \$45,000 motorcycle, \$144,000 Porsche and \$2 million yacht. Of course with a fortune estimated at \$450 million, it can afford to spend like a *Top Gun*. "I live my life the best way I can," says 'the 1.7m ex busboy from New York who's a rampant Scientologist.'

...*'BLINDED BY SCIENTOLOGY* Dressed in jeans and a T-shirt, perched on the sofa at her father's modest California home, there is little to link the British-born solo mother with an AUSn actress. The Brit has never been to a showbiz party but shares something far more fundamental with the ex-wife of the star of *Mission Impossible*. According to her friends, the actress, who was raised a Roman Catholic in AUS, has become disillusioned with Scientology – in which her husband is so active – and her desire to distance the couple's two adopted children from the Church's teachings is cited as one of the main reasons behind their marriage break-up. It is a view the Brit (22) understands only too well. It is adamant her 2-year-old daughter will not be raised according to the doctrines of Scientology's founder. "I just want my daughter to have a normal childhood and make her own decisions in life." The Brit was a Scientologist for 19 years, spending much of her childhood in the Church's strictest order – the Sea Organisation – and her story provides a rare insight into the workings of Scientology, which numbers some of Hollywood's biggest names among its adherents. Her views are shared by a 42-year-old who works for a Florida-based organisation which vehemently opposes Scientology. This person was a Scientologist for 20 years, working for the Sea Organisation in the Scientology school (Scientists denounce outside schools as places full of "wogs" – their word for non-Scientists). "I didn't teach. The children had worksheets and I just checked them and helped them look up a word if they had difficulty with something." If her pupils still had difficulties they would be sent to attend "ethics" sessions and be hooked up to a machine called a "learning accelerator", similar to a lie detector. The children would hold two electrodes while answering questions. The meter detects small amounts of electronic resistance and an unbalanced needle would indicate the child did not understand something. The 22-year-old's parents were Scientologists. Her mother's parents were members of the Church's British headquarters in East Grinstead, West Sussex. Her father joined the movement as an idealistic 24-year-old, fresh out of university. "I was approached in the street in San Francisco, where I was on holiday, and became interested in the promises they made," says the father. "They tell you that past experiences are holding you back and, when you reach the upper levels of Scientology, you will know the secret of life itself. I'd split up with my girlfriend and had not found satisfactory answers to the meaning of life. Scientology seemed to provide answers." Back in Britain the 24-year-old took a Scientology course in London and met his future wife, who already had a son by a previous marriage. The couple soon wed and had the now-22-year-old. "If I fell over, Mum would do a contact assist, which means that whatever part of your body you hurt, you must press against the object which hurt you. You keep repeating this until the pain goes away. Mum made me do it in public, which embarrassed me. If I was ill, my Mum would give me a touch assist. I'd lie down and mum'd touch me with her finger, saying, 'Feel my finger'. Mum wouldn't stop until I felt better so, to stop her prodding me, I'd say I felt better." When aged 5 or 6, the daughter started going to church for "auditing", a form of counselling which is the basis of Scientology's teachings. "It was like a drill where I was told, 'Look at the wall, walk to the wall, touch the wall, walk away from the wall'. Other times, I'd be told to follow someone's hand movements with my eyes. It was supposed to calm you and help you see the world more clearly but really it was hypnotic." When the family moved to Florida, the mother joined the Church's strictest religious order, the Sea Organisation. Members dedicate their whole life and the next billion years, because they believe in reincarnation, to Scientology. Their mission is to convert the world. "I hated it. Mum and Dad did not get home until 10pm and we had to do chores after school under the supervision of a Scientology nanny. We had to clean the kitchen and mop the floors." Eventually her parents marriage buckled under the strain of long working hours and the father's increasing disaffection with Scientology. Under custody arrangements, the daughter stayed in California with her father, where it began attending a Scientology course at the] **Celebrity Centre in Hollywood, a massive replica 17th-century castle. "The founder... set up the centre to protect the artist because [Ron] believed the artist is who will save the world..."** - 1997

Many children – particularly those who are unhappy – dream of becoming a famous artist of some description or sports star when they grow up. Although most will never attempt to fulfil their dream, some will be able and willing to devote their teenage years and adult lives to pursue it, and a few will succeed in achieving their ambition of winning an Oscar for best actor, or gold in an Olympic event, etc. Their success raises a valid question: if they had always dreamed of saving the world instead of dreaming about achieving personal glory in an unimportant event, would they also have been successful at achieving that ambition? This question raises another: since, clearly, no one has yet managed to *save the world*, does this mean that no child has dreamed of doing so (or no one has been willing or able to devote its teenage years and adult life to the pursuit of that ambition) – or those that did were unsuccessful?

It was stated previously that individuals who attempt to divert the public's attention from God's ultimate spokesperson (in a human form) to themselves can be classified as ANTI-CHRISTS. This, and the previous question, suggests that a child who dreams of saving the world and succeeds should be classified as the CHRIST. It has also been implied that the most god-like human (i.e., Christ) can be considered the wisest human. *Socrates believed that an enlightened person is happy because it acts in the right way*. Although the same thing can be said of a wise person, could such a person – or a Christ – be happy today while it knows that in the time it takes to smile: at least one child would have died due to starvation, a preventable disease or accident, or physical abuse; at least one adult would have been raped, tortured, murdered or killed in a fight/war; x animals would have been slaughtered, y trees would have been cut down, and the world would have become more polluted?

...though... my life was so divine... can I be free from crying [when]my whole world is dying...

...I cried until dust appeared... and it feels like I'll never smile again...

...I couldn't begin to smile Because I can't even laugh or cry... If it was so easy to be happy Why am I so down? All I can do is sit and wonder if it's going to end Or... wish that I could just die...

There's nothing worth living for tonight Tell me that there's something worth living for tonight Don't let me down don't let me drown...

...before I drown in my sorrow well I just want to say how will it laugh tomorrow when I can't even smile today... - Suicidal Tendencies

HOW?

In the past few years there has been a great increase in interest in the future. The main reasons for this are a realisation that many of our present problems are a result of bad decisions taken in the past, coupled with the faster rate of change which is now occurring due to the cumulative effects of advances in science and technology. Also, there is a growing awareness that the future is not necessarily immutable, but to some extent we can choose the kind of future we have, and make value judgements on what we consider most desirable... Perhaps we will have to shed some of the things and ideas that we now consider essential, but in the process we may, in a sense, become more human... [However, it] is only when there is a large enough body of informed opinion, actively seeking change, that we will start to steer away from our present helter-skelter course – towards, perhaps, more desirable goals. - Understanding Futurology

Our Jewish forbears, the prophets and the old Chinese sages understood and proclaimed that the most important factor in giving shape to our human existence is the setting up and establishment of a goal: the goal being a community of free and happy human beings who by constant inward endeavor strive to liberate themselves from the inheritance of anti-social and destructive instincts. - Einstein

...the redressing of the oppressions and grievances of... [the past includes] the billions of dollars' worth of reparations that the current generation of Germans has paid to the Jewish victims of the Nazis' holocaust. Similarly, we see the same principle at work in the social bills now coming due for the past exploitation of the environment, the unconscionable exhausting by four generations of industrial citizens of the planet's 60-million-year endowment of petroleum, not to mention the grim legacy of radioactive wastes... [T]he new politics of reconceptualization is typified by the slogan of the Values Party, in N[Z]: "We do not inherit the world from our parents, we *borrow* it from our children." ...It is our children and grandchildren that will... suffer the social, physical, and genetic consequences... [if we fail to address t]he increasing public costs of maintaining environmental quality, clean drinking water, and breathable air. We face the cost of cleaning up mountains of waste and the additional cost of necessary government regulation to prevent more pollution. Indeed many of our most thoughtful scholars now believe that this type of industrial society is creating problems faster than it is able to devise cures for them. - The Politics of the Solar Age

More and more people are feeling that in the next thirty or forty years the human race must break through to a new kind of future. Failure will mean disaster; success will mean an important upward step on the ladder of evolutionary progress. Many of us see this breakthrough as the central project, the historic task, for the two or three generations living at the present time – the task which gives meaning to our lives. We sense that a threefold era is now ending: first, the age which began with the industrial revolution [200] years ago; second, the age of European ascendancy which began with the Renaissance and Reformation [500] years ago; and, third, the age of the successor civilisations to Athens, Jerusalem, and Rome which began roughly... [2000] years ago. This suggests a historical perspective, and a measure of our task as midwives to a new future. Recognition that [hu]mankind is at a turning point is now fairly widespread... enough... that it is possible [to] start to make it happen[– once we have decided]... what kind of... future... we... [want from amongst all] possible visions of the future... [W]hile talking about our present situation and future possibilities with many people in Britain, Europe and North America... I have become aware... that... a [‘forecaster must be cautious about writing off visionaries based on the arguments of conservatives, especially established experts. It is important to remember that visionaries have been responsible for many of the developments that have fundamentally altered the shape of the human world. And “experts” are very often wrong’]... In general, if we leave the experts to think about the future for us, we thereby choose a certain kind of future – a future dominated by experts. So we have to clarify things for ourselves... Practical thinking about the future involves a mixture of the following: predicting what is likely to happen, forecasting what would happen if..., deciding what we want to happen, planning how to help it to happen; and acting accordingly[(Aristotle allegedly introduced the notion that: ‘First we must identify WHAT we want to do; next, HOW we will do it; then we can DO it’)]... There are five distinctly different possibilities for the future... (1) *Business-As-Usual*. This view holds that the future will be much like the present and the past. There will no doubt continue to be many changes and crises, alarms and excursions, as there always have been. But the main problems of the [First World] countries... and of the world as a whole, will not change dramatically. Nor will the best methods of handling them. Nor will most people's general outlook and attitudes. This view can be presented as the only realistic approach to the practical problems of keeping things going in reasonably good order. It appeals to placid and pragmatic people, good operators, successful trouble-shooters, moderate reformers, people who are content with their present position or their future prospects in the existing system. It also appeals to defeatists, cynics and worldly wise[people], critical of the present state of affairs but convinced they cannot change it and not prepared to try. (2) *Disaster*. This view holds that things are beginning to break down catastrophically. There is no realistic alternative to nuclear war, and increasing unrest, famine, pollution, poverty, misery, disease and crime on an national and international scale. This view, too, can be presented as the only realistic view of the future. It is held by calm and thoughtful people, who have worked out the possibilities carefully, and who see no point in kidding themselves and others. It also attracts pessimists; hell-fire merchants, preachers and doomsters, who enjoy making other people uncomfortable and who like the limelight themselves; and people whose personal experience of failure has left its mark on their thinking about the world. (3) *The Totalitarian Conservationist (TC) Future*. This view agrees with the previous one that risk of disaster is very real, but holds that the best way to avert it is to accept an authoritarian system of government. People who hold this view point to the emergence of authoritarian regimes at previous crisis periods – Julius Caesar and Augustus after the collapse of the Roman Republic, Napoleon after the French Revolution, Hitler after the Weimar Republic in Germany, Stalin after the Russian Revolution – as evidence that people turn towards authority in times of chaos. They say that worldwide shortages and population pressures are creating a situation in which too many people are competing for too few resources. The only solution to this ‘tragedy of the commons’... in which uncontrolled individual greed destroys the common good, is a TC solution on the lines proposed by Hobbes in his ‘Leviathan’: we must give up our freedom to a sovereign power, which will enforce law and order and distribute the limited resources fairly to us all; otherwise our lives will be poor, nasty, brutish and short. This view also can be presented persuasively as the only realistic approach to the future. It appeals to people who think they have more to lose from disorder than from dictatorship; to people of an authoritarian, dominating temperament; to people who take a low view of other people (‘you can’t change human nature’); and to people who think themselves as belonging to the governing, rather than the governed, class. (4) *The Hyper-expansionist (HE) Future*. This view holds that we can break out of our present problems by accelerating the super-industrialist drives in [First World] society, and in particular by making more effective use of science and technology. Space colonisation, nuclear power, computing, and genetic engineering can enable us to overcome the limits of geography, energy, intelligence and biology. This view appeals to optimistic, energetic, ambitious, competitive people for whom economic and technical achievement is more significant than personal and social growth. They are often [guys], and are likely to be toy-loving and over-cerebral. For many of today's opinion-formers... this is the only conceivable view of the future – and also an exciting one... [But is] it a law of nature that compels us to make more and more *things*, including many that are harmful or useless, before we can attend to the needs of *people*? ...[Furthermore, while] the basic needs of billions of [Last W]orld people are not yet met, will it be possible for the [First World] countries to concentrate on creating a high technology future? ...[In addition, the] fixed dimensions and finite resources of planet Earth cannot allow economic growth to continue indefinitely... (5) *The Sane, Humane, Ecological (SHE) Future*. This view holds that, instead of accelerating, we should change direction... [T]he key to the future is not continuing expansion but balance – balance within ourselves... between ourselves and other people... between people and nature... [T]he important limits and the important frontiers are... not technical and economic[, which means future]... expansion will be psychological and social...

The only realistic course is to give top priority to learning to live supportively with one another on our small and crowded planet. This will involve decentralisation, not further centralisation. This is the only way of organising that will enable most people to fulfil themselves. We should aim to create a learning and planning society, a 'trans-industrial society'[, which]... would place greater emphasis on the durability of manufactured products. Repair and maintenance and servicing would be relatively more important than they are today... This view appeals to optimistic, participative, reflective people, who reject each of the first four views as unrealistic or unacceptable and believe that a better future is feasible. It is only fair to say that it also appeals to quite a large number of crackpots. Of these five views, Business-As-Usual is the only one which holds, in effect, that we do not need to concern ourselves with the future; and Disaster is the only one which holds that catastrophe is inevitable. The last three share a serious concern about the future and a common belief that disaster is avoidable. But they disagree with one another about the most effective way of avoiding disaster; and they disagree about what kind of future is most desirable. TC recommends clampdown; HE recommends breakout; and SHE recommends breakthrough... We need to understand all these different views, because the actual future will almost certainly contain elements of all five...

The Theosophists spoke of five successive human races; both they and Nietzsche called for [humanity] to leave behind traditional limits and acquire new powers... [A] leaflet entitled "An Open Letter to the Whole World,"... read, in part: ...Humanity isn't born yet... Nietzsche's... teachings... propounded the idea of Super[hu]man, a new mode of humanity, and Orage said it was [humanity]'s task to define [it]self anew... Robert Owen had... publicly declared in 1816 that... [the] cotton mill... reformist... knew how to design a society so that it would function without crime, poverty, or misery... but much of... Owen's project was essentially aimed at disciplining the poor, remoralizing the Lower Orders as [Owen put it]... Tolstoy's Preface to *The Quest for Merlin* ends with a quotation from the Russian mystical theologian Nikolai Berdyaev. "History stands still and settles in the past. Only a prophetic vision of the past can set history in motion: and only a prophetic vision of the future can bind the present and the past into a sort of interior and complete spiritual movement.

Western culture has witnessed at least three grand historical epochs of seeking – each with a dominant spirit, enduring spokes[people] and distinctive problems. We have gone from the "Why?" to the "How?", from the search for purpose to the search for causes... THE FIRST EPOCH, OUR ANCIENT HERITAGE, was an age of individual heroic seekers, of inspired prophets and philosophers... The special problem of the seeker in the age of prophets was revealed in the celebrated life of Job. And the Job Syndrome would carry a warning for all over-confident seekers to come. The story of Job is a parable of how [a hu]man makes his own problems in his search for purpose... This familiar story became the classic epic of human suffering – and the suffering of the innocent... Job was... virtuous and prosperous... in the form of a rich farm, a beautiful family and the respect of his neighbors. Satan suggested to God that Job's virtue and piety were motivated only by his desire for earthly reward. Satan urged God to test Job's faith. If God took away everything from Job, Satan insisted, Job would curse God... Job's cattle were stolen, his sheep struck by lightning, his children killed in a desert storm. And finally Satan covered Job's body with sores. Still Job did not curse God but extolled [God's] wisdom... The Lord... blesses Job with greater prosperity than ever before. Now Job has seven sons and no other [girls] are as beautiful as his three daughters. Why is Job not told why [Job] is made to suffer? ...This problem, one that [the Judeo-Christian person] had created for himself by his belief, has haunted Western thought for millennia... Not until the 18th century did Leibniz give a name to this troublesome problem – Theodicy, from the Greek *theos* (God) and *dike* (Justice). If Job and others had not set out with a belief in a benevolent God, would they have been so puzzled by the suffering of the innocent? This question has not equally troubled people everywhere. Religions in the East have provided plausible theological explanations for divine punishment and retribution in the concept of *karma*... and the work of Kali and other destructive divinities.

[It has often been said that 'the most dangerous person in the world is the person who believes they know what's best for other people.' For humanity]'s greatest suffering at the hands of [other people] we can thank the ideologues and the religious zealots. These people are certain of their righteousness and are eager to impose their will on others... Thus we have reached the present, often floating on seas of blood while still seeking the shining promise, our Garden of Eden... As unfulfilled dreamers we shall pass to succeeding generations the eternal torch of hope shining in the oceans of despair... Is the future yoked to the past? Do the cycles of history have to repeat themselves? Will we ever escape from our circle of despair? ...For two million years our ancestors in different sizes and shapes learned to kill better than their competitors, and so set themselves apart from the rest of the animal kingdom... The physical and spiritual combined to carve out empires, to build Babylon, Persepolis and Rome to extend the faith... ['So long as there is hope for a better future, people will slog on under very adverse conditions'. So faith] went on enslaving the living to strive for deferred promises of fresher pastures, the greener grass for future generations[– and, as a consequence, humanity] was never satisfied. This is how it was through millennia as empires came and went, and new faiths destroyed older ones, making yesterday's truth a present heresy. The great religions followed one another, each taking its toll of human suffering in the name of its gods... [until the] twentieth century saw whole continents mobilized in orgies of blood-letting in the name of ideological nationalism... The intention should be to steer away from disaster and to keep hope alive, not to determine a destination in some idealized Utopia... Predicting the future of technology in any definite sense is impossible... In short, to speak predictively of technology more than a few years ahead, the forecaster would need to combine the inventive genius of a Leonardo with the business acumen of a Ford and the moral insight of an Old Testament prophet. For this reason you should be sceptical about forecasts that purport to tell you what *will* happen... You are on safer epistemological ground if you let experts speak imaginatively about possibilities and then say what *you* think *should* happen. Everyone is entitled to his or her opinion... But... chances are that one's opinions are either banal or mere wishful thinking; if they are not, then one may be seeking to impose upon other peoples and other generations a Utopian update of one's own local and temporary way of life... If this period of turbulence is to be one of renewal for our societies, this renewal must be based on a new conception of growth, new attitudes towards the purposes of growth, and a re-structuring of the system of incentives and penalties which motivate the growth process... The transition to the 'new growth' society implies some profound changes in our traditional notions of the distinctions between private and public rights and responsibilities... ['It is possible to find a wide body of support today, summarised by *The Limits to Growth* and *Small is Beautiful* evangelists, for a belt tightening effort among the rich and fairer shares of the limited available resources. If we are now approaching the limits to growth, and must rest content (or at least make do) with a smallish global cake then clearly, in the interests of self-preservation and avoiding global conflict, we should share what little we have. But this implies an enormous strain on existing world systems, at least in the First World countries. Standing still, a no-growth situation, is one thing; but actually taking a cut in living standards, however worthwhile the reasons, is quite another. The hazardous implications of this kind of future world are spelled out in detail in *World Futures*. Here, it stands as "obvious" that this is a situation of the last resort, only to be countenanced if all else fails.' However, new growth does not mean a retreat to a more primitive or less desirable standard of life or to a static economy. Indeed, it should be seen as an advance towards a more qualitative, humanly satisfying lifestyle... But... today, most political leaders are so overwhelmed by the number and complexity of issues confronting them that they are less and less able to deal with immediate problems effectively, let alone consider seriously the fundamental changes that are necessary to secure the future of their constituents. Industrial societies are on the verge of becoming virtually ungovernable under the present system. And there is no new body of economic and political theory which they can [use to] construct new political platforms. Both Marxism and Keynesian theories have been shown to be largely obsolete and no new body of ideas has yet emerged. We desperately need such a new body of ideas – a new synthesis.

We are guided in economic, political, and international questions by principles that were suitable... three or five thousand years ago but are directly opposed to our present consciousness and conditions of life... A [hu]man of the ancient world could believe [it] had a right to avail himself of the good things of this world at the expense of other people, causing them to suffer from generation to generation, for [the ancients believed that humans] were of different breeds... that [humans] are not equal... Not only did... Plato and Aristotle, justify the existence of slavery and demonstrate its lawfulness, but even three centuries ago when describing Utopia – an imaginary society of the future – [its author] could not imagine it without slaves... [Even ‘the idea of disciplined, neat, orderly utopias seems old-fashioned now, partly because of crimes committed by would-be utopia-makers; also because of new emphasis in people’s thoughts and discussions about better ways of living’. Humans] of our time do not merely pretend to hate oppression, inequality, class distinctions, and all kinds of cruelty not only to [other humans] but to animals – they really do hate all this, but do not know how to abolish it or cannot make up their minds to part with the system that supports it all but seems to them indispensable.

...[a] biologically based account of human history... asserts that ‘Happiness... and... liberty... depend upon changes in our... strategies of human... development.’ ...The... author draws our attention to the fact that... there are paths which avoid... goods and services which add little to either our dignity, our happiness or our potential for survival: conspicuous consumption in the form of energy-intensive possessions like sophisticated weapons and motor cars are obvious examples... [– and the author even] goes so far as to suggest... a revised attitude to material possessions in which we cure ourselves of a morbid craving for extravagant gadgetry...

Everyone wants a world safer and happier than the present one. That humankind can choose its destiny is a proposition that follows from history – in particular, from the history of the present half century. It can be seen now that history has had a plot: the tool-making species has been making itself. The arrow of its history is the accumulation of objective knowledge. From age to age, as history went on repeating itself, that enterprise has pointed the direction of time... The economy of growth, it is now clear, must give way at last to the economy of equity[– which]... has special relevance to the long-range future of the human species... The moral questions implicit in this ultimate transition have been lurking in the subconscious of economics ever since Adam Smith delegated them to the invisible hand.

But all too often such debate focuses on specific issues without the problems ever being related effectively to an overall vision of where the world is going and how it is going to get there.

What is our desirable future? How can we make it happen? ...the Foresight Project[is] an ambitious attempt to galvanise... thinking about our future... We don’t... know what [technological]developments the future will bring. However, [some] trends... are global: the revolution that completes the transition from nomad-hunter to agrarian to industrial age to knowledge age is happening right now. Its effects are likely to be greater and more compressed than that of the industrial revolution that made capital and labour king.

What, then, are the real possibilities? Will the future approach a static condition (“steady state”), or will change be never ending. Does our hope for humanity lie in forging better social organizations, or will technology evolve so much that it will allow us to solve certain problems without becoming wiser or more selfless? ...The modest and gentle nineteenth-century tract writer Edward Bellamy turned his pen to prophecy in *Looking Backward: 2000-1887*, a utopian vision “...intended in all seriousness as a forecast, in accordance with the principles of evolution.” *Looking Backward* shares with George Orwell’s *1984*, written sixty years later, two identical assumptions. The first[is] that developments in technology can be ignored... [and the second is] that socialism will sweep humanity to a universal, irreversible static condition... From those two identical... [but] definitely wrong... assumptions, Bellamy and Orwell derive future worlds that could hardly be more different. Bellamy’s novel is an idyll: by the year 2000 socialism based on the “solidarity of race and the brotherhood of [humanity]” has brought about an ideal world free of warfare... Gone, too, is the concept of money, and college education is free to all. Crime has disappeared, and with it the jury system and lawyers. In Bellamy’s world neither insanity nor suicide remain, and the world’s citizens look forward to the “eventual unification of the world as one nation.” - 2081: A Hopeful View of the Human Future

Looking Backward 2000-1887 is a detailed description of an ideal state which exists in the USA and most of the rest of the world in the year 2000, as contrasted with the conditions... in 1887... For most of the 20th century the USA has been a communist state, with all... workers – of whatever trade, grade or age – receiving the same wage, paid as credit. This credit allowance is generous but is exchangeable only at a public store. There is no private manufacturing of any sort, so no competition or advertising exists... There is a universally high standard of living, with full employment, good working conditions, retirement on the same high income at the age of forty-five, magnificent housing, free medical treatment, and a host of other improvements... there are [even]no personal servants: these have been replaced by machines for household cleaning, etc... The rise in standard of living is claimed by the author to stem from greater efficiency of production (because there is no competition), lack of waste (because all... [of the citizens –] who choose their occupations according to natural ability and personal preference – ...are working for the common good and because all demand for goods is accurately known), no monetary system to complicate matters, and no government administration to consume a tithe of all production – technological innovation is *not* cited as a reason... There is a hierarchy of command, the most efficient... being promoted, but the author seems to think that an entire nation can be run smoothly and efficiently by a relative handful of supervisors... without the help of a bureaucracy. Obviously Edward Bellamy’s fictional 20th century did not produce either Parkinson’s Law or the Peter Principle... People like to dream of (or read of, in the fictionalized versions of others’ dreams) better times than their own. They like to read of a future when there is no poverty or hunger or unhappiness, when all drudgery is left to fully automated machines... when [hu]mankind is healthier and longer-lived, when human traits like aggression and dishonesty have disappeared... Perhaps the most satirical of all dystopian novels (prior to 1945) is *We* by the Russian writer Yevgeny Zamyatin, first published in an English translation in 1924. This is a particularly elliptical novel set in the highly advanced and strangely alien future of the... 30th century. There is a totalitarian regime – the One State – and everybody lives in a single large city where everything is purposely artificial. A wall of glass, the Green Wall, keeps nature at bay. “The wall is, probably, the greatest of all inventions. [Humanity] ceased to be a wild animal only when... [humanity] had built the Green Wall.” Indeed, all walls in the city are of glass: there is no privacy or secrecy; the One State knows all and controls all. Brief periods of privacy are allowed for the purposes of sex, but prior permission must be obtained. Names have disappeared and citizens are designated by numbers preceded by a letter (a consonant for [guys], a vowel for [gals]). They are even referred to as “numbers” rather than “people”. Families, too, have disappeared, and all are sexually available to all. Perhaps most horrifying is that the inhabitants seem content with their lot, unaware of any better existence... *News From Nowhere* (1890) by William Morris is a noted satire on... the shape of a utopian future. In some respects it is a parody of... *Looking Backward 2000-1887*. The narrator... is miraculously transported into the future while asleep (by about two hundred years, although the exact date is not mentioned) because the [narrator] has been musing on the development of society before going to bed. The future... is in every way very different from the world of 1890. For a start, everyone

is happy, because society is aimed at individual happiness... Yet this is a true socialist state, with everybody working because they want to (idleness, fortunately, is now extinct) and consuming what they need. Money has disappeared, even as a notional store of value. - The Shape of Futures Past

It is just as psychologically naive to believe that doing away with money will solve all of [hu]mankind's problems as it is to think they can be resolved by putting a million dollars in everyone's pockets.

We may not have found the best way of using [money and,] in our civilization, it is hard to see how we could manage without it... But... Egypt became a great civilization and a great empire without the benefit of money as a convenient way to exchange and trade.

...the Egyptian *deben* (raw copper weighed out in pounds) was a measure of exchange, but neither token nor payment-medium.

An alternative monetary system to using the N[Z] dollar is being explored at the National Green Dollars conference in Upper Hutt, which started yesterday. An organiser... said green dollars was a bartering system where people traded goods and services rather than money. People paid a joining fee and were given a computerised account. If they used their skills to do something for someone else in the green dollar association, such as housework or gardening, their account was credited with green dollars[(or 'trade dollars')]. They could then use their credit to buy goods or services from someone else in the organisation. Businesses and tradespeople could also join... [T]he bartering system worked well for people normally unable to afford luxury items. One of the aims of the conference was to attract new members to add to the 2000 already involved. - 1996

It would be ironic if a system of bartering such as green dollars (the 'commercial "green dollars" credit card now handles \$180 million worth of transactions annually') was to be introduced throughout NZ as a solution to the problems caused by the monetary system – because the monetary system originally evolved as a solution to the problems caused by bartering (the main one being how to correlate respective values of different goods and services without the aid of a common denominator – e.g., does 30 minutes of carpentry equal 30 minutes of farming, or 60; does one wooden chair equal 1kg of grain, or 10?)!

Economic system still the world's best despite flaws... [C]apitalism is underpinned by a moral basis and its efficiency... Capitalism is a dynamic system in which the nature of work continues to evolve. Some people lose their jobs but more jobs are being created elsewhere. Human ingenuity enables more of us to figure out ways to achieve more productivity for less effort... The main alternative... was communism, which was a disaster...

Pure capitalism (i.e., when everything is paid for) doesn't yet exist in any of the major nations but each year many of them get progressively closer. It was implied previously that 20th century capitalism and communism – and its associate, socialism – aren't *on opposing sides*. It is true that in theory capitalism supports private instead of communal ownership, but in practice both have been based on an economic system (r:p13, ln27). In order to properly oppose capitalism a system would, in addition to practicing communal ownership, have to be non-economic (i.e., a moneyless society – which is not the same as a *cashless society*, where every monetary transaction is made electronically). Although a moneyless society won't *solve all of humankind's problems*, it can solve most of them (and, without the distraction of economics, it will become easier to address any remaining problems). One problem a moneyless system will never be able to solve is natural inequality among individual humans (e.g., some humans are taller than others, or heavier, are more intelligent, skilful, attractive, are healthier, live longer, etc.), but it can remove unnatural inequalities (e.g., social position due to birth, material wealth, distribution of resources, etc.). Removing money would also mean that products and services will be valued for their usefulness – and, as a consequence, useless products and services would become obsolete.

If the Kingdom of Heaven is not eating and drinking, but righteousness and peace, neither is civilization the multiplication of motor-cars... cinemas, or of any other of the innumerable devices by which [modern people] accumulate means of ever-increasing intricacy to the attainment of ends which are not worth attaining... In order, however, to escape from one illusion, it ought not to be necessary to embrace another... SO to criticize inequality and to desire equality is not, as is sometimes suggested, to cherish the romantic illusion that [people] are equal in character and intelligence. It is to hold ['that all members of the species are equal in the sense that, and only in the sense, that none is more or less human than another'; that], while... natural endowments differ profoundly, it is the mark of a civilized society to aim at eliminating such inequities as have their source, not in individual differences, but in its own organization, and that individual differences, which are a source of social energy, are more likely to ripen and find expression if social inequities are, as far as practicable, diminished... The individual differences... in... characters and capacities... will always survive... But their existence is no reason for not seeking to establish the largest possible measure of equality of environment, circumstance, and opportunity. On the contrary, it is a reason for redoubling our efforts to establish... social institutions... [which] stress... lightly differences of wealth... birth and social position, and... meet common needs, and are a source of common enlightenment and common enjoyment... in order to ensure that these diversities of gifts may come to fruition... The important thing... is not that... equality should be completely attained, but that it should be sincerely sought... The sage who defined his Utopia as a society in which any [perso]n can say to any other, 'Go to hell', but no [perso]n wants to say it, and no [perso]n need go when it is said, may have been crude in expression, but h[is reasoning] was sound in substance... And a society which is convinced that inequality is an evil need not be alarmed because the evil is one which cannot wholly be subdued. - Equality

The Bible says that 'the love of money is the root of all evil' (I Timothy 6:10) – which implies that evil can be eliminated, or at least subdued, by eliminating *the love of money*. Furthermore, the book is clear about rich people being unable to get into heaven (e.g., St Luke 6:20-4), which has been interpreted by some as meaning that there is no money in heaven (r:p1013, lns5-6). This interpretation is supported by the notion that money – along with violence and suffering – didn't exist in the *Garden of Eden*. Therefore, if human society was to become moneyless, it would mean that humanity is literally reverting to its original state – in biblical terms, not primitive.

revolution... 1. the forcible overthrow of a government or social order, in favour of a new system... 2. any fundamental change or reversal of conditions or ideas. 3. revolving; a single completion of an orbit or rotation...

Our task... is nothing short of recycling ourselves and recycling our culture.

...but how? The answer... might just turn on... sidestepping... this question... and asking instead: *who* is best placed to bring about social change?

1: CHILDREN?

...you won't fool the children of the revolution...

Do... you ever question any of the things... taught... at school. And... [say,] "Oh my teacher why do you take me for a fool?" ...Wake up... all they do is... deceive you... Don't let them take away your future. Rise up... the time has come... to liberate this human race... a better place has... to come...

...if children ruled the world it would be a better place...

There is a spirit in each generation that calls us to build a better way, to make life safer and much easier to control, more peaceful and... refined...

Many... students... and other young intellectuals – who are certain to play a major role in the coming ideological reconstruction – ...candidly admit that they feel let down by the preceding generation, who they believe have a clear duty to provide more intellectual assistance. And they ask this question: 'If our elders have shown themselves unable or unwilling to articulate viable non-Communist alternatives... to Communism... doesn't that imply a certain intellectual bankruptcy?' ...No wonder the youth are disappointed!

While the conflict between the idealism of the young and the pragmatism and cynicism of their parents is nothing new, the protests of the youthful counterculture of the sixties reached epidemic proportions... Many young people, observing their parents' drive to get ahead financially and to accumulate bigger houses and cars and bank accounts and more expensive furniture, decided the struggle for money wasn't worth the effort and dropped out... For a long time... [rebellion] against parental demands and values... has been considered a normal part of growing up – an aspect of the rites of passage. It was generally accepted that children were, for the most part, moulded by their parents, became adolescents and rebelled against their parents, then quit rebelling and became part of the adult establishment. Over the years, however, a strange transformation has been taking place. Parents and other adults have not only been *listening* to the younger generation, they have been looking to it for guidance. The young lead and the elders follow. Young people are setting the styles in hairdos, clothes, music, automobiles, housing, and moral values.

Don't be scared... kids... just want to change the world THE... middle-aged naturally resent the young, whom they suspect of having more energy, better looks, more enjoyable sex and a great many more years ahead of them. Such feelings are, perhaps, only to be expected but we should realise that, in the absence of war, this is one of the toughest times for youth. In the Sixties and Seventies to be young may not have been heavenly but you could leave school and not only be certain of a job but be able to choose the sort of job you wanted. All this has changed. A child can do its homework, pass incessant tests from nursery school upwards, collect a dozen A-levels and a scholarship to university, end up with a first in modern languages and then, after writing hundreds of letters, perhaps land a job packing shelves in the supermarket provided that the over-qualifications can be kept secret. If you're a talented young actor or a dancer and work hard for the Royal Academy of Dramatic Arts or a ballet school, you'll be told that such talents for the arts (our most successful industry) don't deserve a grant and you should instead have nursed a lifelong ambition to be a chartered accountant. If you're not one of the bright ones, if you went to an overcrowded, rundown school with frightened teachers, if you didn't bother too much about lessons because you knew you'd never get a job anyway... you can look forward to being cracked down on, tagged, curfewed, imprisoned at an increasingly early age, perhaps banged in a hospital with middle-aged psychopaths and generally regarded as an enemy in what politicians call the war against crime. How long will it be, I wonder, before... we know that our children, our friend's children, the young people we meet every day, are behaving with admirable courage, common sense and tolerance for middle-aged politicians who have made such a mess of things. All right they wear their caps back to front, they take little notice of dire warnings about smoking and enjoy music so deafening that you can't hear the words but, in spite of all discouragements, they haven't lost their faith in the future and their longing to improve the world they live in... A study of teenagers from schools in Northumberland, Birmingham and Brighton, carried out by the British Psychological Society, found that half of them engaged in some sort of campaigning or volunteer work. "A great deal more than a similar group of adults,"... Many of them worked in charity shops, helped with charity raising, youth clubs and hospitals and visited old people. It is to be hoped that, from time to time, the old people return the visits... A tenth of those studied were paid-up members of campaigning groups like Amnesty International, Greenpeace and Friends of the Earth, while 89[%] had given money to charity and many of them had signed petitions and campaigned for local causes... It doesn't really need the British Psychological Society to tell us what should be obvious about a new generation. The students on University Challenge could easily defeat a team of Government ministers... The alarming part of [the British Psychological Society]'s findings, though, is not the good news about the young but the sad news about us... [- the] middle-aged, middle-of-the-road voting society to whom all politicians are at present on their knees... We have... persuaded ourselves of a "negative stereotype of a self-interested and disaffected youth culture" in our midst... What we need to do is to stop being afraid of them... After all, the youth in baggy shorts and dirty trainers coming towards you smoking something which smells suspiciously of old carpets, is probably not armed. [The youth] just wants you to... sign a petition for civil rights in China.

...A[US]n teenagers know what is important to them. Their list of the top 10 requirements for good citizenship defined in a survey for Youth Studies A[US], embraced respect for the rights and property of others, equal treatment for all regardless of gender, disability, race, age or religion, honesty, safe driving and protection of the environment. They [also] want, according to other studies, a better future that values cooperation, community and families... a more equal distribution of wealth, a return to more traditional standards... and a job. What the majority expect is a new century more likely marked by crisis than by peace and prosperity, one in which the quality of life at home and abroad may well decline, crime and violence will increase, and the gap between rich and poor will widen... The *Medical Journal of A[US]* reported this year that the nation's 15 to 24-year-olds suffer more psychological disorders, have less trust, are more cynical and are more pessimistic than their baby boomer parents and their... W[W2]-vintage grandparents. Behind this lies the end of certainty, marked by a series of social indicators that are reflected across the [First World. NZ] teenagers would have little trouble identifying with their transtasman peers.

...*Tomorrow's children*[: OUR] *BEACONS OF HOPE* LITTLE girls of six with gonorrhoea[(sic)], babies shaken so hard their brains are pulped, social workers who insist it is better for a child to return to an abusive family than go into care. Children with TB, rheumatic fever, asthma. Kids who commit suicide either slowly, at the end of a glue bag, or fast and savage... [T]he debris of a lost generation... proves... [that NZ] – once the model for child rearing – has fallen so far from what it will accept as a society... Fortunately... [it is still possible to] find... some fragmented signs of salvation... Every day, while some kids play truant, are sexually, physically or emotionally abused and go to school with cold feet and empty bellies, another, much bigger group will get out of a warm bed, eat a reasonable breakfast, brush their teeth, kiss Mum or Dad goodbye and go to school. Lots will have fun. Most will learn to read and write. And... [some – like] the second-fastest... 12-year-old girl... over 200m in the country... [- will]

want... to be a doctor or lawyer because... [they aim] to help people with their problems. [However, will such 12-year-olds have the same aims in another few years? This is a valid question to ask because although 'a survey of Britain's "Millennial Generation" – young people who will be around the age of 21 at the turn of the century – portrays them as having great respect for doctors and teachers but little for politicians and even less for journalists, it also found some 48% want to run their own business and 43% list becoming a millionaire by the age of 35 as a career goal.'

...the richest 12-year-old in the world 'will inherit the legendary Onassis fortune on January 29. But rumours are it could inherit peanuts – originally estimated at \$5.3 billion, her fortune has been frittered away by her pharmaceutical father and the four Greek "Onassis Mafia" guardians of her inheritance. What started out as a fairytale has turned into a Greek tragedy. The tragedy came to a head when the girl and her father closely escaped a kidnapping attempt by "Israeli terrorists". In fact, the thugs were paid by members of the Onassis Foundation, as Swiss investigators later suspected. On Jan. 29 auditors will finally announce the true value of her inheritance – now estimated at a mere \$800 million. A family friend says the teenager "intends to use her money to do good, to help her native Greece and to build a name for herself as a businessperson to reckon with."

...*Young & loaded* These stars are small on years, big on bank balance! Currently seen on TV as the star of *Malcolm in the Middle*, the 16-year-old also has a slew of films to his credit – all of which help him pull in \$6 million annually. When a rapper started out it was known as Lil Bow Wow. Now that the rapper's 15 it has a new grown-up moniker – Bow Wow – to match his grown-up income of \$14.9 million. Remember the youngest girl in the sitcom *Full House*? Well the twins who jointly played the adorable little scamp are all grown up and building their own massive empire. Starring in sitcoms, films and TV movies since they could talk, the 16-year-old beauties now have their own range of fashion and lifestyle products. Their merchandise is sold through the US retail mega-chain Wal-Mart and it's expected the twins will be worth a huge \$1.8 billion by next year. ■ The Onassis heir 'collected US\$2.7 billion on her 18th birthday'...

'In a recent US Youth Poll, 64% of the teenagers questioned said that they hoped their lives would be different from those of their parents. This included having more money. They're not so much concerned about global issues like overpopulation as they are about the high cost of living.'

...Teens in the US spent an estimated \$US103 billion... in 1996, a 4[%] increase over 1995, according to a recent study at Teen Research Unlimited. Teens are also among malls most eager shoppers, spending an average of \$40 each visit, according to a survey conducted by the International Council of Shopping Centres. The ICSC survey, which looked at the habits of... teenagers between the ages of 14 and 17, found that teens make nearly 40[%] more trips to the mall than other shoppers. "Teens are among the nation's most brand-conscious and selective shoppers,"... [the] vice-president of research at ICSC, said. The 13-to-19-year-old consumer group is expected to expand until at least 2009, according to the U[S] Census Bureau.

...*Children rule the world* KIDS want everything. The right clothes. The right Christmas gifts. The right car to be driven to school in. Because so many kids seem to want so much so often, it is kids who have become wanted... by virtually every major company in America. As customers. For life... There's no kid-glove protection from this effort. Just a grinding need for new customers that forever has changed the way many of the biggest marketers treat kids as young as preschoolers. Once upon a time, kid marketing was limited to toys and breakfast cereals. Now, marketers realise kids as young as two can influence everything [including] where the family will vacation... By age two, kids are nagging their folks for the latest gizmo they saw hyped on TV, says... the... author of *What Kids Buy and Why*. And this is just the beginning of kids' struggle for control over what once were solely parental decisions. It should be no surprise that many of the biggest marketers are siding with the kids. Until now, it was believed that kids were spending or influencing about \$[US]150 billion annually. But in 1997 that figure is believed to have grown to \$500[billion.

...an] American music legend [(r:p1730, ln54)] says the idea that young people can change the world, the theme of one of his trademark anthems, is unfortunately no longer valid of today's youth. The singer who gave the world... *The Times They are a-Changin'*, says the feeling of having influence was important to the young people of the 1960s, even though it may not have been true in practice. "In the 60s people had the idea... that... feeling... one could act was more important than acting itself... But today that feeling is missing." [The legend], once hailed as the poet-singer of a generation, also... does not believe his work had ultimately had any real influence. "If I had wanted to influence society, I would have done something else: I would have gone to Harvard or Yale to become a politician or something like that."

...[I read the letters on your page and I think, "Oh how sweet. Youth culture. These children think they're so clever and that they can change the world, but when they get out in the real world they sure are gonna think different."

...A friend in his 40s, for whom I used to babysit, enjoys regaling tales of his now almost self-sufficient kids who are in their early 20s. One is in Edinburgh on the start of her OE and the other in the prime of his young adulthood living in the luxury of the family home. Like most parents the friend boasts about their virtues, somewhat relieved that they have emerged from their teenage years intact. And like most parents the friend lives in the charmingly naive fantasy that his kids enjoy the same sort of fun it and his wife did in their "crazy" youth, turning a blind eye to clear signs indicating that his offspring may have taken things just a few steps further. That was until my friend received a misdirected e-mail from his daughter destined for his son which leaves him in a confused state somewhere between laughter and manic hysteria. It opened "Hello my favourite boy" – a dead giveaway that my friend was not the intended recipient and then followed 20 lines capturing the essence of her OE escapades – "had a bikkie and went to a club doing lines and drinking overproof rum till 7 am. Took a slight detour to the pub, sat drinking jugs of Pimms and voddies all day, went to a local curry house but was so pissed I fell off the chair. Nearly got kicked out for being so obnoxious, wicked, awesome etc." My friend later received the sanitised designed-for-parents version, just five lines of the "having-a-great-time, things-are-very-expensive-here, meeting-lot-of-new-people" variety. The big OE. They say some things never change. Sowing your wild oats and only ever giving your parents half the story. This all happens before you supposedly buckle down and get serious. But the question is – will today's early 20-somethings follow this pattern set by their parents? Baby boomers who pioneered the OE experience have been infamous for their liberal parenting. They are the generation who truly believe they are mates with their children. Boomers pride themselves on honest communications with their kids, leading to lame comments such as "look if my kid was doing that sort of thing it would certainly tell me," and "deep down I know they are sensible kids." But deep down is a concern that their kids have had it all too easy and might never get serious (on one hand parents rabbit on about life being harder these days for young people and then complain about how good their kids get it on the other!). Parents worry about their kids' general lack of responsibility and laissez-faire attitude which show no signs of abating. They worry over the "rude awakening" these kids will get one day when they find out how tough life really is, but wonder if this day will indeed ever come.'

...*The rising generation apparently thinks too much about looks and too little about life*. The first generation to reach adulthood in the new millennium will be streetwise, with bulging closets and little ambition, says a report. Researchers from an advertising firm interviewed urban teens aged 14 to 18 over 3 years to find out what they want out of life. What they discovered was a generation with few goals, no real understanding of the world beyond these shores and a near-obsession with appearance. "They are very much into themselves," said the firm's national planning director. It's really quite disappointing because there's no real depth there." The 250 teens from Auckland and 50 from Wellington who took part in the study overwhelmingly chose designer duds over bargain buys, viewed drugs as relatively harmless fun, thought cellphones were essential to daily life and saw education simply as a means to a high-paying job. They have pride in NZ but think we put ourselves down too much, and are too close to AUS and too far from anywhere else. They want to remove the Union Jack from the flag, replacing it with a silver fern or Maori symbol. In five years they want to be overseas on their Big OE. Teens the *Herald* approached agreed with the report's main findings but did not resemble the self-absorbed youngsters with a short attention span it described.'

...IT'S HARD TO JUDGE A GENERATION BY ITS STATISTICS. FIVE years ago, my generation of [USers] was a group of over-stuffed slackers; today we're corporate raiders. An unlikely transformation. But there's at least one statistic that resonates: more of us are taking a full five years to get through college. Most [US] parents look at this as a sort of slacker ritual – the obligatory year of coffee drinking and... reading

[beatnik authors] before graduation. But there's another way to regard that extra year: as a peace dividend. A generation ago, in the midst of the Vietnam War, the idea of a year off from college was dangerously ridiculous. Leaving school meant a ticket to Saigon. Two generations ago it was Korea. Three generations ago, war-torn Europe or the inferno of the Pacific. My generation has had the blessing of growing up in peaceful times, and it has made all the difference. That fifth year of college has given us, in the best sense of the cliché, a chance to find ourselves. It is premature (also probably unlucky) to call Generation X the peace generation, but the evidence is mounting. No generation in [US] history has had less traffic with war or its brutally congruent demands for sacrifice and faith. And because we haven't had to fight, we've been free from the conformist pressures of a nation at war. We've found our own, unique identity as a generation that thinks and does as it pleases... Technoliths like Microsoft and Nike are earning their spectacular growth on the backs of twentysomething executives who work overseas and are fighting not only for the cause of their chosen company but also to propagate a belief system that has served us well... The globalized, interconnected economy we are helping to create is likely to be our best insurance of a peaceful world for our children... Around the world the ineluctable algebra of economic and political liberalization (less war = more money) is catching on... As a friend told me over dinner in Kuala Lumpur last month, "Age isn't the issue. Ambition is." And with nearly 50% of the world's population under 30 years of age, with great ambitions for themselves and their countries, prospects for the two essential ingredients of peace – capitalism and democracy – seem better than ever... It is easy, of course, to imagine a wonderful future when all you've known is tranquillity. But... is this the start of a thousand years of peace, secured by a certainty that what we have now is forever worth keeping? Even the most cynical historians... now seem to agree with us: freedom, tolerance and curiosity are more than slacker slogans. They are also ingredients of peace. - 1997

In the 1960s there were hippies, in the 70s there were punks and in the 80s there were yuppies. Now, in the closing decade of the 20th century... there has emerged a new social group commonly referred to as "slackers." Like those before them slackers are distinguished from other people by what they wear, say, watch, read, eat and listen to – in short, by what they do. So what do slackers do? Well basically, nothing. Slackers are, by definition, inactive, unproductive, uninteresting, apathetic and, above all, unambitious. Slackers have no career goals and no dreams of making the world a better place. To borrow a phrase from the archetypal generation-X movie *Reality Bites*, slackers are masters at the art of time suckage. Or alternatively, to borrow a phrase from... Bart Simpson, slackers are underachievers and proud of it. Now you may be tempted, particularly if you belong to an older age-group, to pour scorn on these young hooligans, chastising them for their lack of a good work ethic and so forth, but before you do you should bear this in mind: it is my hypothesis that the slacker lifestyle can be seen as an understandable response of young people to the society that confronts them... today... [O]ne of the fundamental tenets of... the philosophy that underpins the state-enforced curriculum of today's schools... [is that individuals are] powerless to control [their] own destiny, that a person's lot in life is predetermined by factors beyond his or her control (race, sex, socio-economic status). Confronted with that, it is easy to see why young people conclude that it is futile to try and do anything. After all, you can't fight fate.

Truth be told the world's a disgusting place, dad. Since we're helpless to do anything about it, we've decided to embrace its many horrors.

We wanted to reflect that this generation is the first generation who can't expect to do better than their parents... - *This Life*

My parents' generation had... this... great delusion... that our comparatively prosperous, free and just way of life, in North America... was heading for even greater prosperity, freedom and justice. Even in its imperfect state, this way of life seemed to provide the norm to which all other nations would aspire. Depressions, dictators and nuclear weapons were seen as regrettable swerves only... with[in] the cybernetics of the system.

filial piety, loyalty to and respect for one's parents. Parental respect is fundamental in Jewish and Christian tradition as one of the Ten Commandments. However, its importance is perhaps greater in Oriental cultures. In China and Japan it is one of the cardinal virtues of the Confucian Canon... According to the Canon, parents are to be revered in death as well as in life...

The concept of respecting live parents is based on their role as a child's primary provider (of shelter, food and knowledge) until the child reaches adulthood – and, in return for that respect, the child trusts its parents to perform this role to the best of their ability. However, if a parent fails to do so – because it is either incapable or unwilling – then it has broken the unwritten contract between parent and child, and doesn't deserve any respect (recall Socrates' belief that a *parent has no claim to obedience* from its children *unless [it] is wise*).

The fictional cartoon character Homer Simpson is widely – and rightly – criticised for his lack of parental skills, yet Homer is an adult who isn't ashamed to admit to his 8-year-old daughter that 'since the time you learnt to pin your own diapers you've been smarter than me.' It is reasonable to expect each generation of humans to be smarter than the previous one – because human knowledge, like technology, has increased progressively. This theoretical improvement, which has been accentuated by the acceleration of real improvements coming in the fields of human knowledge and technology during recent decades, could be called the GENERATION GAP. Since 'differences of opinion or attitude between different generations' (the common definition of a *GENERATION GAP*) ought to be an expected consequence of that theoretical improvement, parents can largely be blamed for any conflict between themselves and their children – especially if the elder generation fails to acknowledge (due to vanity, perhaps) that the younger generation probably has learnt things they never did, and what the younger generation has learnt may have rendered the elder generation's values obsolete; absolutely if the conflict is a result of a clash between the younger generation's desire to improve the world and the elder generation's apathy towards improving the world (or if the elders support the belief that *feeling one could act is more important than acting itself* – because anyone who isn't part of the solution is part of the problem!).

It has been said that 'if the kids are united they will never be divided'. Chinese children were once united enough as the Red Guard to 'kill – or drive to suicide – 1 million teachers.' They were inspired and 'encouraged by Mao' (an adult communist who believed that 'revolution is rebellion and violence', and who merely used the Red Guard to advance his own ambitions). Many of the Red Guard's members have, however, grown up to embrace capitalism; and, as line 4 of the previous page shows, modern youth is not united in its desire to create a moneyless society – let alone a better society (r:p1655, ln8)!

The elder generation could try to defend its apparent lack of concern for the future of its children and this planet – seemingly confirmed via its willingness to choose producing more products (many of which serve trivial purposes) over producing less pollution and not wasting resources – by arguing that, because the children have most to gain from the future, they should be responsible for creating a different future (if that is what they desire) when they have become the generation with the power to do something. However, even if they were united, is it fair to expect the next generation in power to be responsible for fixing the mess made – or, at least, contributed to – by the current generation in power?

You can blame history You can blame politics You can blame nature You can blame [their parents and grandparents] You can blame God But you can't blame the children – unicef

2: GALS?

I STAND in my sunny kitchen, opening my mail, the kids running in and out, biscuits baking in the oven. I sort the letters: a birth announcement from an old friend, a note from my mother, and more bills than I can pay. And the appeals for help. I flip through them swiftly – the dying children, the exploited working mothers, the endangered wildlife refuge. They come every day, these tragedies and terrors, into the peace and chaos of my kitchen, and every day I hesitate before I throw them in the rubbish. If I look at them it breaks my heart, and just now I can't afford to have my heart broken – I've lost my job and I'm a single mother. So I harden myself against opening them at all. Then I watch my own healthy children playing, and think again. Do I want them to grow up turning their hearts and eyes away from people in trouble? Do I want them to think it is someone else's responsibility? If they see me throw away a request without considering it, will they learn to be callous? I want to teach my children that helping others is a necessity, not a luxury... that their actions and informed opinions can matter.

...mum's gonna fix it all soon mum's coming round to put it back the way it oughta be...

"I always knew some day mom would... rise up a[gainst]... our... oppressors." ..."At the risk of editorialising, these... [mums] must be dealt with in a harsh and brutal fashion otherwise their behaviour could insight other[s]... leading to anarchy of biblical proportions. It's in Revelations people!"

...in... Athens... there was distress, fear, and discontent. How deeply the people felt the pressure of the long war is uttered in the comedy of *Lysistrata* or "Dame Disbander" which the poet Aristophanes brought out at this crisis. The heroine unites all the [gals] of the belligerent cities of Greece into a league to force the [guys] to make peace.

...basically, what's wrong with humanity is [guys].

...[gals] have the darnedest way of winning arguments without arguing.

...sisters you've got the power now use it.

...the... movement... wants a shift in priorities such that those who interfere with the environment should have to justify doing so, rather than having the onus of justification rest on the environment's defenders. A precondition for this... is an awareness of the 'soft' boundaries between ourselves and the non-human natural world. I pointed out... that in this connection deep ecologists are presented with a formidable problem of persuasion – most people simply do not think like that and it is hard to see how they ever will. Ecofeminists, though, suggest that there are millions of people thinking like that, or at least potentially on the brink of doing so – [gals] themselves... 'The identity and destiny of [gals] and nature are merged'... and... [since gals] are closer... to nature... than [guys, they] are therefore potentially in the vanguard as far as developing sustainable ways of relating to the environment is concerned... Ecofeminists... usually... simply identify some... positive... traits that they argue most [gals] already have... and then suggest that... we... and... the planet would be better off if... all of us... adopted such traits: Initially it seems obvious that the ecofeminist and peace argument is grounded on accepting a special feminine connectedness with nature or with peaceful characteristics, and then asserting this as a rival ideal of the human (or as part of such an ideal).

mother goddess [refers to the] mother-figure deity (also called the Great Mother), goddess of the entire complex of birth and growth, commonly a central figure of early nature-cults where maintenance of fertility was of prime importance in the religion. Such a figure is found in pantheons all over the world; Isis, Astarte, Cybele, and Demeter were traditional mother goddesses in the eastern Mediterranean.

...[St] *Teresa of Avila*... (1515-82), Spanish Carmelite nun... [known for her] strong character, shrewdness and great practical ability... Her importance is twofold. As the reformer of the Carmelite Order her work has survived in the great number of discaled monasteries which venerate her as their foundress... As a spiritual writer her influence was epoch-making, giving a description of the entire life of prayer from meditation to the so-called 'mystic marriage' or union with God. Her combination of mystic experience with ceaseless activity as a reformer and organizer make her life the classical instance for those who contend that the highest contemplation is not incompatible with great practical achievements.

...Mother [Teresa] (1910-), Roman Catholic nun, born in Yugoslavia, founder of an order (Missionaries of Charity) which is noted for its work among the poor and the dying in Calcutta, India, and throughout the world.

Wanted: Saint To Work Slums... M[other Teresa was once asked if it] would ever choose a successor to run her Missionaries of Charity, the mighty order [the nun] founded in 1948 to help the world's poor and neglected... "If [God] can find someone as small as me," [Teresa told a biographer, "then God] can find someone even smaller." [The biographer marvelled: "Mother Teresa actually considers herself] so ordinary that anyone can replace her." Someone will have to. Last week, leading nuns of her order began gathering in Calcutta to undertake the extraordinary task of picking a new Mother Superior-General. Suffering from acute back pains and still bed-ridden after a heart blockage in November, Mother Teresa, 86, has disclosed that [it] is stepping down as head of the order, which has about 5,000 members in 120 countries and receives millions of dollars a year in donations... [I]n December... the order... summoned its 96 most senior nuns to Calcutta. They will spend next week cloistered in two local retreats, meditating and praying before starting the process of selecting a new Mother Superior-General... The ceremony is similar to the Vatican's way of choosing a new Pope from among Cardinals... [except that elections] for Mother Superior-General are held every six years, but only once in the order's history has anyone cast a ballot against... Teresa staying on. That was... Teresa herself... Though widely admired, [all of]... the forerunners for the job... lack the founder's easy warmth. "We don't have anyone with... Teresa's special love and powers of attraction," laments one nun. For that reason, the most beloved [gal] in Christendom will likely stay on as the order's titular leader until her death. At the order's headquarters... the sisters are busy shooing away hundreds of well-wishers and trying to dissuade... Teresa from doing any work. Even using a wheelchair these days is painful, and [Teresa] is losing her ability to speak... ■ Mother Teresa and [the] Pope... get more fan mail than any other celebrity.

...*Tiny nun shared special relationship with Pope* MOTHER TERESA... was perhaps the only [gal] ever to enter the "popemobile" with [the] Pope... The episode on February 3, 1986 – a day [Mother Teresa] called the happiest day of her life – was one which showed the Polish Pope had a special affinity with the tiny nun because [the Serb] was a living symbol of grassroots Christian charity. The vehicle, which usually transports only the Pope, his private secretary and the local bishop, had just arrived outside her home for the dying in the teeming, fetid Kalighat slum. Without thinking about protocol, the Nobel Peace laureate hopped in and spontaneously hugged the Pope, who kissed her head... After the emotional visit the Pope came the closest [the pontiff] has in public to calling Mother Teresa a holy person... Two years later the Pope decided the world centre of

Catholicism needed more examples of Mother Teresa's charity[and] allowed nuns of her... religious order to open a soup kitchen inside the Vatican walls to help feed Rome's growing list of homeless and destitute. The Pope believes Mother Teresa was one of the greatest ambassadors of Christianity in modern times because [the nun] opened her door to everyone... in a non-judgmental way... [The nun,] who... had planned to spend yesterday holding special... inter-faith prayers at St Thomas'... for Diana, Princess of Wales... died in Calcutta on Friday night... [Teresa was unable to] attend Diana's funeral because of [her] fragile health... The... [US] President... linked the two... in his weekly radio broadcast.

...*World grieves for two saints*... Perhaps the two most famous [gals] in the world... died within a week of each other, and British civil and religious leaders, including the Queen, were quick to draw parallels between them... The two had met on several occasions, the last time in June in New York, when they walked hand in hand and prayed together. Di... had also visited the Missionaries of Charity in Calcutta in 1992. They represented a strange alliance – the young, tall, fashionably dressed Princess from the English aristocracy and the wizened, increasingly frail, Albanian-born missionary, clad in her trademark white and blue uniform. Yet they recognised in each other a concern for others. Mother Teresa... had been “shocked” by the Princess' death, according to a spokes[person] in her order. The... head of the Catholic Church in England and Wales, said: “It is rather lovely to think that Mother Teresa, who was very friendly with Princess Di... should have gone so soon to join her.” Both had “in... their own ways... given us a wonderful example of how we should all be concerned for each other and serve Christ in each other.”

...*LIVING saint Mother Teresa*... died of a heart attack... on the eve of Princess Diana's funeral... only months after staging a miraculous recovery from debilitating illness. The Indian icon... would be kept at St Thomas Church... in south Calcutta until Wednesday for public viewing, authorities said... The body... would be buried later that day under the chapel in her order's headquarters... [The] Pope... was “deeply moved and pained” by the death of Mother Teresa and had retreated to his private chapel to pray, a Vatican spokes[person] said. India's... President... described her as “an angel of mercy”, adding: “Such a one as [Teresa] rarely walks upon this earth.” [The]US President... praised the tiny nun as an incredible person and one of the giants of our time... [The] French President... said there was “less love, less compassion, less light” in the world after the death of Mother Teresa. Hundreds of grief-stricken followers of the [nun] who was called “Saint of the Gutters”... gathered outside Mother House, the order's headquarters, as news of her death spread... Mother Teresa was born Agnes Goixha Bejxhiu... in Skopje, in what was then Serbia... on August 27... 1910... [In 1928 Agnes entered the] Loretto Abbey in Ireland... [H]er divine call to work among the poor had come in 1946 and [Agnes] opened her first Calcutta slum school in 1949[, then] took the name Teresa, after France's Saint Therese of the Child Jesus. In mainly Hindu India, [Teresa] was simply “Mother”... When told... [about winning] the Nobel Peace Prize in 1979 for bringing hope and dignity to millions of unwanted people, [Teresa] said: “I am unworthy. The poor must know that we love them,” was her simple message... The world disagreed, showering more than 80 national and international honours on her. In... [1980 Teresa was awarded the] Bharat Ratna, India's highest civilian award[, then in 1983 received an] honorary Order of Merit from Britain's Queen... [Teresa narrowly escaped death in 1986 in a] Tanzanian air crash... [Last year Teresa was granted an] honorary American citizenship – only [the]fifth person ever... [A NZ]er... who worked in orphanages in Bombay and Manila run by Mother Teresa's order... and... met... her... several times... said... [“Teresa] was very slight but... had the most incredible power, humanity and love in her which [the nun] would show to everyone [it met. Teresa] would never turn anyone away who wanted to see her... [often staying] up to two or three in the morning to take in the queues of people who stood outside the gates...”

...*MOTHER TERESA* was a worldwide symbol of untiring commitment to the poor and suffering, but like most of the world's icons... also drew criticism. [Teresa] was the target of some unflattering comments for her conservative beliefs and alleged tolerance of suffering. A 1994 British television documentary that questioned the worth of Mother Teresa's charity work in India's slums was perhaps the sharpest attack on her actions. The controversial programme, called *Hell's Angel* and aired on Britain's commercial Channel 4, called the media myth around her a mixture of “hyperbole and credulity”... It... accused her of preaching the message that the poor must accept their fate, while the rich and powerful are favoured by God. “[Teresa] lends spiritual solace to dictators and to wealthy exploiters, which is scarcely the essence of simplicity, and... preaches surrender and prostration to the poor, which a truly humble person would barely have the nerve to do,”... Mother Teresa's supporters around the world rose up in... [her defence. The] leader of Britain's Catholics, said the documentary was a grotesque caricature. “[Mother Teresa] represents what ordinary people everywhere acknowledge as genuine holiness,”... For decades, television helped to spread Mother Teresa's message of hope for the destitute and brought the image of her tiny, stooped, birdlike figure into homes across the world. A 1968 BBC television interview helped publicise the diminutive nun's charity. Despite her apparent frailty, [Teresa] was seen rushing to Armenia after an earthquake, to Ethiopia during a famine and to Cambodia and Lebanon during war. But the 1994... documentary and, later, published comments by some Westerners familiar with her charity work, said her homes provided haphazard medical care and lacked basic medicines like painkillers... *The Lancet*, a leading British medical journal... wrote... “Mother Teresa prefers providence to planning.” The Missionaries of Charity... did not hide the fact that it was an order of nuns before a group of healers. A yellowing script outside its Calcutta headquarters quotes from a 1977 interview with Mother Teresa: “We are first of all religious; we are not social workers, not teachers, not nurses or doctors, we are... sisters[who] serve Jesus in the poor.” ...The Missionaries of Charity now feeds about 500,000 families each year, teaches 20,000 children in its schools and treats 90,000 lepers in its clinics.

...Reflecting Mother Teresa's ability to touch rich and poor, the thousands of mourners who walked past her body yesterday included barefoot paupers, Government leaders, a former beauty queen and an Indian musician... Mother Teresa's funeral on Saturday will be held in the 10,000-seat stadium where [the]Pope... addressed the faithful during his 1986 visit to India... The Indian [PM]... has called for a state funeral, meaning Mother Teresa will be given the full military honours normally reserved for heads of state. That also makes it likely Presidents and P[M]s from around the world will attend... No decision had been made last night on who would represent... [NZ. Mother Teresa made] only one visit to N[Z], in 1973... More than 20 cardinals and bishops from around the world will join the 90-minute Mass.

...Mother Teresa, whose message of peace and compassion went beyond the boundaries of creed and nationality, will go to her burial place on a gun carriage, draped in the Indian flag. The military trappings of Saturday's state funeral might clash with the image of the Nobel Peace laureate – but church leaders said yesterday that it was the Government's way of giving ...her... its most prestigious farewell... “People might think of war when they see a gun carriage, but this is not the way it... should be taken.” ...[● A long-time friend of Teresa] cannot remember the dates, but... clearly recalls a lot about the young nun who had a strange request. “Father Vandexam kept asking me whether I knew of a room in a mud hut with a mud-tiled roof,” [the friend]... aged 89... said yesterday, speaking of the priest who was seeking accommodation for... Teresa[– “who] wanted to live amongst the poor.” ...Teresa... [eventually] settled for the first floor in [the friend's] house, but lived austere... “Look, there the sisters used to play tug of war – and [Teresa's] team... always los[and fe]ll down on the floor.” But the humour did nothing to stop the nun's inner spirit...

Yesterday... the Catholic broadcaster Telepace aired a humorous conversation which took place in Rome in May between Mother Teresa and[a] Vatican cardinal... in which Mother Teresa was asked what would happen when [the nun] met St Peter in heaven. The founder of the Catholic Church, said Mother Teresa, would probably complain. “St Peter will tell me: ‘But what have you done, Mother Teresa, filling up paradise with all your poor people?’” ...The cardinal then suggested that St Peter “would line up all the people whom you have sent him down the years.” Mother Teresa replied: “There are 50,000 of them and they all died with St Peter's ticket [a smile on the face].”

...With their charismatic patron gone forever, many... workers and children... at... the orphanage that Mother Teresa ran in the Calcutta slums... were wondering about their future... One member of the order, speaking on condition of anonymity, said it would be difficult to go forward without Mother Teresa to inspire others to help and donate funds... [Her] order's finances are not public, and there are no reliable estimates on how much it takes to run its more than 500 missions... [Incidentally, people] the world over considered Mother Teresa... a “living saint” but years or

decades may pass before the Catholic Church can elevate her to sainthood. Despite a person's reputation during his or her life, the process that leads to sainthood cannot begin until after death. And whatever Mother Teresa did during her lifetime, two miracles after her death have to be recognised by the Church in the complicated and sometimes controversial process of getting a halo. If a person has earned a "reputation of sanctity" among the people, the local bishop can begin the process but... must wait at least five years after the person has died. When the prelate begins the cause, the candidate for sainthood receives the title "Servant of God." A "postulator" is appointed to help gather information from people who knew the candidate, seeking evidence of holiness. The evidence – usually amounting to many, many volumes – is sent under seal to the Vatican's Congregation for the Causes for Saints. A "relator" is appointed. His job is to evaluate the evidence and make a recommendation. If the investigation ends positively, then begins the long process towards beatification and ultimately sainthood.

...some in Calcutta say they already know the answer. "[Teresa]'s already a saint, we don't need the Vatican's word," said... a business[person]... Since her death... the Vatican has been flooded with requests to waive the five-year waiting period before the process of canonisation begins... [However], the Vatican's authority on doctrine, said it was unlikely measures would be taken to quicken the procedure... Mother Teresa... dedicated her work to God, saying [it was possible to see God] in every suffering human being... But... [to] name her a saint, the Vatican must be convinced Mother Teresa has performed miracles. Such miracles can come after death, such as curing an ill believer or answering a supplicant's prayers. Church leaders said they were waiting for evidence of a miracle. "It is a sign from God that we wish for; we pray for that,"...

THE shelling of Beirut had just reached its peak in 1992 when Mother Teresa decided to head right into the thick of it all to rescue 60 severely retarded children who were without water and power in a bombed-out hospital. A saintly mission it was, but completely insane, several priests told her: Her life would be at risk... [The nun] eventually persuaded the US ambassador to allow her to go to the children in Muslim West Beirut if there were a ceasefire. "I'm certain there will be a ceasefire tomorrow," [the nun] told him. The next day the bombing stopped, and Mother Teresa and a caravan of hospital workers carried the children, one by one, to safety... And that was her life's philosophy – to help one person and love one person at a time, no matter how hopeless their situation, and then go on to the next one.

...[a professional golfer] was once in a tournament in the Philippines when Mother Teresa and [the]Pope... were there together. A government official asked... which one [the golfer] wanted to meet. [The golfer] said Mother Teresa. "We'll have other popes." ...Mother Teresa's niece is quoted in the documentary *Mother Teresa*... as saying that as a child the [person] many now consider a saint was "mischievous, playful but no goody-goody"... Mother Teresa was criticised for focusing on giving people a dignified death instead of focusing on trying to make them healthy; for being satisfied with changing lives "hovel by hovel" instead of devising large-scale programmes to wipe out poverty; for preaching Catholicism's opposition to abortion instead of helping India cope with the problems of overpopulation. [A]British journalist... who turned a caustic eye on Mother Teresa in his 1995 book, *The Missionary Position: Mother Teresa In Theory And Practice*, accused her of deepening fatalism in the hovels of [a] city of 13 million. "I think it is very beautiful for the poor to accept their lot, to share it with the passion of Christ. I think the world is being much helped by the suffering of the poor people," [the journalist] quoted her as saying... [H]er life in Calcutta's slums "illustrated something that the high priests of development often overlook: in order to pull people out of poverty, it is important to first empower them with the hope that change is possible," [another]commentator... wrote in a recent *Newsweek* column.

...THE rag picker lay on the road in the shelter of a parked bus. Her body racked by fever and respiratory disease, [the rag picker] lay huddled under a thin blanket on an old sack... [B]ehind her stood the closed doors of the Home for the Destitute and Dying in Calcutta... It seems a surprising story. Mother Teresa was a global icon of... compassion, but since her death, entry to her home for the destitute has become increasingly restricted... [T]he No 3 in the order, has denied in local papers that sick people have been put back on the streets... [though, according to No 3, most] beggars "are much more comfortable on the streets than inside a room full of beggars". From the middle-class streets of Lake Range, 8km away, emerged another... story. Two weeks after... Teresa died, people looked out of their windows to see a Missionaries of Charity van pull up. The doors were opened and an 80-year-old... was placed on the pavement. Witnesses claim [the 80-year-old] was half-paralysed and visibly distressed. Police were called but nobody could get any sense from the [80-year-old] who merely babbled and sobbed. They returned her to the Missionaries of Charity where [the 80-year-old] was readmitted, barely an hour and a half after being abandoned... [T]he Nepalese-born convert from Hinduism who has become... Teresa's successor, has denied that [the 80-year-old] was treated badly. The missionaries could not accommodate everyone, [the successor] said... After... Teresa's death, [the new No 1] declared the poor would always be poor. "Our job... is to provide comfort and help them put on a brave face." ..."I am afraid there may be a little less charity these days," says... the Catholic priest who led prayers after... Teresa's death.

...[GAL] of the WORLD... It was early in 1985 and [the US] president had just given Mother Teresa the Presidential Medal of Freedom in a Rose Garden ceremony. As... the... saint in a sari... walked down the corridor between the Oval Office and the West Wing drive... I could not help it: I bowed. "Mother," I said, "I just want to touch your hand." [Mother Teresa] looked up at me... and... pressed into my hand a poem... written[by herself]... I took the poem from its frame the day [its author] died. It is free verse called "Mother's Meditation (in the hospital)." In it [Mother Teresa] reflects on Christ's question to his Apostles: "Who do you say I am?" [Mother Teresa notes that Christ] was the boy born in Bethlehem, "put in the manger full of straw... kept warm by the breadth of the donkey," who grew up to be "an ordinary [guy] without much learning." ...We think saints are soft, ethereal, pious and meek. But some saints are steamrollers – great organisers, great combatants in the world... You have to be a pretty tough character to organise a universe that exists to help people whom other people aren't interested in helping.

...[the new US] Secretary of State does not claim to be a great strategic thinker, but [does claim to be] a tough power broker...

The most powerful [gal] in the world... was already trying to influence people's views of foreign policy when... in ninth grade[the] recent refugee with a funny accent and the wrong clothes... decided to start an international-relations club and make herself its president. Now, 46 years later, [the refugee] is poised to become one of the most influential foreign policy powers in the arena, in large part because her voice carries further than anyone else's – right into the White House. When [the President] was mulling his choices for a Secretary of State... [it] soon acknowledged that no [gal had ever held the position and, luckily, no] one was more skillful, or colorful, at explaining U.S. foreign policy interests than his outspoken U[N] ambassador. While her critics caricatured her as a loose cannon, without the heft and discretion to be a careful diplomat... those who worked with her in private knew that those lively broadsides that made such great bites on the evening news had been carefully scripted and well rehearsed... The test... is whether [the former ambassador] will be able to make her case for U.S. foreign policy initiatives as effectively with foreign governments as... with [the President. And gal] foreign-policy officers, noticing that [their new boss] hasn't appointed any [gals] to prominent slots so far, are grumbling that the glass ceiling may now be reinforced as the floor beneath her feet.

...GIRLS ON TOP... IF [guys] want jobs in future, they better learn to be... assertive... ambitious... and... bossy like a [gal. More gals] are breaking through the glass ceiling to become bosses, although slowly, and those still being thwarted by not gaining the promotions they deserve are leaving to set up their own companies and doing it better than [guys]. How much of their success can be put down to a "[gal]'s way" of doing business is a matter for debate – many say it's personality, rather than gender. But researchers agree that the traditional macho culture lingering in senior management, where being one of the boys can be as important as competence and experience, is a major factor in the painfully slow progress of [gals] to the top of the career ladder. A 1994... survey of 188 organisations found that only 5.7% of [gals] employed in the private sector held management positions, compared with 11.4% of [guys]; and only 4.6% of [gals] working for public bodies were bosses, compared with 19.3% of [guys]. Those who did reach senior management were paid 85% of what their [guy] counterparts earned. Those passing over a [gal] to give a [guy work]mate a job, prompting her to leave to become her own boss, could be doing their company a disservice... [because gals] are 49% more

successful in starting up their business than [guys]. At the end of their first year, [gals'] companies have an 85% success rate compared with an overall rate of 50%. [Gals] are also becoming employers at a faster rate... [and.] in 1993, three-quarters of their employees were [gals. NZ gals'] success matches that of their sisters in other [First World countries – in AUS, gal] business owners are responsible for about half of private sector employment creation; in Britain, nearly a third of people who set up firms are [gals]; and in the U[S], the number of [gal]-owned businesses has increased by 78% since 1987[(when 'there were 4,114,800 firms owned by gals, representing 30% of all US firms in number and 17% of the total receipts). The percentage of gal-owned firms in the US was highest in social services (83%), apparel (55%) and personal services (53%'). A US] survey found that [gals] do a better job than [guys] in 28 out of 31 key management areas, including identifying trends, maintaining productivity and keeping promises. A study of 22,000 French firms found those run by [gals] were twice as profitable and growing twice as fast as those run by [guys]... So after centuries of discrimination and restriction to the home, what has made [gals] so good at business? ...a Massey University management systems lecturer... thinks it is the very conditioning that girls still receive – to be empathetic, flexible, and take into account the needs and opinions of others – that has made them more suited to the work environment of the '90s. They are the qualities recognised as reaping a better, more productive response from staff, and that best cater to those wanting, and often needing, to better balance home and work. If a manager does not provide a “family friendly” workplace to take into account childcare arrangements, the desire for parental leave and so on, [it]... may find good staff leaving and difficulty in attracting replacements. Then there's [gals'] inherent abilities at organisation, efficiency and thinking of a number of different things at once, developed from generations of raising children, supporting partners and running households... In another study, by Auckland University, more than 80% of [gal] bosses said their main way of dealing with poor work was to “talk it over”... and in response to a question about how they went about firing someone, 42% said “we don't”. IT MAY be that [gals] feel compelled to take the consultative approach because to appear too aggressive and pushy can work against them... In contrast, a recent British study found in tough economic times, when redundancy is more of a threat, [gal] bosses adapt for survival by becoming more aggressive and dictatorial. And – contrary to the supportive, nurturing atmosphere that survey respondents claim is created by most [gal] bosses – some... can appear mysteriously intent on destroying staff morale... [The] founder and former editor of *Fashion Quarterly*... freely admits [it] is not easy to work for, “but then I've never needed to be liked.” ...[it] doesn't think her lack of background in journalism was a hindrance in running the magazine. “...I can't write, but I hire people who can...” ...[By the way, NZ's] Business Roundtable is set to get its first [gal] full member... when[the Mobil NZ] chief executive... joins.

...N[Z]'S Parliament has earned a pat on the back for having the sixth-highest proportion in the world of [gals] in power... with 29.2%... N[Z] led the Pacific parliaments, ahead of A[US] on 15.5%, and was behind Sweden (40.4%), Norway (39.4%), Finland (33.5%), Denmark (33%) and the Netherlands (31.3%)... And while the country's [gal] politicians have welcomed the... Inter-Parliamentary Union ranking... [amongst] the world's 179 Parliaments... they say they will not be happy until [guys and gals] are equally represented in Parliament... [The former Gals'] Affairs Minister... said... “[Gals] are 52% of the population so it's not unrealistic to think we can improve our position. People think we've got there and that's it, but we have to keep fighting the battle. Do we have enough [gals] in Cabinet or as select committee chairs?!” The new Minister of Gals' Affairs, who is NZ's only remaining gal] Cabinet minister... and [the Labour Party] leader... also said the result could be improved on. [After all, NZ has yet to have a gal PM – a situation the Labour Party leader hopes to rectify when the country holds its next parliamentary elections.]

...Pakistan's Supreme Court upheld the dismissal of [the country's former PM (r:p200, ln68)] yesterday... “There is enough material to establish corruption, nepotism and misrule,” [the]Chief Justice... said at the end of a hearing... into [the former PM]'s appeal against her dismissal by[the] President... on a range of charges. [The former PM] denies them all. The... [former PM] said the court verdict was part of a plot to drive her from politics... [In local news, three] out of four N[Z] First Cabinet Ministers are relaxed about any change in National's leadership, and say it would not trigger a collapse of the coalition... if [National's 5th-ranked MP – the current Minister of Gals' Affairs –] took the reins. Their comments will reassure some nervous... backers[of the 5th-ranked MP], who fear replacing [the incumbent PM] is a high-risk strategy because it could lead to the dissolution of the coalition and an early election. [The 5th-ranked MP] has recently tried to build bridges with NZ First... [by saying that it] would be happy to be part of a National-NZ First [coalition] after the next election. [However, the NZ First cabinet] ministers' comments are at odds with the fourth NZ First cabinet minister, [and]party leader... who has indicated to [the 5th-ranked National MP] through intermediaries that the coalition deal would be off if [it became PM. The NZ First leader] has a close working relationship with... [the incumbent PM. However, the] NZ First deputy... would be happy to work with anybody. “I don't give a toss who the leader of the National Party is, as long as the coalition agreement is stable,”...

When dreams are shattered people will say the strangest things. Take [the leader of the Labour Party]. In the aftermath of [a gal]'s takeover of the leadership of the National Party, and undoubtedly disappointed at having lost the opportunity to become [NZ's first gal PM, the Labour Party leader said it] still hoped to become the first... [elected gal PM of NZ. Which reminds me: the person who has stolen her opportunity] recently... told... a story... about... when [NZ's first gal Governor-General] went into a school and a little boy said, “Oh... do you think a [guy] will ever be Governor-General?”

...the... “freshness” that [the Minister of Gals' Affairs] yesterday promised to bring to National's line-up looks like prompting a clean-out of the party's eight-member front bench. But the cabinet reshuffle to follow [the 5th-ranked National MP]'s coup is still a month away because [the incumbent PM] will not formally step down until after [it] returns from China... [The PM]-in-waiting... may opt for a staged reshuffle, making initial changes next month before unveiling a pre-election cabinet makeover when some ministers have made their retirement intentions clear later in the New Year. Her problem, however, is that her back benchers do not have an abundance of “fresh” talent, unless [the PM-in-waiting] takes the unlikely step of elevating someone from the 1996 intake.

...When [the PM-in-waiting first] came into politics [it said: “I'm] determined to serve three constituencies: those who passionately believe in private enterprise and who create wealth so we have jobs and social services...; those who cherish freedom and believe in taking responsibility for themselves and their own before looking to others...; and... those whose interests are not easily heard in the corridors of power and, in particular, [gals.” On]... the shelves in... [her] office was a sign of the times: “Whatever [gals] do, they must do twice as well as [guys] to be thought half as good. Thankfully this is not difficult.” ...yesterday... the... reminders that [National's 5th-ranked MP] is likely to become the country's first [gal PM] were in the flowers colouring the otherwise-bland surroundings of her Beehive theatre press conference, and her comment when asked if it would be difficult being a [gal] in the post. “I have to tell you walking over t[v] cords in high heels is, I suspect, more difficult than for my [guy] colleagues.” In the House, [the PM-in-waiting] made her entrance a fashionable few minutes late, and glided in her stately fashion to her seat next to the deputy National leader for now... In the snap debate that followed, [the PM-in-waiting] adopted her distinctive combative stance, an imperious, arms-spread-on-the-desk delivery. [The PM-in-waiting] rode out most of the opposition derision but they slipped a few in under the guard. When [the PM-in-waiting talked about the outgoing PM]'s incisive ability to read politics, particularly over the past few days, [one Labour MP] interjected that it was easy to notice a “knife stuck in our back.” At the end of her speech, [the outgoing PM] paused on his way out for a brief handshake with his successor[who, not long ago, did not want to be accused of upstaging the PM. Her husband didn't]t want to talk publicly yesterday... [but] in 1991... said... “Ages ago I could recognise that [my wife] had excellent skills, and I'm enough of a capitalist to say people should use their skills.”

...[an MP]'s strike for the leadership of the National Party caught blue-ribbon supporters off guard... “There has not been wide consultation within the party. A lot of people within the party feel the timing is all wrong.” The [5th-ranked MP's]... caucus supporters... ran the risk of dividing the party and handing the reins of government to “a coalition of Labour, the Alliance and left-leaning N[Z] Firsters.” A former... National Party national executive member... said the caucus should remember [the outgoing PM]'s standing within the party. “[The outgoing PM] is a very

underestimated politician – [someone who] has got a lot of qualities people do not recognise...” ...[the outgoing PM, who agreed to] step down... last night... had led the party for 11 years...

Six years ago [a National Party MP] was being burned in the streets. Protesters roasted her effigy after [the MP] introduced the 1991 benefit cuts as Minister of Social Welfare. Now [the same MP will become NZ's first gal PM]. It has been a painful transformation from most unpopular politician in the country – a position [the MP] still holds unchallenged with many voters – to double-figure support in opinion polls. Even this figure has to be seen in perspective. Her latest 12[%] rating was three points below the [outgoing PM]... But her growing fan club, inside and outside the National Party, believe [the gal from Gore] has the intellect, the determination and, above all, the strength (a word you hear often about her) to lead the country... [The representative of] Ashburton (now Rakaia)... has been talked about as a future P[M] almost from the time... [the mother of two, a former primary school] teacher, farmer, playcentre representative[and] county councillor... entered Parliament in 1987... As Health Minister, [the Ashburton MP] spent three years defending National's... health reforms... But despite the intense unpopularity [her] positions brought her, [the Ashburton MP] never backed away from defending the party cause. Colleagues and opponents alike were amazed at the way [the MP] seemed to invite confrontation on issues – a trademark, many believe, of her unwavering self-belief... [The MP] was... the second of four daughters of a Presbyterian minister. Former classmates... have described her as an undistinguished student who scraped through school certificate but failed to get university entrance... *Enemies call her: Tank-Commander* [or] the perfumed steamroller...

Business leaders are comfortable with the news that [the Minister of Gals' Affairs will] take over the leadership of the National Party. Senior business executives spoken to yesterday said leadership was the vital ingredient missing from the coalition Government... On the question of... [her] suitability for the job... the... chief executive of the gas company Enerco [NZ said the new PM] appeared to have a pragmatic and forward-looking approach to business... [Asked what qualified the new PM for the job, one of her colleagues said that it 'has been a good mother.' The good mother] sees herself as having the skills to do the job rather than having the philosophical approach of standing for a view at a certain time... [To work, her] leadership must change the public impression of the coalition as a tired, two-headed... beast. For that reason, [the new PM] may not be worried if N[Z] First splits and [its leader] leaves the coalition – as long as enough of its MPs are prepared to help National govern with Act and United Party support... to ensure a 61-59 majority. There was no indication last night if and when [the outgoing PM] will step down from Parliament. However, [the outgoing PM] said it was his strongest wish that the coalition agreement remained in “good health” – a sign [outgoing PM] will stick around.

...[the outgoing PM] had been thinking of retiring for a while before... [being] ousted... this week, say family members... [One of his eight siblings] jokingly... planned asking his big brother if [the outgoing PM] wanted a job in his real estate firm... [The outgoing PM] will lose many – but not all – of the perks of office... His drop in pay will depend on his new job, which will probably be as a minister[, but if it]... heads for the back benches his salary will drop more than \$100,000 to \$72,000.

...When top-level visitors come half-way round the world to see you, they naturally expect you to go to a bit of effort to entertain them. But... [the Netherlands PM and the US] Deputy Secretary of State... got more than they expected when they arrived in Wellington in time to see a [PM rolled. The User] is on an Asia-Pacific tour and having met [the outgoing PM] at the Beehive on Monday had to race back to Parliament yesterday morning to meet his replacement... before... [flying] out to Canberra yesterday afternoon. [The Dutch PM] was guest of honour at a state banquet at the Beehive last night, hosted by [NZ's outgoing PM]. The Minister of Foreign Affairs... [– who] is not expected to survive... [for long in the new regime –] said both visitors were “lapping it up... They feel tremendously pleased and a little humble even that we didn't just shut them out and say, ‘sorry, we've got a big political problem here, stay away’...” However... the distinguished guests realised they would be swimming against the tide if they expected much media coverage of their visits and both cancelled press conferences... Financial markets were virtually unaffected by [the coup]...

The election of [a *conservative farmer's wife* as PM]-designate after a bloodless coup places the centre-right economic agenda firmly at the forefront after months of policy drift. In [the PM-designate], business finally has a leader who will “talk the walk” as well as “walk the talk” and strongly champion... [the] free market... Greater self-reliance will become the... National Party's catchcry in competition with the... Labour Party's embrace of dependency and the politics of grievance. This latter stance has aided Labour's rise in the political polls but does nothing to ensure [NZ dis]continues its transformation from a welfare state to an independent, entrepreneurial nation... According to [herself, the PM-designate] grew up in a poor but secure family... There is a strong tone of moral superiority in [her] claims that proper attention to family life can prevent social disintegration and family distress, and that being poor is not the explanation... Having myself been a Presbyterian congregant while growing up in the 1950s, I know that ministers' families, while modestly paid, enjoyed... status in communities. Her minister father would have had a house provided by the church, not market rentals and, unlike modern industries, there are no redundancies from God. [The PM-designate] cannot know what it is like running a home in the era of the Employment Contracts Act, when both parents must work, and when the hours of work and wage packet are unpredictable... There is a danger in taking one's personal experience as the norm, or worse, holding it up as the exemplar for others... [In recent days, the PM-designate] has grown in stature. Her manner is more composed and assured, her smile more beneficent, and her voice as smooth as oil... This sureness of outlook verges on smugness, an unattractive quality emanating from one so privileged... Of course [the PM-designate] can afford to look confident because currently everything is going her way[, although]... an absurd clause in the coalition agreement enables N[Z] First to have three more of its MPs appointed to Cabinet next year. So unless that agreement is renegotiated, [as the PM-designate]'s backers want, National will ultimately have... more... instability... Clearly players like [the outgoing PM, his party deputy, the] Attorney-General... and even the able Finance Minister... are on the way out, no matter the language of appeasement proffered yesterday. All are able cabinet ministers but most are set to become casualties of [the PM-designate]'s need to produce a rejuvenated administration... In [the outgoing PM]'s case, a senior diplomatic posting to Washington and a key policy role in negotiating a free-trade agreement with the U[S] have been mentioned. A Commonwealth role for [his party deputy] and various quasi-government roles for other potential retirees have been suggested... 10 of the 18 staff in the office of the [outgoing PM could also] be out of work... [The PM-designate]'s credentials as a fiscal conservative arise from her stint as Minister of Social Welfare during which [it] implemented benefit cuts announced in the “mother of all budgets” brought in by the other half of the “rottweiler twins,”... On further state asset sales, [the PM-designate] is seen as one who would sooner the Government was not involved in trading businesses, at least where competition is possible... Privatisation of roads, with their monopoly characteristics, was... however... ruled out early in the review of roading which, as Minister of Transport, [the PM-designate] has been overseeing... Some kind of corporatisation of the roading administration is expected, modelled perhaps on the airport companies... Such a change would raise questions about the need for further amalgamations of rural councils, much of whose time and much of whose rates revenue is devoted to roading. On ACC, [the PM-designate] is understood to... favour some competition, though that was not on her agenda when... [taking] up the portfolio... In her eyes, producer boards' export monopolies – where they survive – are also something which have had their day, especially if removing them turns out to be the price of a free-trade agreement with the U[S].

...NZ] First wants a guarantee... that [the PM-designate] plans no lurches to the right before it will consider committing itself to a coalition Government with her... The party's MPs harbour resentment that their support was taken for granted in her leadership coup. This was made all the more galling for them because the coup was propelled by anti-N[Z] First sentiment within National ranks... [The PM-designate], who is said to be surprised by the degree of unhappiness in NZ First, extended the olive branch yesterday... [by saying that it] did not plan to renegotiate the

coalition agreement... The possibility of [NZ First's leader] collapsing the coalition and supporting a Labour minority Government with his own party and National in Opposition has not been ruled out and was canvassed by him at yesterday's caucus. But his own performance in Parliament yesterday, including a bitter attack on Labour, reinforced its unlikelihood. The Labour leader... also put paid to it, saying to change Governments like that in the circumstances would be "inappropriate."

...An assertive [PM-designate] had her first face-to-face meeting yesterday as National Party leader with [the NZ First leader]... Neither was commenting on the content of the talks, but [the PM-designate] is likely to have repeated her assurances that the coalition agreement would not be changed without the parties' mutual consent. Earlier, [the PM-designate had] dropped the delicate diplomacy of the past few days to contemplate a government without [NZ First by saying that NZ]ers wanted a coalition majority government as their first option but, in apparent reference to a single-party minority government, said National had other options... And [the NZ First leader] signalled a subtle but significant change in his resolve not to change the coalition agreement, a position [it] has taken since... [the leadership coup. Yesterday the NZ First leader] suggested... the clause allowing three more N[Z] First MPs to be promoted as ministers by next October... was open to question... Outside Parliament [the NZ First leader] also reiterated his willingness to reassess the sale of assets protected under the coalition agreement... But... [the] coup has given [the PM-designate] and National an instant boost, according to a snap poll of 500 people... for *One Network News*. National is up seven points to 37[%] and Labour is down seven to 45[%]. The PM-designate] doubled her popularity as preferred [PM to 21%. The Labour leader] is on 28[%].

...Electing the head prefect is an exercise fraught with difficulties. Do you vote for the person you like, the sports champion or the one who won't do you in for smoking behind the bike shed? Whatever the outcome, you welcome the process and the chance to have your say. But as this week's Beehive coup has shown, secrecy is more important than consultation in the creation of a new leader. Grass-roots party members have been forced to accept – yet again – that consultation on such high matters of state is a luxury, not a right... Most divisional heads and party members contacted by the *N[Z] Herald* this week said they would have preferred greater consultation by MPs about the decision to replace the P[M], but understood that secrecy was paramount... [as] consultation... would have generated unwelcome publicity.

...The arrival by coup of N[Z]'s first gal PM has enabled her to be] likened to the Iron [Maiden. The replacement of NZ's PM]... received widespread coverage on the international pages of broadsheet newspapers internationally... [-] though there was little cover on television or in tabloids... [-] and prompted an editorial in the *Times*... [which] said the scenario of a coup while a leader was overseas was all too familiar, [although NZ]'s first experience of a coup had appeared civilised... While the paper said [the outgoing PM] had over the years proven to be a doughty fighter and curiously suggested [the outgoing PM] had borrowed policies from [AUS, it said the outgoing PM] had recently grown careless. The report said [the outgoing PM] might have kept his job if [the outgoing PM] had just attended the Commonwealth summit in Edinburgh [rather than staying] away too long by going on to France. It made no mention of his earlier stopover in London to meet [the British P]M... Meanwhile, an editorial in yesterday's *Sydney Morning Herald* said the failure of the N[Z] First leader... to rise to the challenges of Government had caused [the outgoing PM]'s downfall.

...THE [person] once tipped to be A[US's first gal PM has]... sounded a warning... to our own [gal PM]. "I'm always pleased when [gals] achieve significant office, but the scenario has a somewhat familiar ring about it,"... The question must be, have [our PM-elect]'s colleagues stitched her up with a job no-one could make a success of? Is the task of turning this government around one that only a naive politician would take on? A cynic might think so, if it were not for the way [our PM-elect] has survived other portfolios intended to bury her. The graveyard shifts in social welfare and then health were ones her colleagues may have thought [the gal from Gore] would never emerge from, but did... [Her] chief opponent at the next election will not be [the leader of Labour], it will be a mood for change... By the time the 1999 election rolls up, National will have been in office for nine years... Last week's coup saw National position itself for the first state of rejuvenation that is its only antidote to the cyclical wave of change... Instead of facing many more months of debilitating speculation on leadership, the party now has up to two years to remake itself after the tidiest of coups... But... [renewing] a government while in office is one of politics' most arduous feats... The model National is eyeing is that of the last A[US]n Labor government, which transformed itself in office effectively enough to hold power all the way from 1983 to 1996... [- although an] Opposition in serial disarray helped too. The difficulty facing... [NZ's PM-elect is that the] generational change which has seen the baby boomers move into the dominant positions in National, as they did in Labour as long ago as the early 1980s... must do more than bringing forward fresh faces and a fresh vision. Most of all, [the new regime] has to respond to the strongest element of the desire for change, the desire for a swing back to centrist or centre-left policies. For National, that is a tall order, for [the PM-elect], near impossible... her advocacy of self-reliance does not gel with a public looking for a more reassuring face on government... [Furthermore,] a large section of the public believe her to be a harsh and judgmental [person]. The double jeopardy in... [her] mission from hell is that [the PM-elect] must not only bring her own party back to life, but must find new ways of limiting damage from National's unpredictable coalition partner... However, [the PM-elect]... has ambitions of making the coalition work for a while at least, and that will mean currying favour with NZ First and its leader at times, just as [her predecessor] had to.

...The PM-elect... is constantly compared with... [Britain's Iron Maiden – who once declared that: "T]he international conservative position is sound because there is no need for a fundamental rethinking of basic principles, as had to happen in the '70s[" –] ...and in economic terms the comparison seems apt. But [our PM-elect] has none of [the old leader of Britain]'s open brutality. "Attila the Hen" was constantly belittling, insulting and sacking her colleagues: [The Iron Maiden] once entered the cabinet room and told the Chancellor of the Exchequer to get a haircut... [On another occasion, the Iron Maiden proclaimed that it] didn't care how much her ministers talked, as long as they did what [the Iron Maiden] said... But officials are full of praise for [our PM-elect]... "I don't find her a cold sort of person at all," says [one official]. "I find her a sensible, large-size mum." ...The critics have a different view. For them, [our PM-elect]'s voice is as sweet as a razor and as calm as the crypt... [A former spokesperson] for the Public Health Coalition, a fierce opponent of National's health reforms, found her patronising and dismissive. In early 1994, the then Health Minister lectured a health delegation as though they knew nothing about the issues, "and we couldn't get a word in edgewise." And... [a former chairperson] of the Medical Association and a leader of the [health coalition], says while the minister may not be cold and heartless, "her policies are." So just how far to the right is the new PM? In some ways [our PM-elect] could be seen as more radical than... [the Iron Maiden. A] professor of public policy at Wellington's Victoria University says [the Iron Maiden] "never challenged universal free health care; ...never challenged free tertiary education". The top personal tax rate under the Conservative government was reduced to 40p in the pound, while "we're down to 33c in the dollar..." [Our PM-elect] advocates lower taxes and more targeting of benefits, and is... a more determined advocate of the shrinking state than the Iron Maiden... "[Our PM-elect i]s clearly on the market end of the spectrum. Her views would be regarded as very radical if not extreme in many democracies around the world." ...there is a paradox. [Our PM-elect] knows about poverty and life on the benefit. Her father was... [in] a notoriously low-paid profession... [The] Presbyterian minister... died suddenly when [the PM-elect] was 18, and his wife... had to move out of the manse and on to a widow's benefit... As Minister of Health [the PM-elect] was... forced to defend some wildly unpopular policies: Her image as a flint-faced budget-crusher was confirmed. When [the current Minister of Health] became her understudy... his motto was "don't defend the indefensible". [His mentor's] approach, on the other hand, often seemed to be just that. Certainly [the PM-elect] could never win the political argument over heart-break cases like... the pensioner who was billed more than \$50,000 for the hospital care of his wife... [who] had been in a long-stay public hospital bed with Alzheimer's. [The then Minister of Health] said charging those who could afford to pay avoided discrimination against those who paid for private care, or were cared for at home. No matter how calmly... [the politician who] somehow... averted... the crisis... [which] threatened her home electorate... [by scrapping] plans to downgrade the services at Ashburton Hospital... might argue

the point, however, the public remembered only the terrible television pictures of a dying pensioner and the minister who said no... One part of the politician has got lost in all the odium: Her liberation on matters of sex. In this [our PM-elect] differs crucially from the laced-and-corseted Victorianism of [the Iron Maiden. It was while Health Minister that our PM-elect gave gals] the free contraceptive pill, for example, a decision which got international media coverage but has failed to dent her hard-right image at home. When the YWCA published *Sisters*, a sex education guide for young [gals] which included frank discussion of masturbation and lesbianism, the moral majority hit the roof... [while] the impeccably conservative farmer's wife leaped to its defence... [The farmer's wife] has also been a reforming Minister of [Gals'] Affairs, and was responsible for ground-breaking legislation on domestic violence... [The] executive director of the YWCA, says [the PM-elect] "was terrific help in getting government funding for a self-defence programme that the YWCA was running for girls in intermediate schools"... [Our PM-elect's services to NZ gals] are in quite a different category[to the Iron Maiden]... A poster for [the Iron Maiden, recalls the executive director], proclaimed "Mrs T's message to British [gals is]: Tough!" ...Those close to [our PM-elect] say the public will get to like her as they see her more often. They say that her cool manner, which can seem both patronising and chilling, is a mask which all [gal] politicians have to wear. "Any [gal] who shows emotion," says one close associate, "is condemned as being weak." That is why, [the associate says, gal] politicians so often adopt the same... style... [as their guy counterparts. Her Opposition counterpart] had to do so to protect herself from the [guys] in the Labour Party... [However, during] the last election, [the Labour Party leader] managed to crack her mask of ice, and shot up in the polls. There is an odd symmetry between the leaders of both the major parties. Both are cool and both photograph badly. Both have an image problem. [But Labour's leader] has improved hers, and the polls suggest [the PM-elect]'s is improving as well. Partly, this goes with the job: new P[M]s suddenly look prime ministerial, and their ratings go up. The real test comes after the honeymoon.

...as a role model for... [gals the PM-elect risks alienating gal] voters if her job is to move National further to the right, warns a political scientist... based at Lincoln University and responsible for establishing the National [Gal] in Politics Network... [R]ecent Auckland University research confirmed overseas studies that identified a gender gap between... voters... [Gals] were more likely to support the concept of a welfare state and increased spending for education, health, childcare and the elderly. They were also less likely to strongly support monetarist economic policy. While [the new] prime ministership would mark the start of a new and exciting era, "we should be cautious in our expectations of what a [gal PM] can achieve (for [gals]) at the moment. The entry of an individual leader does not mean the interests of [gals] will be advanced." Many [gal] politicians found it difficult to "speak for [gals]" because there was not one [gals'] view. A more useful indicator was... the critical mass of [gals] in the party... With [gals] leading the two biggest parties – not a first because Norway... previously had four [gals] leading its major parties – and taking significant roles in... smaller parties, that "critical mass" was growing. "This means we can actually get more gutsy debate." ...Having a leader who talked about post-natal depression instead of rugby signified how great a shift was being made... [The gal] leadership and management style... is increasingly being recognised as desirable... Britain's [Iron Maiden] held power for years, with immense popularity, and Ireland's president[– who will soon be] ending a seven-year term to become the U[N] Human Rights Commissioner[– i]s "widely judged to have been spectacularly successful"... [The gal who] led... Norway... through the 80s, retiring earlier this year[, also]... had huge respect and was being tipped as the next head of the W[HO. Indira Gandhi (the 'daughter of independent India's first PM, and herself PM 1966-77 and again from 1980, dominating Indian politics for nearly 20 years before her assassination in 1984'), Pakistan's former PM] (now leader of the Opposition) and [the]Bangladesh president... – the country's second [gal] leader – were all examples of influential Asian [gals. The] Sri Lankan president... took a lead from her mother, who was that country's first [gal] president. There were '15 gal leaders of the world in 1994. All are out of office today, but the world now has 27 gal leaders.' However, their politics reflects the view that there aren't any] notable differences between the way [gals and guys ruled. 'Gals are just as capable of repeating stupid things as guys.']

...Whenever... our first chick leader... passes on telly, I sit bolt upright with my arms and legs crossed and my back very straight, like at kindy. Know who is in charge, I always say. However, I have given this First [Gal PM] business substantial thought on your behalf this past week... Being a girl, two politicians suddenly running our largest political parties is interesting. My girlfriends and I have talked much of it. After all, much of [our] life is still about ascertaining how powerful we really feel. When a [gal PM] emerges everyone immediately wonders whether other [gals] feel similar achievement is more possible for them... but... [gals] fall into two groups in my opinion. Group one: Those who are consistently confident in their right to contribute. Group two: Those who pretend they are. Our new leader is of the first group. I'm of the second. So are most [gals] I know. I say this because much [gal] conversation still centres round telling each other we have a right to impact. We like the idea of power, kicking blokes about, etc, but I honestly believe we still struggle to maintain the necessary confidence... and this does affect delivery... Now, don't get me wrong – I believe in our right to succeed... – ...[but] let's be frank... political success is considered dubious, even... an indication of a personality slightly beyond the everyday, ie, slightly inhuman. And [our new leader] does not strike one as an ally. I realise *60 Minutes*, etc, have done their Christian best to portray her as a cuddly bunny, but when I see her coming, I still assume the crash position.

...MUCH has been made of N[Z] having its first [gal PM], 104 years after [NZ gals] gained the vote. I wonder what those suffragists who fought for [gals] to gain the vote would have made of [our first gal PM]? The legislation allowing [gals] to vote was part of a move towards a more socialised state which included the old age pension and greater regulations of the standards of public hospital and health care, but the suffragists were not all liberals. They included... arch capitalists and outspoken opponents of anything remotely smacking of socialism. Personal calamities were the responsibilities of individuals and their families. Feminists holding these views would have applauded... [the PM-elect's elevation. The PM-elect] has only ever supported [gals'] concerns when it did not conflict with the New Right agenda of her Government... Where [gals'] concerns cut across the general thrust of government economic policy, [gals] came a very definite last. We have not heard [the PM-elect] speak up against market rentals which have reduced poor families in high-cost urban areas to doubling up in beds, with a resulting surge in diseases of over-crowding and poverty, such as meningitis and tuberculosis. Neither have we heard... [her] on the issue of early discharge of new mothers from hospital, on falling breast-feeding rates or a lack of post-natal care. At the U[N] conference in Beijing, China, to mark the end of the Decade of [Gals, our Minister of Gals' Affairs] paraded National's more market policies as opening opportunities for [gals. Yet the same person] has been silent on the recent sudden slide in [gals'] average wages as a proportion of [guys'], the first such downturn in years... The "less state" policy of recent years has thrown new burdens on to [gals] who are expected to care for the sick, disabled and old as the state gives up on providing their care... The increasing gulf between the rich and the poor in society in general is mirrored by a widening gulf among [gals]. The 1996 census showed that of the 32% of the population that earned under \$15,000, 61% were... [gals. Unlike their PM-elect – who is living proof that] it is possible to point to a small elite group of high-flying [gals] who are doing well at present... under the free market... [-] these poorly paid [workers] are invisible and voiceless. Will [their PM-elect] speak for them? Hardly. Their pauperisation is a direct consequence of government policy, and poverty is a necessary ingredient of international competitiveness. Giving [gals] power if it is used to push right wing agendas is hardly an advance. It doesn't feel any better getting your benefit cut when a [gal] does it, rather than a [guy]. People disabled after accidents who are about to get work-tested and transferred onto the unemployment benefit, will not feel grateful that these draconian measures were introduced under a [gal]... In fact, it may feel worse... The quality that distinguishes [the gals] of the New Right is their impermeability, their unquestioning devotion to their theories [- a quality for which our PM-elect] is an exemplar. The message of the last election was that people had had enough of restructuring. Since then, what has [our PM-elect] promoted? More state asset sales, toll gates on roads, and further erosion of the social contract of ACC. Leadership by [gals] has in the past been

doubted on the grounds that [they] will not be able to take the “tough” decisions, that they will be too soft and be swayed by emotion. [The Iron Maiden] put that myth to rest and [our PM-elect] has so far proved similarly bullet-proof. This being the case, I see nothing to applaud in having a first [gal PM]. Policies and actions count more than a shallow emphasis on gender.

...MOST people believe [the new] administration will make the rich richer, the poor poorer, and leave beneficiaries worse off. That’s according to the findings of a poll commissioned by the *Sunday Star-Times*[, which also]... found that only 27% of those surveyed wanted National... to continue with the coalition government... The largest number, 42%, thought National should call a snap election.

...[the] Queen Bee... does not want to move to the Beehive. The new National Party leader... has floated the idea of foregoing the Beehive’s cramped ninth floor and keeping her more modern and comfortable office space in nearby Bowen House... where her present 18th-floor office offers a sweeping view over the squatting Beehive to Wellington’s harbour and the peaks of the Tararua Range... [Her] Bowen House office is not big enough as a prime ministerial space, but other floors could be taken over.

...[the PM-elect] looks likely to bow to tradition and move into the Beehive... next week... [from] her high-rise office building across the road... [The PM-elect]’s taste for the commanding heights extends to her own penthouse apartment atop an inner city Wellington office tower. No date has been set for [the PM-elect and her] husband... to shift to Premier House, set in park-like grounds five minutes walk from Parliament... [■ The PM-elect] held more talks with the [NZ] First leader... over the weekend. The pair talked by telephone and will have at least one face-to-face meeting – and possibly more – in Wellington today, in advance of a caucus decision from N[Z] First on whether to remain in the 11-month-old coalition... Widespread predictions that N[Z] First MPs will stick with National... [because] they will not want to give up “the trappings of power” have aggravated some to the point where they are determined not to be seen leaping back with National.

...Patience with N[Z] First will start to wear thin if it delays its decision on the coalition much longer, says National’s chief whip... The public and the National Party “will not be tolerant like they were at the last election...”... Yesterday... the... N[Z] First... leader said [it] was “in shutdown” and refused to answer questions about the talks or why [the Deputy-PM] is now demanding assurances from [the PM-elect] that TV1 will not be sold – having entertained such a sale when it was proposed by the outgoing... [PM – but the PM-elect] was confident of the outcome of their talks. “I’m sure that understandings can be reached that will meet his and my needs,” [the PM-elect] said on breakfast television. However, their relationship has not got off to a roaring start: it is understood that last Monday, in the midst of the coup, [the PM-elect] slipped up on protocol by telephoning [the NZ First leader’s] deputy... before him. And then on the *60 Minutes* television programme... said, “this country will not be run over a whisky bottle” – apparent reference to [the outgoing PM and Deputy-PM’s] reputation for burning the midnight oil together.

...N[Z] First prolonged the coalition impasse yesterday, saying it still needs further assurances on health policy before committing itself to a government led by... [the gal from Gore. Speaking of impasses, the PM]-elect... has issued a statement and reassured Parliament that her Government has no intention of reviewing the ban on nuclear-powered warships. [The PM-elect] moved swiftly yesterday after her first foreign media interview resulted in the *Sydney Morning Herald* headline: [Mrs Built-like-a-ship] would consider end to nuclear ban.” The article reported her as saying [that as PM-elect it] would be prepared to propose an end to the 12-year ban... but only in extreme, strategic circumstances. [The PM-elect] said yesterday that... the... [article] was “misleading and incorrect”... In a transcript of the interview, provided by the Sydney paper, [the PM-elect says]... “If... ever I thought as a minister or [PM] that it became strategically important, of course I would raise it with the population... But the advice I have received in technical terms is that that is extremely unlikely so I do not expect that it will be a political matter that will be raised again... [I]f... you go out to the streets you will find it’s not even an issue...”

...N[Z] First stuck between a rock and National’s hard place It is one thing to know you don’t really have a choice. It is even more annoying to get constant reminders. The prevailing view across the country is that N[Z] First – despite its bluff and delay – is in such a weak position it’s only viable option in the two weeks since... [the] coup has been to acquiesce and stick with the ruling coalition. N[Z] First MPs, however, are prone to a “get stuffed,” circling-of-the-wagons mentality. They take unusual strength from one another – [the former Minister of Customs/deputy-Minister of Health] excepted – through being “staunch.” It is against this backdrop that the caucus meets privately this morning during the party’s annual convention in Christchurch to canvass options for the last time and make up its mind whether to stay in or not – and what provisos to put on staying. Such is the ridicule, antagonism and inference of political impotence, the MPs may feel they have been almost goaded to quit the coalition. [But an] atmosphere of mutual hostility is not conducive to running any kind of government, coalition or otherwise. Increasingly, the question of N[Z] First pulling the plug has become one of when, not if... Logic dictates staying: self-respect has pushed feeling the other way... Adding to the mix is [the NZ First leader], a perverse politician who likes to prove everyone wrong... National MPs are generally relaxed about N[Z] First having... the “gift of time” to make up its mind... “They got caught off guard. They could not be seen to be lap-dogs,” says one minister. “They want to show they are in control of their destiny.” ...Says [another National minister: “Our PM-elect has given her inherited Deputy-PM] just enough rope to hang the remnants of his credibility.” ...[the PM-elect] has been very careful, avoiding pushing [the NZ First leader] into a corner publicly or looking desperate to get his endorsement... But the danger in the hiatus is the public will view the post-coup stand-off as coalition “business as usual” – and [the PM-elect]’s honeymoon will be over before it has begun... N[Z] First, anyway, does not put much store on assurances from [the PM-elect] on policy and the coalition agreement. The pretext for the talks may be policy, but no one is fooled. [The NZ First leader] has been using them to suss out [the PM-elect]’s attitude towards him – and assess exactly how much leverage and influence [the Deputy-PM] retains under her stewardship.

...Dear Mr [NZ First Leader], Thank you for your letter... I agree that the announcement of the change in National Party leadership gives cause for deep concern about what is in the best interests of the country. Labour is of the view that the change was made for a reason and that the reason was to take the National Party in a more extreme direction... Labour believes that the National Party’s new leader does not have a mandate to lead the country in the direction National is foreshadowing[, but it]... would not be credible for Labour to attempt to lead a government on the terms you suggest... We believe that there should be an early election to test who does have the confidence of the country... The people of N[Z] are indicating... that they are overwhelmingly dissatisfied with the Coalition Government. The course of action I propose offers the most sensible and democratic solution... Yours sincerely, [the Labour Party leader.

...the NZ First leader’s approach to the] Labour leader... was a desperate measure which has badly damaged his credibility, according to political scientists[– one of whom]... said yesterday that [the Deputy-PM] was now like a cornered rat. Previously, “people could think with some justification that N[Z] First was deciding its own destiny... But the letter... [(in which NZ’s First leader] asked if Labour would be prepared to govern within the \$5 billion new expenditure cap, maintain budget surpluses and accept tax cuts) let people know that NZ First is lost – it doesn’t know what to do.” ...Whatever [NZ First’s leader thought it] was doing when... [sending] his overture to [his Labour counterpart, what it] was in fact doing was putting his own neck in a noose. And [his Labour counterpart – who, ironically, became leader of her own party via a coup –]pulled the rope. What makes the offer even more inexplicable is that it was clearly not sincere... It also gave the whip-hand to [the PM]-elect... “If I were [the PM-elect, I] would seriously think of cutting him adrift,” said [one political scientist. “NZ First’s leader has] shown that his first loyalty is not to the coalition... And [the PM-elect] doesn’t need him.” ...[However, although NZ First’s leader took the PM-elect] by surprise with his offer to support a Labour-led government, [the PM-elect] insisted yesterday that [it] still wanted to hold the shaky National-NZ First coalition together... Either way... [his] willingness to contemplate pulling out signals a new, volatile relationship between the two parties which will damage the coalition even if it survives this weekend.

...In going to see [the leader of Labour on Friday the leader of NZ First] **did exactly what** [someone in his position] **should have done under MMP**. Desperate as it looked, the move has shown [the PM-elect that her party] **can't count on N[Z] First support**. If [the PM-elect] goes too far to the right her coalition partner may be willing to commit suicide, if necessary, in order to bring down the Government. That is exactly what a minority Government party should be willing to do. But obviously suicide is an extreme step, so it is not surprising that N[Z] First has pulled back from it for now. The main reason [why the majority of NZers] voted for MMP in 1993 was to restrain governments. [Many people were] outraged at the way that first Labour in the 1980s then National... after 1990 campaigned on one thing at elections then turned around afterwards and did the exact opposite. Both parties were able to give the fingers to the people who elected them because the old system gave them, once elected, absolute power. A ruling clique in either party that controlled the party caucus... through persuasion or patronage, could do what it liked. That was not democracy; it was elected dictatorship... No party has won a majority of the votes in any election since 1954 although, admittedly, recent polls suggest that Labour may do so again at the next election.

...The Minister of Finance... yesterday moved to extinguish financial market concern about the robustness of the coalition Government's financial pledges... [by saying that] the recommitment of the NZ First leader... and the P[M]-elect... to the coalition agreement should be a confidence booster for business... However, in doing so, [the minister] raised the possibility that his time as head of the exchequer might be limited... Reaffirmation of the coalition drew a muted response yesterday from financial market participants although some had made a trip into their offices. "I think it will be business as usual," one dealer said, then added, "[But if the Minister of Finance] resigns, then that would be interesting."

...[the outgoing PM] is being tipped to step down from politics altogether and pack his bags to become N[Z]'s Ambassador in Washington. If [the outgoing PM] did suddenly quit politics, [doing so] would leave his successor... the unpleasant task of facing a byelection in his Taranaki-King Country seat, which would test the level of anger and disapproval of the coalition Government. There is no suggestion National would lose the blue-ribbon rural seat – [the outgoing PM] has a 10,214-vote majority – but the pattern of by-elections is a vote against incumbent Government.

...The outgoing P[M]... yesterday told *Breakfast* television [that it] had not made any decisions about his future but a job overseas was among his options... [P]eople had been kind enough to suggest a number of positions... Asked specifically about a story in yesterday's N[Z] *Herald* tipping him to quit politics altogether for the Washington post, [the outgoing PM] did not rule it out... "When I've got something to announce or say I'll say it." ...in Parliament yesterday... [a challenge from the PM]-elect... to the Opposition... set the scene for a raucous free-for-all... The opportunity came during the weekly general debate, an hour during which everyone focused on last weekend's political events – or at least everyone except [for an Alliance MP], who wanted to talk about special education. [The PM-elect] began her speech by telling all other political parties in the House "to put their programmes and their policies on the line and show us that they can do more for this nation than the coalition can do in our own right." If the other parties had taken up the suggestion, it would have killed the debate, but none did, giving [the PM-elect] an early lesson that just because [the gal from Gore is the PM-elect] does not mean anyone will do what [the gal from Gore says. And the PM-elect] was scarcely choosing her words well when [the gal from Gore] issued the challenge to Labour to "say what you're going to do, don't keep talking about it." The N[Z] First leader... was in vintage debating form... even challenging Opposition MPs that if they wanted to hear about sleaze, "I'll give you sleaze." The promise earned [the NZ First leader] the only quiet period of the debate as expectant MPs looked to him to reveal something truly disgusting, or at least expensively defamatory further down the line, but unfortunately [the Deputy-PM] failed to deliver... THE MORE you observe politics, the more you've got to admit that each party is worse than the other... [a US] humorist, remarked... Still, as one courageously optimistic government MP put it: "From here, there is only one way forward, and that's up".

...[her parting shot as ACC minister was] to crank up worker accident compensation levies by five times the recommended amount. [The PM-elect] – who is due to ditch her [ACC] portfolio in the next few days – ...announce[d] radical increases... w[hich] mean those on the average wage... paying an extra \$175 a year... [Her] office would not comment... [but the PM-elect] last night offered a glimpse of her social policy agenda... [It wants NZ]ers to think hard about their personal responsibilities and obligations... [T]here had to be new understandings about the relationships between what the Government could guarantee and where people should be responsible for themselves. [NZ] had to be "disciplined", with each generation confronting issues... not deferring decisions... Whether [the PM-elect] can impose that kind of discipline on the rest of her party remains to be seen.

...The P[M]-elect... has sought to pack far more punch in Parliament, revitalising the coalition's front bench in a cabinet reshuffle which is otherwise conservative and minimalist. Despite the caution displayed in the reshuffle yesterday, [the PM-elect] has put her ministers on notice of a further rejig next year by indicating they must meet performance goals which [it] will have a big say in setting. [The PM-elect] is also demanding team-work to package and promote the coalition's policies effectively, rather than allowing ministers to run isolated, individual fiefdoms... [The PM-elect] has shifted a few portfolios and shunted existing ministers up and down the rankings, compensating for the absence of new blood with a front-bench clean-out and demoting or dumping five out of National's eight senior ministers. Crucially, [the PM-elect] has pushed the health, education and social welfare portfolios onto the front bench... By keeping the [gals' affairs portfolio, the PM-elect has tried to] remedy the absence of other [gals] in the cabinet... The main casualty of the cabinet reshuffle... the Attorney-General and Minister of Defence and Corrections until Monday... may become High Commissioner to London midway through next year.

...TOMORROW... [the PM-elect] will at last stride to the head of the Cabinet table... Perhaps we are getting nearer to the view expressed by the American poet WM Ross Wallace who, in *What Rules the World* in 1845 wrote: ...the hand that rocks the cradle Is the hand that rules the world... In spite of having been a leader in giving [gals the vote, NZ] became somewhat slower in... first... elevating [gals] to parliamentary status (...1933) and to Cabinet (...1947). It has been claimed Guy Fawkes was the only [guy] who seriously tried to raise politicians to a higher level. Certainly, when [the Iron Maiden became Britain's first gal PM, it] tended to keep her largely [guy] Cabinet in line with her ever-ready handbag. Indeed, *The Guardian* reported in 1985 the anecdotal story of the time [the Iron Maiden] was joined at lunch in a London Restaurant by some... Cabinet colleagues. [The Iron Maiden] ordered steak and kidney pie. "And the vegetables?" inquired the waiter. "Oh, they'll have the same," replied [the Iron Maiden]... In an interview with the [NZ Herald, our first gal PM] indicated a fresh attack on "welfarism" was at the top of her agenda. [The PM-elect] also talked about what drives her as a politician, describing the love and support... the... 45-year-old mother-of-two... draws from her own family and her Christian faith... Her... faith, which [the PM-elect] does not often talk about publicly, is very important to her. "I couldn't do what I do, I couldn't sustain the pressure or the criticism or indeed the burden of the challenge I face without it." ...Although [the PM-elect] was happy to be seen as a role model for younger... [gals, it] described herself as "a pretty ordinary N[Z]er." ...The second of four daughters of a Presbyterian minister in small South Island towns... believes... love is lacking in many families today and Government benefits and intervention is no substitute. "What concerns me is when I see people asking Governments to do what they're meant to do for themselves. That worries me greatly because I know children who are nurtured and loved and cared for will be wonderful citizens in the future – it's as simple as that." Governments could not deliver people a sense of self-belief... "I've often heard Maori leaders – and they've gone to the heart of this issue – say that welfarism has destroyed the spirit of Maoridom. And I think that's insightful but a very sobering sentiment..."

...Maoridom has suffered another blow with the death of one of the country's most respected Maori rights matriarchs, Eva Rickard. Her passing follows the recent loss of Matiu Rata, Sir Hepi te Heuheu and other tribal elders... Mrs Rickard had a long association with controversy through her stand over Maori land rights[, and] successfully waged an 11-year battle with the Government over the return of the Raglan golf course. When it came to tribal politics, [Eva] was not slow in letting her tribal elders know if [Eva] thought they were wrong. The Minister of Maori Affairs, [the

NZ First deputy-leader], yesterday paid tribute to Mrs Rickard, saying that all of Maoridom would feel the loss. "...Eva... was a role model for a number of us." ...Her long time friend and legal adviser... yesterday described Eva... as "one of the greatest Maori [gals] of the century, and a warrior in the same mould as... Dame Whina Cooper." ...When Eva... heard that [a Maori elder] intended welcoming the touring Springboks in 1981, [Eva] said that traditional Maori would have too – then cut their enemy's throats. The tactic appealed to the grandchild of a survivor of the Battle of Rangiriri... Mrs Rickard used to recall her grandfather walking from the Waikato River to Raglan with a bullet in one shoulder and his little sister on the other. [Her grandfather] settled in a ponga hut on land that later became the Raglan Golf Course... Eva Kereopa grew up a member of the Tainui Awhiro tribe. Her mother spoke to her only in Maori, but her daughter responded in English, saying ["I] reject... all... that bloody Maori humbug." The only Maori girl in her class, Eva was taken out of school at the outbreak of... [WW2] and put to work making bullets in a munitions factory, while her Pakeha classmates remained at their lessons. This education disadvantage was later to rankle, especially when it came to securing work... It was only in her thirties that Eva... began to take an interest in Maori land issues and language. [Eva] had watched her mother's lone battle against a state push to vacate her house, and saw her finally win from Parliament "paper access" to her home – a concession lost when [the mother] died in 1954. On her death bed Eva's mother begged her daughter to return to her people's values... [H]er mother's words stayed with her, and... [in] the late 1970s Mrs Rickard, a mother of nine and noted for her services to the community, took up where her mother had left off... [becoming] deeply involved in the dispute over the Raglan Golf Course, Tainui Awhiro land taken for an emergency airfield during... [WW2] and never returned... Eva[']s struggle to regain the land... was criticised by radical Maori for using the Pakeha court system, and [Eva] received hate mail and death threats from Pakeha. [Eva] always regretted the divisions caused... Mrs Rickard devoted her latter years to helping young people... [although Eva] also found time to act in the film *Mauri*, and to float the idea of setting up an independent Maori republic in Raglan... But the outspoken kuia ([gal] elder) never lost her sharp tongue, this year calling NZ First's Maori [guy] MPs "miserable leaders."

...The MP for Te Tai Hauauru... has hit out at his tribal elders for their "hypocritical" stand in refusing [gals] the right to speak at Eva Rickard's tangi... [The MP] found it ironic that the very people who ignored pleas from the late Maori rights activist for help during her fight for the return of land now sat in judgment on the very land for which she had fought to regain... When Mrs Rickard was buried on Wednesday, the next generation of activists gathered around her to say their farewells. The kaumatua gave them permission but warned that only [guys] could stand to speak. In the style of Mrs Rickard, [one gal activist] rose to speak. [It] was told to sit down but stood her ground to have her say, in which [the activist challenged the guys] to respect the mana of [their opposite sex].

...The family of the late Maori activist Eva Rickard are upset that someone is going door-to-door in Hamilton supposedly collecting money for ...a... headstone... [to commemorate the person who once said her sex] held the key to leadership... but were shut out of Maoridom's "brown table."

...The large wooden table on which N[Z PM]s have been thumping their fists since the 1940s may face the chop under [the new regime. The new PM] sat behind the desk for the first time yesterday... and appeared to take an immediate dislike to its vast expanse. "I find the size of this desk thoroughly intimidating and I wonder what we will do with this, despite its history and importance?" ...The desk was first used by the second Labour [PM]... Two years ago, it was one of the few pieces of furniture to survive a \$105,000 refurbishment of the... office. Meanwhile... [at] Government House... the... [deposed PM] continued to honour his pledge of no bitterness, at least not displaying any. Now ranked No 22 out of 24, [the deposed PM] took his place at the end of the long table among the N[Z] First ministers outside cabinet... [● In the latest NZ] *Herald-Digipoll* survey... [of the public's preferred PM, the deposed PM has risen slightly to 4.9%. The new PM's rating is also] up from 17.7[%] support to 18.3[%]. But backing for [the Labour Party leader] has continued to surge in the past month, from 32.2[%] to 34.7%. The Deputy-PM and NZ First leader... will take no comfort from his lowly ranking. His level of support as preferred [PM] has dropped from 2[%] to 1.3[%]. But there is some hope for the coalition. Two months ago, 90.3[%] of those polled said they were not satisfied with its performance. In the latest poll, which carries a margin of error of 3.6[%], that level of dissatisfaction has dropped to 86.2[%].

...Speaking on the eve of the coalition's first birthday, [the new PM said, "NZers]... in my opinion want good government which puts people's interests first... We must ask what can and should the Government do for N[Z] and its people... We are not alone in seeking answers to this vexed question. Most... nations are searching." ...[the new PM] was readying herself for whatever... Labour chose to throw at her on her first[official] day in Parliament as P[M]. But the Battle of the Boadiceas, the Clash of the Xenas... – pick your cliché – turned out to be Girl Power without the Spice. Labour had executed a tactical retreat in advance, postponing Parliament's eagerly awaited [gal-leader-to-gal]-leader confrontation. Labour did not target any of its four parliamentary questions at the new P[M] yesterday, deliberately singling out other ministers in a business-as-usual assault on the coalition's weak points instead. The reasoning? Why give [the new PM] a platform to generate more "warm fuzzy"-type headlines while her MPs cheered her along? The risk? Having called [the new PM] a "wimp" last month, [the Labour leader] could not afford to look one herself. The "wimp" label should have been fired straight back... yesterday, but [the new PM]'s supposedly fresh front bench were as inert and speechless as showroom dummies. A relaxed [Labour leader], however, took the precaution of piggy-backing on other MPs' questions, asking a couple of supplementaries just to show [that the leader of the Opposition] was not chickening out. Sarcasm was her chosen weapon to break down the austere [new PM], who displayed her nervousness while listing the coalition's "many" achievements, saying at one point there were now "more people receiving additional rent to pay for their accommodation supplement" when [the new PM] meant the words to come out the other way round. [Labour's leader] acidly responded by questioning why [the new PM] had "assassinated"... the [previous PM] if the coalition's record was so magnificent. The response was unexpected. Parked on the backbenches, but still carrying a folder marked "Prime Minister", [the former PM] beamed a smile from there to Washington, giving [his ex-opponent] the big thumbs up.

...Why are so many [gals] who win power at the national level spectacularly hard and uncompromising? You can be banished from polite society these days for suggesting that [a gal] is deadlier than [a guy], but in politics it is the plain truth. Take... [NZ's first gal PM]. The coup in which [the new PM ousted the old PM] as leader of the ruling National Party was a classic act of political treachery: [the gal] collected signatures of support while [her leader] was away in Scotland... and bluntly told him [that his leadership] was finished when [the leader came home. The gal] even looked like [someone who] enjoyed doing it... The total numbers are too small to make good statistics, but they suggest that politics at the more exalted levels positively encourages the rise of [gals] whose public persona has all the warmth and charm of a contract killer... And since these are intelligent people who are professionals in the image game, one presumes that they see some advantage in doing so... But what possible advantage could there be in being seen as a tough, unfeeling, ruthless pit-bull of a politician? Very little, if you happen to be a [guy] politician in a country at peace. But if you are a senior [gal] politician with ambitions to climb to the very top of the greasy pole, then toughness may be an essential part of your credibility, proof that you are not just a "typical" [gal], all woolly warmth and sympathy. There are many exceptions to this rule, of course. Over half the [gals] who have made it to the rank of national leader in democratic countries did not do so entirely under their own steam. They were either compromise candidates who were briefly put into office to take the blame for a worn-out government – Canada... and France... both fit that paradigm – or their power is essentially hereditary... In the... four biggest industrialised countries... – ...America... Russia... Japan... and German[y –] ...it is virtually impossible for a [gal] to get elected president or [PM. (The US] might manage it one of these days, but I wouldn't hold my breath.) And[, while the US President]... can be as caring and vulnerable as... [the guy likes,] in the middle or smaller [First World] countries, many of which have had one [gal] leader by now, the price of power is still very often that [the gal must] prove herself to be more "masculine" than her [guy] rivals.

...A group of six high-powered [gals] have been dubbed the *Spice Girls of international politics*... Their detractors call them The Sisterhood. Others describe them as the most exclusive club ever. But the six who lead the world's most influential development agencies say recognition of [gal] leaders is long overdue on the international circuit. For the first time since the end of... [WW2, five gals head UN] institutions and a sixth is a respected member of the European Commission. The decisions they make in European capitals and in New York mean the difference between life and death for millions. The Spice Girls of international diplomacy are in perfect harmony when it comes to discussing the empowerment of [their own sex]. Yet they rarely have time to get together, because of the conflicting timetables and pressures of their jobs. [Gal] foreign ministers – there were 10 at the last count – are easier to convene because for one month in the year they attend the U[N] General Assembly in New York. This year the U[S] Secretary of State... seized the opportunity to invite seven [gal] ministers to dinner. As this other exclusive club was sharing a cosy evening... the European commissioner for fisheries, consumer affairs and human rights – one of the six “Spice Girls” – was trying to argue her way out of a jail in Kabul. [The commissioner] had organised the distribution of more than \$320 million in humanitarian aid to Afghanistan, but was taken into custody by the country's religious police because her team took pictures of unveiled Muslim [gals] at the Central Polyclinic in Kabul... Her peers include [the] former Irish President... – who has just taken her new job as head of the U[N] Human Rights Commission and has been succeeded in Ireland by another... [gal (a former)] journalist-presenter with RTE, Ireland's national television network... and... a staunch Catholic, [who] is against abortion but supports the idea of [gal priests, and] was strongly critical of the Church's handling of a rash of child sex abuse cases involving priests[] – the... Unicef director... the... [head] of the world food programme... the [head of the UN] population fund... and... [the UN] high commissioner for refugees... [The commissioner for refugees, a] 70-year-old... of Japan, who was first appointed in 1991... is... [the] doyenne of this group... [The doyenne] is in charge of a budget of \$1.6 billion a year, intended to cater for the needs of 22 million refugees worldwide. “[Gals] are the key to development,” said... the Unicef chief who has been on a working visit to the Middle East. “Unless you involve [gals] you don't get development. These are life and death issues, not theoretical ones. You don't want to be boxed in doing the [gals'] thing, but if you don't raise [gals'] issues, no one else will.” ...As executive director of the world food programme... a rising star in the Republican Party in the U[S] and a former Assistant Secretary of State for Agriculture... has a budget of \$1.9 billion a year and a task force of 4000 employees in 45 countries. [The executive director] and the other “Spice Girls” acknowledge there is an inevitable overlap in some of their activities, another reason for direct telephone contact and sometimes the occasional face-to-face meeting.

...Girl Power has struck in California: [girls]... can now sit on whichever side of the bus [they like. A] 10-year-old had been fighting a 50-year-old policy that requires girls to sit on one side of the bus and boys on the other in the San Pasqual Union School District... “Today I got to sit... on the left side and then the right... It felt pretty good,” said... [the 10-year-old. By the way.] Britain's pop superstars... have made it to stardom in Toyland. Spice Girls dolls will be on sale in... time for Christmas[. The ‘27cm dolls cost \$45’].

...IT WAS the best of years, if you were in the business of making chewable... Mummy Spice... dolls, and the worst of years, if you were in government... It was a year of high farce and low drama, of political circuses, backroom plots, and a coronation... Politicians on all sides agreed... [the] year of girl power... had been a draining year. Trust in our elected representatives sank to new lows, MPs on all sides of the house were seen more than ever as greedy and unaccountable, and faith in the new electoral system was spent faster than... [an MP's] taxi chits... The [5th-ranked MP] spent much of the year... giving bold, visionary speeches and cosying up to National's backbench. By the time [it wheeled her leader's] guillotine into place, National MPs were in a state of high excitement over how this fresh, young leader might disentangle them from the sullied clutches of NZ First. But far from starting a shootout with [the NZ First leader, the new PM] is now purring reconciliation. Now [the new PM] wants to work with NZ First more closely, believing [it] will get more credit for uniting the large and dysfunctional coalition family than for tearing it apart.

...[the new PM] wants brakes put on pay rises and social spending in 1998 so the Government can increase the pace of economic rebuilding in a low-tax environment. In a pre-Christmas state-of-the-nation speech to the Auckland Chamber of Commerce, [the new PM] called on employers not to agree to higher pay unless employees' productivity or performance merited it. “I think we've got to be careful in N[Z] in the next two years... [Our] economy is totally dependent on being a successful exporter, and if the domestic economy overheats and then gets out of kilter, we simply face a correction at some stage in the future.” Her comments were greeted with disdain by the unions. [The] Council of Trade Unions economist... said: “It means the workers suffer again.” Under a “Tory Government,” there was always a reason never to have a pay increase. “The point is, when productivity does go up, they say you shouldn't reward it because you have to improve profitability...” ...only politicians... are allowed... to have a rise without an increase in performance... and their employers (the taxpayers) have no say whatsoever... During her speech, the [new PM] promised business leaders a new style of management that would cut the Government imposed costs of doing business... [T]he Government would put its own house in order with a Regulatory Responsibility Act in May, which [the new PM] likened in importance to the Fiscal Responsibility Act and the Reserve Bank Act. It would aim a blow torch at bureaucratic red tape and force officials to justify red tape. Two laws were singled out for early scrutiny to see if their costs outweigh the benefits – the Building Act and the Human Rights Act... [The new PM also] hinted that a further three N[Z] First MPs may not be appointed to the cabinet next year... [Incidentally, j]ust three weeks after... [going f]rom Crown Prince to backbench bullfrog[, the deposed PM has received]... the country's top award, member of the Order of N[Z]... in the New Year honours... Among the nearly 180 others honoured are... the... 1992-95 All Black coach... [and] Doug Dibley, the country's last Gallipoli veteran... who... is honoured posthumously.

...[“Being the editor of] *Metro*... you have to keep your eye on the nation, of course. What sort of things do you predict for next year?” “...how can it get any more dramatic than it did in '97? ...I predict that nothing will happen again... we had a whole year where there was sort of chaos and... underwear stories... but nothing happened. You know what I mean, in terms of policy and laws... it's all concerned now with who's up who, and who's not paying in Parliament[, with]... the money... or the favours that change hands and, in fact, very little governing is really done...” “...do you think that there'll be a snap election?” “Umm, no... that would require [the leader of NZ First] sort of committing suicide... [T]hey're all too greedy, you know... they're not going to pass away 150 grand a year... and a car and all the perks... so, no... they'll cling on to power as long as their... little fingernails can keep them there.” [“Changing the subject, did you hear about the ‘46-year-old South African immigrant who died after being strangled by his tie when it got caught in a large shoe sanding machine about midday yesterday at the Orthotic Centre in Ellerslie’?” “No. But I recently read an article from the US by a gal]... author and journalist... [which asked: If guys] can run the world, why can't they stop wearing neckties? How intelligent is it to start the day by tying a little noose around your neck?”]

The moment I get up... I get shaved and set up (The moment I wake up... I put on my make-up)... While combing my hair... And wond'ring what tie (dress) to wear now I say a little prayer for you... Forever, forever you'll stay in my heart And I will love you forever and ever We will never part, oh how I love you Together, together that's how it must be To live without you would Only mean heartbreak for me My darling believe me For there is no one but you Please love me too I'm in love with you Answer my prayer...

NEWSPAPER ADS are replacing traditional matchmakers among the literate classes in India, where brides and grooms rarely choose their own spouses. Every Sunday, newspapers are filled with classified advertisements inviting inquiries about “well-educated, professional boys” and

“beautiful, homely, university-graduate girls.” Homely in Indian matrimonial-ad English means someone who would make a good wife, mother and housekeeper... [The] chief of advertisements at the *Hindustan Times*, says, “We run more than 4500 such advertisements a month, and the number is increasing. Very few ads are repeated, an indication that the success rate is high.” - 1992

[Gals] are three times more likely than [guys] to be admitted to hospital... perhaps because of hormonal factors... □ Long-term use of talcum powder around the genitals has been linked to increased risk of ovarian cancer. U[S] researchers found gals] with epithelial ovarian tumours were significantly more likely to have regularly used talc powder around the genitals than a control group... They... say their findings suggest [gals] should be discouraged from using talc as part of daily genital hygiene. - 1993

Cross your legs and prepare to squirm... There is, it seems, a steady trickle of [gals] requesting cosmetic surgery on their genitalia. No, having a “vag job” isn’t some freaky Californian fad[like getting a ‘Brazilian bikini wax’ (which ‘removes all pubic hair except for a thin vertical line’)]. It’s an option that’s taken the suffering out of sex, sport and showering for more than a few satisfied customers. The main operations of this kind (some of which, if seen as medically necessary, may be covered by Medicare) are: removal of excess labia tissue from the... inner lips of the vagina; “perineorrhaphy”, tightening of the vaginal wall; repairing the hymen; and liposuction of the mons pubis... Naturally, self-consciousness prevents many patients from finding out about genital cosmetic surgery but, because such procedures are gradually becoming more publicly known, feelings of embarrassment or shame are being eroded. According to the A[US]n Society of Plastic Surgeons, the overall demand for genital cosmetic surgery, particularly the kind that involves trimming of the labia, has been growing slowly but surely during the past few years... Those of us with “problem free” genitalia may feel more than a little cynical about the suggestion that the demand for surgery of this kind will increase in the future. Could it, for instance, signal the beginning of another unwanted beauty boom that has us running to have our vagina tightened because we don’t want to feel baggier than our partner’s ex? Or might the dimensions of our labia end up giving us the same kind of hang-ups that [guys] suffer over the size of their penises? On the other hand... who’s to say that changing the appearance of your labia is any more bizarre than having a nose job? ...But there is always the danger of making what is essentially a psychological problem into a non-existent physical one. One leading Sydney gynaecologist says that occasionally a... [gal who] has entirely normal and healthy genitalia... will come to him for genital surgery... In such cases [it] will try to dissuade her from undergoing surgery, and... gently explain that her problem has more to do with her poor self-image than her genitals. Counselling can be the best form of treatment in such instances... The surgeon also speculates that many more requests for genital plastic surgery have already been avoided by patients’ GPs, who have managed to reassure the [gals] in question they are perfectly normal... [However,] there are some... who genuinely need genital surgery, particularly of the labia. Says... [the] chief of plastic surgery at Sydney’s Concord Hospital: “Many [gals] have functional problems with their labia. They may experience pain or tenderness during sex due to the excess labia tissue rubbing; they can be unable to wear normal underwear and cannot wear tight jeans because of problems with chafing. Of course, surgery may also be requested for aesthetic reasons,” [the chief] continues. “Some... with large labia are extremely embarrassed and so are prepared to go to surgical lengths to have the problem fixed and to avoid a potentially embarrassing situation with a future partner.” Also, reconstruction of the labia may be requested following disfiguring cervical cancer surgery. According to the... gynaecologist, the benefits of this type of surgery may be only marginal and are often not lasting. In some cases, re-operating in this area can make the disfigurement even worse due to recurring scar tissue. [Furthermore, although t]rimming of excess labia tissue is a relatively straightforward operation, performed under a general anaesthetic[, b]ecause the area is moist there is an increased risk of infection and occasionally bleeding can be a problem during surgery... [P]erineorrhaphy... is usually performed on sexually active [gals] whose vaginal wall has been stretched during childbirth... and say that this has meant less pleasure during sex, for themselves or their partner... Occasionally, though, a perfectly normal [gal] may have been told by an insensitive or spiteful partner that [his lover] has a problem... [Such a gal] will be advised against surgery and steered towards finding a new boyfriend rather than a cosmetic surgeon. Perineorrhaphy usually involves a two- to three-day stay in hospital. The patient... can start having sex again after four to six weeks... Probably the most cosmetic of all genital nip and tucks on... external genitalia is liposuction of the mons pubis... “The [gals] who wish to have this done are usually obese. They have [requested liposuction of their] tummy and therefore... it is necessary to perform liposuction on both areas so that the mons pubis isn’t left protruding,” says... [the] Sydney cosmetic surgeon... who introduced liposuction into A[US] in 1983... however... two or three[of his] patients... have had liposuction on the mons pubis alone. These have been young... [gals] who have a large mound of venus and are embarrassed by the fact that it draws attention to their pubic area when they are in swimwear or tight clothing... There is usually little question in the minds of [gals] who want to have their hymen repaired about whether they should have the operation... “Most... are young Muslims who have had sex with someone who is not destined to be their husband. They later regret the act and want to have their hymen reconstructed so they can be confident they will appear to be a virgin on their wedding night.” While some surgeons feel hymen reconstruction is a worthless operation because most [guys] aren’t necessarily able to tell whether a [gal] is or isn’t a virgin... [(in some gals the hymen) tissue is so elastic that it can stretch during intercourse and not necessarily tear[, ‘or they can remain intact even after childbirth!’]; therefore an intact hymen may not mean that a [gal] is a virgin... [- and], in some cases, the hymen may have ruptured without sexual penetration[; ‘hymens can be broken through strenuous exercise in pre-teen years’)]... most treat requests for the surgery sympathetically... Technically, the procedure is a fiddly one but is quite simple to perform... If a [patient] has only had sex once or twice, repairing the hymen is simply a matter of sewing the slits of skin back together, thus recreating the lip... But if a [patient] has had sex on many occasions, it’s likely that her hymen is pretty much beyond repair. In such cases, surgeons can trim a flap of skin from the back of the vagina and attach it to the front, thus creating an artificial hymen. This is one procedure you won’t be able to claim on Medicare.

...[the lead singer from *Hole*] was a former A[US]n boarding schoolgirl, stripper and small-time musician when [it] decided to pursue Kurt Cobain, lead singer of grunge supergroup Nirvana. [The small-timer] chased him for months, even chanting daily for “the coolest boy in rock ‘n’ roll” to be her boyfriend. Finally [the small-timer] persuaded an eager-to-please prospective manager to give her tickets to a Nirvana show so [the singer] could meet the object of her obsession. It wasn’t love at first sight, says an observer: “I didn’t see sparks, but they did go home together.” In the end, [the small-timer got her guy]. They married three months after meeting but didn’t go on a honeymoon because[, the small-timer] says: “Life is a perennial honeymoon right now – I get to go to the bank machine every day.” ...Linda McCartney was a receptionist at *Town & Country* magazine in New York... [who] stole an invitation to a yacht party with the Rolling Stones from her boss’s desk. Young Linda... decided to pass herself off as a staff photographer. When [Linda] arrived, there was only one space on the boat for a photographer and the Stones voted for the blonde, miniskirted Linda. From then on, photography was her ticket to the rock world. With her shots from the party, [Linda] managed to get herself appointed house photographer for a club. “I didn’t get any pay, but I got access to everybody – The Who, Jimi Hendrix, Jefferson Airplane, The Grateful Dead. Most didn’t know anyone in New York, so I’d... become their unofficial tour guide... Some of them were boyfriends, on and off, but I’m not saying which ones.” Linda gave up photographing bands when [Linda caught a Beatle]... “I slept with Brian Jones of the Rolling Stones a year before [the band’s founder] died,” says... an ex-groupie. “I slept with The Who’s Keith Moon a couple of weeks before [that drummer] passed away. Jimi Hendrix, I had him too, before [that guitarist snuffed it in ‘1970, aged 27’]. You’d think all that would have put me off the whole rock star thing, but it didn’t. I was still chasing Black Sabbath and Pink Floyd in 1975. What made me knock it all on the head was when I found myself sucking off a Wishbone Ash lighting [operator] just to get access to the group.” Now 40, the glamorous blond... works for the government and lives

with her English husband. But the stories [the 40-year-old] tells of the good old bad days confirm everything we believe – rightly or wrongly – about groupies. That they are sexually depraved[and] wild... drunk on spunk and wicked to the soles of... [their] shoes. “I’d go through the members of a band, one after another, without thinking about it,” [the 40-year-old] reminisces, with obvious regret that such behaviour would now be little short of suicidal. “Nowadays, with AIDS and all that, you don’t know what you’re going to catch. You’d have to be soft in the head to be a groupie.” That may well be true, but there are still no shortage of volunteers – including... [her] 19-year-old daughter... “I know [my daughter]’s at it... Just like I was at her age. I can’t stop her doing it, but I say to her, ‘...it’s all different these days’.” But is it? [The daughter]’s methods are essentially the same as those of her mother 20 years ago. When one of her favourite bands is touring, [the daughter] bluffs her way backstage with the sole aim of making it with her most fancied group member. In 1968, [the mother]’s dream was to sleep with her hero, Jimi Hendrix. [The daughter]’s burning ambition is to bed the skinny drummer from Nirvana. The bands may change, but the song remains the same... [A]nother second-generation groupie who... is... Sydney-based... shares [the 19-year-old]’s obsession with Nirvana... With her dry, bleached hair and nicotine-stained teeth, [the gal who is]... only “about 20”... could pass for her mother – who hit her groupie peak in the ’70s with bands like AC/DC... before falling pregnant... With a wardrobe that wouldn’t look out of place in a Kings Cross doorway and serious drink and drug problems, [the Sydneysider] is the badlove groupie cliché personified. Born too late, [the Sydneysider] yearns for the days when the stereotype was established, a bygone era when [guys were still primitive], groupies were groupies and both were sluts. “Musos are so straight these days... Either they’re gay or they’re so scared of catching something, they wear two condoms and a roll of Glad Wrap even when I just give head, which is basically all they want.” And in the AIDS-ravaged, neo-conservative ’90s, a lot of band’s don’t even want that. But while [the Sydneysider] may look and behave like a walking drug flashback, [the Sydneysider] is very much the modern high-tech groupie[– having] just bought herself a laptop computer, so [it] can be on “the network”. This is an international database that provides the itinerant muso with instant keystroke access to groupies across the globe. Details of their numbers, addresses and particular talents may be dialled up via modem from any motel phone by such roving rock gods as... an acknowledged network pioneer and lead singer with Los Angeles band Porno for Pyros (and another of [the Sydneysider]’s targets...). Such pragmatism is common among groupies. With backstage security ever tighter, it takes planning, ingenuity and determination to get at bands these days... [T]wo British groupies[who are] just 15 and 16... have been on the scene for about six months, but already they talk like seasoned campaigners. “Usually we’ve worked out which member of the group we’re going to sleep with... and we don’t often settle for second-best... We’re quite fussy, I suppose. You get these girls who’ll sleep with anyone they’ve seen in a gig guide... [but we] have standards. We have to like the music... When we started, we’d waste a lot of time hanging around after a show, trying to get backstage. Now we go to sound checks in the afternoon, which is dead easy. Then we’ll ask the blokes in the band if they’ll put us on the guest list... A lot of groupies are still treated badly by the groups... But the blokes we sleep with treat us well because they can see that we’re not dirty slags.” ...In Los Angeles, five topnotch groupies banded together in the ’70s and called themselves GTOs (Girls Together Outrageously). One of them... went on to marry a musician... before writing *I’m With The Band: Confessions Of A Groupie*... The GTOs put out their own album... but, sadly, it was no meal ticket to immortality: within five years two were dead from drug overdoses... The Chicago-based Plaster Casters, friends of the GTOs, were so named for their practice of taking plaster moulds of rock stars’ erect penises... Reportedly the biggest trophy in their collection belonged to Jimi Hendrix... [A] musician who knows all about groupies from the other side of the mosh pit[– the] guitarist with Adam & The Ants in their early ’80s heyday[– claims to have] slept with more than 700 [groupies] in a four-year period. “I wanted it all and I got it all... But it was a two-way thing... If anything they were chasing me. I wonder if I’m going to annoy feminists here, but I’m sure [most gals] have always been as excited about sleeping with musicians as the other way around.” This is precisely the attitude that marks a new generation of groupies. Rather than ever-ready sexual dumpsters, they act as temporary, no-strings-attached girlfriends to peripatetic band members who crave attention... on the road... But even with these “modern girls”, the question remains: why would an intelligent, self-respecting [person] want to make herself available as the sex-toy of any bloke who just happens to make music for a living? “Don’t believe it’s anything less than romance, because true groupies are nothing if not romantics,”... a privately educated computer data analyst... and... self-confessed groupie... from Melbourne... says, adding that in contrast to the notion of the groupie as a desperate [person] fuelled by self-loathing... “It’s actually got a lot to do with self-esteem. All the groupies I know have very high opinions of themselves. It’s why they’ve got the guts to talk with musos in the first place... [A] true groupie wants... to make him notice more than just... [her] tits and... hole.” ...Morally, [the Melburnian]... has no qualms about betraying the girlfriends of the guys... “Their steady [girlfriends] know it’s going to happen, so why pretend it doesn’t? At least I don’t try to steal their [boyfriends] away.” ...To experience the full benefits of being a groupie – the limousine rides, shopping sprees, parties and celebrity openings – it takes more than being able to perform well in bed, according to [the Melburnian]. To be a member of the groupie elite, they need to be able to initiate conversations as well as erections. “It’s one thing to go up to someone in a band and tell him you really love his music. Anyone can do that. You’ve got to be able to tell him why you like his music; or better still tell him about the bits you don’t like...,”... [A] model for a Roxy Music album cover... soon after began to date the band’s lead singer... The couple lived together for two years until one night they went backstage at a Stones concert and [the model] was instantly attracted to [the Stones’ singer]. Nothing happened that night, but soon after [her partner of two years] was unlucky enough to go on a tour to A[US and Japan alone. The model] admits, “What can I say – I was fickle.” [So was her new partner and eventual husband – much to the model’s dismay. However, Mr and Mrs Fickle stayed] together, on and off, [until Mr Fickle ‘fathered a Brazilian model’s baby.’

...Why beautiful gals] make lousy lovers... I once had a friend... [who announced] one morning, in the cafe where [my friend] used to have breakfast, that [it] had just slept with his 90th [conquest]. It seemed totally unimaginable: how could anyone have slept with 90 [different partners] before their 25th birthday? Still, we believed him because... while not beyond keeping score, [my friend] would never have fabricated it. Besides, his special talent was for a leisurely and dogged pursuit. No challenge was too great for him. No [gal] was too sophisticated, too beautiful, too married, too rich, too remote. Sooner or later each one yielded to his invitation as naturally as accepting a glass of water. In a small way [my friend] was something of a legend, but... found no joy in this because [it] was a disappointed [person. My friend] could never understand why his conquests were so unsatisfying and why [the prolific lover] often felt an indefinable bleakness as [the 24-year-old] went through the elaborate motions of his love-making. It took... wise counsel... to analyse the difficulty: “Your problem is quite simply that all of your [sexual partners] are too good-looking,”... “What do you mean, too good-looking? There’s no such thing as too good-looking,” [my friend said. His counsel explained: “Beautiful gals] are never good in bed because they are so used to being admired. Sex is merely an extension of the admiration they have received all their lives. In her heart, every beautiful [gal] believes that it’s enough just to let a [guy] near the adored form of her body. Beyond that, they think they have no responsibility.” As [my friend] listened, you could see his world collapsing before him. [My friend] couldn’t begin to imagine any other way of life, yet... knew that what [it] was being told was true. [Indeed, my friend] confessed that only a few weeks before, [my friend had] seduced a beautiful model whose behaviour had borne out all his [counsel] was saying. While... making love to her, [the model] angled her body so [the model] could watch herself in the mirror. Just as [my friend] was building to the crescendo of his performance [the model] craned her neck, went rigid and squeezed the flesh around her hips, asking him if[– in his opinion – the model] had put on any weight. It seemed... that the only enjoyment [the model] gained from him were his tireless reassurances as to her gorgeous looks. [My friend] recalled the questions [the model] would ask during their nights together. “How much did you want me when you first saw me? ...Which part of me do you like best? ...Am I the most beautiful [gal] you have ever slept with?” I don’t know what happened to [my friend, or whether it] truly understood the connection between beauty and passivity

in bed. But that conversation stayed with me because it seemed to contain a fundamental truth. Beautiful [gals] never have to try to get [guys] into bed and so do not learn that, once there, they should give as much as they receive. In bed, their behaviour resembles that of an artist's model and they become the lifeless subjects of living scrutiny... [Furthermore, life] is a great deal easier for the beautiful, which means that their personalities never quite develop the features that make people profoundly attractive... A fascinating combination is the relationship between an ugly [guy] and a beautiful [gal]. It is the sort of collaboration which suits both parties, but it's especially telling about beautiful [gals]. A pretty gal I know, who once slept with a famously unattractive journalist whose work [the pretty gal] had long admired, had only this to say: "I'll bonk anyone that writes and talks well." But it's the obvious contrast between these looks which provides the most satisfaction. The [gal's] beauty becomes that much more obvious beside her companion. This is a form of narcissism in which the [gal] looks into the face of her partner and sees in his adoring eyes the effect of her own good looks. It goes without saying that these are hardly optimum conditions for love-making because good sex requires that the relationship should be equal: equal in desire and affection, and without the complications that exist in the association between mistress and slave. It is widely believed that beauty is a handicap in [gals], but this is a misunderstanding. Just as someone who is charming becomes less so the moment... [that someone] is aware of their charm, so beauty is damaged by self-consciousness. It's not beauty that is the problem, but the admiration it inspires. This, of course, is extremely difficult to avoid because the world craves beauty, and heaps praise on those blessed with it... Some interesting research has been carried out in [US] colleges, where it has been discovered that [gals] who are widely accepted to be good-looking by their peers sometimes despise the attention they get. Researchers [also] say that... good-looking [gals] often mistrust affection, believing people never really appreciate them for themselves. It is... beauty in childhood and adolescence that's the real curse. [Gals] who blossom in adulthood are the ones we should envy, as they have all the advantages of good looks but are rarely spoilt. Moreover, they do not regard going to bed with someone as a big favour. Since the days when I listened to... [my friend's conversation], I've come to realise that it is [guys] who are mostly to blame for this state of affairs. They will never understand that obvious good looks do not always equal sex appeal, and that the pursuit of standard beauty and proportions leads to inevitable disappointment. The point is, true sex appeal is quite frequently a hidden quality which is gradually revealed by conversation... [My friend] represents failure of imagination and also patience. [My friend] could never see that the young art students who hung out in the same cafe as [it] did, though less glamorous, were far more promising than the trail of models and hard-faced socialites [it had] bedded. - 1994

[‘Being attractive is the most important thing there is. If you want to catch the biggest fish in your pond you need to be as attractive as possible’ – which, for some gals, means making their most obvious attractions bigger! Speaking of breast enlargements,] a **topless dancer...** [who now has] a **bust size of 56FF...** [and] whose stage name is **Chesty Love...** was recently allowed to deduct her US\$2,088 breast implants as a legitimate business expense. **Now that's inflation...** [and] **two more good reasons to keep receipts.**

...[an acquaintance recently told me: ‘The best thing about my husband is his butt.’ It reminded me of a recent cartoon which highlighted the plight of middle-aged guys who get sore tail bones due to having flat buttocks. Their problem was solved with silicon pads inserted into their trousers. It also got me wondering if any guys are having their butts surgically enhanced by silicon to make things easier, or to attract a partner – or please an existing one. I can deal with some guys being small-minded enough to think that a bigger butt or member will make them more attractive, or that bigger breasts make gals more attractive – but it fills me with despair that many gals share the same mentality. They're as bad as those spinners that claim they have a special connection with nature because they happen to be a one-out-of-every-28-gals who's period coincides with the full moon!]

...**BY SOME FREAK OF nature**, [gals] who work together will often find that their menstrual cycles converge. Here at CLEO, in an office of 16 [gals,] this makes for one very interesting week each month and one very tolerant [guy] Chief Sub-Editor. In fact, as I sit at my desk writing this story, I want to hit someone, then burst into tears. I hate every single thing about my life even though it's exactly the same life I had yesterday when the world was a happy place. Yes, I'm suffering from PMT, the very same syndrome that affects approximately 90[% of menstruating gals in AUS]. PMT occurs some time between ovulation and menstruation; it can strike anywhere up to a fortnight before your period and may last just a few days or up to two weeks. But if you're suffering from PMT, your symptoms (there are more than 150 recognised symptoms, though no-one has them all) will usually subside when your period starts. While there is no all-purpose PMT cure, there are still many things you can do to attempt to alleviate your symptoms. In a bid to find the best treatments, we spoke to doctors, dietitians, naturopaths, herbalists, aromatherapists and PMT experts, and were pleasantly surprised by their recommendations... **Doctors and naturopaths agree that diet is the most fundamental of all PMT treatments... EAT MORE Complex carbohydrates...** [(‘Raising low levels of the neuro-transmitter serotonin may well alleviate many of the emotional aspects of PMS, says a research scientist at the Massachusetts Institute of Technology. The only effective way to make more serotonin is to eat carbohydrates – but don't eat protein and fat with the carbohydrate snack, since these create other metabolic reactions that negate serotonin's effects. Limit caffeine, which can cause irritability, anxiety and moodiness even for those not prone to PMS. Like alcohol, caffeine seems to have a more pronounced effect on those with PMS. According to one theory, exercise balances hormone levels over time. “It decreases oestrogen,” says an obstetrician and gynaecologist. Regular exercise also causes your body to release endorphins – natural chemicals that elevate mood, fight fatigue and manage cravings. Bright, white light can reduce some symptoms of PMS, according to an unpublished study by an associate professor of psychiatry at the University of British Columbia. His research indicates that exposure to the equivalent of early morning outdoor light for 30 minutes a day during the two weeks before periods can lessen symptoms by 60%. Another study has similarly suggested that administration of a bright light in the evening can reduce symptoms of PMS.’)] **CUT DOWN ON: Salt...** two weeks before your period is due... *Best if you have: mood swings, anxiety, fluid retention, bingeing, pimples, breast tenderness...* Head for your local chemist or health food store and you'll find several bottles claiming to be especially formulated for the needs of... PMT sufferers. These tablets usually contain varying amounts of calcium, iron, vitamins B1, B2, B6, B12, D, E, folic acid, zinc, ginseng and manganese. They're widely considered to be a good way to supplement your diet without overdosing on any particular vitamin or mineral or spending a fortune on individual supplements. Zinc will help your skin, B6 your moods and everything else helps stabilise your system and prevent cravings... Naturopaths have found two herbs that help PMT. The first, Dong Quai, is a Chinese herb that “normalises the... reproductive system and is also beneficial to the nervous system”... The other herb that can help is Vitex Agnus Casus, better known as the chaste berry, responsible for normalising progesterone levels in the body. Both are available in pill form from health food stores... *Best if you have: emotional symptoms such as anxiety, depression, mood swings... AROMATHERAPY...* is easily the most pleasurable form of PMT treatment... [and is *best if you have: migraines, headaches, mood swings, teariness, vagueness, depression...* [‘Chiropractic spinal manipulation and massage eases the symptoms of PMT, a three-year Melbourne study has found. Symptoms were relieved in more than 40% of the 30 PMT sufferers studied.’] **The medical profession frequently dismisses evening primrose oil...** as having no beneficial effect whatsoever on PMT, pointing to clinical studies to prove the point. But try telling that to the thousands of A[US]n gals who insist it] has changed their lives... However, [evening primrose oil] is fairly expensive (\$20 for a two-month supply) and it's not an instant cure... [One advisor] points out that incorporating some practical skills into your life is crucial in treating emotional PMT symptoms. *Acceptance* Instead of fighting your moods, accept that you feel awful and go with the flow. Remind yourself that it's only temporary. *Get some space* Focus on your own needs; even if just for a couple of hours. Give yourself permission to opt out without feeling like you've failed in your role as wife/girlfriend or mother/daughter. *Go easy on yourself* Take the line of least resistance. For example: get takeaway for dinner[or get someone else in your household to cook], postpone a social arrangement, forget about chores for a few days. And say to yourself: “I do not have to be super[gal] today”. - 1995

[I had to smile the other evening when I heard on television someone refer to an MP and some of her contemporaries as the “supermums of the 90s.” Huh! They should have seen my mother in the 1920s: five children and a husband of his time – brought up with the idea that running a home and managing the family of seven was entirely “the wife’s work.” Mother was up before 4.30am every day, seven days a week – on weekdays to cook Dad a hot breakfast and get him off to work, then a little later to cook five more hot breakfasts as it prepared us children for school. In the winter mother cooked three rounds of hot meals a day on a coal fire. Candles were her only lighting. Her only hot water for all cleaning and baths came from a big, black kettle which weighed a ton and sat permanently on the coal stove. All the clothes Mum washed by hand in a tub in the back yard, winter and summer, including sheets and blankets which were put through a mangle – a piece of equipment the modern-day supermum would not be able to turn on its own let alone turn with a thick blanket passing through it. Washing for seven under those conditions was a whole day’s work; just lugging the water through the house was a job in itself. And, of course, there were still the three hot meals to cook for seven people plus all the polishing and cleaning. No car, of course: all the shopping was carried home by hand and on foot through muddy streets with no footpaths.’ Convenience products (e.g., sanitary items) were less convenient, and PMT was less recognised. ‘Supermums in the 90s? There is no such thing.’ ■ **ONE feature of... [NZ government] is... that a great deal of drinking is done in Parliament. This is the only explanation I can find for much of what I hear in the debating chamber. Alcohol deludes the [guy MP] into the belief [that it] now has Churchillian gifts of oratory. Before slumping into deep sleep his slurred and meaningless interjections are seen (by himself) as shafts of great wit. [Gal MPs] are different. Under the minimal influence of alcohol their voices become shrill and piercing. Their strange passion for the accuracy of irrelevant detail destroys the logical sequence of any argument. With the merest whiff of a cork they feel compelled to fill every minute with 60 seconds of empty verbiage. This doesn’t mean that I have anything against [gals]. Indeed... I have found the married specimen particularly useful for cooking meals, ironing shirts and going to bed with.**

...I see that *Tatler* has up-dated its “little black book” of Britain’s most “eligible” people. I also could not help but notice that, once again, I have not made the grade. Why not, pray? ...my overdraft is under control, my gums are just about maintaining their grip on my teeth. Was I blackballed because I do not have a trust fund, or a nebulous career in “interior decoration?” How does one get to be thought of as eligible anyway? ...They say it helps if one steps outside the front door, occasionally, puts oneself about, as it were. This may be where I am screwing up. My social life mainly consists of sprawling on the sofa in my pyjamas, drinking mid-range plonk, keeping a beady eye out for “nice [guys] on the telly.” ...For a period, I also developed a taste for drinking too much in the company of like-minded reprobates but I would not recommend this strategy to any [gal] who wishes to appear eligible. Sadly, all it did was make me a magnet for [guys] who were only after one thing – namely, an all-night bar. Few single [gals] are thought of as eligible anyway. Most people just view you as desperate. I know that whenever I’m single, friends see it as a cue to suggest the most unsuitable of suitors: real creeps – not a brain, a car, or a shred of beauty among the lot of them. When one responds, as one must, with loud retching noises, they then complain that you are “too choosy,” which is a polite way of saying: “Get real.” The way I see it, there is no point in being an eligible gal about town if you wind up being saddled with Mr No-Jokes, or worse, Mr Ugly-But-Nice. I accept that holding out for... someone particularly dishy... may be a bit unrealistic but one must maintain standards. I have a public out there: friends, neighbours; the couple at the corner shop. They would be disappointed if I suddenly acquired a boyfriend who was just as inadequate as I am. It seems to me that, fortune hunters aside, [guys and gals] have entirely different notions of what makes a person eligible... [However, it also seems likely that this particular difference could soon disappear – because, having first] learned that young [gals’] bodies are becoming more like those of [guys, we are now told that gals’] minds are going the same way. Psychological testing of almost 1000 British people has revealed personality traits once thought the exclusive preserve of [guys] are appearing in young [gals] – and vice versa. [The latter] have acquired... arrogance, leadership qualities and a tendency towards dishonesty, according to the study now being analysed by the Oxford-based psychological profiling company.

...VIOLENT offending by [gals] almost trebled in the last 10 years, but society and the justice system are excusing and ignoring the problem... Violent [gals] were far more likely to be treated leniently by the courts. They were seldom given custodial sentences, even for serious offending, and when they went to jail, they tended to get shorter sentences. And [gal violence – especially]... assault... of... their partners... – ...was grossly underreported... “We expect [gals] to be kind and nurturing. Sure, [they] can be like that, but the door swings both ways. Like any human being, [gals] can be... nasty.” ...violence by [guys] tended to be “territorial”, protecting their status or “[guyhood]”, while [gal] violence was most often directed at their children, their lovers and their lovers’ lovers. “[Guy] violence tends to be more cold-blooded, while [gal] violence tends to be highly emotional.” ...a Canterbury University sociology lecturer, said... [gals] often offered excuses for their offending, such as being victims of abuse themselves, or suffering emotional or hormonal problems... “[Guys] unfortunately can’t draw on that sort of cop-out, but [gals] do and they are believed... We are developing a cult of victimhood where it is OK to do anything if you are a victim. It just perpetrates the myth that [gals] can only be the victims, not offenders.” Courts demeaned [gals] by not taking their violence seriously and not demanding that they take responsibility for their actions. “Treating [violent gals] like recalcitrant children is not dealing with the problem.” ...[In related news,] according to a report released this week... [gals’] refugees face a shortage of volunteers, while at the same time their workload is likely to increase. Th[e report]... says the number of domestic violence cases handled by refugees is likely to increase by 11[%] in the next two years... because of the effects of Social Welfare and police documentaries and advertising campaigns, more referrals from other agencies, police family violence policies and the Domestic Violence Act... [P]rotection orders had increased by 70[%] since the Act became law... [The spokesperson for the] National Collective of [Gals’] Refugees (which ‘every year helps more than 15,000 mothers and children escape a life of family violence’)... said refugees were concerned they won’t be able to provide services because finding volunteers was getting harder. “Ours is the least glamorous to work for and the most dangerous.” ...if volunteers had to choose between working at a refuge, a Citizens Advice Bureau or Life Line, they would usually avoid the refuge option. Most refugees employed only one full-time and one part-time worker and relied on about 30 volunteers. The report estimated that if the volunteers were paid, it would cost \$5.5 million a year... Refugees’ annual costs were also likely to rise from about \$12 million in 1995-96 to up to \$13 million in 1996-97... But the Government contributed only \$3.6 million... It was hoped the report would convince the Government and corporate sector that more funding was needed.

...Battered [gals] looking for shelter at refuges could soon find there is no room at the inn. A surge in the number of victims... has left refuges full to overflowing... Refuges say the worst has still to come as demand usually peaks... over Christmas... and... the New Year... A spokes[person] for Auckland refuges... said staff were already asking [people] to look elsewhere before coming to a refuge. “...If they have some money, then we advise them to stay at a motel. We try to never turn anyone away... but we are getting to a point where we may have to say we can’t take any more.” ...the nine refuges in Auckland offered about 70 beds although demand was much higher than that... An option was to transfer [people] to other regions but this was not always suitable. Most of the refuges in Waikato were overstretched, with the Te Awamutu home full for the first time in many years... Refuges in Hamilton, Thames, Whangarei and Rotorua were also full... The Hamilton co-ordinator... said it was a huge relief a YMCA facility still existed to take any overflow... The YMCA announced earlier this month that the house would close because of a cash crisis, but an anonymous donation would see it run until February. A Wellington refuge co-ordinator... said staff were hectic giving advice on protection orders and the differing forms of abuse... [since] the Domestic Violence Act... came into force in July[. • ‘Nationwide there’re 51 Gals’ Refuge safe houses’]...

America’s uglies launch war against... the latest “ism”... In a country already battling racism, sexism, ageism and heterosexism, [a 36-year-old] has added another exotic “ism” to the list – “looksism.” From the remote Utah house... share[d] with her married sister, [the 36-year-old] is embarking on an extraordinary national crusade. It may sound like the latest wheeze dreamed up by the gauleiters of political correctness, but it is no joke.

Instead [the 36-year-old] has opened a debate that not only touches on American popular culture – from Disney to... presidential election[s] – but also on universal questions of equality, evolution and lust. [The 36-year-old] is daring to challenge the way people look at each other. For [the 36-year-old], it is a personal battle... [The 36-year-old] is ugly. No doubt about it... Her long, crooked nose, her thin, pale lips and the purple blotch of a birthmark above her right eye all say it as clearly as the children who once taunted her with cries of Pinocchio and Wicked Witch... As a child [it] was so ashamed with her looks that [it] hid in a cupboard when visited at home by strangers. In adolescence [it] spent long nights at home while her peers were out dating. Once [it] was at a bus-stop when a [father]... told his attractive young son: “You’re the beauty” before turning to her to add, “And you’re the beast.” “If all your life you’ve had taunts and insults behind your back and to your face, you’d have to be pretty foolish to believe you’re as attractive as average people,”... For a while [it] thought things were improving. [It] fell in love, but the [object of her love] – a devout churchgoer – eventually broke off their relationship, telling her that “in all Christian honesty[I]” couldn’t marry a [gal] with a “defect.” The defect was her ugliness. [The 36-year-old] recounts this unemotionally and winces only when you try to suggest that [it] might not, in fact, be ugly... “I’m ugly, but that’s okay because I have a beautiful soul,” says... the U[S]’s first pioneer for the rights of the “appearance-impaired.” ...Her point is that it should not matter. That is why [the 36-year-old] has formed a group called the Pinocchio Plot, whose mission is to roll back what might be the last acceptable prejudice: judging people by their looks. Pinocchio... is a classic product of a culture that equates beauty with moral goodness and ugliness with evil. Because the little boy lied, his nose grew long; his face literally became as ugly as sin... [The] group wants children to read new fairy stories – *Sleeping Ugly* is on their recommended list – in which princes can be short and bald, and wicked stepsisters are not always pocked with warts and bent features. “Cinderella got stretch marks, Snow White wrinkled, and Rapunzel’s golden tresses greyed,” is a favourite slogan. Nor is there much patience for tales in which the unattractive triumph, such as *Beauty and the Beast* or *Ugly Duckling*. After all... the characters are only redeemed when they change their looks... “Ugly ducklings don’t have to become beautiful swans... And why can’t the Beast stay ugly?” The problem is as great now as it has ever been, says the anti-looksist movement. Just look at Disney’s most recent offerings. In *Pocahontas*, the Indian girl and her English lover John Smith are painted as impossible lovelies: [her] with a narrow waist, endless legs and a full bosom, h[im] with a chiselled torso. Yet historical accounts suggest Smith was plain, if not cosmetically challenged. But in the movie the only ugly character is the wicked English colonist, Governor John Radcliffe – his chin pockmarked with moles. *The Lion King* irritated [the 36-year-old] even more. Not only was the good lion shown with a healthy golden mane, while his evil brother was bony and dark – the villain was actually named after a physical blemish: Scar... [The 36-year-old] fears children are being raised to believe that a facial flaw indicates a bad character and that “what is beautiful is good.” What has boosted [the anti-looksism movement] – 400 letters of support from across the U[S] in just two weeks – is a flurry of fresh evidence that goes to show that looksism is not confined to fairy tales or even romance. On the contrary, the latest research suggests that looks-based discrimination affects every aspect of our lives... Studies show that when identically qualified candidates apply for the same job, the better-looking one always wins... Once they have the job, lookers fare better too. A 1993 study by the University of Texas and Michigan State found that good-looking people earned 12[%] more than their less comely colleagues; intriguingly the difference was larger for [guys than for gals]. “It is a non-conscious process,” says a psychologist... who has studied the power of beauty. [The psychologist] believes bosses are not even aware of their own bias. “They assume that more attractive people have an array of valued characteristics.” Researchers have found similar thinking even in acts of charity. If a dishy [gal] needs help on the roadside, motorists stop in seconds, some screeching to a halt and plunging into reverse. When volunteers are shaking collection boxes for charity, the attractive ones bring in up to 50[%] more. This is serious business... [An] unprepossessing... Senator... from Texas, said his run for the White House earlier this year represented a challenge: “Can an ugly [guy] be elected President?” The voters swiftly delivered their verdict: [the] Senator... was knocked out in the first round, losing to the rugged and permanently tanned [candidate]... Lawyers, too, know there is no tougher obstacle than a physically unattractive defendant. [One] Boston trial attorney... says overweight or unappealing clients start with a disadvantage, but when the accused is attractive, a trial can be a breeze. “Juries find it hard to believe that such a nice-looking person could do such a heinous crime,”... Even children are victims – and perpetrators – of looksism. Researchers have found mothers pay more attention to babies when they look nice, and can be inattentive when the child is plain[, while ‘teachers give more attention to beautiful students’.] But it is a two-way street: [youngst]ers prefer pretty teachers to plain, believing they are kinder and cleverer. Babies as young as three months linger much longer on photographs of beautiful people, and show signs of distress when... faced with less attractive images. That evidence cuts straight to the argument [the 36-year-old] faces every day: preference for the beautiful is a basic, unavoidable human instinct. Evolutionary science has recently buttressed that view, revealing that all cultures at all times have valued certain key physical traits, all of them indicators of biological health. [Guys look for gals] with a good waist-hip ratio because that is a sign of fertility. [Gals covet guys] with symmetrical features; they are more likely to be strong, athletic and a good bet for fatherhood. None of this interests [the 36-year-old, who] does not care if it is nature – genetic impulses telling us to shun the ugly – or nurture – Hollywood and the glamour magazines – that is to blame. If it is inbuilt we should overcome it... just as we try to curb the urge for violence. If it is learned behaviour, we should unlearn it.

...Have I missed something? A new insight into feminism perhaps? I *must* have done. After all, there was the lovely Miss N[Z] telling a reporter on *Holmes* this week that if we don’t respect her decision to enter Miss Universe we’re obviously not pro-[gals]. Nice try, love. Unfortunately you’re talking drivell. What are you trying to say – that beauty pageants are no longer sexist or demeaning, simply because you *choose* to enter the competition? What, were contestants dragged screaming off the streets in the 60s? If you truly believe beauty contests signal [gal] empowerment I can only say that you have very modest aspirations for your sex. You don’t need an IQ through the roof to realise that beauty pageants are about as pro-[gal as AUSs’ One Nation MP] is pro-Asian. They’re not a celebration of [gals], they’re not about beauty, or even charity, they’re about *sex* – and [gals] as *sex objects*. Frankly I think it would be far kinder to everyone involved if the Miss World and Miss Universe pageants were simply amalgamated into one big wet T-shirt competition. At least it would be honest. Still, I understand not everyone holds my view on this. I met a bloke at the weekend who rolled his eyes in exasperation at my comments and ordered me to lighten up. “Look, beauty contests are a bit of fun, that’s all... and no one forces the girls to enter do they?” Sadly, [like Miss NZ, that particular bloke] has a point. It seems remarkable, but [last] year’s Miss World boasted a record number of entrants – 89 to be exact. Wearing smiles tighter than their hotpants, and breasts hoisted up to their ears, the contestants collectively giggled, preened and paraded themselves like market slaves out to attract the highest bidder. Yet to these girls the end obviously justified the means. A tiara, a title, travel, fame – all good reasons to have some “fun” and give the beauty business a go. I do understand the motivation but I’m afraid I can’t respect it. To my mind, entering a beauty competition inevitably trades off individual gain against moral responsibility. There’s a loser every time, and that loser is the [gals’] movement. Perhaps when [gals] can boast equal pay and work opportunities, unbiased media coverage, legal equality in all countries and an end to sexual violence I can afford to take a kinder view of these unfortunate pageants. Until that time, Miss N[Z], believe me when I tell you I’d rather be judged as a bearded old feminist any day than a beautiful hypocrite.

...Miss Universe pageant organisers have denied ordering their reigning beauty queen, [Miss] Venezuela... to lose weight or give up her title... [I]n a statement released in the resort town of Las Cruces, New Mexico, where [Miss Universe] is attending the Miss Teen USA pageant... the... president of Miss Universe Inc... said Miss Universe officials were “extremely happy with [Miss Venezuela] and feel that their reigning beauty queen] fulfils her obligations... exceptionally well.” Officials of the Miss Venezuela Organisation had claimed on Tuesday that [Miss Universe] had been given an ultimatum by Miss Universe organisers to lose 12kg in two weeks... [Miss Universe] was 1.73m tall and weighed 51kg when [the Latin beauty] became the fourth Venezuelan to win the crown in Las Vegas in May[(the country has also collected ‘5 Miss World and 29 other international

beauty contest titles during the past two decades’)). But yesterday Venezuelan pageant officials backed away from their earlier comments, with one official saying: “[The reigning Miss Universe] obviously has a weight problem which affects her swimsuit contracts but this does not mean [our girl] will be stripped of her crown.” Those close to... [her] said... the beauty queen... has a weakness for pasta and cakes.

...Suicide threats by feminist protesters and race rows with the media have angered would-be Miss Worlds competing in India, where the beauty pageant has attracted more controversy than ever before. A [gals’] activist group is threatening to upstage the crowning moment on November 23 by infiltrating the crowd in Bangalore’s Chinnaswamy cricket stadium, taking cyanide and setting their silk saris alight. “I just hope everything will turn out alright. This threat of burning themselves makes me mad and sad,” said Miss Venezuela... the favourite to take the title. One [person] died by self-immolation last week in a protest against India hosting the beauty contest. The suicide sent shudders through the Miss World camp at the luxury Windsor Manor hotel in Bangalore. “This is the land of Gandhi, the land of peace. How can they take such an extreme step. Everybody has a right to protest but not in this form. I am very concerned,” said Miss Costa Rica... an aspiring journalist. To add to the controversy, the African contingent among the 88 competitors say the media is shunning them because they are black.

...Beauty contest threatens to set India alight Beauty killed Suresh Kumar, or else it was the exploitation of [gals], or else the assault on Indian cultural values. It all depends on how you look at it. In the countdown to the coronation of the next Miss World, to be held in India for the first and – given the degree of opposition it has met – possibly the last time, it seems there are countless ways of looking at an event that ordinarily seems so divested of meaning. Weeks of protest and fears for the security of the contestants reached crisis point last Thursday, when Mr Kumar, a 24-year-old tailor, doused himself in petrol and set himself alight at a bus stand in the city of Madurai, 430km south of Bangalore... Witnesses said [Suresh] was still muttering anti-contest slogans on the way to the hospital where [the protester] died. Not everyone in India, of course, shares Mr Kumar’s views of Miss World... The hotel where the[contestants] are staying has become a magnet for rich Bangalorans – the coffee shop is packed with ogles anxious for a glimpse of the beauty queens, whose days are filled with rehearsals for the gala extravaganza. Provided the protests don’t force a down-scaling of the grand-finale, it will feature 60 decorated elephants, several hundred dancers and a candle-lit map of India... Miss World 1996 is only the latest in a series of Western imports to have caused a furore in India. Like the other new arrivals – fast food restaurants, the fitness craze and U[S] soap operas like *The Bold And The Beautiful* – the pageant has become a convenient symbol for a whole range of Indian organisations that are not usually on speaking terms... Will... others... tak[e] Mr Kumar’s path? ...the... leader... of the... Hindu right-wing Bharatiya Janata Party[which] has been at the forefront of the protests... think[s] so. “This is only the beginning[,” the leader said last Friday]...

Protests fail to disrupt contest... [Miss] Greece was crowned Miss World at the end of a heavily guarded beauty contest overshadowed by protests and threats by militant[s]... to commit suicide by immolation. The 18-year-old professional model won the title after... [s]ome 10,000 police and paratroopers... had detained more than 1500 protesters in the southern Indian city of Bangalore. Scattered clashes throughout the city left at least seven police[officers] injured and clouds of tear gas before the pageant started. But inside the fortress-like cricket stadium, the three-hour spectacle passed off without incident... In deference to Indian mores, the contestants wore long transparent skirts around their swimsuits.

...Beauty contestant’s action raises storm in a ‘C’ cup... A young model and beauty contestant is suing her surgeon for \$38,500... [-] the \$5500 cost of the surgery, legal fees of \$3000 and \$30,000 in punitive or exemplary damages – ...after an implant operation left her with smaller breasts than [the model] had hoped for. The 22-year-old Hillsborough student had expected to have “C” size breasts instead of the more modest “A” bra cups size [it] ended up with. Her lawyer... told... the Auckland District Court this week: “...it was marvellous surgery but it didn’t produce the desired results. [The doctor] didn’t fill the implants [with saline solution] to the requisite size... and that’s our argument.” The... doctor’s lawyer... yesterday applied to have the [student]’s action struck out... The [Auckland student], aged 20 at the time, had modelled and taken part in beauty pageants in the U[S. It] apparently discovered that other contestants had boosted their chances of winning by having breast implants and decided to do the same... The doctor gave her various sizes of implant to try for size in her bra and eventually [the student] elected to have 210cc prosthesis implanted... in March 1994... The [student]’s statement of claim alleges that the doctor breached the Consumer Guarantees Act 1993 by not achieving the size of breasts [it wanted, and] is also claiming for humiliation and breach of privacy as a result of having to have remedial surgery. When [the student initially] complained, the doctor allegedly flippantly told her that [the student] could have the bigger implants when [the student] won lotto, as [the student] had no money at the time. Or, alternatively, [the doctor] was alleged to have told her... it... could do [the remedial surgery] at a reduced cost when [the student] had her appendix removed as [the student] would already be paying for the hospital theatre.

...[a US singer has] become a plastic surgery junkie, having had all kinds of plastic surgery: face, legs, breasts, hips and arms. One operation to enhance her buttocks left her unable to sit down for weeks! ...[now the] 50-year-old country star... is in hiding after... [undergoing] a \$30,000... laser surgery... procedure to get rid of wrinkles by burning away the skin on her face. Medical sources say the risky operation could leave[the semi-plastic] Dolly with discoloured skin and... scarred for life.

...A CHILLY development expert has criticised a new glossy magazine based on the world-famous... doll, Barbie. The A[US]n publishers plan an inaugural N[Z] edition of *Barbie* later this month, targeted at girls aged between five and 12... [The] associate professor of education at Auckland University, said the magazine was full of stereotypes about the roles of [gals] to look good and be popular. “This is exactly what Barbie has been criticised for in the past. In fact, it’s worse,”... The magazine includes stories on the environment and after-school fashion tips. It also has an article about a child TV star, a profile of a nine-year-old A[US]n lifesaver and a short story about Barbie and friends in a fashion pageant... [The associate professor] was also concerned by some of the poses of young girls in the magazine. [However, the magazine’s editor] said there had been no negative feedback after two issues in A[US]. “I’ve had mothers ringing me up saying it’s brilliant.” - 1996

A crying, walking, sleeping, living doll [An Aucklander] is, on the face of it, a fearless sort of [bloke]. For one thing [it] allows himself – without the slightest protest – to be arranged on the grass in a public domain surrounded by Barbie dolls, to have his photo taken by a N[Z] *Herald* photographer and a passing German tourist, and to be gaped at by a clutch of passing kids. But... [the] department manager for a textile company, admits having a couple of consuming fears. The first is that [it] will be struck about the head by disgruntled doll owners whose beloved Barbies don’t make the cut when [the manager] finishes judging at today’s Barbie in the Park outing. The second is that by touting himself as someone who’s bonkers about Barbie [it]’ll be seen as some sort of “loony.” Not that [the manager cares, really. The manager] is a serious collector of “vintage” Barbies ([it]... can “walk past a shelf of Barbies at The Warehouse with no interest at all”) and a champion of a doll [it] reckons has had a “rough deal.” Barbie has... “possibly been a bit misunderstood. [Barbie]’s lived the ideal life, has the most amazing figure, amazing legs and wonderful clothes – [the doll]’s had everything basically, and of course it’s totally unrealistic.” But what appeals... about Barbie is the way [the doll]’s changed with the times. “[Barbie]’s been given a lot of changes over the years. The role of other dolls developed in the 60s was of a [gal] who stayed at home and cooked. But Barbie’s been out there doing things. I really admire people who go out and do things, so good on her.” [The manager] has only been bonding with Barbie for 18 months, but [the doll]’s been... “within my psyche for the last 30 years.” As a child growing up in the 60s [it] was fascinated by a neighbour’s dolls which were the antithesis of “those awful sleepy-eyed baby things your sisters had. I suppose I always wanted one but it wasn’t done in those days to give boys dolls. About 18 months ago I thought, ‘Why the hell not? Why shouldn’t I do it?’ and started buying the odd one off the store shelf.” But the Barbie buzz [the manager ha]d been expecting didn’t happen. It was, [the manager] realised, the Barbies... from his childhood that held the allure... [The manager now] has a special Barbie room at home where the dolls, some still in

their boxes, are definitely off-limits to anyone of any age who thinks toys are made for playing with. The closest [the manager] gets to toying with his collection is when dolls arrive in “basket-case condition” and need loving restoration. [The manager]’ll spend hours washing, conditioning and styling their hair or removing any ink marks with Clearasil (a trick of the trade) and a bit of a sun bathe. Despite his fears that people will think collecting dolls is a peculiar pursuit, [the manager] has yet to experience any flak. Perhaps, [the manager] says, everyone understands nostalgia. “It’s all just longing for something you had as a child,” – or in [his] case, for something [it] never had. And, of course, attitudes have changed as much as Barbie’s looks over the years. [His] mother... offered to buy him a Barbie doll for Christmas. But [the son says it said no because it’s got plenty] already... His first vintage Barbie is still his favourite: Ponytail Barbie from 1965 wears a red bathing suit and cat’s eye glasses; but [the manager] now has 60 Barbies (including an array of “bitch Barbies” from the 60s who look... “decidedly frumpy and unapproachable”).

...LITTLE-KNOWN fact no.99 from the file on that all-American, all-plastic icon of [gal]hood – the Barbie doll: even Barbie gets cellulite. Barbie cellulite is known by those in the know about such matters as “weave marks” and is the reason serious collectors of the leggy one prohibit Barbie from such activities as riding Horse Dancer, Equestrienne Barbie’s elegant plastic steed. Galloping is a no-go because the doll’s soft vinyl legs absorb marks from the fabric of the jodhpurs which reduces the value of the Barbie in the eyes of the collector, to say nothing of tarnishing her image as the babe with the perfect bod. Not that you’d imagine a smidgen of cellulite would matter to the millions of little girls (and boys) who do things to Barbie that would make a serious collector like [a middle-aged textile manager] (see story on [page 1759, line 55]) feel seriously queasy. Still, there are more than enough Barbies around the world to ensure that the breed survives the odd occasions of dismemberment or decapitation at the hands of tots who like to play rough. The organisers of today’s Barbie rally... hope that there is a fair percentage of survivors left to turn up outside the Auckland Museum for an afternoon of “Barbiemania.” They can probably be assured that there are: Barbie dolls roll out of the shops by the million. Barbie’s surrogate parents, the giant toy company Mattel, estimates that American girls in the target market – three to 10-year-olds – own an average of 12 Barbies each. No statistics are collected from N[Z] sales but Mattel... believes we are probably on a par with the A[US]ns, whose young... [girl]s are estimated to own between five and eight Barbies each. Is that a lot of curvy dollies? Well, it translates as a lot of lovely lolly: more than one-third of Mattel’s nearly \$NZ6 billion in [annual] toy sales comes from Barbie and associated products. Barbie was born in 1959. At 37 [Barbi]e’s hardly aged at all; [the doll] has, though, rolled with the fashion trends over the decades. When Jackie O began sporting bee-hive hairdos in the 60s Barbie wasn’t far behind and, bizarrely, [the girl with] the impossibly achievable bodily proportions turned up in a McDonald’s uniform sometime in the early 80s. And the buzz is that Barbie has indulged in that most American of leisure pursuits – plastic surgery: the pointy little ski-jump nose which adorned her countenance in the 60s has been rounded off to provide her with a perfect snub. A new Barbie is released every month; the hot dolls of 1996 were Jewel Hair Mermaid Barbie and Ocean Friend Barbie (put your wetsuit-clad Barbie into a bowl of warm water and [it] emerges – ooh, aah – in a bathing suit). All this and still there are those who claim Barbie is... an advertisement for anorexia; a fantasy figure which encourages sexist stereotypes. Barbie, in fact, is a positive role model for young girls, a spokes[person] for Mattel, NZ unsurprisingly claims, pointing to a series of “aspirational” dolls which feature Barbie as, for example, a teacher, a pet doctor and a people doctor ([the doll] has also been a presidential candidate and an astronaut). Then there’s a recent addition to the Barbie household, baby sister Kelly – from interacting with the sister dolls girls can, apparently, learn a lot about caring for young children. But wait, there’s more. Barbie’s can teach kids subliminally the things mums have spent years attempting to drill into their young... What you won’t find the folk at Mattel waxing lyrical about is a series of “anti-Barbies” which have reared their less-than-peachy complexions in a little shop in San Francisco. In-Jean-ious stocks a Trailer Trash Barbie who dangles a cigarette from her lips and a baby from her hips and whose platinum coiffure sports dark roots. Dyke Barbie comes with a pierced nose, Hooker Barbie’s accessories are a negligee and condom and Drag Queen Barbie is Ken parading in a wig and frock. The shop owner... has been asked by Mattel to stop selling the dolls in original boxes – the corporate logo has been retouched to read “Motel” – but the big surprise has been the demand. It’s payback time for those who grew up with a symbol of oppression... • Barbie[’s manufacturer]... Mattel is hoping to hook girls into the multimedia game market – 80[%] of the \$7.5 billion global market for computer games comes from cyber toys for boys.

...Companies target girls for growth... COMPUTER game companies are scratching their heads for ways to open up the potentially massive [girl] market. Computer and video gaming is [boy] dominated, with girls accounting for less than 35% of the market. But 12 months ago they accounted for less than 25%. Much of the increase can be attributed to the success of a 40-year-old doll named Barbie... Until a few years ago, one of the best-selling games among [girl] players was the Russian puzzle game *Tetris*. Broderbund’s huge hit *Myst* with its educational adventure game series based around *Carmen Sandiego* also attracted their share of girl gamers, but they were gender neutral rather than specifically aimed at a [girl] audience. When Mattel announced it was going into the electronic games market and was going to produce *Barbie* games, the reaction was mixed. But the move was a huge success and the *Barbie Fashion Designer* program was one of the biggest sellers of the year. Players could design clothes and print them on a special fabric packaged with the game. This year, Mattel will release several new *Barbie* titles, including a hairdresser CD that allows users to design their own hair-styles. Mattel will also release an underwater adventure game starring Barbie. The company’s success has encouraged several other companies to continue their efforts to crack the market... Girl Games had success in the US last year with a CD-Rom called *Let’s Talk About Me*. The CD deals with issues of interest to pre-teen and young teenage girls, such as make-up, relationships and keeping diaries. The sequel, *Let’s Talk About Me Too*, will be released in N[Z] later in the year. Like Barbie’s hairstyler CD it includes a hair design utility. Users will be able to scan their own photograph and use the digitised image of themselves as a mannequin to experiment with hundreds of hairstyles and hair colours. [Girl Games] also will produce a game version of the TV series *Sabrina the Teenage Witch*... In the US, Her Interactive released a five-CD set called *McKenzie & Co* that features young actors in mini-games and comic scenes about romance, friends, school, part-time jobs and shopping. The game, which is aimed at 10-year-olds and up, is packaged with a small lipstick.

...IT’S ironic that Barbie, a 38-year-old... bimbo... beloved by seven-year-old girls and tolerated by feminist mothers, has created a techno revolution for young [gals]. Thanks to Barbie’s CD-Rom success, game makers are creating titles for girls. The trend is dispelling notions that girls fear technology and lose interest in computing as they get older... Retail buyers were apprehensive when Mattel showed its *Barbie Fashion Designer* computer game last year at the International Toy Fair... Their big fear was that girls would not buy software. But within seven months of... showing up in stores in October, sales topped \$[US]26 million, according to PC Data. So far this year, it’s the 10th-best selling computer game. In comparison, *Diablo*, the current best-selling computer game, has generated sales of \$19.7m since December. Before *Barbie*, game makers assumed girls didn’t play on computers. But... 60% of 12 to 13-year-old girls told Gallup pollsters they wanted to know more about computer advances. Until they are 10, girls spend more time on home computers than boys do, according to a 1995 survey... Research[also] shows girls don’t like playing against the clock or keeping score. They like working with others and communicating via e-mail... Violence doesn’t offend girls, research shows, it simply bores them. “They will do those kinds of games for a short while,” said... Girls Games. “And then they say, ‘Now what?’” ...Some new games for girls focus on beauty, like *Cosmopolitan Virtual Makeover*, which encourages girls to perform on-screen makeovers of their faces. *Purple Moon*, a spinoff from Interval Research Corp, has launched two series of [girl] games. Its *Rockett* games explores life in school; *Secret Paths* helps girls overcome common fears. The games will be tied in with an Internet site and chat rooms... [● A]ccording to a study at East Anglia University, England[, girls]... would have a brighter future if they played with “boys” toys such as chemistry sets and Meccano rather than “girlie” ones like Spice Girl or Barbie dolls... It suggested that toys such as Barbie hold girls back by conditioning them into thinking they are fit only for stereotypical [gal] roles.

...EVERY second of every hour of every day, two Barbie dolls are sold somewhere in the world. Do the maths and that works out at more than 63 million new Barbies churned out each year, with about 200,000 of those sold in N[Z]. And Barbie's maker... goes through so much fabric each year to clothe those new dolls and supply new outfits for existing ones, that it ranks as one of the largest clothing manufacturers in the world. The reason for Barbie's continuing popularity with young girls and older collectors alike, is the same. Barbie has always aimed to appeal to the social aspirations of its target market of three to 10-year-old girls. The style of Barbie constantly changes to reflect their changing tastes and styles. To sell, Barbie must represent the way girls want to be when they grow up... The dozens of Barbie variations which are produced each year provide a valuable social commentary on the way generations have seen themselves. And fertile ground for collectors with an interest in mid to late 20th century social history. Barbie's origins go back to 1945 when [a US] couple... founded Mattel... and started making picture frames in their garage. A sideline developed when they started making doll house furniture from the offcuts and this, in turn, led the company to expand into the toy business. [Mrs US Couple] got the idea for Barbie watching her daughter... play with cut-out adult paper dolls. Up until that time, most dolls were made to look like babies – an adult-looking doll was almost unheard of. Mrs [US Couple] believed there was a market for a three dimensional doll through which little girls could act out their dreams of growing up, and the first Barbie, fashionably attired in a zebra-striped one-piece bathing suit, hit the shops in 1959. It was not an immediate success. Most retailers did not see the doll through little girls' eyes, and few ordered it. However Mattel tried another tack. They advertised Barbie on the fastest growing entertainment medium of the time – television. In a classic marketing coup that was to rewrite advertising textbooks, little baby boomers pestered their mothers for the dolls, and the company was swamped with orders. It took several years for supply to catch up with demand... The first Barbies of the early '60s were cast as teenage fashion models, with their outfits influenced by the Paris-based couture houses which dominated the fashion scene at the time. In 1964, Barbie's hair was literally let down as [the doll] adopted the Carnaby Street look of the swinging '60s, and... was made even more mod with a resculpted face and new wardrobe in 1967. In the '70s came California Girl Barbie, with a deep tan, sun streaked hair, granny frocks and glittery disco outfits. In the high flying, fitness crazed '80s, Barbie was variously an aerobic instructor, credit card carrying executive and TV soap-inspired fashion victim... Barbie was not commercially imported into this country until 1971, and even then only in small numbers, as [Barbie] was considered expensive by N[Z] consumers. This puts [local] collectors of vintage Barbies at a considerable disadvantage to those in the US, where there is a huge and thriving market for old Barbies and her accessories. However the trade in the dolls is now international, with many dealers providing lists of their stock in collector magazines and on the Internet. According to... [the] president of the Barbie And Sindy Collectors Club of N[Z], the market in the US is so well developed that virtually any model of the doll or its accessories can be bought, at a price. The original 1959 model Barbie will cost anything from about \$7700 to \$15,000 depending on its condition. Collectors grade Barbies according to their condition, with the most valuable being graded NRFB – never removed from box... A '70s doll in good condition will sell for around \$100 in N[Z], and many can still be found at flea markets, garage sales and the like, although most business is transacted privately between collectors... There are also collectors who specialise just in Barbie clothes or accessories... Mattel has also developed a number of Barbie spin offs, such as... several younger siblings... and... boyfriend Ken... However, [the]... brand manager for Mattel NZ, said Barbie will never have children of her own. Barbie and Ken are strictly "just good friends".

...Barbie's battle to keep her virginity... AS the world's billionth Barbie doll was sold this week, a song called *Barbie Girl* stood poised to top the [US] pop charts. Mattel Inc... insists its cult product has nothing to do with sex. Aqua, the Danish bubblegum group responsible for *Barbie Girl*, doesn't agree. Neither, it seems, do the millions who have bought their record, reported by record store staff to include "kids as young as six." Aqua – so bad they make the Spice Girls sound like Schoenberg – landed in the U[S] last week to begin a tour promoting a dreadful debut album called *Aquarium*. They were surprised to find that *Barbie Girl*, a dialogue between the doll and Ken, her beau since 1961, had caused such controversy. "I'm a Barbie girl in a Barbie world/Life in plastic, it's fantastic/You can brush my hair, undress me everywhere," sings Barbie. To which Ken replies: "You're my doll, rock and roll/Feel the glamour and the pain/Kiss me here, touch me there, hanky panky." Mattel's objection to the song is not the obvious one – that it is a load of drivel – but that it implies that Barbie is... a sex symbol. Lawyers for the company and for MCA Records were "locked in talks for the best part of the week," with legal action not ruled out... The song, however, is not at the centre of the ongoing debate about Barbie and her sexuality – that position belongs to Barbie herself. Her origins leave little room for debate. In 1952 a cartoonist in Hamburg... launched a comic-strip character called Lilli which was then turned into an "adult dolly" – an undisguised masturbation aid. In 1957... [the] co-founder of Mattel, was touring Europe and after purchasing three Lilli dolls came up with an idea: Barbie... a toy which would represent the innocence and effervescence of childhood... [The co-founder] was fired from Mattel some years later... [The] author of a book about Barbie, said the doll was "aggressively coded for wholesomeness to overcome the fact [i]t... was inspired by a quasi-pornographic gag gift." Initial market research showed parents to be appalled and hostile but Mattel appealed to little girls who wanted a doll which didn't need a nappy-change or a bottle so much as a date... Barbie's blue eyes nestle beneath carefully arched eyebrows[and above] bee-stung, ruby-red lips. Her figure, transposed to human scale, is a reality-defying 36-18-33. Her legs are long, lean and perfect and her hallmark shoes are open-toed and stiletto-heeled... [L]ooking to improve on its \$[US]1.7 billion in revenue last year... – ...95[% of US] girls between the ages of three and 10 own [a Barbie –] ...Mattel has tried to meet the serial challenge of a thoroughly modern... though sexless... Barbie. Feminists objecting to the bimbo image were appeased by various career Barbies: an astronaut, a surgeon, "Firefighter Barbie" and a Barbie... with a lap-top computer which can actually be connected to a child's real word processor... Mattel let... plans for the next Barbie... out of the bag last week... "Biker Barbie" will come complete with leather jacket and a monster Harley Davidson – likely to get Ken horribly over-excited. Earlier in this over-eventful year for Barbie, Mattel came up with what it regarded as a coup de grace in the caring society: "Share-a-Smile Becky" is the latest addition to Barbie's miasma of saccharin relatives and friends – whizzing about in a bright pink wheelchair. But there's a hitch: Becky cannot visit her friend because Barbie's "Dream House" has no wheelchair access ramp... But Becky has a great figure, great face, great hair, great legs and great attitude. "Fat Barbie" is still a way off.

...FAT is a growth industry. Those who have squeezed through the cracks in their diets are demanding to be catered for. No more are the fuller-of-figure being forced to wear cheerfully coloured dresses that do a good imitation of two-[person] pup tents. They are sick of being treated as asexual and unintelligent. They're standing up for their rights – and manufacturers, advertisers and media are listening. They realise it may be possible to, literally, live off the fat of this land. A reader survey by the new fashion and lifestyle magazine *Bella*, which caters to "plus-size [gals]" found its audience – aged mainly between 36 and 55 and wearing size-20 clothing – has a healthy average income of nearly \$40,000 a year. Obviously there is potential for the fuller figured to fatten a few wallets. During the past three years the number of retailers selling... fashion clothing in sizes larger than 14 has more than doubled. Most are in Auckland, where the number has ballooned... to about 40 stores now. Christchurch has gone from three to around seven... As a result... [a] photographer... has set up Models Plus, N[Z]'s only agency specialising in larger [gals, and] eventually hopes to start touring catwalk shows around the country. It's not just the fashion industry paying attention to our larger citizenry. [An Aucklander]... has started organising Big Sister Bali Tours, holidays just for plus-sizers. Also this year, the Body Shop cosmetics chain store imported its Self Esteem Revolution campaign. It's led by a chubby version of a Barbie doll known as Rubenesque Ruby who advocates positive body image. Posters featuring her read... "Celebrate yourself and others will follow". Even Mattel's Barbie doll is joining in. Her impossibly perfect curves will alter during the next few years to possess a slightly thicker waist and smaller breasts. The toy's maker say it has nothing to do with any desire for political correctness...

Food for thought on the body 'beautiful'... The trend is already showing signs of waning but The Body Shop founder... for one, will be glad to see the back of it. [The founder] even has a phrase for the super-thin super-models who are being made up to look as though they have been badly beaten or smacked out of their minds on drugs: "glum cow disease." The internationally renowned business[person] flew in to NZ this week to talk to staff and lecture audiences in Auckland and Wellington on business ethics. At a business breakfast... yesterday, [the founder] could not resist taking a swipe at the beauty industry, which [the founder] has criticised for years for its use of animal-tested products and for what [the founder] sees as unrealistic images of [her own sex]. A recent campaign featuring a far-from-slim Barbie-style doll... enraged... Mattel. [The founder] admitted there were now "tense discussions"... over the issue. Posters featuring the doll... have been displayed in The Body Shop's 13 NZ stores... but anyone wanting to buy the doll will be disappointed... the image was computer-generated, and the company had not really thought about making a real... Ruby Rubenesque... [NZ and AUS] have been two of the most successful countries for The Body Shop over the past year... both sales and profits increased 5[%] – a bigger increase than any other region. But don't expect to see native plants included in Body Shop products just yet. Three years ago, the company talked with local Maori about using manuka, or teatree, oil in the chain's skin and haircare products. [The founder] said yesterday that the idea had come to nothing, partly because teatree was readily available overseas, but also because the people [the founder] was talking to did not seem overly enthusiastic about the idea.

...[the User didn't] realise how closely her friend had come to resemble her until one day, while shopping together, they picked out the same dress and an assistant asked if they were twins. [The User], who grew up in Ohio is 42. Her friend... a legal secretary from London, is only 29. Their Barbie-doll look is largely the creation of their plastic surgeon. In the past [9 years, the elder twin] has spent \$140,000 on 27 operations, including two nose jobs, an eyelift... [3] facelifts, breast implants and a reduction, and a procedure that required her jaw to be sawn apart and secured with titanium pins to reduce the jut of her chin. [The younger twin] saw her on television, liked the look and sought her advice. Two operations costing \$15,000 gave her almost identical features... put... down to the surgeon's style rather than a deliberate plan. "[The surgeon] has a favourite profile [it] likes to create..." According to [the elder twin], no fewer than six [gals] have become virtual clones of her through the same surgical techniques. Their similarity is the extreme manifestation of a startling trend[that includes a 'Beverly Hills clinic which specialises in turning people into the mirror-image of their favourite star' (this may enable them to gain work as the star's 'double, like the person hired to be 007's stand in on *Die Another Day*', or as celebrity lookalikes – thereby taking work from the people paid to imitate stars they naturally look like; surprisingly, when one star 'couldn't make it to a galpal's recent birthday bash due to a previous engagement, it did the next best thing – hired her "twin" from a special Hollywood agency that specialises in celebrity doubles!)]]. Little more than a decade ago, a mere handful of "aesthetic" cosmetic surgeons were operating in Britain. There are now about 300, and the number of... [Brits] submitting to the knife, laser and suction hose has soared to 65,000 a year. Whether this trend is the symptom of healthy self-esteem or an increasingly obsessive preoccupation with superficial image, nobody has given greater impetus to the "plastic fantastic" revolution than [the 42-year-old]. An artist, photographer, socialite and rock singer in her time, [the 42-year-old] now devotes herself to a commercial advisory service on cosmetic surgery. While conceding [it] looks "bimboesque"... the... [42-year-old] is keen to emphasise her IQ of 148, membership of Mensa and success in business. [The elder twin] embarked on her own transformation after the death of her father, who... gave her little affection but left her enough money to seek out the best surgeons. The look [it] created was based partly on Leonardo da Vinci's theory of the classically proportioned face. [It] also wanted the... slim figure of a teenager which... would make her irresistible to [guys]. The strategy clearly worked. [The 42-year-old] delights in the story of a Romanian baron who ended their brief romance 20 years ago when some of his friends compared her jutting chin to that of Punch. [The baron] wooed her again after failing at first to recognise the "new [Punch]"... But as... the... [42-year-old] braces herself for a fourth facelift, [it] might be wise to realise that not even her looks can last for ever, and the style [it] has created may not endure. As... a leading surgeon, explains, trends change. "I see former models who had Marilyn Monroe bobbed noses done in the 1960s. Now they're coming to me and asking for their original nose back." ...Next[week], the computer quest... to create the... world's most beautiful face.

...MY NIECE fronted up the other morning with a thick pile of scientific papers. "My parents should have given me plastic surgery," [my niece] stormed. "Would have been far more useful than a good education." Her mid-20s' crisis was triggered by new research from the University of Queensland, where [a]psychologist... showed that we consider a beautiful face is actually a symmetrical one. The visually balanced tend to do better than the facially irregular. The guinea pigs for [the psychologist's] work were a group of identical twins. Judges rated them for attractiveness and, more often than not, those deemed good-looking had the best match between their left and right sides. I explained how beauty was in the eye of the beholder. In the remote highlands of Papua New Guinea... platinum blond hair evokes images of dead grass. And as for... breasts – blokes prefer them long and pointy up there. "Yeah right, uncle. I'll remember that on my next expedition. But how do you explain this lot?" The first report... was a study showing that more attractive kids tend to find it easier to make friends... Another study... was... the crooks-and-plastic-surgeon paper. Facial reconstruction was found to be more successful in preventing criminals from returning to prison than social and vocational rehabilitation were. "Okay looks may offer some advantages. But what sort of personality are these spoiled pretty boys and girls going to end up with?" I asked. The answer was in front of my nose. People who are beautiful on the outside are also lovelier on the inside. Even as youngsters they're far less aggressive... So if you're looking for someone to father or mother your children, steer clear of the symmetrically-challenged.

...[a] sassy... member of the *Melrose* cast... is hooked on... the lip-plumping procedure... [of] collagen injections, and her super-swollen lips are the alarming proof... Now her much-talked-about oversized lips have become ultra-sensitive and one side of her mouth is much bigger than the other.

...a 24-year-old New Jersey resident... suffered from scoliosis, or severe curvature of the spine, until [it] had a rod implanted in his back several years ago. The rod stopped him from working out to get the body [it] wanted, so ...[the New Yorker]... flew to Beverly Hills to have... pectoral implant[s]... His reaction to his new look? "Completely ecstatic. People have noticed I have a chest. When they ask if I have been working out, I just say, 'Yes, I joined a gym'." ...Being flat-chested in Hollywood has always driven would-be starlets to the plastic surgeon. However, it is no longer only [small-breasted, small-minded gals] who are desperately seeking surgery. Years ago, [guys] would send away to Charles Atlas for his exercise equipment. In Hollywood today though, a [guy] who wants to develop his chest is more likely to seek out a qualified physician, go under the knife and... after a couple of weeks rest, face the world with a new set of pecs. In fact, pectoral implants are the fastest growing sector of plastic surgery in America... A[n]... actor, who got his new chest two months ago, says the implants have helped him get roles, but... warns that choosing the right surgeon is the key to the operation's success... The operation takes place under a general anaesthetic, beginning with a three centimetre cut under the armpit. Through the opening, [the surgeon] inserts three tapered pieces of silicone, each about seven centimetres long, under the existing chest muscle. These are then fanned out to simulate the natural contours of the chest. Because the patient's own tissue encapsulates the implants, holding them in place, there is no danger of the silicone moving... The operation takes about 90 minutes and costs around a mere \$15,000. There are now an estimated... 3000 [US guys] walking around with brand new "twin pecs". Most of this surgery has been carried out for amateur bobybuilders. A... spokes[person] for the American Society for Aesthetic Plastic Surgery, says the operation is considered safe. However... the implants could shift over time in some cases, if the person is very active. Other doctors caution that the procedure hasn't been proven safe over the long-term.

...[a NZ lawyer says a] court ruling in the U[S] is a positive step for [gals] seeking compensation for problems caused by breast implants... But... it did not speed up the litigation brought by about 1600 [NZers from amongst the 'estimated more than 5000 gals in the country who have had

implants’]... In the first class-action trial over silicone breast implants, a Louisiana jury has found against Dow Chemical Co. The jury ruled that Dow was negligent in testing silicone for use in human implants, withheld information and made misleading statements about safety. But it did not rule on whether the implants cause disease. That stage of the trial begins [in five weeks]. Dow Chemical owns half of Dow Corning Corp, the largest maker of breast implants... Dow Corning filed for bankruptcy in 1995, when a proposed [\$NZ6.75 billion] global settlement of implant claims involving all [43] manufacturers fell through... The verdict was the first stage in a complicated legal process aimed at winning damages for 1800 [US gals]. But Dow Chemical contends that the ruling applied to only eight of the [claimants] and has asked for another court to rule on that point.

...[NZers] taking legal action over silicone breast implants have filed objections to a settlement offer made by Dow Corning... The \$US2.4 billion... settlement offer is part of a plan to bring the company out of bankruptcy and would apply to 150,000 [gals in the US] and 50,000 others worldwide.

...A settlement has been reached in a lawsuit brought by 11 [gals] against Bristol-Myers Squibb over allegedly defective silicone gel breast implants. The settlement was announced in [the] Brooklyn Federal Court... but the amount the [complainants] received was kept confidential.

...With all her efforts to stay young for [her] hubby... and keep their love alive, [an actor] must be exhausted. It’s a wonder [the actor] finds time to make movies between setting up romantic weekends to celebrate special anniversaries, buying her [hubby] costly works of art such as a Picasso painting, and checking in for dollups of cosmetic surgery[that have made her look worse, not better – if I was the actor, I’d be suing my surgeon!

...‘Though the “cosmetologists” of Beverly Hills consider it heresy to say so, expensive beauty treatments can make you look older. If they don’t want anyone to find this out, then they should come up with a way to keep the Picasso-buying actor at home. Recent pictures of the 45-year-old reveal a gal whose essential good looks are caught up in a no-win battle with her beauty treatments. Her forehead is too smooth, her lips are plump but oddly misshapen, while her skin looks reddened and patchy. There is a weary look too in her eyes, and a strange dissonance between those parts of her face that have been “fixed” and those allowed to take their own natural course. The odd thing is that only a few months ago the actor was vowing to give up her very public struggle to look 10 years younger.’ Incidentally, the person] who works at the Premananda Memorial Leprosy Hospital in Calcutta, arrived in N[Z] on Sunday to promote the work of the worldwide Leprosy Mission which has several branches in this country. [The Indian doctor] is also here to learn about plastic surgery procedures that will help to reduce the deformities of lepers... [Photos of the Indian doctor] with two of the world’s most famous [gals] belie the behind-the-scenes work that goes on in the battle to help people with leprosy... [The Indian doctor] met the Princess of Wales in 1992 when [Di] visited the leprosy hospital where [it] has worked for the past 20 years[, and the doctor] had ongoing contact with the late Mother Teresa... Now aged 48, [the doctor] works at the Calcutta hospital part-time and spends the rest of the year co-ordinating surgery and treatments for leprosy sufferers around India. While around 500,000 of his countryfolk have leprosy, only 20 cases have been diagnosed in N[Z]. Leprosy for him, is not posing with sick children for photographs – it is about relieving pain and reducing deformities. “Most of the patients try to hide their deformity... Any treatment gives importance to appearance and function.” ...Much of his surgical work is to help people with drop foot... and glove fingers...

Finger on the pulse... [The] practical side of perfume is explored by [the NZ Herald]... “ODOURS have a power of persuasion stronger than that of words, appearances, emotions or will. The persuasive power of an odour cannot be fended off, it enters into us like breath into our lungs, it fills us up, imbues us totally.” (From *Perfume: The Story of a Murderer*...). You want to buy a new perfume and you want it to suit you. The last one you bought, at horrendous expense[(‘gland cells in the nectaries of flowers produce fragrant oils, or attars, that are blended with other ingredients to make perfumes; it takes many thousands of pounds of flowers to produce an ounce of flower oil – this is one reason for the high cost of perfumes’)], has been down-graded to a mere ornament. It smells great in the bottle and great on your best friend, but it changes into something weird and unpleasant as soon as it touches your skin. You’re too annoyed about the whole situation even to be gracious and give the perfume to your best friend. This is what you need to do. Sashay confidently up to the perfume counter. Do not allow yourself to be intimidated by the attendants, those overly-maquilled maidens with glossy pony-tails and pseudo nurse uniforms. Tell them you are looking for a new perfume for yourself, and tell them of any previous perfume successes. They can then work out the group that fell into – oriental, floral or citrus, for example – and suggest something along those lines. Sniff-test no more than three a visit sprayed on to sample cards, and if there are one or two you like then have a sample sprayed on each wrist... or inside your elbow. Allow 10 minutes for the scent and your skin to develop a meaningful relationship before making your decision. If your skin is sensitive and you’ve had problems with perfume before, [an] Auckland dermatologist... recommends leaving a test patch on your forearm for two days, covered with a sticking plaster. “Many people have reactions to perfumes, either a stinging sensation which happens immediately... or one of several forms of dermatitis, hives, or multi water blisters. That will usually show within two days of using the product, but it can take months or years. And then it can be very difficult to track down what’s actually causing the problem.” Most [gals] also use several perfumed skin-care products, which can confuse the issue... (Even hypo-allergenic products, which may appear scent-less, often have a masking scent to cover the fatty smell of the base.) These products may contain up to 20 ingredients, many of which are potential allergens – perfume is not the only culprit... some [gals] with sensitive skin may be fine with perfume until they go out into the sunlight. Then they may get blisters immediately or over several years a dusky pigmentation may develop on the skin, especially on the sides of the neck or cheeks. It ought to be enough to put us off using any cosmetic which we haven’t freshly whipped up in our own kitchens from ingredients harvested in our own organic gardens. But most of us will never have a single hive or watery blister from perfume – and who’s got the time for crushing rose petals these days? Now that you’ve chosen your perfume: Wear it on pulse points and on the nape of the neck, but not on your throat – the skin is too delicate. Keep the bottle out of heat and light, tucked away in a drawer or in its box if you must display it. Use it regularly and the last spray will be as delicious as the first. Don’t expect it to last more than, say, 18 months. If someone is offering to buy you a gift of perfume, ask for body lotion, talc or shower gel from your favourite perfume range. Layering makes the scent last longer.

...PERFUME has always been a special gift for a [gal] and now it can be just as special for a... [guy]. The] cosmetic manager at Smith & Caughey in Newmarket, s[ays his s]taff will take the time to help you make the right choice for the [guy] in your life. An Aramis gift set, exclusive to Smith & Caughey, is a 100ml bottle of eau de toilette priced at \$98 and comes with a superb tortoiseshell rollerball desk pen... Another exclusive... is a Clinique Daily Skin Essentials gift set... great buying at \$62... With greater awareness of the effects of sun on the skin, the major cosmetic houses have developed a range of products for [guys], often fragrance-free. Lab Series by Aramis is very popular. When making a purchase you can join the Lab Series VIP Club or why not give a gift voucher for a Lab Series facial in... [the] discreet beauty therapy room upstairs in the... Newmarket store... According to... Clinique... “You can never have enough quality product for your skin. Skin care has no age barrier. Whether you are 16 or 80 a gift like this is going to encourage you to take better care.” The Newmarket and Queen St stores[also] have quality shaving sets in wood, gold and chrome. Teamed with a magnificent shaving brush (from \$20 to \$200) they not only make a lasting gift but a lovely accessory to your bathroom.

...*Perfume: a fashion accessory...* PERFUME is a classic... gift... Days are gone where you would only wear one fragrance, according to... [the] cosmetic and fragrance buyer at Smith & Caughey in Newmarket. “[Gals] wear different fragrances for different occasions now.” ...[nowadays t]he major houses put together gift sets offering very good value... For that very special gift Estee Lauder has brushed 9-carat gold zodiac powder compacts, one for each star sign. At \$100 you are buying a collectable piece of artwork which is practical, beautiful and exclusive to Smith & Caughey... Another really fun idea... [is] a sizzling Hydra Mousse which literally fizzes on the skin giving a calming cooling effect... in summer.

...The bizarre cosmetic secrets of the supermodels and the Hollywood stars are being exposed by one of their own: ...a fashion model and television chat show host. Her book, *The World's Best Kept Beauty Secrets*, has sold more than 100,000 copies in the U[S] and three publishers are vying for world wide publishing rights. After 30 years on the catwalk, [the author] has compiled a compendium of tips that sound like an initiation rite in a girls' dormitory. Puffed eyes in the morning? Rub some haemorrhoid cream around the lids. Dirt in the pores? Mix some porridge to use as an exfoliant... [or mix] sugar with a little olive oil... One strange tip was passed on by... the wife of [the Rolling Stones' singer who] rubs lard over her body to avoid stretch marks... [A couple of ancient] actress sisters would take a banana and allow it to turn black and full of potassium before putting it on their face as a mask. Then they would put it in an old bra and wear it to firm the breasts... "[One sister] told me, 'Darling, [guys] love breasts. No boobies, no rubies.' And [the sister] wore a lot of jewellery." ...[a] supermodel uses her coffee grounds to massage her legs to... get rid of cellulite... Hair lacking lustre? ...reach for the Smirnoff: A rinse of vodka adds shine... [T]he hair stylist on the programme... *Friends*... uses a special concoction of 30 mashed aspirin in a bottle of shampoo to prevent dandruff in... [Rachel's hair. The author] claims people are far better off going to the supermarket than the cosmetic counter when they have a problem with their appearance[– a piece of advice which would seem to be supported by the 'AUSn researchers studying the effectiveness of anti-ageing creams containing AHAs who found one that retailed for over \$100 which had ingredients costing 50c, and many were no more effective than moisturisers because the active ingredient wasn't present in a high enough concentration.] "The make-up industry hates me but I am sick of people being ripped off. They think they have to go and spend all this money when famous people are using home-based concoctions taken from the... refrigerator... The stars cannot talk about this because many of them are under contract to leading cosmetics companies, but I can. I have been my own guinea pig and tried all these secrets myself and they work." ...[the author also claims to have] discovered that some salons charging expensive fees for "herbal wraps" using mud from the Dead Sea were actually using a formula created from cat litter... "...I have worked with the most fabulous celebrities who swear by [this] kitty litter facial, including top make-up artists. Although they love this facial, they know that their clients may be a little reticent to try such an unorthodox facial. So they pour the kitty litter into an attractive container. You might want to do the same at your house to avoid strange looks." ...Skin care experts in Britain... were... wary of allergic reactions and urged caution before applying untested lotions [– especially] to the face... [However, a] consultant dermatologist at the Royal Free Hospital in London said: "...These things do cleanse pores so there is a logic to it. As for haemorrhoid cream, it does have some effect on blood vessels but as far as I am aware there is no proven value in applying it to the skin."

...British [gals] 've found a "miracle cure" for wrinkles by using creams for treating piles... [M]odels... use it to give an instant lifting effect ...for... fashion shows. So great is the demand for anti-pile ointment that pharmacists have reported the trend to the National Pharmaceutical Association.

...[in the] belly of a society mansion, afternoon tea is being served behind drawn blinds. The [gals] of this opulent Remuera, Auckland, coffee clique are gathered in the half-light of the room focusing intently on a slide show being screened on to a wall. This particular slide show isn't boring snapshots of a family holiday in Tunisia... these are slides of... faces – before and after. We are at a virtual plastic surgery Tupperware party. A dozen or so [gals] float about sipping hot drinks and admiring surgical enhancements as they would a lettuce crisper. "And here, in this one," Q-Med's product manager... says [while flicking] to the next slide, "you can see how [the patient] looks after the chemical peel." The [gals] "ohhh", and "ahhh" appreciatively as [the product manager] runs through the list of treatments and therapies: There are the dermal fillers to "polyfills" in those wrinkles and furrows, including Collagen and a newcomer called hyaluronic acid... Both are temporary, requiring top-ups after about six months. (Approx. cost: \$200-\$500)... there is sclerotherapy for erasing veins, the Surgitron for removing warts, moles, "lumps and pumps"... (Cost: Less than \$100 for a mole)... Botox which paralyses isolated face muscles thus preventing the face from forming wrinkles from, say, frowning... Injections are required every six to 12 months. (Approx. cost: \$200)... and there are the chemical peels – generally using TCA acid – which peel off the surface of the skin leaving it as pink and new as a baby's bottom... Skin will look sunburnt afterward and take 10 days to heal. (Approx. cost: \$150)... [Laser resurfacing] emits an invisible light beam that can be aimed at minor lines and wrinkles to erase them. The skin will feel sunburnt for one or two days and takes 10 days to heal. (Cost is dependent on procedure, around \$3000 for the entire face)... [Lipo-sculpture transfers] fat... to plump out hollows or wrinkles. Your own fat can be taken from another part of the body, such as the abdomen, spun out using centrifugal force to eliminate everything but the fat cells, and re-injected where needed. Cost [is] dependent on procedure... [Tumescent is] where large amounts of fluid, which includes a numbing anaesthetic, are injected into the body as the fat is removed. (Approx. cost: \$2000 for initial treatment, although it can cost far more.) [Ultrasonic is] liposuction in which ultrasound "loosens up" the fat, making it easier to suck it out of the body. This technique is said to make body sculpting procedures easier and more precise. It is more costly than traditional liposuction... [The product manager packs] away the projector and wheel[s] out the surgical chair... "[My demonstration patient] here is over from A[US]. We're going to freshen her up with a little hyaluronic acid." ...[the patient] reclines in the chair as [a surgeon] dons surgical gloves and fills his syringe... [The surgeon] confides... to the party... "I can't say I like doing this sort of thing,"... his colleague... attempts to arch an eyebrow in agreement – but... can't right now. Botox injections have paralysed the [colleague's] brow muscles and [the colleague] can no longer look up. "I can only see this far," [the colleague] demonstrates for me, raising his eyes to the curtain pelmet. "But I can still use my neck," [the colleague] jokes, rocking his head back. [The surgeon and his colleague] aren't used to doing surgery as performance art in a party environment; they prefer the peace and quiet of their practice rooms... Still, this event is for a good cause – the doctors are members of the Appearance Medicine Group, and this outing is an attempt to raise the profile of their newly established society. The [group, which] consists of GPs who aim to specialise in the superficial – the science of beauty... [–] is positioning itself in a market gap somewhere between the beautician and the plastic surgeon... They are motivated by the fact that the market for services such as Collagen injections and chemical peels is skyrocketing... Once the domain of... movie stars, plastic surgery is becoming commonplace among average [gals]... Traditional plastic surgeons also report a rise in clientele. "All I can say is that it is an extremely, extremely, extremely busy time for me right now," says [one Auckland] plastic surgeon. The reason for the increase in business is twofold, [it] says. "There seem to be more people out there seeking improvements as people see new techniques, and some of the old misgivings about plastic surgery seem to have disappeared... it's just a trend as the culture becomes more sophisticated." ...America, of course, is the heart and hotbed of plastic surgery. It is also the place where things can, and frequently do, go horribly wrong. After 18 related deaths, California finally regulated its cosmetic industry. Yet even laws don't make for a foolproof setup. There was the recent case of Tammara Cotton who popped into an LA doctor for a spot of "lunch-time lipo" using the tumescent... technique. [Tammara] was dead soon after... Tammara... virtually drowned in her own body fluids. At the time of death her body had been bloated with 19 litres of fluid... Doctors... stress all these techniques can go wrong if the wrong person is doing the job. In N[Z], the cosmetic surgery industry is unregulated and is likely to remain so.

...Keeping up appearances... THEY remove... wrinkles, buff... lips and send varicose veins packing, but now the doctors who fix the imperfections are meeting to fix their own. For the first time, 15 A[US]n and six N[Z] doctors practising what they call "appearance medicine" have joined forces to decide on a code of practice for their industry. At an inaugural conference in Auckland this weekend, the doctors looked at operating standards, treatment claims, new treatment evaluations and ethical dilemmas affecting their field. The doctors previously worked under their own guidelines but decided to form the Appearance Medicine Society of Australasia... Appearance medicine, which has been available in N[Z] for less than a year, describes a range of treatments which are less severe than cosmetic surgery but more intensive than beauty therapy... The society maintains its techniques are safer, more affordable and supported by N[Z] psychiatrists. But... the... Medical Association chair[person]... who had not heard of appearance medicine, said [it] was concerned about the ethics of such surgery and whether there would be adequate follow-up care.

...“A bush girl” [from Ngaruawahia has taken] me very vigorously to task for a little harmless bit of pleasantry as to the country yokels and the bush girls making their appearance in the town for the... holidays and how they comported themselves. My fair correspondent shows so much spirit that [I feel it] is entitled to make her defence of her class: Dear Mercutio – in reading your last Saturday’s contribution, my indignation was aroused at the pitying way you spoke of the country yokels’ visit to town and “how the bush girls were easily picked out through their disregard of the fashion plates.” Now, sir, as one of the poor bush girls, I would like to tell you that I am sure we would all be very sorry to think that we were only able to study the fashion sheets and dress accordingly. Where would our work go? We most humbly apologise for overstepping the bounds of prudence by “gazing at the shop windows and flattening our precious little noses against the window panes.” We could easily have avoided the latter had we wanted them flattened as there are always plenty of Maoris handy who would be glad [to oblige]... Could those who study the fashion plates do much else? Last week I had occasion to go to Auckland and from what I can gather all these city girls converse about was dress and mashers – quite nonsensical to a country girl. For hospitality the so-called “country yokel” stands far superior to the city swell.

...AFTER a month of planning [one city swell] was determined to succeed at the *Sunday Star-Times* Fashion in the Field competition... at [the Ellerslie racecourse] on Friday... “But when I got here and saw the other girls – and they all looked so beautiful – I didn’t think I had a chance,” said... [the] sometime model who won the under-25 category at race days in 1994 and 1995 and who eventually claimed the Supreme Award [this year]... There was elegance and glamour aplenty as every one of more than 300 contestants catwalked before the judges, three fashionable A[US]ns – a) make-up artist... clothing designer... and talent agency director... The trio had the difficult task of narrowing the field down to eight finalists. The Auckland finalists were then joined by four regional winners, who had been named best-dressed at their own provincial race day. There was stiff competition. Among the 12 was... [someone] from Levin who won thousands of dollars worth of prizes at the Melbourne Cup in November[, and] wore that same outfit – an aubergine suit with avocado trim... There was also mother-daughter rivalry... [The daughter] had won at the Te Rapa races in an outfit designed by her mother... to automatically go into the finals in Auckland. So as not to compete with her[daughter, the mother] entered the Ellerslie Classic [Gal] category – but ended up a candidate for the Supreme Award anyway. It was the other way around for [another mother and daughter. The daughter] did not enter this year. Instead, [it] brought her mother a stunningly elegant black and white Moschino suit which eventually won the Classic... prize. The selection of... [the] overall winner was unanimous. “We noted [the city swell immediately. The city swell] looked comfortable and had chosen the outfit perfectly. It wasn’t too old for her, nor was it too flirty[– although, we confess, the city swell] reminded us very much of [the prostitute] in the movie *Pretty [Gal]*.” When the Supreme Award winner had]... collected off her first bet on the first race... The arrest in Malaysia of three Muslim beauty contestants who paraded in swimsuits has touched a sensitive nerve in a country whose official religion is Islam but whose laws are secular. The move occurred against the backdrop of a controversial government ruling that a course on Islamic civilisation would be made mandatory in universities... The beauty competition row erupted when religious officials raided the Miss Malaysia Petite contest finals in Selangor... and arrested the trio before TV cameras and a gasping audience. [The part]-time models... were fined \$NZ225 each. The law against “indecent” dressing in public was passed by Selangor in 1995, but was not widely known. It had not been acted on until the arrests... Muslims themselves are split over the... ruling. “Muslims should support the action as a way to guard the purity of Islam and a step to stop social ills...” [one] student... was quoted as saying in *Harakah*, the newspaper of opposition Islamic party PAS. Others, including the [PM’s] outspoken daughter, were livid. “What worries me is, what next? What constitutes indecency in Muslim [gals]? ...Excuse me, but did the Taliban infiltrate our country?” ...Certain Malaysian government leaders were embarrassed at what they saw as a setback to years of hard work convincing people at home and abroad Islam was a moderate religion.

...A Muslim beauty who won the Miss Croatia title this month and then was stripped of it amid allegations of religious prejudice, has failed to regain it in a rerun of the original beauty contest. The same jury that chose [the Muslim beauty], aged 22, for the title two weeks ago ditched her when asked to judge again in favour of the 17-year-old former runner-up... [In local news, l]egal threats are flying and confusion is rampant as two [people] are paraded as the country’s most beautiful [gal]. In one corner is... Miss N[Z]. And in the other is... the Miss Counties representative in last year’s Miss N[Z] contest. Miss Counties] did not figure in the top five but has been “given” the title of Miss World N[Z]. The troubles began when a new promoter took over the Miss World franchise in N[Z] from the organisers of the Miss N[Z] contest, and chose [Miss Counties]. And when Miss Counties was identified in a television interview this week as Miss [World NZ, Miss NZ] was furious... “I’m just trying to build up the profile [before the Miss Universe competition...] but it is very hard when someone else is going around taking the credit.” ...[Miss Counties] got the chance to go to the Miss World pageant in India last November after [a]model agent... took over the... franchise. [The model agent claimed to have chosen Miss Counties because it] fitted the criteria for the Miss World pageant perfectly... “...The girl who goes to Miss World has to be intelligent. Miss World is beauty with a purpose.” [Miss Counties], who holds a degree in dairy science, said people would get used to the idea of there being two distinct titles[and added that] being Miss World N[Z] had been “wonderful.” “I have had a chance to travel and meet a lot of people,”... Next year there would be a full contest to find a Miss World N[Z].

...NZ’s runner-up Miss World has left a dodgy start to her modelling career far behind. International modelling offers are pouring in for [the NZer], who came second to Miss India in the Miss World pageant in the Seychelles at the weekend. It is the kind of future the 18-year-old could only dream about two years ago when, as an aimless Waikato teenager, [it] went to Christchurch looking for a job. Her proud dad, [a]Te Aroha laundry owner... said her modelling career kicked off with a dodgy work proposition from a photographer [the teen] met in a Christchurch chemist shop. When [the teen checked the photographer’s credentials through a local model agency, the agency made an offer of their own... [The NZer] beat 84 others to take the £5000... runner-up title... [Her agent, the] Spotlight Model Agency director... said the second placing was ideal – it would carry prestige and cement her lucrative modelling career, without tying her up to a year of Miss World commitments... Her outfit by [a Christchurch]-based fashion designer... also won the best gown section... N[Z]’s only other runner-up in the Miss World contest was... in 1963... [NZ’s Miss World] came third... in 1990... The country’s only other major international beauty contest winner... took the Miss Universe title in 1983.

...Rumours that Miss World would lose her title because of connections with two of the contest judges were rife in the Seychelles yesterday... Observers in the Indian Ocean islands where the beauty pageant was held over the weekend said that Miss India might be forced to step down in favour of the runner-up... But... the organiser of Miss World N[Z]... was surprised to hear there were any doubts about whether [Miss India] would keep the crown. “Perhaps I should be delighted for the N[Z] girl to step into the position... but Miss India was the true winner in my opinion.” ...Miss [India]... works for BMG Crescendo[, which]... is linked to the main sponsor of the 1997 Miss World, the Dolphin Group, whose chief executive... was one of the judges. Another judge, the former President of Seychelles... was described in the Government newspaper *Nation* as a “special associate” of the Dolphin Group... Meanwhile, N[Zers won’t] see the event on t[v] because neither TVNZ nor TV3 bought the programme.

...A once shy and awkward Waikato teenager has fulfilled her dream of becoming a beauty sensation... [The] runner-up in the Miss World pageant... drifted through... three Waikato high schools before dropping out in the fifth form to take up modelling work in Christchurch. After two years under the tutelage of Spotlight Model Agency... [the Waikato teenager] was crowned Miss World N[Z] two months ago]. Newspaper and magazine reports at the time labelled her a rebellious urchin, sent to stay with an aunt in the South Island while... [sorting] herself out. Her father... denies the claims, which... have hurt the family of five... [His eldest daughter] spent the first term of her fifth-form year at Te Aroha college. The college’s principal... said that during a couple of discussions in his office after her outspokenness had landed her in trouble with her teachers, [the

laundry-owner's daughter] told him it did not matter how [well the daughter] got on at school because [the 5th-former] knew there was a successful modelling career ahead of her.

...More than 100 family, friends, well-wishers and awe-struck young girls greeted the... Miss World runner-up... at the airport... in Christchurch yesterday... The [first] things on her agenda were a McDonald's meal and a walk by the beach with... her boyfriend... [The runner-up] was in a way relieved not to have won the Miss World title because... [it would have meant putting] her modelling career on hold for a year. But [the runner-up] was prepared... to take over the crown if rumours proved true and the winner... was forced to step down.

...[the girl] just wants to congratulate her big sister for being named the second most beautiful [gal] in the world. But [her big sister] has refused to return her 13-year-old sister's calls and has not spoken to any of her family since [becoming the] runner-up Miss World... at the weekend. "The whole family is just devastated," her father... said last night. They blame the Christchurch model agency who they say has seized control of their 18-year-old daughter and isolated her from the family. But... [her agent] told TV3 last night that... [the] Spotlight Model Agency... had given [the 18-year-old] a fresh start at a low point in her life... The family spat became public yesterday when the beauty queen's mother... arrived back from the Seychelles[and] spoke of her dismay at not being able to speak to her daughter after making the long and expensive journey to the final. [Her eldest daughter] blamed the contest's tight security, but her family believe they are being kept away from her... Last night [her father] pleaded for his daughter to contact the family within the next 36 hours. [The father] said his daughter had a very important decision to make: "Is [my eldest daughter] going to listen to people who are going to be there for her whether [it] loses or succeeds, or is [it] prepared to listen to someone who won't do that?" But [his eldest daughter] said, in reading from a prepared statement on television, that [it] was disappointed her parents had spoken publicly and... urged them to respect her wishes. "I just wish they would want the best for me and appreciate all that [my agent] has done to help me instead of going to the media and causing a lot of corruption."

...[the Miss World runner-up] is being urged to sort out her very public family squabble... An agreement between the contest organisers and [the runner-up] stipulates that her title can be removed if [it] brings the pageant into disrepute... [However, the] founder of the Miss World beauty competition... said from London last night that the runner-up in last week's pageant was unlikely to lose her title. "That really only applies to the winner,"... [The runner-up], and her agent... have bickered all week with the model's family... The model lives with the [agent's] family in Christchurch and goes out with her mentor's son...

The first steps in healing the rift between [a] beauty queen... and her parents may have been taken. [The beauty queen contacted her] parents... on Wednesday but the couple – still reeling from media interest in the spat – are keeping details of the conversation private... The rift between the family hit the headlines late last month after [the beauty queen] became the runner-up Miss World... Until this week [the beauty queen] had ignored appeals from her Waikato family to contact them... including her proud young sister... who... is staying with her grandmother... [Their father] did not know whether [the beauty queen] had yet spoken to her sister... [T]he licence holder for the N[Z] Miss World competition... had not been contacted by [the beauty queen] and did not want to comment.

...[NZ's] Miss World runner-up... has made up with her family and is going home to the Waikato... The beauty queen also says [it] has split with her manager... although... they still communicated professionally and [the beauty queen] continued to have a relationship with... [her former manager's son. The beauty queen] looked in danger of losing her title after a two-day television sideshow last month in which [the model], her mother... and [her manager] slugged it out verbally... "I love my family and they love me, and I am going to visit them... It was a shame that my private life was kind of thrown around all of N[Z]." The beauty queen also said that stories... about her wayward past had been exaggerated.

...[NZ's] premier beauty queen hasn't visited] her family... The... runner-up in Miss World last month, had picked up some lucrative modelling work overseas and needed to save money... However... mum and dad are happy.

...While her parents... issue tearful warnings on television that a crazed killer is on the loose, police and public officials in the affluent city of Boulder, Colorado, insist that no such person exists. It is now more than three weeks since the millionaire... climbed the stairs from his basement with the body of his six-year-old daughter in his arms. Earlier that morning his wife... had discovered a three-page ransom note on the kitchen steps and an empty child's bed upstairs. JonBenet had been thrown into a windowless room... her mouth sealed with masking tape and nylon cord tightened around her neck with a wooden handle. Police had tried the door to the basement while searching the house on Boulder's millionaires' row earlier, but found it jammed. Almost from the beginning it was clear that this was much more than a kidnapping gone horribly wrong. Forensic reports soon revealed that JonBenet had been sexually assaulted, with a number of newspapers reporting that her skull had been fractured. Police first discovered that the ransom note had been torn from a legal note pad in the \$US750,000... house, then, last week, uncovered a draft version in which the author had apparently attempted to disguise his or her handwriting. The ransom demand, for \$US118,000... was oddly precise as well. The cloud of suspicion that hangs over the case stubbornly refuses to clear. But even the most sceptical admit there is nothing to suggest that this is anything other than, as her parents claim, a horrific intrusion into their picture-book family life. In the aftermath of the murder, [JonBenet's grand]mother described the Colorado house where the family has lived since 1991 as a hellhole. "Our friends are as mad as hell," [the grandmother] told a Denver television station. "All America is as mad as hell." So why then have husband and wife retained the services of different high-powered criminal attorneys? They have also hired a private investigator and offered a \$50,000 reward. Above all, why has [JonBenet's father], the president of Access Graphics, a billion-dollar computer equipment subsidiary of Lockheed-Martin, engaged the services of... one of Washington's biggest media consultants and a former spokes[perso]n for the Justice Department. "We are a Christian God-fearing family," a weeping and red-eyed [mother]... insisted to CNN... "We love our children." That love apparently included turning her daughter into a rising star on the child beauty pageant circuit, a bizarre passion of America's Old South, in which little girls, caked with make-up and with elaborately coiffed helmet-hair, pirouette before judges in clothes that suggest a sexuality well beyond their years. Videotapes endlessly replayed on network t[v, which show]... the vulgar pageants where [JonBenet] would parade in a white cowboy hat and matching boots, [have]... gripped America with a blend of heartbreak and revulsion. Not since the day when [a black sports celebrity] fled down the freeways of Los Angeles in his white Ford Bronco has a murder investigation so captured the imagination of the public. The fascination with the case is fed by constant rumour and innuendo.

...Most of the readers who wrote to us about the unusual world of pint-sized beauty pageants... damned the idea of tots' participating in them... [A reader from] Indianapolis, Indiana, stated firmly, "I cannot think of anything less important or good than the values espoused in these events, where contestants are coached to be competitive and self-absorbed. The tapes of poor JonBenet Ramsey are truly disturbing." ...[a reader from] Berkeley, California, agrees that pageants emphasize the wrong values. "It's sad enough that grown[up] gals] are subjected to and pressured by standards of beauty, but that they are being instilled in children so young is heartbreaking." ...[a 12-year-old reader from] Penfield, New York, is also no fan of such contests. "When young kids participate in these pageants... they learn how to be vain, how to put on makeup and strut their stuff. Parents say this improves self-esteem, but I think it inflates the winners' egos and makes the losers feel awful."

...Playmates and mothers are joining forces to make girls as young as nine go on diets in a futile bid for popularity, British researchers said yesterday. Two studies presented to the Third London International Conference on [E]ating Disorders showed that girls who are just a little heavier than their peers are much less popular... Although none of the girls [in the first survey were] clinically obese, and most did not even look fat, the heavier they were, the more likely they were to be on a diet. The second survey showed mothers... who dieted and were concerned about their weight also urged daughters whom they saw as fat to diet. Meanwhile researchers say they may have found the Holy Grail of dieters the world over: a pill that would provide the same metabolic benefits as exercise... but... [don't] break out the chocolate yet... [because] this elusive "exercise

pill[“] could still be years in coming. ■ ‘Dozens of websites that show pictures of anorexics and offer advice on how to starve and what drugs help you lose weight have been closed by an internet service provider. Yahoo! closed the sites this month because the numbers had increased dramatically. But many other similar sites, run by people who have anorexia nervosa, remain on the internet, to the alarm of NZ eating disorders services. Nearly 400 websites worldwide contain hints on how to suppress appetite, what drugs help weight loss, and exercise routines. A coordinator at the Eating Disorder Service in Auckland said secrecy went hand in hand with anorexia, which meant it was difficult to tell how influential the sites were. “There might be times when family would not know if people were accessing these sites or not.” Anorexia was like a psychiatric illness. Overseas figures showed it affected about 1% of the population. Many factors were involved in the complex disorder, including personality, family dynamics, social factors and history. This made it difficult to treat’]...

British researchers say that the brains of young people with anorexia show measurable differences, which could mean there is a biological factor which predisposes people to the illness... London’s Great Ormond Street Hospital found that a number of anorexic children had a reduced blood flow to areas of the brain believed to govern visual self-perception and appetite – the anterior temporal lobes... On average the blood flow was 10[%] less than normal, but in some children it was as much as 30[%] less. “...when we look at ourselves in the mirror, normally we’d see what we really look like. But the abnormality distorts what we see.” Anorexics, who can starve to death, often believe they are too fat even when the scales and their thin bodies say otherwise. Singer Karen Carpenter died of heart failure brought on by anorexia... [The researchers, who presented their] findings to an eating disorders conference this week... hoped the findings could lead to a treatment for anorexia, which afflicts one [gal] in 5000 in Britain and is becoming more common in industrialised countries... But they warned that the studies were very tentative and said a variety of factors could be involved, including genetics... peer pressure... and [‘over-protective mothers – a study by British psychiatrists of girls with the eating disorder showed many of their mothers had been anxious during pregnancy and the child’s early years, and a quarter had had a previous stillbirth or miscarriage (they remained so distressed about the loss of their first child they had difficulties allowing the new one to mature and become independent’)]...

Samantha Kendall died late last month, bringing to an end a tragedy that seemed as inevitable as it was futile... [T]hree years ago, her twin sister... [also died from] anorexia... SAM... was weary of being wheeled out like a circus freak, forever known as the “anorexic twin”. [Sam] was tired, too, of playing piggy in the middle between her mother and grandmother who vied for the limelight her dubious fame brought the family. Most of all... [Sam] was worn out by the stream of experts who pontificated on her condition and debated cures. “Everybody wants to say: ‘I got Samantha Kendall better’ ...I want someone to help me not because I am... [a] celebrity anorexic, but because I’m a girl who is ill... I will probably die from anorexia.” It is exactly two years since... that tragic prophecy... Samantha, like her sister Michaela before her, died weighing less than 31kg. Since the day in 1981 when the 14-year-olds began a race to see who would lose most weight in six weeks, there was a macabre inevitability about how they would end their lives – as emaciated, exhausted, clinically depressed and confused [people] who had lost the will to overcome anorexia. Samantha[’s]... life was a complex meld. [Sam] railed against her celebrity status, yet courted publicity... pleaded from her “death bed” for money to finance a controversial cure in Canada, yet shunned all offers of medical help in Britain... lauded the Canadian’ clinic’s treatment, then accused it of using her as an advertisement to attract patients... [and even swore to] live for her sister, yet starved herself so much that her liver failed. [Sam] had tried every treatment – force feeding, electric shock therapy, medication and counselling. At times [Sam] seemed to be winning and would begin another round of press conferences and photocalls. But her last years were a lingering death played out in public. As one former doctor warned, [Sam] had become addicted to life as an anorexic. “Given the choice between being the most famous anorexic in the world and an ordinary Brummie, it’s a difficult choice for her,”... When the Kendall’s were chubby seven-year-olds their grandmother... nicknamed them “the trifle twins” because of their fondness for sticky puddings. “Perhaps that’s why mum and dad left, because we are fat,” Samantha told her twin. When the girls were born their father was in prison for burglary and by the time they were four [their father] had deserted their mother... Unable to cope, [their mother] farmed them out to her mother, who brought them up. By her own admission, [their mother] had little maternal instinct. “I’m not very stuck on babies... I have always had an affinity with animals.” Like many anorexics, the twins’ earliest experiences were dominated by comments on their size. At 11, when both weighed 70kg, Sam... recalled a visit to her aunt who said: “Oh my God, they’re bloody enormous. What are we going to do with them?” An uncle weighed them, saying: “God, girls, look at the size of your backsides. It’s disgusting.” By 14 and weighing 76kg, they were singing with their mother at the... clubs where [their mother] performed. Inevitably, attention was drawn to their size. When a boy called Michaela a “fat mess” [Michaela] hit him. Believing they would win affection if they were thinner, they began their dieting pact. Each lost 19kg in six weeks, eating just two boiled eggs and a Crunchie bar a day. Flattering remarks followed and the twins revelled in the attention they received. If we become thinner, they reasoned, we will be even more popular... Last week 30-year-old Samantha’s ashes were buried beneath a magnolia tree in her mother’s Birmingham garden – beside the twin whose legacy [Sam] could never shake off. Their pact is now complete... When Samantha died, alone, [her mother] was heartbroken. “Why couldn’t someone have helped them when it all started to go wrong,” [the mother] wept. The likely truth is there probably never was any chance of helping the twins – save excising a childhood that bred physical self-loathing.

...[*HOW I BEAT anorexia* When the girl from Te Puke felt hungry, it would watch somebody else savour her favourite food. If that didn’t make her feel nourished, it would turn to her scrapbook filled with pictures of moreish meals. The girl wasn’t trying to stick to a diet, it was deeply absorbed in anorexia. The girl started dieting at 14, when 65kg. Within a year it was a skeletal 39kg – the average weight of a 10-year-old – and so thin that her natural defences had covered her whole body in hair to keep her warm. Sleeping without several duvets on her mattress gave her bruises, yet lying around was all it had energy for. “I forgot what being hungry was all about. People think anorexia is a physical illness but it’s not, it’s mental. It wasn’t started by peer pressure, it was all about control. It was the only thing I could control without people forcing me to do things and making decisions for me. I could see my bones, I knew I wasn’t fat. It started as a good, healthy diet. I ate fruit and veges and lost a little. People started saying, ‘You look really good,’ so I carried on and lost more weight. When I got down to 58kg I started cutting out anything fattening. Within 3 months I was just eating one piece of fruit or some dry toast and water all day.” To avoid the pressure from her mum, an office administrator, and schoolfriends encouraging her to eat, the girl moved to Rotorua, where it enrolled in a hairdressing course. “When I moved to Rotorua, I had guys dripping off my arms. Then I thought that if I put on weight they wouldn’t want to go out with me.” All the while, her mum was desperately trying to get her to see sense – to no avail. “I had a call from her tutor saying they’d asked her not to come any more, as her being there was upsetting the other students too much. I’d try to entice her to eat, but my daughter got so clever. It would put a mouthful in and chew for ages, but had only eaten one mouthful. I spent \$6000 on dietitians, psychiatrists and psychologists. Drug addicts and alcoholics get so much support, but I didn’t know where to turn. It would have been nice if there was another mum I could relate to.” The daughter agreed to weekly weigh-ins with her doctor. But another trick it used was to drink litres of water shortly before being weighed. One day, doctors called the mother to say her daughter – who was now only 36kg – hadn’t turned up for her weigh-in. “I cried my heart out all the way to Rotorua. I had so much hope this would be a turning point. I wanted them to put her in a unit, but I knew we couldn’t do it without her cooperation. We took her to the unit, but my daughter just looked at me and said, ‘I do not want to stay here, Mum’.” It was only the death of her friend Kirsty Robinson – who a year earlier survived a boating accident that claimed the lives of Kirsty’s father Ross, cousin Tim and their friend John Lim – in a car accident, that made her think about her health and how it was killing herself. The 17-year-old – who was 34kg when it attended Kirsty’s funeral – vowed to stop letting anorexia rule her life, and began eating again. Now, a year on, it is a healthy 60kg and can start planning her future. It has a part-time job as a retail assistant and wants to get into modelling. “It’s hard to get a job because I left school at 15 and have no qualifications. But I finally feel beautiful and I am such a strong person. My personality is awesome. I want to warn others, but nothing I say can help them, it’s got to come from within.” The long-term effects of her anorexia are still

being accessed. "My kidneys are stuffed. There's a chance I won't be able to have children. I didn't have a period for three years. I'm terrified I may never know what it's like to be a mother. I didn't realise the pain I was putting Mum through. Thank goodness Mum stood by me." • Anorexia] and bulimia rates are surging in fashion-conscious Argentina... leading to alarmingly high death rates from eating disorders. "According to recent studies, one out of every 10 teenagers in Argentina is bulimic or anorexic, triple the rate of the U[S. And 9] out of 10 [are girls]," said a report by the National [Gals'] Council released yesterday... Argentina[ha]s... a mortality rate of 10% among victims of serious eating disorders, it said... The report blames the country's "narcissistic or 'barbie-doll' culture" for imposing impossible standards of beauty on adolescent girls. "Dolls used to have the face of little girls; now they look like a miniature version of [a super]model," said... the... organiser of the council's first national seminar on bulimia and anorexia last year... The council said it would seek to encourage a public debate and national policies aimed at altering advertising bias and fashion designs so as to include [girls] of all sizes.

...*Sexless, skeletal slaves to fashion...* IT'S AN indictment of our communal apathy that a cross-dressing cop has to draw attention to the poor deal [gals] get from clothes shops. If a dedicated transvestite can't find the right size frock... what chance has ordinary Ms Kiwi got? ...My cross-dressing contacts tell me that most of the clothes they try on these days are designed for a mythical creature more than 1.8m tall and proportioned like a starving greyhound. The explanation for this blind failure of clothing manufacturers to match supply with demand is on the catwalks and in the magazine photoshoot studios, where couturiers pay handsomely for [models] who look as if they've just staggered through the gates of Belsen into the arms of Allied soldiers in 1945. These skeletal creatures, all with down-turned mouths signalling the fashionable mixture of petulance and personal tragedy, are not even remotely feminine. They are sexless travesties of humanity. Their only significant contribution to the late 20th century is anorexia nervosa, the frightful disease of the mind that turns physically normal young [girls] into compulsive starvelings because their images in the mirrors of suburban bedrooms don't match the photographs airbrushed into glossy magazines. Magazine publishers would not know what you were talking about if you suggested they were being anti-social by throwing practicality out the window and encouraging anorexia. Choosing clothes according to fashion is something some of our fellow humans have always done, unfortunately. It is a mark of a very limited intellect to feel that you can't wear sensible, practical clothes because they are unfashionable. But peer pressure is unrelenting and irresistible.

...Japan's Education Minister reports that the average weight of schoolgirls there has declined for nearly all ages this year, the first such drop in more than 20 years. Officials suspect a growing number of young girls are going on strict diets to look like a bone-thin pop star... [In further news from Japan.] Tokyo is known for sex joints, featuring naked [gals] in acts that range from coy to raunchy. A favourite [Japanese guy] practice is to dine at clubs where sushi is served with a naked [gal] as the platter. But at J.men's, it's [guys – mainly from the US] – who strip to G-strings for the entertainment of Japanese [gals] who come here by the busload, some three or four times a week. "This is the best... I never get tired of coming here," says... a 20-year-old college student who pays the \$42 cover charge as many nights as [possible. The 20-year-old] knows all the dancers by name. "It totally changes my mood. My life is so boring otherwise." J.men's is Tokyo's first [guy] strip joint, and the nightly crowds are proof some Japanese [gals] are sick of sitting at home while their husbands or boyfriends are out on the town... Some of the dancers lean over and kiss [gals] in the audience. Sometimes they drag a shy one onstage for a dance or nuzzle. A hug from a big strapping guy... goes a long way here, judging from the giggly, giddy responses. At no time are the performers completely naked (though they come close). The hook is young [non-Japanese] guys... singing and dancing in decidedly American garb. Besides sports uniforms, sometimes they are in top hat and tails, or full US military uniforms.

...THEY ARE known, for obvious reasons, as screwdrivers. Usually blonde, often tanned and always sleekly beautiful, they are as dedicated to their task as the Formula One drivers they seek to enchant. The drivers' wives call them paddock ponies because they understand the intentions of the glamorous [gals] who waft around the paddock and the hospitality tents of grand prix racetracks. Their aim is to bag a driver, and preferably one who is young and unattached... The ability to speak several European languages helps, and any screwdriver worth her salt knows that Monaco, Argentina and the Italian circuits are the most accommodating to overt glamour. Once inside, the experienced screwdriver is never shy and, as [the experienced screwdriver] knows, if the single-minded drivers don't bite, there... is an even more blatant approach: Slipping the driver a phone number; or pushing a photograph of your naked self (with phone number) under his hotel door. Drivers are not immune to such attention – [a Scottish driver] once signed a girl's pair of knickers while [the screwdriver] was still wearing them. Neither is it unusual for [gals] to be passed from one driver to another, each hero competing for the most glamorous catch as fiercely as [the hero] manoeuvres for the chequered flag... If necessary, they are prepared to share... [A] team owner, recalls two... girlfriends... [of a] flamboyant Brazilian ex-world champion... almost scuffling. "It was a big thing to carry your driver boyfriend's racing helmet as [the driver] came off the track. At one grand prix each girl grabbed a side of his hat and tugged with their teeth clenched. It was hilarious." Last summer, [one girlfriend] watched serenely as a gaggle of luscious [screwdrivers] wriggled around her lover, the Scottish driver... "There are always girls around," [the girlfriend] said with a pretty shrug. "But I trust [my Scot]." Today, however, the blonde and beautiful [girlfriend] is alone after four years of highly public attachment to [the Scot]. With the economy of one accustomed to swift changes of gear, [the Scot] disengaged her in one phone call. Recently, at the San Marino Grand Prix in Imola, another blonde and beautiful model... was "comforting him at the trackside". Now, to suggest that [the model] is just another predatory screwdriver would be unkind and untrue. [The model] works at the London office of IMG, the management company. But there is no doubt that glamorous... [screwdrivers] are an essential part of the intoxicating, dangerous and egotistical world of F1. Risk and sex are always easy partners, and as the sport becomes richer and more high profile, grand prix groupies intent on manoeuvring for pole position are becoming ever more numerous. And as [the Brazilian] once famously observed, grand prix is no place for ugly [gals]... But it's not just the girls who are getting in on the F1 act. Racing's social profile is rising ever higher – last month Britain's *Tatler* magazine endorse[d] motorsport as "the new A-list social priority" – a thrilling successor to polo for the financially well endowed... Growing numbers of the spectating rich, famous and socially elevated is, of course, even more of a pull for the screwdrivers. As is F1's spectacular political incorrectness. Seething with machismo, sexism and undiluted pulling power, this is a world where [guys still call gals] "birds" and where [gals] worship a cadre of chiselled and immensely fit [guys] who risk their lives in a high-octane gladiatorial struggle. Some aphrodisiac... Screwdrivers, it seems, are far from being on the last lap.

...SOME fascinating stories have surfaced in the wake of the resurgence of stiletto heels, which are making a comeback in N[Z]. So far they're significantly present only in Auckland, but it's only a matter of time until the country cousins catch on. The feminists are furious. Stiletto heels epitomise what the New[-age Gal] must never stoop to: Appealing to [guys'] lecherous desire to see good legs look even better; admitting that good legs tend to make sex lives more abundant and satisfying by attracting the pick of the studs. This is why bearded [gals], even those who have good legs in spite of themselves, never wear stiletto heels, and hiss in frustrated fury when they see them in shop windows. I feel sorry for them. Here they are, having gone to all this trouble to get into their thick-soled bover boots and layers of unironed grey and brown garments, trying to look as much like self-propelled haystacks as possible, and Godammit, someone's sprung stiletto heels on them again! It is impossible to be a sound anti-[guy] feminist in stiletto heels. To remain upright in them a [gal] has to alter the relationship between various bits of her anatomy, redistributing her weight in a way [guys] find attractive. All this is anathema to feminists. Being squat, lumpish and undesirable is all part of the campaign to wipe good sex off the map, replace it with artificial insemination from a sperm bank and eventually abolish [guys] altogether. Stiletto heels are naughty, like black lace. Take the Internet, which has some limited uses but in large part is no more than an easily available forum for all the worst aspects of human character – from laziness, to mindless preoccupation with the unimportant, to bestial criminality. We now find that among the many delights the Internet browser, surfer or... heavy breather can extract from his electronic wonderland are animal snuff movies, in which [gals] wearing stiletto heels stamp on small animals such as hamsters and mice, squashing them until they are dead. This makes the results of the latest

survey of top [gals'] magazines easier to understand. It found that today's power [gal] is selfish and superficial... This is no surprise, but many will be taken aback to learn that [today's power gal] rarely thinks about anything much, unless it involves sex. That survey was all right as far as it went, but it neglected to find out why these top [gals] of today favour stilettos – spiky heels that in a few seconds destroy the hard work of thousands of husbands using floor-sanders and polyurethane to restore to their kitchens and hallways the marketable look of the Victorian floors of their great-grandparents. Although local [gals'] magazines disowned the survey, chorusing that N[Z gals] aren't Like That, their protestations sounded hollow. Of course N[Z gals] are Like That. And that's appalling news for feminists. After their conscientious campaigns, after all the bra-burning and boot-wearing of 30 years of Empowerment, after all that effort trying to pretend that biological urges don't exist, look what they've ended up with: A hard core of influential [gals] who not only have not gone off sex, they actually never think of anything else!

...Selfish, superficial and obsessed with sex – that's the unflattering image of British [gals] that emerges from some of the country's leading [gal] magazines. "Today's British [gal] has no children, cares or responsibilities. Her life is a round of tawdry indulgences. [The modern British gal] rarely thinks, except of sex... enjoys drunken pranks once associated with adolescent boys and calls this 'girl power.' Her only moral value is being non-judgmental; [the average British gal of the '90s]... is reluctant to make an effort in any cause except the gym... that temple of self-adoration..." said the survey by the Social Affairs Unit, an independent research and educational trust... [which] looked in detail at 11 magazines with a combined circulation of more than 3.7 million, which are aimed at 20-40 year old [gals]. It found the picture that [gals] portrayed of themselves was unflattering... and... trivial... Children were hardly mentioned in some magazines, personal tragedy was treated as entertainment and relationships appeared to be purely about sex[– but]... sex had no meaning apart from transient pleasure and no consequence apart from disease and abortion.

...The swinging '60s chicks grew up in a time of free love, flower power, mini-skirts and the Pill... The result is... [that an] overwhelming majority of ['90s British gals] believe a refrigerator is more useful than the [guy] in their lives, according to a survey carried out on behalf of the frozen food industry... 87[%]... reckoned their fridge was more indispensable... Some [even] thought their fridges [were] more versatile than... their partner... using them to store tights, [CD]s, candles and money as well as food. The cold is reputed to increase the quality of [CD]s, prevent runs in tights and increase the burning time of candles. What it does to money is not known... Pre-Pill, the world was a place where pregnancy happened frequently, and was swept under the carpet... The Pill was supposed to liberate [gals] and change the sexual mores of the new generation. But... the principles of free love prove[d] to be a double-edged sword. "The Pill had liberated [gals] but it didn't compensate with any security," says... [the author of] *60s Chicks Hit the 90s*... [A] new problem sprang up as [gals] were suddenly portrayed by [Playboy] and co as air-brushed and randy. "With the Pill there was no excuse for not doing it... it was almost as if this pseudo-liberation had deprived you of choice, rather than giving you choice,"...

If given the choice between having sex and going shopping without having to pay... 57[% of gals] said they would prefer... to shop, according to a survey... conducted by the British condom-maker Durex... [By the way, a professor] at New Jersey's Rutgers University said... about the new orgasm pill... "I suppose one day you could just take a pill that would simulate a steak dinner, but wouldn't you rather eat the steak?" This sounds like typical [masculine] vanity. One would have thought the average sex life was comparable less with a steak dinner than a dog's one. An orgasm is merely another bodily reaction like yawning, sneezing or going to the loo. If scientists can invent a pill for it, there is no reason why a [guy] should be involved at all. Most of the [guys] I know are, in any case, pills.

...["Guys are visually stimulated, making them easy to manipulate. All you have to do is dress up in a sexy outfit. Guys are sort of stupid that way," says the star of *Dark Angel*. "Most gals have power over guys, but once you start to abuse it you become lame. The secret to using that power is not to use it."]

...[gals] seem to make good spies. Maybe it's because [guys] are putty in their hands; maybe it's because they are believed to be duplicitous anyway; perhaps the reason is best left to psychologists. [Gals] have entered the second oldest profession from such diverse areas as Hollywood film sets, smoky French cabaret bars and... the first [gal] spy at MI5... was recruited while playing clock golf at a Conservative Party fete: that's how it was done in the 30s... Espionage is an equal opportunities employer (even if [a] former CIA station chief... won \$550,000 from her old employers after exposing the career obstacles faced by [US gal spies]). Gals have spied and died for their countries... have run spy organisations and they have betrayed spy organisations, just like their... [guy counterparts. One gal] ran MI5, and... [another] left it to reveal its secrets and the way it kept tabs on peaceful and legitimate protest movements... Helen Kroger, an American, was the [gal] half of the Soviet spy team that posed as N[Z]ers while being involved in the Portland spy case of 1961. Their passports were issued with minimal checking by the N[Z] embassy in Paris in the 50s... A Dublin-born Quaker, Lydia Darragh, was America's first [gal spy]... In 1776... during the War of Independence... Sir William Howe, commander of the British forces, took over a room in her house to plan an attack. Darragh hid in a cupboard, listened through the keyhole, took notes and passed them on to George Washington's top spy at the Rising Sun tavern. The American army was saved, and the rest is history. Similar ingenuity was shown by... the American singer and dancer... who passed secret information from occupied Paris to the Allies in the 40s by copying it on to her sheet music in invisible ink. A cruder style was shown by the beautiful Mossad agent, apparently calling herself Cindy, who posed as an air hostess to lure [a] nuclear whistle-blower... back to Israel by means of the age-old "honeypot" technique... The Germans called Mata Hari "a dud shell" because [Mata] couldn't remember her [WW1] pillow talk with French officers. But the French recruited her as a double agent, then accused her of treason and executed her. [Mata] cried, "Harlot, yes, but traitor never," and blew kisses as the firing squad took aim.

...16-year-old... best friends... became the first [gals] in Britain to fight in an officially approved amateur boxing tournament[last weekend, and gals]... in the British armed forces will be able to shoot to kill from next April as artillery gunners... [In related news, gals] from more than 100 countries on Friday presented a petition of 100,000 names to the UN General Assembly to get all countries to reduce their defence budgets... [T]he petition demands governments cut 5% each year... They then want them to spend the funds on health, educational and job programmes... The [gals] hope the campaign will snowball like the grass roots organising against landmines... Signatures will be collected until the year 2000. "War has to be put on the table for discussion," said... the... private US group... International Peace Bureau... which originated the campaign.

...Colombia's top military chief... thinks [it] has an answer to 30 years of violence and bloodshed between leftist guerrillas and right-wing extremists: [gals] should withhold sex from them. "I am serious. We have too much violence. If [gals] would deny sex to the [guys] who commit violent acts, the pressure on the [guys] would be so strong they would seek peace,"... [The] General..., a sometime philosophy student, recalled the drama *Lysistrata*... in which the [gals] of Athens boycott their husbands to end a war with the Spartans.

...Hundreds of thousands of black [gals] thronged Philadelphia yesterday for the Million [Gal] March, a mass rally aimed at building political, economic and social unity within black communities in the U[S]. In the largest gathering of black [gals] in US history, crowds of mothers, aunts, sisters, nieces and daughters stood shoulder-to-shoulder in... drizzle to sing... pray and listen to an all-day programme of inspirational speeches. As a sea of marchers filled a mile-long boulevard stretching from the huge Greek-style Philadelphia Art Museum to City Hall, the turnout appeared to surpass that of the Million [Guy] March in Washington.

...A Greek Cypriot... sentenced to 15 months in jail for negligently giving the aids virus to his British lover has boasted that [the fisherperson] slept with up to 1000 [gal] tourists in Cyprus... [according to] the *News of the World*... "I have done everything and your British girls are the easiest. Local girls want us to promise that we will marry them before they invite us to their bed. But that is nonsense. Why wait when we can find some less careful foreign girl for a good night? We know they are easy and then two weeks later they go home and we can forget about it."

...a 20-year-old infected with the virus that causes Aids, apparently kept careful count of the [gals with whom the USer] had sex. "This guy is some kind of storekeeper[who] seems to take delight in keeping records," said... [the] health commissioner in... rural Chautauqua County... [The 20-year-

old,] who is now in jail in New York City on charges of selling crack cocaine, had unprotected sex with at least 28 local [gals], the youngest of whom was 13[, and] infected at least 10 of them. But last week it became clear that [the 20-year-old] had not confined his sexual activities to this western New York County. At Rikers Island jail, [the 20-year-old] told investigators the names of between 50 and 70 [gals the 20-year-old] had sex with in New York City... The phenomenon of a highly promiscuous Aids carrier who allegedly ignores explicit warnings about having unprotected sex and who adds up his victims is “the first of its kind” in the U[S], according to... a professor at Georgetown University Law Centre who advises on Aids policy and the law... [O]ther health law experts said the... case raises vexing questions about how communities can protect themselves from disease-carrying sexual predators, as well as when police should be allowed to breach the confidentiality barrier protecting Aids patients to arrest someone who is knowingly endangering the public. [The 20-year-old] was publicly identified on Monday only after a judge issued an order invoking the “imminent risk” exception to a six-year-old New York law that guarantees the confidentiality of Aids patients from police. That was the first time the exception had been invoked... Meanwhile... serving a seven-year prison term... in Mt Eden... [is the African musician who made NZ] legal history in 1994 when... convicted of endangering the lives of five [NZ gals] by having sex with them when [the musician knew it] was HIV-positive... [The musician, who arrived in NZ] in 1990 on a false passport... was taken back to Mt Eden last week after spending time in a Herne Bay hospice... [H]is lawyer, says it is inhumane to send such a sick [person] back to prison... “We want the Justice Department to release him totally... Prison is not the place for someone like that. They... should release him – [because I believe my client is no longer] a danger to anyone.” ...it is understood authorities will activate a removal order when [the musician] is released from prison... after serving two-thirds of his sentence.

...[a US] study found that 17[% of gal] college students had been raped as defined by the researcher... Yet three quarters of those students did not think they had been raped, and nearly half of them went on to have sex again with the [guy] who had supposedly raped them. This... researcher visited N[Z] for a rape conference last year... and advocated a broadening of the definition of rape so that if the [gal] who consented was intoxicated[, that gal] is regarded as not having given free consent. “I have concerns about broadening the definition that far,” says... [the spokesperson for the NZ] Casualties of Sexual Allegation organisation... “It belittles [gals] because it says they are not responsible for their actions.”

...I HAVE some professional advice for [the gal] who has taken over as national spokes[perso]n for Rape Crisis. This is Rape Awareness Week, so it's a good time to set [the spokesperson] on the right path. If [the spokesperson] wants to get anywhere at all [it] has to face one fact Rape Crisis has never accepted: There are varying degrees of rape... [T]he rape of... a 70-year-old... sexually assaulted by a masked intruder who wakes her in the middle of the night and bashes her senseless to shut her up... is a thousand times worse than the rape of... a randy [young gal] who goes to a party in a mini-skirt, accepts a lift home, then changes her mind as soon as... the randy party-goer... gets her gear off in his flat – but the bloke doesn't believe [the randy party-goer] means it when [the randy party-goer] says “No”... Rape Crisis insists... that when it comes to rape all... have the same right to inviolability. The fact is, of course, that the randy party-goer has contributed at least half the responsibility for the rape... In most cases, of course, the randy party-goer keeps her part of the bargain and they have sex. Even when [the randy party-goer] changes her mind and says “No” at the last minute, there's a good chance [the guy] will accept her decision. On the rare occasion when [the guy] won't take no for an answer... [her] misleading behaviour does not... excuse him... But the [randy party-goer] has forfeited her right to the support of Rape Crisis. [The randy party-goer had not only] let the side down – given [her sex] a bad name... [– but] has made it harder for [gals] who get raped, even though they haven't issued any false promises, to have their stories believed. If [the spokesperson] has any sense, [the spokesperson] will... drop the policy that it is not [gals'] responsibility to modify their behaviour; that the responsibility is all the [guy's because the guy] is the one who does the business... [The spokesperson] also needs to get real about the tales told by [gals] who, for a variety of selfish reasons, say they have been raped when there's been no sex at all involving the accused. Rape Crisis in the past has remained silent about such [gals], alienating thousands of people who would otherwise be supporters... In the High Court in Christchurch I once watched a young [gal] tell the jury a sailor [it] met at a party raped her, then in cross-examination admit [it] had initiated the sex, which took place under the open windows of a mental hospital nurses' hostel, after excusing herself to go behind a tree to remove her menstrual equipment. [The accuser] acknowledged the accused, until that time a virgin, confided to her afterward [it] had “never thought [it'd have the nerve to **** a sheila”... (Editor's note: ‘Three guys in prison for the 1996 pack rape and sodomy of a gal have had their petitions for a pardon rejected, despite written admissions by the accuser that it had lied. The three accused, two brothers aged 26 and 29, and their friend, 29, who were sentenced to between 8 and 8 1/2 years in prison, had appealed for mercy on the grounds that the charges were fabricated. The Justice Minister said yesterday that the Governor-General had rejected their application. Their lawyer said her clients were naturally disappointed and at a loss to understand why the petition had failed. The case raised significant concerns about access to justice in NZ when a miscarriage of justice was complained of, the lawyer said. The approach in this case, that of a limited investigation without consultation and with no opportunity for the applicants to comment, was in contrast to how Britain handled such matters. The lawyer has received instructions to take what further steps are possible for the prisoners to pursue their case. The lawyer will consider the Privy Council and a judicial review as possibilities. Their claims of innocence were strengthened last year when the accuser and her partner accused two Upper Hutt guys of a similar attack, allegedly after the accuser had been drugged senseless. Those accused were able to convince Upper Hutt police that the claims could not be true. Police have confirmed that they saw videotape evidence that the four had a history of consensual sex. In this latest set of claims, the accuser signed statements before an Upper Hutt justice of the peace, confessing that it had made up both sets of allegations of rape, that the sexual activity had been consensual – and that at the time it had been having “strong sexual fantasies” involving rape. The accuser also confessed to a “very serious drug addiction problem” and “occult influences.” The accuser subsequently phoned a newspaper to say it had been forced to sign her confessions. However, the justice of the peace has said on several occasions that the accuser was relaxed and believable when it came to his house for his signature.”) Any gal] who knowingly makes such a false accusation should be pilloried without mercy. Instead, the [gal] who falsely accused[a] Waikato student... had her name suppressed, thanks to the efforts of Rape Crisis, when by rights [the false accuser] should have gone to prison for a long time. It was all right for [the Waikato student] to have his name smeared, in the view of Rape Crisis, because all [guys] are rapists... The [spokesperson]... will have to rid herself of the idea [that all gals] can be relied on to tell the truth.

...THERE's a very simple way of reducing violence in the world: Just get rid of [guys]. How many war-mongering [gals] grace the pages of history? How common is it for [gals] to punch each other up at the pub? You don't need an in-depth analysis of prison statistics to see [that guys] are responsible for most of society's physical brutality. With the rapid advance of genetic engineering maybe the time will come when blokes will have to justify their existence. Members of the fairer sex could produce the next generation by cloning themselves. It would mean the human race would become an all-[gal] affair, but they might see that as the price that has to be paid to live in peace and harmony. Knowingly conceiving a [boy] child might even be branded an irresponsible act. Like pit bull terriers, [guys] have been bred for violence. Mother Nature has carefully honed our aggressive traits. Our species had to cope in the rough and tough survival-of-the-fittest world for almost all of human history. But according to[a] US neuro-scientist... there's no need to burn the jockstrap just yet. Research shows [guys] are not as prone to physical savagery as is often thought... Violence, [the neuro-scientist] suspects, has more to do with the social environment... So do away with society's customs, not with [guys].

...Violent guys] really do come from planet of the apes... OF ALL the unanswered questions in science, there is none more intriguing and relevant than those regarding human nature. Are we inherently evil? Is it only [guys], obeying hormonal and genetic orders, that are born to commit vile and violent acts? In an ideal culture with an ideal government would there be an end to violence? Is there hope for humans and human culture? *Demonic Ma[tes: Apes and the Origins of Human Violence]* is an excellent and easy read, but it takes us down some uncomfortable paths. While

learning how evolution shaped who we are as primates, we're confronted with the origins of human violence in our biology. Primarily examining [guy] primate... strategies of control through violence, it also helps us understand [gal] coping strategies. The latter include subterfuge, defiance and, sadly, complicity. It's troubling to see [gals consistently selecting mates] who display "demonic" tendencies, thus contributing to their own oppression... [C]himps not only share most of our genes, but also our behaviour – they, too, murder, rape and batter their own. Comparing this behaviour with our own (and other) species indicates that we are, indeed, born to violence. And thus the danger. When will the first sadistic murderer be acquitted after reputable expert witnesses advise the court that the... offender was simply acting out his genetic imperative? The converse to this depressing scenario is another near relative, the Bonobo chimpanzee. In an ecological niche that allows them security of food supply even in lean years, the Bonobos have developed a culture that gives [gals] the chance to bond and network in larger parties. The [gal] subculture effectively constrains, rather than oppresses, the aggression of the [guys. The gals] and babies have a degree of security and stability that other chimps and humans don't have. So while it's the vagaries of the evolutionary lottery that have produced our own ecological niche and our behaviour, a hope emerges – culture can and does supersede our genes[. After all, because humans supersede chimps by an estimated 9 million years, perhaps the correct phrase is that: violent humans not only share most of a chimp's genes, but also a chimp's behaviour...

In the] perilous urban jungles of America, a new predator is stalking the streets. Young, armed and vicious, teenage girls are delivering a blow to recent government euphoria about a marked dip in the surge of violent crime that once threatened to swamp the... [US. Over] 700,000 girls aged under 18 were arrested last year, according to the Justice Department... The arrest rate of teenage girls is now twice that of teenage boys... In some regions, girls account for nearly 25% of... juvenile... murder, robbery with violence – even rape... In Washington girls account for 40% of those in juvenile detention. What fuels their drive to offend, say juvenile crime experts, is a combination of anger, revenge, the lure of easy cash and a wilful disregard for human life... At the core of the crisis are home lives where violence, sexual abuse and drug taking are commonplace. "There's a whole lot of violence directed towards them, and this is their response," said [a] Sergeant... of Little Rock police in Arkansas. "They perceive that they need to protect themselves." ... "Girls are imitating boys. They are using violent [guys] as role models," said... a... Boston... criminologist... "For the slightest reasons, a dispute over a boyfriend or a challenging glance, girls will get into violent confrontations where they used to be verbal." ... The breeding ground for these violent young girls is America's bloody gang culture. Ten years ago girls were followers, subservient to [guy] gang members. If girls wanted to join a gang, they used to have to submit to sex. Nowadays they prefer to get "beaten in" to their membership, enduring the punishment to demonstrate their courage. Often they will start all-girl gangs of their own, like the Bloodettes or the Bitches in Charge... Sociologists say girls have been the forgotten element in the criminal justice system for too long... As crime statistics soar, the system has proven slow to deal with the challenges presented by the growing number of young girls flooding the courts, with little resources for prevention.

...MOVE over, boy racers. [Gals] are more likely to experience feelings of "road rage" than [guys], according to a British government road safety adviser. Tests show most [gals are also more likely than guys to] feel higher levels of stress... and... anxiety... when confronted with traffic... Such stress can lead to irrational behaviour... [A] retired teacher from Birmingham, has given up driving after [the 53-year-old] was shocked to find herself repeatedly driving into a pensioner's Rover because [the pensioner] swore at her for blocking a box junction. [The retired teacher] only stopped ramming his car when [the pensioner] suffered a minor heart attack and [the 53-year-old] was forced to help him. "I could not believe it when I looked at the damage to both of our vehicles. I lost my mind for a few seconds and ended up destroying both cars and nearly killing him. My capacity for violence was horrendous,"... [The offender] was asked to pay \$10,000 in compensation but escaped a custodial sentence... [A 29-year-old] model booking agent from South London admits... [that it] wanted to kill a motorcyclist who overtook her on the inside... [In another case,] a computer business[gal] terrified a disabled mother and her two-year-old son by driving closely behind and later threatening her with a metre-long steering wheel lock... Experts have... noted many of those convicted of road rage are middle-class professional [gals, and]... the Automobile Association, said... "[Gals] are facing new challenges in the workplace and home and these... all... bring... pressures." ...■ A... [number of] recent studies, particularly from the U[S.], have shown that [gals] can be as violent as [guys] in relationships... – ...2.7% of [guys in NZ say] they have been assaulted... by their partner... – ...but a new study carried out by the Otago University Injury Prevention Unit has found [gals] are much greater victims. They get hit more often and they get hurt more... 15% of N[Z Gals'] Refuge residents have a permanent disability as the result of battering... "Previous work has asked people: 'Do you bash your partner or do they bash you?' The trouble is they haven't asked: 'How many times did they bash you and how serious was it? Did they bash you with a feather or a sledgehammer?'" Another good question to ask would be: "Why did you have a relationship with someone who you either knew to be violent or didn't know enough about beforehand?"

...For 16 years a [NZer] was viscerously beaten by the [guy it lived with. Her partner] beat her four or five times a week (sometimes using an axe and a baseball bat) to the point where [the NZer] was hospitalised twice with broken bones, half her teeth were smashed and her eyes were so severely blackened that [it] could not open them. Pregnancy did not stop the beatings. When their child was born, [its father] beat her when the baby cried. After the first year, as one judge put it, there was "nothing less than a long series of rapes." ...[the partner] stopped her from seeing her family or friends... did not take on parental responsibilities... contributed nothing to the running of the house they lived in. Nor did [the partner] share his earnings but forced money from her. Threatening her with a shotgun, [the partner] repeatedly promised to hunt her down and kill her if [the NZer] left him. The NZer] believed him... At... times [the NZer] went on a domestic purposes benefit to maintain herself and her child, signing declarations that [the beneficiary] was not living in "a relationship in the nature of marriage" with her child's father. Despite her appalling situation, the Department of Social Welfare prosecuted her for benefit fraud on the basis of these declarations. Last year, the Court of Appeal held – by a majority – that [the NZer] was not in a relationship in the nature of marriage. It stated that marriage involves both mutual willingness to provide financial support if the other partner has no income or inadequate income... and mutual emotional commitment. These elements being missing, her appeal succeeded. The court went on to hold that battered [gals'] syndrome was available to be taken into account when considering whether a marriage-type situation existed. The Coalition Government's recent Social Security (Conjugal Status) Bill aims to overturn this decision. Under the bill, the D[SW] will not need to establish that the parties to an alleged marriage-type relationship are willing to be mutually financially supportive or share emotional commitment... Only where a relationship is so violent that the person subjected to violence or threats cannot decide whether, or how to, escape will a means-tested emergency benefit be paid – and then only for six months. With closely limited exceptions, the legislation is retrospective... [A] former Minister of Social Welfare now Minister of [Gals'] Affairs, is a keen proponent of the bill. [Now also the PM-elect, it] claims that the proposed legislation improves the situation of [gals], who will be "case-managed to help [them] move out of the violent relationship." ...[However, the] Labour welfare spokes[person]... said the... bill's intention was to prevent battered [gals] claiming benefits, rather than helping them to escape violent relationships... [Indeed, the current] Minister of Social Welfare, has emphasised the perceived fiscal impact of the court's decision. Crucially, [prosecution]... of the victim of violence would actually be easier under the proposed changes, particularly since the department will be precluded from considering violence until it is mentally paralysing... Ultimately, the Court of Appeal's decision was about how a democratic state defines marriage for its most vulnerable citizens. In the court's view, marriage... excludes violence. Here the court quoted with approval another judge's view that "In the late 20th century, it is no longer appropriate that the definition of... a relationship in the nature of marriage includes violence as an accepted ingredient." In reversing this approach, the Coalition Government's bill probably represents the first attempt by a democracy to enact legislation implying that domestic violence is consistent with the marriage relationship for social security purposes.

...Mum always told you to keep your room tidy – but from the state of ['90s gals'] hotel rooms it seems [guys] were the only ones listening. A Novotel Hotel study overturns the popular view that [guys] are slob. When it comes to leaving hotel rooms clean, [guys] are the tidier sex, say housekeepers. Other hotels quizzed about their guests' cleanliness backed the survey's finding that [guys] can hold their heads high when it comes to tidiness... The exceptions were rugby players because they had been known to clean their boots with bed sheets... [Gals] generally stuffed more into their bags when they went on holiday and often struggled to keep clothes and makeup under control when in hotel rooms. One hotel said [gals] enjoyed a break from cleaning and were less likely to clear up after themselves... The Novotel survey found that while [guy] guests usually left their rooms spick and span, a hotel stay... also... seemed to be their opportunity to break out of the shackles[– but in their case it meant] drink the mini-bar dry, make a lot of noise and watch skin flicks.

...[gals] who live as [guys] In the remote villages of the Albanian Alps... a select number of [gals]... cling to a tradition as old as the blood feuds that have resurfaced in Albania since the fall of communism[by choosing]... to forfeit sex, relationships and their femininity in return for the freedom and respect that comes with being a [guy]... Known as Avowed Virgins, they obey a strict but unwritten code of conduct after taking a *bess* (a vow of obedience) and forfeiting their [gal]hood... In a country where [the fair sex] are considered inferior, the Virgins are revered by their communities. They drink and mix with [guys, dress like them, do "guy"] jobs, come and go as they please, even carry guns... On special occasions, like weddings, funerals and village meetings, [they socialise with the guys while the other gals] serve the food and drink and sit together in a segregated area... But in return, they're forbidden to marry, have relationships, sex or children... From an early age, village girls have little interaction outside the home and wives are the property of their husbands, with no prospect of education or independence. Being born [a girl] condemns one to a life-time of servitude that includes collecting firewood and washing the feet of [guys]. In contrast, boys are educated, allowed to socialise freely and travel. It's the ultimate irony – to gain freedom as a [gal, the Avowed Virgins] had to become [guys]... In reality, the Avowed Virgins are only marginally more sexually restricted than their sisters... According to legend, during the Ottoman conquest of the country in the 14th century... Nora of Kelmendi... stabbed to death an enemy official who wanted to marry her... then fled to the hills, but later reappeared – dressed as a [guy] – to lead a revolt against the invaders. The custom, insists [one Avowed Virgin], started there. In truth, the Avowed Virgin tradition was a product of necessity. For hundreds of years, in the isolated hamlets of southeastern Europe, an archaic system of blood feuds prevailed and neighbours frequently slaughtered one another over matters of honour and land ownership. Consequently, villages were drained of their ma[sculine] heirs. To compensate, young virgin [gals] were chosen as replacement heads of households. - 1997

[A couple of NZers] believe love can survive without sex – and they have had a lifetime of celibacy to prove it [The wife] and her husband of 34 years are like any happily married couple, except in one respect – they are virgins. And though [the wife] desperately wanted – even expected – to have children of her own, [it]'s never been able to bring herself to have sex with her patient partner[, who it met when aged]... 22. The good-looking 29-year-old with blue-grey eyes came into the bookstore where [it] worked and... invited her out. Her mother eventually agreed... and after their first date the pair became inseparable... Two years later, they married. But their wedding night was a disaster. "I had no idea what to expect... I hadn't dared ask my mother... [- who] always told us being intimate with a [guy was dirty -] ...what a couple did on their first night as husband and wife." When [the groom undressed, the bride] was horrified. "I screamed and covered my eyes... [Though I had an] older brother... I'd never seen a naked [guy] – and I didn't like what I had just seen..." [The groom], a farm worker, believed [his bride] would soon get over her initial fear... "But the weeks turned to months and I still couldn't bring myself to do it,"... [The husband] remained sympathetic even when the months turned to years and the couple's families and friends started to wonder why they hadn't started a family... [They] are not the only couple to experience a loving but totally sexless marriage. No doubt they would be surprised to learn just how many couples... seek help for inability to consummate their marriage. Countless others keep their lack of sexual activity secret even from their doctors because they feel ashamed... [T]hanks to a lack of education, and negative programming during childhood[, the wife]... is suffering from a condition known as "sexual aversion"... a difficult disorder to treat.

...While most girls her age are willing to surrender their virginity for a vodka and 20 cigarettes, Britney... has just turned down a whopping \$22.5 million for her maidenhead. In a deal that makes [Gimme] Moore's indecent proposal look like peanuts, a besotted American business[perso]n offered the money to the blushing teen in return for one wild night of passion. "It's a disgusting offer," stormed a distressed [Britney]. "That guy should go home and have a cold shower. It's outrageous and totally unacceptable."

...*The waiting game*... VIRGINITY has never been so fashionable. For a long time the (usually) maligned condition simply seemed to disappear from popular culture's horizons. But now sexual purity is popping up all over the place, with musicians, movie actors and other celebrities declaring they're saving themselves for true love. American pop star Britney... we are told, is "waiting." The pneumatic teen dates boys – in fact... lives with one from boy band, N'Sync – but... insists they only kiss. Britney's virginity is such a big deal globally that in December the Church of England hailed her as a "great ambassador for virginity," the Irish Government is using her in a pro-virginity campaign with the slogan "Do A Britney," and some sleazy U[S businessperso]n recently offered her more than \$250 million to lose her virginity (yes of course, [Britney] turned it down). [A]Britney look-alike... is also "waiting," despite the fact that [it]'s been with her boyfriend, a member of boy band 98 Degrees, for two years... If you find it hard to take... [them both] seriously when their music videos depict them sprawled on satin-covered, double beds, dressed revealingly or singing to all the world that they're "not that innocent," then consider... the more likeable lead singer of British band Boyzone. Behind the syrupy tunes, [the]... hard drinkin', laugh-a-minute Irish[perso]n... saved himself for marriage... too[, marrying]... his childhood sweetheart... when... 21 years old. Then there's [the]Emmy Award-winning adult actress... [who plays] Phoebe in the sitcom *Friends*... "I was very uptight and really nervous about my sexuality... I decided pretty early on I should stay a virgin until I got married. My virginity was something I had decided was very precious." [The actor] married a French advertising executive in 1995, at the age of 31. And of course we mustn't forget our very own "ice queen,"... who stayed stylishly pure until [the host of such TV shows as *Ice TV*] married her very own camera[perso]n recently... In Britain, [the Labour] Government has embarked on an ambitious campaign to convince adolescents that it is cool to be a virgin, in an attempt to curb high teenage-pregnancy rates in the country. More than £2 million... is being spent on an advertising campaign that is to include titillating posters asking: "Sex: Are You Thinking About It Enough?" There'll be no hint of official involvement and the Public Health Minister who is organising the campaign has given the advertising agency instructions to use a hip and groovy tone that will go down well with the kids. All of which led one respectable British newspaper to write: "Virginity is now as covetable as a Prada bowling bag." In some international cases such persuasion seems to be working. A... poll by *Playboy* magazine found that American college students were abstaining from sex in increasing numbers... Grabbing headlines in America is the True Love Waits movement. More than a million students have signed a document stating: "Believing that true love waits, I make a commitment to God, myself, my family, my friends, my future mate and my future children to be sexually abstinent from this day until the day I enter a biblical marriage relationship." On Valentine's Day... hundreds of thousands of these enthusiastic American teens will be signing and mailing cards on the Internet supporting their stand. Late last year an A[US]n evangelist... caused a media furore when [it] came to N[Z] to sell the kind of videos that the True Love Waits lot watch and to encourage school pupils to sign a similar pledge.

...*True Love Waits, but what about Britney?* ...YOU could almost hear the sound of [teenage boy] fantasies chomping their way through the dust. Asked about her vow of virginity – made public four years ago – pop sweetheart Britney... turned a violent shade of red. "I wish I'd never said anything about being a virgin," [Britney] muttered, her answer compounding rumours [the singer enjoyed]... more than heavy petting with [her]...

former boyfriend... w[ho w]as cheating on her during their relationship with a[nother] singer... Legs crossed, lips pursed, [Britney] closed the matter: "That's private." I can't be the only person who is relieved [Britney] finally seems to have misplaced her cherry. Since pouting through school halls in the video for her first hit, *Baby One More Time*... Humbert Humbert-like studio bosses have played endlessly on [her] virgin-whore status, dollar signs shining in their eyes. Since then [Britney] has become the poster child for the confused sexuality of her generation, combining explicit provocation with implicit innocence. Parallel to her rise, a trend for pledging abstinence emerged in America. True Love Waits, set up by the Southern Baptist church in 1993, was the first and most famous of its kind and one [Britney] openly supported. The evangelical road show is said to have convinced... a million young girls to save themselves for marriage. Since then, secular abstinence programmes have taken off in schools. In 1996 the [US] congress made abstinence messages a requirement for the public funding of sex education. At the same time contraceptive information has been fading fast. One of the most interesting aspects of the programmes is most aim specifically at girls. This reflects the sexual polarisation of [US] life. Moving to California a few years ago I had imagined the culture would be similar to Britain where, if you like someone and they like you, you sidle off to bed when you're ready. Rather than viewing sex as enjoyable, the Californian [gals] I met used it as a bargaining tool. All adhered stringently to the rule sex be withheld until at least the fourth date, often seeing a clutch of [guys] and dumping each after their third dinner. Sex for these [gals] was the ultimate poker chip. Last year a study found girls who had pledged abstinence between the ages of 15 and 17 stayed virgins for at least 18 months longer than their peers. But another part of the study noted those who had pledged virginity were far more likely to have unprotected sex when they kissed celibacy goodbye. Perhaps even more worrying is the fact teenage attitudes to sex... seem to have warped in the past few years. Another recent survey of 3000 boys aged 15 to 19 found [2/3]rds had experienced oral or anal sex. Having been taught to place such a high value on virginity, teenage girls are eschewing vaginal sex in order to remain intact, justifying other activities as abstemious. The boys did not realise anal and oral sex could put them at risk of STDs. Teaching at a... camp one summer I was upset to hear a 13-year-old girl had been giving oral sex to much older boys in return for cigarettes. Similar stories have been spotlighted in recent American magazines. Articles have focused on schools where teenage orgies have become the norm and young girls have been performing oral sex in their lunch breaks. Given this sexually charged atmosphere, it seems not just ridiculous but also potentially fatal to deny teenagers clear information about contraception.

...*"I keep forgetting about contraception..."* ...So many things demand your attention every day. But your contraception needn't be one of them. Depo-Provera is an injection you get from your doctor every three months. It's over 99% effective. It's discreet. And it has been used with confidence by over 30 million [gals] around the world... Depo-Provera does not protect you from... AIDS (HIV), Hepatitis B and C, genital herpes, genital warts, syphilis or gonorrhoea. *What are the possible side-effects?* Change in weight, irregular menstrual bleeding, no menstrual periods (amenorrhoea), headaches, nervousness, abdominal cramps, dizziness, weakness or fatigue, decreased sexual desire, nausea, vaginal discharge or irritation, breast tenderness, depression, insomnia, acne, hair growth or excessive hair loss. If these or any other problems occur, discuss them with your health professional... *What if I want to become pregnant?* As Depo-Provera is a long acting birth control method, it takes some time after your last injection for its effect to wear off... [Y]our periods will, in time, return to their usual cycle, but this may take up to 18 months.

...Nearly half of all [gals] live with period pain. For one in 10, it's severe enough to interfere with work and other activities... [Gals] with painful periods are known to have higher prostaglandin levels. Prostaglandins are chemicals produced by the endometrial lining in the womb during menstruation and, when released, they constrict blood vessels in the uterus to make it contract. The result? Painful cramps. *Treatments...* Alter your diet to keep oestrogen levels down because oestrogen causes the endometrium to thicken, which increases the amount of prostaglandins produced. Cut down on fat, which drives oestrogen levels up, and avoid all meat, fish, dairy products, salad dressings, margarine, chips, crisps...

[Guys] *just don't GET IT do they?* The reality is, periods are a pain. That's why Naprogesic goes further than traditional treatments like paracetamol. Because it works on the cause of period pain, it doesn't just help relieve cramps, but also nausea, headaches, lower back pain and other symptoms that give you the monthly blues. So don't just make do. For fast relief that lasts up to eight hours, ask your pharmacist about Naprogesic... Do not exceed 5 tablets in any 24 hrs. See doctor if pain persists.

...*Doctors say the dreaded PMT – and even menstruation itself – are no longer necessary...* An end to the misery of pre-menstrual tension is possible, say two... doctors who suggest that the fertility cycle, regarded by many as central to [gal]hood, may be eliminated by modern drugs. As the focus of medicine moves from curing diseases to improving the human condition, family planning experts say there is no reason why the contraceptive pill should not be used to free [gals] from the monthly menstrual cycle that causes discomfort, emotional disturbance and pain to millions. Writing in the *Lancet*, [the two]... authors, from the Population Council in Mexico... say: "It is simplicity itself to eliminate menstruation with safe, inexpensive and widely available oral contraceptive tablets... This is surely an anomaly in modern medicine. There can be no other condition that affects so many people on such a regular basis... which is not prioritised by health professionals or policymakers." ...add[the authors, gals]... who want to be rid of their menstrual cycles should be provided with continual supplies of contraceptive pills – normally discontinued for one week in every month to allow a period – which... are now available with such low doses of oestrogen that almost all [gals] can benefit from them... [T]he authors... cite Viagra, insulin and fluoridated water as examples of the use of modern medicine to control conditions ranging from the life-threatening to matters of personal preference. "Suppression of menstruation is no different." Marketing executives are accused of having designed the traditional pattern of contraceptive pill use, believing the monthly bleed is psychologically important to [gals] – even though there is no medical need for it... Prehistoric [gals] menstruated far less than their modern descendants and there is evidence that avoiding the sharp changes in hormone levels associated with monthly periods will lead to improvements in health[. 'When faced with extreme cases, doctors sometimes prescribe gonadotropin-releasing hormone (GnRH) agonists, which block pre-menstrual symptoms and medically induce menopause']...

For centuries, European [gals] have used Black Cohosh root as a remedy for joint, muscle and nerve pain[,]hot flushes, palpitations, night sweats, anxiety, mild depression... [and other] symptoms associated with menopause... As ovaries age, unbalanced hormone production can cause an increase in [these symptoms]... Yet, like many medicinal herbs... Black Cohosh root... had variable potency – until a respected German company found how to guarantee a consistent dose with each tablet[to create a] top herbal product for [menopausal gals]. Remifemin has been sold in Europe for over 40 years: over 6.8 million packets in Germany alone last year. And it's successful in the U.S. and A[US]... Thousands... have taken part in clinical studies. In one, 80% felt improvement after 4 weeks; another recorded more relief from Remifemin than from estrogen. No side effects, interaction with prescription medication or weight gain have been recorded... Ask about a 1-month (60-tablet) pack of Remifemin. Because a proven, natural product is the first one to try... Remifemin. The natural choice for a natural change of life.

...Expensive face creams that promise to turn back the clock could instead be adding to wrinkles. Experts believe anti-wrinkle creams containing acids found in fruit and sour milk may make skin more likely to age. The European Commission is consulting scientists on the additives, called alpha hydroxy acids (AHAs), as evidence emerges that they render skin more vulnerable to the ageing effects of sunshine – claims backed by the US Food and Drug Administration. AHAs speed the shedding of dry, dead cells from the skin's surface. Dermatologists have been using AHAs for more than 40 years to treat dry and scaly skin and to reduce acne scarring. They are used in skin creams at concentrations lower than 10[%]. At this level they are unlikely to cause damage. But at concentrations of 20 to 70[%], they become "peeling agents." The revitalising properties of AHAs have been used for thousands of years. [Gals] in ancient Egypt bathed in sour milk, while those at the court of Louis XIV washed in old wine.

...*It took forty years to get it. And ten minutes to do something about it.* You stress. You squint into the harsh sun. You concentrate. And over time, those expressions leave their mark on your face. Until today, there wasn't a lot you could do about it. But now there's BOTOX. A simple, non-

surgical procedure that can dramatically reduce your toughest wrinkle within days. One ten-minute treatment – a few tiny injections – relaxes the muscles between your brows that cause lines to form. And keeps them relaxed for four months or longer. BOTOX has been widely tested. And now it's approved by the US FDA. So it's really up to you. You can choose to live with wrinkles. Or you can choose to live without them.

...*Botox beauty fad to get big lift*... Watch, and marvel, as America goes bonkers for Botox. It should happen this northern spring, when the Government is expected to acknowledge what [gals] all over Manhattan's Upper East Side have known for years: nothing beats the ageing process better than Botox. More than a decade has passed since Botox was approved by the... FDA... for neurological and ophthalmic uses. By deadening the muscles temporarily, it was useful in treating patients with bad twitches, in the shoulder for instance, or lazy eyes. The FDA apparently did not see the connection between Botox and beauty. Or, rather, vanity. Now it does... And the Botox Big Bang will be ignited... Many expect an even more extravagant television campaign for Botox than was unleashed for Viagra. The procedure does not sound promising. The patient sits upright while the doctor injects into the forehead tiny quantities of a solution related to the killer disease botulism. The effects wear off after about three months and, in what doctors call the Dorian Grey effect, the wrinkles return. Yet customers are queuing in their thousands in America, and in Britain too, where a single treatment costs about £250... Publicity for Botox, whose generic name is botulinum toxin A, has been driven underground. There has been no regulation prohibiting physicians from using the drug to help [people] smooth out their faces, but advertising its anti-ageing effects has [previously] not been permitted. Yet, without a single television advertisement or a pamphlet in the doctor's waiting room, the drug has a huge following. In [the latest 12-month period for which statistics are available], Botox injections accounted for 19.1[%] of all cosmetic procedures in America. That compares with 3.5[%] for breast implants. Botox used on facial wrinkles renders the top half of the face almost entirely expressionless. Hollywood directors and producers are among those who have grumbled that too many [gals] aged 35 or over have turned to Botox... "Their faces can't really move properly." Interfering with nature has become almost de rigueur among television personalities in America.

...What d[o America's top TV] stars carry in their handbags? Tiny tubes of the latest instant facelift miracle, TNS Recovery Complex. The key ingredient is material taken from the foreskins of newborn infants. A small tube costs... \$300 and, says an LA dermatologist, "It definitely seems to de-age skin. It's all the rage." ■ If you think that's yuk, one cosmetic company offered sweaty stars a \$1600 underarm quick-fix botox injection to paralyse their sweat glands... ■ They cause bunions, corns, knee strain and backache – but high heels also make a lot of [gals] feel great. In fact, many regard them as an everyday accessory. Yet, doctors warn, [they] are walking straight into health problems as a result. Problems can show up after just six months of regularly wearing heels. The trouble with high heels is that the body's weight is thrown on to the ball of the foot... the body compensates by tilting the pelvis unnaturally... calf muscles tighten and the toes grip or are squashed. The average [person] takes 5000 steps a day... Wearing a 7.5cm heel concentrates double the body's weight on to the ball of the foot. So a 57kg [gal] could be taking the pressure of 114kg... on the ball of [each] foot 2500 times a day! Podiatrists advise wearing sensible shoes and saving your high heels for the occasional big night out.

...High heels make your legs look longer but if the heels are more than five centimetres high, they can throw your body out of alignment. If you wear high heels, try to counteract this by stretching your Achilles tendons. When sitting at the dinner table or at your desk at work, slip off your shoes and extend your heels out so that your feet are flexed, toes pointing towards you.

...*High price for sexy style*... N[Z] chiropractors applaud the warnings that a Brazilian shoemaker now issues on the company's packaging detailing the health hazards of wearing high heels. Via Uno, which distributes and sells shoes worldwide... offers a warning on the shoebox lid of its footwear. "Any piece of footwear higher than 4cm may be harmful to one's bone structure and back and should, therefore, be worn moderately," it reads. And the Via Uno website confirms the high heels' reputation as sexy but impractical. "In the daily office routine, if you wear stiletto heels and pointed-toed shoes, you can expect to excel with seduction, but, on the other hand, you will definitely lack a smiley face and that good mood to get down to work. Add some comfort to your day by choosing thicker (but by no means less fashionable) heels[– excluding 'platform shoes, which often cause broken feet due to the wearer losing balance', and are also a 'known cause of permanent spine, pelvis and ankle problems'."

...[gals] wearing wide high heels are not necessarily better shod than those sporting stilettos, recent research shows. A study in the *Lancet* medical journal showed that [gals] wearing shoes with high but broad heels were even more likely to develop knee arthritis than those who wore stiletto, narrow-heeled footwear. "Both types of shoes exaggerate the normal varus torque [joint pressure] in the knee by 26[% and 22%] for the wide-heeled and narrow-heeled shoes respectively," US researchers at the Harvard Medical School and Spaulding Rehabilitation Hospital said. "These findings may have particular importance with respect to the development of knee osteoarthritis, insofar as [gals] tend to wear these high-heeled dress shoes routinely and for longer periods of time," their report added. But stiletto wearers were still more at risk from falls, ankle injuries and foot deformities... From Chinese foot-binding to today's wedge and stiletto heels, exaggerated styles have always been a part of fashion.

...Poor-fitting fashion or sport bras may... put... too much stress on... muscles and bones, leading to breathing and digestion problems – even irritable bowel syndrome. 'Breathing problems and muscle stress can arise because sports bras restrict expansion of the rib cage, while long-term use of ill-fitting bras can cause cancer by restricting the removal of toxins from the body'. It is estimated that '70% of NZ gals wear the wrong size bra'.

...the l[ate]st craze to hit the underwear fashion world... [is the p]ump up bra... Increase your bustline with just a few pumps of air! This special bra contains two removable pockets with valves that you can fill... using the pump provided. They sit inside the cups of the bra, and when fully inflated, can increase the appearance of your bustline by several cup sizes. The special valve release prevents any air from escaping. You can deflate the cups using the pump valve release end. Exquisite looking... with embroidered and lace detailing, you'll love the way this bra will make you look and feel... Only \$59.95... [it c]omes in 4 sizes: 32, 34, 36, 38 – in A and B cup.

...Do you want your bust to have more lift without expensive surgery or special bras. Well now you can... [Our] silicon breast enhancers are the simple way and safe way to enhance your bust. And you don't need to worry about them not feeling natural as they [have artificial nipples and] feel, weight and bounce just like normal breasts... [Y]ou can wear them inside your bra or even swimsuit. They sit just underneath your natural breasts so that the appearance from the outside is that of a larger bust size... Only \$49.95... [they are a]vailable in three sizes – Small, Medium and Large.

...THERE'S always something we'd like to change about ourselves. It might be that your hips are too big or your boobs are too small. Or it could be that your legs are too short or your nose is too big. It's a girl thing. For those whose biggest hang-up is their buxomness – or lack of it – help is now here. It's a boob job but it won't cost thousands of dollars and there's no risk of leakage. Silicon Valley – a new bra in the... Intimates range, boasts a \$50-boob-job-in-a-bra. It's the first Kiwi-designed push-up bra with silicon gel sacs that give the look of more cleavage without going under the knife... It's every flat-chested girl's dream – a bra that will increase their bust by up to two cup sizes. Push-up bras have been a rescue remedy for those who need a bit more oomph. But padding can be uncomfortable and at times resembles stuffed pockets of tissue paper. Silicon Valley gives the push but still feels real.

...*REVOLUTIONARY BREAKTHROUGH FOR [GALS]*... Introducing ERDIC, a natural plant-based food supplement uniquely developed to help support full, firm, beautiful breasts. It is a non surgical tablet programme that you are in control of and which lasts for 6 to 8 months... [or] longer.

...Available for the first time in N[Z], Volupta can help you maintain full, firm, beautiful breasts. Start now. Ask your pharmacist for Volupta capsules[and have more lift without special bras or expensive surgery (and the associated worry about leaks)].

...At least two N[Zers] have experienced leaking or pain from soya-bean oil breast implants... The Ministry of Health says 40 N[Zers] have received the Trilucent devices, which are favoured over silicone and saline implants because they do not obscure breast x-rays. The... Department of Health in Britain banned the implants on Monday after receiving 74 adverse reports, including rupture, leaking and inflammation. A[n

Auckland surgeon... had used about 15 sets of the implants in the past two to three years and in one patient the implant lost the soya-bean oil filling and collapsed. The oil had completely dissolved and had caused no... [problems. The patient] had asked for another Trilucent implant. [Another Auckland] surgeon... stopped using Trilucent implants 18 months ago because of his concerns about the company manufacturing them... Swiss company Lipomatrix... [O]ne of his patients had had some pain and [the surgeon] might consider taking the implant out.

...An Auckland[er] who had leaking breast implants removed in 1992, says compensation will help acknowledge years of pain and discomfort. "Carol", who did not wish to be identified, had implants inserted in 1969 as a result of pressure from her husband. "At the time I'd just had three children close together and it came down to self-esteem. Looking back, I know that was a bad decision." Over the years, the implants became "as hard as rocks" and caused burning sensations and pain. "It was just awful. I felt unwell all the time." [The wife] also had numbness in her toes and fingers. Compensation moved a step closer last week, with an announcement that American company Dow Corning had agreed in principle to set up a fund of about \$70 million for around 6000 A[US]n and N[Z] gals... but any cheques were still up to 18 months away. A Palmerston North [resident], "Mary", who... had her implants removed three years ago... [and] also did not want to be identified, said [it wondered if it]d live to see any payout. "I'm pretty ill with an auto-immune disease. Things have gradually got worse over the years. I'm in a lot of pain and I get so exhausted... I just want to be around when the compensation happens, but I'm frightened I might not be." ...But no amount of money would make her healthy again... [The Palmerston North resident] opted for breast implants 22 years after surgery to remove non-cancerous lumps.

...[gals] with breast implants have been warned of a new hazard linked with the cosmetic enhancement... A study of 3500 [gals] who had implants over a 28-year period found they were [3] times more likely to kill themselves than those who were content with what nature had given them. [Gals] who have cosmetic surgery are known to be prone to psychiatric problems, and the researchers say this link is likely to explain the high suicide rate rather than any effect of the implants themselves. The... finding adds to the risks of implants which have been debated for more than a decade.

...SILICONE breast implants have had a lot of bad press, but this week's British documentary *Storm In A D Cup* (Prime TV, 9.30pm, Thursday) looks at evidence that suggests breast implants can actually be good for [gals]. Feminists are not so happy with this news and neither is the significant number of [gals] with implants which they blame for everything from rheumatoid arthritis to chronic fatigue syndrome. But some recent research suggests that not only are the implants safe, they can also help prevent breast cancer.

...Most patients would be overjoyed to hear their doctor say the words, "you don't have cancer". When a specialist told [a Christchurch resident that last] July, her first reaction was one of relief... - [it]... didn't have a potentially fatal disease[, so it] wasn't going to die. But, as... [the patient (]who works for Statistics N[Z)] ...left his office, another emotion welled up - anger. It started to sink in that, if [the patient] didn't have cancer, her surgeon had removed her breast needlessly. "My sister had taken me to the doctor and I got in the car and said, 'I don't believe this'," says [the patient] who'd had a mastectomy the previous week. "I said, 'You mean to tell me they've put me through all of this and I don't even have cancer?' I was in a terrible state." ...[it] had had a lump in her breast since... her early twenties. [It]d earlier had another lump removed, which turned out to be benign. When the second one appeared, [the patient] was told it was also harmless and wouldn't need to be removed. "From time to time, over the years, I've had it checked but it was always all right." But, in June[last year, it] noticed the lump was sore and her breast was swollen... and was referred to a specialist on July 5[, when it] had a mammogram and an ultrasound, then a fine needle aspiration, which involves removing cells from the lump with a needle. "I went back the next day for the results and the surgeon told me malignant cells were present. I also saw an oncologist and they both agreed I needed a mastectomy. I asked if they could just cut some away to do tests on that before taking the whole breast but the surgeon said there was a risk of the cancer cells getting into the blood stream and spreading... As well as removing her left breast, the surgeon also took out her lymph glands, in case the cancer had spread to them... (Tests have since confirmed [the patient] had mastitis, an inflammation of the breast.) ...[the patient says it] has heard the medical profession believes a rate of 10[%] for misdiagnosis is acceptable. "How can any misdiagnosis be acceptable? I was never told this before the operation. In my opinion, every surgeon should ensure all possible avenues have been completely exhausted before removing a breast... To reconstruct the breast, they took skin and a muscle from my breast and pulled it to the front. I have to live with this for the rest of my life. To me, this breast is just a thing - it's very hard and it feels alien." ...[□ London d]octors and psychologists yesterday condemned plans by the parents of a 15-year-old... girl to pay £3250 to give her breast implants as a 16th birthday present... [The mother], aged 40, who has had two breast enlargements as well as other cosmetic surgical procedures... said: "I want [my daughter] to feel confident about the way [it] looks and if that means having breast implants... I will support her... [My daughter] has the same shape and build I had... tall with a small chest and... out of proportion... and I know just how [it] is feeling..." ..."I had thought about having my breasts enlarged when I was 12, but when I was about to turn 15, I saw so many people having it done that I wanted mine bigger as well. Every other person you see on television has had implants. If I want to be successful I need to have them too[," the daughter said]... Her parents run their company, Grosvenor House Centre for Plastic Surgery, from their farmhouse home. Neither is a plastic surgeon, and they refer clients to doctors for surgery to be carried out. A Harley St psychologist who counsels [gals] about the effects of having cosmetic surgery... was... worried that the teenager wanted the breast operation so that [it] could be successful. "That is a very disturbing belief for a 15-year-old girl to have, and also a false one." ...a consultant plastic surgeon, said: "I find it hard to understand why any 15-year-old girls need surgery. If they do not like their self-image, a quick-fix solution is not the best answer." ...the consultant [the] family want to carry out the operation also expressed doubts. "At 16 the breast isn't matured enough and there are also a lot of psychological implications. If it doesn't change at 18 or 19 then we can think about it." [The mother] said after his comments: "If [our consultant] says 16 is too young then we will respect that and [our daughter] will have to wait until [it] is 18." A[n A]uckland plastic surgeon and reconstructive surgeon... said it was unlikely that a breast implant operation would be carried out on a 15-year-old girl in N[Z]. However, it also said there were no rules or laws to stop such a procedure going ahead... [with] parental consent...

A TV documentary showing teens getting breast enlargements on hire purchase has come under fire... [from the] Christian Heritage Party... [for sending] out bad messages... "Teenagers see shows like this and they just get ideas in their heads. They are very impressionable..." ...Reel Life: Perfect Breasts screened on TV One last week. It featured several British teenage girls talking about how they were saving for new breasts and how they were sure the surgery would bring them happiness. "You can get your boobs done on HP, or pop down the road in your lunch break, get a loan, make the appointment and have new breasts within a month," said one post-op teenager.

..."I didn't want to be bigger. I just wanted my breasts to look the way they did before I had children"... When [a cosmetic surgeon] enlarges your breasts, your own wishes will be a major part in deciding • your new size • the type of implant • the surface nature of the implant... • whether your implant goes under or above the chest muscle... • the site of insertion, knowing that you want the smallest scar possible... Sites for inserting the implants are... the areola (the dark skin around the nipple)[;] under the breasts - this site will usually produce a very obvious scar and is therefore the least popular with patients[;] the axilla (armpit)[; and] the umbilicus (belly button). These last two methods leave you with no scars on the breasts, therefore no evidence of having implants. The implants are put in place using [an] endoscope, the latest aid to accuracy and safety... Breast [s]urgery does not treat breast lumps or cancers - [practitioners] specialise only in breast enlargement, reduction and lifting.

...[of the Kiwis] who... opted for B-cup... implants in the 1980s... most now want C-cups. The average size of an implant in the 1980s was 200ml. It is now 350ml... But... while... those who want to be bustier believe even bigger is better[, more Kiwi gals]... want smaller breasts rather than bigger ones... There are 1000 breast reductions done each year in N[Z] - and only 300 breast enlargements.

...EXCESSIVE breast development is a problem that afflicts a significant number of [gals] and – to a lesser extent – [guys. Large-breasted gals] classically suffer from chronic back, shoulder and neck pain, muscle strain, tension headaches, deep strap marks, poor posture, skin irritation, breast discomfort... difficulty exercising and fitting clothes. They are also subject to humiliation and harassment, resulting in low self-esteem, depression and a reluctance to participate in many social activities. Heavy, pendulous breasts will aggravate osteoporosis, arthritis... and respiratory conditions, such as asthma. An effective surgical solution will dramatically change... lives. A common response after breast reduction... is, “This is the best thing I have ever done.” It is often followed by “I just wish I had done it sooner.” ...reduction mammoplasty, takes... two to four hours to perform... The operation takes place under general anaesthetic and most patients are discharged the following day. There is only mild to moderate discomfort for several days and approximately two weeks convalescence is recommended before returning to work... Complications such as infection, bleeding, delayed wound healing and loss of sensation, are uncommon... Breast feeding is possible after reduction surgery so [gals] should not be discouraged from having this operation before starting a family. The overall costs for breast reduction surgery vary from \$7000 to \$8500[in NZ, where h]ealthcare insurers... have difficulty recognising mammary hypertrophy... as a reimbursable medical condition... except where a balancing procedure is required after breast cancer surgery. These same companies, however, have no difficulty granting cover for [guy] breast enlargement or swelling of the scrotum (hydrocoele)... It is important to choose a qualified plastic surgeon who is familiar with various breast reduction techniques... The latest development is the use of an ultrasonic probe to remove the excess tissue through very small incisions.

...Hollywood folk are asking whether [the former *Baywatch* co-star (r:p1553, lns65-6)] had her brain size reduced together with the much publicised bust reduction. Their questions follow her decision to reunite with [the]abusive rocker... who did four months in prison for beating... [her. “The abusive rocker] loves me with or without the implants,”... coos[the actor who, ‘while in her early teens – and still a virgin – was raped by’ a trusted acquaintance]... The pair are living together again – and plan a second marriage ceremony... a wacky millennium wedding to be held at midnight, New Year’s Eve 1999... on the beach and in the nude... [W]edding guests will [also]have to be naked. [Incidentally, ‘a bride had to cut short her honeymoon after a breast implant moved out of place’...]

Gals] with breast implants should be banned from driving cars, said a German insurance company. When [one gal’s] implants burst from seatbelt pressure in an accident, [it] sued the driver of the offending car. □... Up to a quarter of [gals] seeking saline breast implants for cosmetic reasons end up having replacement operations within five years, U[S] federal health advisers have been told. The F[DA] will put the failure rate in brochures given to patients before surgery but the advisory panel... urged makers of the implants to better monitor their performance... 20[% of gals] seeking breast augmentation sought a second operation... because a hard capsule had formed around the implant. [Recipients] also requested new implants because they wanted to change sizes, or because of leaks and deflation...

There was a time [Hole’s] rock grunge chick... craved a more [bosom]y look too, but after a recent change of heart... had her breast implants removed. Silicone breast implants do not cause serious diseases such as cancer, lupus, or other chronic disorders, but they are not entirely safe either, according to a report... by the Institute of Medicine, the medical arm of the non-profit U[S] National Academy of Sciences... “It is essential that [gals] fully understand these risks before they decide to undergo this surgery.” The most serious documented problems came from the tissue around the implants contracting, the implant rupturing, or an infection developing. Many [patients] had alleged that the silicone in the implants, which makers say is chemically inert, leaked and caused illnesses... But the Institute... committee failed to find any hard evidence to support them... “Syndromes of the type ascribed to implants generally involve symptoms that are nonspecific and common to the general population.”

...At least 3000 N[Z]ers have breast implants and a Wellington researcher is keen to find out how they feel about them... why they have implants and how they deal with conflicting information about the risks... [A] Health Services Research Centre study... will interview up to 25... [patients but won’t include any transsexuals, who] also provided a significant demand... Meanwhile... a cosmetic surgery junkie... [– who has endured] 35 operations... and... [says that:] “If you analyse [the]money over the time that I’ve spent it, it’s less than I spend on my hair every week... [(which is)] \$100 a week... because I have dark curly brown hair and I like to have it straight and blond[”] – is trying to increase demand in NZ)... On August 7, [the junkie will] be bringing her brand of surgically enhanced beauty to... a symposium at Auckland’s Stamford Plaza... [If the junkie was] a normal fee-paying client, [it] would have run up a bill of about \$80,000... [The junkie gets to spend less than normal clients because it] works as a sort of mobile showroom for... Clinical Beauty... travelling around A[US] and the world displaying the benefits of going under the knife. The clinic acts as a liaison between potential patients and cosmetic surgeons... “If any other organ in your body breaks down you don’t have any problems with replacing or repairing it. So why not? It’s not possible that people stay young without any assistance. It’s just not possible.” What about growing old gracefully, I suggest weakly. “It’s simply no longer realistic... We live in such an appearance-conscious society. I don’t even think of myself as being 52...” ...So what does the future hold? According to... the... president of the N[Z] Foundation for Cosmetic Plastic Surgery... in 100 years plastic surgery will look “incredibly primitive” because scientists will be manipulating the ageing process chemically and genetically. Expect significant developments in the next 10 to 15 years... [I also ask him] what’s wrong with holding on to our money and growing old gracefully? ...“We never have... All that’s happened is that technology has caught up with desire.” ...[● Tonight’s documentary.] PLASTIC SURGERY: GAMBLING WITH YOUR LOOKS... shares the shocking experiences of people who have gambled with plastic surgery and lost.

...A [Miami resident] has died after a botched underground plastic surgery operation to make her buttocks bigger.

...[last night] TV1’s *Reel Life* series... plung[ed] fully into the world of weird... with a piece on people who have plastic surgery to look like animals.

...Plastic surgery is not just about improving the looks of film stars... The last thing[the] hill-climb enthusiast... clearly remembers is gunning the “Rotary Rocket” into a sharp left bend on the Maramarua unsealed track. “But... I wasn’t scratched apart from my right arm which went out the window and got mashed.” That is an understatement. More descriptively it was “squeezed like a tube of toothpaste,” according to [a]Middlemore Hospital plastic and reconstructive surgeon... The injury was so severe that amputation could have been the outcome. But... [the] arm was saved by a combination of cosmetic and endoscopic surgery techniques in the first free tissue transfer of muscle done in N[Z]. The surgeon] and his team took muscle from [the patient]’s back and stitched it into the gaping forearm wound, using microsurgery to restore vital blood flow... Plastic surgery is sometimes scoffed at by the public, mainly because it’s associated with movie and TV stars having facelifts or breast augmentations. “But you have to first master the cosmetic to learn the reconstructive skills because form and function go together... We can now remove disfiguring lumps from a child’s face, for example, leaving little or no scar... I suppose that’s cosmetic in one sense, but... it changes and brightens lives.” [● ‘Plastic surgical techniques, total removal plus skin grafting, and tattooing have been used successfully to correct birthmarks (or *nevus*) – a skin blemish present at birth or appearing shortly thereafter that usually disappears without treatment. Such marks are either moles which may contain brown pigment, or an accumulation of small blood vessels called port-wine stains or hemangioma.’ ‘About 10% of babies have them on their bodies (they are more common in premature babies). Once their growth has peaked, the blood vessels begin to reduce in size and usually reduce by 80% by the age of 8 years. In some cases steroid injections can help reduce the size of a haemangioma. Early treatment may be necessary if the birthmark interferes with vision, breathing or feeding.’]

...THREE months after his face was bashed to pulp by a mallet-wielding “unhappy” client, [a]plastic surgeon... is still shaken by the memory... With two-thirds of his time spent on reconstructive surgery, most of it at Middlemore Hospital where [the plastic surgeon] is clinical director, and

the balance in private cosmetic work, [the plastic surgeon] was brilliantly placed for the best sewing and reconstruction job in town. And... got it... Today, just 12 weeks later, [his] ordeal is almost wiped off his face. Despite seven blunt blows to his head, causing blood to spatter all four walls of his surgery, only one scar is visible. And, within another couple of months, that will probably fade away, too. After his session on the other side of the scalpel, [it] is well placed to talk about a new no-holds-barred consumers' guide... published late last year by the N[Z] Foundation for Cosmetic Plastic Surgery... The beautifully produced book covers all aspects of plastic surgery... "It's really important for people to know that these procedures are not like nipping into the... hairdresser for a tint and blow wave. Cosmetic surgery can't be undone... Surgeons use knives. There's bleeding. People can die under the anaesthetic." Given the downside, and the commitment of ethical local practitioners to expose it, it's not surprising that N[Z]ers are cautious about taking the surgery option... However, say hairdressers in Auckland's more affluent suburbs, the tell-tale face-lift scars secreted in their clients' hair are... [becoming increasingly common]. "They're there all right – they just don't want people to know about it. And yes, it's a great idea. I've never had a client who didn't look a million dollars [after a lift] and I've never had one who was unhappy. It gives people their self-esteem and morale a really big boost. Clients say to me, 'I get up in the morning, look in the mirror and feel great'."

...There is a way for [gals] who are undergoing radiation or chemotherapy to do so without suffering a loss of control over the way they look. *Look Good... Feel Better* run workshops all over N[Z] to give these patients the products and techniques to face their treatment and the world with confidence. For many... it can be a turning point in their treatment, helping them face their therapy with renewed strength and willpower. *Look Good... Feel Better* is free to [use]... It is the charity of the Cosmetic, Toiletries and Fragrance Association, whose member companies donate over \$2.5 million worth of product annually. It helped over 1500 N[Z] gals last year and would like to help many more.

...Around ten years ago in the U[S], the daughter of the owner of one of the big cosmetic companies was diagnosed with cancer. When the side effects of the treatment started to affect the way [it looked, the daughter] felt as if [it] was losing her identity. Then one day, the people at her father's cosmetic company gave her a makeover, concealing the effects of the treatment and boosting her spirits immeasurably. [The daughter wanted other gal cancer patients] to feel the same surge in confidence [it] had felt, so independently approached the other large cosmetic corporations and *Look Good... Feel Better* was born... If you know someone dealing with these treatments, it can probably help them.

...My two-and-a-half-year-old grandson was watching me apply face cream. "What does that do?"... "Makes me beautiful," I replied. [Grandson] stood looking for a moment. Then... answered, "Well, it's not working, Nana." ...■ Make-up was first used about 100,000 years ago for camouflage.

...[Covering pimples with make-up can be tricky when you don't have zillions to spend. The problem is that if you have pimples, you also have oily skin and make-up doesn't adhere well to oil. Pimples are the result of a sensitivity to hormones, particularly testosterone, which both sexes have. When the hormones are released, their skin produces too much oil. The follicles in the skin can't deal with the extra oil and get blocked. Doctors believe this sensitivity is inherited. Washing your skin all the time isn't the solution, say beauty therapists, as the skin compensates for the lost oil and makes more! Dermatologists are skin doctors who have a range of treatments to solve your particular problem. Antibiotics and vitamin creams can be used effectively.]

...[antibiotics, x-rays, diet, and scrupulous hygiene of the affected areas are among the many methods of treatments for acne] – 'inflammation of the skin's oil-glands, producing red pimples.'] Speaking of p[imples, the daughter of a US singer (r:p1633, ln10)] is in danger of becoming a... pain. The six-year-old loves wearing make-up and has told Mummy [it] wants to start her own kiddie cosmetics line. M[ummy] thinks it's a great idea and is in talks with [a] pal... to make it happen. Spare us!

...*GROWING UP too fast* Remember when [the] child actor... of *Harry Potter* fame was a fresh-faced little cutie-pie? Now, at just 12 years old, the starlet has already morphed into a slinky young minx. At the world premiere of *Harry Potter and the Chamber of Secrets*... Hermione Granger... appeared more seductive than innocent schoolgirl... [(despite the director's) determination not to make the same mistake with the three young stars of the *Harry Potter* movies... [as it did when it introduced another child actor] to the world in his blockbuster movie *Home Alone*...)]... But if you think [the 12-year-old i]s looking too grown-up too soon, spare a thought for [a singer]'s daughter... At just six years old, [it]'s already a jet setter with her very own stylist who plots every clothing item from the hairclips down. Lately there's even been talk... [the] Little Material Girl... may soon launch her own clothing and make-up range. Then there's Britney[']s... little sister... Only 11, [s]is i]s already a navel-flashing show-off who never faces the camera without make-up. Just like her big sister the [11-year-old] has a growing army of young fans who want to imitate her... provocative clothes.

...Nowhere in the world are physical appearances more important than in Hollywood, where even the most beautiful can feel insecure about how they look. The glamour squad given the task of keeping the desired ones looking desirable are the hairstylists, make-up artists, fashion stylists and wardrobe assistants. It's big business. And it... has gone crazy with greed, say film studio executives. The... [people] who blow-dry, tease, style and paint the stars have become so rich and powerful, some of them make more money than their clients. Angry film studio bosses say they're now demanding star treatment for themselves. "It's extortion,"... By the way, [the gal star of *What Gals Want* had]... an \$11,000 make-over before fronting up to the premier... ([it] could've had surgery for that!)... The Oscar winner... wanted Paramount Pictures to pick up the tab – and they did. [Editor's note: 'globally, the beauty business is worth \$287 billion a year'...]

British gals 'collectively spend £3 billion each year on beauty products', and 'in Beirut gals spend 75% of their income on their looks.'

...*Cleopatra's mind much sharper than her looks*... In a satisfying modern twist to an ancient tale, it seems Cleopatra's legendary beauty owed more to her alluring personality than physical assets. An exhibition at the British Museum un.masks the first-century Queen of Egypt – long idealised as a stunner with lustrous hair, luminous eyes and a comely figure – as a stumpy, chunky [figure] with a hook nose and flaring nostrils. The exhibition, which opens next month, explodes one of our best-loved myths with a collection of ceramics, paintings, bronzes and caricatures which reveal a ghastly set of brown teeth, rolls of fat around the neck and an unusually prominent lower lip. Eleven sculptures, initially thought to represent less-attractive queens, have been identified as Cleopatra... The unflattering sculptures make Cleopatra look more like Cinderella's stepsisters than... the screen goddesses who portrayed her on film... They bear no resemblance to the ruler described by Roman historian Dio Cassius as "a [figure] of incomparable beauty," and by Plutarch as an irresistible charmer: "Her appearance, together with the seduction of her speech[, and]... her character, which pervaded her action in an inexplicable way, was utterly spellbinding. The sound of her voice was sweet..." ...According to [modern] historians... the Romans, embarrassed by Cleopatra's romantic success with their great leaders... created the legend of her looks, believing it made her accomplishments less impressive. Centuries later the plain Queen with a spectacular brain is settling the score... A clever leader, Cleopatra was expert at manipulating her image. [Cleopatra] was the only member of her family, the Ptolemies from Macedonia, who bothered to learn Egyptian so that [it] could talk to her subjects. [Cleopatra] left a trail of potent lotus perfume wherever [the Queen] went, and travelled the Nile river in a golden barge with red sails and silver oars. But... Cleopatra... was best known for seducing the Roman Emperor Julius Caesar and his general Mark Antony before killing herself in dramatic style by forcing a snake to bite her breast.

...Historians, scientists, moviegoers, lovers and dreamers can't seem to get enough of Cleopatra. More than 2000 years after her death in 30BC, [the]... Queen of the Nile... rules... [again] in... a two-part mini-series simply called *Cleopatra*... The movie is based on... the... novel, *The Memoirs of Cleopatra*... [by a gal who,] as a nine-year-old... developed... a "fatal fascination" for both... Egypt and... Cleopatra... This *Cleopatra*, [the author] says, will be the most accurate depiction brought to the screen. "I think... as a political leader, the flighty aspect of her is basically Roman propaganda that then got picked up by Shakespeare, where you have scenes where [Cleopatra]'s sort of idle and lying around eating grapes. In real life... [Cleopatra] wasn't really like that – although [it] was obviously very appealing, very charming..." Shot on location in Morocco and on London sound stages, *Cleopatra* has "the most lavish and largest" sets ever built for a TV mini-series. One tonne of copper was used to make the jewellery

and costumes... “Every scene we did in Morocco was massive. We used 13,000 extras over six weeks, 7000 horses, two kilometres of cloth...” [The actor who plays]... Mark Antony... thinks this film, like those before it, will offer up a Cleopatra seen in the light of the times. “[The original] version was about a modern vamp – a 30s post-suffragette, a liberated [gal. In the 1960s’] version, I think there’s a sense of the politics of the time, of U[S] foreign policy... and the blind reverence that was given to the Roman Empire... and here we are at the end of our century, a breath away from 2000, perhaps psychologically most prepared to deal with the metaphysical implications of this tale – the notion of channelling a goddess like Isis.”

...GOD, nature, fate – whatever you may call the force that drives our lives – seemed extraordinarily unkind when it decreed that the fine, broad mind of Iris Murdoch, novelist, philosopher and polymath, should crumble slowly in the grip of Alzheimer’s... Murdoch was in many ways a person of her generation. [Iris] was an active member of the Communist Party at Oxford, marched and spoke for nuclear disarmament at the big rallies in the 1960s, and was enormously influenced by Sartre and existentialism... [Iris] was a neo-Platonist, a respected moral philosopher, a popular and lively lecturer on the subject whose *Metaphysics as a Guide to Morals* (1992) is the best known of the four books on philosophy published after her first work, *Sartre, Romantic, Rationalist*, appeared in 1953 (revised and reissued in 1980 as *Sartre, Romantic, Realist*)... [Iris] wanted to put Plato “into a modern context as background to moral philosophy, as a bridge between morals and religion, and as relevant to our new disturbed understanding of religious truth.” A critic said her thought was “unique as a creative re-imagining of Plato in the late 20th century.” ...In a separate career, [Iris]... became... one of the most admired serious novelists in the second half of the 20th century, with a large and committed readership throughout the English-speaking world, despite the length of her stories and their often labyrinthine plots... Murdoch was born in Dublin in 1919 and moved to England a year later, but returned annually through her childhood to Ireland for holidays. [Iris] was plain, shy, an only child, and had no children herself – a recipe, one would have thought, for lifelong loneliness. But [Iris] had... a warmly companionable husband for 43 years... a professor of English Literature at Oxford... MURDOCH began writing fiction regularly at age 9, inventing people... to fill her lonely life. [Iris] wrote five unpublished novels before her first book, the work on Sartre, appeared. After that came 27 novels, including *The Sea, The Sea* which won the Booker Prize in 1978. [Iris] was... “involved in various causes.” Her greatest cause, doubly pursued in her twin roles as novelist and philosopher, was the pursuit of truth... “The novelist must serve society and tell it truths, do people good, open up imaginative reflection... We must preserve and cherish a strong truth-bearing everyday language, not marred or corrupted by technical discourse or scientific codes; and thereby promote the clarified objective knowledge of [humanity] and society of which we are in need as citizens and as moral agents.” ...[Iris] died this week.

...A tragic psychological disorder is making beautiful [gals] believe they are too ugly to continue living... For more than 30 years, Gina was hooked on the sight of her own reflection. But it wasn’t narcissistic vanity that drove her to spend up to six hours at a time gazing at her face in the mirror, looking for signs of even the slightest flaw. Gina* is one of just three per cent of the population known to suffer from a rare and little understood psychological condition called body dysmorphic disorder (BDD). The disorder triggers an irrational preoccupation with some aspect of her appearance and compels Gina to repeatedly check herself in mirrors... By her 40s – and with two broken marriages behind her – Gina had become so obsessed with her appearance that [Gina] even resorted to do-it-yourself face work, using tweezers to surgically remove bumps, or using needles to pop spots and pierce sores... ‘Over the years I created a lot of scar tissue, which I hated because I thought it would attract more unwanted attention. So I’d remove that too – slicing giant pieces of skin from around the area, leaving gaping wounds that required stitching. Amazingly, I didn’t feel any pain while I was doing it – I was too absorbed in what I was doing. But I’d feel really guilty or embarrassed when I had to explain my wounds – I’d blame them on car accidents or say that my cat had scratched me.’ ...The actual cause of this rare disorder is a chemical imbalance in the brain. While some sufferers of BDD are so revolted by their imagined ugliness that they can’t bear the sight of themselves and develop phobias of mirrors, others, like Gina, become addicted to them. And while some sufferers might develop an exaggerated dislike of some particular feature of their appearance, others become preoccupied with their entire body image – adopting bizarre and elaborate disguises... Most often surfacing during adolescence, aspects of BDD include anxiety, depression, panic attacks and sometimes suicidal tendencies... Tall, blonde and willowy, 20-year-old Carly has looks to die for. Yet the striking-looking student’s looks have almost driven her to suicide on three separate occasions. For when Carly* looks in the mirror, [it] doesn’t see the flawless complexion and picture-perfect smile that everyone else finds so attractive. Instead, [Carly] sees the face of a monster – shocking enough to make motorists crash their cars and ugly enough to reduce observers to tears. ‘I’m a monster – I was born that way and that’s just something I’m having to learn to accept... When I walk down the street, I know people are shocked to see something so ugly... They can’t believe someone like me would have the nerve to show my face, because such ugliness is confronting.’ This unshakeable belief has been Carly’s nightmare since [it] was 14... Carly is currently battling an urge to splurge on a costly make-up addiction, which condemns her to spend hours a day in front of the mirror, performing rituals to improve her ‘flawed’ face. But now [Carly] has found the courage to tell... her tragic story, in the hope that [the student] might encourage other sufferers to get help before it’s too late... and everyone involved in the story, including the photographer and reporter, can attest to the fact that [Carly] is a strikingly attractive young [perso]n.

...How to find out if you’re hot or not... Dare to expose yourself to the ultimate truth? It is horrible, strangely addictive and a phenomenal success. The insecure need not apply. “Am I hot or not?” is the latest internet sensation, a new website created just over a week ago by two unemployed Californians... [that] offers people the chance to be judged for attractiveness... or lack of looks... A series of anonymous pictures of [guys and gals] are presented to the viewer who is then invited to vote on their attractiveness on a scale of one to 10. Over a thousand people of all ages have sent in their photographs to the virtual beauty pageant and watched their scores fluctuate as complete strangers assess their looks.

...If you’re a [guy], at some point a [gal] will ask you... “How do I look?” ...You must be careful how you answer this question... Because you will never come up with the right answer... Most [guys], I believe, think of themselves as average-looking. [Guys] will think this even if their faces cause heart failure in cattle at a range of 300m. Being average does not bother them; average is fine... This is why [guys] never ask anybody how they look. Their primary form of beauty care is to shave themselves, which is essentially the same form of beauty care that they give to their lawns. If, at the end of his daily beauty regimen, a [guy] has managed to wipe most of the shaving cream out of his hair and is not bleeding too badly, [it] stops thinking about his appearance and devotes his mind to more critical issues, such as the Super Bowl. [Gals, however,] do not look at themselves this way. If I had to express, in three words, what I believe most [gals] think about their appearance, those words would be: not good enough. No matter how attractive a [gal] may appear to be to others, when [that gal] looks at herself in the mirror, [it] thinks... that at any moment a municipal animal-control officer is going to throw a net over her and haul her off to the [dog-]shelter. Why do [gals] have such low self-esteem? There are many complex psychological and societal reasons, by which I mean Barbie. Girls grow up playing with a doll proportioned such that, if it were a human, it would be 2.3m tall and weigh 37kg, of which 24kg would be bosoms. This is a difficult appearance standard to live up to, especially when you contrast it with the standard set for little boys by their... action figure... dolls... Most... that my son played with... were hideous. For example... Buzz-Off... was part human, part flying insect. Buzz-Off was not a looker. But [Buzz-Off] was extremely self-confident. You could not imagine Buzz-Off saying to the other action figures: Do you think these wings make my hips look big? But [girls] grow up thinking they need to look like Barbie, which for most... is impossible, although there is a multibillion-dollar beauty industry devoted to convincing [them] they must try. I once saw a show... wherein [a] supermodel... dispensed makeup tips to the studio audience. [The supermodel (r:p21, ln16)] had all these middle-aged [gals] applying beauty products to their faces[, while stressing] how important it was to apply them in a certain way... [The studio audience] dutifully did this, even though it was obvious to any sane observer that, no matter how carefully they applied these products, they would never look remotely

like [the supermole], who is some kind of genetic mutation. I'm not saying that [guys] are superior. I'm just saying that you're not going to get a group of middle-aged [guys] to sit in a room and apply cosmetics to themselves under the instruction of [the star of films such as *Seven Years In Tibet*], in hopes of looking more like him. [Guys] would realise that this task was pointless and demeaning. They would find some way to bolster their self-esteem that did not require looking like [the instructor]. They would say to [the instructor]: ...what do you know about LAWN CARE, pretty boy? [Ironically, if a guy was to try and pretty himself up with make-up, most gals would consider him undesirable!]Of course, many [gals] will argue that the reason they become obsessed with trying to look like [a supermodel is that guys], being as shallow as a drop of shit, WANT [gals] to look that way. To which I have two responses: 1. Hey, just because WE'RE idiots, that doesn't mean YOU have to be; and 2. [Guys] don't even notice 97[%] of the beauty efforts you make anyway. Take fingernails. The average [gal] spends 5000 hours a year worrying about her fingernails; I have never once, in more than 40 years of listening to... [guys talk about gals, heard one say that a particular gal] has a nice set of fingernails... Anyway, to get back to my original point: if you're a [guy, and a gal] asks you how [it] looks, you're in big trouble... [even if the gal] suspects that you're not qualified to judge anybody's appearance... because you have shaving cream in your hair... Obviously, you can't say... bad. But you also can't say... great, because [the gal will] think you're lying, because [it] has spent countless hours, with the help of the multibillion-dollar beauty industry, obsessing about the differences between herself and [a supermodel]... The best technique is to form an honest yet sensitive opinion, then collapse on the floor with some sort of fatal seizure. Trust me, this is the easiest way out... • A psychological study in 1995 found that three minutes spent looking at models in a fashion magazine caused 70[% of gals] to feel depressed, guilty, and shameful.

...Did you know... • The models in the magazines are airbrushed – they're not perfect! ...• [Models have been known to 'swallow tape-worms to stay thin']... • Models 20 years ago weighed [8%] less than the average [gal]. Today they weight 23[%] less... • The average western [gal] weighs 65kg... and wears between a size 12 and 14... • Marilyn Monroe wore a size 14... • If shop mannequins were real... they'd be too thin to menstruate... • If Barbie was a real [person, it]d have to walk on all fours... • One out of every four university-aged [gals] has an eating disorder... • There are three billion [gals] who don't look like super models and only eight who do.

...Today [the waif] can earn \$20,000 a day and has a fortune worth more than \$6 million[, plus]... homes in London, Paris and New York... [The waif] appeared in her first Klein campaign at the age of 19 and almost single-handedly sold CkOne and Obsession to the difficult younger market. Within a year CkOne had outsold every other perfume including Chanel No 5 and... Opium, which [the waif] also promoted. This month C[k put "her] of cheekbones-to-die-for" into... denim... The jeans... are, as you would expect, baggy, but that's more a reflection of the current penchant for low-slung styles than her physique. [However, at] the Paris Fashion Show last week[, the waif] looked stunning in a cocktail dress of wet-look sequins as they flashed and clung to her curves – yes, curves. And... [the waif] also... sported a tan. Even this was healthy – it came out of a bottle.

...In 10 years of modelling, [the waif]... never walked down a catwalk sober. Talking openly... about the drug and alcohol problems that forced her to check in... to the exclusive... £300-a-night... Priory rehabilitation clinic, the 25-year-old... said [it] and... fellow models would smoke cannabis and drink from dawn to dusk... "In France and London we... smoke pot all day, but things got out of control... I kind of lost the plot there a little bit..."

...Last week British supermodel [the waif] admitted to a decade of drugs and champagne. This week [the waif] has ended her lucrative contract as the face of C[k. The waif] and the fashion giant decided by "mutual agreement," after six years of catwalk appearances and advertising campaigns, not to renew her contract. Her agents insisted [the waif] had not been fired for her party-girl lifestyle.

...Supermodel boss bares fangs and quits... It was not so much a case of biting the hand that fed him as wrenching off the whole arm and sticking it in the mincer... [The chairperso]n of the biggest model agency in the world, has announced his resignation with an interview in a French magazine denouncing all models as arrogant spoilt pains surrounded by idiots and leeches. The fashion industry is no stranger to the odd temper tantrum but... [the g]uru's outburst... was greeted with disbelief at the weekend... [The guru] founded Elite in 1971[and] was... famous for attracting big names to his company, including... [the supermole,] by flattering their egos and making them feel special. But... [the guru told VSD it] disliked all the supermodels and no longer had the patience to suck up to them. [The guru] admitted that his decision to step down was partly based on a documentary about the agency which led to the resignation of... [its] European president, after [the president] was filmed propositioning a reporter posing as a model and offering her money for sex.

...TWO model agency bosses have quit after a TV inquiry into an under-age sex and drug scandal. Elite[']s... European president – the ex-husband of [a]supermodel... – and one of his senior executives... quit after a BBC documentary team went undercover... [The president] was secretly filmed offering [a]BBC reporter... who posed as a model, around \$1000 for sex... The fate of at least two other Elite executives lies in the balance. Another agency depicted in the report tried to stop the programme from being shown... [A t]op British model, [aged]... 20, has been suspended by the Paris agency Marilyn after being captured by the film-makers taking cocaine... The film, which will be shown on TV One's Assignment tomorrow, also showed [the president saying it] planned to have sex with girls wanting to become models, after a fashion contest in France in which the average age of participants was 15... The director of the Elite Model Look beauty contest... has also quit.

...All's fair in Latin beauty factories... [The] 23-year-old architecture student... who will represent Chile in the Miss Universe[beauty] pageant on Wednesday, spent much of [last month] dashing back and forth between English classes, wardrobe fittings, skin cleanings and massages. When... [the 23-year-old] was not running to the beauty salon, where a machine squeezed toxins out of her legs and into her bladder, [it] studied videos of earlier pageants. [The 23-year-old] spent other days getting fitted for the short two-piece dress – made out of Chile's No 1 export, copper, and weighing 12kg – that [it] will wear. The contest will take place in Trinidad and Tobago. If organisers have their way this will be the last year Miss Chile winners will have to scramble to prepare for the Miss World and Miss Universe pageants... [A] 36-year-old public relations head for a local plastic surgeon, is coordinating the creation of the Miss Chile Agency, which will seek to compete with "beauty factories" in other countries – primarily Venezuela. The agency, which will cost about \$1.5 million a year, will... accept about 25 [beauties] a year who are between 18 and 25 years old, single, childless and at least 1.65m tall. It will not charge them. In fact, it will pay them, and will even provide free plastic surgery if they want it. The plan is based on the practice in Venezuela, where being a beauty queen is considered a profession and where plastic surgery is the norm, not the exception, for contestants... [As one Miss Venezuela plastic surgeon put it: 'A plastic surgeon doesn't play God, but was created by God to fix His imperfections, the things God didn't get right first time round.'] Venezuela holds more international beauty crowns than any other country, the Miss Venezuela Organisation says on its Internet Website. The organisation selects [prospects] from modelling schools and whisks them away to a boot camp of strict diets and runway classes. Dental and plastic surgeons nip and tuck to produce a creation that fits that year's concept of beauty. Venezuela's annual national beauty contest is one of the country's most watched televised events. Some winners go on to careers in entertainment, such as... Miss Venezuela 1996, who entered the soap opera scene. In March... Miss Universe 1981, won the governorship of oil-rich Venezuela's prime tourist spot, Margarita Island, in the Caribbean. "Venezuela is the master. We are still students," [Miss Chile Agency's public relations head] said. But Chile has a good start because it prizes beautiful [gals]. It is a country where young [gals] in high heels and elastic dresses that are shorter than the span of daylight in a north Alaskan winter serve coffee to [white-collar guys] standing at counters surrounded by mirrored walls.

...“I'll do anything,” [the former beauty queen pleaded with a] super-producer... while auditioning for a TV job... “Just don't ask me to jump out of helicopters!” [Her] plea was soon deafened by the roar of rotor blades as [the former beauty queen] sat at the door of a chopper 300 metres aloft with a bungy cord tied to her ankles. Jumping out of that helicopter helped the former beauty queen land the role of daredevil presenter on *Mountain Dew On The Edge*. Now, as [the former beauty] celebrates clocking up 300 episodes on Sky 1's *Lion Red Sportscafe*, it's hard to remember a time

when [her face] wasn't on our screens... "It's been a long time... But it's been a good time, because I haven't had a really high profile or anything like that, it's just been a job. I've only been calling it a career in the last five years." Once upon a time, [the gal] worked as a PA for a car dealership. A career in TV seemed like a dream reserved for the famous and fabulous. All that changed after [it] entered Miss N[Z] in 1988 – and won. "I was so shocked... Then someone sat me down and said 'listen, here's an opportunity. You've got to run with it. Make of it what you will because if you don't do anything, nobody's going to do it for you.'" When *Sale Of The Century* arrived as our first five-nights-a-week game show, [Miss NZ 1988] came with it as a TV model. But [the former beauty] wanted more. When *Wheel Of Fortune* came along, [it] won the role of co-host... "That was the year that I learned that hassling was the way to go... T[V] was not necessarily about talent and academic skills, it was about being in the right place at the right time and hassling the right people. I'm the first to admit that my first couple of years in TV were just horrendous. But I learnt and grew, and now I've done some awesome things in my life." On *The Edge* kicked off a string of out-and-about shows... Having earned her sporting reputation, [the former beauty] landed her role on *Sportscape*... Strangely, after 300 episodes, [it] claims never to have watched herself on the show. No doubt [it]'s seen her bio on the show's website, which includes the comments: "Position: Navigator. Special Talents: Quite obviously. Qualifications: Not knowing or caring about drift defences." [The former beauty] says *Sportscape* needs someone who isn't necessarily an expert on sports. "I'm sort of there as the girl who doesn't know everything, because there are a lot of people watching it who don't know... So you really do need to simplify things, and to me that's quite an important role." ...These days, [the former beauty]'s as busy as ever... [– in addition to being] a member of the *Sportscape* team [it's] ja... presenter of the *Lipstick Lunch* on Radio 91ZM. And just to make sure [it]'s on her toes, [the now married former beauty] is also mum to [two boys, aged] three, and... one... "I... tell you what, I'm the best ideas person in the world but I'm the laziest dog ever. I'm one of these people who wakes in the middle of the night and jots things down on my pad – but taking that into fruition, making something come of it... well, it's just a [case] of... being content with where I've been for the past 12 months, which is part-time work, part-time mum."

...[NZ's LATEST] BEAUTY queen... is on a mission from God. The[reigning] Miss World N[Z] is a devout Christian and Sunday school teacher. Despite having no modelling or beauty contest experience, [it] scored a miracle win at last month's national pageant. "I know that it's God's plan for my life... I had never thought about entering before and didn't tell anyone except my family and a few close friends. I was amazed when I won." ...[the] Auckland law student and keen netballer, will compete in London for the Miss World contest... TV2 will screen the contest. The 1.76m beauty queen, who lives in... South Auckland, is already sharing her faith with other contestants. "When I went away for a week with the Miss World NZ pageant, I shared a room with two other girls... My bed was by the light and every night I refused to turn the light off until I had read aloud from the Word for today. When I go to the Miss World contest, I will be with 80 or 90 other [girl]s. I might be the only contact they will have with a Christian so it's an awesome opportunity to share my faith."

...A beauty queen stripped of her title amid rival allegations of religious bias and rigged voting will represent Croatia after all at this year's Miss World beauty pageant, the organiser said yesterday... before describing the affair as a circus. "We have got enough real problems in the world trying to fight hunger and so on, without worrying about two beauty queens." ...[following] a compromise solution... the contest's original runner-up... will represent Croatia at the pageant in 1999... [However, the] matter may not even rest there. [The stripped beauty queen] is now considering going to court to have her title reinstated, her lawyer said.

...It's a sham, says disillusioned Miss World N[Z] of her prize... "[Last year's Miss NZ] was given hers in one lump sum. I've been given half and I won't get the rest until the end of my 12 months, provided I've not breached my contract... Last year's winner... was at the centre of a family feud... and I'm paying the price for it. I don't resent her but a lot of controls have been placed over me. [The Miss NZ franchise owners] are on the defensive now." The [franchise owners] say they are deeply hurt by [her] accusations. They've only held the franchise... for two seasons. Their introduction to the world of national beauty pageants was marred by the fracas surrounding [last year's winner] – and now this. "[This year's winner thinks it's] under this cloud. I don't know what [it] expects – to be in the media spotlight every day? ...We... feel very betrayed... We are really and truly doing the best we can... We were asked to give financial backing but we decided if anyone was going to go broke, we'd go broke ourselves... We're \$30,000 in the red... We're looking to promote our girls as ambassadors for their country more than beauty queens. Why is nobody interested any more?" ...If [this year's Miss NZ] had been crowned 30, 20 or even 10 years ago, [it] would have been a much happier beauty queen [(although, since being loaned a car, fashionable clothing and jewellery by various companies – after complaining on *Holmes* that it hadn't been rewarded enough – this year's Miss NZ is a bit happier now). The Miss NZ's of the 1960s and 1970s were household names. They toured the country doing shows and taking part in charity events. They made the covers of magazines. Miss N[Z] 1963... remembers, "...When I was crowned, I was sent to Miss World and Miss International. The runner-up went to Miss Universe... I travelled with shows throughout the country and people flocked to them. I did fashion parades at department stores and there were hundreds of people waiting outside the doors. I still have people come up to me today and say, 'You're [Miss NZ 1963]'. But in 1963, I don't think there was TV in N[Z] so people flocked to live shows. Today, people can sit in their lounge and watch beautiful girls on ordinary TV programmes any time they want. I don't think people losing interest has anything to do with feminism... But I think there are too many Miss N[Z]s around now. There should be just one..."

...[the 20-year-old who was] runner-up in the 1997 Miss World contest, is engaged to... a Latin multi-millionaire 30 years her senior... "It's the perfect relationship," [last year's Miss NZ] told *Sunday News* from Milan... "Love has no age, so the age difference doesn't matter as far as I'm concerned." ...The pair, who met in Christchurch 18 months ago, divide their time between... palatial homes in England, Italy and the south of France... [The 20-year-old], who had the modelling world at her feet after her pageant triumph, has turned her back on the industry... [In related news, the] new Miss World... was raped while in Italy for a fashion show last month. British newspapers reported yesterday that the owner of a travel agency had been charged with the attack.

...Miss World, an 18-year-old Israeli... has gone public to encourage other rape victims to come forward. The assault took place... nearly two months before [the 18-year-old] was crowned Miss World in the Seychelles. But [full] details were only released yesterday after a suspect was detained in Israel and a court lifted a gag order. The suspect... has not been formally charged and has denied the allegations[, but]... an Israeli judge refused to release him while the police continued investigations... [The suspect], aged 43... runs a travel agency in Milan, while his wife and three children live in Israel[, and] was arrested last weekend at Ben-Gurion International Airport when... [trying] to enter Israel... In [her statement, Miss Israel claimed to have been] in Milan last autumn to audition for modelling jobs, but decided to cut short her stay. [Miss Israel] asked the suspect to arrange a flight back to Israel. [The suspect] told her that there were no flights from Milan to Israel and that [the 18-year-old] would have to catch a plane in Rome. The suspect then told her that trains to Rome were booked and offered to drive her to the capital... [T]he travel agent stopped the car outside Milan, pulled a knife and raped her in the back seat of the car... then tied her up, taped her mouth shut and tried to suffocate her with a plastic bag and a rope. "I struggled with him... and finally... [the rapist] released me and asked me not to contact police,"... Once [they reached Rome, the 18-year-old] filed a complaint with Italian police and upon her return to Israel, also notified Israeli authorities who issued an arrest warrant and began extradition proceedings. After [the 18-year-old] won the Miss World title, an Italian reporter remembered that an Israeli model had filed a complaint with Italian police, checked the name and discovered... it was [the same person]. Stories about the assault also appeared in British newspapers. But the case was not reported in Israel because of a gag order... [The new Miss World] wanted to serve as an example. "[Gals] who are assaulted must react to the crimes committed against them, even at the price of some public exposure, so that these

incidents do not become an accepted, routine part of our lives.” [The 18-year-old] dismissed rumours that those involved in the Miss World pageant had been aware of the assault and granted her the title out of pity. “I won the Miss World title in my own right, and not as a result of charity.”

...a nice pair of legs has triumphed where years of meaningful debate have failed. The Miss Israel pageant last week sparked a spirit of camaraderie between the country’s Jews and Arabs when [a] 21-year-old became the first Arab... in the pageant’s 49-year history to win the title... Stressing that her crowning had nothing to do with politics... [the] Muslim... declared, “The judges picked me because they thought I was the most beautiful.” Others saw deeper meaning... [The PM said her] selection was a “manifestation of equality and cooperation between Jews and Arabs in Israel.” Note to U.N. delegates: “When all else fails, try an evening wear competition.”

...MISS WORLD – YOU DECIDE. For the first time, viewers can vote to crown this year’s Miss World (via international phone numbers given during the broadcast)... [during] next week’s pageant in Sun City, South Africa.

...Miss World makes history [A] Nigerian... has been crowned Miss World, the first black African to take the title. From 93 contestants, [the Nigerian, aged] 18, took first place ahead of... [the contestants from] Aruba, and Scotland... The pageant, held in Sun City, South Africa... was beamed to a projected global audience of 1.2 billion. “I am so happy. It’s a wonderful feeling and it’s indescribable... I know back home they were all watching out for me and I am happy I made them proud,” [the Nigerian] said... adding that [it] would continue her studies as a computer scientist as well as carry out the functions of one of the world’s most beautiful [gals]. Before being crowned [Miss Nigeria] said with a smile “black is beautiful”. There have been only three winners from Africa – two were white South Africans. The third was from Arab Egypt. For the first time China had an entrant... ■ [IN] NIGERIA... Unarmed village [gals] holding 700... workers inside a[n]... oil terminal let 200 [workers] go yesterday, but threatened a traditional and powerful shaming gesture if the others try to leave – removing their own clothes. “Our weapon is our nakedness,” said... a representative of the [group] involved in the extraordinary week-old protest at ChevronTexaco’s giant Escravos terminal. Most Nigerian tribes consider displays of nudity by wives, mothers or grandmothers a damning act of protest that shames those at whom it is aimed. About 600 [villagers] are holding the facility... The takeover began when 150 [villagers] managed to sneak into the... pipeline terminal. They have blocked the airstrip, helipad and port that provide the only exit routes from the facility, which is surrounded by rivers and swamps. The [villagers], most from the nearby communities of Ughorodo and Arutan, want the oil giant to hire their sons and use some of the region’s oil riches to develop their remote and run-down communities, most of which lack electricity. The occupation has halted the facility’s oil exports, estimated at nearly a half-million barrels a day, which account for the bulk of the company’s Nigerian production. The company says it will not affect production quotas... About 100 police and soldiers are at hand to protect the facility, but are under strict orders not to harm the [protesters].

...Hundreds of unarmed [mothers and grandmothers] occupying a ChevronTexaco oil terminal agreed yesterday to end their eight-day siege after the company offered to hire at least 25 villagers and to build schools, electrical and water systems and other amenities. But the[ir]... representatives said they would wait until the verbal agreement was put in writing and signed before they withdraw from the... facility in southeastern Nigeria.

...[NZ’S NEWEST] BEAUTY queen... will fly to the Miss World pageant in Nigeria... [The beauty queen] was criticised for wanting to attend the pageant when [a] Nigerian... is to be stoned to death for having a child out of wedlock. But [Miss NZ], 18, has decided to go, saying [it] will achieve more... that way. “I... believe we can make our voices better heard by attending Miss World and speaking out publicly on her behalf. But I will not be going with empty hands...” [Miss NZ] has... set up a website... containing a petition [it] plans to give to Nigerian officials... [Incidentally, a South Africa actor who’s n]ot known for her heavyweight acting talent... [ha]s surprised Tinseltown by scoring a role A-listers would, er, kill for. [It]’ll play the lead in *Monster*, about real-life serial killer Aileen Wuornos, a lesbian and prostitute who boasted of bedding 250,000 [guys. Aileen] killed seven truck drivers in a nine-month spree, and was executed last month.

...[NZ’s P]M... rejects any suggestion that next month’s Miss World pageant in Nigeria played a role in saving a Nigerian... from death by stoning. On Saturday, Nigerian officials lifted the death sentence... The reigning Miss World N[Z]... had earlier rejected demands to boycott the... pageant, saying [it] could do more to save the [Nigerian by attending. The NZ PM] said the pageant organisers could not claim victory. “I personally don’t think the Miss World contest going ahead has been terribly helpful. The international publicity has been very damning.” ...N[Z] was one of many Governments which made formal representations. The Nigerian Government’s pledge to spare [the 31-year-old]’s life is designed to placate international opposition and prevent any more contestants from joining the nine who have threatened to pull out in protest at the death sentence.

...It was 50 years ago this week that Eric Morely came up with the idea for Miss World – as a one-off publicity stunt to promote the Festival of Britain. [Eric] died last November, aged 82, but his widow... is still full of energy. “I’ve been rushing around trying to get the company back on its feet again... We have developed a new concept for the show and we’re discussing ways we can do something positive for the contestants’ education, with scholarships.” ...It may come as a surprise to hear that the [perso]n who married Eric Morely in 1960, and who has been heavily involved with Miss World since 1969, should have harboured such dreams to change it. For years, [Mrs Morely] was the “mother hen” who protected the girls from the press, made sure they were chaperoned, who, while her husband was announcing the results “in reverse order,” operated backstage with military precision... [D]espite having been number two in charge of a competition long accused of being a sexist “cattle market,” M[rs M]orely has always supported [gals] behind the scenes... [The] former model... coined the phrase “beauty with a purpose;” ...banned the revelation of the contestants’ vital statistics; and when the tabloid newspapers splashed a reported affair over their front pages... spoke up for [gals] everywhere, saying: “I figure that a [gal, like a guy], is entitled to have a private life.” Now M[rs M]orely says that although [it] had “enormous respect” for her husband’s wisdom, their aims did differ. “I didn’t feel comfortable with swimsuits on stage. Not because I thought there was anything wrong with them, but I thought that you don’t generally feel comfortable if someone’s interviewing you in a dinner jacket and you’re in a swimsuit.” Miss World was very much of its time when it was invented; very much the brainchild of one [guy]... There were 23 girls in th[e] first contest... No one from African or Asian countries was represented... The prize money was £1000 and the bikinis caused a storm. A year later, an American organisation started Miss Universe, and Morely vowed to continue with Miss World so the Americans could never say they got there first... In 1970 history was made at London’s Royal Albert Hall. While Bob Hope was busy making sexist jokes on stage (“it’s been quite a cattle market – I’ve been out there checking calves”) a group of [gals]’ liberationists prepared for action. A football rattle resounded through the hall, loud and untraceable. Hope, halfway through a sentence, looked up from his mike, suddenly startled. At that moment, from behind him comes a bursting flour bomb. H[ope] turns around, like a rabbit in headlights, and runs for the wings. There were stink bombs and tomatoes thrown too, though they are invisible in the grainy images of the archives. In fact, the physical sabotage looks rather low-scale, but as a piece of activism it was a triumph... The 1970 demonstration did not have an immediate effect on Miss World, in the sense that the contest continues to this day.

...[the contestant] from the N[SW] Central Coast, was last night chosen as the last Miss A[US]. The winner was crowned at a gala ball at Melbourne’s Crown Palladium. The Miss A[US] quest, which began in 1926, has been wound up, with its organiser, the A[US]n Spastic and Cerebral Palsy Association, deciding it is no longer relevant.

...BEAUTY pageants are losing their shine as fewer [girls] line up for the chance to wear the winner’s crown. The Miss N[Z] pageant... to be announced in next week’s *Sunday Times* has only seven entries for a national competition of regional finalists. It’s a huge decline for a pageant that normally boasts double that figure... When Miss N[Z] was televised in the days of frosted hair and puffball skirts it was every girl’s dream to become a beauty queen and parade the catwalk, a glistening diamond crown atop, smiling her American smile while draped in a sea of sequins. In the early 80s the pageants were the stepping stones to a career in the limelight. Some of our most well-known TV faces... are... former-beauty queens who made their debuts on the catwalk. [The contestant] who made the top five in the Miss N[Z] 1988 pageant, doesn’t think beauty pageants

do... any harm, so long as they're not judged on... looks alone... The Miss N[Z] pageant launched... her... career. The organiser of the show, then an executive at TVNZ, told her they were always looking for new talent and to get back to him. "And I did. I kept calling for six months. Eventually something came up... [when t]hey made the show Sale of the Century. [The runner-up] eventually got the job hosting Sale[– taking over from Miss NZ 1988, who is now]... host of TAB Sports Cafe... [–] and hasn't looked back... Miss Mount Maunganui[, who]... made history in 1983, when [i]t... became the first – and only – Miss N[Z] to ever be crowned Miss Universe... has had her own modelling agency, grooming school and image consultancy and has recently written a book – *Beauty: The truth about fashion, beauty and image*... Since TVNZ cancelled televising the show... they've suffered... [T]he Miss N[Z] franchise... owner... hopes TVNZ will come on board again, restoring popularity and enthusiasm to the pageant.

...*Beachgoers still flock to beach beauty pageants as though [feminists] had never burned their bras. Family fun or a tragic relic of days that should have gone by?* ...PICTURE a provincial beach resort, late December, early January. Peak holiday season. Yet the camping ground's deserted. Row upon row of empty caravans... Shift focus to the nearby park, domain or sound shell. Suddenly the air's pungent with sun-screen, throbbing music, shafted with wolf-whistles. Every [father, mother], child and red-blooded youth in the area is revelling in that quintessential element of... coastal culture – beach beauty pageants. Political correctness has [been] dealt a body blow... Yes, there are girls in bikinis. So? What would you expect to find at the beach – girls in moon suits? ...Beach pageants are many things to many people; a fund-raiser for the service and community groups who present them, a fine family day out. Possibly a smart career move. Certainly a perverting opportunity. Something to do. To people of a certain age, they're a nostalgia trip. The music's the same; the instruments in other hands... It is an "electrifying" experience for the girls. But for organisers, the business of rounding up prizes, judges and contestants demands about six months of "full-on hard work"... [However, the] only sandflies in the ointment that [one] organiser... can recall have been the few feminists who once went "round the back" and failed, even there, to make a nuisance of themselves; and the lads who compromised the integrity of a Hairy Legs competition by exhibiting their backsides to the sound shell. That category was introduced after young [guys] began expressing an interest in entering the Miss Mt Maunganui contest proper[(a guy recently won a major beauty contest for gals in AUS!)]... The current Miss Mt Maunganui is [a] 19-year-old business studies student... of Auckland[who]'s won or been placed in most of the competitions... since joining the circuit about a year ago. "I just enjoy them... But a lot of the girls do them because they can earn money." A[n] Auckland dental assistant... is such a one... "I don't think there's any other reason I would do it... I'm not an exhibitionist." At 21, [the dental technician is] getting "a bit old and a bit past it," but at the height of the season... can still make an easy \$1000 a week. Last year, [the dental technician] won \$12,000... However, most of her prizemonies came from nightclub bikini contests, a far raunchier and generally better remunerated kettle of fish than your seaside pageant. "The beach contests are a lot more wholesome. You... try to look sexy because it's all part of wearing a bikini, but you don't cross the line. You have to respect the fact that there are young kids in the audience."

...The big question in Thailand's offices and bars is, "Who is more beautiful – the new Miss Thailand or Miss Tiffany?" Most say Miss Tiffany... wins hands down. The fact that [Miss Tiffany] is the 18-year-old winner of a... transsexual and transvestite beauty contest proves that looks are only skin deep, and has led to public debate about the position of the "third sex" in Thai society. Suddenly offices, factories and universities are awash in gossip about gays, gender and cross-dressing. [One u]niversity lecturer... said: "My colleagues have all been talking about how a [guy] can be more pretty than a [gal] and just what a [gal] is these days. In Bangkok it all seems to be getting rather complicated." ...an analyst for a hotel chain, has no doubts about Miss Tiffany's appeal. "Miss Thailand is pretty good but Miss Tiffany is much more beautiful. Her face and skin are perfect, probably because of all the operations. I'm not gay but if [Miss Tiffany was a gal] I would approach her." Miss Tiffany would argue that [it] already is a [gal] thanks to a series of sex-change operations. The gender debate has hit the headlines because for the first time Thailand's Miss Tiffany Universe contest, featuring 40... contestants, was aired on national TV. Millions watched... the... finals[, which] were deliberately timed to steal the limelight from the Miss Thailand... contest and its 60 competitors. Held the previous day, the Miss Thailand pageant is traditionally massively popular. Feminism has made few inroads into... Thailand and most Thais are proud of the worldwide reputation their [gals] have for their looks. The pageant is enshrined as a national institution. The new Miss Thailand, ...a medical student, not only won \$40,000 but gets to keep the \$15,000 diamond necklace, her crown, a car and household goodies. Winners are guaranteed fame for life, with previous Miss Thailand's slipping into jobs in the Army or on TV as presenters, models and actresses. But this year the Miss Tiffany Universe contest was every bit as spectacular as its rival. Organisers kept a lid on the contest's traditionally camp and cabaret elements to give the pageant a more mainstream appeal. The judges were told to select winners on the basis of how feminine they were, both in looks and personality, with the winner going to Miss Gay Universe... in the US for the first time. [A gay] rights advocate, lecturer and contest judge... said extra care had been taken to select a winner because the country's international reputation was at stake... The publicity is now forcing Thais to consider how they view and treat the country's increasingly open transvestite and transsexual community. Most Thais call crossdressers... katoeys – a disparaging term... They are typically the butt of cruel jokes, typecast by most TV soap operas as screaming and hysterical, or forced into the sex industry to serve homosexual sex tourists. Hundreds work in the cabaret industry, which offers transvestite shows in all the major tourist resorts. Dozens of others have met foreign [guys] and now live abroad. Western visitors to Thailand are often shocked by the number... of Thai transvestites and gays and the apparent femininity of many Thai... [guys, who] think nothing of wearing hairbands, lipstick and long varnished nails in public. The numbers have variously been attributed to the high value placed on tolerance in a Buddhist society, the absence of sexual taboos, or even the lack of fathers in family life. In Patong, Bangkok's raunchy red light district... customers are often warned by fellow sex tourists to establish the sex of the "bar girls" before using their services. "These days the only give-away is the size of their hands and feet, even their Adam's apples can be sorted out with an operation... Stories abound of [tourists] hopping into bed with a girl only to get a rude surprise." The country's most famous Thai kick boxer... has also been doing his bit to promote the blurring of the genders. Last year the reluctant transvestite told his supporters: "I don't want to fight any handsome [guy]. I just don't want to hurt him." But [the transvestite] would typically kick and punch his opponents into submission before giving them a peck on the cheek. Doctors have so far refused to perform the sex-change operations [the kick boxer] wants, telling him to wear [gals'] clothing first to see if [it] really wants to become a [gal. The kick boxer] is not being welcomed for a forthcoming exhibition match in straight-laced Singapore, where the country's police say his transvestism could have an "undesirable influence" on children. Bangkok, on the other hand, has no such scruples. It is the sex-change capital of the world. A complete set of sex re-assignment operations can be done for as little as \$12,500 at a host of hospitals. One doctor has performed more than 1000 such operations over the past decade. However, the lack of centralised record-keeping means no one knows how many [guys] have switched sex... Despite such openness towards transsexuals and transvestites... [the] country's new constitution, which affords [guys and gals] equal rights, has not yet been tested by transsexuals. The Interior Ministry has yet to tell its registration officials if transsexuals are permitted to change their[sex on] ID cards... This means they are not given protection afforded to [gals] under Thai law.

...*'Miss France' splits fraternity*... Once [the person in question] was a warrior, a doughty defender of freedom. In a short time, her fate will be sealed: [the person in question] will become a supermodel, perhaps a game show hostess. A symbol of anorexia or the autocue: it's a pity the [person in question] herself wasn't consulted on her own future. The [person] in question is Marianne, the effigy of the French Republic for the past two centuries. The mythical figure, a common feature of French life, is facing a remodelling as the new millennium dawns – and at the same time... is igniting a raucous debate over who or what should embody the ideal French[gal]. The face of Marianne adorns French stamps; her bust is in every town hall; and her figure is used as shorthand by artists whenever they need to represent France in a cartoon. [Marianne] is best known abroad through the... painting in which [it] is portrayed as a bare-breasted, rifle-toting combatant leading the people to liberty. Marianne fell in and out of

political favour during the upheavals of the 19th century, when the republic alternated with the Napoleonic dynasty and the restored monarchy. But [Marianne] staged a comeback in the early 20th century, sometimes stripped of her revolutionary headdress, the Phrygian bonnet, and with her dress and features changing with the times. Thirty years ago, the authorities seized upon the idea of using a star for the head of Marianne to make the figure more popular. The first sculpture... evolved... in 1978, and... [again] in 1985. Now, in... deference to the spirit of democracy, the country's 36,000 mayors have for the first time been able to elect their choice directly. But the shortlist of five candidates drawn up by their association unleashed a torrent of accusations that French [gals] risk being portrayed as pouting, insipid and brainless... The row over the millennial Marianne is unfolding against a wider debate on the role of [gals] in France.

...Until last week, Palestinian [gals] had played only supporting roles in military and terrorist operations, though the Koran states jihad – holy war – can be carried out by [gals] as well as [guys]. But... after the first [gal] Palestinian “martyr” of the intifada blew herself up in Jerusalem[, dozens of Palestinian gals]... have begun volunteering for military operations against Israel... Wafa’a Idris, a 28-year-old Palestinian medical assistant, killed an Israeli pensioner and wounded more than 100 others when a bomb [it] was carrying detonated in one of Jerusalem’s busiest streets... The bombing appears to have ended a social taboo and even the most conservative Islamist groups have come to appreciate the propaganda benefits of fem[inine] recruits. Idris’ attack was carried out in the name of the Al Aqsa Martyrs, a group affiliated to [the PLO leader]’s moderate Fatah faction. At her local Fatah headquarters, an official said: “There is no doubt that this is a turning point. It has given [gals] a burst of enthusiasm to join the fight...” Investigators now believe Idris accidentally detonated the bomb while carrying it to a [guy] colleague and had no intention of killing herself. According to the Koran, on the day of judgment a shahid, or martyr, of either sex will face no reckoning and will be guided into paradise by a beautiful nymph. Some Muslim clerics also preach a martyr will be looked after by 72 houris, the beautiful virgins of paradise. The promised bliss has no sexual connotations. [Gals] who put themselves forward to become martyrs say they would be content with being in paradise and expect no specific reward. The changed mood has caused chaos at military and police checkpoints. [Palestinian gals] have rarely, if ever, been searched in the past. But at Kalandia checkpoint between Jerusalem and Ramallah, soldiers have been attempting to cope with the new threat. When a young Palestinian [gal] refused to open her jacket for inspection, a [gal] soldier was summoned, arriving an hour later. More than 2000 Palestinians, including hundreds of [gals], poured through the streets of Al Amari refugee camp in Ramallah last week to join a symbolic “funeral” for Idris... [by] following an empty coffin draped in a Palestinian flag... [A local gals’] activist, said: “What happened is liberating for us. There have been many [gals] who had the intention to do this before now but they were afraid that society would not accept them. Now they feel they can do it because Wafa’a has shown the way.”

...Carried away by history’s current... It was Friday afternoon in the Kiryat Hayovel neighbourhood of south Jerusalem. At the Supersol market, the Sabbath rush was on. Shoppers pushed their carts past shelves stripped of bread and matzos for the weeklong Passover holiday. Inside the entrance, a middle-aged security guard stood, carefully searching bags. At 1.49pm, 17-year-old Rachel Levy... stepped off the bus from her nearby apartment on a quick trip to buy red pepper and herbs for a fish dinner with her mother and two brothers. At the same time, another girl – strikingly attractive, with intense hazel eyes – walked towards the glass double doors. The teenagers brushed past each other as the guard reached out to grab the hazel-eyed girl, whose outfit may have aroused suspicion. “Wait!” the guard cried. A split second later, an explosion tore through the store, sending bodies flying. When the smoke cleared and the screaming stopped, the girls and the guard lay dead. Ayat Al Akhras and Rachel Levy never knew each other, but... grew up less than 6km apart. One had spent her life in the grim confines of the Dehaishe refugee camp outside Bethlehem, a packed slum where 12,000 people live in poverty and frustration. The other lived in the shadow of a sleek mall filled with cinemas, cafes and boutiques. In another time and another place, they could have been schoolmates, even friends. But the intifada cast them in the role of adversaries and, ultimately, executioner and victim. Mostly, the world has been accustomed to one kind of suicide bomber – the angry Islamic [guy] driven by visions of paradise who martyrs himself as [it] kills infidels. The story of Ayat Al Akhras may signal a new and terrifying phase – the spread of suicide bombing to all levels of society. Ayat, 18, was raised hearing stories of Israeli aggression and Palestinian flight. Her mother... and... father... grew up in a tent camp in the Gaza Strip, where their parents had fled from Arab villages near Tel Aviv after the 1948 war... Like many Palestinian girls her age – even smart, ambitious ones – Ayat was eventually drawn to the cult of martyrdom. For the first year of the intifada, suicide bombings were the province of Islamic radicals, who accepted only [guy recruits]. Gals could not become suicide bombers, the Hamas and Islamic Jihad leaders maintained, because a [gal] travelling out of home without her husband, brother or father breached Islamic law. The rule was ironclad, though Hamas['] spiritual leader... conceded: “We will start using [gals] when we have run out of [guys].” Last year the secular Al Aqsa Martyrs’ Brigades embraced suicide bombings as well, believing they would inflict far more pain on the Israelis than guerrilla warfare, hastening an end to the occupation. They started a unit for [gal] recruits. Wafa Idriss, a divorced, 26-year-old ambulance worker from a Ramallah refugee camp, became the first [gal] suicide bomber. Many girls in the Dehaishe camp rejoiced that [gals] were playing a role in fighting Israeli occupation. Even the youngest children were affected. “Since last Christmas, the girls don’t want dolls,” says... a professor of psychology at Bethlehem University. “All they want are guns and tanks.” Ayat’s anger peaked when Israeli forces rolled into Dehaishe... On the evening of March 8, neighbour Isa Zakari Faraj and his daughter were playing when [Isa] was shot through the window by Israeli troops. “When Ayat saw me and our cousin carrying Isa past the doorway, [Ayat] screamed out in pain,” says her brother... Isa died in their arms. Faraj’s death had a powerful impact on Ayat. Soon after, her friends believe, [Ayat] either sought out or was approached by... Al Aqsa... Experts say her self-discipline and intelligence made her a natural candidate. [Ayat] probably needed little psychological preparation, which helps to explain why [the 18-year-old] did not vary her daily routine in the weeks before her death. As the hour approached, though, [Ayat] made little attempt to hide her hatred of Israel, or what [it] saw as Arab passivity. Days before her operation, [Ayat] secretly met at least one accomplice from Al Aqsa who videotaped her final message and dropped it off at a Bethlehem TV station after her attack. Backlit, with her head wrapped in the black-and-white checked kaffiyet of the Fatah movement, [Ayat] reads from a prepared statement in strong monotone: “I say to the Arab leaders, ‘Stop... failing to fulfil your duty. Shame on the Arab armies who are sitting and watching the girls of Palestine fighting while they are asleep.’” ...On... Thursday night, March 28... Ayat’s fiancé dropped by as usual, spending an hour having tea and talking with her family before returning home. Ayat, her father said, stayed up all night, apparently studying in her room. Palestinian schools are normally closed on Fridays, but the students in Dehaishe had lost two weeks during the Israeli Army’s March incursion. At 7.30am, Ayat gathered her books and hurried out to school. “[Ayat] said, ‘Please wish me well on my test today’,” her mother remembers. “Then [Ayat] waved goodbye.” At the end of classes that morning, Ayat’s closest friend... was struck by her parting words. “[Ayat] said, ‘I’m going to pray in Al Aqsa. I won’t see you any more.’ I asked her, ‘Are you going to do something, are you going to do some operation?’ But [Ayat] said, ‘No, no.’” Ayat went along footpaths and through fields, skirting Israeli checkpoints and crossed unnoticed into Jerusalem. Palestinian sources believe an accomplice was waiting in a car. [Ayat] was given her belt of explosives and driven to a dropoff point near the Supersol market. [Ayat] was so composed that [the 18-year-old] shooed away two Palestinian[s]... selling herbs and scallions in front of the supermarket. Then walked purposefully toward the door, where the security guard may have attempted to block her path. At that moment, Rachel Levy brushed by. Ayat pressed the detonator, blowing herself in one direction and Rachel in the other. [Rachel’s mother] knew something was wrong when [it] heard sirens... immediately phon[ing] her sister, who switched on the radio and relayed the report of a bomb at the Supersol market. [Rachel’s mother] screamed, “My daughter is there!” and rushed with her son to the scene. Hours later [Rachel’s mother] identified her daughter’s remains at the morgue... The first Ayat[s]... family knew of her deed was when Palestinian guerrillas gathered outside their home to fire their guns in her honour... Though convention calls for a martyr’s father to express pride in the act, [Ayat’s father] seemed as

overwhelmed by grief as [Mrs] Levy. “Words cannot express the pain I feel,” [the father] mumbled, staring down at a studio photograph of his daughter taken in front of a fake cityscape of lower Manhattan, the Twin Towers above her head. Ayat’s fiancé seemed as uncomprehending as her father. “If [Ayat] had just told me what [it] was planning, I would have stopped her,” [the fiancé] said softly. “May God forgive her for what [Ayat] has done.”

...Deadlier sex Iraq[’s] dictator... uses hit squads of seductive... agents to kill his opponents abroad, says the British Foreign Office. The assassins, chosen for their looks and loyalty to the regime, are sent from Iraq to home in on their targets – the so-called honey trap. Many of the [assassins], who have been sent from Iraq to Britain, Germany, the Netherlands and Sweden, were originally belly-dancers and actresses...

THIS story absolutely stunned me – I still can’t believe it’s true... [T]he British army is paying for 12 of its soldiers – fem[inine ones], presumably – to have breast enhancement because the soldiers hate their small breasts. It’s true – 12 of them at around \$8000 a pop. Apparently the army is prepared to cough up for the ops because unhappy soldiers don’t make good soldiers. Maybe not, but surely self-obsessed tarts with hang-ups about their hooters don’t make for very good soldiers either. If they’re that focused on their chests, they’re going to be easy to crack if they’re captured, aren’t they? ...This would have to be the most irresponsible use of a defence budget I’ve ever heard. And now I’m told that as well as adding a bit here, they’re prepared to pay to take a bit away there. Breast reductions are also funded because – as any big girls can tell you – they get in the way... Could it be that someone out there working on the British tabloids is pulling our tits with this storm in a b-cup story? ■... [the AUS]n Defence Force chief... has again backed the principle of [gals] serving in combat units, saying the focus should be on individual capability... [The] Admiral... said combat effectiveness and performance in the field related to the physical and mental competence of personnel, regardless of gender.

...[US gals] have been challenging [guy] domination of the political and business establishment for decades. Now they have begun to infiltrate another, far more contentious bastion of [guy] power: the Ku Klux Klan. A report from the Southern Poverty Law Centre – a respected and well-funded group that tracks racist groups in the U[S] – says that the role of [gals] in the far-right movement is changing. From compliant helpmates, cleaning, cooking and stitching the white robes and caps of their [guy]-folk, they are taking on leadership positions themselves. Eventually a [gal] could gain the dubious distinction of becoming the first [gal] Grand Wizard... One reason for the trend is that [gals] now comprise 25[%] of the membership of far-right groups and up to half of new recruits. [One leader], who started the [Gals’] Frontier section of neo-Nazi group, the World Church of the Creator, 15 months ago, is cited by the law centre as saying: “For years it seemed that a white [gal]’s role in the racial movement was to write to lonely prisoners and stand behind their boyfriends without much of an opinion about anything... Everyone is starting to realise that if we are going to overcome this struggle we are going to have to do it together – [guys and gals] – side by side.”

...A new book paints a grim picture of life as one of the girls in the gang... BEING abducted and gang raped by eight [guys] in 1980 began 10 years of hell at the hands of a local gang for a young South Island[er]... “Pansy”. Intimidated into silence by threats [Pansy] and her family would be killed if [it] spoke out, the 17-year-old failed to report the rape and was soon to become property of the gang. Repeatedly raped, beaten and degraded, her body now bears the scars of burns and the tattoos of gang insignia. Eventually [Pansy] tried to escape for the sake of her baby boy, but was caught, hacked with a machete and left for dead. “There were times when I could have committed suicide. I didn’t want to live any more. I had no hope. You become cold. It’s like... someone’s cut your heart out,”... Her harrowing account of life in a gang is one of 10 in a new book, *The Girls in the Gang*, by [a]Christchurch researcher... and University of Canterbury sociology lecturer... w[ho] is uniquely equipped for the task: in 1972 [it] married an associate of a bike gang, whom [it] now calls... The Bitter One. During their years together [the wife] suffered regular beatings with fists, sticks, an electric cord and knives, as well as being kicked with steel-capped boots... In 1991, [the wife] ended up in hospital bleeding profusely from the head, covered in bruises, with a perforated eardrum and more than 30 cuts to her feet where he[r husband] had stabbed her with a kitchen knife. [The wife] swore not to return home and moved into a [gals’] refuge. Her husband was committed to a psychiatric hospital under a compulsory treatment order. Her determination to understand what had happened led her to enrol at university in 1994 and [it] also became an accredited worker for Stopping Violence Services. [The lecturer] hopes writing about the effects of gang violence on [gals] will bring greater public understanding and support for both [guys and gals] wanting to leave gangs. “With [gals] from gangs or violent relationships, the focus is on why they stayed. I think that’s wrong. Let’s celebrate the [gals] who get out and make such profound changes. Let’s look at how they make those changes and what they have learned about themselves in the process. These [gals] are so brave – they are survivors,”... Pansy’s partner was charged with her attempted murder. In spite of gang attempts to stop her testifying in court, [Pansy] did so and helped send him to prison. [Pansy] still fears gang reprisals but has formed a new relationship and is optimistic about the future. Most of the [gals] in the book – often propelled by a combination of broken family upbringings and drug and alcohol problems – chose life with a gang voluntarily... [The lecturer] said most of the [gals] in her book were pulled towards gangs because they provided a sense of identity and purpose – they were a substitute family. Once involved, the[y]... tended to accept beatings and abuse because they had seen so much of that at home. That was “just the way life is”. “It’s an indictment on families and society at large that our young kids would choose that sort of life or choose to be a street kid or glue sniffer.” The gang culture [the lecturer] describes is one where [gals] are totally subservient to their [partners]. “Lily”, whose mother was a heavy drinker and prostitute, dropped out of school in the third form and fell in with a member of an ethnic gang. [Lily said the gals’] main roles were to cook, look after children and provide sex. “You had to practically keep your mouth shut,” said Lily. “You see nothing, you say nothing.” ...[the lecturer] is the first to admit not all gang members and associates treat [their partners] badly, and some gangs had changed in the past 10 years. “Gangs have become more business-orientated and, by and large, [gals] are treated better and gang rapes are less frequent than they once were – in some gangs, rape was banned.” However, [the lecturer] believes the gender dynamics of gang life are fundamentally still the same... [The gals’] refuge chief executive... said while gangs might say violence against [gals] was lessening, her perception was her organisation was seeing a growing call on its services from [gals] with gang affiliations. “And the ones we’re seeing are just scratching the surface – what about the other ones out there living lives of misery?”

...Ten [gals] interviewed about their involvement – for between two and 35 years – with gangs say that even if they leave, reporting the violence to the police is not an option. Nor can they go to some [gals’] refuges for help, in case they are tracked by gang members and put other [gals’] safety at risk. The [gals’] accounts of their involvement have been documented by [a]Christchurch Stopping Violence Service facilitator... who spoke at this week’s Beyond Violence conference in New Plymouth... In her study the [gals’] names were changed to those of flowers and all contact details destroyed after the interviews to ensure [the participants’] safety... “It doesn’t matter where you go or what you do, there are too many... gang members... they’re everywhere,” said Pansy. “You can’t hide.” Even police have “a degree of cautious respect” for some gangs’ intelligence operations, and their ability to find people. [A]Christchurch gang liaison officer... said some gangs had complete dossiers, including photos, of their enemies. “Christchurch gangs are crack researchers and are able to find information on almost anyone. They are very good at using publicly available information to track people down,” [t]he... Detective... said. Some of the [gals the lecturer] interviewed said the hardest part of gang life to handle was the emotional abuse from other [gals – some of whom] are also used to set... up [victims] to be “blocked” – gang raped.

...[Gals’] groups are outraged that a jury let a [guy] off a charge of murdering his partner because [it] provoked him by complaining to the police about being beaten up. The case in the High Court at Wellington has brought calls for a change in the law to stop what the Labour justice spokes[person]... described as a “travesty of justice.” “It seems to me absolutely to defy common sense that a person... beaten so badly that [it] was taken to hospital, who then complained to the police, could have that complaint... used to reduce the seriousness of the offence and the length of the

sentence.” Rape Crisis also condemned the decision... as incomprehensible... sa[ying] it sent a dangerous signal to [gals] agonising over whether to go through the right avenues in response to domestic violence. [However, the] Minister of Justice... [said] the Government had no plans to review the law on provocation... The judge... did not question the jury’s decision, but... said... the verdict itself involved “tempering the law with mercy”...

How do some [guys] violate a fundamental [human] value and beat the [gals] closest to them? ...The answers may be disturbing, because the justifications and excuses employ some commonly held beliefs and values. One particularly strong influence on some [guys] who use violence is that of a certain masculinity epitomised by the “macho...” image... Participants in... studies indicated that to be... “macho...” meant that the [guy] had authority in the home... was the breadwinner (whether... earning or not), the protector and that what [the guy] said was right. If any member of the family questioned his authority [the guy] had the right to exercise his authority over them[and] claimed legitimacy for his superiority because of his greater physical strength. We would like to think that such traditional values went out with the 1950s but they are alive and well among various members of the community and they can sometimes influence unwittingly the actions of [guys] who strongly support fair treatment for [gals]... Before we condemn such thinking... consider this: the exercising of violence for disciplinary reasons has only just been removed from our schools and it is still widely endorsed by many adults as a means of controlling children. When... [guys] use the justification of “discipline” for violence against their partners, they are simply positioning their partners as children and employing a socially endorsed excuse for violence... Another socially endorsed excuse for... violence against [gals] is that of provocation. Provocation is endorsed by the courts as a fair excuse for violence... In our research, some [gals] who have experienced violence from their partners noted the[ir partners] used violence against them if they thought they had glanced at another [guy. A gal’s] sexual power was construed by some [guys] as a provocative threat... and a powerful incentive to isolate the [gal] from contact with others in the community... Furthermore, because provocation is seen to be a legitimate excuse for violence this justification creates sufficient ambiguity about the circumstances of the [guy]’s violence to silence any questioning of his actions... Another excuse commonly used... to justify... violence against [partners] is “it takes two to tango.” This little commonsense statement hides a mass of myths and erroneous assumptions. It assumes an egalitarian relationship in which exchanges are of equal influence... Secondly, “it takes two...” assumes that a [guy]’s violence occurs as a result of escalating conflict with his partner. It became very clear from the [gals] we interviewed that their partner’s violence was often quite unpredictable. Indeed, some [guys] said their violence was sometimes an act of revenge for a transgression they considered the[ir partner] had made some days earlier... Thirdly, just as with provocation, “it takes two...” assumes the [victim] holds some responsibility for the violence. The assumption of her responsibility is often the very thing which holds [victims] in the relationship. They are intent on providing the “perfect love” – exhausting all their own actions which might be interpreted as causing the violence in order to return the [guy] to the loving, non-violent person [it] seemed to be at the outset of the relationship. The hope of change is a powerful binding influence on the [victim]. When we assume the [victim] holds some responsibility we collude with the [guy] in his expectation that [his partner] should be the one who changed, and in his avoidance of his responsibility for his actions... These are a small sample of the social values and supports used by some... to protect the [guy] from acknowledging the harm... done, not only to his... partner but to the children who experience, witness or hear his violence.

...Domestic violence is a cruel reality for many families. I’m sick of seeing and hearing it around neighbourhoods. I’ve tired of ringing the police over the past year at the request of a victim of domestic violence who is equally violent to her own kids. Her husband often beats her and the kids. Then the wife beats him and yells at him for beating the kids. It’s been a month since I last intervened in one of their fights. The sight of their domestics always paralyses me and I can only help by calling 111 at the victim’s request. Each time is scary and I did a lot of deep breathing the last time. That experience, plus knowing other [gals] over the years who have stayed in violent relationships, has made me rethink my ideas about domestic violence. My new way of thinking is that [gals] who stay in violent relationships are as culpable of the violence as the [guys] who commit the abuses. I’m not in any way absolving the [guys] who kick, punch, beat and mentally torture their other halves. They are the lowest common denominators in our communities. But I don’t believe it’s simply a case of victim and perpetrator. Granted, it does start off as that. But as a relationship evolves gradually and the violence continues, I’ve noticed how the abused spouse and the abusive spouse start to feed off each other. Somewhere in this feeding frenzy, the abused spouse starts to look less a victim and more a partner in their violent struggles. At that point, the only victims I see are the children. I asked a friend who is a family law solicitor if [gals] who stay in violent relationships are as much to blame as the abusers. “It’s a difficult one. It’s not that clear-cut. A lot don’t have financial means to leave, especially if they’re on a benefit. There’s usually so many other factors to consider like the children, their home, money...” But what about the [gals] I know who have left violent relationships and agreed with my new way of thinking? “It’s easy to say that when you’re out of that situation. But when you’re in the middle of it, it’s hard to see that you do have a choice, that you can do something about it.” Maybe in many cases, but not all. I still maintain that there are [gals] who knowingly “enjoy” the violence at a deeply sick level, and stay as long as the sex is great, irrespective of the damage to their kids... [□ F]igures, revealed in a N[Z] Herald-DigiPoll survey, reflect a problem that has seen convictions for assault on [gals] increase by more than 150[%] in the past 10 years... At the same time, the survey of 860 people taken this month found that nearly one in eight [guys] had been on the receiving end of violence from a partner. Although all the evidence shows that it is invariably [gals] and children who suffer at the hands of [guys], an Otago University study indicated that young [gals] are more likely to strike the first blow – out of frustration and because they are victims of previous domestic assaults... Confirming A[US]n research showing that [guys] hit to gain control and [gals] to express frustration, the Dunedin study found [gals] who hit first were 10 times more likely to have been victims in the past. Conversely, [guys] who had initiated violence in the past were 19 times more likely to be struck first in the next row. The Dunedin authors believe that [gals] think less about the consequences of hitting because they know these will be less severe. [Gals] are unlikely to cause injury, and therefore the [guy] is unlikely to call the police... The results mirror American studies that were bitterly contested by [gals’] rights activists... The... manager of the Saftinet service for domestic violence victims, fears these statistics will be used to trivialise the experience of the “splattered [gal] it] sees daily. “Who’s frightened of whom?” [the manager] asks.

...*When home becomes a battlefield* The most violent place in N[Z] is not under an All Black ruck or late night in a dangerous bar. It is the family home. From 1988 to 1997, convictions for what police call “[guy assaults gal]” – domestic violence – increased by 168[%]. Last year 5054 [guys] were prosecuted for domestic assault, and 1000 more faced less serious family violence charges. Family Court applications for protection orders have averaged 616 a month for the past three years – 154 a week... Mostly it is [guys] – often fuelled by alcohol – who perpetuate violence, but [t]he... police family violence coordinator for Waitakere, North Shore and Rodney and a veteran of scores of domestic violence call-outs... has arrested [gals. The coordinator has also] found solo mothers living in fear of their own children, and recalls one... who had locks on her bedroom door to protect her from her violent children. [The]Senior Sergeant... is part of an industry which picks up the pieces of damaged lives and broken families. Frontline workers include crisis teams with welfare, health and family skills. Behind them are hundreds of volunteers who answer emergency calls, make late-night visits to victims or attend to children’s needs. The services all complain of being stretched, and believe the country ignores this epidemic at its peril. The police response has stiffened in the past few years. Officers arrest where once they might have warned, and intervene when they might have backed away. The latest trial initiative involves trying to stop the cycle of violence, where youngsters exposed to abuse go on to commit violence... Police National Headquarters, says there is solid evidence that domestic violence has long-term effects on children. N[Z]’s Domestic Violence Act makes it an offence to allow children to witness physical, sexual or psychological abuse in a family setting. The one major N[Z] investigation in this area revealed that 75[%] of children in [gals’] refuges who had seen their mother abused had severe behavioural problems. Last year 10,000 children, mostly under 10, spent time in refuges, sometimes returning again and again.

...*REFUGE FACTS IN 1997*... • Refuge received 299,079 telephone calls about our services... • Refuge made 45,545 contacts with [gals] and children (up 14% from 1996). • Refuge filled 123,061 beds throughout the country. • 7,274 [gals] asked for Refuge's help. • Refuge helped 10,331 children deal with violence in their homes... • Refuge workers travelled 1,266,308 kilometres to bring [gals] and children to safety... • Refuge advocates... worked 177,579 paid... [and] 410,048 unpaid hours... N[Z]'s fAmILy ViOLeNcE StATiStiCS ArE ENOUGH tO MaKE yoU SiCK. ArE ThEy ENOUGH tO MaKE yoU GiVE? Please post your donation today. No collector will call. [Teenage girls] are heading in increasing numbers to Auckland [gals'] refuges... in attempts to escape from troubled relationships... Speaking of [troubled relationships, the wife of the President of the United States] is embroiled in yet another sex scandal – but... can't blame her husband... For this time, the love affair which has been so painfully exposed is her own. According to [a] former live-in governess... the [person] who is now America's First [Wife] had a long-term relationship with a married [guy], Vince Foster. Some say the affair began soon after [the First Wife] was hired by Vince's law firm, in 1977. Certainly, it became known by the mid-1980s among aides... It finally ended on 20 July, 1993, when Vince took an antique pistol to a suburban park and shot himself. "Everything about this is a horrible story... But from the dreamy looks [the First Wife] gave Vince and the way [it] talked about him constantly, I guess [the First Wife] was in love with him, in a way [it] never was with... [her husband. The First Wife makes herself out to be] a passive little wife... but has a much stronger personality than [her husband, who the wife] saw... as this big, old mound of moulding clay – someone [it] could boss around and get elected from his little-bitty state to the Presidency. "If [the then Arkansas Governor's wife] hadn't had that ambition, I'm sure [it would] have pushed Vince to get a divorce... I remember once, we were in the car... and [the then Arkansas Governor asked his wife] a question about the Supreme Court. [The wife] snapped, 'You ignorant son-of-a-bitch. Vince would never need to ask me that – Vince is an intellectual.' [The First Wife despised her husband]. But, I think, early on... made up her mind... to have it both ways – to keep the marriage to the [person who] was going to [become] president and to keep her lover. [The First Wife] is a great manipulator and seemed to expect everyone, even Vince's wife... would go along with the arrangement..." In 1993, [the First Wife] persuaded Vince to move to Washington and accept a top job at the White House. [Vince agreed, leaving his wife] in Little Rock. But shortly after his appointment, [the First Wife] was incensed when Vince was unable to cover up a White House embezzlement scandal. For three weeks, [the First Wife] refused to see him or take his calls. [The former governess] believes this is what plunged him into his final black despair. "Vince wasn't the kind of machine [the First Wife is. Vince had] made this huge sacrifice, moving to a strange city for her sake. It must have been unbearably hurtful to him to be dropped by her." [Vince's wife] refuses to be drawn on her late husband's affair with [the First Wife]. "If they did, who cares now?" is all [the widow will say. But the governess] believes, since the First [Wife] is now campaigning for a seat in the US Senate, people have the right to know. "How can [voters believe that the First Wife] wants to do great things for them when [it is] so cruel to the [people] in her own life? I think the only [person the First Wife] cares about is herself."

...[I was] sitting on a plastic swivel chair in an office-come-storeroom littered with coat hangers, cigarette packets and snaps of waifish [models. The guy] was sitting opposite on the floor with mohair jackets and sparkly, cocktail numbers hanging around him. It was the first time I'd been 'out the back' in the clothing store and it was under slightly undesirable circumstances. Slightly? Well, highly undesirable and embarrassing circumstances actually. This meeting was the appendage to a fling, which lasted all of, well, one week. The subject for discussion was STDs. I was adamant about my own cleanliness, so if anyone had caught anything, then it was *I* from *him*. I felt quite righteous in the knowledge that if there was an aggrieved party it was *me*. [The guy] had originally sold me a dress for my birthday party: the dress was so nice I decided to invite him along to the party. Living out of the city [the guy] ended up crashing at my place and the next day we drank coffee and nursed each other's hangover. We talked on the phone during the week and I popped in to see him at work. On the Friday we had drinks and [the guy] stayed over, by Monday [the guy had decided it] was more committed to his girlfriend in A[US than it had] realised. I'd scurried off to Family Planning after [the guy had] said: "Hey, let's just keep this as a casual thing", and the results were pending. Funnily enough, when I told him this, [the guy confessed that it had] also made a little trip to the doctor to get checked out. "I'm all clear... Last week I just had a passing urine infection, that's all". When I told him about my symptoms [the guy] went pale and started getting edgy. In a warped sort of way I liked the power I had in the situation. When you've been dumped, it can be nice to know you can still impact on your dumper emotionally. Very warped, I know, but there's nothing like being jilted for bringing out the desperado in me. His eyes narrowed suspiciously as [the guy] inquired as to how regularly I got tested. As it happened, I hadn't caught anything. My results also pointed to a minor urine infection. Phew. When I went to get my results the only disturbing thing was that the nurse who gave them to me was the mother of an old school friend who hadn't let her daughter play at my house because I'd been labelled "a bad egg". The sales assistant's relief was palpable... [upon hearing] I'd been given a clean bill of health. So was mine. It was the first time I'd found myself in this sort of predicament. Despite the vague irony and odd humour I found in the proceedings, leaving myself open to a STD was a serious wake-up call. Best just restrict these casual encounters to *Ally McBeal*-like drooling, rather than face the consequences of 'the morning after' in a poky storeroom.

...[yesterday a new mum proudly showed] off her three miracle babies – born as a result of a one-in-14 million chance. The tiny girls are the survivors of N[Z]'s first identical quadruplets. Now [the new mum], 27, faces a 24 hour wait while tests discover which of her two lovers is their father. "I don't care which is their real dad," the Tauranga mum told *Sunday News*. "I'm happy for them to have two fathers and twice as much love." The paternal puzzle began when [the mum] and her husband... 28, who have three other children, split last year. [The mum then met and had a] four-month relationship... [with a 31-year-old]. "I don't know who the dad is... [because the] girls were conceived at the time I was splitting up with [my ex-lover] and getting back with [my husband]." The ex-lover... said: "I'd love to be the father but I want proof." Even if the girls were his, [the ex-lover] would be happy for them to be raised by... [the husband and wife. The husband said: "If the ex-lover] is the dad, I want him to be in the babies' lives..." ...[the wife said: "My husband] doesn't earn much as a cleaner and... is staying at mum's house. We hope to get another place to live before... [the babies (who were born) 12 weeks early] come out of hospital." The wife also]... says the tiny babies will help overcome her grief at the loss of her son, EJ, a cerebral palsy sufferer who died last year at age six. The tragedy led to her separation from [her husband]...

NZ's miracle] mum... has moved in with both the possible dads. Blood tests last week failed to reveal which of [her] two lovers fathered her three tiny daughters... [The ex-lover and husband] were found to have the same blood type, which is also identical to the three babies... [Her] husband... and ex-lover... have decided not to take more accurate DNA tests. Instead, they will live... as one big family in [the ex-lover]'s Tauranga home... "We don't want to know who is the dad, because it would be awful for the one who was not... [My husband] was a bit worried when [my ex-lover] asked us to stay with him, but it feels normal and we are all very happy about it now. I still care about [my ex-lover] but there is nothing between us..." ...[Her husband said,] "I would do... more tests... if... the girls... wanted to find out later on..." ..."We are as happy as hell," [the ex-lover] said.

...*Unhappy families* A DREAM of happy families for miracle triplets with two dads has turned sour... [The little triplets] lived with mum... and both their dads. But [the Tauranga gal], 27, is now a solo mum to the tots... after rows split the family... Despite blood tests, [the mother] had no idea who had fathered the triplets, now four-months-old. Instead of taking more detailed DNA tests, the three shocked N[Z] when they moved in together as one big happy family... But the joy turned to tears just one month later. [The husband], a contract cleaner, moved out after a row with [his wife]. The next day, [the house's owner] rekindled his affair with [the mother]. Last week, the couple argued over the triplets and [the 31-year-old threw the mother] and her babies out. [The 27-year-old and her girls] are believed to be living with her mum in Tauranga. "[The mother] and me

were lovers all the time we were living together with [her husband] and the girls... When [her husband] went to work, we would get together. Sometimes I had love bites on my neck, but [her husband] didn't seem to notice. We got together properly after [her husband] left. I think living together got too much for us." [The 31-year-old said it] wanted DNA tests to prove [it] was the triplets' dad so [it could fight their mother] for custody. "I'm sure it's me but I don't have the money to get the tests done... There's a really strong bond between those babies and me. I don't want to lose them. I still have feelings for [their mother] but we will never get back together." [The triplets' mother and her husband] were unavailable for comment.

...The parents of murdered six-year-old beauty queen JonBenet Ramsey, who have not spoken publicly in more than a year, break their silence in a British documentary to be screened this week. According to *Newsweek* magazine, the [parent]s proclaim their innocence in the interview and say they are worried the killing of their daughter may never be solved. "The American public has been led to believe that we... brutally beat JonBenet, sexually molested her, strangled her, went to sleep, got up the next morning, wrote a three-page ransom note... then I... called the police... and was able to act distraught... Help me understand that... The killer could never have guessed that [it]... would be so lucky as to have the resulting investigation conducted by such closed-minded police," the father said in a letter to news organisations. "We don't fault you for initially including us under your 'umbrella of suspicion,' but we will forever hold you accountable for following a theory rather than the evidence." [The father] said the police "had decided they had solved the case on the very first day by reaching the incredible conclusion that because the parents were in the house, they must have done it..." The parents[, who] have since moved to an Atlanta suburb... have denied any involvement but refused to talk to investigators until last month. It is not known yet whether their 11-year-old son talked to the investigators...

JonBenet *The mystery deepens*... JonBenet's killer remains at large but, as the grand jury in Boulder, Colorado, begins winding up its 10-month investigation, the finger pointing and rumour mill has once again gathered force. This time, public suspicion is aimed not at [her] parents... but at... their now 12-year-old son. In late May, [the son] appeared before the grand jury, triggering rumours that... [it] was the one who'd killed his sister and that his parents were now involved in plea-bargain negotiations with [the]Boulder District Attorney... However, in an interview with *The A[US]n Gals' Weekly*, a spokesperson for the DA[] denied US tabloid reports that [the brother] was a suspect... [The spokesperson also] said: "Grand jury matters are secret and, true or false, we do not comment on them." The rumours... though, gathered momentum with the release of the book, *A Little Girl's Dream*, by [the person] who ran the Li'l Darlin Beauty Pageants in which JonBenet competed. [The author] claims that JonBenet was murdered by a boy her own age who knew her well and, thanks to her... the police are now looking in a different direction – away from the parents to... a boy with the same cherubic face as his sister and the same wide, pale blue eyes. The organiser of the Li'l Darlin pageants says [the brother] was jealous of his sister and gives a detailed scenario of the killing, which occurred, [it] claims, after JonBenet received more gifts than her brother and yet again wet her bed. But few are taking the theory seriously in Boulder, pointing out that... Li'l Darlin Beauty Pageants are deserted, and no longer bring in an income of \$US1 million a year – a sensationalist book is a good way to recoup the loss, some say. Nevertheless, the US tabloids are using [the author]'s claims for their headlines and, in mid-June, for the second time since their daughter's murder, the [parents] moved house... To any outsider, [JonBenet's family] were the ideal American family. Handsome and rich, [JonBenet's father] was a former naval engineer, who founded his own software business and became a multi-millionaire. Previously married and a father of three, [the former naval engineer met his] 14-years-younger[-wife-to-be] in Atlanta. Her dream was to be Miss America, but... was pipped at the post for the title of Miss West Virginia in 1977. Disappointed, [the wife-to-be] refused to give up and, despite falling in love... continued to chase the Miss America crown, entering pageant after pageant. Finally, in 1980, [the dreamer] gave up and married [her lover], saying her dream now was to have five children. [Her son] was born in 1987 and, in 1990, JonBenet arrived. But there would be no more children... The family that seemed to personify the American dream was about to enter a Gothic nightmare. First there was news that [the father]'s daughter from his previous marriage had been killed in a car crash. Then [his second wife] was diagnosed with ovarian cancer. [The second wife] battled it bravely and emerged from chemotherapy with an all-clear, but discovered that the treatments had left her sterile. That was when [the second wife] began entering her daughter in beauty pageants across the US. The idea was that JonBenet would win the children's pageants and then go on as an adult to take the crown that had eluded her mother. Her hair frosted and streaked, JonBenet wore coloured contact lenses to make her eyes even bluer and was made up for each event by a professional make-up artist, who charged \$200 an hour. In one year alone, [the mother] spent \$30,000 on JonBenet. Encouraging this madness, [JonBenet's father] named the family yacht *Miss America*... To many, the sight of a small child with dyed hair... real diamonds... gold... and make-up posing flirtatiously as a miniature adult is grotesque, but [her parents] insisted JonBenet loved it. Why, then, did six-year-old JonBenet suddenly begin wetting her bed? Was this, along with her chronic nightmares, a sign of stress and a reaction to her mother's impatience when [JonBenet] didn't win a pageant, but came second or third? Either way, it was an increasingly bizarre life for the little girl, and perhaps it is this that makes her story so compelling and so tragic. After two-and-a-half years of investigation... the mountain of evidence points as easily to the... parents as it does to JonBenet's brother. A case can also be made, however, for... [the parent]'s claim that the killer was an intruder, who slithered through a broken window in the basement. But it is hard to get past... [the parents]. Why would a couple whose daughter was murdered refuse to talk to police, but instead, hire not only their own lawyers, but their own public relations officer, and then go on national television to tell the world they were offering a \$100,000 reward in a bid to find the killer? Also troubling was the retired FBI profiler they hired to come up with a psychological profile of the murderer... Then there is the ransom note. Written on a... legal pad ...owned[by the parents]... there was not one note, but several drafts, which after rambling for two pages, demanded the peculiar sum of \$118,000 – which just "happened" to be the exact amount of the payout bonus [JonBenet's father] had received that week from his business. [The mother claims to have] found the ransom note on the stairs at about 5am, but it was 7am before the house was thoroughly searched. Although the police helped with the search, they left before the body was found. It was [her father] and a friend who found JonBenet and carried her from the... basement room where [JonBenet] was killed, disturbing vital evidence... Added to this came the news that JonBenet was clubbed by a torch, the imprint of which matches the torch [the mother kept by her son]'s bed. Then came reports that a stun gun was used. [The father] had been given a stun gun by a friend a short time before. And what about the broken paintbrush used as part of the ligature that strangled and killed the little girl? Investigators matched it with a paintbrush in [the mother]'s own box of watercolours. Graphology tests on the ransom note have ruled out [the father], but remain inconclusive for [the mother]. Then there's the emergency call, with [the son] speaking in the background at a time when his parents insisted that... [the brother JonBenet would] go to... for comfort... [after waking from] a nightmare or wet[ting] her bed... was asleep. Which brings us back to [the brother]. Are his parents trying to protect him, aware that [it] is the killer? Before the grand jury can say yes or no, a match must be found for DNA evidence on JonBenet's underwear and under her fingernails. Forensic investigators have not been able to match it to anyone in the... family. Neither can they match up palm prints and footprints found in the basement. Which all suggests the killer was an intruder. But why were no footprints found in the snow? And why... a[t a time of year] notorious for break-ins, were the... burglar alarms turned off? If it was[the brother, the brother] cannot be prosecuted. Under Colorado law, a nine-year-old cannot be charged with murder. But the hard fact is there may not be enough evidence to convict anyone. The death of... JonBenet may remain a mystery forever.

...THE tombstone at the St James Episcopal Cemetery in Marietta, Georgia, is a simple granite plaque, set so low only a child need not stoop to read it. It carries just [a girl's] name... and date of birth... Had [the girl] lived, JonBenet would have been nine last Friday, celebrating with party games and a cake. Instead, for two years and eight months the question of who killed JonBenet has mesmerised America. It has ruined a score of lives, crippled careers, broken friendships and captured headlines in every continent. If the small girl from a small town has found peace of a kind

in her quiet grave, it eludes almost everyone else touched by the case. And yet a resolution of sorts is approaching. In... Boulder... a grand jury investigation is nearing completion... When they... speak... it will trigger the greatest media feeding frenzy since the [criminal trial of a black sports star for the murder of his estranged wife Nicole and her companion Ron Goldman]. Authorities in Boulder are cautioning its citizens to brace themselves for an invasion that may number in the thousands. Attention has focused on the parents... Many sniggered at the couple's opulent taste, which included a Christmas tree in every room, and an 18th-century piano converted to play electronically. Almost from the moment [JonBenet's father] staggered from the cellar at 1.10pm on Boxing Day 1996, carrying his daughter's body in his arms, the couple – despite or possibly because of a lack of any direct evidence – have been the popular choice as suspects for the murder... It seems unlikely they will ever agree voluntarily to appear before the grand jury... WHAT seems to have damned [the mother] in the eyes of many was the revelation her daughter had been a... budding star on the child pageant circuit, whose titles included Little Miss Colorado and the National Tiny Miss Beauty. Photographs and videos, endlessly replayed and reprinted across the world, showed JonBenet disturbingly transformed into... an unwitting parody of adult sexuality. And it is this aspect of the story, unsurprisingly, which has been most exploited by the... tabloids. They have devoted and continue to devote pages to [the wife]'s allegedly dubious record as a mother... Some wildly speculated it was JonBenet's continued bedwetting which might have been the breaking point... According to this scenario, JonBenet's death might have been an accident, covered up to look like a... murder. Other accusations about the [parents] as a couple have included everything from sexual abuse to torture... The FBI says it has never encountered a case where a parent has killed his or her child in such a brutal manner. BUT the idea an intruder was responsible also has its problems. The doors and windows to the house were locked that night and there were no signs of a forced entry... [W]hen detectives examined... the... broken basement window... it... was found to have an unbroken spider's web across it. Much effort has gone into consulting arachnid experts, who have concluded[that despite the layer of snow outside] it was perhaps mild enough that December for the spider to have come out of hibernation and repaired the web before the police noticed it. Whoever killed JonBenet [had to know] the house well enough to find his or her way up a spiral staircase to her bedroom, and came remarkably ill-prepared for the deed... The failure of police to resolve... an investigation lasting two and a half years, has led to widespread criticism. JonBenet's murder was the first in Boulder, a prosperous middle-class university town, for two years... ONE of the defining characteristics of the inquiry has been bitter feuding between the police and the district attorney's office... In January this year an open letter... was published in the *Denver Post*, accusing... the DA... of creating the appearance of "impropriety, professional incompetence and a lack of objectivity" on the part of the police... However vehemently they criticise [the DA], though, the police must themselves take their fair share of responsibility for the failures of the investigation. From the first moment, Boulder officers made extraordinary mistakes – not the least of them failure to find JonBenet's body hidden behind the basement door when they searched the house... Thereafter... they failed to address the case with any coherence. The detective unit fragmented into pro and anti-[the parents] camps. The parents[... continue to protest their innocence... Earlier this year, when... JonBenet's brother, was questioned by the grand jury, tabloid headlines announced [the brother] was now the prime suspect. But [the DA] quickly denied this was the case, prompting a rare retraction by the publications involved... The couple are expecting little good to come from the grand jury's final report. If, as expected, the jurors cannot point to a suspect, the [family] will remain under a cloud of suspicion. There were fresh flowers on JonBenet's grave on August 6. But the prospect of her ever being mourned in peace seem remote.

...JonBenet's parents... have filed a \$US25 million... lawsuit against the *Star*, alleging the tabloid libelled their son with stories calling him the prime suspect in the killing of his sister... The federal lawsuit said the stories, published on May 25 and June 1 but later retracted, were false and defamatory, and subjected [their son] to "public hatred, contempt and ridicule." ...The... May 25... story ran a front-page photo of the two children under the headline "JonBenet was killed by brother..." ...The June 1 article said prosecutors were "closing in" on [the brother, who]... had a "sad, twisted life" because [it] was never able to compete with his beauty-queen sister... The *Star* said it would vigorously fight the suit and it would give the tabloid a chance to "conduct a complete investigation of the murder, pursuing avenues of inquiry that were not available to state investigators."

...It looks like the interest in poor JonBenet's tragic life and wardrobe will never die. Of course, one suspects the parents murdered her. Well, they were certainly guilty of a heinous crime the moment they put her on the stage.

...A former lead detective in the JonBenet... murder case believes the murdered girl's mother wrote the ransom note that was in the family home in Boulder the day her body was found. In an interview to be broadcast on ABC's *Good Morning America*, [the lead detective], who resigned in protest at what [it] called the lack of aggressive prosecution of the case, said... [that o]f 73 suspects whose writing samples were analysed by experts, only [the mother] could not be excluded as the note's author... [It interrogated the parent]s four months after the slaying and was a lead detective until... resign[ing] in August 1998, saying [the]Boulder County District Attorney... sacrificed procedure for politics. [The lead detective] has written a book called *JonBenet: Inside the... Murder Investigation*[, and] is scheduled to appear on ABC programmes this week to promote it.

...JONBENET's... [parents] have decided to write a book about their daughter[']s... unsolved murder. It's tentatively titled *The Death of Innocence* and will focus on the six-year-old's life beyond beauty pageants and the[ir]... faith in God.

...A retired detective throws new light on the savage killing of a child beauty... [The district attorney], embattled and frustrated, had hit his limit. In March 1997, three months after the brutal murder of 6-year-old JonBenet... the Boulder, Colorado, district attorney decided to get help in solving the crime. [The DA] turned to... a seasoned Colorado Springs detective who had recently retired. [The retired detective] had a reputation as a dogged investigator who often solved complex murders after others had given up. His job was to examine the police theory that one or both of JonBenet's parents... were involved in the killing. As [the retired detective] began reviewing the evidence, [it] instead became convinced that someone had broken into the house and murdered JonBenet while her family slept. At odds with the police, who continued to pursue the parents, [the retired detective] was kept to the sidelines and resigned in protest in September 1998. Loyal to the cop's code never to talk about an investigation, [the retired detective] refused to share the theory that led him to his "intruder theory." But now [the retired detective] is breaking his silence. Even so, his theory does not solve the case. [The retired detective] still cannot answer the key question: who killed JonBenet? And his theory cannot disprove the police case against the [parent]s, who remain under suspicion and have just come out with their own book, *The Death of Innocence*. When [the retired detective] first began looking into the murder, [i]t... too, thought the parents were the likely culprits. But as [the retired detective] examined the evidence, including police crime-scene photos and video, [it] began to wonder. A basement window was open, and the window-well outside showed signs of fresh disturbance. But the police inexplicably rejected an officer's request to bring in dogs to find a possible scent trail. [The retired detective] noticed leaves and debris, including foam packing peanuts, outside the house in the window-well. Inside the basement, [it] saw similar leaves and foam nuts, including one 20m away in the room where JonBenet was found – a possible sign that an intruder coming through the window had tracked the debris through the basement. "The wind sure didn't blow those in there,"... says[the retired detective, who] also saw a fresh print from a Hi-Tec shoe, a brand no one in the family owned. Examining autopsy photos, [the retired detective] noticed unusual sets of abrasions on JonBenet's back and face. [The retired detective] wondered if they had been made by a stun-gun, an unlikely weapon for a parent to use on a child. [The retired detective] measured the marks and discovered that they matched a brand of stun-gun called the Air Taser. [The retired detective] began to believe the killer might have used the stun gun on JonBenet as [the girl] slept, then carried her to the basement. Another key part of the police case that JonBenet was struck on the head, then strangled to confuse investigators, also failed to add up in [the retired detective]'s view. The autopsy showed signs that [JonBenet] struggled while being strangled, something [the girl] could not have done if [it] had been dealt a skull-crushing blow. The massive skull fracture barely bled, a sign that [JonBenet] was already near death from strangulation

at the time [it] was hit. What is more, the garrotte used to strangle her, made of rope and the broken end of one of [the mother]'s paint-brushes, was an elaborate instrument of death, an unlikely tool for the [parent]s to have fashioned in the panicked minutes after allegedly striking her. [The retired detective] discovered a splinter, apparently from the brush handle, on the carpet just outside the room where JonBenet was found. Police found fibres from the same carpet on a baseball bat in the bushes outside the house, leading [the retired detective] to believe the killer used it to bludgeon JonBenet. DNA found under JonBenet's fingernails and in her underpants was ma[sculine], but did not match [her family's DNA. The retired detective] believes the police were right to focus on the family at first. But... is dismayed at their reluctance to investigate alternatives. [The retired detective] thinks the killer spent time inside the house before the murder, getting familiar with the layout. [The killer] may have broken in while the family was out earlier that night, giving him time to write the ransom note on [the parent]'s stationary. State officials cleared [the father] of writing the note, and a Secret Service examiner concluded there was "no evidence" that [the mother] had written it. [The retired detective says it] continues to pursue a list of more than a dozen possible suspects – "This old detective hasn't given up yet." [The retired detective] may be the last one who hasn't. [The DA has announced it] will not seek another term – the latest life shaken by the death of a little girl.

...*Money goes round JonBenet*... Last week, at checkout counters across America, every shopper had the chance to know more about the murder of JonBenet... than the detectives who have investigated the case since... 1996. Not to mention the FBI, a grand jury and a legion of hired consultants that now includes forensic document examiners, fibre classifiers, psychological profilers and experts in the web-spinning habits of Colorado house spiders. As usual, just as it has been ever since the 6-year-old beauty queen's bludgeoned and strangled body was brought up from the wine cellar of her parents' Boulder home, the latest scoops were served up by America's scandal-sheet tabloids. JonBenet's painted face graced all their covers, as it has hundreds of previous editions of the *Globe*, *Enquirer* and *Star*. A tiny trollop angel, [JonBenet] floats weekly by the cash register to look over and protect the boisterous, thriving industry that has sprouted from her grave[(which a graffiti-artist has defaced with the words 'NO JUSTICE IN U.S.A.'). The grubbier tabloid, the key-hole peeping *Globe*, provided the best example of what makes this death cult so unique: Week after week, in magazines, on TV, in bookstores and on the Internet, JonBenet Inc., grows larger by feeding on its previous sins. Scurrilous "scoops" become gospel truths, while myths transmute through repetition into "facts" that no amount of qualification can dispel. Everybody points the finger – and makes a very pretty penny for their pains... On a normal week, the *Globe*'s circulation hovers just shy of one million copies. With JonBenet on the cover, figures compiled by an independent circulation audit agency demonstrate that sales can rocket by as much as 50[%]... "Gotcha! [JonBenet's Parent]s' Three TV Blunders Destroy Alibi," shouted the *Globe*'s [latest]front-page headline... At the heart of *Globe*'s latest limp tale was an interview with [a]"noted psychiatrist"... who explained how the [parent]s unconsciously betrayed their guilt during a recent blitz of TV interviews to promote their own book about the slaying and its aftermath. The first "blunder" was [the mother]'s eagerness to talk of her battle with ovarian cancer, something [the psychiatrist] interpreted as the ravings of a [perso]n so possessed by egomania that [it] could kill her own daughter in a fit of homicidal jealousy. And when [JonBenet's father] begged off taking a lie-detector test, [the psychiatrist] decided it was because [the father] "would probably fail." [The psychiatrist] is the author of *A Mother Gone Bad: A Psychiatrist Looks at [JonBenet's Mother]'s Secret Confession*. One of the 20-and-counting books about the murder, [the psychiatrist]'s tome attempts to analyze the ransom note the couple claim to have found on the staircase of their home. The book's greatest flaw is not the author's dreadful prose but its lack of original research. Accepting the falsehoods of earlier books and newspaper reports, it leaps to a conclusion that is even further removed from the few hard facts. Last week, as [a]former lead detective... was pushing his... book, [it quoted the psychiatrist]s' dubious insights. Thus do the wheels of the JonBenet factory spin... Given that a fruitless \$US34 million has been spent so far on the probe, perhaps the only real truth is the killer may never be brought before a jury... All the lies, half-truths and confusions make for an irresistible mix, especially when the leading characters include a computer-biz mega-millionaire and his family – a billionaire to the ever-flamboyant tabloids – with a private jet and full-time pilot. Set the mystery in chic Boulder, an idyllic town once described as "14 square miles surrounded by reality," and the formula produces a classic whodunnit. One need not be a confirmed cynic to suspect that those screaming loudest for the [parent]s' blood would really prefer if the case stayed unsolved. While there would be a bit more money to be wrung from a trial, any conviction would derail the JonBenet gravy train for ever after. Take... for instance, an author who became a charter member of JonBenet Inc., after [a black sportsper]son's acquittal left him high and dry. Before Nicole Brown Simpson's body was found on the doorstep of her Brentwood home, [the author] had enjoyed an acquaintanceship with... [her violent husband]'s close friend, lawyer and business manager. So when the retired grid-iron star ran short of cash, [the author] suggested a first-person book in which [the guilty celebrity] could protest his innocence. The result was *I Want To Tell You*... which generated \$US1.7 million to pay the Dream Team's prodigious legal fees. For signing up a ghost writer and editing the final draft, [the author] bagged a quick \$US100,000. Then the nimble [author] switched sides and penned his own book, *An American Tragedy*, the best of all the many accounts of [the celebrity's criminal trial (at the celebrity's second, 'civil trial, in 1997, the jury found him liable on all eight counts and ordered him to compensate Ron's parents with \$8.5 million for his wrongful death; the fact that the estate of Nicole did not file a wrongful-death suit leaves open the possibility that either or both of her children, when they come of age, may sue their father for their mother's wrongful death'). Hi]s was a smart, sharp piece of journalism good enough to earn him an invitation from... *New Yorker* to take a look at JonBenet. [Hi]s compulsively readable account of the case, *Perfect Murder, Perfect Town*, hit the stands last year and became an instant chart-buster. Earlier this year, with [the author] as its screenwriter, the book became a well reviewed television movie that earned [him] yet one more fortune... On [one presenter]'s TV show the [parents of JonBenet] are always guilty. [The presenter] assembled a motley collection of spin doctors and paid flaks for a mock trial that found the couple guilty as charged. Staged during ratings week, it was [the presenter]'s most-watched programme of the year and helped him lock up a \$US30 million extension on his contract. If that episode broke new ground in the media's fixation with JonBenet, her parents' efforts to promote their own book pushed the envelope even further. Last month the couple came out of seclusion to promote their memoir, *The Death of Innocence*, which answers none of the vital questions while blaming the murder on a conveniently unknown intruder. It is now high on the bestseller list. Another JonBenet fortune, this time falling into the laps of the prime suspects. In Boulder there is little sympathy for the couple, partly because they moved to Atlanta within a week of the murder and also for naming former friends as suspects. "JonBenet is really symbolic of the greed, the degradation, the selling out of principles in this country," said... a Boulder nurse who has organised candlelit vigils every Christmas Eve, the anniversary of the murder. "In this feeding frenzy, they forget they are feeding off a little child." ...[By the way, at 7.30pm on TV2 tonight, *Painted Babies* goes to] the Southern Charm Beauty Pageant in Atlanta, [where]parents enter children as young as six months old. This documentary follows the children and parents as they compete against each other for the title of Supreme Queen...

Getting started modelling [A little girl has] won her first modelling competition and doesn't plan to stop there. [The girl], from Ranui, has just turned six and won the Miss T&T Westgate competition, judged by [the Massey resident] who was recently crowned Miss N[Z]. The girl's mother says her daughter] has been asking to model for a while and [it] thought the competition would be a good place to start... About 15 girls entered the competition, organised by [the manager of the children's clothing store. The six-year-old]... won a voucher from the shop and all other entrants also won a prize. [The manager] often organises events for the shop including bringing in live chickens for Easter. "I thought it would be nice to do something for the girls," [the manager] says. "They were so excited and the place was really busy." ...[By the way, in] April, *Business Age* magazine estimated [the Body]'s wealth at \$70 million and placed her at the top of the supermodel earners, just ahead of [the supermole].

...*Who's the biggest catch of all?* ...[NZ's top supermodel (r:p1679, ln8) – i]f you managed to have [her]... sign a coloured photo of herself when [the model was last] here, it could be like money in the bank[; on]... the US market... [a] signed glossy colour picture of [her] was \$150, but now has

taken a hike to \$300() –] ...could be lined up against [AUS's the Body] to see who is the biggest catch. Aussie-N[Z] celebrity rivalry will be the angle of [the new 13-part] TV show *Big Fish Downunder*. Famous Kiwis will be pitted against their A[US]n counterparts in a weekly battle to catch the biggest fish... in resort locations in both countries.

...WHAT do an Auckland dental nurse, a Havelock North nanny and a radio newsreader from Hamilton all have in common with each other? They all want to be [an All Black flanker]'s girl... more than 40 [of his] fans have written to *Sunday News* after we revealed his hunt for a dream date... [A] blond paramedic reckons [it] can help ease the player's... pain. "I've just completed a case study on concussion in rugby and I was impressed... [that the] 28-year-old... was unafraid to make an individual decision to wear headgear,"... [The] newsreader with the Edge radio station in Hamilton, was smitten by [the flanker (r:p1430, ln69) when it] met him in a restaurant. A photo of that moment is her most treasured possession... [One respondent from] Dunedin... turned down a dance with [the flanker] once and hopes to turn back the clock... [Another respondent, aged] 26, of Timaru, shares [the flanker]'s passion for surfing... [The flanker even] planned to quit the All Blacks if rugby bosses insisted [it] stop surfing. The N[ZRFU] began making threatening noises about [his] off-field passion during the 1997 Tri Nations series and... wanted to introduce a special surfing-related clause into the Otago flanker's contract... The trouble occurred when the All Black suffered a facial gash after being struck by his out-of-control surfboard. The wound was nasty and required 15 stitches, although [the flanker] still played the next international. While [the player]'s sponsor Nike was happy when the scar healed into the shape of its swoosh logo, the NZRFU... was upset.

...*Beast's age offers Beauty no guarantees...* Surely such a gorgeous [gal as the Welsh beauty who starred in such films as *Entrapment*] deserves better than marriage to... the confessed sex addict of [Wall St fame. The Welsh lass] is beginning a career in Hollywood. [The sex addict] is a has-been, growing jowls and living off the faded glory of his role in *Wall St*. It was a tedious movie and as far as anyone can tell, [the sex addict] is a dull [individual], attracted to roles in which [his character is] a sexual weakling and... [claims to] suffer... from the same problem in real life. On the birthday they share, September 30, [the Welsh beauty] will turn... an age at which young [gals] traditionally begin to acquire common sense. [The sex addict will] turn... an age at which [guys (like the singer who married NZ's top supermodel – only to receive some of his own medicine when the Kiwi left him – and who performed the song *Tonight's the night*, about an older guy seducing a virgin on her 16th birthday; the singer from the *Rolling Stones* and the US President)) traditionally lose theirs. Yet there's a strong rumour they'll [stay married]. Why's that such a lousy idea? Because there's something unpleasantly canny and calculated about [guys like the sex addict], who share the "problem" of their incessant randiness with the... readers of popular magazines. It's a great way of advertising their uncritical availability (despite advancing age, apparently) to any [gal] not covered in smallpox pustules, while claiming to be morally confused. It's their way of warning in advance they take no responsibility, because they're driven by a affliction – a bit like eczema, maybe – outside their control. [Gals] just throw themselves at them and they're too weak to resist. (Yawn.) Where's the fun in conquering a [guy] who flabbily declares [himself to be] anybody's, anytime. A [guy] anybody can have can only get that way because nobody really wants him. But apparently [the Welsh beauty], who's enthused in the past about how much [it adores older guys (and, before it had ever met her future husband, told a friend that it 'wanted to marry him'), thinks it has] got herself a catch. What does [the Welsh beauty] see in him? Presumably the traditional trappings of older [guys]: wealth, experience of the world, tolerance, and the idea they offer grateful unstinted admiration.

...*It's all in the size... of the wallet* OUT-OF-CONDITION [guys] take heart. The size of your wallet will give more of a chance of a long term relationship with a beautiful [gal] than the shape of your stomach, according to new Canterbury University research. The study has found that an extremely good-looking and sexy [gal] will in the first instance almost certainly seek an equally good-looking [guy] for a partner. But the [extremely good-looking gal] will be prepared to compromise those standards if [it] can attract a mate who has high status or wealth, or if [it believes the guy] has the potential to achieve them. While a good-looking mate might be ideal, a [gal]'s natural instinct is to seek security, which means a wealthy [mate], no matter how ugly, will always be preferred from a long-term point of view. On the other hand, the research has found [guys] are the opposite and are less likely to compromise on looks, even if they can attract a partner who is exceptionally warm and loyal.

...*Lessons in snaring a rich mate...* Don't waste your time looking for love. Go ahead and marry for money. This is the advice dispensed at a class entitled, simply, "How to Marry the Rich," one of the... best-attended and longest-running... adult education courses in New York City. "Don't feel guilty. The rich will marry somebody. Why not you?" [the] teacher... tells the standing-room-only crowd in the... four-hour... seminar... [held] every few weeks. Her students, most of them [gals], nod in assent and jot down notes... Approaching the topic with the fervour of a revival preacher and the calculation of a business planner, [teacher] suggests setting your sights with care. Try rich heir[s], often found at charity events or art classes, risk-taking entrepreneurs who are known to propose by the second date or rich guys who feel guilty about their money and are most likely to marry [a gal] with children... And that is only a taste of what [teacher] delivers in just the first 15 minutes of the class. Still to come are tips on crashing posh parties (check notice boards in exclusive hotels), dressing the part (natural fibres beat synthetics every time) and practising good manners (getting out of a limousine gracefully is an essential skill). As in buying real estate, the three most important factors in finding a RM are location, location and location. Find a rich mate through a job (try a Wall Street broker), religion (Jewish synagogues and Episcopal churches are best bets), a newspaper (read the obituaries), a neighbourhood (move within 16 blocks of an affluent part of town) and even a parking lot (always park next to the most expensive car). Keep at it... "Date anyone who is sane and breathing." But demand top-drawer treatment. "If someone says they love you and they don't spend money on you, it's a lie." ...As the energetic [teacher] spews out suggestions in her honey-coated Texas drawl, her diamond-laden left hand gesturing with a long-stemmed rose painted gold, the class pays rapt attention. After all... they have shelled out \$US35... apiece to hear it... "Let's face it," said one, a nursing graduate. "[A guy who is] rich and... a jerk [is] easier to love than [a guy who is] poor and... a jerk." "At least with a rich one you get compensated," added her friend, a computer software designer... [Teacher also] offers private consultations outside the classroom starting at \$US175 an hour. Longer sessions cost up to \$US1500... [Teacher's] husband... is rich, of course... a successful oil-industry executive. They met and married 14 years ago. The Houston-based couple share five divorces. They married after a courtship of less than three months. Their wedding day was just two days after his last divorce became final. "I like her straightforwardness about money," [hubby] wrote in a foreword to her book, also called *How to Marry the Rich*. "As [teacher] has said, a gold digger is the only perfect mate to the gold owner,"... added... [someone] who thought up the idea [exploited by teacher], who... taught classes in flirting[before] turning her skills to the topic of marrying the rich.

...I DO hate a blonde joke, especially when it's real life. And somehow you just knew that... a former *Playboy* pin-up who appeared in the news this week, is both – a blonde, that is, and a joke. [Anna Nicole]Smith married an old, old [guy when it] was at the height of her marketability, just five years ago[when Smith was 26 and the groom] was 88. J Howard Marshall III did what ancient billionaires will do: [get] married to have a warm body to cuddle up to, a girl who'd commit whatever indecencies would set his old ticker racing. [This particular ancient billionaire] wanted to go out with a grin on his face... It was a 1950s fantasy, of course... *Esquire* featured cartoons about this unlovely theme regularly at that time: lissom lovelies with enormous knockers perched [o]n high stools in jewellery shops, waving mega diamonds around while white-haired old [guys] handed over wads of cash; pretty, pouting secretaries perched on old [guys'] knees to do dictation; nurses with white uniforms straining at the buttons over buxom bosoms taking the pulses of excitable geriatric squillionaires. The captions were always the same and they told an old, old story. Times were simpler then... Cash was cash. A girl... had to negotiate a high price and was respected for it. Minks, diamonds, real estate: a young girl deserved it for letting an old [guy] twang her bra elastic and dribble over her delectables. Girls held out for marriage if they could...

Marriage meant decent financial compensation for those girls for all those tedious indecencies. The money set a girl up in a hat shop, ready to woo a good-looking gigolo and make up for lost time. Divorce – in due, swift course – was one way out of such marriages. But the preferable one was death. (His). There were many more cartoons in the '50s of lissom, busty widows dressed in black... in lawyers' offices as wills were read... Smith... wasn't yet born when those cartoons were the stock-in-trade of the [guy] magazine world. And that's the shame. Marshall, you see... popped his clogs and left her not a cent of his enormous fortune. Even though [Marshall] promised her... half! Picture the innocent sweetie as [Smith] trotted into the lawyer's office, hankie in hand, sobs stifled, to hear the good news about the year of hard yakka... put in giving the old boy his moments of joy. Picture the show of puzzlement as the lawyer asked her for the front door key to the mansion... the keys to the Porsche... and... handed her the bill for her credit cards, which the estate would not pay. Picture the moment of utter disillusionment, of realising that there is no God who'll reward you for hard graft in this world with a bit of temporal loot. Imagine the gutted and filleted feeling. And imagine the old codger cackling in his coffin, his last ruthless contract complete. Smith, naturally, did not have a pre-nuptial agreement. Time was passing, no doubt, and it would have looked so... crass. [Smith] trusted and was undone. And now [Smith] must sue. Oh please, let her have a handsome and suave lawyer who will take his payment in kind, because I'm sure we all feel sorry for [her. The pin-up] has learned the hardest of all lessons...

Anna Nicole Smith has joined a dating agency to try to find a new ma[te]. The ex-*Playboy* model says [it]'s desperate to find a new ma[te] following the death of her billionaire husband, 90-year-old J Howard Marshall... The former stripper[, who]... was awarded \$170 million[(which equates to '\$420,000 per day for their 14 month marriage')] from the estate of her husband and has applied to the court for another \$60 million... [ha]s already been out on her first date. "[The date] was... very nice... [It] worked for a company or... owned the company I'm not sure which... [The date] brought me a bunch of the products over, they were swim suits. Apparently [it] somehow got my size beforehand because they all fit."

...[when a 10-year-old boy's sexual curiosity prompted him to suggest to a girl who lived on the next block the usual, "I'll show you mine if you'll show me yours", his request was met with "I'm going to tell your mother!"] But the boy found it was able to "buy a look" when the boy offered her a dollar. Much like power-grabbing manipulators, some love sellers seem to be lacking in anything resembling a guilty conscience. They view the love buyer as a "sucker" or a "pigeon" and show no remorse about taking such a person's money. There are wives who are loyal and loving to their husbands while the money flows and who seek a good divorce attorney when the husband declares bankruptcy. It is no doubt difficult for the very wealthy person to become involved with others without feeling that money is partly responsible for the involvement. The late J. Paul Getty, for example, received thousands of proposals of marriage from gals Getty had never met but who knew of his financial status. Many even stated that they would be willing to waive the formality of marriage and overwhelm him with love and companionship provided appropriate financial arrangements were made beforehand.')

...*Mistress meter soars on Wall St* ONCE you've got the swanky Manhattan apartment, the splendid beach house in the Hamptons and, still, your stock market dough keeps piling up, what do you invest in? A babe. If the tabloids and the divorce lawyers are to be believed, mistresses have become as integral a part of Manhattan's dizzying bull-market affluence as \$300,000 Lamborghinis, \$1000 bottles of wine and \$28,000 Hermes crocodile leather purses. Indeed, one Wall St hedge-fund trader recently demanded at the end of an affair, that his mistress give back a Hermes purse. [The mistress refused. As one] prominent New York divorce lawyer... explains: "Mistresses are a direct function of the economy. There is no question about it. I can tell you how the economy is doing by how many mistresses come into my office looking for justice." ...The mistress meter of economic good times went through the roof last week as New Yorkers were treated to another in a series of front-page tabloid tales about a "leggy" young mistress, a "Wall Street sugar daddy" and how their good times have come to a heavily lawyered end... In the lawsuit filed in state court, [a] former model... (28), alleges that [an] advisory director... (66), kept her as his mistress for more than two years while making a number of lucrative promises. "The defendant agreed to pay plaintiff the sum of \$500,000 if [the model] would not work, and would remain at home so that the defendant could meet her at lunch time, or after work, for sex," according to court documents. While charging that [the 66-year-old]'s "appetite for sex was insatiable", the court papers say that [the 66-year-old insisted that the model] "come to his house so that they could engage in wild sex in his wife's bed". The suit also claims that [the 66-year-old], who... has two grown children, impregnated her twice and then persuaded her to have an abortion each time. The legal grounds for the suit, according to... [the] lawyer for the jilted mistress, is that [the 66-year-old] "breached an oral contract... to pay my client \$500,000..."... Divorce lawyers agree that a jilted mistress almost always faces a steep climb in trying to extract money from her former lover – especially if [the lover is married. The 66-year-old]'s wife, interviewed at her posh home in Connecticut... supports her husband and [accuses the model] of trying to "ruin my family".

...[a] divorcee... has put a judge in the dock over his comments about Remuera housewives... in his High Court ruling on a divorce proceeding... [The] judge... ordered a politician to share his fortune with his wife... [and] said: "This is nothing like a case in which an Auckland corporate wife with a Remuera bob haircut, a 3-series BMW, nannified and private-schooled children and no idea of what a balance sheet is, let alone how to read one, seeks half a commercial empire after 20 years of nothing more than bridge, tennis and Earl Grey tea." ...The author and former model agency boss says it is hard work being a corporate wife... Those husbands often demand that their spouses stay at home and look attractive... "What the hell is wrong with that? They work very... very hard to look good,"... [A hair]dressing magnate... says Remuera's wealthy residents no longer favour the bob haircut. They prefer a tousled, scrunched look, a style... which "looks just like you have run your hands through your hair."

...[a country music star (r:p1759, ln43)] has decided that her big bouffant wigs are old hat and has invested in 30cm hair extensions. The vivacious country star pays \$3000 every three months for about 500 natural platinum blond extensions to be glued and woven into her hair over 12 hours. But [the singer]'s undecided about the fate of her 600 wigs, worth a staggering \$900,000.

...[a British actor] – *EastEnders'* Peggy Mitchell – has revealed how her hair fell out after [it] had extensions fitted by a dodgy crimper. [The actor], 62, suffered cuts, burns and irritation after the \$1500 hair-do in west London. [The actor] had to rush to another hairdresser, who spent 12 hours carefully removing the extensions. The original hairdresser, who was featured on TV consumer show *Beware: Rogue Traders*, is still working despite having more than \$100,000 of outstanding County Court judgments against her.

...*the naked truth: Ginger's a brunette* Nine years old and desperate for nude pictures of Ginger Spice...? Just nick \$2.95 out of mum's purse and run down to the local newsagent because that's where you'll find them. Or at least that's where a sharp-eyed *Herald* photographer elbowed primary school competitors out of the way to get his copy. Never mind numbers and social studies, feast your eyes on the Ginger, formerly known as a brunette, as [Ginger] prances naked through the forest wearing nothing but a nice pair of court shoes and a floral headband. And that's not all you'll see of the girl power group slowly losing their power. There's enough to oggle there to get you through school C biology. Somehow I don't think mums and dads (okay, probably just mum's) will be too happy to find the *Spice Girls Poster Magazine* under their tiny tots' pillows although, looking on the bright side, at an original price of £2.50, it's a real bargain over here.

...THE Spice Girls have already proven that even if you have no talent, no singing or song-writing ability, you can still get... worldwide fame – and loads of money to go with it. Now they have just proven that even if five ordinary girls are photographed by one of the top fashion photographers in the world... – surprise, surprise – they'll still look ordinary. Reassuring, isn't it? [The lensperson who is] more used to spending weeks on a few high fashion shots, had to capture the... loud-mouthed advocates of Girl Power in more grown-up Gucci gear in only a day. Plus a journalist had to interview them at the same time. The accompanying story eventually concludes that Baby and Scary are the most naturally pretty, all of the girls... a[re] 1.65m... they all have nice eyes and... all wear glasses when not working. None of them – except Ginger Spice, who turns out to be the leader – are all that bright. And – having made two albums, a movie and just come off a world tour – they're all exhausted. The photo shoot took place on a day they would normally have had off but they sacrificed it to do the *Vogue* cover. Ah, the price of fame and fortune...

Critics are labelling it the Curse of the Spice Girls. How could five such famous [gals], once envied worldwide, have become such a sad, sorry lot? Once the hottest act in the world, now every member of the Spice Girls seems desperately unhappy – unable to cope with the way life has panned out. Posh... has turned into Panic Spice... “When you’re famous it carries a risk of attack or kidnap. I can’t take this any more... No-one can really imagine what it’s like to be recognised wherever you go.” And the other Girls have their own demons to battle... [One m]usic guru... believes the Spice Girls are past their use-by date... “But, hey, I don’t feel sorry for them! How can you feel sorry for anybody worth tens of millions? They played the game and they had fun.” But now the fun is over. And it seems no amount of money can ever buy it back.

...A CUNNING plan to save the Spice Girls... will answer a tantalising question that is debated whenever two of their fans meet: who is the spiciest singer of them all. The all-girl band, whose individual voices have until now been submerged in their close harmony style, have decided to perform solo tracks when they start recording their third album this week. Virgin Records, which has issued writs against newspapers that suggested it was unhappy about the pregnancies of two of the singers, regard the “semi-solo” album... as a satisfying solution to the attractions of solo careers while maintaining the lucrative Spice Girls brand. The Spice Girls could afford to retire tomorrow. *Q* magazine recently estimated their fortunes at \$39 million each... Yet, like so many pop sensations before them, the foursome want musical respect and they are more confident about winning it since... [Ginger Spice] left the group... The band have already defied the “Monkee law” – named after the [US] “teeny pop” group created to counter the Beatles in the 1960s – by not only surviving longer than three years but also producing a second album... that is set to outsell their debut. They have had seven No 1 singles, and despite [Ginger]’s departure, their recent 14,000-seat Madison Square Gardens show in New York sold out in 12 minutes and won over even their most curmudgeonly critics. But can they actually sing? ...Fans believe the battle of the voices will be won by Sporty Spice... who... recently sang... [without her mates at a] Planet Hollywood restaurant. “[Sporty] has the lungs but whether [Sporty] knows what to do with them is another matter,” said an onlooker.

...The cover of [Scary Spice]’s new solo album is definitely “hot” but while her surgically-enhanced assets will certainly help to shift more units, they’ve come at a heavy price. Her estranged husband... claims her plastic surgery marked the end of their marriage. “I was... against it because it meant [my wife] would no longer be able to breast-feed [our baby]. I was very, very angry. It was the beginning of the end of our sex life...”

...*Magazine sex loses gloss in quest for perfection*... [Gals] are being misled by life-style magazines into thinking that perfect sex can be achieved simply by “pushing buttons,” says an expert. Magazines such as *Cosmopolitan* set impossible goals and take no account of what happens in real relationships, says [a] sex psychologist. Their emphasis on performance and technique gives [readers] a false idea of what good sex should be like and helps to foster a negative self-image. [The psychologist] and two colleagues from University College London studied 26 sex articles in 63 magazines... All promote a “prescriptive” recipe for sex which sets out the technique skills necessary for a [gal] to acquire, the study says. The primary focus is performance rather than pleasure. No account is taken of the importance of communication between partners, or the possibility of relationship problems, it says... [Guys] are assumed to be proficient and confident about sex, despite the fact that an estimated 31[% of them] have sexual difficulties... The study also finds the same three experts, all of whom have written books, are constantly being quoted in the magazines. One of them is [the]... author of *The Joy of Sex*, whose advice was apparently sought even though [the guy is dead. The psychologist] says advice aimed at helping [gals] to hide unattractive aspects of their bodies during sex is potentially damaging. “There’s an assumption that your body will not be perfect, so you have to use clothing, make-up, blindfolds – anything – to stop him seeing your deficiencies... Sexual positions are recommended that make your legs look thin or hide cellulite. Worrying about these things reduces so many avenues of pleasure and makes a person feel crap. It’s not going to help someone with a negative self-image at all... These articles are not empowering... and they don’t allow people any room to ask if they have a problem. Sex is seen as a serious activity to perform alongside all the other activities in a busy [gal]’s day.”

...*Hedonistic [gals] behaving very badly*... They go out when they want, they drink as much as they feel like and they stay out until 4 am because they are free to do so. No, we are not talking about twentysomethings – we are talking about [gals] in their 30s who are determined to enter middle age disgracefully. A British study has shown that record numbers of [gals] aged 30 to 45 are smoking and drinking heavily and doing no exercise, and their numbers are increasing faster than in any other age group. The survey... said “ladettes” were staying single well into their 30s, prolonging their “live-for-today lifestyle.” “We are the late-60s generation, the first generation of [gals] who have freedom,” said one fun-loving thirtysomething. These [gals] have the money to do what they want. And they also exist in N[Z]. Just ask... the... owner of Lime bar in Ponsonby and the Hobson St Lounge in central Auckland. Fun-loving career [gals] are the target market for both venues. At 7 pm on a Thursday night the Hobson St Lounge is full of them – they started early, said [the] manager... “The older bracket” came in on Friday nights, but also through the week, especially after work... They were dressed up and were “definitely professionals.” But their biggest giveaway... was what they drink – either good wine or cocktails. And did they drink a lot? “Sure, they get tipsy... They have been there, done that and have nothing to prove. They know how to have a good time and do it pleasantly.” ...While there may not be N[Z] statistics on the phenomenon, a sample survey of N[Z]ers’ drug use showed an 11[%] increase between 1990 and 1998 in the number of [gal] drinkers who felt drunk at least once a month... Wealthier [gals] drank more than the less well-off... On one side of the phenomenon was a group... who were single or divorced, were fed up that they could not find a partner, or had just left one and were saying “to hell with the whole thing,” rewarding themselves with things they enjoyed... It’s the Bridget Jones syndrome. On the other side were married [gals], for whom the pressure of work and home life was growing all the time. They were struggling to live up to media icons such as the domestic goddess who has a top career and a home life. In a time-starved world, booze and fags were a way of dealing with the troubles of the day. One 35-year-old... who would not be named, is all too familiar with the thirtysomething scene. The Hobson St Lounge is often her last stop on a big night out, but still only one of many... [The 35-year-old, who] runs her own public relations business... is single... But the intention of a night on the town was not to meet a future match... “You know you are not going to meet your future husband at a bar at 3 am.” ...[it] could have married at 28 but chose not to. “There is so much else to do in the world. We can do what we want to do and have the money to do it. We are the ones making choices...” ...[a 32-year-old] is also single. “I have taken advantage of being single and make the most of it. I enjoy going out and drinking and no one will stop me. It is fun.” [Another ladette], also 32 and single, said... [gals] such as her no longer had the same mentality as they used to... [Gals] in their 30s [just] wanted to have a good time... [This 32-year-old added that it] had been tied to nothing for the past 10 years...

[‘There are girls who want to be a deb. That’s like wanting to sweep the road. I wish they would sweep the road – that’s useful!’ Of greater concern, perhaps, 93[%] of teenage girls... say that store-hopping is their favourite activity...

CAN YOU imagine life without Band-aids, Tampax, tupperware, ice cream, condoms, Pampers, vaseline, Bic pens, Levi’s jeans? How would your kids get on without their Lego, rollerblades or Barbie dolls? [The] book... *WHY DIDN’T I THINK OF THAT?: Bizarre Origins of Ingenious Inventions We Couldn’t Live Without*... chronicles the origins of 50 famous inventions. Depending on your point of view, some of these are more essential than others. I can’t say I’ve ever had a great need for Silly Putty. Neither did the world’s scientific community who wrote to [the Scottish inventor] in 1943: “This is interesting material, but we are unable to find even one functional use for it.” Well, with the right marketing and packaging, more than 200 million Silly Putty eggs have been sold since 1951 when [a] marketing whizz... took a chance on the gooey substance... Astronauts took it to the moon to relieve boredom. [The marketing whizz] made a fortune of more than \$[NZ]140 million. The inventor of Tampax... received no monetary rewards for his efforts, although the London *Sunday Times* named him one of the “1000 Most Important People of the 20th Century”. (In fact, [gals] have used a variation of tampon since ancient times. Egyptians used softened papyrus and Romans used wool.) [The inventor of Tampax] sold the patent to... [a businessperson and physician, who] had a few problems with [US] religious groups who feared that

Tampax would encourage young [gals] to masturbate. Undeterred, [the physician] hired nurses to give lectures... and took on a smart partner. A full-page, four-colour ad in the *American Weekly* depicting young [gals] dancing, playing tennis etc... demonstrated that with internal protection a modern menstruating [gal] could be active. Other fascinating facts: ...Ken's nether region used to be as smooth as Barbie; later [her boyfriend] was given a "little bump". [Incidentally, 'for \$100,000, AUSn doctors will turn you into a Barbie doll lookalike if you are a boy'; a US gal whose 'ambition was to become like her childhood idol, achieved it after 27 operations' and a similar cost.]

...Start on the journey of a lifetime... with... *Barbie*... the... little girls' best friend! ...Let Barbie teach you all about the wonderful world we live in! Impress your friends with your new-found knowledge! Be the smartest as Barbie shares her beauty secrets with you! ...Barbie shows you how to put on make-up, step-by-step... Barbie has many talents and hobbies... Understand what Barbie does at work... Barbie Fact Files are divided into... great colour-coded sections: [e.g.] ...Barbie the ballerina... lead[s] you into the graceful flowing world of classical ballet... *To become real dancers, you have to be supple, graceful and good humoured*... Get all 36 cards for only one dollar... plus \$1 postage and handling... Send for your 36 BARBIE FACT FILES within 10 days and you will receive a poster... – ...CELEBRATING FORTY YEARS OF DREAMS... – ...absolutely FREE! ...Don't miss out! ...DON'T DELAY, REPLY TODAY! ...• Offer valid in N[Z] only... From time to time, we pass on to our customers news about products and services which may interest them. If you do not want to be informed, please let us know by ticking the box.□

...Set in Ireland during the 1960s, when [gals] in the US were burning their bras in a feminist fervour... *The Magdalene Sisters*... is the story of three young [gals] who are sent to the Magdalene Laundries by their fathers because one was raped, one had [a] child out of wedlock and the third girl, an orphan, was too pretty and spirited. We witness how the girls survive, adjust and eventually escape this painfully hypocritical environment run by the dictatorial Sisters of Mercy for the Catholic Church. The [girls] in them were little more than slaves, spending 364 days a year working in the laundries, never seeing a penny and atoning for their sins... *The Magdalene Sisters* is a fascinating movie when you consider the fact that the last laundry closed only seven years ago... □ [40%]... of nuns in the U[S -] ...some 34,000... nuns... [-] have been sexually abused, according to an independent study... The national survey was conducted by researchers at St Louis University and paid for in part by several orders of Catholic nuns. It was completed in 1996 but kept under wraps because some Catholic officials feared the information would create a scandal.

...[the] Pope... has waived the mandatory wait of five years after death to begin the process towards sainthood for Mother Teresa... Two miracles have already been attributed to Mother Teresa and forwarded to the Vatican for verification. One of these happened in the U[S] where a French[person] broke several ribs in a car accident, but her injuries miraculously healed when [it] wore a Mother Teresa medallion around her neck. Another reported miracle involved a Palestinian girl suffering from cancer who recovered after Mother Teresa appeared in her dreams and said: "Child, you are cured." ...The Archbishop of Calcutta... hoped the Catholic nun would be declared a saint in 2000, when the Vatican celebrates the start of the third millennium of Christianity.

...Until recently [the Indian] was not even a Christian, let alone a Catholic. [The Indian] cannot read, does not know her precise age, and comes from one of India's most backward and downtrodden communities. But... [the] tribal... mother of five... is about to play a starring role in the most compelling posthumous inquiry to hit the Vatican in decades, if not centuries. A tribunal of Vatican theologians will shortly begin to consider whether Mother Teresa should be made a saint. [The]Pope... has already put the Albanian nun, who died in... 1997, on a "fast track" to canonisation. Two years ago the Diocesan Church in Calcutta began the onerous task of gathering evidence that would support her claim to sainthood. The 34,000 pages of material collected by investigators has been sent to Rome. The investigators were especially keen to authenticate a miracle performed by... Teresa after her death... And in [the mother-of-five], they appear to have found one. In May 1998, [the mother] was suffering from a painful, gigantic tumour in her uterus. Leaving her husband and... children behind in her village, [it] hobbled into the home for the destitute run by the Missionaries for Charity... in the West Bengal town of Patiram. "For two months I had severe pain... and I was crying. I was not able to sleep; I could lay only on the left side and I couldn't stand straight. The sisters gave me medicine but the pain was still there. I was always praying to... Teresa, whose picture was on the wall just opposite my bed." After [the mother] made several unproductive trips to hospital, two of the nuns caring for her... decided to take matters into their own hands. On... the first anniversary of... Teresa's death... the nuns tied a silver oval-shaped medallion to [her] stomach using a black thread. The medallion had been placed on... Teresa's body after her own death. [The mother] then fell asleep while the sisters prayed – and wept – holding her stomach. When [the mother] awoke the next morning the tumour had miraculously disappeared. [The mother] became well enough to start helping in the garden and eventually went back to her village. Diocesan investigators subsequently interviewed [the mother] and talked to a series of doctors who confirmed that the tumour had indeed disappeared. "The probe found the miracle to have met the essential requisites of being organic, immediate, permanent and intercessionary in nature," said the Archbishop of Calcutta... But the excessive secrecy deployed by... Teresa's order, and her successor... has raised more questions than answers... in [the mother]'s case... All the nuns involved in her treatment have refused to discuss publicly what happened. And [the mother]'s name has never previously been revealed – in fact, the Missionaries of Charity have gone out of their way to prevent it from coming out. When the *Observer* newspaper turned up outside the Missionaries of Charity home for the destitute in the town of Raiganj, close to where [the mother] was treated, the nuns refused to emerge. "Obviously what happened is an objective-miracle. But the sisters don't want to give different versions as that would spoil things," Raiganj[']s bishop... said. The witness statements given by the sisters also reveal several inconsistencies. [The mother], who is about 30, claims [it] was being given medicine only for pain relief, but the sisters confirm [it] was also treated for TB. Before the "miracle", [the mother] was taken to five doctors – an extraordinary number for a poor resident of a Missionaries of Charity home. Once [the mother] had been "cured", the nuns encouraged her sister... to write to their Mother House in Calcutta, the order's HQ, informing them of the miracle. [The sister] refused and so the nuns reluctantly put pen to paper themselves. Despite the doubters, including local doctors, there are many who believe that... Teresa was a saint and deserves official recognition. The Vatican's chief investigator... who headed the diocesan probe, said last week that [it] had been overwhelmed by the findings, which included several hundred miracles attributed to... Teresa. Confirmation of a miracle is required for beatification, while a second miracle is required for full-blown sainthood. But [the chief investigator] is confident: "I don't think there will be any obstacles."

...WHEN the Holiday Inn hotel chain asked... 5000... Americans to identify the smartest people of the... century respondents came up with some interesting replies. Microsoft[']s chairperso[n]... was crowned the smartest business[person]... As for the overall smartest person, Americans picked... Einstein... President Roosevelt, who led the [US] through the Depression and W[W]II, beat John F. Kennedy... and Dwight Eisenhower for smartest president. Mother Teresa was smartest humanitarian... The hotel... used the... survey to highlight itself as the "smart choice" for travellers.

...[the singer] has just seen Africa afresh. You might think the ex-Boomtown Rat and hero of famine relief had already seen all a [perso]n could of the continent that cried out for Live Aid... [H]is raw, straight-to-the-heart appeal raised an awesome \$150million to feed the [Last] World's starving. When [the singer] got together a Who's Who of pop... to make that historic Band Aid single, [it] turned up the amplifier – way beyond max – on global giving. Factory workers across Europe worked free over weekends solely to press his record *Do They Know It's Christmas?* A newlywed couple sold their house for the cause, and old [bird]s queued to give their wedding rings. "That's all they had to give away – an extreme sacrifice that represents all the love they'd had in their life," says [the singer], whose humanitarian efforts won him a knighthood and a Nobel Peace Prize. But this time round [the singer] was seeing Africa through the eyes of his children, first-time visitors to the continent [it] finds "the most beautiful and intoxicating in the world". "Before their trip, the kids – like most people – only knew the Africa of horror, of decay,"... But on safari

close by the Sabi River, [his children]... saw the Africa that dreams are made of. It's the Africa that we all wish existed without the fear of famine, debt, divisiveness or early death from AIDS – all the problems that [the singer] (an impassioned spokesperson with ideals way above party politics) continues to speak out against and battle. For the girls, big game by day and vast starry skies by night were the pay-off for their dreadful immunisation jabs, producing what [their father] describes as “a minor typhoid outbreak in Battersea”... On safari, [the singer] was as mesmerised as the children by the ongoing parade of wildlife beyond the veranda of Exeter Lodge. [The singer] tells of being terrified when charged by an elephant (luckily on a walk without the girls), of stunning sunrises and the odd sundowner of colonial pink gin, as well as an Easter egg hunt in the bush – “with monkeys and children competing for the best chocolate”. But for [the singer], ever the restless, multifaceted, must-do mover and shaker, there was a more serious side to the visit. [The singer] makes it plain that [a noted humanitarian] couldn't be in Africa without work on his agenda. There was some record promo to attend to – advance publicity in Cape Town for his... album *Sex, Age And Death* (“It's that time of my life!” [the 46-year-old] quips). But the meetings arranged with two Presidents, past and present, of South Africa were the real working purpose of his trip... [The singer] has already met, and made a TV documentary with, [the past President]. “The nice thing about being me... is that I can get to meet these extraordinary people.” ...The admiration's mutual: [the past President salutes the singer] as a “fellow guerrilla fighter”... [The singer] keeps endlessly busy because [it]'s easily bored – and boredom, [it] says, is a slipway to depression. [The singer is, it] says, a natural-born worrier, “melancholic by disposition”. Yet droll and dry, his company is also the ultimate *craic*. Who else, in a couple of hours, can move through memories of canning peas in Peterborough (“It was good money”), building the M25 (“Very good money”) to arguing with Mother Teresa? Says [the singer: “I thought Mother Teresa] was an amazing old bird. Willy, very media-hip, very strong. In the plight of Africa and so many people dying, [the nun] saw the suffering of Christ while I saw the denial of Christ. [The nun] saw famine as God testing us; I couldn't see how humans let other people go through that. In the end, [the nun] said: ‘I can't do what you do. You can't do what I do. But we both have to do it.’” ...From ...his... urgent sense that [it] should write a song – “because that's all I CAN do” – the extraordinary history of Live Aid unfurled... It's ironic that at the end of that incredible Live Aid day, [the organiser] eventually found himself alone in the stadium, having to hitch a ride home in an unknown family's Volvo. And that for all the funds raised, [the singer] then found himself almost broke and obliged to write – with some misgivings – a best-selling autobiography that, to his retrospective relish, became a set book for Oxford University English Lit exam entrants. His book was called *Is That It?* – which, of course, it couldn't be... The very next year, while... recording in LA, [the singer] was asked to clear the studio for a private word with the British Consul General. Expecting some formal Band Aid business, [the singer] only half-heard the words addressed to him – “medal” and “British Empire” – and said, chancing his luck, that although this sounded very nice, wasn't there something to offer that wasn't a medal? “But you don't see, you'll be a Knight Commander,” pressed the honourable messenger. “Oh,” said [the singer], understanding at last. “Ah! That's really cool. Thanks very much.” On his great day at the Palace, [the]... Queen told... him... his title was a small token for the work [it]'d done. “Believe me, Your Majesty,” said the new knight, “it wasn't nearly as hard as getting into this morning suit.” ...If they had to choose, it's hard to believe that the four girls would really prefer a conventionally suited father with golf club membership and social expectations to match... “Normally... the girls... are embarrassed by me – ...‘Why can't you be like other dads?’ they say.” Maybe they're too... young to grasp what [their father] has achieved by being different. Have they watched the video footage from Live Aid beamed worldwide to two billion people? Actually, says [the singer], they haven't – but then neither has [their father]. “It's not their time... only one... was... born... And being kids busy with the present and their own lives, they don't really see it as their story.” Of the [ir father's] story – or at least its dark side – more than enough for comfort has already been said. It's a cruel irony that [the singer] woke up the world to unbearable loss in Africa but then faced unspeakable pain at home. The loss of his wife, Paula Yates, first into the arms of INXS singer Michael Hutchence and then through her tragic death from a drugs overdose[– following Michael's apparent suicide in AUS –] makes his role as a single parent to their daughters all the more delicately demanding. But... [the singer] shrugs off any suggestion that his decision to take on... Paula's four-year-old daughter by Hutchence, was either noble or tough... [The singer] claims to have a poor, selective memory and so to think little of times past... “But what really stands out in my memory more than anything... was the realisation that we are not in the end powerless in the face of monstrous human events.” ...As an outsider, it's hard to grasp quite how [the singer] left his Dublin school without any qualifications ([it] concocted his own school reports to appease his academically ambitious Dad), yet rose from abattoir work to pop stardom and on... to global acclaim. To [the singer], however, his life though “episodic” and “unplanned”... seems “all of a piece”. There was a defining moment of boyhood romanticism when his father took him outside to watch the first Sputnik pass over Blackrock... After that cosmic “connectedness”, it was natural enough... to perceive Africa was only around the corner – and thus to believe in the real possibility of “throwing an electronic loop around the planet and bringing people together in their lingua franca, which is not English but pop music”.

...[it is an event that brings people together across Australasia, and this year a NZer became the first gal] trainer to ever have a winning horse in the historic race. “I believe that everything I've gone through was fate,” [the]... Melbourne Cup winning trainer... t[old *Gals'*] *Day* from a Victorian paddock as the A[US]n media wait[ed] restlessly in the wings... [to interview] the new darling of the Australasian turf... “Out of every cloud is a silver lining. You definitely have to survive the hard times to enjoy the good times. Now I plan to enjoy every moment of this win. I don't want to come off this cloud for a long time.” ...Ever since her husband... trained 1988 Melbourne Cup winner Empire Rose, [the wife] has dreamed about winning the world's most famous horse race. But not even a Hollywood script writer could have thrown up so many hurdles along the way. After a fall 10 years ago when riding in an amateur race in Gisborne, [the wife] was in a coma for eight days, and doctors feared for her life. Her speech slurred from brain damage, [the wife] was sent to a “mental home”, and [that] was the scariest time of her life. “They thought that's where I belonged because I was having trouble talking, but I knew I was OK. I just couldn't tell anyone. I remember the movie on the TV the first night was *One Flew Over the Cuckoo's Nest*. It was like a nightmare. It was a mixed ward, too, and I was petrified the guys were going to rape me. They were that scary. Fortunately, I made a remarkable recovery over the weekend and I was out of there on the Monday.” Despite medical opinion that [the wife] would not be able to ride again, [the mother of two] was back on a horse three months later. But it was two years before [the teenagers' mother] fully recovered... “After everything I've been through, this win proves that you can do anything you put your mind to – don't let anyone say you can't.”

...[Telecom has] a... new head... The 37-year-old, who will next month start collecting a pay packet that others can only dream about... has realised a dream harboured since... [becoming] the 17-year-old dux of McKillop College in Rotorua: becoming the chief executive of a top... [NZ company. Its outgoing chief executive] is convinced that Telecom, which searched the world for his replacement, has the right person for the job... [His replacement] has hardly come out of nowhere. Her current position as head of Telecom's services has her in charge of half the company's staff and 90[%] of its \$3.4 billion revenue... No details have been revealed of her new annual salary package, but... the... departing Telecom chief executive... is nudging \$2 million and there will be few above her on the N[Z] corporate earnings ladder.

...Now the girls rule the roost... As a [gal], I was delighted to see the line-up of illustrious [gals] who were at... [the] swearing in of... N[Z]'s new governor-general... It's great that so many [gals] are at the helm of the SS New Zealand. There... was the governor-general, the prime minister, the chief justice and the leader of the opposition – powerful, intelligent babes, the lot of them. It made me proud to be a N[Z]er.

...TVNZ] has sold its Saturday morning 7 am to 7.30 am slot on TVOne to an A[US]n evangelist who preaches that having fem[inin]e leaders is a sign of the devil. [The e]vangelist... sought a broadcast time later than 6 am on a Saturday when his message would be screened “among children

and young people.” His mission begins... with two programmes reserved for the topic of our “fatherless generation,” a sad state of affairs “reflected in the fact that we have a fem[inine PM] and... Leader of the Opposition.”

...[the Opposition leader] has a vision: the audience knows this because [the Labour Party leader] has told them five times... [Labour’s leader is passionate: and] has said so three times. The audience gratefully inhales the great Labour themes – fairness and security, sickness and the pension, unemployment and catastrophe... [Labour’s leader] is leading a crusade: [the leader] says so repeatedly and whatever a politician says three times is true. Certainly it works for these loyal Canterbury folk on a balmy day... They clap and cheer her out into the sunshine. In 1999, Labour is going big with the vision thing. It’s policy pledges, on the other hand, seem small and modest by comparison. [Labour’s leader] concedes that they are careful, even conservative. Will this visionary frugality, this crusade to nowhere-very-promising, do the political business? [Labour’s leader] says it will. The focus groups, it seems, are telling Labour two things. 1: Things are bad and we want to hear that they can get better. 2: Don’t give us any horse-dung about Paradise Tomorrow. “People say ‘the health system is completely stuffed!’ And they’ve all got a story. And then when the question is thrown in, ‘Is it too late? Do you really think Labour can do anything?’,” people say, ‘Oh no, it’s not too late. You’ve got to start somewhere,’”... But they don’t want to be told, [Labour’s leader] says, that everything can quickly be fixed. “They wouldn’t believe us,”...

Some business leaders were last night calling for an early election, as the coalition Government plunged deeper into chaos in the wake of a fundamental disagreement over the sale of Wellington airport. Frustration at the ongoing political uncertainty has prompted some business leaders to call for National to pull the plug, with at least one business representative saying... voters would reward National for saying “enough.” ...● Cabinet resolved in principle last night to proceed with the sale of the Government’s 66[%] share in Wellington airport.

...*FINALLY, THE END... Just the last rites remain...* The coalition Government is now all but dead after [the Deputy PM] led his four fellow N[Z] First ministers out of last night’s emergency cabinet meeting. An angry [PM] described the walkout as “unprecedented” in N[Z] politics and... regarded it as “terribly serious.” But an early election was not being considered at this stage. Instead it was [the PM’s] intention to continue to govern as a minority Government should the breach in the coalition prove irreparable. [The PM] has called the National Party president... to Wellington this morning to begin special coalition dispute resolution procedures. This involves the leaders, deputy leaders and presidents of both parties... [E]ither party can give seven days’ notice to terminate the coalition agreement... The... walkout came as the cabinet was discussing the sale of... Wellington International Airport... [The leader of] NZ First... said NZ First would not sell public assets into foreign control and “nor will we sell our principles and beliefs purely for the positions of public office.” However, National MPs remain convinced that [the Deputy PM] is motivated more by politics than principle and... wants to collapse the coalition because [the NZ First leader believes it] can better revive his party’s flagging fortunes out of National’s shadow... Soundings by National this week had persuaded it that if [the leader of NZ First walked, the Deputy PM] could take his caucus with him, at least at the outset. However, National strategists believed that as many as 10 of the NZ First MPs could later be enticed back into the fold and went into last night’s meeting prepared for every eventuality, including collapsing the coalition if necessary. [The PM’s patience with the Deputy PM] was exhausted before [the NZ First leader] managed to irritate her even further in Parliament yesterday when... [likening] remaining in the coalition, whatever it did, to “the Nazism and fascism of the 1930s and 1940s.” Her spine has been stiffened by a growing demand within her party, her caucus and among her ministerial colleagues[, as well as from her ‘five to eight media advisers’, to cast the Deputy PM] adrift. They see him as an electoral liability and have always known that [the NZ First leader] would break away from the coalition before the next election... but National sources were suggesting last night that the fallout from the Asian crisis might have brought the timetable forward. The N[Z] *Herald* understands that the revised economic and fiscal forecasts now being prepared by the Treasury make gloomy reading and there is doubt in National circles about whether [the NZ First leader] is prepared to front the hard decisions the new figures may require.

...*Electors sold out from day one...* The public has never forgiven [NZ First’s leader] for going into coalition with National after campaigning to get rid of the National Government... After the election, NZ First voters rued their polling-day choice... For nine weeks, [the party’s leader] spun out simultaneous coalition talks with National and Labour, and then spun out the public announcement that NZ First had chosen National as its coalition partner... Labour was gutted and the vitriol that followed never allowed NZ First to pause and take breath. It was straight out of Civvy St and, in some cases, straight into cabinet for NZ First MPs, who stumbled from day one... N[umerous] turbulent months later and the public odium towards [NZ First, and its leader] in particular, is as strong as ever... Like a headless chicken that keeps running in circles, the Government was pouring out messages of stability last night... No one was really paying attention though, because they were all wondering whether the Government still existed.

...*The future of the Government rests with 14 NZ First MPs cast adrift after the sacking of [their leader]...* National is cautiously confident that it will get enough N[Z] First votes to survive [the NZ First leader’s] revenge at being dumped as Deputy P[M]. The NZ First leader is expected to go into Opposition, taking his hardcore loyalists with him. However, National needs to peel off eight of his 15 MPs... to maintain a majority in the House. First in the gun are the seven NZ First ministers. The P[M]... is prepared to allow them to continue to hold their warrants provided they give her a “personal commitment that they understand the obligations of collective responsibility.” [The PM] has written inviting each to meet her individually over the next few days to discuss their futures. [The NZ First leader], who has also been sacked from the Treasurer’s job, was talking tough yesterday, saying his people could not be “bought off... for 30 pieces of silver” or for the privileges and perks of office. However, [the NZ First leader] must surely regard it as ominous that so far only [one of his MPs] has declared his hand – and... has said that [the PM has the MP’s] “unwavering support.” ...the Associate Treasurer... says his boss... was making “increasingly irrational decisions” and had to be sacked for the good of the Government and the economy... Where the others will jump is anyone’s guess but [their leader] would be unwise to rely upon their following him into the wilderness.

...[the sacked Deputy PM] took his last ride in a Government limousine last night as his cabinet privileges ran out. Stripped of his minister’s warrant, [the NZ First leader also]... took a severe pay cut – from \$151,000 to between \$82,000 and \$91,500, depending on how many MPs stay in [his] party... On top of the ignominy, [the NZ First leader] heard news of his dumping not from his boss, but from his hosts at a lunch function in an Auckland hotel. It fell to the chair[person of the NZ]-China Trade Association... to tell [him what the PM] had not... “I said, ‘Haven’t you heard the news?’ [The NZ First leader] said, ‘What news?’ I said, ‘The P[M] has replaced you as Deputy PM and Treasurer,’” [The NZ First leader] said, “That’s very interesting,” and... went and sat down and... asked his assistants to find out more details. I joked I was a strange emissary.” [The NZ First leader] was unimpressed... “Seldom have I ever been to a meeting where the host welcomes me and says: ‘Look, your designation has been changed,’”... It would have been nice to have been told by the person who claims to be responsible.” [The PM said it was sorry about not being] the one to bear the bad news... [The PM] had tried to speak to... [the NZ First leader] for 45 minutes before... [announcing] her decision to a... press conference... after noon... The staff member who accompanied... [the sacked Deputy PM] said... both had been tied up on the phone between arriving in Auckland and arriving at the function.

...[NZ First’s] leader... created history... [by being] sacked from the cabinet, [a]constitutional expert and former [Labour PM]... said yesterday. “...to my knowledge... [NZ First’s leader] is the first politician... in [NZ] history... who has been dismissed as a cabinet minister twice for breach of collective responsibility,”... [NZ First’s leader] was also dumped from the cabinet in 1991 when, as a National MP, [it] was Maori Affairs Minister.

...[as the] Electoral Office is starting to push through some election preparations in case of a snap election... Labour has increased its lead over National in the latest *National Business Review*-Consultus poll... According to the poll... Labour now enjoys 43[%] support, up two points over a

poll a month ago, and National is on 32[%] support, down one point. The poll was conducted between... the week in which Labour[']s leader... was given a resounding welcome to the Alliance's annual conference. The Alliance itself fell one point in the poll to 10[%], Act fell two points to 7[%], and NZ First was up one point to 3[%]. Translated into an MMP Parliament, and assuming NZ First did not win any electorate seats, Labour would have 56 seats and the Alliance 13 – enough MPs to form a majority coalition government... National would have 42 seats and Act nine.

...The P[M] will today pitch for the votes of MMP opponents by promising referendums on the voting system in the next parliamentary term... [The PM]'s speech today will also repeat the view [it] first expressed in January... [that] MMP could be strengthened through constitutional mechanisms such as a ban on snap elections... [Meanwhile, the PM is still] canvassing the possibility of giving people in same-sex relationships normal legal rights in matters of matrimonial property, adoption, inheritance and immigration... No country as yet gives same-sex couples the same rights to marriage as heterosexual couples. In 1997, the Court of Appeal refused to grant marriage licences to three lesbian couples. One option could be to follow Denmark, which allows a same-sex couple to complete an official "registration of partnership." This gives the couple the same legal rights and responsibilities – with some exceptions – as a heterosexual couple. The Danish exceptions forbid church weddings, adoption of children and state-funding of artificial insemination for a lesbian couple. Speaking at Saturday night's Hero Parade in Auckland, [the PM promised to] put... the legal recognition of same-sex relationships on the Government's agenda... A landmark High Court ruling last week upheld a [lesbian]'s right to child support from her former lesbian lover. The [lesbian mother] later admitted the couple used a loophole to claim welfare cash. They could not do so because their relationship was not recognised by the law. Repeating her election pitch of providing security, [the PM] said that theme included rights in personal relationships. But any legislation is unlikely to be introduced before [the next] election. The parliamentary programme is already full. Labour's human rights spokes[person described the PM's] statement as empty words.

...In January of last year the *Herald* published on this page my accounts of the Blokes Liberation Front, its objectives and the steady moves our society has been making to ensure their implementation. Recent events have provided even further evidence that the BLF's philosophy is gaining more acceptance and now seems an appropriate time to examine these issues and, in light of the front's success, its plans for other major areas of development... [such as a flat tax] rate of 100[%] on all income, with everything else free... [T]he key point of our policy statement accepts that while blokes have been in charge of society for the last 20,000 years or so, things have been a fair shambles and it is time we got out of the business of being boss, stayed home to watch the rugby... and the cricket... and let the sheilas get on with the business of running the whole show. After all, we argue, they can scarcely do a worse job than blokes have managed all these years. What a thrill, then, swept through the BLF when... we saw our principal doctrine accepted and indeed put into place by the senior partner of the coalition Government. How our hearts beat with joy and our heads swelled with pride when [our PM] finally saw the light, got out of the big time and handed over the reins to [his former No 5]. How delighted we were that a [gal of the former No 5]'s stature, compassion and intellectual breadth would become our country's first [gal PM]...

By the end of the 1970s the [feminist] movement could no longer claim to be the United [Gals'] Front. Abortion, race and sexual preference separated and divided the ranks. Sisterhood, it seemed, could be selective. But there would be one unifying movement in the '80s that would bring together... all liberated [gals]... under one banner... [When] the 1981 Springbok tour ripped [NZ apart, gals] called a truce to their infighting and protested the tour together, and this time they had a new ally – [guys]. "Because by that time I think anyone with half-a-brain realised that this simply wasn't... about rugby, it was... about oppression. And so the sort of things that [gals] had been saying for a decade had finally percolated through into the [guy] consciousness of this country, and they bonded. More than they'd ever bonded previously."

The current social revolution, spearheaded by... the feminist movement, is... heavily involved in economic change. In contrast to the industrial revolution, however, one of the primary forces behind the present upheaval is a desire to exchange dependence for independence. Among the feminists, for example, many of the demands for equality have to do with money – equal pay... equal job opportunities, and pay for [gals] who stay home and keep house. Books on advising [gals] on how to handle money are almost as common as cookbooks... Old stereotypes of [guy and gal] behavior no longer hold true in relation to money any more than they do in other areas.

Gals constitute 52% of NZ's population and more than 50% of the population in other nations where they have a longer life expectancy (excluding, perhaps, those where it isn't uncommon for parents to abort girl foetuses or murder baby girls) which, if they were to unite politically, means they should be able to achieve their aims – at least in the so-called democracies – with or without the assistance of guys. It would, however, appear that few gals are united and even less are interested in aiming to create a moneyless society – especially amongst the political gal leaders (who have largely proven themselves to be the equals of their guy peers when it comes to lacking sound solutions to the problems their societies are facing). Non-political gal icons who promote concern for the poor (e.g., Princess Di) invariably undo any good which could come from their charitable principles and deeds by flaunting an extravagant and image-conscious lifestyle, while those who humbly live like or amongst the poor invariably undo any good that comes from their actions and example by their promotion of unsound beliefs (e.g., Mother Teresa). Gal philosophers are a rarity, and gal philosophers who aren't simply riding on the pack of someone else (e.g., Plato) are even rarer. The apparent lack of gal philosophers – at least ones of substance – could be related to the historical oppression of gals (i.e., few gals have thought about wider social issues in the past because their position in society didn't require it, and most were too busy coping with personal issues – e.g., trying to find a husband who could support them because it was near-impossible to support themselves, then organising households once they had found a husband – to bother getting involved; 'it was an age when gals were valued for their appearance, their ability to run the household, and their capacity for lively small talk') but, given the freedom and opportunity to expand their minds, most First World gals have chosen to devote mental energy to engaging in *lively small talk* or worrying about their physical looks and their menstrual cycle instead of worrying about the future of their own society or the plight of their Last World sisters. The majority of gals were oppressed historically because the majority of gals did nothing to alter their situation, and they will continue to be oppressed while their gender is predominantly unwilling to contemplate a world without wealth and shopping malls!

If I had to give a definition of capitalism I would say: the process whereby American girls turn into American [gals].

An American [Gals'] League felt called upon to protest against Einstein's visit to their country. They received the following answer[:] Never yet have I experienced from the fair sex such energetic rejection of all advances; or if I have, never from so many at once. But are they not quite right, these watchful citizenesses? Why should one open one's doors to a person who devours hard-boiled capitalists with as much appetite and gusto as the Cretan Minotaur in days gone by devoured luscious Greek maidens, and on top of that is low-down enough to reject every sort of war, except the unavoidable war with one's own wife? Therefore give heed to your clever and patriotic [gal]-folk and remember that the Capitol of mighty Rome was once saved by the cackling of its faithful geese.

3: THE POOR MAJORITY?

Social War, also called ITALIC WAR, or MARSIC WAR (90-89 BC), rebellion waged by ancient Rome's Italian allies (*socii*) who, denied the Roman franchise, fought for independence. The allies in central and southern Italy had fought side by side with Rome in several wars and had grown restive under Roman autocratic rule, wanting instead Roman citizenship and the privileges it conferred. In 91 BC the Roman tribune Marcus Livius Drusus tried to solve the problem by proposing legislation that would have admitted all Italians to citizenship, but his program aroused heated opposition in the Senate, and Drusus was soon afterward assassinated. The frustrated Italian allies then rose in revolt. The peoples of the hills of central Italy formed the heart of the uprising, the Marsi in the north and the Samnites in the south. Neither the Latin colonies nor Etruria and Umbria joined in. The Italians began organizing their own confederacy; they established their headquarters at Corfinium, which they renamed Italia, created a Senate and officers, and issued a special coinage; soon they had 100,000 [soldiers] in the field. In 90 BC Roman armies were defeated in the northern sector, while in the south the Italians were equally successful and burst into southern Campania. Only by political concession could Rome hope to check the revolt: the consul Lucius Julius Caesar thus helped pass a law granting Roman citizenship to all Italians who had not participated in the revolt and probably also to all who had but were ready to immediately lay down their arms. This move pacified many of the Italians, who soon lost interest in further struggle against Rome. Roman forces... soon inflicted decisive defeats on the remaining rebels and captured their strongholds. The back of the revolt was now broken, although some resistance continued among the Samnites for a short time. Further legislation was soon passed that reinforced the allies' newly won rights; one law regulated the municipal organization of the communities that now entered the Roman state; and another dealt with Cisalpine Gaul (probably granting citizenship to all Latin colonies). Thus the political unification of all Italy south of the Po River was achieved, and Romans and Italians, hitherto linked by alliance, could now become a single nation.

...in England (1381)... widespread unrest, caused by poor economic conditions and repressive legislation, culminated in revolt among the peasant and artisan classes, particularly in Kent and Essex. The rebels marched on London, occupying the city and executing unpopular ministers, but after the death of their leader, Wat Taylor, they were persuaded to disperse after the young king Richard II had granted some of their demands. Afterwards the government went back on its promises and rapidly re-established control.

After the failure of the revolutions of 1848, [Karl Marx – who]... studied history... economics... and philosophy... [-] withdrew to London, where [Marx] lived in poverty with his family the rest of his life, supported primarily by friends, studying and writing on economics and history, and assisting in organization of various working class movements... Regarding all value as the product of human labor, but observing that historically this value accrued primarily to... nonlaboring classes in the form of capital, while the labourers received little more in wages than their subsistence, Marx believed the economic struggle between these two groups was the motive force of history... Marx prophesied the imminence of [Procrustean] revolution, by which all class distinctions would be destroyed, and the state, which... served only to defend the capitalists... eventually wither away. [Marx] felt revolution would come to Russia last.

...Derived from a widespread, spontaneous loss of faith in the social, economic, political, and military structure of Russia, Nihilism sought the complete destruction of tradition to allow the reorganization of society. Toward the end of the 19th cent. Nihilists participated in numerous assassinations and other acts of violence, but their lack of central organization and program caused them to be overrun by the Social Democratic and Social Revolutionary movements. Turgenev gave the movement its name in his sardonic novel *Fathers and Sons* (1862).

Throughout U.S. history, mass violence has been infrequent, despite what some people have claimed. No nation in history has had such orderly change and growth. Those that have resorted to violence have been a lunatic minority. *Until recently!* Today, tens of thousands are willing to... [fight] for their cause. Various racial, social, and economic groups have risen from the bottom of our society... and they are carrying the resentments of their former low estate. But now they are acquiring... power, and the attention of the media. - 1974

Even more seriously, perhaps, the industrial-era paradigm contains no rationale or incentive for more equitable distribution of the earth's resources between the [First World] nations and the [Last] World countries. The seeds of worldwide conflict lie in the enormous and growing disparity between the world's rich and poor peoples... Disparities between rich and poor nations are not new, of course. Several things *are* new, however. One development is that communications media now reach the poor masses and continually remind them of the disparities. Another is the worldwide revolution of rising expectations and the mood of self-determination that is replacing the attitude of submission among those who view themselves as oppressed. A third development is the increasing vulnerability of our complex society to disruption. The elements of society are so closely coupled that damage to one halts the activity of many elements, thus making it possible for small dissident groups to apply pressures, through terrorism and sabotage, far greater than those they could muster politically or economically. We must face the possibility that threats to the world industrial system, ranging from raw material embargoes to nuclear blackmail, may be used to force the industrially developed world to transfer large amounts of wealth to the poverty-stricken world. Such actions become a credible eventuality precisely because they may be the only way that poor nations feel that they can hope to remedy their condition. - 1976

The basic reason for poverty in the poorest countries is not that the wealthy countries refuse to share, but that the peasants in question refuse to change their ancient ways... [Conversely,] setbacks of ideological movements that once attracted such hopeful enthusiasm have left vast numbers of people, especially in the West... groping for something to believe in... [M]any people are left psychologically high and dry... with little to cling to.

...The situation at present is that civilisation is observably advanced by the efforts of relatively few individuals, some of whom may end up with a greater-than-average share of wealth as a result of their efforts, while... there is a real need for some kind of ethic, or perhaps ethos, which can define acceptable routes to desired goals... One... long-term goal is with us in the apparent desirability of raising the standards of the [Last] World to that of the [First]: as a practical proposition we had better put it aside for a while, for the materials and energy are just not available – and, even if they were, the pollution burden incurred under the present way of doing things would be unacceptable. We will be hard put to maintain our own standards for very much longer without attempting to raise those of others. What is needed, of course, is some kind of system that will gradually share out the wealth so that we eventually come to some more equitable distribution... Partly the problem has been created by the poor wanting what the rich observably have, and in many cases attaining it in relatively short time... It is a truism that what the rich have in one generation the poor expect to have in the next... or at least shortly after. This... could be used as an argument for not having rich people, although it could equally be used as an argument for a different set of expectations for the poor... To extrapolate and say that within fifty years everybody should have a private aircraft is not realistic; even if achievable it is not desirable... Similarly, we cannot extrapolate and say that every person on the globe should have an automobile, because the number of square kilometres of road and parking space required would seriously threaten agriculture,

while the fuel base on which automobiles run would probably not last as long as the expected lifetime of an automobile in any case... Perhaps the best alternative would be to design a society where one reduces the outgoings of the average person... and maybe reducing the working week to four days... At present it may seem crazy to try to interest the average [hu]man in such presumptuous ideas as the life-time of the species when all [the average human] is really concerned about is where the next meal is coming from. The quick answer is that, in the [First World] at least, the average [hu]man need not worry too much about the next meal... but if [it] does not get some reasonable idea of the future [it] may have to, pretty soon... [Humanity] is not merely pushed forward, like toothpaste out of a tube – there is at least an equal amount of pull from [its] visions and... dreams... Most people would prefer to think that they were contributing in some way to an advance in society, and that our human values of justice, love and a greater understanding of the natural world were in the ascendant, even though one might be in a difficult patch at the present time. These are the kind of ideals that give people cohesion and enable them to work together... It is better to live in a society that at least *thinks* it is going somewhere, even if the view is a little fuzzy round the edges... Once vision is lost one ends up with a free-for-all where everybody tries to grab what they can, only to discover that the division of the parts ends up as much less than the sum of the whole... The point at which [humanity] tips from being driven by what has happened to being pulled by what might be made to happen is perhaps a watershed in human development. The only way we may make the transition is by a greater knowledge of the future. It has been said that knowledge is power; better yet, it may be freedom... Another factor is that people do need some kind of security.

...Threats to group security that lead to intergroup conflict may be real or imagined. They may involve threats of physical violence or financial destruction. Most threats, however, are to the status, reputation, or ego of the group. Those who have money often see those who have less as a potential threat to their “superior status” and they fear being “dragged down” to the level of the poorer group. This leads to feelings of hostility and antagonism toward those who are at a lower socioeconomic level... Conflict between groups, with resultant fear, hostility, and distrust, is likely to be increased as group membership is restricted. An organization which anyone can join and from which anyone can withdraw is not likely to arouse much resentment. Where membership is limited, however, group identification becomes intensified and barriers develop between those who are members and those who are not. As barriers increase, communication between groups lessens and suspicion takes the place of understanding... Generally... the wealthy people in a community use their money to separate themselves from less affluent community members. Differences become barriers and the more different the wealthy group becomes in dress, housing, language, customs, moral standards, and the like, the more it alienates itself from the majority and the more resentment and hostility it is likely to attract... It would seem easy to understand why people who are born into poverty and see no legitimate way of getting out, while others around them have an overabundance of wealth, might rise up in rebellion and turn on the privileged few. It is much harder to fathom why the sons and daughters of the very rich would do the same thing. Yet that has been a common trend in the U[S] during the past decade or so. - 1979

...Socialists... consider themselves far superior to all class antagonisms. They want to improve the condition of every member of society, even that of the most favoured. Hence, they habitually appeal to society at large, without distinction of class; nay, by preference, to the ruling class... Hence, they reject all political, and especially all revolutionary, action; they wish to attain their ends by peaceful means, and endeavour by small experiments, necessarily doomed to failure, and by the force of example, to pave the way for the new social Gospel... For how can people, when once they understand their system, fail to see in it the best possible plan of the best possible state of society? ...and to realise... their... castles in the air... – ...[such as] their social Utopias... “phalansteres”... “Home Colonies”... “Little Icaria”... [and other] duo-decimo editions of the New Jerusalem – ...they are compelled to appeal to the feelings and purses of the bourgeois... They, therefore, violently oppose all political action on the part of the working class; such action, according to them, can only result from blind unbelief in the new Gospel... [However, it is] evident, that the bourgeoisie is unfit any longer to be the ruling class in society... It is unfit because it is incompetent to assure an existence to its slave within his slavery... Society can no longer live under this bourgeoisie, in other words, its existence is no longer compatible with society... What the bourgeoisie, therefore, produces, above all, is its own grave-diggers. Its fall and the victory of the proletariat are equally inevitable... In place of the old bourgeois society, with its classes and class antagonisms, we shall have an association, in which the free development of each is the condition for the free development of all... Of course... the first step in the revolution by the working class, is to raise the proletariat to the position of ruling class, to win the battle of democracy.

...Civilized communities have always employed force and violence, tempered at times by fraud, to hold their members together against the inequities that divided them. Inequity has had its historical role as well, freeing a few members of the community for larger enterprises when there was not enough to go around[, but t]he enormous forces and the violence now at the disposal of national states makes this way of organizing society and going on with history suddenly fatal. At the same time, by exercise of the same supremely human capacities that made the weapons of mass destruction, our species has brought another future into sight. Understanding and control of nature have shown how to secure enough... material goods to permit the admission of every [hu]man into full membership in [hum]ankind. - 1983

There has... been some discussion of the general issue of agents for change... Two suggestions... [are:] the potentially central role of the ‘new social movements’, such as feminism, the peace movement, gays and so on[; and]... that of the middle class as the instigators of change... [In 1986 a thesis presented] a classic formulation of the [second] position: one must of course acknowledge that the post-industrial revolution is likely to be pioneered by middle-class people. [According to that thesis the] reasons are simple: such people not only have more chance of working out where their own genuine self-interest lies, but they also have the flexibility and security to act upon such insights... If [the author of the thesis] means simply the questioning of current social and political practices and the presentation of alternatives, then the middle class clearly has a central role to play. If, however, [the author] sees the middle class as the engine of actual social change then... [the author has failed to see that the] middle classes are deeply implicated in present political practices, and in most respects their ‘self-interest’ as they perceive it lies in preserving them. Moreover, there is little sign of them being persuaded that their ‘genuine’ self-interest... lies in founding a sustainable society. A further problem with [the 1986] thesis is that it seems to fly in the face of one of [its author’s] own central maxims... ‘I do not believe that the majority of people will change until they believe it is in their own interests to do so... A reinterpretation of enlightened self-interest is therefore the key to any radical transformation’... This is a reasonable position, but the conclusion that the middle class will therefore be the pioneers contradicts one of [the author]’s earlier observations: one thing is clear[–] even if we continue to think in terms of working class and middle class, it is not the latter that has the most to worry about in terms of the current crisis. [The thesis goes on to say:] It is the middle classes that have the flexibility to weather traumatic shifts in social and economic patterns; by and large, they are not the ones to suffer most from mindless jobs, dangerous working conditions, a filthy, polluted environment, shattered communities, the exploitation of mass culture, the inhumanity of bureaucrats and the mendacity of politicians. On this reading, and taking into account [the author]’s self-interest thesis, it is the working class and not the middle class whose interest lies in shifting away from present social practices.

A fundamental transformation must occur in all areas of society. This can be achieved only by means of a movement from below, from those affected who recognize the necessity to take further developments into their own hands. - 1990

Many have criticized the Greens in the U[S] for being slow. Slow to get in there and do it. Slow to organize. Slow to develop a political message and direction. But the Greens have sought to get back to the basics of sound organizing. The more they have done this, the more they perceive the need to build from the ground up and... that the ground one stands on must be worth standing on for its own sake. This takes time... Building for a revolution, especially a revolution that is transformative and nonviolent, one that strives for internal democracy within the movement as well as external democracy in society... requires new models. These are not discovered or applied overnight... We, the revolutionaries in a new key, must learn to unite those seeming opposites, soul and calculation, spirituality and strategy, and become the Green Warriors for a new society... What we must guard against is... that our anger... [towards the rulers –] for... not only... screwing[society] up but for persisting in the policies and practices that perpetuate and intensify the crisis... [– does not] turn to hatred, which would... only... inspire them with even greater hate... that they will staunchly resist substantive transformation to the nth degree and to the end, growing rigid and ultimately stupid in the defense of their power and privilege.

...the success of the Chinese revolution [can] no longer be denied. In [a] few years, one quarter of the world population had moved on from long-arrested development in agricultural civilization into industrial revolution. Today, 20 years later, China is crossing the... industrial... threshold... and achieving status as a world power in fact... The success of the revolution must be attributed in no small part to the homogeneity of the Chinese people. On a subcontinent the size of the [US]... a billion people speak the same language and share the same 5000-year history of high civilization. This is in contrast to the diversity of language, history, and culture in Europe... Further, in contrast to other... countries awaiting the industrial revolution, China had a large cosmopolitan urban population, a source of leadership in the minor nobility of the Mandarin civil service... and... a substantial cadre of [European or US]-educated intellectuals... It was to them that Mao Zedong addressed his injunction: "Serve the people!" Under firmly imposed economic and social equality, the political revolution entrained the old order in industrial revolution. The people to be served were the villagers. It was no doubt lucky for the course of the Chinese revolution that its urban intellectual[s]... had to share the hard life of the peasants... [But] the... revolution in the villages was not bloodless. Landowners and moneylenders were lynched by their fellow villagers... Stalin's troops had massacred muzhiks and kulaks alike, and the word *mir*, in its meaning of village, was erased from Soviet vocabulary[, but the] Chinese revolution preserved the village and... villagers compelled the regime to back off its promotion of such extremes of collectivism as communal cooking, dining, and child rearing... The Chinese farmer... embrace[d] the new technology supplied from the center and proceeded to produce the agricultural surplus that made possible the... industrial revolution. Increase in the production of food proceeded steadily (except in 1959)... In 1959, a bad farming season... and the distractions of Mao's "great leap forward," which enlisted 90 million villagers in [stupid] industrial enterprises... such... as the building of back-yard blast furnaces, brought on a famine in which as many as 20 million people may have perished. - 1992

China's revolution had been a two-stage one. The first stage had been a democratic revolution which triumphed with the establishment of the People's Republic in 1949, after 30 years of war and civil war. Right from the beginning Mao had proclaimed (and continued to proclaim) that when the first stage had been completed the revolution would be continued into the second, socialist stage. Because of the correct strategy and tactics followed under Mao's leadership, the... stage turned out to be shorter than anticipated, the basic socialist ownership of the means of production being completed by 1957. In fact, in 1952, Stalin, who had earlier been suspicious of the Chinese revolution, declared in his pamphlet: 'Economic Problems of Socialism in the USSR,' that China was a socialist country. And while the socialist camp lasted that view was held by all the socialist countries. But it became evident to Mao that in China a new revisionist grouping existed in the Party and state, and [Mao] became increasingly concerned that it might usurp power in China as in Russia... [– where], even in Stalin's time, a new bourgeoisie had been growing... comprised of highly-paid bureaucrats, managers of state enterprises, professional people divorced from the masses, and a labour aristocracy based on excessive incentive payments[(t)his privileged stratum constituted the social basis of Khrushchev and his revisionist clique() –] ...and restore capitalism there. [Mao] launched the Cultural Revolution in China in the mid-sixties with the aim of rearing a whole generation of Marxist-Leninists who would bar the road to revisionism. This Cultural Revolution was a vast, turbulent movement which eventually involved the great mass of the Chinese people, though beginning with the youth. After great difficulties this movement enabled the exposure and defeat of the revisionist bloc within the Party, but... I don't agree with... claims that Mao made no mistakes, that the Cultural Revolution was an unqualified success... [T]he Cultural Revolution did not achieve its object... While a form of working-class power was established after the Cultural Revolution, its leaders lacked experience, made mistakes, and this together with the reaction against the upheavals during the Cultural Revolution enabled Hua Guo-feng to manoeuvre his way to power through a coup d-etat against the so-called 'gang of four.' H[ua] was soon joined by Deng Xiaoping who quickly ousted Hua and seized power himself... In refuting Khrushchevism, Mao pointed to the importance of the contradiction between the imperialist world and the oppressed peoples as being more and more important in the scheme of things... Of course, China never claimed to have *completed* building socialism. Mao pointed out often that the struggle between the socialist road and the capitalist road would last a very long time before it was decided – perhaps one or two hundred years... [W]orld... control and power... [is currently] headed by US imperialism. But it doesn't alter the fact that imperialism is... a system in decay. That means that new revolutionary forces are *certain* to arise... Lenin once wrote an article not long after W[W]I entitled 'Backward Europe and Advanced Asia'. By this [Lenin] meant that revolution had begun to make great strides in the Asian world and there were many signs that there were going to be new... revolutions which would have very different characteristics from the revolutions that had hitherto been the only ones considered, namely in Europe. We are facing a situation today where in fact the centre of world revolution is not Europe. It's quite obvious that revolution in Europe is at a low ebb. What we see is a predominance of revisionism and opportunism where there still exists some sort of labour movement... The main revolutionary movements of today are... in the [Last W]orld... and... as the crisis develops and the imperialists twist the arms of the [Last W]orld countries through the IMF and the World Bank, they will move the masses closer to revolution... Of course, when I am referring to the revolutionary developments in the [Last W]orld, I don't mean that that is a separate part of the world revolution. No, it is a definite part of the world proletarian revolution which will in due course link up with the revolutions in the [First World] countries as they too develop because once the supply of superprofits from exploitation of the dependent countries in the [Last W]orld... diminishes so will the ability of the imperialists to maintain themselves in power in the major [First World] countries and they will be compelled to force down the living standards of the mass of the [ir own] workers. That will mean that there will be growing resistance that will eventually culminate in [the worldwide proletarian] revolution. - 1993

...the Resistance is... meeting in secret locations... away from the eyes of oppressors... the message is perfectly clear... now is the time for action cause actions speak louder than words...

...rise Aborigine... rise African rise native tribes off[North] America... rise South America... original people of the land... rise against materialism [and] capitalism take what is rightfully yours...

Thousands of hippies, punks, communists and middle-class leftists ended a conference in the Mexican jungle at the weekend pledging to support their... hosts and reviling corporate America. From more than 40 countries as diverse as France, Japan and Iran, supporters of the Mayan Indian rebels converged on [an] impoverished village in the remote southern Lacandon rain forests for the Zapatistas' Conference for Humanity and

Against Neoliberalism. The conference ended with the 2000 or so participants pledging to help one another fight the world's prevailing free-market economic policies, resist the International Monetary Fund and spread the Zapatista gospel of Indian autonomy through modern channels like the Internet. The rebels' leader... described the event as a meeting for the world's disfranchised, those left behind in capitalism's unforgiving search for profit. - 1996

Indians find salvation in return to their tradition Working amid cars and pickup trucks glinting in the evening sun... a soft-spoken 28-year-old from Alberta's Blackfoot Indian Reserve... pieced together the brightly coloured fabric, beads and feathers of his ceremonial Indian dancing costume... [The 28-year-old] was transforming himself into an explosion of red, yellow and black to dance at the opening of this year's Buffalo Days Powwow at Head-Smashed-In Buffalo Jump, 175km south of Calgary. Taking a break from the laborious process, [the 28-year-old] said his return to ancient traditions was his salvation from poverty and alcoholism, which have long plagued Canadian Indian youth... "One of the reasons I come to this powwow is it is a big tourist attraction," [the 28-year-old] said before the brightly coloured dancers padded their way into the opening ceremonies. "It helps the world... [to] have awareness of the native tradition here." ...Indian drummers and dancers of all ages from Alberta, British Columbia and Saskatchewan provinces and Montana across the US border gathered for the weekend to compete for prize money and pay homage to their ancestors on a stage surrounded by pine boughs and painted teepees. Alcohol was forbidden... That is not surprising given the site, which is sacred to the region's native population. Head-Smashed-In Buffalo Jump, where Alberta prairie meets rolling Rocky Mountains foothills, is one of the last and best-preserved of several buffalo killing cliffs used by Plains Indians for about 5000 years... Today, the cliff - minus the buffalo herds since the late 1870s, when European settlers and sport hunters almost brought the huge North American bison to extinction - is designated as a World Heritage Site by the U[N] Educational, Scientific and Cultural Organisation... The customs have spread beyond North America. Conspicuous among Indians readying the site for the evening spectacle was... a 30-year-old German from Berlin who had lived on the Peigan Reserve for a month... [A] house renovator who was attired in homemade buckskin clothes, [the 30-year-old] is one of thousands of Germans who have embraced Indian customs and spirituality in an attempt to get back to the land. The spread of ancient customs beyond the reservations was seen as positive amid social ills and tension pitting the tribes against Canada's majority population and its Government. That tension, over such issues as land claims and the right to self-government, has exploded into violence in the past few years, with recent armed standoffs occurring at Gustafsen Lake, in British Columbia, and Ipperwash, Ontario.

...The Canadian military dishonoured its proud legacy by torturing and killing civilians during a peacekeeping mission in Somalia in the early 1990s according to an independent commission of inquiry. The inquiry's damning report on the 1992-1993 mission also accuses the Government of trying to cover up the atrocities... On March 4, 1993, Canadian soldiers worried about looters shot two unarmed Somalis in the back as they fled, killing one of them. Twelve days later they tortured to death a 16-year-old Somali boy named Shidane Arone. The commission found excessive force was used in the shooting incident and that it was immediately covered up by the Defence Headquarters in Ottawa... The incidents and their immediate aftermath, which are known in Canada as the "Somali Affair," occurred under a Conservative Government, which was defeated in a 1993 election... Impugning the reputation of officers right to the top of the military chain of command, the three-[perso]n commission welcomed the fact that many senior officers had left Canada's armed forces and suggested that others consider resigning. "It's time for a new leadership to emerge in the Department of National Defence and the Canadian Forces and it is time for that new leadership to carry the forces in a new direction,"...

The only force that can and should change N[Z]'s economic and social direction is the organised force of the people themselves.

...Two armoured personnel carriers rolled into place in the siege of the Texas secessionists as their leader's lawyer warned of another Waco if officers move in for an arrest. "There's the potential for a lot of killing and that's what we want to stop," said... the lawyer for... the self-proclaimed ambassador of the Republic of Texas. [The ambassador] and 12 followers have been holed up in the rugged Davis Mountains since Sunday, when they took two neighbours hostage in retaliation for the arrest of two followers. They released both hostages on Monday in exchange for one of the jailed comrades, who had been arrested on weapons charges. The armoured personnel carriers[, which] arrived from Tyler, 473km across the state... joined nearly 100 state and federal officers at the standoff... The group has demanded the release of the other jailed follower, a [gal] arrested on contempt charges. [The ambassador] has also demanded a state referendum on independence for Texas... Government agents were locked in a 51-day standoff with the Branch Davidians cult near Waco before launching an assault that ended in a fire in 1993. Cult leader David Koresh and about 80 followers died.

...SHOW OF UNITY[Yesterday] marchers protesting against the torture of a Haitian immigrant - allegedly at the hands of police - descend[ed] on a New York City plaza during a Day of Outrage Against Police Brutality and Harassment. Four officers have since been charged...

WHEN JEAN BERNARD CHARLES was shoved to the ground in handcuffs four months ago in Port-au-Prince and shot to death by four Haitian police officers for no apparent reason, his family's troubles were just beginning. They complained that Haiti's police should not be in the business of murdering civilians. This, they quickly discovered, was a mistake. First came the warnings: if the relatives didn't shut up, they might suffer the same fate. Then came the threats: one afternoon a few officers caught up with Charles' cousin and said [the cousin] was going to be arrested. When [the cousin] fled, they shot at him. Fearing for their lives, Charles' cousin and brother finally did what many Haitians are doing these days when they find themselves abused, tortured or terrorized by the police. They paid a visit to the offices of... the Human Rights Fund. The group offers a number of services, including a special protection program for people... savaged by police officers whom the U.S. recruited, trained and turned loose on the streets of Haiti in July 1995. Of course, this does not come cheap. But fortunately there is a ready source of cash. That's because, like the officers who commit these crimes, the program to shelter their victims is funded by U.S. tax dollars. Up until now this program remained a closely held secret within the community of [U.S.] and U.N. officials who administer Haiti's billion-dollar reconstruction effort... "It's sad," an... official told TIME. "Here's a force we invested \$65 million in, and from the same account, we're now using money to protect people from it." This is certainly not what the [U.S.] Administration had in mind in September 1994 when the U.S. military invaded Haiti to reinstate the country's first freely elected President... Shortly after [the Haitian President]'s return, the U.S. created the first civilian police force in Haitian history. It was to be the cornerstone of Haiti's new democracy. With trustworthy police, U.S. officials predicted, Haiti could finally begin to deconstruct its dictatorship, reconstruct its economy and build from scratch all the judicial, political and civil institutions necessary for a working democracy. Unfortunately, the timetable for this impressive goal was rather tight. At the time, there was immense pressure in the U.S. to pull out the 21,000 [U.S.] soldiers as swiftly as possible. When it was decided that most of those troops would leave by March 1995, the schedule for assembling the police force had to be compressed accordingly. So after only four months of training (rather than the 12 months that experts had recommended), 5,000 ill-equipped rookie cadets were deployed. Looking back, a U.S. official sums up that approach as follows: "We were stupid." It didn't take long for trouble to surface among a number of the new officers. Their behavior ranged from the sadistic (beating a prisoner to death and dumping his body in a latrine) to the idiotic (blindly firing after a car and killing a seven-year-old girl)... Last month a Human Rights Watch/Americas report... indicated that the police have slain at least 46 people in the past two years, and... almost none of those killings could be remotely construed as a legitimate use of deadly force. In one notorious example, on Nov. 5, 1996, police shot and killed five [guys] on a busy downtown street. One of the victims was in handcuffs... [I]n the spring of 1996... U.S. officials... started casting about for a way to protect [civilians]... The solution was the H[RF]. The... group has paid for the funerals of 11 people killed by the police in the past seven months and for the

medical care of another 60 who were beaten or wounded. The fund has also enabled witnesses to disappear quietly by providing them with safe houses, legal aid and a stipend for living. Sometimes, however, this protection is not enough. Shortly after one of... Charles' relatives moved into a safe house that the H[RF] had rented for him, four [guys] forced him into a white Nissan pickup truck (the same type of vehicle driven by the Haitian National Police). They took him to... a remote field where the former military used to torture people. There... [they] broke both his knees and razored his back. When officials of the H[RF] arrived at work on Monday morning, the [cousin] was slumped on the front steps. One ear was hanging from the side of his face... U.S. officials admit that the police have serious problems, but they insist the Haitian government is taking corrective measures... "If you look at the overall situation... they have made progress." Perhaps. But [at least one citizen] might take issue with that statement. Early last month, [the citizen] took part in a demonstration in which 150 people, many carrying candles, marched in front of the National Palace to protest Haiti's economic problems. It was more of a vigil than a demonstration, but despite the peaceful nature of the gathering, a Haitian police officer fired a "Flashbang" grenade at the protesters. When the canister exploded, it blew off [the citizen]'s right hand... Three weeks later, a bandage still covers the stump at the end of his wrist. "I'm trying to learn to write with my left hand now... I'll have a second surgery in a few weeks, and then I'm going to try to get a prosthesis." [U.S. officials told him] they would like to cover the cost. Angry at the police and their sponsors, [the citizen] refused the offer.

...It is 6 am in the Constitution railway station and a long-haired teenager on his way home from a nightclub has just been shot and killed by a drunk. The killer takes refuge on a train and is surrounded by police. "Cool it, I'm a cop," [the killer] shouts, flashing a badge... The story is told by... a lawyer for pressure group Coordination Against Police and Institutional Violence, set up to document illegal killings by police since democracy was restored in Argentina in 1983. Amnesty International has documented "dozens of murders by police in circumstances indicating extra-judicial executions," and human rights lawyers at the Centre for Legal and Social Studies list 153 fatal victims of police violence in greater Buenos Aires alone last year... Four officers were indicted for a 1994 anti-Jewish bomb attack that killed 86, entire drug and fraud squads were sent down for extortion and drugs, and newspapers were full of beatings, rapes... and... torture... by the boys in blue... Crime by police has become so endemic it has spawned a new genre in journalism among crime reporters no longer able to distinguish the cops from the robbers. It is no surprise that opinion polls show... 90[%] of Argentinians have little or no faith in... Argentina's largest security force... The 47,000 members of the... Buenos Aires Province Police... force, which is larger even than the army... [and] far outnumbers the 31,000-strong Federal Police... are under orders to carry their revolvers even off duty... The new Security Secretary... said the province has purged 1000 officers from the ranks this year and at least 100 more will follow. When [the secretary] set up a police complaints hotline... it could not cope with the influx of calls and collapsed in 48 hours. One of his first jobs will be to review a police code drawn up by the late Police Chief Ramon Camps, an infamous figure of the 1976-1983 military junta's "Dirty War" in which thousands of people, possibly tens of thousands, were killed... [Camps was] convicted of 214 kidnaps, 120 torture cases, 32 murders, two rapes, two abortions provoked by torture, 18 robberies and 10 child kidnappings... Surprisingly, the police's best friend may be... a 56-year-old lawyer... [who] organises human rights training for police who... are desperate to improve their appalling public image. "They can't bear their reputation and being criticised even by their own kids. If society attacks the police... and only thinks about how to put them in jail, what sort of police force will we have? Can we have a state without police?" ...[In related news, f]ive ex-police[officers] have asked South Africa's Truth and Reconciliation Commission for amnesty in connection with the 1977 death of black consciousness leader Steve Biko. Immortalised in the Hollywood film *Cry Freedom*, Biko died after being savagely beaten and then transported unconscious 1000km in a police Land-Rover.

...Former South African security police officers... [- including a] Colonel... and... a... Lieutenant Colonel... [-] have confessed to killing leading anti-apartheid activist Steve Biko in 1977, the country's Truth and Reconciliation Commission said last night... Biko led South Africa's black consciousness movement and died in police detention a month after being arrested in the Eastern Cape city of Port Elizabeth... on the Indian Ocean coast... His family say they do not want amnesty for his killers, but justice. Biko became a martyr for black South Africans and for anti-apartheid activists around the world... Biko, aged 30, died on September 12, 1977. [Biko] had... apparently... been... beaten... At his funeral, pictures of his battered body were widely distributed and later published around the world. [Biko] came to symbolise the victims of apartheid brutality... "It was a great tragedy that [Steve] was killed, but his death had enormous impact overseas,"... said... a white former newspaper editor whose friendship with Biko was depicted in the 1987 British film *Cry Freedom*... Soon after, the U[S] imposed an oil and arms embargo on South Africa... No one was convicted in Biko's death, although an inquest concluded [Biko] probably had received fatal head injuries while being questioned by police. - 1997

September '77... it was business as usual in police room 619... you can blow out a candle but you can't blow out a fire... the eyes of the world are watching now... for all those still being tortured... and... for all prisoners of conscience... - Biko

South Africa's... Truth and Reconciliation Commission... has rejected amnesty for four former security police[officers] involved in the death in custody of Black Consciousness leader Steve Biko in 1977. The... commission... said the police appeared to have attacked Biko out of "ill-will or spite," and had not testified truthfully.

...A British police weapon smashes down on N[Z] teacher Blair Peach's head. His skull is severely fractured. In four hours [Peach] will be dead. The police's Special Patrol Group had charged at Peach during a Southall, west London, protest on April 23, 1979. An inquest ruled it "death by misadventure". Police never accepted liability, although they did reportedly pay his family \$75,000 in 1988. Now, under New Labour, his... 53-year-old... widow... has launched a campaign to get access to still-secret police comments on the case and to meet [the British]Home Secretary... who as a young MP backed a call for a public inquiry into the death. [The Home Secretary] has previously met the families of three death-by-misadventure victims. In two re-opened cases, police investigations were found to be lacking. Victoria University graduate Peach, then 23, moved to London for his OE[, and] immediately found work at Phoenix School in east London. [Peach] taught disadvantaged children to read... said [his widow], a social worker in north London. Together they helped found the Anti-Nazi League in 1976 and were prominent campaigners. Even as a schoolboy growing up in Napier, Peach abhorred racism and had written for his school magazine on Maori rights. [His widow] says: "The National Front set up its HQ in Hackney and we were very involved in a successful campaign to close it." Then came a National Front election meeting in Southall, the traditional heart of London's Indian community... [P]rotesters were met by 2750 police officers who had sealed off much of the area. As they dispersed, hundreds of protesters were arrested and attacked. Forced down a side street, Peach suffered head injuries following a charge by the... SPG... An Indian family took him into their home and called an ambulance. A single blow had fractured his skull and caused severe internal bleeding. During an emergency operation, half a pint of blood was drained and pieces of bone removed, but [Blair] died on the table. Medical evidence said the weapon involved was either a weighted rubber cosh, a police radio or a truncheon. Afterwards, police closed ranks... "They said [Blair had] been hit by mistake by other protesters. Not until the inquest did we get real information." That inquest began in November 1979, but was adjourned because the judge did not want to call a jury. In a precedent-setting decision, the High Court ruled juries must be called in all suspicious death circumstances. By the time of the 1980 inquest, [a]... police investigation had narrowed the person who struck the killer blow to six officers. The *Sunday Times* named them... And SPG members' lockers had been raided, netting a haul of illegal weapons. They also reportedly found a homemade leather cosh, which fitted the description of a possible killer weapon. Yet nobody has ever been charged or

disciplined for Peach's death... [(b)etween 1969 and 1999, over 1000 people died in police custody in England[; n]ot one police officer has ever been convicted of any of these deaths[), and]... it seems unlikely the police will ever own up... Despite pressure for a public inquiry, the government refused. So the Council for Civil Liberties put together a prominent panel, headed by an Oxford University professor, which... decided: "At least one police witness is untrustworthy." ...Eleven [civilian] witnesses gave evidence... [that police] appeared to have attacked stragglers and innocent bystanders in a vindictive way... Peach's legacy lives on in several forms. A school, in Southall, [h]as been named after him, despite local Conservative attempts to change it. An organisation called Inquest was started... It deals with suspicious deaths in police, and other Government body, custody. Last year it looked at 303 cases. A 20th anniversary committee is planning various activities, including an education conference, Blair Peach Lives! ...a concert... and... a demonstration that hopes to pass the site of his killing. The actual anniversary... has been declared by the committee to be Blair Peach Day, "when the meaning of Blair Peach's teaching will be remembered and practised in schools across the country." But it will be up to [the Home Secretary] to decide Peach's real legacy: whether London's Metropolitan Police are willing to face the fact they have blood on their hands.

...the Special Patrol them a murderer... we can't let them get no furtherer Them kill the teacher... the dirty bleeders Blair Peach was not an English[perso]n Him come from N[Z, where police] wouldn't kill a[n unarmed citizen for protesting against racism (although they probably came close during 1981; some 'clowns got \$10,000 for a beating – but what did the police officer get who was isolated and beaten to death in a separate incident – the grateful thanks of the Rugby Union?; the press went to great pains to try to identify the Red Squad but how much effort went into trying to trace a police killer? TV journalism is very biased sometimes')])... All ye people of England great injustices are committed upon this land How long will you permit them to carry on Is England becoming a fascist state? The answer lies at your own gate and in the answer lies your fate.

Governments assert that armies are chiefly needed for external defence, but that is not true. They are needed first of all against their own subjects... 'State violence can only cease when there are no more bad [people] in society,' say the champions of the existing order of things, meaning that since there will always be bad [people], violence can never cease. And that would be correct if what they assume were true, namely, that the oppressors are always the better people and that the only means of delivering... humanity... from evil is by violence. Then indeed violence could never cease. But as, on the contrary, it is not the better who do violence to the worse, but the worse who do violence to the better, and as there is another means of putting an end to evil besides violence, which never puts an end to it, the assertion that violence can never cease is incorrect. The use of violence grows less and less and evidently must eventually disappear, but not (as some champions of the existing order imagine) by the oppressed becoming better and better under the influence of government (on the contrary that influence only makes them worse) but because as [people] in general constantly tend to improve, so even the worse people who are in power will become less and less wicked – and the last so good that they will become incapable of using violence... If some people say that freedom from violence or at least a diminution of it, can be gained by the oppressed forcibly overthrowing the oppressing government and replacing it by a new one which will have no need to employ such violence and such enslavement, and if some people try to do this, they only deceive themselves and others and make the position no better but rather worse. Such people's activity only increases the despotism of the governments. Their attempts at emancipation only afford a convenient pretext for the governments to intensify their power. Even if... as in France in 1870, a government may be forcibly overthrown and the power transferred into other hands, the new authority would be no less oppressive than the former: on the contrary – defending itself from all its dispossessed and exasperated enemies – it would be more despotic... Other [people] would be enslaved and... the violence and oppression would be the same or even more cruel, since hatred of one another would be increased by the struggle, and intensified forms of oppression would have to be devised. This has been the case after all revolutions, all attempts at revolution, all conspiracies and all forcible changes of government. Every conflict merely strengthens the means of oppression in the hands of those who for the time being are in power.

If tools such as the Internet are taken into consideration, and the suggestion that the poor and oppressed are incapable of *replacing the current system with a new one which will have no need to employ violence and enslavement* is ignored, it is possible that the poor and oppressed majority could organise their superior numbers to defeat the rich and ruling minority (and their legalised terrorist organisations – the politically-sanctioned, taxpayer-funded, police and armed forces) in a worldwide war. Unfortunately, the problem with large-scale wars is that they not only tend to create suffering and death on both sides, but they can seriously damage infrastructure, which can affect the ability of the post-war society to function. The potential for damage to food supply, health and utility services, and loss of skilled workers, etc., caused by a potential WW3 – even an non-nuclear confrontation – could backfire on the poor and oppressed (i.e., the world that they win control off might not be worth having, and the people at the very bottom of society – the poor and oppressed of the Last World – are likely to end up being hurt the most if it takes a while to rebuild the infrastructure). The poor and oppressed from the Last World may feel like they have nothing to lose and everything to gain from creating a moneyless society (i.e., they already hurt the most, so can't comprehend things getting any worse; they mostly already live in a semi-moneyless environment, so changing to a completely moneyless society would be a small step for them) – and they largely lack adequate infrastructure anyway – so they may be prepared to risk their future. However, the poor and oppressed living in First World countries not only constitute less of a majority, and maybe a minority in some of them, but they might be less willing to risk what they have already in the hope of gaining a better society for themselves, or at least for their children (i.e., many could be expected to believe that they personally have nothing to lose and everything to gain by maintaining the economic system). This suggestion appears to be supported by contemporary Maoris, Aborigines, and native American Indians, whose ancestors operated generally successful moneyless societies up until a century or two ago, yet the descendants seem more interested in gaining ownership of land and marketing the materialistic aspects of their traditional culture to tourists or casino punters than promoting a viable alternative to the economic system! But, as with children, and gals collectively, it isn't the *responsibility* of the poor to ensure that the means of fixing society is instigated.

4: THE LEADERS?

The Master said, Only if the right sort of people had charge of a country for a hundred years would it become really possible to stop cruelty and do away with slaughter... "Promote [citizens] of superior capacity." Jan Yung said, How does one know a [citizen] of superior capacity, in order to promote him? The Master said, Promote those you know, and those whom you do not know other people will certainly not neglect. - Lun Yu

The Master said, Govern the people by regulations, keep order among them by chastisements, and they will flee from you, and lose all self-respect. Govern them by moral force, keep order among them by ritual and they will keep their self-respect and come to you of their own accord. - The Analects of Confucius

Laws are a means of government. But only to a limited degree do they bring results... Example is better than law. For where the laws govern, the people are shameless in avoiding punishment. But when example governs, the people have a sense of shame and improve. - Confucius (translated)

"Generally people desire their personal good. A few desire the good of their own people. But only the servants of God desire the good of every one." The servants of God cannot subscribe to the politics of this or that party. Certainly theirs is not the politics which makes for disunity and dissipation of energy. They have their own kind of politics... meant for uniting and strengthening all. Th[e]... stage is now being set for the rule of all by all... [which doesn't] mean voting rights for all, but a sincere co-operation emanating from the unity of hearts. The age is approaching when the truth, "One in all and all in one", will rule the world. If we put ourselves on its side, we will share the credit... If not, it will come in spite of us.

An ingrained myth from the past, aided and abetted by generations of modern liberal scholars, journalists and politicians, has it that government by the people means that every person, no matter who, must be involved in public affairs on a steady basis. Failing that, there must be something wrong with government by the people. The early democratic theorists tended to think of it in those terms. Their critics, who called themselves revisionists, also thought of it in similar terms, thinking that therefore we should settle for some retrenchment of democracy. And the critics of these critics, in turn, the anti-revisionists and protagonists for a full participatory democracy, have also thought of it in these terms. The equation of "real" democracy with perpetual participation by all is now a kind of conventional wisdom among liberal-minded scholars and large numbers of the attentive public. The conventional wisdom does not ask the decisive practical question: if everybody is working at politics all or most of the time, when will the work of the family, the school and the productive economy be done, and who will do it? In other words, politics not only appeals to a relatively small number in the general population, but politics is also to some important degree a specialized activity. Just as any of the professions, such as parenting or teaching or engineering or running a business.

Some tasks are basic enough to be performed by all able-bodied and able-minded humans (e.g., street-sweeping, farm labouring), while others are only able to be performed by people who have particular skills or training (e.g., designing bridges, medical surgery). A surgeon could be expected to cope with being forced to assist on a farm at a moment's notice, but a farm labourer would not be expected to satisfactorily cope with suddenly being forced to perform a heart transplant. Neither the surgeon nor the farm labourer should be expected to simultaneously perform their own work and the task of leading society (i.e., having the final say regarding important decisions that concern every member of the society, and ensuring that the important decisions are implemented – which includes directing the tasks of other workers). For this reason at least one member of a society is chosen to perform the task of being leader, thereby freeing itself from other tasks, and enabling other workers to perform their tasks minus the added burden of leadership. Therefore, in theory, leaders are supposed to serve the best interests of the majority of their society's members. If the leaders of every late-20th century country were interested in what is best for the majority of their fellow citizens, and in proving themselves to be worthy of the title LEADER, all of them ought to be interested in creating a moneyless society. Unfortunately, the majority of the leaders of late-20th century societies serve only themselves and a minority of their society's members. Furthermore, many contemporary leaders weren't even selected by the members of their society (e.g., they inherited leadership; they forced themselves into the position of leader). The lack of suitable leaders is, however, not the major problem facing late-20th century society. The major problem is lack of unity among humans on a worldwide basis. Human society is currently divided into about 200 countries. Some of these countries have effectively existed as a united society for thousands of years (e.g., China, Greece, Egypt), while others are relatively new (e.g., USA, AUS, NZ). Some can be called NATURAL countries because they are completely cut off from others by water (e.g., AUS, NZ), while others can be called UNNATURAL because they share the same land mass but are divided by artificial borders. Yet, despite sharing the same land mass, the same ancestry, the same planet and often the same language or religion, the members of such countries generally consider themselves to be different to the people who live outside their borders. Indeed, many have considered themselves different enough to go to war with their national neighbours!

...Imagine there's no countries It isn't hard to do Nothing to kill or die for and no religion too Imagine all the people living life in peace... Imagine[having] no possessions I wonder if you can No need for greed or hunger A brotherhood... sharing all the world... You may say I'm a dreamer but I'm not the only one I hope some day you'll join us and the world will be as one... - John Lennon

On the day when we can fully trust each other there will be peace on Earth.

...we[']ve got to get... together sooner or later because the revolution's here and you know that it's right...

...gather in together... every creed... build a world... in union a world as one as it's time to reach our destiny a new way has begun... it's a victory for all...

Our job is only beginning, for now we have to put the world in order. It will be a long and complicated struggle, but we have the unity of a common cause and a common knowledge.

In the beginning there were two hemispheres. Now there's only one[sphere].

Egypt has been aptly described as a land having length but not breadth. The description is not quite accurate, because the Delta area is certainly extensive; but south of Cairo, Egypt really consists of two strips of irrigable land on either bank of the Nile, with the desert stretching away on either side. The land consequently divides into two distinctive parts: Lower Egypt, comprising the delta area, and Upper Egypt, formed by the long narrow Nile valley. The fertility of the land depends absolutely upon the annual flooding of the Nile and the careful control and conservation of its life-giving waters. This entails the construction and maintenance of elaborate irrigation works. Consequently a strong centralized government, uniting Upper and Lower Egypt under one rule and able to direct the country's labour resources, has always been essential to the economic and social well-being of the people. Such a government was first established about 3000 BC by princes of This, in Upper Egypt, and the achievement was so important that the Egyptians looked back on this union of Upper and Lower Egypt as the starting point of their national life.

When humanity was in its infancy there were no countries – and Earth's artificial international borders can't be seen from outer space – so creating a united human world isn't just advisable, it's logical.

Pictures of the Earth from space... have had a powerful effect in promoting the idea of the planet as a single system... - Changing face of Earth

When [a human first] walked on the moon and looked upon the world, what [it] saw was oneness. 'Earth rise' was an image of unity; and now satellites daily confirm how small and vulnerable, but essentially how whole, the planet is – how the clouds and storms and gases that assail it take

no notice of the separateness we sustain below, almost in defiance of nature. This wholeness of our global society must be, I believe, the dominant assumption of future political realities, whether or not it finds expression in the kind of formal relationships that show up on the political maps. Even today, in our politically disparate world of customs ports and passports, a frontier is increasingly an expression of contiguity no less than of separation; borders are crossed by trade, by transport, and above all by people, playing their part in the ever deepening process of human integration. [One writer] reminded us that 'Heaven gives its glimpses only to those not in a position to look too close'. Perhaps Earth-bound [people are] too close to discern [their] oneness. We talk of 'balkanization' in pejorative terms – the axiomatic nonsense of a fragmented society, but we live with a 'balkanized' world that so contradicts the glimpse from space. Yet there are glimpses of our one world here in our confused present. We have lived for so long in a world of separate worlds that we find it hard to admit, sometimes even to recognize, the oneness of our world. Over the millennia, our separatism fed on differences of tribe and race, of language and religion; it fed on division of class; it fed on human aggrandisement and lust for power; it fed on an adversary system which our model of the nation state moulded and our concept of sovereignty sustained. It might almost be said that separatism, disunity, antipathy even, was [humanity]'s natural condition. And yet, over the centuries, we have been moving away from our primitive instincts, our loyalties evolving from family to tribe to nation to region – always towards a sense of oneness, an awareness of belonging to steadily enlarging groups... Interdependence is not new. What is new is the intensity and variety of the economic relationships that have emerged... and the actual recognition, in many quarters, of the elements of mutual interest in them. And what is new, as a result, is that we have lost the option of ignoring our interdependent state – of ignoring the reality that we have become one world. All this is a positive gain. That the world has become more interdependent must not be seen as a process of decline and fall. It should be a source of reassurance as we contemplate the political map of the future and the future of the world. Responsive to the practicalities of interdependence, we must move from a system of international relations characterized by reliance on force and fear to one based on co-operation and mutual benefit. In doing so we will almost certainly find that we have also moved towards a more peaceful world, not because we have avoided conflict, but because the realities of interdependence... provide incentives for the resolution of conflict otherwise than by return to force and threat. How palpable today those mutual needs! How obvious the need for a global coalition of survival to rescue our world society – our one society – from collapsing into economic chaos or sliding to self-destruction!

The world's people know that the human race is able to do better; they are conscious that there must be higher purposes and nobler pursuits to which societies must aim; from whatever regions they come they are looking for a vision of the future that they can share in good conscience with the rest of the human race... As the concept of the one world comes to signify more clearly a single human community rather than a coterie of states, we shall better understand the need to trim the edges of sovereignty, to move away from an adversary system of international politics... These perceptions must begin to inform our conduct, for, in the end, human interdependence is not a matter of dialects, but of destiny.

Historically, human development can be viewed as many local experiments at creating social orders of many varieties but usually based on partial concepts; i.e., the social orders worked for *some* people, at the expense of *other* people, and were based on the exploitation of nature. Furthermore, they worked in the *short* term but appear to have failed in the *long* term... [A]ll experiments of local and partial human development based on these short-term exploitations, have been failures in one way or another when seen in a planetary perspective. Today, we know that such societies are impossible to maintain and that the destabilization on which they have built themselves are now affecting their internal governmental stability and the global stability of the planet... Increasingly, we see the denouement of the nation-state as a viable unit of governance; becoming too big for the small problems of its own local populations and at the same time too small for the big problems of global relations and ecosystems... [A]n editorial... in the *New York Times* (January 12, 1980) entitled "The World's Hidden Leaders." ...quoted [the] French President... "We are living through one of those periods when world balance depends on the level-headedness of a few [people]," and added that we do not even know who those... [few people are. However, the editorial] does not question... the basic paradigm: that it is indeed *possible* for one [hu]man to be "in charge" of any of these complex multidimensional societies and ever-more-interactive global situations. Our common sense tells us that the whole concept is untenable and an illusion. Yet the illusion is embraced beyond reason by most "leaders" and "decision makers"... A new type of planetary coalition... based on agreed-upon global principles and uniformity of constraint... must emerge to undergrid the pervasive aspirations in [First and Last] World countries for the new world order: composed of all people tyrannized by monetization and other arbitrary definitions of political boundaries.

If... there is no commonly held image of what is worth striving for, our society will lack both motivation and direction.

Kant believe[d] that there should be a world state in which everyone can participate, and a system of international law regulating relationships between various nations or states.

The attitude of... those who see a means of escape from wars in international diplomatic measures, is very well expressed in the report of the last Peace Congress in London... that appeared in No. 8 of the *Revue des Revues* for 1891... [H]aving collected letters and opinions from learned [people] all over the world, the Congress... arrived at the following resolution...: '...The Congress affirms its belief that the brotherhood of [humanity] involves as a necessary consequence a brotherhood of nations in which the interests of all are acknowledged to be identical... The Congress proposes to the Inter-Parliamentary Conference that the utmost support should be given to every project for the unification of weights... measures... and telegraphic arrangements, &c., which would assist in constituting a commercial, industrial, and scientific union of the peoples. - Tolstoy

Tolstoy flatly denied the "moral imperative" of nations and nationality. Citizenship, [Tolstoy] said, was in modern times so mixed an idea – invoked by so many interest groups – and was so much the product of manipulative propaganda, that "being French" or "being Russian" could not mean any value worth living by. Patriotism and citizenship [Tolstoy] considered an ideology of slavery, fostered by governments and facilitated by newspapers. But public opinion, which supported governments, could also destroy them. Let one [hu]man begin to speak the truth, said Tolstoy, and all the opposition would melt away. Even more aggressively, in the following year, 1896, [Tolstoy] wrote "Patriotism or Peace?" ...Nowadays, [the essay] said, patriotism could not be counted as a virtue. It had been useful in the past to weld groups of [people] into states, but now that work was done. Tolstoy's essay... admitted that the patriotism of an enslaved nation (like Poland then, India in Gandhi's time, our own contemporary equivalents) is more pardonable, although still an evil.

"...national consciousness... means... a contribution by every individual to a definite constructive national work[," wrote Gandhi]... "The better mind of the world desires today not absolutely independent states warring one against another, but a federation of friendly interdependent states... Interdependence is and ought to be as much the ideal of [humanity] as self-sufficiency. [A hu]man is a social being. Without interrelation with society [it] cannot realize its oneness with the universe or suppress his egotism... Real disarmament cannot come unless the nations of the world cease to exploit one another... If there were no greed, there would be no occasion for armaments... In this age of democracy, in this age of

awakening of the poorest of the poor, you can redeliver this message with the greatest emphasis... If you want to give a message to the West, it must be the message of love and the message of truth... The way of peace is the way of truth. Truthfulness is even more important than peacefulness. Indeed, lying is the mother of violence. A truthful [perso]n cannot long remain violent. [The person] will perceive in the course of his search that [it] has no need to be violent and... will further discover that so long as there is the slightest trace of violence in him, [it] will fail to find the truth... [it seeks. A person] cannot do right in one department of life whilst [it] is occupied in doing wrong in any other department. Life is one indivisible whole... What I want you to understand is the message... the... wise [figures] of the East have left to us, and if we really become worthy of that great message, the conquest of the West will be completed. This conquest will be loved by the West itself. The West is today pining for wisdom. It is despairing of a multiplication of the atom bombs, because atom bombs mean utter destruction not merely of the West but of the whole world, as if the prophesy of the Bible is going to be fulfilled..."

One... observes that nuclear weapons have made the nation-state obsolete, and humans will want out (is that the expression?) when they realise that belonging to a nation-state exposes them to danger rather than giving them the traditional protection.

WE ARE CAUGHT IN A SITUATION in which every citizen of every country, his children, and his life's work, are threatened by the terrible insecurity which reigns in our world today. The progress of technological development has not increased the stability of the welfare of humanity. Because of our inability to solve the problem of international organization, it has actually contributed to the dangers which threaten peace and the very existence of [hu]mankind... A permanent peace cannot be prepared by threats but only by the honest attempt to create mutual trust... The development of technology and of the implements of war has brought about something akin to a shrinking of our planet. Economic interlinking has made the destinies of nations interdependent to a degree far greater than in previous years. The available weapons of destruction are of a kind such that no place on earth is safeguarded against sudden total destruction. The only hope for protection lies in the securing of peace in a supranational way. A world government must be created which is able to solve conflicts between nations by judicial decision. This government must be based on a clearcut constitution which is approved by the governments and the nations and which gives it the sole disposition of offensive weapons. - Einstein

Einstein once believed peace could be achieved through the formation of a COMMISSION DE CO-OPERATION INTELLECTUAL.

This commission was to be strictly international and entirely non-political, whose business it was to put the intellectuals of all nations, who were isolated by... W[WI], in touch with each other. - Ideas and Opinions [of Einstein]

However, after WW1, efforts to unite the world were primarily entrusted to the LEAGUE OF NATIONS.

Nationalism, like the nation state, is a modern phenomenon, having developed as a cause and result of the state's growing role in economics, social, and political life since the Middle Ages. It has been also a rallying point for cultural minorities within an empire who desire independence... [US] nationalism grew strong during the Revolution. Nationalist allegiance in France ripened during the French Revolution and the Napoleonic Wars, which also served to light the fires of German nationalism, destined to grow rapidly. Italian nationalism... was strongly anti-Austrian and anti-papal. Other nationalisms developed in Europe during the 19th cent., the revolutions of 1830 and 1848 being strongly nationalist. In the 20th cent... [WWI] created like sentiments, with strong anti-Western feeling springing up in the U.S.S.R., Africa, the Near East, and Far East. Also, during the 20th cent. the contrary spirit of internationalism has grown up... and has found concrete form in the League of Nations... an international organization to maintain world peace, established by the League Covenant, part of the Treaty of Versailles, in 1919. Its formation was suggested by Pres. Woodrow Wilson in his Fourteen Points stating Allied peace aims. On Jan. 10, 1920, the League began functioning officially, with headquarters at Geneva... It consisted of an Assembly, in which all member nations were represented, and a Council, including permanent representatives of Britain, France, Italy, and Japan, later joined by those of Germany and the U.S.S.R. Other members were later elected by the Assembly for three-year periods. Originally a place was provided on the Council for the U.S., but the U.S. Senate's refusal to ratify the Treaty of Versailles containing the League Covenant prevented U.S. participation. The Assembly made recommendations to the Council, which made the decisions. These had to be unanimous; any member nation could exercise veto. Attached to the League were a Secretariat, an international Labor Organization, a Permanent Court of International Justice, and a number of special commissions and inquiries. Under the Covenant, the members pledged themselves not to use force in the settlement of disputes with one another until they submitted them for arbitration, and to respect each other's territorial integrity and political independence. Aggressors were to be punished by sanctions. The League registered treaties and issued mandates... Of the 63 nations that were at one time members of the League, 16 withdrew at various times, particularly important being the withdrawals of Japan and Germany (1933) and Italy (1937). Russia was expelled in Dec. 1939 when [it] attacked Finland. In general, the League was effective in dealing with the problems of lesser powers but was unsuccessful in regard to those of the major powers. It failed to bring about disarmament...; it failed to prevent the Japanese aggression in China in 1931, the Italian invasion of Ethiopia in 1935, the German and Italian intervention in the Spanish Civil War of 1936, Hitler's annexations of Austria and Czechoslovakia, and the aggression against Poland...

It was only with the greatest reluctance that I decided to resign from the committee; and even I cannot be certain that I acted correctly. But once my faith in the League as a whole was shaken, it became impossible to participate further in any of its activities. Its chief defect is not the lack of real power behind it; rather, what I find most discouraging is that, by its silence and its actions, the League functions as a tool of those nations which, at this stage of history, happen to be the dominant powers. Thus, the League not only fails to uphold justice but actually undermines the faith of [people] of good will who believe in the possibility of creating a supranational organization. - Einstein On Peace

By the outbreak of... [WW2] the League of Nations was little more than a helpless spectator, and the war itself destroyed it entirely... [The *United Nations* was] an international organization of countries set up in 1945, in succession to the League..., to promote international peace, security, and co-operation, with its headquarters in New York... Administration is by the Secretariat, headed by the Secretary-General. The chief deliberative body is the General Assembly, in which each member State has one vote; recommendations are passed but the UN has no power to impose its will.

The delegates of fifty-five governments[('representing about 80% of the inhabitants of the Earth')], meeting in the second General Assembly of the U[N], undoubtedly will be aware of the fact that during the last two years – since the victory over the Axis powers – no appreciable progress has been made either toward the prevention of war or toward agreement in specific fields such as control of atomic energy and economic cooperation in the reconstruction of war-devastated areas. The UN cannot be blamed for these failures. No international organization can be stronger than the constitutional powers given it, or than its component parts want it to be. As a matter of fact, the U[N] is an extremely important and useful institution *provided* the peoples and governments of the world realize that it is merely a transitional system toward the final goal, which is the establishment of a supranational authority vested with sufficient legislative and executive powers to keep the peace. The present impasse lies in the

fact that there is no sufficient, reliable supranational authority. Thus the responsible leaders of all governments are obliged to act on the assumption of eventual war. Every step motivated by that assumption contributes to the general fear and distrust that hastens the final catastrophe. However strong national armaments may be, they do not create military security for any nation nor do they guarantee the maintenance of peace. The time has come for the UN to strengthen its moral authority by bold decision. First, the authority of the General Assembly must be increased so that the Security Council as well as all other bodies of the UN will be subordinated to it. As long as there is a conflict of authority between the Assembly and the Security Council, the effectiveness of the whole institution will remain necessarily impaired. Second, the method of representation at the UN should be considerably modified. The present method of selection by government appointment does not leave any real freedom to the appointee. Furthermore, selection by governments cannot give the peoples of the world the feeling of being fairly and proportionately represented. The moral authority of the UN would be considerably enhanced if the delegates were elected directly by the people. Were they responsible to an electorate, they would have much more freedom to follow their consciences. Thus we could hope for more states[people] and fewer diplomats. - Out Of [Einstein's] Latter Years

The UN needs to become more consciously a chamber for consensus and less an arena of conflict... Above all, the U[N] must recapture the faith of its constituency among the world's people. A generation ago young people in particular looked to the U[N] as the embodiment of all that was noblest in international endeavour. We need more practical reminders that it still is, so that as the world's people become more committed they will in turn help their governments to return to belief in the U[N] as an institution through which they can work collectively to find the accommodations they must make for survival... [G]uided by the... beacons of principle and practicality... it [is] possible... to develop a convergence of view on where we [a]re as a human society, on where we ha[ve] to go and how we might get there.

Pressures on the world economy are many and varied... As the number of independent countries in the world has grown, particularly as a result of the European withdrawal from empire, so the nature and extent of global problems has changed... High on the list... [of] these problems... is the question of inequity, especially in economic terms... [and] particularly in terms of resource rivalry... As a rough guide, the world may be divided into the "rich" countries... and the "poor" countries... producing tension as the former use their wealth and power to impose their own terms of trade. Although this has yet to produce violence on a large scale, the potential for... conflict undoubtedly exists and efforts must be made to ensure a more equal distribution of wealth if it is to be avoided. Up until now, these efforts have not enjoyed success... International problems demand international solutions, and the... [UN is] a potential source of such solutions. The record is not impressive, for the U[N] inevitably reflects the tensions between its members, but the fact that it exists as a forum for debate does offer at least a glimmer of hope for the future. If attempts are not made to solve the problems of the world, they could become overwhelming... It is in part because of the shrinking of the globe, because of the phenomenon of "interdependence" (the extent to which one country depends upon the next, particularly in terms of trade) that conflict is so marked. Years ago people hoped that an interdependent world would make for less strife... [T]his has... not... proved to be the case in the post-1945 period... "That we have this Charter is a great wonder" [the]President... of the U[S] told the First Session of the... UN... when it met in San Francisco in 1945. It is perhaps an even greater wonder that the U[N] has survived for over 40 years, and that it has developed to a point where it represents the interests of 159 (out of 167) states in the modern world... The U[N] was created to act as the highest international authority for resolving disputes... [I]ts Charter requires its members to settle conflicts by peaceful means, and to refer them to a Security Council of major powers if they cannot reach agreement. On occasions, the Council has acted on its own account, dispatching peace-keeping forces or applying sanctions... against regimes in breach of the rules. It has proved less successful in punishing governments for abusing human rights or dealing with terrorist groups who have often drawn upon the support of its own members. The Charter had to be highly flexible in order to reconcile the different ideological beliefs of the two superpowers, the U[S] and the Soviet Union, who soon found themselves at odds after the defeat of Germany and Japan in 1945... The members left for future discussion the task of raising a military force. This was indefinitely deferred after the U[S] and the Soviet Union failed to reach agreement at the London Conference of 1946... Anxious to provide the new organisation with some authority, the original members... gave the Security Council some powers but required the unanimous consent of the five permanent members (the victors in 1945: the U[S], Soviet Union, Great Britain, France and China)... Since 1945, the Security Council has been increased to 15 members – the additional 10 are chosen from the rest of the members of the U[N] on a rotational basis. They serve for a period of two years but do not enjoy the right of veto... From the start the U[N] has been criticised as an institution that has failed to live up to the aspirations and hopes of the founding members. It is possible to argue that it has not achieved much, that the superpowers have used the U[N] as an arena in which to compete rather than resolve their differences. This contradicts one of the... main functions [of the UN to act] as "a centre for harmonising the actions of nations" (Article 1(4) UN Charter). But unlike its predecessor, the League of Nations... it has not been ignored... [- although, in] the first 30 years of its existence, the General Assembly passed 3,500 resolutions, the great majority of which were totally ignored by the Council... [-] and that perhaps is the most important contribution that it has made to the resolution of conflict. It is precisely because the U[N] is of value to the superpowers and their allies that it has been used by them... The support the United Kingdom received [from the UN] in the run-up to the Falklands War in 1982 did much to restore the [organisation's] reputation in parts of the... world. Somewhat to its own surprise, perhaps, Britain received almost unanimous international support when Argentina occupied the Falklands in April 1982 after years of negotiations between the two powers had failed. The Security Council roundly condemned the occupation and rejected out of hand Argentina's claim that the requirement under the UN Charter to settle disputes peacefully did not apply to quarrels that predated the Charter's adoption. As the British representative noted, had this been accepted, the world would have become a more dangerous place. The Council went on to reject a further Argentinian claim that it was entitled to resort to force because of the strength of its legal claim to sovereignty of the islands, a claim that had been endorsed on many occasions by the UN Committee of Decolonisation. Instead, the Council insisted that the only justification for force could be self-defence. Although it did not condemn the invasion as an act of aggression, by demanding Argentina's immediate withdrawal (Resolution 502) it was making it clear that Argentina's actions were illegal. Some weeks later a British Task Force retook the islands. Even if the U[N] did not resolve the conflict, it created circumstances in which Britain's use of force could be seen in terms of the defence of international law... [T]he world in which the U[N] has operated was not one [its founders] could ever have imagined... But... [as] long as the U[N] exists and is taken seriously, even as nothing more than a forum for debate, the world is a safer place... Since 1945, the role of the U[N]'s forces has been a subject of some controversy. After the experience of Korea (1950-53), when UN troops were committed specifically to fight an aggressor, many countries refused to allow further deployments unless in a non-fighting capacity. Out of this emerged the idea of "peace-keeping" rather than "peace-making".

The U[N] has been committed to international peace-keeping since its inception, through two instruments – Observer Missions and Peacekeeping Forces. In recent years UN peacekeeping activities have increased dramatically, with more operations launched in the last five years than in the previous 40. Numbers of UN military personnel deployed have risen from 10,000 in 1987 to 70,000 in 1993.

The U[N], teetering on the verge of bankruptcy, has announced staff cuts of 10[%] through buy-outs, attrition and outright sackings. The aim is to cut \$US250 million... from costs through staff reductions of about 1000 as well as new efficiency programmes like publication and fellowship cuts...

The reductions were forced... by a zero-growth budget and the failure of members, particularly the U[S], to pay dues or peacekeeping debts in time.

...*Crisis for UN*... Like Banquo's ghost... the... Secretary-General['s]... future hovers over the 51st General Assembly session of the U[N], where few countries are expected to mention publicly the subject of his re-election. But, unlike the spectre in Shakespeare's *Macbeth*, [the Secretary-General] is invited to the proceedings, defying the U[S] by declaring his intention to seek another five years when his current term expires in December. With kings, presidents, prime ministers and foreign ministers gathering at the U[N] for the next three weeks, no one knows who will lead the world body next year or what the nearly bankrupt organisation is supposed to do. For Washington, how the U[N] operates, rather than what its tasks are, is foremost, beginning with the search for a new secretary-general who would concentrate on restructuring the world body... Most delegates believe opposition to [the Secretary-General] is politically motivated, and the council last month rebuffed efforts by [the]US Ambassador... even to discuss the issue. According to... many analysts, [the ambassador] apparently believes Congress will never agree to pay the \$US1.6 billion... in arrears the U[S] owes to the UN without some radical change, such as a new secretary-general. Conversely, with Congress' refusal to pay the huge debt crippling the world body, American authority has been so undercut that other U[N] members are ready to turn down many initiatives suggested by Washington... [The Secretary-General] himself is philosophical about the direction of the U[N]. "In our case, we are still at the beginning and the member states don't know what role they want... Now we are living in a crisis of the U[N] – its ups and downs."

...[a journalist]'s new book... about her experiences in Somalia, reveals a... U[N] in dire need of reform... David Morris, the N[Z] caterer murdered in Somalia last year, liked to tell journalists that [it] was nuclear capable. [Morris] would drink half a bottle of vodka and tell them [the NZer] was gunrunning, or drug-smuggling, and that, if they printed it, [the caterer] would haul them through the courts. [Morris] also told them that when [it] found his son's killer [the caterer] planned to throw him from a helicopter. Grief and alcohol exaggerated certain aspects of Morris's personality; Somalia magnified the whole package. When his catering company won the contract to feed U[N] personnel living in this African ammunition box, the twitchy entrepreneur found his element. In the midst of a disintegrating UN mission, [Morris] stitched deals together over a trip-wire and got away with it. His ego ballooned. "Somalia suited David down to the ground," says... the N[Z] 60 Minutes journalist who interviewed Morris when [the caterer] returned to Mogadishu after his youngest son was murdered there in 1993... [The journalist] spent several months living in the Morris Catering compound at Port Mogadishu, filing stories for 60 Minutes, CNN and others. *Blood Money*, her account of her experiences in Somalia, is the story of two disasters arrived at from different angles. David Morris hurtles along one narrative like a car heading for a wall; his death at the hands of Islamic extremists is the inevitable crash-point. The other disaster, that of the UN mission in Somalia (Unsom), has no trajectory – it is a story of paralysis. In the face of increasing hostility to its presence, the UN simply bunkered in and did as little as possible. When it did respond, the situation got worse. [The journalist]'s 60 Minutes piece conveyed a sense of things falling apart. The footage of Somalia civilians screaming for American blood after marines shot up a food distribution centre was early evidence that Operation Restore Hope had lost its way. *Blood Money* goes further, describing a UN riddled with corruption and a mission in Somalia run by yes-[people] and incompetents. "We're looking at career bureaucrats here," says [the journalist]. "We're not looking at people who can make decisions and run it by the seat of their pants; they panicked and they froze in the face of a failing mission." For David Morris and his staff, this botching and duplicity was more than an annoyance: at times the mismanagement in Somalia threatened their lives. [The journalist] describes in her book how dangerous things became when the UN refused to pay Morris Catering what it was owed. With the troops and support staff preparing to pull out of the country, the company could not pay off its local creditors, who had started turning up at the compound brandishing machine guns to reinforce their demands. The joke doing the rounds of Mogadishu – that Morris and his [staff] would be left waving goodbye as the UN pulled out – began to stick in people's throats. The UN might have screwed Morris Catering, but it did little better by Somalia, according to [the journalist]. The peacekeepers arrived with the best of intentions... but they underestimated the bitterness in a country that "runs on historical rage". Their attempts to pick winners and losers from among the warlords simply stirred things up and, by the end of the mission, the troops who had been welcomed ashore as rescuers were preparing to stage a fighting withdrawal. For [the journalist], one incident symbolised this failure... *Blood Money*... describes a pall hanging above the desert as peacekeepers burnt truckloads of household and office furniture: beds, tables, chairs, cabinets. [The journalist] took photographs as Somalis fought soldiers to get to the burning items. "It was appalling, to watch all that equipment being destroyed... When you looked at the poverty in that country and they didn't leave a thing." [□ 1996 is the 'UN year for eradication of poverty'.]

...*Utopian dream a 'disaster'*... The new world order – a philosophy proposing a single global religion, economy, education and legal system – would be a recipe for conflict and the antithesis of peace, a visiting international lecturer says... [T]o many such an ideal, if it were achieved, would usher in utopia. "But such assessment ignores the lessons of history,"... The persuasive argument that the achievement of such aims would dispel poverty, make an end of armed conflicts and eliminate religious bloodbaths does not stand up against thorough investigation, [the Melburnian said. "The US]... and many other[countries] testify to the fact that... squalor and abject need lie side by side with affluence..."]

...[a USer] suspected of sending parcel bombs to a newspaper and several television stations was arrested yesterday and appeared in court where [the suspect] was ordered held on bail of \$US4.5 million... [The suspect], who allegedly mailed the explosive devices in the name of... "The Messiah," had threatened "explosive destruction" if his demands were not met... None exploded. A Los Angeles police spokes[person]... said the author of the letters wanted "to become secretary-general of the U[N], in order to create Utopia on Earth."

...[the US] is threatening to investigate any use of U[N] personnel or funds directed towards the re-election of... [the current UN Secretary-General. A spokesperson for the US] ambassador to the U[N]... said Washington's opposition to a second five-year term for [the Egyptian] was "irreversible." ...Since... [the Egyptian announced his intention to] run for a second term... the U[S] has made it clear that it would use its Security Council veto to block[him, while the current Secretary-General] has made... equally clear that... it... will use his support among [Last] World and non-aligned countries to fight to the bitter end... Washington blames... the current Secretary-General... for the U[N] failure in Bosnia, and believes that a change in leadership is needed to reform the U[N] bureaucracy and cut costs... The U[N] is in the throes of a financial crisis, and is owed \$4.5 billion by member states. Roughly half is owed by Washington which has been withholding funds until wide-ranging reforms are implemented.

...The U[S] intends to pay... \$660 million to the U[N] to bring its 1996 dues up to date and make a dent in its debt for peacekeeping ventures.

...*Money isn't all that the U[N] lacks* The new president of the U[N] General Assembly wants an end to delays, long lunches and tortuous unfocused speeches, an end to "business as usual." [The new president] might as well seek an end to the institution itself. And perhaps [the new president] should. Last session, the U[N] gave itself a 50th birthday present: working groups representing a range of member nations to look at changes in the organisation's structure and financial status. As a bad omen for this 51st session, the groups reported back empty-handed. Their members had acted true to form; their groups collapsed in disagreement. What the organisation is short of is unquestionable. It needs its members to pay their dues, particularly the countries that have left the kitty nearly \$3 billion in arrears. But that is just money and money never bought political will. What it really needs is an intelligence network that is an early warning system of potential trouble. It needs an arbitration system to handle negotiations. It needs sufficient independent military capability to respond to any degeneration into conflict. It needs law and order units to ensure stability in any aftermath. It needs administrative units to provide expertise in rebuilding political stability. And it needs all those, not just the one or two that are convenient. The U[N] itself has proved that they are not effective in isolation. What is Afghanistan now after the U[N] mediated the withdrawal of Soviet forces? Politics of the superpowers rendered the U[N] impotent during its first 40 years. Now the 90s have

provided a raft of examples that ram the point home that the U[N] cannot operate in isolation. What events of this decade have created is a credibility vacuum filled only when the U[S] wants to do something. Tangle with [the Iraqi President], protect relief supplies in Somalia, deal to Haitian hoodlums. With pleasure, said the Security Council. But when France wanted to intervene in Rwanda, U[N] approval was lukewarm indeed. And let's not talk about Bosnia. Liberia is an example of what the U[N] does and doesn't do. Last month a U[N] World Food Programme consignment of medicine, beans, oil and sugar reached an area 70km from Monrovia that had been closed by fighting since February. The agency reported more than half the 30,000 inhabitants suffering from extreme hunger and hundreds of skeletal children on the verge of death. This was after six years of civil war that has killed more than 150,000 people. But where was the U[N] six years ago? Embroiled in the Gulf. For Liberia, no one outside Africa cared. The world body can feed one day but it cannot defend in the face of the violence of the next. That limitation threatens to make its humanitarian operations exercises in futility. So if no one gives a dime about the Liberias of the world, the U[N] is unlikely to live up to the expectations of those who see it as a solid foundation in a volatile community. This is particularly so when geographical changes have triggered communal strife of less perceived international import than the national conflicts that encouraged the creation of the world body. The limitations of the U[N] are undermined when the country that claims to being the land of the free, the world's greatest democracy, threatens to reject any majority decision on who should lead the organisation. It waves its veto over the head of [the UN] Secretary-General... If the U[S] uses that anarchic power in such a fundamentally democratic matter, what chance is there for the Security Council to be effective when the issue is guns and lives? ...There may be answers hidden in the world body as it is now constituted. However, they are so buried by the weight of the organisation's failings that starting from scratch has considerable attraction.

...[the UN] Secretary-General... whose re-election the U[S] vetoed yesterday, faced up to the challenges of the post-Cold War era dominated by one superpower before being sacrificed on the altar of [US domestic politics. Hi]s independence from the U[S] during his five-year mandate proved his undoing, as Washington continued to be the dominant player at the U[N] despite widespread criticism for failing to pay its [UN dues. "The Egyptian] wanted to be a world leader. It was in his psyche..." says one Asian ambassador of the... Coptic Christian... who in his native Egypt played a role in negotiating the landmark peace treaty with Israel signed in 1979... The assassination of his grandfather by Islamic fundamentalists while [PM] under the British protectorate is an... event that marked [him]... According to U[N] watchers, the great powers expect the [Secretary-General] to be the obedient servant of the... Security Council, but [the Egyptian] was often in conflict with the council on international security issues, engaging in sterile "buck-passing" on who was to blame when things went wrong. Critics also say that the... small and wiry figure now aged 74, failed to bring a moral dimension to his post at a time when the world was grappling with new ethnic conflicts breaking out after the collapse of the communist bloc and the end of [US]-Soviet rivalry in far-flung regions. [However, after] taking over as secretary-general in January 1992... [the Egyptian] called a series of global conferences confronting the issues of the day, including the landmark 1992 Earth Summit in Rio de Janeiro... then turned to reform – too belatedly in the U[S]'s view – to tackle the 185-member world body's bloated bureaucracy. Other achievements under his mandate include the creation of war crimes tribunals for Rwanda and former Yugoslavia, and electoral monitoring arrangements in fledgling democracies. Success stories include... involvement in peace moves in El Salvador, Guatemala, Mozambique and South Africa.

...The U[S] opposes the Egyptian's re-election] for a second term as U[N] chief because it says [the Secretary-General] has been sluggish in promoting reform. But his champions call him the greatest reformer in U[N] history. Who is right? The question is pointless, U[N] officials, diplomats and others familiar with the U[N] say, because the real issue is that Washington doesn't think it can work with [him. The US] cast the lone vote against... [him] in the Security Council. And talks continue on who might succeed him when his term ends on December 31. During his five years as... Secretary-General, [it] often crossed swords publicly with Washington: • When the international community was slow to respond to famine in Somalia, [the Secretary-General] complained that the West was preoccupied with a "rich [person]'s war" in the former Yugoslavia. • ...resisted demands by Washington for airstrikes against the Bosnian Serbs during the Bosnian conflict. • Over [US objections, the Secretary-General] released a report... which implied that Israel intentionally shelled a U[N] compound filled with civilians in south Lebanon. • ...clashed publicly with [the US's] UN] Ambassador last December after... recommend[ing] that Nato take over peacekeeping operations in Croatia. The [US] Administration feared that would complicate efforts to win congressional approval for the Nato mission in Bosnia. Most of the... member states do not share Washington's stance that the 74-year-old... must go. But the U[N] is no democracy. The U[S] wields enormous power in the organisation and is the biggest U[N] contributor, even if it owes more than \$US1 b... The organisation can survive without [the Egyptian] but not without [US support. US officials say the Egyptian] resisted many... reforms and agreed to [others] only under pressure... Washington[also] has resisted reforms backed by many other nations, such as reorganising the 15-member Security Council or reducing the power of the five permanent members...

A[US]'s failure to win a fifth term on the Security Council... has left observers feeling some dismay if little surprise. While the failure has provoked an urgent post-mortem across the Tasman, former N[Z] diplomats say the failure points to the need for key reforms in how the Security Council membership is decided. Criticism centres on the five regional groupings from which the 10 non-permanent seats... are elected, groupings that were determined in the middle of the Cold War in 1963... "The regional groupings from which the membership of the Security Council is determined is a quirk of history that don't reflect the present makeup of the UN." ...The present makeup... reflects what the two experts, who served as diplomats in the U[N] when N[Z] won a Security Council seat in 1992, characterise as a Western European bias. The election this week left four European... members, Portugal, Sweden, Britain and France on the 15-member council. [NZ and AUS] are members of the Western European and Others regional group of 26 countries that can elect two seats every two years. Sixteen countries in the group are, or soon will be, members of the European Union, which means... that they share common trade and diplomatic interests. In our regional group, the "Others" are N[Z, AUS and the US – the latter] in an "ex-officio" capacity. The Asia and Africa regional groups contain greater numbers of countries, which affect an individual nation's odds of election to the Security Council... [One of NZ's former UN diplomats, who is now] director of Victoria University's Centre for Strategic Studies... has suggested that the Security Council electoral groupings could instead be based on nine truly regional groupings of 20 nations. Each group could elect two members, which including the five permanent members, would create a Security Council of 23 nations, with a fairer geographical representation... "The Security Council has a tendency to operate on its own as a little group of 15 in a smoke-filled room and forget about the outside world. This is especially true of major powers. The role of smaller powers is to bridge that gap." ...[the director says AUS]'s failure is a pity for N[Z]. "It would have been good because through diplomatic liaison we can get across our point of view on issues where our interests are at stake." ...N[Z] diplomats did lobby actively on behalf of A[US]'s seat, a bid that reportedly cost more than \$500,000. A[US] and Canada did the same for this country in 1992, an obligation discharged as members of the loose co-ordinating group CANZ. The ballots are secret so diplomats cannot easily assess the success of their work. The *Sydney Morning Herald* described the... loss as a "sandbagging." Potential council members have to be elected with a two-thirds majority. A[US fell just] short with 91 votes in the first ballot in which Sweden won outright. In the second ballot for the remaining seat, A[US]n support dribbled away to 57 votes, with Portugal gaining 124. By contrast, when N[Z] ran against Spain and Sweden in 1992, Spain won the first ballot, but... N[Z] diplomats, who say Western Europe provided little support for this country's bid, had convinced Latin American and African countries to support N[Z] in the second ballot, which this country won with 99 votes to Sweden's 74.

...N[Z] has pulled off another diplomatic coup at the U[N. NZ]... and France were elected to the two spare seats on the advisory committee on administrative and budgetary questions at the expense of the U[S], whose bad record at paying its dues cost it votes. The Minister of Foreign

Affairs... said it was the first time N[Z] had been represented, on what... was one of the most sought-after committees... The 16-strong body has been dominated by the larger powers, but... the outcome reflected N[Z]'s standing as a leader on U[N] reform. The committee examines and reports on the U[N]'s accounts and peacekeeping budgets and the administrative budgets of specialised agencies... [A diplomat], who was a member of N[Z]'s team during its 1993-1994 term on the Security Council, was elected to the committee for three years from January 1.

...Two rounds of unofficial balloting for the post of... secretary-general have ended inconclusively, with all four African candidates getting at least one potential veto from a permanent member of the Security Council... [The UN] undersecretary-general for peacekeeping, led in the more important second round of informal voting and was the only candidate to get more than the nine votes required. But [the Ghanaian] received one negative vote from... France, which prefers candidates from its former French-speaking colonies... Diplomats suspected that the U[S] and Britain cast negative votes against all candidates except [the Ghanaian]. It is not known how many straw polls the council will take or when official voting will begin for the race, which is still deadlocked.

...The new secretary-general... [outlined] his vision for the future to the U[N] General Assembly yesterday... The soft-spoken 58-year-old... [Ghanaian] won the support of all 15 Security Council members last Friday after France dropped a veto threat... ["I think reform and change are possible, but the process has to be managed and we will need to work with the member states... to pay their contributions on time. I would also want to be able to energise the staff and get them to work in a cohesive and a productive manner. After months of cuts and reform they have been demoralised. I think I can turn them around and I would also work as a team with my colleagues at a senior level with judicious delegation to get things [done] quickly. Delegation does not mean abdication. I would ultimately be responsible... We need to look at the U[N] system as a whole. We need to see what we can do to avoid duplication and to get the U[N] system working as a system. Of course when it comes to alleviating poverty there are other big players that we need to co-ordinate our efforts with and here I mean other institutions, the role of the private sector, NGOs. We need to find a way of getting all of them to work in a co-ordinated way... I don't think the membership is ready for a standing U[N] army. It poses all sorts of legal issues, traditional questions of funding: who's going to pay for it? I'm known to have said I think it obviously would be ideal if we had an army we could send out. The way we are asked to operate is a bit like telling the City of London, yes, we know you need a fire station, but we will build one when a fire breaks out. That's more or less what peacekeepers are asked to do. What we are trying to do is to work with the member states and introduce measures here at our headquarters which will permit speedier deployment of the U[N] forces to conflict areas. It will not be as fast as the U[S] or the UK doing it, as we do not have the capacity to do it, but it will reduce the lead time from four months to probably two or three months... We have made some mistakes. Not all of our operations were successful. But... I hope we have learned some lessons also..."]

...UN learned lesson from bloody fighting in Congo... No wonder the West is cautious about military intervention in Zaire. The U[N] tried it 36 years ago, and the organisation suffered 250 deaths, including its own secretary-general... His plane crashed in the darkness near the Ndola airport... in Northern Rhodesia, now Zambia[, while on a mission]... to negotiate an end to the conflict... In July 1960, the U[N] dispatched peacekeepers to... Zaire, then known as... the Congo to quell the unrest that broke out as Belgian colonial rule ended. At the time, it represented the largest and most difficult peacekeeping operation the U[N] had ever mounted... Thirty countries offered troops for the operation, which reached a maximum strength of 19,800[, but the]... mission was beset by problems from the beginning. A few days before the U[N] approved the force, the southeastern province of Katanga rebelled and declared independence... In the midst of the confusion... a former journalist, Joseph Mobutu, [who had been]... appointed... as Army chief of staff... [by the new PM], Patrice Lumumba... staged a coup against... the President... and... Lumumba[, who]... was captured by Mobutu's forces and executed a few months later... Six months into the mission the U[N] troops were authorised to use force if necessary to prevent civil war... But many of the national contingents lacked equipment, weapons and ammunition... When the... peacekeepers left four years later, the country was still unstable, and still governed by some of the same people who were in charge when the U[N] arrived. The bloody experience... taught a generation of future U[N] leaders the risks of trying to impose peace, and sparked a longstanding reluctance to use force in missions such as Somalia and the former Yugoslavia.

...Bloody clashes on the ceasefire line in Cyprus underlined the difficulties facing mediators seeking an end to the island's division and threw a question mark over the role of U[N] peacekeepers there. The violence, the worst in many years, erupted when hundreds of Greek Cypriot motorcyclists defied an order by Cypriot authorities and pushed across the U[N]-policed Green Line yesterday to protest against Turkey's presence in the north. A Greek Cypriot was killed and 41 were injured by bullets, stones and air-rifle shots in the ensuing clashes, police and hospital sources said. Authorities in the north said 12 Turkish Cypriots were also wounded... Witnesses said... [the dead Greek Cypriot], Mr Tassos Isaac, aged 24, a restaurant owner... who leaves a wife five months pregnant, fell on barbed wire and was trapped in the buffer zone where [it] was beaten in the head by demonstrators from the other side. The violence undermined the failure of a succession of international attempts to find a solution to the Cyprus dispute, which is a major source of tension between the Nato partners Greece and Turkey. Greek and Turkish Cypriots have been separated since Turkish troops occupied the north in 1974 in the wake of a brief coup in Nicosia engineered by the military then ruling Greece. Efforts to reunite the island as a federation have had no success.

...[a Ghanaian statesperson and former President of Ghana, 'Kwame Nkrumah, tried to assume leadership of the emergent countries of Africa and spoke often of establishing a United States of Africa. But other African leaders generally rebuffed these proposals.' By the way, another Ghanaian statesperson], the newly chosen... secretary-general... [of the UN, said yesterday that it] would speak to the U[S] Congress if that was what was necessary to get Washington to pay its debts. "I think it will be necessary and I am prepared to do so... I hope that I'll be able to work with the [US] Administration and through them to Congress to get the U[S] to pay its arrears and to pay its dues because without a stable financial basis, it is extremely difficult to carry on reform,"... As the first secretary-general from sub-Saharan Africa, [the former]... undersecretary-general for peacekeeping... said his achievement was an honour not just for Ghana but for Africa as a whole... Asked why... the Ghanaian... wanted the post, [the 58-year-old] replied, "That's a good question. Someone had to do it and it turns out to be my lot... [A] friend of mine described it as a job from hell." ...[the Ghanaian] will be formally appointed today by the 185-member General Assembly.

...a 58-year-old U[N] career official from Ghana... was sworn in yesterday as secretary-general... [and] said nations should "make this organisation leaner, more efficient and more effective, more responsive to the wishes and needs of its members." Mindful, however, of both Washington's \$US1.3 billion... debt, which is bankrupting the U[N], and its demand for reform, [the new secretary-general] said in his acceptance speech: "Applaud us when we prevail; correct us when we fail; but, above all, do not let this indispensable, irreplaceable institution wither, languish or perish as a result of member state indifference, inattention or financial starvation." Change, [the new secretary-general] said, was necessary for the U[N] as well as the rest of the world... [The former secretary-general], in a farewell address, delivered a thinly veiled jab at the U[S] for its arrears to the world body, saying the financial crisis was not the result of bad management, but the refusal to fulfil a treaty obligation.

...[in a Reuters photograph, a] Hutu refugee guards his family's cooking pot in a pause on the trek home to Rwanda. Beside him is a tin of cooking oil supplied as aid through the U[N]... I do not say with Nietzsche, "There are whole peoples who have failed" and close my eyes. But I do say this humanitarian aid business is in danger of becoming something of an industry where amplification of human need in order to rouse public opinion and government action walks a fine dividing line with the more self-serving motives of keeping the aid charities fully employed. Aid agencies as corporate bodies are not disinterested actors in human tragedies, even if many of their heroic personnel often are. The institutions' very existence depends on regular disasters. Since... [WW2], there have been only three major occasions of mass genocide: one in Cambodia, one in Burundi and

one in Rwanda. Each time the horror has led the aid agencies astray in the aftermath... *The Quality of Mercy*, a very precise if disturbing dissection of what happened in Cambodia in 1979, reveals the misrepresentations and incompetence of many of the world's charities. They range from the reputable, such as Oxfam, which refused to accept the word of their local [person] on the spot who said people were poor and malnourished but not dying of hunger, to the idiotic, like La Leche League, offering to send in a plane loaded with lactating [gals]. The truth was the hungry refugees who massed on the Thai border were not, as claimed, the tip of an iceberg. Most Cambodians, although deprived of rice, found they could live on fish, roots of lotus flowers and fruit. The refugees on the Thai border were, in fact, as the genocidal Khmer Rouge saw it, an army-in-waiting being fed and tended so that they would be enabled to live and fight another day – the same story as with the Hutu in eastern Zaire. Two years ago I wrote a column saying stop feeding these Hutu refugees (children and the infirm apart) and they would break with their political and military masters, the instigators of the genocide against the Tutsis, and head back for home in Rwanda. Now the Tutsi militias of eastern Zaire have done the job by warfare. In the Cambodian case the Thai Government and probably the U[S] played politics with the aid agencies. It was in the U[S] and Thai interests to support the murderous Khmer Rouge since they were now fighting the Vietnamese-installed regime... In the Rwanda/Zaire case Western politics also has dangerous undercurrents of the Machiavellian. The French, usually the major outside influence in this part of the world, have been sidelined by the Anglo-Saxons. The French military intervention in 1994, which undoubtedly saved lives, is widely seen to have helped the Hutu perpetrators of genocide escape to Zaire. The U[S], supported by the British and, to a lesser extent, the Canadians, has thrown its weight behind the Tutsi regime in Rwanda. While this is difficult to fault on honest humanitarian instincts, it does appear to be part of a grand strategy to wrong-foot the French in the region. By the discreet use of military aid the U[S] is building up in east Africa a chain of friendly states including Eritrea, Ethiopia and Uganda, which will join the bid to topple the ultra-Islamist, terrorist-supporting regime in Sudan. However, the big prize in this modern-day “scramble for Africa” is Zaire... But... Zaire has been a quagmire for outsiders ever since the Belgians gave it independence... The aid agencies should resolve once again never to hype the need for instant compassion, however jaded they think our consciences have become. And Western governments should realise the only way they will succeed in helping Africa is not by being ridiculously competitive but by working together closely. Right now they need to help the authorities in Rwanda and Zaire round up the ringleaders of the genocide for trial. If an outside intervention force is still necessary this is the job it should concentrate on.

...Has the world outgrown the need for groups such as Greenpeace? ...a founding member of the Values Party... recently appointed executive director of Greenpeace NZ, who]... has extensive experience in not-for-profit organisations including five years as national development director of the Foundation for the Blind... gives an emphatic “No.” ...For 25 years Greenpeace has focused... public concern... about the environment... and brought the reality of environmental destruction home, helping to shift opinion and build public determination to take action. Blowing the whistle to expose polluters and bearing witness to environmental crimes are still integral to Greenpeace. [But] over the past decade we have expanded our role... Our distinctive protests are just the tip of the iceberg: 80[%] of our work is rarely seen by the public – scientific research, the development of solutions, lobbying for environmental protection, submission writing, educational projects, dialogue with industry... promoting clean technologies. Greenpeace remains fiercely independent, relying wholly on donations from individual members of the public and refusing corporate or governmental sponsorship... But one cannot work without the other. The environmental movement has been remarkably free of ideological dogma, and it is false to label some of us, or our strategies, “new” or “old.” The reality is more complex. Environmentalists will have to continue to both confront and collaborate with business if we are to keep getting results... Greenpeace will be necessary for the foreseeable future to provide the conscience, the hope and the sheer determination to take on the vested interests that drive environmental destruction. We will be needed to campaign for solutions to be implemented, and to beat back the “inevitable” degradation of our planet with humour, courage and creativity. - 1996

What if they held a protest and no one came? ...ONE of the boldest, most theatrical environmental groups in the nation had struck. Greenpeace USA, the self-appointed action team of environmentalism, managed to block an oil-drilling platform from leaving an Alaskan harbour. It was late last month and the activists faced down the massive platform in tiny inflatable dinghies and a small ship – a classic Greenpeace eco-stunt. Almost nobody paid any attention. The nationwide yawn may help explain why Greenpeace USA is undergoing an overhaul as dramatic as its past raids and protests... Mismanagement and explosive growth have played a part in crippling an organisation the public had long perceived as “juvenile delinquents for a cause”, said [a] former executive director... But there are other problems. Critics, and even some members, say the group's goals grew diffuse and its members grew bored with its activities. The organisation that draped a banner over Mt Rushmore to protest about acid rain and blockaded whaling ships in the Pacific Ocean simply hasn't kept up with the times. In an age when chemical companies tout their good deeds for the environment and when politicians profess deep concern for the Earth, its traditional role of screaming bloody murder about environmental catastrophes seems dated. However, Greenpeace looks tame compared with the new eco-terrorism groups that destroy fishing boats and, at risk to workers, place metal spikes in trees. It's a sad comedown for what was once one of the most influential of the environmental or “green” groups. In the 1970s, its US activists gained international renown – and condemnation – for putting themselves between whales and harpoons. Greenpeaceers sprayed baby harp seals with dye to foil fur hunters, chained themselves to barrels of toxic waste and interfered with nuclear tests. Such campaigns helped ignite public outrage and change laws. At its height in 1991, Greenpeace USA boasted 1.2 million members and an annual budget of \$60 million. But while the direct mail drives attracted members by targeting a sympathetic audience, the organisation couldn't keep those new members involved... Greenpeace had already begun laying off workers. In 1993, it cut operations 25%. And in the past three years, two offices in California and one each in Texas and Arizona have shut their doors. This year, US membership fell to 420,000. Contributions sank to less than \$25 million in 1995, but rebounded slightly last year... How could an organisation have squandered widespread public support so quickly? Greenpeace loyalists say other environmental groups have been struggling, too. True. But none of them have crashed on such a grand scale... [Furthermore.] membership is up and finances are stable... [at] Greenpeace International, the umbrella organisation for 43 chapters around the world... Greenpeace USA's leaders have been reluctant to discuss problems. But other environmentalists think Greenpeace simply became less relevant... The sense of doom it capitalised on... [during the] '70s... faded as laws and policies changed. As it got bigger, it also lost its original focus... Other green groups take corporate and government money. But Greenpeace USA does not, making it especially vulnerable to drops in membership. Another hindrance may have been the group's own culture of rebellion. “We are activists primarily, and we're not looking at the long-term picture...,” said... [a spokesperson. Greenpeace NZ membership has also] halved from the boom times in the... wave of exposure and sympathy following the Rainbow Warrior bombing in 1985... to around 30,000 today... Greenpeace [NZ now employs] 15 staff – about half the 1990 number... Its annual budget was around \$1.6 million. Each Greenpeace organisation [is] a separate entity and no funds [are] transferred between them... [Greenpeace NZ's] executive director... said the problems in Greenpeace USA were “historical and have been going on for some time – they are now having to deal with them. There has been better financial stewardship in NZ –] ...we have no fancy furnishings and only one administration person. The majority of the money we receive is spent on actual campaigns.” ...Greenpeace NZ's direct actions were comparatively rare, well planned and were always part of overall campaigns... After the French announced it would resume nuclear testing on Mururoa Atoll in 1995, the Rainbow Warrior II sailed to the atoll in protest. It made international headlines after it crossed into the 12-mile test exclusion zone and was boarded by French commandos. Last year during an anti-chlorine campaign against the Tasman Pulp and Paper Mill in Kawerau Greenpeace members were arrested after scaling a 60m tower to unfurl a “Chlorine Kills” banner and clamping 200-litre drums to railway lines. Last month, four members were arrested at New Plymouth in a campaign to reduce carbon dioxide emissions at the new Stratford power station after boarding

the Jumbo Challenger, which was delivering turbines at Port Taranaki... [While on the topic of protest groups,] Amnesty International has accused the U[S and EU] of protecting violators from the scrutiny of the UN Human Rights Commission... China is likely to escape censure for the seventh year running at the U[N] forum, which opens on Monday, because Washington and Brussels have been lax in lobbying support for a resolution, says the London-based group. It named five states – Algeria, Colombia, Indonesia, Nigeria and Turkey – for scrutiny at the forum... And it called for the main UN human rights body, whose 53 member states hold their six-week session in Geneva, to be reformed. “The message is: trade and human rights are linked” said Amnesty’s legal director... “We see a range of ‘untouchables’ – countries that won’t be touched, even though there are severe human rights violations[‘there would be no refugee problem if human rights were respected’] – because of the economic and political interests of the big powers and others in the commission.” ...On Turkey, Amnesty said that it had avoided international scrutiny through solidarity with... Western countries, despite documented cases of torture and other abuses against Kurds... The... human rights situation in Colombia has worsened since the last annual UN session. “Extrajudicial executions, ‘disappearances’ and torture by members of the security forces and their paramilitary allies have persisted and, in some areas, increased dramatically.” Amnesty called on Indonesia to halt its “crackdown” on non-violent, political, human rights, labour and other activists. It urged Jakarta to address violations in East Timor and allow groups, including itself, access to the area.

...Will chest-thumping by Western nations clamouring for the global moral high ground push human rights up the international development agenda? Perhaps not, according to [a former UN] diplomat... Instead... the... director of N[Z]’s Centre for Strategic Studies... warns that... [in] Asia, where governments are under constant diplomatic and trade pressure to conform to Western concepts of humanism, the campaign may even hold the potential to backfire. Since the end of the Cold War... the world has witnessed a “veritable crusade of universal dimensions” led by the U[S] and other key [Western] countries, designed to spread good governance, free trade and human rights throughout the world. “Democracies, so the argument runs, do not go to war with one another... [However, democracy] is certainly no guarantee of stability...” In East Asia... nations have within 25 years achieved a degree of modernisation and development that Western Europe and North America took more than a century to accomplish. The accompanying presumption is that the pace of economic success based on convergent liberal free market policies will produce similar convergence with the West in ideals, values and democratic practice. “It is forgotten that North America and European experiences of modernisation were accomplished over several decades by a conspicuous absence of genuine democracy or human rights, by child labour, slavery, theft of intellectual property and similar misdemeanours... Asia is not, however, to be permitted the same period of grace. The assertive presumption that Western values are indeed universal values is producing among Asian politicians and thinkers fairly negative reactions... The ideals, values and principles embodied in the U[N] and in the human rights covenants were, and are, the ideals, values and principles of that group of UN founder nations, the so-called West. A modern and successful Asia will expect that its ideals, values and principles should find some expression as well in the body of international normative behaviour. Asia’s attachment to the international system overall will be clearly affected to the extent this does, or does not, occur.” ...[Incidentally, the] UN human rights committee has condemned serious human rights abuses in Sudan including the crucifixion of convicts, slavery and the press-ganging of children into the army.

...With righteous Italian anger of the radical variety... the E[U]’s commissioner for humanitarian aid, has turned on the institution of which [it] has long been a passionate supporter. The UN, [the commissioner] said last week, faces being tarnished for ever by shame for its role in the Congo. “The saga of the commission of inquiry into the massacres has surpassed the degree of ridicule it has already earned.” [The commissioner], who directs the world’s biggest budget for humanitarian aid, had better be listened to... [because it] is right. We need to know what is going through the minds of the new UN Secretary-General... and the new High Commissioner for Human Rights, the former president of Ireland... How could the UN just decide to buckle and pull out its human rights investigators when the [then new leader] of the Congo, Laurent Kabila, told them to? The UN human rights team was dispatched to the Congo in June to investigate reports that Mr Kabila’s rebels, in the battle to topple the long-time dictator, Mobutu Sese Seko, massacred Rwandan Hutu refugees. When these UN human rights investigators were first deployed it was with the acquiescence of Mr Kabila. But no sooner were they on the ground than they were obstructed and denounced at every turn. Reports from human rights and intelligence sources make it clear that all this was a stalling tactic to give time for the mass graves to be exhumed, the bodies burnt and the evidence scattered to the wind and rivers. Witnesses have been intimidated and jailed... The UN has two serious problems to overcome. Firstly, its failed credibility as a human rights organisation... and its fading seriousness as a peacekeeper, for which the [US] Administration’s wimpiness in the face of the anti-UN hostility of the chair[perso]n of the US Senate’s foreign relations committee... has been largely responsible. [The UN]’s human rights weaknesses are something the secretary-general can do much to repair himself, since it has deep roots in the culture and more so the institution itself, and had a willing supporter of the take-it-easy approach during the tenure of his predecessor... This was expertly documented in a report written two years ago by Article 19, the London-based International Centre Against Censorship. It showed in enormous detail how governmental manipulation of UN human rights committees had led to the suppression of a “substantial number of allegations of abuses in the five veto-wielding countries.” ...It [also] showed how UN operations in the field have often failed to report publicly human rights violations. In ex-Yugoslavia essential information that would have helped relatives trace missing victims during the ethnic cleansing was withheld. Most serious of all was that the UN forces in Somalia violated the Geneva Convention by refusing to disclose crucial information about the casualties they inflicted on local people. Not surprisingly, Canadian and Italian units of the UN peacekeepers from that operation have been accused of brutality and cruelty. The UN’s problem with peacekeeping is that its authority, finances and reach have been so mangled by consistent opposition from the US during the [42nd] presidency that it does not have the spine to stand tall. A new secretary-general is not enough. The rot has gone too far... We are now paying the price for this in a number of arenas. There is a blunting of sensibilities following one televised ethnic war after another, in which the world community seems politically helpless. It also affects issues like the aftermath of the Gulf War where there is growing unwillingness by rank and file member countries to support the continued and intrusive monitoring of Iraq’s war machine by the UN. [The Iraqi leader]’s gain here is going to be America’s big loss. Intellectually, this state of affairs does not add up. With the end of the Cold War and with the number of smaller wars declining dramatically each year, this should be the time for great UN activism in pursuit of helping the world peace process along. Instead, this quite unique historical opportunity for a great peace and the advancement of universal human rights is being wasted and frittered away.

...Famine focused world attention on Somalia seven years ago, causing governments and aid organisations alike to rally relief teams and send out aircraft to deliver food to the southern Juba Valley. Today, a new call for help is receiving slow and sparse response. Heavy rains have beaten down on the valley for three weeks, causing the Juba River to pour over its banks... 130 people have drowned and... 300,000 Somalis are without homes or food. The faction leaders who rule this nation of seven million in the absence of a central government – the same ones who forced out UN peacekeepers in 1995 – are appealing for aid. But bitterness left over from that disastrous mission has governments and relief agencies reluctant to mount another large-scale effort. “The governments fear there may be [a return to the] chaos of 1992. It’s been proven that large amounts of aid attract looters,” said... a spokes[perso]n for CARE International. The anarchy of Somalia made a fiasco of the two-year relief mission. More than 100 peacekeepers died and... \$US1.66 billion was spent before the U[N] finally pulled out the last of its troops... [In related news, a Wellington] company... founded in 1875... which hit international headlines... in 1991... [when it won the UN] berets contract... closed yesterday with the loss of 60 jobs.

...The U[N] still owes N[Z] \$3.5 million for peacekeeping work in Bosnia. N[Z] sent three contingents of peacekeepers to Bosnia between 1994 and 1996... The Army sent the UN a bill for \$13.5 million to reimburse mission costs. Of that, \$10 million has been paid. The UN has certified \$1.5

million of the outstanding amount for payment when money is available. The Chief of General Staff... said the Army's wait was not a serious concern and did not affect its operations. "We're effectively borrowing from the Defence Force against it."

...The U[N], in debt for more than \$US2 billion... is limping along by not paying states... who contributed troops to peacekeeping ventures, says its chief financial officer. "One group of member states finances another,"... Because of a continuing shortfall for day-to-day expenses, mainly because the U[S] owes it more than \$US1 billion... the U[N] has to borrow from peacekeeping funds, which means not paying those contributing troops. Highest on the list is France, owed about \$US135 million, followed by Britain at about \$US80 million. The Netherlands, Pakistan and India come next, followed by nearly every country that has contributed troops to the U[N] since 1990, including N[Z]. The US President has proposed a)... \$US1 billion payment for arrears... But conservatives in Congress are far from approving the monies... [and, if] the money is allocated... a U[S] debt of \$US362 million would still remain...

[The US] President... and the Republican-dominated Senate have called for the prompt payment of... arrears to the... [UN. T]he arch-conservative chair[person] of the powerful Senate Foreign Relations Committee, announced after... meeting the new U[N] chief that... legislation providing for the payment... would... [be submitted – but also] made it clear that payment, which would be staggered over a period of time, would be linked to progress by the U[N] in carrying out specific reforms... a linkage with which... the... new secretary-general... appeared uncomfortable... "If the reforms are piecemeal, or if the status quo persists, then you will have a very difficult time" getting the money... said... [the senator]. In another development concerning the UN, n]ine of Taiwan's allies ha[ve] submitted a proposal... calling for Taiwan's representation in the world body.

...Cambodia's U[N] seat will stay vacant for the time being after a UN committee deferred any decision on the credentials of two rival delegations... After a closed-door meeting of the General Assembly's nine-member credentials committee, members said the issue had been shelved indefinitely... Meanwhile... Japan will not even consider increasing its contributions to the U[N] unless the Security Council is quickly reformed to give Tokyo a permanent seat, according to a senior official. "I'm sure the Japanese taxpayer will not be happy if Japan is continuously asked to pay more and... at the same time we don't have a permanent representation on the Security Council,"... Japan[is] the second-largest contributor... This year Japan will contribute 15.65[% of the UN]'s regular budget. Tokyo is unhappy about a U[S] drive to cut Washington's contributions to 20[%]... especially given that Japan's gross national product is around half that of the U[S].

...US] slammed for dictatorial arrogance... THROUGH the eyes of much of the world, the resurgence of the U[S] and its ascendancy as the world's only superpower has been one of the most dramatic developments since the Cold War. Historians who once warned about America's decline now gush about an age of unrivalled dominance. But over the past few months, irritation and anxiety have begun to overshadow sentiments of admiration among America's closest allies. Across Europe, Asia, Latin America and Africa, convictions are growing that the US's political, economic and cultural clout is breeding an arrogance that is unpleasant and dangerous. "Never before in modern history has a country dominated the earth so totally as the U[S] does today," said the German news magazine *Spiegel* in a recent cover story. "[US] idols and icons are shaping the world from Kathmandu to Kinshasa, from Cairo to Caracas. Globalisation wears a 'Made in USA' label. The Americans are acting, in the absence of limits put to them by anybody or anything, as if they own a blank che[que] in their 'McWorld'. Strengthened by the end of communism and an economic boom, Washington seems to have abandoned self-doubts from the Vietnam trauma. America is now... obtrusive[and] intimidating." The US is discovering its behaviour has come under sharpest scrutiny from friendly nations that no longer feel prevented by Cold War loyalties from expressing their disagreements with Washington. At the U[N], allies such as Britain and Germany have not shrunk from excoriating America's refusal to pay as much as \$1 billion in past dues, its reluctance to increase spending on foreign aid and its rejection of a ban on land mines... Washington's efforts to compel other nations to isolate Cuba, Iran, Iraq and Libya have also provoked annoyance... [The US President]'s officials say the US was bound to be condemned whatever it did – overbearing when it asserts its will and indecisive if it allowed others to take the lead.

...After hearing that Iraq was probably still concealing details of clandestine weapons programmes, the U[N] Security Council yesterday maintained the stiff economic sanctions imposed on Baghdad since its 1990 invasion of Kuwait. "Getting Iraq to comply is like pulling teeth from somebody who doesn't want to open his mouth," [the US's] UN ambassador... said... The Security Council decision was made during its regular 60-day review of Iraqi Gulf War sanctions... • [The US – which 'has maintained about three bombing raids per week since its most recent military campaign in Iraq ended 10 months ago (and shows no sign of letting up even though US military officials admit that the continued bombing has had no impact on Iraq's military capabilities and Iraq says the raids have killed 200 civilians') –] ...has formerly asked the U[N] to lower its dues from 25 to 20[%]...

The British envoy to the U[N]... has sharply criticised the U[S] for failing to pay its UN dues, calling this "indefensible." "The amount owed by Washington is the equivalent of the whole of the UN regular budget for one year,"... It accounted for two-thirds of the \$US2.1 billion... in UN members' arrears for budget dues and peacekeeping costs... In unusually pointed criticism of a close ally, [the envoy] asked: "How can the UN put itself to rights in such an ignominious predicament?" In a speech prepared for a meeting at the UN of members of the British-American Chamber of Commerce, [the envoy] said personal respect and affection for individual [US] diplomats and public servants "inhibit many in this building from speaking frankly. The truth is, failure to pay legal dues... causes great anger and exasperation, even among friends and allies. It poisons the working environment. [US] exceptionalism cannot mean being the exception to the laws everyone else has to obey. What a reputation to risk, for a nation of such traditional vision and generosity." Alluding to repeated US calls for UN reform, [the envoy] said if an ailing patient needed surgery, "we would make sure [the patient] had normal blood pressure before operating, perhaps even given a quick transfusion," especially if [it] was expected to return to work the next day. "With the UN it seems to be different: the pulse is feeble, blood supply is down, no blood donors in sight. But self-appointed medics pronounce chloroform and the scalpel a cure for overweight. A smarter remedy might be: restore the blood supply to normal and recommend more exercise." In... [further UN news, Tuesday] was the day diplomats at the [world body] have anticipated for months with dread and disdain: The day they had to start paying their parking tickets. The city of New York's new policy, backed by the State Department, of refusing to recognise diplomatic immunity for parking violations has prompted more impassioned rhetoric here in the last few days than most issues of war and peace. Equally controversial have been suggestions that diplomats who want to avoid tickets for illegal parking try using public transportation to get to work. [The secretary]-general... took time out... [from] trying to end the bloody civil war in Zaire... to call for calm on all sides and a return to civil dialogue. But the UN committee in charge of housekeeping issues threatened to bring the dispute before the General Assembly... Cuba's UN] delegate... said it was an effort to "protect our rights". The delegation collected 1208 tickets last year on its 30 diplomatic vehicles. "Diplomatic immunity is like virginity. Either you have it or you don't," added [the diplomat] who represents Brazil (3351 citations on 35 cars). In the end, the committee put off a decision until [next week]. Some members were ready to continue lobbing verbal grenades at "the host country", but the translators on duty were ending their shift and the session was adjourned to avoid paying them overtime. But no one in Tuesday's debate scaled the rhetorical heights reached earlier in the week by the French, who may not have been this convulsed since a Californian cabernet sauvignon first topped Bordeaux in an international wine competition. [The]French legal counsel... fulminated that maybe the UN should move its headquarters to more civilised Geneva or Vienna... where police were more accommodating. Last year, [New York] city officials say, 116,345 tickets were issued to UN diplomatic cars, with 17,936 more given to consular vehicles, which also are subject to the new rules. Russia received the largest total – 31,388 on 178 vehicles – and North Korea averaged the most per vehicle, with 38.3 a month.

...The effects of globalisation and the dark side of "identity politics" are among the major challenges facing the U[N], says its Secretary-General... [H]is first annual report to UN member states... warns of the dangers of the unfettered proliferation of small arms to conflict areas where the U[N] is attempting to build peace. [The report] also says that the international community needs to "address and resolve" the problems posed by an

ominous new trend, in which civilian populations and humanitarian workers have become the targets of combatants. The Secretary-General, in a break with UN tradition, is due to present the 25-page report to the... General Assembly... when world leaders gather for the opening of the general debate... which always takes place on the third Tuesday in September. [His] aides say that by taking the podium moments ahead of leaders such as [the] US President... the Ghanaian UN chief intends to place his reform agenda firmly at the heart of the debate... In an attack on traditional General Assembly procedures, [the Secretary-General] appeals to member states to allow him a freer hand, saying that “the current situation serves neither party well.” ...[while being] “prudently optimistic” about the future, [the Secretary-General] makes it clear [that it] expects member states to do their share, notably in solving the world body’s financial crisis, which [the Secretary-General] describes as “unprecedented and debilitating.”

...with an eye on the... [US Congress, which has] vowed not to pay the \$US1 billion Washington owes the world body until it... [is satisfied with his reform programme, the] UN... Secretary-General... yesterday proposed eliminating staff and cutting \$US123 million... from the budget as a first step... 1,000 jobs his predecessor... left vacant would be cut completely... [The Secretary-General] also proposed merging some... departments, creating a code of conduct for its employees and cutting... administrative expenditures, now 38[%] of the budget... by a third by the year 2001.

...sometimes you need to have change imposed upon you... WRITING about neoliberal reform programmes... a co-director of the Centre for Rationality, Ethics and Society at the University of Chicago, says because restructuring tends to be painful, with significant social costs, reforms tend to be initiated from above and launched by surprise. Significant change is enacted by fiat and rail-road through so that the compromise that might result from public consultation need not be made.

...[the] president of the U[N] General Assembly has presented a key resolution to enlarge the Security Council that could allow Japan and Germany to become permanent members but without veto power. The document from... [the Malaysian diplomat] would expand the 15-member council to 24 seats and is considered the first serious attempt to reform the body after years... of fruitless discussions. But it does not necessarily resolve the controversy quickly... Any council changes would have to be accepted by a two-thirds vote in the 185-seat General Assembly and by the current five permanent council members. They would also require a revision of the U[N] Charter, which would have to be ratified by two-thirds of members’ national legislatures... [By the way, US] Army units backed by helicopters were yesterday trying to extract three remaining U[N] police officers still trapped in the... town of Brcko after a day of violence... The rest of the force of 257 U[N] police officers had been rescued from Brcko in often chaotic scenes... [as the US] Army units of the Nato-led Stabilisation Force (SFOR), together with teams of U[N] international police task force officers, formed groups to snatch U[N] officials from houses in which they were besieged by Serb mobs... “There’s just no law now on the streets of Brcko,”... said... [a UN spokesperson, who added that] at least 25 U[N] vehicles had been destroyed in the attacks, and many more damaged, with some U[N] police officers fleeing for their lives after being attacked by stone-throwing mobs... In the afternoon, with mobs still rampaging through the town and no sign of Serb police... [US] Army troops opened fire at a checkpoint on the bridge over the Slava River... after... a television crew from Associated Press... [was] attacked and assaulted... [by] an angry mob... Meanwhile, the Western-backed Bosnian Serb President... [was holding] an inauguration ceremony in her Banja Luka stronghold.

...Peacekeepers in Bosnia will use deadly force if necessary against mob violence, Nato’s top general said yesterday... Stone-throwing Bosnian Serbs have confronted [US] troops in Bosnia several times in the past week. Two soldiers were injured by clubs in one incident... The... General... said SFOR was striving not to take sides despite clashes with Serb hardliners, who support... the... indicted war criminal... and... former Bosnian Serb president... against... “...the constitutionally elected president of the Republika Srpska,” as Serb-controlled areas of Bosnia are known. [The General also] suggested peace-keeping troops in the former Yugoslav region might try to disarm [the former president]’s armed bodyguards. “If there are specialist police who are protecting him... they won’t legally be able to...”

...Eight years on from the end of the Cold War we seem to be mired, even entrapped, in a seamless web of failures on the international scene. U[N] peacekeeping, once the flagship, has been holed below the waterline and is sinking fast – it doesn’t even try to put in a port call in bloody African conflicts these days. Start 2 (the Strategic Arms Reduction Treaty) meant to cut the over-large US and Russian nuclear arsenals, first held hostage by [the US Senate Foreign Relations Committee’s chairperson,] is now a prisoner of the equally chauvinist Russian Duma. The [US] Administration’s energies have been deployed almost exclusively on the expansion of Nato – there are not many beads of sweat to be seen in Washington from the pushing for Start 2, much less Start 3. Elsewhere, [the Iraqi President] is still trying to build weapons of mass destruction, the Middle East peace process appears to be dead in the water... But is this all? It is not, though to find a mention in the press of another side of things is a laborious and unrewarding task. The media appears to revel in its melancholic view of life. Last week the Stockholm International Peace Research Institute held its annual press conference to launch its 830-page yearbook. Admittedly, it is a complex read, but is that a good enough reason for ignoring the remarkable revelation made in its first chapter that for every year since 1989... the number of wars has fallen? In 1989 there were 36 major conflicts... and last year... it was down to 27, of which all but one, between India and Pakistan over Kashmir, were domestic in nature... The evidence appears conclusive that it was the Cold War that was the greatest single stirrer of conflict... Last year... witnessed the end of the post-Cold War period... With that out of the way it probably doesn’t matter so much if the [US] Administration still spends on defence at Cold War levels or Russian and [US] missiles stay nuclear-armed in their silos. Since America and Russia are no longer engaged in proxy wars it doesn’t any more weigh on the rest of the world, only on the [US] and Russian taxpayers who should wake up and ask what it’s all for. We are now living in a very different kind of world than humanity has long been used to and the question is can we keep it that way? Can the momentum of declining conflicts be sustained? Africa and an arc of instability around the Russian periphery remain the most troubled regions. But who can help them? The most single successful arbitrator of disputes, for all its setbacks in Somalia, Rwanda and ex-Yugoslavia, remains the UN. These days, however, the Security Council remains shy of launching new initiatives. UN peacekeeping continues its dramatic decline and all the remaining large-scale UN operations are set to be terminated this year. Yet, even though it is a truism to say it, peace must be struggled for continuously. A small band of UN enthusiasts, determined and skilled diplomats and, increasingly, voluntary organisations carry on with their unremarked upon good works of arbitration and interposition. No other generation in humankind’s history has been so close to a worldwide peace. Are we going to go for the final push or are we not? Why on earth at just this moment are we losing our nerve?

...Human security does not come out of a gun barrel... Unlike traditional military security, human security is much less about procuring arms and deploying troops than it is about strengthening the social and environmental fabric of societies and improving their governance. To avoid the instability and breakdown now witnessed in countless areas, a human security policy must take into account a complex web of social, economic, environmental and other factors. Although there is much that governments can do on their own to promote human security, national policies need to be complemented by improved international cooperation. This is true, for instance, in global environmental governance – where the gap between rhetoric and action is widening. The 1995 World Social Summit in Copenhagen recognised – rhetorically, at any rate – that poverty, unemployment and social disintegration are closely linked to peace and security issues, and that there is urgent need for a new global commitment to reduce deep inequities that breed explosive social conditions, fuel ethnic antagonisms and drive environmental decline... Since many contemporary conflicts arise within countries, promoting more democratic forms of domestic governance and facilitating the emergence of more pluralistic, accountable societies is crucial. While far from being a panacea, the tremendous rise in the number of non-governmental organisations is on the whole an encouraging development. [But the] broad availability of arms means that disputes can easily be transformed into violent conflict. It is time all governments made strenuous efforts to reverse course. From permissive and careless attitudes towards developing, producing, procuring and trading arms, we need to move towards constraint. This means adopting meaningful limits on new production, but it also means

undertaking an effort to collect and destroy as large a portion of the arms already in circulation as possible... It is time to strike a new balance in our security investments – a balance that curtails the excessive reliance on traditional military means... and corrects massive social and environmental investment deficits... Devoting greater resources to demilitarisation, environmental sustainability and social well-being may be regarded as incurring unwelcome expenses. Yet they constitute a set of highly beneficial, mutually reinforcing and long-overdue investments. Put simply, the choice before humanity is pay now or pay much more later. The cost of failing to advance human security is already escalating... [Currently, building] an alternative security system – based on far-reaching disarmament, demobilisation of soldiers, conversion of arms factories, more effective peacekeeping and non-violent conflict resolution – might require some \$US40 billion annually. The global social and environmental investment needs – encompassing such areas as preventing soil erosion, providing safe drinking water, eliminating malnourishment and providing adequate shelter – will take a larger amount, perhaps some \$US200 billion annually for several years. [However, this] compares with roughly \$US800 billion spent each year on military budgets... [■] The Republican Congress has come up with a brazen approach to squaring the [US\$ UN] debt – threatening the U[N]. The Senate Foreign Relations Committee has approved legislation that would pay \$US819 million of the debt over the next three years, but only if the U[N] complies with a long list of conditions, including... a reduction in future U[S] dues. However, U[N] members may reject the deal... “I don’t think anyone expects that Congress can take decisions and impose them unilaterally on the other 184 member states,” [the UN’s leader] said... The secretary-general stopped short of condemning the plan... calling it a product of “tough and delicate negotiations.” Officials in the [US] Administration “felt this was the best deal they could get under the circumstances and considered it a breakthrough,”... [The] Administration participated in drafting the bill and is supporting the basic thrust, acknowledging that it could be the only chance to win congressional support for repaying much of the... debt... The bill, written by [the] foreign relations committee chair[perso]n... is the latest and perhaps most serious salvo from Congress in a long-running effort to use money power to compel reforms and bend the U[N] agenda more to the U[Ss’] liking... But the... approach is a risky one that U[N] officials and congressional critics contend could produce a backlash from countries that resent heavy-handed U[S] dictates. While many member countries agree that the U[N] bureaucracy has become bloated and wasteful, there is also indignation about the U[S] withholding dues... it has promised to pay and periodically leaving the institution short of funds.

...[Entertainment tycoon] finds a spare billion for the UN... [The vice-chair[perso]n of Time Warner Inc, said yesterday [that it] would donate \$US1 billion... to a fund for U[N] programmes over the next 10 years and would ask other wealthy people to do the same... Such a fund would have to have a new structure because individuals could not contribute money directly to the U[N] to make up for dues and other debts of governments. “The U[S] still has to pay up,” [the vice-chairperson] said... Speaking... on CNN, [the vice-chairperson confessed]: “I only got the idea 48 hours ago. One billion is a good round number.” ...[the] strong supporter of the U[N] and a critic of the [US] Government for its \$US1.5 billion debt to the world body, first made the stunning announcement at a dinner in New York... “I’m not poorer than I was nine months ago, and the world is a lot better off.” Asked about the reaction of... his... actress... wife, [the vice-chairperson] said: “It brought tears to her eyes.” [The vice-chairperson] quoted her as saying “I am proud to be married to you.” ...U[N] officials have welcomed [the] US media mogul[’s promised donation]... as a boost to the morale of the world body, which is frequently under attack by US politicians.

...Beware tycoons bearing gifts for purposes that are the responsibility of governments... At its foundation the U[N] was the second attempt this century to achieve peace by structured debate among nations. Its agencies range from the children, refugee and environment programmes to the food, agricultural, health, cultural and scientific organisations... They are the creations, and remain the responsibilities, of member governments... They should not be funded directly by outsiders, whether tycoons or corporations, without the mandates which official representatives enjoy. One of the unsubtle aspects of global privatisations and resulting lower corporate tax rates is the increasing public relations gestures of corporates to be seen to be “green” or socially conscientious. Having refused to operate in higher tax jurisdictions they have often escaped to the lower wage and environmental standards of [Last World] countries where their excess profits can become available for acts of generosity. Of course, governments might welcome largesse which relieves them of their responsibilities of U[N] membership. Most seriously, their receipt of donations allows them to abdicate responsibility and hence power. Moreover, it amounts to an exchange of power whereby no government will hereafter find it easy to insist on codes of conduct for transnational corporations with economies far greater than [most countries] or to require U[N] scrutiny of their attempts to defeat U[N] initiatives such as reduced carbon dioxide emissions or the prevention of mining in Antarctica... Of course, the U[N] is short of funds. It is always expensive keeping the peace as a bureaucracy as is the continued support of, for example, orthodox medicine and farming. However, that expense is governments’ expense and should not be captured by private interests. If ever the level playing field cried out for implementation it is now when the subsidy of the world body by business and industry risks us losing the century’s greatest achievement – the U[N] and its agencies. Rather than “saving” it, this gift (and maybe others) could place the world’s great debating forum in great jeopardy. Non-governmental organisations around the world, whose identity depends entirely on there being governments of the people and not of corporate interests, should demand that the U[N], to which they are accredited, not accept the money unless by trustee allocation to international non-governmental charities such as the Red Cross or Oxfam which work with the U[N] in achieving those ends of education, relief and environmental restoration.

...A spontaneous act of good-natured philanthropy or a carefully calculated publicity stunt? ...In an autumnal mood, [a US media tycoon] springs a \$1 billion gift on the U[N] – and unabashedly challenges other rich guys to cough up, too... “I’m putting every rich person in the world on notice... They’re going to be hearing from me about giving money away. If you want to lead, you got to... blow the horn and get out in front of the parade.” ...As [the tycoon] tells it, his life’s thrilling new mission was revealed to him in the form of a net-worth statement. [The tycoon] was flying to New York to receive an award from the U[N] Association and] was in an upbeat mood. The evening before, [it had] cheered his beloved Atlanta Braves baseball team to a come-from-behind victory. Sculptors from Madame Tussaud’s Wax Museum had been in, measuring him with calipers for a statue. [The tycoon will] turn 60 next year, and, just that day, [had] mused aloud about the challenges of age, even for billionaires. “You get more conservative in life... You are not as colourful as you were when you were younger.” For the [guy] who colourised the movies, drab is death. But in a life of dramatic acts, what do you do for a grand exit? The answer lay in the dry document on his lap in the Cessna. As of December 31, 1996, his monthly financial statement read [that the tycoon] was worth \$2.2 billion. By last week the bottom line had ballooned to \$3.2 billion – a vast hunk of new wealth created by the rising price of his shares in the Time Warner media empire. The [tycoon decided to give the] “extra billion”... away – and make the largest single pledge in philanthropic history... Talking to reporters the next day, [the tycoon] said, “There is no greater joy in life than giving to worthy causes.” [An entertainment tycoon becomes the] world’s leading Sister of Charity: it was an astonishing and, to some, annoying idea. This is, after all, a legendary cold corporate tough guy who once fired his own son... a guy who can’t help but be self-promotional... a [guy] who can sense a momentous trend and embody it with purposeful mischief and a gap-toothed sales[person’s] grin. The tycoon] shrewdly has ridden successive waves: the sun belt’s rise, the communications revolution, the globalisation of commerce, the unabashed entrepreneurialism of the 1990s. Now [the tycoon has] caught the next one, giving (some of) it away... This is a guy who, when you look at the fine print, isn’t selling a single share of his Time Warner stock, but is merely promising to set it aside to use as collateral to fund his pledge. [The tycoon will] get tax benefits, while retaining his voting power and the value of any further appreciation. As [the tycoon himself noted, the tycoon is] still at least as rich as [the tycoon] was on New Year’s Day... [The tycoon] is, for now, one of the world’s loudest and richest corporate pensioners... [who] views himself: as a [guy] dangling above the chasm, always at risk. [The tycoon came] by his insecurity the hard way, through a tyrannical father who beat him severely before committing suicide when [the tycoon] was 24. A manic-depressive, [the tycoon]’s mood swings and suicidal tendencies were calmed a decade

ago by lithium and psychotherapy. [The tycoon] remains on the drug and on the wagon. But his chief source of calm and comfort is [his wife], who... made philanthropy an organising principle of his life well before last week. A sailor and hunter, [the tycoon is] a proto-environmentalist. The [tycoon's] Family Foundation, started six years ago, is run by a former head of Greenpeace USA, and all of... his five children... are on the board. It is expected to spend \$25 million next year... In the last year, in public and private, [the tycoon has] only half jokingly offered to assume the entire [US UN] debt – and then sue Congress for full compensation... In Hong Kong, the beehive of billionaires, the [offer] won admiration for its bold impetuosity.

...Con... leaves UN pondering a billion-dollar embarrassment... [The person who] stunned delegates at a UN conference in Melbourne last Friday... [with his pledge to donate] \$US1 billion... to the U[N] to fight poverty was discovered yesterday to be a failed A[USn] businessperso[n]. Describing himself as an exiled Borneo prince and wearing a white robe and tricolour sash, the middle-aged... [AUSn's] pledge followed a] US cable-television king[']s... \$US1 billion offer of UN aid, but the only people who said they knew "His Royal Highness..." were his... rural A[USn] family. The AUSn... still owes them \$A10,000... his brother said. "If [it]'s that bloody rich [it] can send us some money,"... [The AUSn], a failed builder, went overseas 19 years ago, leaving his wife and their seven children... The Australian newspaper... quoted his family as saying. The self-styled prince[, who] could not be contacted yesterday... received a standing ovation at Friday's UN Conference on Secure Infrastructures for Electronic Commerce...

With his recent \$US1 billion gift to the [UN, a media tycoon] bought respect around the world. With another half billion or so, could [the tycoon] buy the presidency of the U[S? The tycoon has]... defied many bigger risk-reward ratios in experiments in business... [A] Democratic political consultant, said: "[The tycoon] is one of the legitimate visionaries of this century. If [the tycoon] wants to give [a billion dollars] to help people and then run for president, more power to him. [The tycoon] seems to be the kind of guy we could use." However, another political consultant cautioned: "Money does not buy happiness or the presidency. The graveyards are full of the corpses of candidates based on money alone." ...critics say [the tycoon] has a low boiling point, a quick temper. Actually, his boring point is lower than his boiling point. A few years ago, after [the tycoon] successfully got CNN up and running against great odds, [the tycoon] was bored and talked about running for the US Senate. Now, [the tycoon is] bored playing second fiddle at Time Warner. And both [the tycoon]... and his wife... are getting bored with raising buffalo in Montana. Don't be surprised if that boredom and all their bucks lead them to the risky but richest experiment ever in politics.

...[The UN] can do nothing against law of the jungle[, which]... suggests that the [organisation] will never be a forerunner to world government... In a recent Herald article, [a former UN diplomat] noted that there is such close agreement between the A[USn] and US governments that the former diplomat can detect "no chink of light between [their] respective positions or interests" regarding Asia-Pacific security issues. In particular, this displeases [the former diplomat] because the recent A[US-US] ministerial communique "nowhere acknowledges the security role of the U[N], nor peacekeeping and related activity, and the need for member countries to strengthen U[N] capacities for ready response, conciliation or good offices." It is hardly surprising that Canberra and Washington excluded the UN from their security deliberations. What surprises is that [the former diplomat] really expected they might do otherwise. Why does [the former diplomat] believe that any nation-state, not to mention a superpower, would entrust its national security or its vital interests to an organisation that has failed so miserably to deter aggression, end civil wars, halt terrorism, and prevent genocide? How many times must the UN demonstrate its impotence as a peacekeeper or peace-enforcer before people recognise this painful reality? Surely this is one question where the evidence speaks loudly and clearly for itself. Civil war raged in Bosnia from 1991-1995, and over 200,000 people were killed while UN peacekeepers monitored the situation and allowed the carnage to continue. Similar calamities occurred when the UN tried to prevent mass murder in Democratic Congo and Rwanda. Punitive UN success stories in Afghanistan and Cambodia went up in smoke when the Taliban militia in the former and the armed forces loyal to [one of the two ruling factions] in the latter brushed aside UN personnel and simply killed or terrorised their political opponents. As for the human disasters that occurred in Liberia, Sierra Leone, Ethiopia, Sudan, Uganda, and Burundi, the UN might just as well have never existed... [A] Pulitzer Prize-winning journalist, sums up the reasons for the UN's feebleness as an international peacekeeper: "[T]his post-cold war version of the UN as the new major player on the block is a hallucination. Why? Because the UN is a fiction. Yes, it has a Secretary-General, a bureaucracy and a building. But it has no army, no taxing authority, no independent will. Because it is a creature of the sovereign powers that control it, its sovereignty is an illusion." The only way to alter this situation is to compel the great powers that control the UN to relinquish their power to the UN and authorise it to maintain peace and order throughout the world. However, sovereign nation-states believe that their primary obligation is to use the power at their disposal to preserve national security... Because a great power like the US would never surrender any of its sovereignty to an international organisation like the UN unless it was confronted by a superior military force, it is safe to say that, given the awesome military power possessed by Washington and its European and Asian allies, this will never occur. No one can deny that the UN is worthwhile... But... the UN is never going to be anything other than the sum of its parts. We must not forget that we dwell in the real world of nation-states and power politics, that world government is nothing more than a utopian dream, and that the law of the jungle counts for much more in today's world than the rule of law.

...It was ironic... that Plato, Socrates' editor, ghost-writer and perpetuator, should become the patron saint of pure, changeless ideas and author of *The Republic*, the prototype and most influential of all Utopias, a terminal portrait of the perfected community[, because]... Socrates could hardly have been any more content in Plato's Republic than [Socrates] had been in his own Athens... [Yet] Plato's *Republic* would claim to be the static end of seeking and the need for seekers. "Although all the rulers are to be philosophers," British mathematician and philosopher Bertrand Russell once objected, "there are to be no innovations; a philosopher is to be, for all time, a [hu]man who understands and agrees with Plato." ...In recalling the story of our human search for meaning, we have been inclined to remember the courage, initiative and imagination of the messengers and forget the message. The Hebrew prophets... sought purpose in the word of the God for whom they spoke, the... Greek philosophers... sought to free the wondrous instrument of reason within everyone... THE NEXT GREAT AGE OF SEEKING... sought purpose not in the vision of individual prophets or the personal revelation of reason within each person. The appeal was... society[] itself. Communal enterprises in the great age of discovery, beginning in the late 15th century, signalled a turn to experience – to shared experience – and dramatized the power and possibilities of community. The European exploration of America showed how much of the world the Europeans still did not know, and how community enterprises of discovery could open opportunities for nations and individuals. Out of this experience and the vitality of the Renaissance... came a new sense of seeking as a communal endeavour. There emerged a new way of describing the communal search that had great influence in succeeding centuries. "Civilization" would suggest the meaning and purpose of community. The word in its modern sense does not enter our language until the 18th century. On 23 March, 1772, James Boswell... tried to persuade British lexicographer Dr. Samuel Johnson to admit the word "civilization" into his landmark *Dictionary of the English Language*. Johnson could not be persuaded, and insisted instead on "civility", to which [Johnson] would only give a technical legal meaning. But in the lexicon of Voltaire's French enlightenment, "civilization" was coming to be the name for the enlightened state of which all [humans were] capable. In France, Voltaire had seen a climax of civilization... In the Russia of Peter the Great [Voltaire thought it] was seeing the process by which civilization would come to other countries. Civilization then, according to Voltaire, was no monopoly of France or any one people or language. It was people in community seeking the perfection of their society and its achievements.

...Our global family ties How the world is shrinking. If global events of 1997 offer any insight, it would be confirmation, on the back of the Asian financial storm, of how interdependent states have become... Asian states more than most are traditionally disinclined to embrace multilateral cooperation. Face often takes precedence over pragmatism. But, as... demonstrated by the smoke from Indonesia's forest fires, national borders are

decidedly porous when faced with international challenges... Even the single most significant political event of the year, the handing over of Hong Kong by Britain to China, had about it a symbolism in keeping with the shrinking of the global village. Such a peaceful exchange of land was in itself a nod to changing times. But... if there was one story during 1997 that contributed more than any other to providing evidence of the way in which the international community is contracting it was the worldwide reaction to the death of the Princess of Wales. An industry may have grown out of explaining the reason but there was no doubt that the grief was genuine and that the hole her passing left reached beyond national barriers. The images of a world grieving together confirmed a world living together... ● [A second joint AUSn-NZ]... embassy is being proposed... as part of on-going attempts by the two countries to cut diplomatic costs. A spokes[person for the NZ] Foreign Affairs Minister... said the two countries had shared facilities in Vienna for several years and were negotiating amalgamating their individual embassies in Geneva... Vienna was the U[N] and the International Atomic Energy Agency base, while Geneva was home to the World Trade Organisation... A recent article in A[US]'s *Bulletin* magazine said joint embassies with A[US, NZ] and Canada were being mooted by the A[US]n government as part of public service restructuring proposals. [The minister's spokesperso]n said there were no immediate proposals for other joint embassies at this stage but the issue was kept under regular review with both parties. "We are... always looking for sensible options for our representation." N[Z] had nearly 50 overseas embassies.

...Welcome to Austzealand and have a nice day. Several times this century it has been suggested that the north and south islands of N[Z] should simply become the seventh and eighth states of A[US]. The British statute of 1900 which created the Commonwealth of A[US] expressly contemplated the possibility that N[Z] might be added to the federation. Haven't wars been fought over such takeover notions? In 1988, the A[US]n and N[Z] attorney-generals signed an agreement which some commentators believed would lead to a common currency, harmonise criminal and corporate law and ensure unhindered trade between the two nations. It was suggested this would, in fact, make N[Z] a de facto state of A[US]. The idea died in the Darwin sun shortly after the ink dried. In 1989, [the NZ P]M... predicted the A[US]n and N[Z] economies would merge, with the two countries likely to be negotiating a joint currency by 2000. Not likely then, not likely now. More recently, A[US]n and N[Z] politicians have taken to trading insults rather than negotiating an empire... And that's the way it should be, because the trans-Tasman rivalry must live on. - 1997

...[if NZ and AUS were] to... become one[country, d]efence, foreign affairs and all similar national responsibilities would pass to the capital in A[US]. N[Z] would be represented in the federal parliament – with the weight of being the federation's fourth largest state – and would retain its own state parliament with responsibilities for health, crime, local government and the like, and would receive funding from the federation. The new state of N[Z] could keep its flag, as the A[US]n states had. But Australasia would have a new federation ensign and the Treaty of Waitangi would become a fundamental part of a new state constitution. The referendum was close – an overall majority in A[US] of 57 per cent... – but... in N[Z]...

NZ]ers have delivered a resounding "no" to the suggestion of hopping into bed with A[US]... More than eight out of 10 people polled... said they did not want the two countries to join under a common Government... and the answer was the same across the board: age, gender, income and geographical boundaries did not alter the view[– although gals]... were less keen on the A[US]ns: just 9% said they wanted our Governments to merge, compared with 19[% of guys]... Only Alliance voters wanted to turn the A[USn-NZ] pact CER... into ECER (Even Closer Economic Relations). About a third of people who supported the Alliance were... keen on defying the watery boundary between us... People felt so strongly that only 4[%] of those surveyed sat on the fence and said they were not sure.

...*Swiss decide UN way to go...* Switzerland basked in a rare moment of international solidarity yesterday, after voters abandoned centuries of political isolationism and narrowly agreed their neutral country should join the U[N]. But leading politicians and analysts said it would be a mistake to over-interpret the referendum as a sign that the country had decisively rejected its perennial outsider role. The "yes" camp won 54.6[%] of the popular vote and 12 of 23 cantons, a double majority required under the Swiss system of direct democracy. The cliffhanger vote came down to the final canton... Although Switzerland was already deeply engaged in UN activities and hosts its European headquarters in Geneva, its fierce neutrality and independent-mindedness had kept it from becoming more than just an observer... "If there is a winner in this election, then it is our country because we can now bring as much as possible our values, our traditions, and our good services into the UN," [Switzerland's]Foreign Minister... said in Berne... The verdict leaves the Vatican as the only state not a full member of the world body.

...[yesterday the world's s]how business elite joined[the UN] Secretary-General... for an 11-hour transatlantic concert that united music and the Internet to fight global poverty. NetAid – organised by the U[N] Development Programme and Internet networking company Cisco Systems... which... has provided about \$US22 million in NetAid and advanced the project a[refundable] \$US5 million... to cover the costs of the concert... – was watched or heard... on television, radio and on a Web site that organisers hoped would lure millions to see the show... [Although] it was the largest Webcast thus far, surpassing the previous mark of 12,500 simultaneous viewers via the Internet[, the volume of hits never threatened] the system's capacity of 125,000... The concert was staged in three venues hosting overlapping performances, starting at Wembley Stadium in London and later moving to the Palais des Nations, the home of the U[N] in Geneva, and finally to Giants Stadium in East Rutherford, New Jersey, outside New York City. Musicians included re-united English rock duo The Eurythmics, who opened the show in London, ...Catatonia... U2... the Fugees... and South African band Ladysmith Black Mambazo. Despite a feel-good atmosphere, some artists warned against a "We are the World" naivete that their efforts would reduce poverty overnight. That movement by top musicians spawned a hit record and raised cash in the mid-1980s but was unsustainable. "Nothing cataclysmic and positive is ever simple," said... the... [lead] singer... of REM. "But I think it is a great idea and perhaps we can get there." [The Secretary-General], speaking from the Palais des Nations, invited virtual viewers to click on "give" to make an online donation... Soon... "nearly half of... the global village will... have to survive on \$US2 a day or less... There are no more excuses. Let's bring on a new day."

...In space no one can hear you scream, but in cyberspace they can. The human rights group Amnesty International is just one of the charities and voluntary organisations that have discovered the power of the Internet in coordinating campaigns around the world – and responding rapidly. In Sri Lanka, security forces were preparing to torture a human rights lawyer they had just arrested when they were told to stop. The lawyer... is alive today only because within hours of her arrest, messages began arriving from Amnesty supporters demanding her release. [An Amnesty u]rgent coordinator... says such quick response is essential. "It is during the first few hours or days that someone is likely to be tortured and killed. Part of the battle is getting information to supporters quickly so they can put their concerns to the relevant official as quickly as possible. Using the Internet, we can respond within minutes of a violation." This month, Amnesty in Britain will join companies such as Tesco and Nationwide in stepping up from merely having a Web site to becoming a full-scale Internet service provider... The charity hopes to see a big increase in use of e-mail among its 150,000 members, who were offered the service earlier this month. Christian Aid was the first charity to become an ISP – in January it teamed up with Global Internet to launch SurfAid. Subscribers pay £7.50... a month plus sales tax for the service, and the charity gets £12 for each sign-on. The move has brought in £9000 so far. The Internet is also a very effective marketing tool, as Christian Aid discovered in May when it asked 10 of [Britain's] top Web sites... to run a banner for a week advertising its Sudan famine appeal. The Internet campaign raised £3500, just for the cost of a few phone calls... But... urgent action... e-mail... campaigns [are only] effective in countries where the Internet is widely used...

INDONESIA faces mounting pressure over political violence in East Timor. The U[N] led condemnation of Indonesia's handling of militia violence in the troubled territory[, while]... Amnesty International has accused Indonesia of failing to honour commitments to stamp out violence by its supporters in the run-in to the... U[N]-supervised ballot... More than 450,000 East Timorese have registered to vote in t[he] election, when they

will be asked to endorse or reject a proposal for autonomy within Indonesia. If they reject autonomy, [the]Indonesian president... and others have suggested the territory could be granted independence. Renewed violence late yesterday left two unidentified people dead and 10 houses torched in the E[T]ese town of Maliana, about 75km southwest of the capital Dili. Before the latest incident, the head of the UN Mission in E[T]... slammed Indonesian police handling of a militia rampage which left six dead. "All that we witnessed suggests that it was the militias carrying guns, weapons, and that once again heavily armed police failed to intervene when that militia violence was carried out in front of them,"... [In reply, the] Indonesian ambassador to the UN... blamed pro-independence groups for the deaths of four people on Thursday[, and] said it was "deeply regrettable that pro-independence supporters carried out acts of provocation against pro-integration members". [Last night AUS's] foreign minister... urged Indonesia to take action to maintain security in the lead-up to the ballot. "The behaviour of a bunch of thugs on the streets of Dili or in other towns... should not stop the people of E[T] being able to exercise democratically their own wishes and to determine their own future,"...

Freedom could add to Timor's grief... Indonesia's suggestion of independence for E[T] may well add to the misery that has long been the norm in the impoverished territory, some analysts say. But it offers Indonesia a chance to rid itself of one issue that has repeatedly blackened its name in the eyes of the world at a time when it desperately needs the international community to help it through its worst economic crisis in 30 years... "This confirms what we have heard from many sources of that regime: that there is a prevalent point of view in Jakarta that Indonesia has lost the battle over E[T]," an ET]ese Nobel peace laureate... told a Portuguese radio station. But [the laureate] was sceptical, saying... Indonesia could later retract or amend the proposal. Analysts said that in the short term E[T], one of the poorest parts of Asia, would be unable to cope on its own. They said there would almost certainly be increased violence between those who wanted to stay with Indonesia, possibly backed by the military, and those who wanted to go it alone, which is probably the majority of the population... "It is impossible for us to become a country in a short time... [To give independence now] is like saying they want to kill the E[T]ese," said... an E[T]ese... member of the Indonesian human rights commission. "We need at least 10 years." The... state-appointed human rights commission says at least 50 people have died in the past six months and thousands have fled their villages after fresh violence this week... Indonesia's invasion of E[T], with the tacit backing of the U[S], was justified as a fight against communism... All but ignored by Portugal during its 300-year rule, E[T] was taken over by Indonesia with almost missionary zeal, determined to give it a leg up. But it turned into an ill-starred venture that brought death to E[T]ese on a genocidal scale and to Indonesia, a notoriety that continues to haunt its image in the international community... "E[T] has become a noose around their neck, an albatross,"... one Asian diplomat said... Since the downfall of [the]former President... last May... Jakarta... has... vehemently refused independence... [The new] Indonesian President... had promised the withdrawal of troops... shortly after[becoming] President... but that had not happened yet... This month A[US], one of the few countries to recognise Indonesian rule there, said Jakarta ought to consider letting E[T] go it alone. But the process should be gradual, it said... Though yielding to outside pressure, analysts say Indonesia now believes that an independent E[T] would not spark other parts of the huge and diverse archipelago to go it alone, despite the growing unrest since [the former President]'s downfall. "...with the possible exception of Irian Jaya, and they feel they have that under control,"... The resource-wealthy Irian Jaya is recognised by the U[N] as part of Indonesia, although there has long been a simmering independence movement there.

...WHEN the door to the cell slammed behind me, the first thing I noticed was the stench of urine and human excreta. Then I saw... bodies lying packed together on the filthy concrete floor. It was one in the morning. Someone handed me a cardboard box so I'd at least have something clean to lay my head on. The police had taken me into custody the previous day and grilled me for nine hours, because... I had taken "political photos" of pro-independence ceremonies, ostensibly not permitted by my tourist visa. So there I was, in a cell with about 40 others. Among them were 26 members of the Satgas Papua, a militia of the independence movement which had established posts throughout Irian Jaya, also known as West Papua... At 4.30 am... noise from the guardroom penetrated the stuffing I'd put in my ears to help me to sleep. At first I thought the guards were doing some rhythmic gymnastics, but it also sounded like blows landing on a body. My fellow prisoners were wide awake and they tried to hold me back when I went to the entrance of our cellblock. The upper part of the door was merely barred, so I had a view of the guardroom. What I saw there was unspeakably shocking. About half a dozen police[officers] were swinging their clubs at people lying on the floor. Oddly enough, they did not cry out. At most there were only soft groans. After a few long seconds, a guard saw me looking and struck his club against the bars of the cellblock door. I quickly went back to my usual spot, from where I could see the clubs, staffs and split bamboo whips at their work. Their ends were smeared with blood and blood sprayed the walls right up to the ceiling. Sometimes I saw the police... hopping up on benches and... jumping on the bodies. By about 5.15 am things quietened and I heard the sound of a hose. But then the orgy of torture resumed, apparently with another lot of prisoners. At one point a guard came into our cell and indicated to me that the beatings were the normal retribution for the death of police[officers]. Other prisoners told me that a police post had been attacked at 1.30 am in the suburb of Abepura, and two police[officers] and a private guard had been killed. At 7.30 am the torturers went outside for morning muster, so I looked into the guardroom again. The floor was covered with blood, like a slaughterhouse. Some of the prisoners were ordered to clean it up. Shortly before 10 am noise broke out again. The cellblock door was opened, and with the ends of their staffs the guards drove about three dozen new prisoners in. Their hair had been striped white from a spray can, like sheep marked for shearing. The newcomers were jammed into a single cell. Then the cellblock door was opened again and one after another they were tossed into our already crowded cells, some more dead than alive. Most remained motionless where they fell, either unconscious or utterly exhausted. One of the[m]... was almost blind and had to be led by another prisoner. Now and again the faces of the guards appeared at the barred window, looking impassively at the tangle of maltreated bodies. The last prisoner was a large [guy] who fell over the bodies on the floor and lay there groaning horribly... In the back of his head was a coin-sized hole through which I believed I could see brain tissue. After nearly an hour and a half of groaning and spasmodic movement, [his]... suffering visibly neared its end... [H]is powerful body raised itself again and his head struck the wall. A final laboured breath, then his head dropped to the cement floor. At last his agony was over. Later I learned that [his name] was Ori Dronggi. I saw a picture of his body in the newspaper *Cenderawasih Pos*. The story said that three dead Papuans had been brought to the morgue and police had said they "died in the fighting." ...All the [people] arrested after the attack on the police station outpost were freed after 36 hours. Dronggi was one of 18... from the highland town of Wamena who were arrested in a dormitory near the university in Abepura. [Dronggi] quite probably had nothing to do with the attack and the same was true of the 35 other[s]... who had been tortured... Throughout my imprisonment not a hair on my head was touched. In fact, the otherwise sadistic guards went out of their way to be nice to me. But mistreatment of other prisoners was continuous... After 12 days Jakarta officials ordered my deportation. The arrival of a Swiss Embassy official from Jakarta was one of the reasons I came out unscathed. But dozens of less privileged prisoners remained in the cells, among them the Satgas militia. Though the extreme violence continues, their spirit remains high. Each morning the Indonesian national anthem is broadcast throughout the prison. In defiance, the Papuans in their cells counter it by singing their independence anthem.

...Almost 20,000 people gathered in the capital of Indonesia's huge and remote province of Irian Jaya yesterday to watch the hoisting of a separatist flag and demand independence. The far eastern province joins a growing number of Indonesia's regions wanting to break free of what many see as decades of oppressive Jakarta rule, threatening the disintegration of one of Asia's biggest countries. The "Morning Star" flag was raised first and then the Indonesian flag at an early morning ceremony in front of a Government building in downtown Jayapura... There was no violence during the ceremony... The "Morning Star" was also raised in other parts of Irian Jaya, on the western side of the giant island of New Guinea, where the Free Papua Movement has for years operated a low-key rebellion against Jakarta. Irian Jaya joined Indonesia in 1963 after massive diplomatic pressure and a threatened invasion by Jakarta... Meanwhile, a top Army official in Indonesia's troubled Aceh said yesterday

that separatists were in control of the province... Military chiefs have been lobbying hard for martial law in Aceh, ahead of Saturday's anniversary of the rebel Free Aceh Movement's founding... [T]he military would resist any attempts to fly the banned Free Aceh flag on Saturday.

...Separatist rebels and student leaders in Indonesia's restive province of Aceh are warning of more violence after the start this week of the Muslim fasting month... [D]uring last year's Ramadan... locals had kidnapped security forces in revenge for past human rights abuses there... The warning came a day after security forces opened fire on protesters... during the rebel anniversary, wounding at least 11 people... Saturday's shooting marred an otherwise largely peaceful celebration of the 23rd anniversary of the Free Aceh rebel movement... [A rebel] said it was the military which would most likely try to provoke an upsurge in violence. "The Indonesian military always pushes us... [Y]esterday they took down our flags and we did not do anything. From that you can see they are always trying to provoke us,"... Although there were no reports of violence yesterday the major highways were still painted with the word "referendum," which growing numbers of Acehese demand so that they can choose whether to set up an independent state. The Government says they can have a referendum on the introduction of Islamic law but has ruled out independence... Meanwhile, at least 31 people have been killed in... clashes between Muslims and Christians on an island in Maluku province...

Indonesia's military, struggling to contain bloody unrest on the island of Ambon, has sent in 3000 troops with orders to shoot rioters on sight and had sacked the local police chief. [The a]rmed forces... commander... told reporters the troops would take tough action to restore peace to the spice islands, where more than 200 people have died in communal fighting since mid-January... Despite having thousands of police and soldiers on the ground, ABRI has been unable to halt the violence, largely between Christian Ambonese and culturally and ethnically different Muslim migrants from elsewhere in the vast archipelago.

...HEADLESS bodies lie in the streets after brutal ethnic clashes on Borneo Island. The death toll has risen to more than 200 after six days of fighting between Dayak tribes[people] and Madurese settlers... Homes of Madurese settlers who fled the Indonesian-controlled area... of Sampit... were being burnt to the ground and thick smoke was reported to be rising in several areas... As many as 11,000 Madurese refugees are sheltering in government offices... waiting to be taken to safety... Two navy ships... were heading up the Mentayan River towards Sampit... More than 600 extra police and soldiers were being sent... and another crew of 650 soldiers was on its way. Borneo Island has been the scene of ethnic violence in the past. Attacks on Madurese by Malays backed by Dayak tribes[people two years ago] left 3000 people dead and tens of thousands displaced.

...In the courtyard of a village head[perso]n's house, a dozen Dayak headhunters sat smoking pungent clove cigarettes, revelling in mass murder and plotting more. "I felt so strong, so powerful," said a 21-year-old veteran of last week's massacres of Madurese settlers in the Indonesian province of Central Kalimantan. "For seven days, I didn't sleep or eat... I just stabbed and slashed and cut off their heads. I don't know how many I killed, but it was at least 10." The wild [guy] of Borneo is alive and flourishing... If the minority Madurese refuse to leave their homes, they will be decapitated, the headhunters insist. But to foreigners, the killers display a timid charm. "Would you like to come along?" they ask... A[nother] 21-year-old... had recently returned from fighting in Sampit, where an estimated 400 migrants from the distant island of Madura were slaughtered last week. The... young... kill[er]... did not follow the ancient Dayak custom and bring home any of his victims' heads as souvenirs... but some of his brethren did, and buried them with their ancestors' bones to act as their servants in the afterlife... For the next proposed attack on a small village, two hours downriver, a witch-doctor will be required as the 50 Madurese there have two guns... "Our fighters will need a spell to make them immune to bullets,"... explained the head[perso]n... In many other countries, [the]... 73-year-old... might well be arrested for aiding and abetting murder, but in Indonesia, [it] will remain a respected figure and continue the campaign to purge his homeland of the Madurese. Out of 100,000 Madurese in Kalimantan, about 20,000 have been shipped out this week and a similar number are waiting in a squalid refugee camp in Sampit to follow... The Sampit rampage followed the murder of a Dayak by settlers during a gambling row in December in a nearby village.

...Indonesian police have begun shooting rioters in Borneo to halt a wave of ethnic violence that has killed hundreds... [The] Inspector-General... threatened to prosecute any officers who failed to take tough action to stem more than a week of savagery... "Police have shot five people who were involved in disorder,"... [The Inspector-General] did not say if those shot were Dayaks, descendants of feared headhunters, who have been killing Madurese immigrants and burning their homes at will, often beheading the victims and ripping out their hearts. The rampage has forced some 30,000 Madurese to leave their homes. Many have fled to Java or their island homeland, Madura, just off East Java, where they face a grim future.

...Top Indonesian security officials yesterday headed to a ravaged Borneo district where 270 people have been slaughtered in a week of ethnic bloodshed and spear-carrying gangs still roam the streets. The visit marks the first serious response in Jakarta to the violence... that has created some 40,000 refugees... It was unclear if there had been fresh bloodshed... The grisly massacres... underscore the mess Indonesia finds itself in... after plunging into political and economic chaos.

...E[T], according to Indonesia's President... is "nothing but rocks." And if this impoverished region chooses independence, it faces the daunting task of building an economy from rubble. Most of its 800,000 people are subsistence farmers. The landscape is mountainous and infertile and 23 years of often-brutal Indonesian rule has done little to foster an educated workforce. Most important jobs are taken by Indonesians... Most discussions of [ET]'s future centre on oil. An independent E[T] would take Indonesia's place in the... treaty with A[US] which shares out the oil and gas wealth in the Timor Sea. But for the foreseeable future, the prospect of significant oil earnings will remain a dream, as last year Indonesia and A[US] received just \$US1.1 million in royalties... E[T]'s best hope is coffee. The country produces an average of 6000 to 7000 tonnes... a year, much of which is marketed as high-quality organic coffee... [T]otal coffee exports were currently worth about \$US15 million a year. Over five to 10 years, with improved techniques and more planting, this could be doubled. But while coffee is likely to be the main plank of the... economy, it cannot be the sole foundation. Other exports that have been mooted include marble – the territory has an impressive supply – and sandalwood, although much of this has already been plundered. Tourism is an alternative, and some have even suggested turning E[T] into a gambling haven for visitors from Indonesia, where gambling is banned. But E[T] lacks even a basic tourism infrastructure at present... In the meantime, [the]... economy is deteriorating, shaken by the uncertainty hanging over the region... Several pro-Indonesian militias have sprung up, sparking clashes that have caused thousands to flee their villages, traumatising the rural economy. In the towns, the Indonesians who controlled the bureaucracy, health, education and trade are leaving. Shop inventories are running down. Many shops have closed. Food and spare parts are scarce.

...An exodus of medical staff and an increasing shortage of drugs may result in the deaths of hundreds in E[T] each day, say foreign medical experts... "The Indonesian Government is not sure of the future of E[T], so things are paralysed... the usual bureaucratic obstacles to things like the import of medicines are getting worse,"... said... an American volunteer...

The B[ritish] Labour Government is exporting more guns and military equipment to Indonesia than its Conservative predecessors, a British newspaper has revealed, despite Indonesia's illegal occupation of E[T]. A report in the *Sunday Times* states that the [Labour] Government has permitted the export of twice as many small arms and machine guns to Indonesia as were approved in the last year of [the last] Conservative Government. The [Labour] Government has also allowed the sale of howitzers, mortars and flame throwers, the report said. The increase in arms sales to Indonesia runs contrary to [the] British Foreign Secretary's... pledge to introduce an "ethical" foreign policy... The Foreign Office stated that the situation in E[T] had improved, following the Indonesian Government's commitment to E[T]ese autonomy.

...PRO-INDONESIA paramilitary groups have threatened to "sacrifice" an A[US]n diplomat or journalist to punish A[US] for its policy switch on E[T], says the A[US]n Foreign Affairs Ministry. "The threats were received by fax on Friday night and passed on to the Indonesian Ministry for Foreign Affairs," said a ministry spokes[perso]n in Sydney. The names of the groups were not disclosed... On Friday, 10 A[US]ns drove overland to West Timor... the *Sydney Morning Herald* reported yesterday... Six A[US]n citizens – two journalists, a priest and three political

activists – had elected to stay in Dili despite an upgraded A[US]n consular warning... Eleven officers from the A[US]n government AusAid programme have also left. The death threats come after A[US] received permission to reopen a consulate in Dili which has been closed since 1971... After being the only country in the world to recognise the incorporation of E[T] into Indonesia in 1976, A[US] changed its stance last month.

...the shock announcement that there would be no transition from 23 years of military rule – should E[T] reject Indonesia's undisclosed offer of autonomy... within the republic – has provoked new fears of civil war. For months the Indonesian military has been arming locally recruited militia and paying them to fight on the side of integration... With more than 16,000 Abri troops stationed on the half-island territory to control a population of about 800,000 and to fight the 300 or so pro-independence Fretilin resistance fighters remaining in the mountains, it is hard to see a military justification for arming a paramilitary force. "It seems that the Government and military apparatus intends to pit opposing groups against each other, and then allow one group to kill the other group," said... the Indonesian National Human Rights Commission [member]... The Dili-based human rights organisation Kontras... has detailed the disappearance, shooting and torturing to death of dozens of E[T]ese by pro-Indonesian militia and said yesterday that it was considering legal action against military commanders who have armed the groups.

...Reports from the countryside of kidnapping, killing and torture continue to reach Dili as the U[N] Security Council sits down to endorse the size of the UN mission in E[T]. The latest, from Catholic church sources in the Ermera region south west of Dili, outline a combined operation by pro-Indonesian militia groups and Indonesian military, coordinated by units of Indonesian military intelligence... which... attacked... [e]ight villages... The report tells how in each village all the inhabitants were rounded up... and their hands tied behind their backs. Those suspected of working with Falintil pro-independence guerrillas were shot... A local guerrilla commander yesterday detailed atrocities in the same villages.

...Pro-Indonesian militia opened fire in the E[T]ese capital of Dili yesterday, a day after they charged through the city killing advocates of independence and burning their homes. At least 12 people were killed on Saturday, and the Indonesian Government has admitted its responsibility.

...E[T]'s paramilitary forces, trained and armed by the Indonesian military, are out of control and the territory has reached a very dangerous point, say regional analysts. After more bloody attacks by pro-Jakarta militia in... Dili... analysts said the armed forces... lacked the political will to stop the violence. Indonesian media, quoting police and military officials, said more than 20 people died... on Saturday... [The] head of South-east Asian studies at Sydney University, said... the paramilitary groups were nothing more than local criminal gangs involved in gambling and prostitution and with no real political agenda in E[T]. "They are not going to be able to take over the local administration in Dili. They are nothing more than crude intimidators. Where do they go from here?" But... [the] director of the A[US]n National University's Asia-Pacific programme... disagreed, believing the paramilitaries had a definite political agenda to remain a part of Indonesia... "I think... [t]he security situation... in E[T]... has deteriorated dramatically in the past four to six weeks." [The director] said the paramilitaries' aim was to wreck a UN-sponsored ballot... to decide whether the former Portuguese colony wants independence or simply more autonomy. "They are cranking up the fear and intimidation prior to the ballot because they realise if there is a free ballot they will lose, because the majority want independence."

...[the militia chief], aged 68, calls himself the chief organiser of E[T]'s pro-integration armed forces – but, depending on who you ask, [the 68-year-old is] also known as a killer, a fascist, a ruiner of young [gals], and a shining example to all E[T]ese. The 68-year-old seems to relish his reputation as a ruthless militia leader using violence to keep E[T] a part of Indonesia... [The 68-year-old] explains his strategy: for peace to exist, there must be one side that is strong enough to frighten its enemies into submission. "Why should I be the one who is scared of them when they can be scared of me?" ...But with the UN presence in E[T] firmly established to oversee the vote, E[T]ese have become bolder in fending off militia attacks. Militia leaders are feeling the pressure that a vote for independence could mean a public backlash against them, including trial for past human rights abuses... [A h]uman rights lawyer... has been collecting evidence on [the 68-year-old] and several other militia chiefs. [The lawyer] says the Indonesian military is almost always at the root of their careers... [A] 27-year-old militia commander responsible for the [recent] Dili and Liguia attacks that killed 35 people... admits [that it] was converted in prison, after serving time as a pro-independence rebel... [The commander, who once] publicly urged integration supporters to capture and kill, if necessary, independence supporters... says not a drop of blood should be spilled during or after the ballot... Asked if [the commander will leave E[T] if autonomy is rejected, [it] waves a hand at his wife and shrugs. "In some ways, it's better to have the ballot just so we can see who is on which side once and for all... But I am afraid that there is clearly no government in Timor. Without law, we will kill one another after the ballot. Especially if autonomy is rejected..."

...The [NZ] Government will spend \$25,000 on flights to Sydney for 16 E[T]ese living in N[Z] so they can take part in an independence vote. They were flown to Sydney this month to register and will go again to vote in the U[N]-run ballot on August 30. The Act leader... has condemned the expense as a "feel-good" gesture than elevates the value of an E[T] vote above a N[Z] vote. The Government would not pay a dollar for any N[Z]er's travel costs to vote... "If you try writing to the Minister of Foreign Affairs and saying to him, 'Look, I'm in Afghanistan. Could I have a free ticket to fly to New Delhi to cast a vote in the nearest embassy?' the answer would be, 'Get off the grass.' If I'm not prepared to pay for a N[Z]er, why should I pay for someone from E[T]?" The Minister of Foreign Affairs... who returned yesterday from an 11-day goodwill tour of the Pacific, was unwilling to answer any questions last night. But [the minister] said through a spokes[person] that financially it had been a very difficult call to make. "But there was no alternative. The N[Z] Government tried to get the U[N] to set up a polling booth in N[Z] but they wouldn't allow it." ...The UN was sticking strictly to the terms of the May tripartite agreement between itself, Portugal... and Indonesia... The deal allows for four voting centres in A[US], which has a large expatriate community, but none in N[Z]... The U[N] also would not allow a polling officer to come to N[Z] to register potential voters... The costs would come out of the \$200 million aid budget... • [Yesterday in Dili, pro-independence]... leaders... raised the flag of free E[T] for the first time in public, as thousands danced and sang in the streets. The emotional early-morning flag-raising ceremony marked the opening of the new headquarters of the National Council of Resistance for E[T] (CNRT) at a seafront bungalow... "This symbol... is the sign of our suffering, our struggle, our crying," said [a] council official... as [it] raised the blue, white and green flag with golden crossed swords and star symbol in the corner. At the base of the flagpole was a cement map of E[T]. A smattering of officers from the U[N] Mission in E[T] were on hand for the ceremony, which was marked by the blowing of bugles, marching school children and patriotic songs.

...Anarchy in Dili... Dili resembled a war zone last night as hundreds of anti-independence militia... took control of the E[T]ese capital, sealing off roads, setting fire to houses and laying siege to the main U[N] compound... In the pro-independence suburb of Becora, militia... were searching house to house for independence activists. As night fell, dozens of militia [members] were seen running into a housing area firing at random... UN officials said two groups... teamed up in the late afternoon to attack the suburb where hundreds of people had taken refuge in a schoolyard after an attack the previous night... One UN civilian police [officer] had a gun pointed at his head and was told to go away or be killed... Indonesian police, who are supposed to [be] maintaining security in the territory before its future is known, stood by and did nothing... [However, about] 100 heavily armed Indonesian riot police were firing at Aitarak militia in defence of the U[N] compound, where 300 UN officers, 60 international journalists and 500 pro-independence refugees were sheltering... Police said one boy had been killed in Dili, and unconfirmed reports said that another four people were killed in the militia-controlled town of Hera... The [post-ballot] violence prompted renewed calls for international peacekeepers.

...A[US]'s Foreign Affairs and Defence Ministers... yesterday ruled out A[US]'s participating in any non-U[N] force in E[T]. Earlier, the N[Z] Minister of Foreign Affairs... was quoted from Wellington as raising the possibility of intervention by a group of like-minded countries in the event of a "worst-case scenario" of absolute chaos by the end of the week. [The minister] was reported... as saying the chances of getting a U[N] mandate for intervention were very low. This might make non-UN intervention possible, [the minister] said, listing A[US], NZ, Japan, the U[S] and possibly

members of the Association of Southeast Asian Nations as potential participants. “We cannot go on hearing about this bloodshed the way it is now and not engage in some sort of a support base,”... [However, a spokesperson for his AUSn counterpart] said last night... “[The NZ Foreign Affairs minister]’s office reassured us that non-UN intervention... is not an option that is being promulgated by N[Z] because of the self-evident complications associated with it...” [The AUSn Defence Minister said his country] was prepared to meet any need for evacuation from E[T], but added: “Troops from A[US] will not go in unless it’s at the invitation of the U[N] with the sanction of Indonesia.” [AUS’s Defence Minister] said the post-ballot period had... so far gone “relatively well,” better than the pre-ballot lead-up... “There have been some wild times [in E[T]], but the polling day itself went well, and I think the Indonesians should be congratulated on that,”... 98.6[%] of 451,000 registered voters... [- 20% of whom] were non-Timorese... [-] cast their votes in Monday’s ballot on the territory’s future...

Migrants flee the future... For Indonesian migrants, an E[T] vote for independence offers a frightening future. Thousands of autonomy supporters have packed up their belongings, locked their homes and fled across the border into Indonesian West Timor fearing renewed bloodshed and violence... “We have been told we will have our throats slashed,”... a Javanese-born school-teacher in the capital... said, clutching his 5-year-old son... “We can’t leave – my job is here. If I go we can’t eat.” ...Human rights groups and senior UN officials said the [migrants] comprised mainly family members of Indonesian military, police and militia officials but also included civil servants and small business folk. In Dili, many of the shops remained closed, their owners either fled into the mountains or joined the cross-border exodus... Tens of thousands of Indonesians... have come to the eastern half of Timor island since Indonesia invaded... in 1975... [T]he influx of migrants[, who]... dominate the public service and business sector... in... [a region where u]nemployment is chronic[, has]... caused strong resentment among E[T]ese, many of whom rely on subsistence for survival. Despite... promises of peace and reconciliation... from pro-independence leaders, fearful migrants... remain sceptical... “I don’t believe them,” says... a bank worker who migrated from Java four years ago. “After the [Indonesian] security forces go, who will protect us?”

...waiting for the aftermath THE new front line in the war for E[T] was a bare kilometre outside the capital, Dili, last Wednesday. On the same afternoon as thugs of the anti-independence Aitarak militia would fight a pitched battle outside the headquarters of the U[N] mission to this troubled province (UNAMET), battle lines were also being drawn on a hill above the ramshackle town. On commanding heights affording a view of Dili and the coast to the east, pro-independence villagers were preparing for war. The rumours are that killings of pro-independence supporters will start in earnest straight after the results are known of last Monday’s independence referendum, some time in the next few days. They were not waiting to find out if the rumour was true. Across the twisted asphalt track leading up the ridge was a roadblock of spindly logs and stones. All across E[T] such roadblocks have been thrown up. Travel is not only impossible without armed escort, but murderously dangerous. Most roadblocks are [patroll]ed by militia members who are drunk or stoned by early afternoon. They are looking for trouble and they hate foreign journalists almost as much as... UNAMET. In the town of Hera, below to the east, Aitarak murdered a school teacher and his wife the night before, apparently for being pro-independence. We tried to drive there. The town was eerily deserted, oil drums blocking the road. At a post [patroll]ed by an Indonesian Army... officer and Aitarak, we were turned back. This, too, is the same all over E[T] – deserted villages, fearful residents hiding in the hills. Only if they have to do they emerge. Last Monday was such a day, when... voters trudged for hours in almost Biblical procession to vote over the disputed half-island’s best chance at a peaceful break from 23 years of brutal, military rule from Jakarta. Up on the hill the mood was friendly. Unlike the sullen menace of the militia, foreigners are welcomed by pro-independence [ET]ese... What worries them, apart from the constant threat of militia attack, is the threat of mass departure – the scurrying flight of journalists as tensions mounted last week, the talk of evacuation by the UN, the loss of the eyes of the world. It is easy to see why. While they may have weight of numbers, the pro-independence camp is hopelessly outgunned... “It would be relatively easy for the Indonesians to close the militias down... The withdrawal by the army of support and armaments from them would achieve that almost immediately. They, meaning... the people in Jakarta, have chosen not to.” What is happening here, in other words, is state-sponsored anarchy... [ET] was colonised, exploited, and neglected by Portugal from the 1400s, before being invaded by Indonesia in 1975 and annexed a year later. Indonesia improved the roads – they wanted to move troops around with greater ease – but the positive legacy of both colonising forces is so scant as to offer one immediate explanation to the [ET]ese impulse for independence. After all, could it get any worse? Could the desperate poverty and endless violence... be deepened much further[?] Depressingly, the answer is yes... A Reconciliation Commission compromising leaders of both sides has been established in recent days under UNAMET auspices. But even as it met for the first time, pro-Jakarta front parties for the militias were already announcing their withdrawal from the process and cranking up their widely doubted allegations of election day frauds. If the rumour mill is correct, this is all scene-setting for the coming wave of blood-letting. The referendum outcome will almost certainly be for independence, and the losers are expected to retaliate, violently and spitefully. E[T] is rife with reports of death lists in every village and reliable eye witness accounts of the distribution of M-16 assault rifles and grenades by... [the] Indonesian Army (TNI)... to local militias. In one inland village, locals told observers on polling day TNI soldiers had gone from house to house telling independence supporters before the ballot: “You can live till Monday...” So complete is Indonesia’s web of security over the territory it is dangerous to name either the town or the source. Militias are equipped with radios and jeeps intended for the Indonesian police (POLRI), so when UN police officers lodge complaints about militia activity, police lack resources to follow through. So far, the threats have not been widely acted upon, although the death toll of anti and pro-independence supporters continued to mount last week. However, the climate of fear is pervasive and, because there was no provision for an international peace-keeping force in last May’s referendum deal between Portugal and Indonesia, there is little to counter it. Most fearful are the UN’s local staff. For them, the murder in Atsabe of 49-year-old Joel Lopez Gomez after polling closed was an early down-payment on the threats made against all 4000 of them. The army, police and the mobile police are responsible for security in E[T]. But to spend a week there is to discover what a joke that is. When black-clad louts from Aitarak can walk into the Dili airport departures area... shake hands and exchange warm greetings with police, set off the metal detectors and go unsearched, you know it is a joke. When they can stop three [ET]ese families from boarding the flight on which their luggage is already loaded, when you see th[ose families] begging to be allowed to go and being refused, you know that things here are very, very wrong. As usual, UNAMET and other observers responded in the only way open to them – with more angry words and reams of paper... [L]iving in E[T] at present is like having the Mongrel Mob in every suburb, with the vital difference the police don’t arrest them. They egg them on. Sometimes, they even emulate them. During voting in Namoleca, in remote hill country, police alleged voting irregularities as a pretext for entering the polling place with firearms presented, in flagrant breach of election protocols. When challenged by the UNAMET returning officer, the police commander reportedly got angry and revealed the extent of Jakarta’s humiliation by this referendum, saying: “This is our country. You can’t tell us what to do.” ...The N[Z] observer delegation was aghest after meeting with a spokes[perso]n for the Indonesian Government’s Commission for Peace and Stability in E[T]. “The situation] was Orwellian,” said... one of the [delegation’s] five MPs... “It was a straight confrontational and bitter statement that this island was just a heap of rocks. [The spokesperson]’s attitude was verging on racist and showed an absolutely vindictive side that if the ungrateful bastards decide to take independence, they’ll get nothing from [the Indonesians, who]’ll take everything. The power will go, the petrol will go. They’ll have nothing left. There will be no infrastructure.” ...There is deep army opposition to giving up the 27th province of the republic, not only because of the heavy casualties suffered there by its soldiers, but also because... on the army’s mind is its loss of control over much of the E[T]ese economy, which extends far further than in most parts of Indonesia. The TNI owns hotels and coffee plantations and controls imported foreign goods, to name a few. There is a natural alliance of economic interests between the army and local leaders who control the militias, who also fear they will lose everything with

independence. However, others in the policy elite see the world will judge Indonesia harshly if it fails again in E[T] and is seen to trigger a new and nasty civil war there. One of three Indonesian ambassadors overseeing the referendum... told the N[Z] MPs Indonesia was a “pariah state” because of E[T], and openly sought... a peace-keeping force. Similarly, the head of the TNI... and the Foreign Minister... have begun to make noises about accepting peace-keepers. But what if the peace is not there to be kept? No peace-keepers can arrive quickly enough to fill the vacuum which yawns after the result is announced this week.

...I HAD an hour to go before the special BBC plane left E[T] on Friday, loaded with journalists and other foreigners who couldn’t hack it any more. Just time for one more stupid risk – a photo in the street where the Aitarak militia has its headquarters. The photographer, a Bangkok-based American freelancer and I grabbed a couple of “ojek” (motorbike taxis) and took off for a last blast through the cruddy streets of Dili... Through the crazily unmarked one-way system we went, past the warehouse where the Indonesian Army houses the coffee it exports and the A[US]n beer it imports for the thirsty foreign hacks who were that day fleeing in droves. Every time we bought a can of Fosters, it helped fund the army, which helps fund the militias which are turning the would-be independent 27th province of Indonesia into an ungovernable hellhole... Past the white-washed Governor’s Palace, giving on to the pretty bay with the wharf where dozens of E[T]ese were summarily shot and dropped into the water during the Indonesian invasion in 1975. Six A[US]n journalists were murdered in that invasion. Last week, the militia was spreading death threats targeted again at the A[US]n media. Past the boarded-up Chinese merchants’ houses, their owners out of E[T] till the coast is far, far clearer. Past the Indonesian police... squad lounging uselessly on the waterfront, waiting for the next outbreak of mob violence to which they could respond too slowly, too half-heartedly. Some are surely in on the deal which allows the militias to run rampant with minimal control. But a lot of these baby-faced guys from Java and Sumatra would much rather be anywhere else. Like Bali, two hours’ flight away and the gateway to Timor. There, the background noise at night is not gunfire but the crooning of over-fed tourists at the karaoke bars. Around the gates of the UN Assistance Mission... It was here I ran from gunfire for the first time in my life. It is unreal. Since you’ll never see a bullet coming, the instinct to take shelter is oddly blunted. Well, that’s what I found. Past the wrecked headquarters of the Council for Timorese National Resistance... trashed by Aitarak in an internationally televised riot on the day I arrived, a bare eight days earlier. It feels far longer, although reporters who’ve spent months in E[T] say it’s like being in the movie *Groundhog Day*, where everything is repeated every day. A militia parade here, an attack there, a death by hacking, gun battles, burning houses, burning cars. Only the scale and extent change. Except for last Monday, when a wonderful, utterly unforgettable thing happened. The people of E[T] voted in droves... Many were in their Sunday best. All were determined to be at the polling station early, partly to stymie attempts to disrupt polling, but also because many had walked miles and miles to be there. At one polling station, a... menacing bloke carrying a new POLRI walkie-talkie, driving a new jeep, was illegally checking everyone’s voting papers as they arrived. A member of the Mahidi militia in the Ainaro district, [the bloke left when NZ]’s UN observer team first photographed and then interviewed him. However, for that day at least, the intimidation was mild. Now, it looks as if the real payback will begin. Earlier on Friday, [a UNAMET spokesperson]... came close to imploring the international media not to conduct a mass exodus. “Now is not the time to leave,” [the spokesperson] declared. We had been crucial to the process by observing and bringing to the world the awful truth of this lawless place... I could not have saved the world by staying on my scheduled extra two days, but I helped create an image of intimidation and flight by leaving early. When the charter plane landed at Dili, someone let out a whoop and clapped. No one else joined in. This was an awful way to leave.

...N[Z] police arrived home from E[T] late last night as the territory erupted into violent chaos after the UN declared it had voted to throw off Indonesian rule. Seven of 10 N[Z] police officers in E[T] to oversee the ballot were overwhelmed by their experience and relieved to be safe. They were greeted by family, [the]Police Minister... and assistant police commissioner... at Auckland Airport. The remaining three were due to return today. The tearful officers were at a loss for words as they struggled to describe the violence. “I thought I had lived a bit of life before this and experienced most things with the N[Z] police, but going through this has got to be the worst there is,” said [a]Timaru Sergeant... In E[T], within hours of the UN announcement... [by the] UN Secretary General... in New York [that]78.5% of... voters had opted for independence... anti-independence militias took to the streets, resuming a campaign of terror[, and]... world applause at the result soon turned to dismay as security unravelled... The UN said... in one hotel, where a number of UN officials and journalists are based, militia... fired at people on the roof... And... it had evacuated five militia-ruled towns, using helicopters to fly out more than 140 local and foreign staff... Indonesia[’s] President... last night called for calm. But... [the President said that it] understood many... Indonesians would take the outcome bitterly.

...Hundreds of E[T]ese are feared dead after pro-Indonesian militias attacked unarmed refugees and set Dili neighbourhoods ablaze. Independence supporters were decapitated and their heads mounted on sticks lining roads out of Dili, [ET]ese resistance leaders in A[US] have been told, after a second day of rampant violence... Militias and the Indonesian security forces were [also]said to be trucking people out of E[T] last night. U[N] officials in Dili said the forced evacuation appeared to be on a large scale. The UN has [itself]evacuated all non-essential staff from E[T] amid mounting pressure to send in peacekeepers... [Militia] fired on convoys of foreign observers and UN personnel trying to reach the airport... [T]he Indonesian armed forces chief and Minister of Defence, visited the territory on Sunday... They spent less than three hours inspecting the chaos. Despite repeated reports that security forces have joined the militias in a systematic campaign of murder and intimidation, [the Indonesian armed forces chief] described the problem as “an emotional situation where civilians are using arms.” Militias toting traditional weapons and security forces with automatic weapons attacked the home of E[T]’s foremost spiritual leader and Nobel Peace Prize laureate... yesterday. Church sources said more than 2000 refugees sheltering within [the bishop]’s compound were quickly marched off at gunpoint to an unknown destination. The... Bishop... flew by helicopter to Baucau... [and] was reported to be safe. Some of the refugees had [previously]been moved from the nearby International Red Cross offices. An official said the militias had trashed the Red Cross compound... [and] communications are down in most areas... Thousands of residents were said to have fought one another in a mad scramble to board aircraft and boats leaving... [ET. A NZ] UN worker in Dili... said militia leaders told him on Saturday: “If you release the results, we’re going to fight you.” [The NZer] had told them the result could not be held up by threats. They said, “Then it’s war.” Just hours after the announcement, militias made good on the threat... • A fresh contingent of N[Z] police is scheduled to go to E[T] at the end of the month, but their deployment could be reviewed. Ten Defence Force personnel remain on the island as UN military liaison officers.

...[a NZ] Labour MP... who has just returned from Dili, said last night that pressure had to go on Indonesian politicians so they understood the costs to them of standing aside and doing nothing to help the E[T]ese.

...NZ’s Government] is relying on the U[S] to flex its immense diplomatic muscle and pressure Indonesia to halt the bloodshed... The Minister of Foreign Affairs... yesterday indicated that international efforts to halt the militia-inspired anarchy in the territory now depended on “big power” involvement. “If you have not got the U[S] involved in some way, [however,]sometimes things don’t move as rapidly as you would like them to,”... [The minister noted that the US] President... who will [soon be arriving in Auckland for] this week’s Apec summit, had admitted [that it] was under firm domestic pressure to withhold financial assistance to Indonesia’s basket-case economy. [The minister] has so far preferred quiet diplomacy and has limited his denouncement of the carnage... to phrases such as “totally unsatisfactory.” [The minister] is keeping in reserve the option of hauling in the Indonesian Ambassador for a ticking-off. [The minister] has also dismissed calls for N[Z] to suspend training of Indonesian military personnel as “utterly irrelevant.” ...[his] restrained language shows [the minister] wants to avoid alienating the Indonesian delegation before Thursday’s Apec trade and foreign ministers’ meeting, which [the NZer] will co-chair. At this stage there is no suggestion that[the Indonesian] President... and his

Foreign Minister... will shun the summit, but N[Z] does not want to offer them an excuse... E[T] is not on the official agenda for Apec, because the regional forum technically handles only economic issues, but the fate of the territory will be discussed “at the margins.” Those discussions will gather strength as foreign ministers hold bilateral meetings with one another on their arrival in Auckland from today... [NZ’s Minister of Foreign Affairs] said it was a good sign that Indonesia was supporting a UN Security Council decision to send an emergency mission to Jakarta to press for a halt to the violence. However, the credibility of the UN was now on the line.

...Troop plan in pipeline... A formal proposal is being developed to seek U[N] approval for an international military mission to E[T], if Indonesia does not take immediate action to restore order. Key UN diplomats said yesterday that the proposal could be ready to be put to the UN Security Council as soon as this week. However, under the terms of the UN-sponsored agreement on E[T], Indonesia would have to agree before international troops could be sent. The diplomats also cautioned that an international force going into E[T] would have to serve alongside Indonesian soldiers, who have been blamed for orchestrating the attacks on civilians... A group of about five Security Council members, headed by Britain’s UN Ambassador... was expected to leave New York today for Indonesia. The original plan... was for the group to visit Dili, but the Indonesian delegation said its Government would only agree to meetings in Jakarta. A high-ranking UN official said the proposal for an initial military mission to E[T] was being developed outside the UN umbrella... [T]he plan is for a “modest” force to go in first and for the UN to gradually build up the presence into a peacekeeping force of between 10,000 and 12,000 soldiers... The U[S] has said it could provide transport for military machinery needed for the mission, but not troops... The UN has been developing contingency plans for a peacekeeping mission once the Indonesian Parliament formally ratifies the poll result in E[T], which may not be until November. The objective now is to bring forward those plans to progressively introduce the troops from early next month. Portugal has told A[US] that it would be prepared to foot a large part of the bill for the [initial] mission, which would not receive UN funding... [The ET]ese resistance leader... said outside the UN chambers last night that financial restrictions should be applied on Indonesia until it complies with its obligations to protect the E[T]ese people... The UN has defended its decision to allow Indonesia to retain full control of security in E[T], saying there would have been no chance of an independence vote if it had not done so.

...More than 600 demonstrators marched on a cabinet meeting in Melbourne yesterday calling for the A[US]n Government to halt the violence in E[T]. Led by local E[T]ese community figures, the crowd urged [the AUSn] Foreign Minister... to honour assurances that A[US] would stand by independence supporters in E[T]. A local ETese leader blamed the violence on elite units of the Indonesian military, which... had been trained in A[US]. The Communications Union said a ban would be placed on postal and telecommunications at all Indonesian businesses in A[US], including the embassy. A call for workers to stop work tomorrow to join another rally was made by several unions. Meanwhile... Indonesian students burned an A[US]n flag in front of Canberra’s embassy in Jakarta to protest against the country’s... contradictory foreign policy towards E[T]. AUS was the first Western country to formally recognise Indonesia’s 1976 annexation of the former Portuguese colony. Few nations have ever recognised the takeover. But this year, A[US] pressed to allow the territory to determine its own future.

...Indonesian police keeping... a... Kiwi ‘guest’... in protective custody in a remote E[T] town wanted to make the right impression by offering him a treat. But the former Aucklanders were aghast when they produced UN rations, which the Kiwi could only conclude had been looted from burned-out quarters abandoned by UN staff... [The] 24-year-old student based in Japan, was stranded in Ainaro, southwest of Dili, on Saturday, the day the UN announced that E[T]ese had voted overwhelmingly for independence. Militias immediately started to shoot at and then burn the UN base in the town, which was next to his hotel. But its occupants were able to flee to Dili by helicopter. [The student] was not so lucky, and had a militia [member] point an assault rifle at his head. “It was touch and go – the guy cocked the weapon, called me an A[US]n and started kicking me... [The militia guy] was very angry, but then I could see that [the guy] wasn’t going to shoot me.” [The student] found shelter in a police station, where [it] stayed for three days, getting to know the Indonesian police officers and watching their dealings with the militias. “They are just poor people from villages in Java who have been given a uniform and gun and sent to E[T]... They have been there for three or four years, and their morale is really low.” But his suspicions of high-level Indonesian complicity in the... crisis were confirmed when militia... and police arrived at the station together to hand in firearms, which were then checked off a list... [The student] was eventually taken by helicopter to the besieged UN compound in Dili.

...[the UN Mission in ET] leader... and his team of observers... were hailed as the heroes of the... crisis yesterday when they refused to evacuate their posts and leave... refugees to the savagery of rampaging militias. They were outraged when the U[N] decided they should pull out because killing and looting were continuing after Indonesia imposed martial law. “A petition was going around... against their forced evacuation from Dili,” said [a member] of the International Federation of Journalists, from inside the compound. The observers fear that once they are out of the way, the militias will have a free hand to attack local UN staff... and the 2000 refugees sheltering in the compound[, many of whom had originally]... sought refuge in an adjoining schoolyard... People panicked as a 15-minute burst of fully automatic rounds splintered into the school. Between the gunfire and the UN compound stood a razor wire fence. Terrorised mothers threw children over it, some of them breaking bones. Older children chose deep cuts to their legs and hands to climb over the wire. Within minutes UN guards had thrown open the complex and hundreds of refugees were streaming in... A[US]n Associated Press reported from inside the compound that terrified refugees felt a mixture of terror and anger at the prospect of the UN evacuation. “It will be like the Holocaust. They will simply kill all of us here as soon as you leave,” said a... student leader... [H]alf of the... refugees sheltering inside the besieged... compound... have [already] fled into the mountains... [T]hey left through the back fence under the cover of darkness... But early today the UN said the refugees still in the compound were being taken to the nearby town of Dare under escort.

...E[T] received no solace from a meeting of the world’s most powerful Foreign Ministers in Auckland yesterday, with any peacekeeping force unlikely to arrive in the ravaged territory for at least three more weeks. At the closed-door meeting in the Auckland Town Hall, only A[US, NZ], Canada and Britain were willing to contribute troops to an international force. Even then, Britain’s offer only matched N[Z]’s – a reinforced infantry company of 250 to 350 soldiers. Initially the U[S] offered only logistical support and humanitarian aid but last night it told Indonesia that it was suspending the military relationship between the two countries... The *Sydney Morning Herald* reported that the gesture was of major symbolic significance. Not only would it deny Indonesian officers access to US staff colleges and other forms of cooperation but it could also signal further measures, including economic sanctions... Apec sources conceded there was nothing the outside world could do in the meantime to stop the bloodshed, as no one was willing to intervene unilaterally and risk a drawn-out battle with 35,000 Indonesian troops on the island. The special meeting of Foreign Ministers held alongside the formal Apec agenda succeeded only in aggravating East-West sensitivities in the 21-member Asia-Pacific free-trade body, with seven countries refusing to let their ministers attend. The dissension over criticising Indonesia meant the vexed issue was simply referred back to the U[N], where the heavyweight diplomacy will resume. The chair[person] of the special session, N[Z]’s Minister of Foreign Affairs... said afterwards: “This issue is much bigger than this ministerial meeting, this issue is much bigger than Apec. The whole issue belongs in New York and Jakarta.” ...[NZ’s PM] is anxious to shift the weekend leaders’ summit from the Timor crisis[and, consequently,] is refusing to allow it on to the formal agenda. Rumours that Indonesia’s President... had been toppled in a military coup, then that [it] had resigned, peppered the day... [Indonesia’s] military chief... who is considered to hold real power anyway, was reported as saying the rumours were “baseless.” In a new twist, the Indonesian Foreign Minister... who is not in Auckland, suggested last night that some parts of the country’s Army were out of control in E[T]. The minister conceded that rogue elements of the military could have caused some bloodshed and said they would be shot.

...There's something slightly surreal about the press conference after the [foreign]ministers... met to discuss the crisis in E[T]. In the Aotea Centre, the stalls are sprinkled with journalists, photographers and television crews... Everyone seems relaxed as Dili burns. There is no air of urgency or even of expectation, perhaps because the waiting media have been through it all so often before. They understand some mysterious law of international diplomacy that is about to be demonstrated for the zillionth time: the higher the stakes and the more urgent the need for decisive, unambiguous action, the vaguer, the blander, the more indefinite the pronouncements... The ministers appear separately and serially – 10 minutes apart. No one seems to want to explain why, just as no one offers an explanation for the absence of the US Secretary of State... Deciphering the significance of such behaviour... may seem the business of “seasoned diplomatic observers.” But in the light of what follows... [– when both NZ's Foreign Affairs] Minister... and the British Foreign Secretary... seem hellbent on saying as little as possible... [–] it seems hard to ignore... They emphasise the wide representation at the meeting (...“three-quarters of the world's GDP was represented around the table,” though it is unclear quite what that was meant to prove other than the weakness of will which only wealth can confer), but listening between the lines... you could hear the faint echoes of disunity behind closed doors... It's easy to draw false conclusions, but when what's said amounts to so little, what's not said starts to sound awfully loud... Asked whether [the British minister] sees any “sinister method in the apparent madness” of the murder in E[T], the Foreign Secretary claims to] see... nothing rational in it, but is quick to return to his main theme about “the courage of [Indonesia's President]... Indonesia is entitled to respect for... giving the people of E[T] a ballot and accepting the result.” Later, across Aotea Square, beyond the metal detectors and security cordons... the leader of the local E[T] resistance, will shake his head in weary puzzlement. “It's not a prize we are given. It is our right, and Indonesia has stolen it since 1975. It makes me very sad. Talking is not needed, but action.”

...Just hours after getting the call, a [RNZAF] air crew was on its way to Darwin for possible duty in Dili. The 10 crew members expected to land at the Tindall A[US]n Air force base, near Darwin, about midnight. [The]Group Captain... said their Hercules was capable of carrying up to 100 people and could form part of an “air bridge” between Tindall and Dili. Flying time is less than two hours, but the runway at Dili is not lit, and could not be used at night. It is one of only two airstrips in E[T] capable of taking the Hercules... No Army personnel are flying with the Hercules, and the crew are not armed... [I]t was unlikely that the N[Z] crew would leave the airfield at Dili. It was thought that A[US]n troops would secure the airfield and go into the city to escort evacuees to the planes... Meanwhile, the frigate Te Kaha, now on exercises near Singapore, has been sent to the waters off E[T] and is expected to arrive within three days. [The NZ P]M... said the frigate would assist the A[US]n Defence Force should evacuation from E[T] be needed. In another development, Britain has directed the guided-missile destroyer HMS Glasgow to E[T].

...no one will rush to the immediate rescue of the [ET]ese and halt the Indonesian-sanctioned killings. Despite the presence of four out of five permanent members of the Security Council, the emergency summit of Foreign Ministers in Auckland foundered on the impotence or apathy of its participants and shoved the problem off Apec's informal agenda... The official line is that [the] meeting, by the very fact it took place, has strengthened the UN's arm by presenting a unified regional face to an intransigent Indonesia. Unified? The meeting could not even agree to issue a formal statement of its position. [The so-called] “coalition of the willing” appears as stillborn as E[T]'s independence. To put it crudely, Apec is split between an occasionally bellicose-sounding white [guy]'s club and financially weak Southeast Asian nations nervous of getting offside with an unstable neighbour. At [the] meeting, those Asean nations warned that external pressure on the intensely nationalistic Indonesians would only prove counter-productive. A[US] already knows that, having discovered that years of patient bridge-building with Jakarta count for nothing when it really matters. A[US] quietly argued that it should be allowed to send in some troops to protect its consulate and the U[N] compound in Dili. The Indonesians refused point blank. That left one big unanswered question... does the assembly of an international peace-keeping force in the region foreshadow intervention without Indonesia's consent? Senior officials, speaking on the understanding they were not identified, said the chances of that happening are zero and there is nothing the international community can do. With between 25,000 and 35,000 Indonesian troops on the island and the U[S] refusing to commit troops, no one else will go into E[T] without Security Council endorsement and Indonesian agreement. Neither is likely... What diplomats do not know is whether the Indonesian military intends keeping E[T] within Indonesia and is eradicating all elements of opposition – or whether it will allow independence once it has burned and pillaged everything in sight. Officials are cautioning that something might happen in volatile Jakarta to alter this bleak picture. But they admit securing E[T]'s independence now depends – as it always has – on sustained diplomacy which carefully mixes persuasion with pressure.

...International economic sanctions... – including a freeze on an urgently needed \$88 billion I[MF] aid package – ...may be imposed on Indonesia to accelerate Jakarta's acceptance of the “inevitable” U[N] peace-keeping force in E[T], the AUS]n Foreign Minister... said yesterday... [Jakarta's acceptance isn't expected until] approval of E[T]'s independence vote [is endorsed]by the Peoples Assembly, due to meet on October 1. “What we would like is for an international force to be able to move in immediately,” said... [the minister, adding that AUS] was prepared to commit up to 4000 troops... [B]ut the international community felt no further action could be taken until the UN mission to Jakarta had reported to[the UN] Secretary-General... and the Security Council, probably at the weekend. “If there is clearly a continuation of the appalling situation we have seen in E[T] over the past few days, if the report... is... very negative... then obviously it will be easier to encourage other countries to contemplate some of the sorts of measures that are being canvassed.” In other developments... Indonesia had turned down a request to arm staff at the UN compound in Dili so they could defend themselves.

...The [guy] in the Apec hotseat for Indonesia last night bared his soul on E[T] and promised that his country would not go back on independence for the province. “As a human being, I'm very sad to see the situation in E[T],” the... Minister of the Economy, Finance and Industry, told the N[Z] Herald. The minister] has found himself having to defend the uncontrolled carnage across E[T] after the Indonesian] President... and Foreign Minister... decided not to come to the Apec forum in Auckland. The savvy and charming 58-year-old father of four says that if N[Z]ers are mad and angry about events in E[T] “we are madder and angrier.” But [the minister] makes it crystal clear that Indonesia is not angry enough with the roaming militias and duplicitous military in strife-torn E[T] to accept an international peacekeeping force... Indonesia was capable of restoring law and order, although [the minister] could not give a timeframe for doing so... [The minister] said Indonesia believed the U[N] should not pull out of E[T]. And speaking as a finance minister, [the 58-year-old] said it would be uncalled for and unprecedented if economic sanctions were imposed on Indonesia. This... would only worsen the situation in E[T].

...the UN] Secretary-General, looked tough on Tuesday when... [giving] Indonesia 48 hours to quell the violence. But where is the threat? It is as if you phoned up your psychopathic neighbours and said, “Listen, stop murdering your house guests, or by golly I'll ask you to invite me over to protect them!” The A[US]ns are doing more than most to gear up for action. But they are wringing their hands, too. “You can't go into the territory of another country without that country's approval,” says [the AUSn PM]... Wait a minute. I didn't notice [the Serbian President] sending invitations to Nato warplanes. Plainly, respect for other countries' turf is a big deal at international law. Equally, plainly, it's not the end of the story. As conflicts in Iraq and Serbia demonstrate, sometimes it's okay to attack without permission. Not that those being invaded always agree. But international law is often less about lawyerly arguments based on clear rules than about power and sales[person]ship. What do I hear for our latest-model justification for invading Panama? Yes, sir, that's right, it is missing a wheel, but we prefer to think of it as substantially similar to other cars and, anyway, look at that fine roof rack. But there is no need for shonky justifications in E[T]. Seldom in modern history has there been a more compelling case for intervention. For a start, there is strong evidence of genocide and other gross and widespread human rights violations, abuses that trump most other international law considerations. Humanitarian concerns like those were enough in many experts' eyes to justify

bombing Serbia. Next, there is the E[T]ese right to self-determination. The right of geographically and ethnically distinct peoples to govern themselves has long been regarded as fundamental at international law. Arguably, Indonesia is squelching that right. Having voted overwhelmingly for independence, E[T] could plausibly be called a state-in-waiting. All its recognised leaders have called on the international community to come to its aid. The world could legitimately answer that call. Alternatively, Portugal could lead the way. The UN... regards Portugal... as the rightful administrative power... of E[T]... Portugal could assert its sovereign right to call for international help to restore order in E[T] and manage its transition to independence. So, if the world wants to rescue E[T], international law doesn't necessarily insist on approval from Indonesia. On the other hand, who wants to pick a fight with a well-equipped, multi-million-soldier, rogue Army? No wonder we're looking to the UN. And true enough, the Security Council has the power to approve the use of force against a country to maintain international peace and security. But will it exercise that power? Not a chance. China, which can veto any decision, has its own E[T]s, and it doesn't want Tibet and Taiwan getting more uppity ideas about independence. One thing might entice the Security Council to approve a peacekeeping force... – Indonesian agreement. Back to square one. Alas, no one has the stomach to face down Indonesia over a puny little dirt-heap like Timor, no matter what the death-count, unless the U[S] weighs in. We can wail and posture and mobilise our 350 soldiers and argue Apec protocol all we like, but without [US] military clout and political leverage, the E[T]ese are doomed. If only the UN had listened to Portugal... and everyone else who pleaded for a contingency plan to deal with the predictable bloodbath around voting time. If only the countries now righteously condemning Indonesia hadn't so readily supplied it with arms while it slaughtered and starved 200,000 E[T]ese after the invasion. If only we could live up to the trust of those who walked long distances in their Sunday best to cast their votes, believing that at long last the world was going to help set them free. E[T] is not the only thing being shot to pieces. So is the credibility of the Indonesian Government, the UN and our leaders' strategy of diplomatic engagement.

...Indonesia's military leaders are accustomed to getting their own way. And when it looked yesterday as if [Indonesia's] President... might be tempted to give the green light to the early arrival of foreign peacekeepers in E[T], the generals decided that enough was enough. After a daylong meeting with his senior commanders, the Defence Minister... called on [the President] to make it clear that the Army would not accept that outcome under any circumstances... The next day's headline in the daily *Kompas* newspaper said all that needed to be said. "The Generals Meet [President. Defence Minister says: 'It is not true there has been a coup d'etat.'" That was true enough. But in the opinion of one senior Indonesian source, "It was a quarter-coup... It means the military have the upper hand." ...The Indonesian military has installed... [a] new military commander of E[T], heading up Security Restoration Operation[, and the]... Indonesian Foreign Minister... asked the world to give Indonesia time before passing judgment on the imposition of martial law in violence-racked E[T]... "Now the Army is moving, and not the police..."... [T]he military now had the authority to declare a curfew, stop people, disarm them on the street, shoot on sight if they violated curfew hours, arrest people for 20 days without warrants, and enter premises without search warrants... Meanwhile, [its]... Defence Secretary says... that... the... US... is not the world's police[force], and Timor does not qualify [as a destination for US troops] under the selective criteria for American involvement.

...with proven oil and gas reserves, a growing coffee industry and strong tourism potential, [ET] could be an economically-viable independent nation. U[S] companies like Starbucks and Phillips Petroleum already have an interest in the region... An independent E[T] would take over rights to... one of the world's richest new energy-producing areas... now administered jointly by Canberra and Jakarta, where royalties are split 50-50... [A]n Indonesian expert at the Centre for Strategic Economic Studies at A[US]'s Victoria University, said... there was also evidence of significant deposits of gold, manganese and marble... although Indonesia had conducted little exploration during its rule. But [the expert] predicted that tourism would eventually become E[T]'s biggest earner of foreign currency. The territory offers stunning mountain vistas and a coastline with pristine beaches... Beans from E[T] are increasingly in demand because the trees have not been exposed to pesticides or fertilisers as a result of years of neglect... [However, more] than half this year's bumper crop may not get to market... No estimates are available of the damage done to E[T]'s economic infrastructure by rampaging anti-independence militias and Indonesian troops, but it is likely to be hundreds of millions of dollars... [Incidentally, the] Indonesian Army... came into being after Indonesia's own proclamation of independence in 1945.

...Secret recommendations that Indonesia support militias in a "scorched earth" campaign in E[T] have been fulfilled almost to the letter. The proposals were contained in a series of leaked Government documents... which predicted a pro-independence victory in the recent referendum and called for action by Indonesian authorities to support the pro-integration side... "We cannot ignore the attitude of the indigenous E[T]ese militias... They are the heroes of integration." ...Embarrassed by the revelations, the Indonesian Government at first denied the document's authenticity. But it is now clear that the militias and their military backers responsible for the carnage in Dili are implementing a planned blueprint of terror.

...We've got blood on our hands THE persecution of the people of E[T] is a blight on the global conscience... [and t]he UN has been exposed as a toothless tiger. [UN o]fficials exhorted the people to get out and vote, and then when the festering violence erupted they proved powerless to protect the people. They had no idea things would get so bad, according to a cringing press release. Excuse me, but that's bullshit. Violence and human rights abuses have been going on in this country for the past 25 years, and if the UN officials couldn't see the writing on the wall following a pro-independence vote, they're not worth the American dollars they're paid. Now N[Z]ers are screaming for the Yanks to come and save the E[T]ese from extinction. Quite a few of the N[Z]ers who support the E[T]ese cause are no-nukes supporters as well. So we ask the Yanks to come and deal to the Indonesians, but they can't refuel in our ports? I don't think... [we] can... have it both ways. Some N[Z]ers are saying we're too small to do anything. We have to leave any military initiative to the Americans. Translated that means we don't want to see any Kiwi lives lost but we're happy to see American blood spilled for the most worthy causes. It's an ugly, ugly situation.

...It would seem that all over the Western world peace-keeping forces were on standby and arguably, in many cases, still are. My question is relatively simple – why have they been placed on standby in their own countries? ...The peacekeepers should surely have been in E[T] two weeks ago setting themselves up and making it abundantly clear that the rest of the world wasn't going to tolerate the abuse of innocent civilians... Instead, despite the clear warning signs, we all sat back and watched and waited. Regardless of the diplomatic reasons for not acting the rest of the world should be ashamed for allowing this situation to develop. The U[S, AUS, NZ], Britain... – we're all responsible and we all have blood on our hands. Yes, I know it may sound dramatic but my heart bleeds for the innocent people of E[T]. It's too late to send in peace-keeping forces after the event. I know we in N[Z] don't exactly have the resources to sort it out on our own. But we should have been at the forefront of pressuring others to join in and get things stabilised before the event, not applying band[-]aids after it!

...INDONESIA looks set to allow peacekeeping forces into E[T] but wants to choose the countries involved. Indonesia's army chief... told a UN delegation yesterday [that it] would recommend to [the Indonesian]president... that a peacekeeping mission be rushed into the violent province... [Asean m]embers... and countries to which Indonesia had sent forces, "like Egypt or South Africa", were suitable... The breakthrough over peacekeeping forces came as... [the US president, in NZ] for the Apec summit, said... a development... [was] expected... within days. His comments came after almost two weeks of intensive diplomatic negotiations... [Yesterday the US] suspended military sales to Indonesia... [while m]any of Indonesia's other aid donors and trading partners warned of sanctions and arms embargoes. And [the US president]'s security adviser... made it clear that [US] pressure was being applied on... the Indonesian military[and its chief. Asked why the US president] had not telephoned [his Indonesian counterpart directly, the security adviser] said: "We have focused on where we believe the decisions are being made..." But [Indonesia's president] gave a t[v] interview to dismiss such reports. "I'm still in charge," [it] told Britain's Channel Four. [■]AN erie silence greeted a UN Security Council team as it toured the ruined capital of E[T] yesterday... Entire neighbourhoods were burned to the ground... and... there was only

sporadic shooting around the UN compound... [where] 1000 refugees... were... still... [sheltering. Hundreds more] were assembled in makeshift camps throughout the city... Thousands of pro-independence supporters have been slaughtered and as many as 200,000 more... have been... forced to flee...

Piles of bodies were burned on the streets of Dili at the weekend... just before a high-level UN Security Council delegation arrived... and tens of thousands of people fleeing the militias and the Indonesian Army are starving and without water. Some had already died and many more were expected to die within three days if urgent attempts by the U[N] to arrange airdrops of water and food out of Darwin failed, the UN... said... The UN yesterday took over a large warehouse on Darwin's waterfront and was trucking in tonnes of rice, tuna, medical supplies and water... The UN was aware of tens of thousands more refugees forcibly deported by the Indonesian military to West Timor and they, too, were in grave danger because of inadequate supplies... As fears of catastrophe built yesterday, fresh reports of atrocities flowed into Darwin... [P]riests, nuns and other clerics were still being targeted by militias and the latest to die was the Acting Moderator of the E[T] Protestant Church, Francisco Vascon Cellos. Along with 100 sheltering refugees, [Cellos] was forced from his church in Dili and trucked to Bacau. During the journey [Cellos] was pulled from a truck and executed on a roadside... [T]here were persistent reports from Dili of ships leaving the harbour loaded with forcibly deported refugees, and then returning empty after a short time... Timor Aid... feared people were being thrown overboard en masse. [The UN spokesperson] feared the Indonesian militias and the Army had embarked on a "final solution" for E[T] that echoed Nazi Germany.

...The world has got what it wanted out of Indonesia, or at least it thinks it has. The demands on it to accept the deployment of a peacekeeping force to E[T] have been heard and accepted. But now, a new and equally urgent chapter in this tragedy begins. The focus will be on... the Secretary-General of the U[N]. It is his job to persuade national leaders to move on from expostulations of disgust, to delivering personnel and equipment... Historically, this is a difficult transition to achieve. The UN has bitter experience of countries baulking when asked to put money where their mouths have been. And even if the political will exists in capitals to contribute to a peacekeeping force, the details of assembling it and deploying it will be ferocious... Expelling all of the Indonesian soldiers to make way for the UN deployment is not likely to happen. The UN appears ready to accept that some [TNI] soldiers will remain to work with the incoming force. The reason for this is partly political – excluding the national Army would deepen the humiliation of Jakarta. However, the UN appears anxious... that Indonesia should not escape all of the responsibility for making the peacekeeping mission work... The UN Security Council must also pass a resolution laying out the force's mandate. It is too soon to calculate how long all of this will take. In theory, an all-A[US]n force could enter E[T] today. That, for now, is not at all what is envisaged. Indonesia has not agreed to an A[US]n invasion. The force will... almost certainly... be... dominated by troops from Asian neighbours such as Malaysia and Japan... A senior UN official said that even under the best of scenarios... assembling and deploying the force was likely to take three weeks. More probably, it would take a month or six weeks... There is also the task of evacuating the roughly 1000 refugees still inside the compound of Unamet... Once those refugees are gone, the remaining vestiges of Unamet will leave Dili. The compound will [then] be transformed into a planning centre for the peacekeeping mission... [By the way, when] they woke up on Saturday, a little tender-headed after a late-night reunion with their returned colleagues... a detective from Hull in England... and friends sat down in a hotel in Darwin and began to draw up a list of the [people] who are responsible for the slaughter in E[T]. The detective... and his colleagues are known in UN-speak as CivPols – civilian police[officers], all of them evacuated in the last few days from doomed UN offices all over E[T]. In exile they have found a job to do – in the words of one CivPol, "to nail [them down], record exactly who did what, where, who they did it to, and who gave the orders." ...The witness accounts and the grisly forensic evidence of the kind collected at mass graves in Kosovo are, for the time being, inaccessible. But... the evidence at hand points exclusively to police and Army collusion in acts of violence... In Liquisa, for example, a [Unamet] convoy was riddled with bullets, three of which passed through an American police[officer – who] miraculously... survived. UN witnesses recognised the [assailants], who wore the uniforms of the local militia – a few days earlier they had been guarding the [Liquisa UN] compound in the uniforms of the Indonesian special police.

...Anzacs told stay away from Timor... [L]ast night... deep divisions emerged over the shape and leadership of an international peacekeeping force. The head of Indonesia's parliamentary defence commission... said: "Those without neutrality on the E[T] problem, such as A[US, NZ], Portugal and the U[S]... do not deserve to be involved. We have to reject them." The call will further bolster a besieged Indonesian Government already receiving support from [Asean] members... for its bid to shape the peacekeeping force, despite [US] warnings that Jakarta will not be allowed to dictate terms to the U[N]. The row, which could delay the arrival of up to 8000 peacekeepers, erupted as [NZ's PM] prepared to recall Parliament to ratify N[Z]'s largest expeditionary force since Vietnam... Six senior officers flew to A[US] on Sunday night to plan an Anzac contingent that will include as many as 500 N[Z] troops, supported by an armoured unit, C-130 Hercules aircraft, the frigate Te Kaha and the tanker Endeavour... [The] UN Secretary-General... has asked A[US], which will supply most of the troops for Timor, to coordinate and lead the operation. Britain, Canada, France, Japan and the U[S] have also pledged varying degrees of support... China indicated last night that it might send troops. [Its] Foreign Minister... said Beijing was studying the proposal, which would be a major departure from its firm policy of non-interference in other nations' affairs... [The] Philippines President... said a meeting of Asean leaders in Auckland on Sunday had agreed with the Indonesian view that Asean soldiers must dominate the force. "It is not really for the West [to dictate terms], and the Indonesian Government has the right to request Asean [to provide most troops]." ...The Asean chair[person, who is also the] Thai Foreign Minister... flew from Auckland yesterday for talks with Indonesia's President... carrying a conciliatory message for Jakarta. "Everyone in the Asean family would like to be supportive and helpful to our friends in Indonesia," [the message said. But the] US President... declared: "They [Indonesia] should not be able to say who is in, or not in, the force, and what structure the force would be, otherwise it will raise all kinds of questions about whether there will be integrity in the force and will also delay the implementation." ...before leaving Sydney for the UN Security Council... A[US's] Foreign Minister... declared that A[US] should lead the operation... [while AUS's PM] has made it clear that [the PM] expects Canberra to be in charge, although [the] Indonesian Foreign Minister... is expected to argue strongly against this in New York. Anti-A[US]n sentiment has grown in Indonesia, with reports yesterday of up to 1000 people attacking a Western A[US] Government office in Surabaya... Indonesia's second-largest city...

Three decades of painstaking bridge-building between Canberra and Jakarta has collapsed with the pillage of E[T]. As Indonesian students burned crude homemade replicas of the A[US]n flag, AUS's PM... accepted the inevitable. "We have tried over the years to build a relationship [with Jakarta] and it's very important that we go on doing that... But obviously we can't remain silent or inactive or paralysed when something that is so clearly wrong is going on." ...[the PM] clearly indicated that important though it is, friendship with Indonesia is not beyond price... Relations between Canberra and Jakarta are now at their worst since the military confrontation of the 1960s, when A[USns, NZers] and Britons fought Indonesians in the jungles of Borneo and planned airstrikes against Java. The Indonesia-N[Z] thermometer has also plunged, although the damage is not so great because of Wellington's more moderate language and lower-profile diplomacy. But deep and disturbing uncertainties about the government that will emerge in Jakarta following the Timor crisis cast long shadows across both countries... No one knows yet what is happening in Jakarta and what kind of administration will emerge from the painful transition to democracy, or even how complete that transition will be... Indonesia's pending political transition during the presidential elections in November is another concern, since all negotiations on E[T] are being conducted with a Government that may well be replaced in less than two months... Nor would the [possible election of Indonesia's] opposition leader... as President... necessarily ease the path to reconciliation. [The opposition leader] is a strong nationalist in a nation of prickly nationalism, a member of the elite that has governed since the end of colonial rule in 1949, and the daughter of the President who led the nation to the brink of war with A[US] in the 1960s. Whoever takes charge will rule a country deeply affected by the language of A[US]n anger – in

diplomacy, the media and on the streets – and whose deep and powerful national pride has been stung by the backdown forced upon it by Canberra's actions. [The AUSn PM] would like to let bygones be bygones, once the heat has subsided. But the opinion of analysts and the experience of history suggest Jakarta will not easily forgive and forget... • [The crew]... of the... frigate Te Kaha were horrified to see the glow of... fires still raging 25 nautical miles away in Dili... as they rushed... through the Wetar Strait... to join the multinational peacekeeping mobilisation... The ship's Phalanx close-in weapon system, a computerised Gatling-style gun for shooting down sea-skimming missiles, was loaded while its operations room kept track of several Indonesian warships in the area. Its boarding party has also stepped up small-arms training. With food supplies low after 47 days at sea, the frigate is due to spend 48 hours loading stores in Darwin before joining A[US]n, British and U[S] warships off Timor. Te Kaha was diverted at short notice from military exercises off Malaysia, from where it was originally due to sail to Singapore en route to Iraqi sanctions enforcement duties in the Gulf. The Navy tanker Endeavour, meanwhile, left Singapore yesterday to join Te Kaha... Endeavour has fuel both for warships and their helicopters, ready to support whatever operation the U[N] decides to launch... A N[Z] Hercules has already flown UN refugees from Dili to Darwin in an A[US]n-led operation, while another waits on 24-hour standby to join it from Whenuapai Air Base...

N[Z] aid agencies are ready to help clean up the human carnage in E[T] but are worried their arrival may be delayed by arguments over the terms of the... peacekeeping mission. And [ET's] independence leader... who is in Auckland to lobby world leaders to end the bloodshed... said Red Cross planes needed to take off within 24 hours. About 3000 troops from A[US, NZ] and the U[S] were needed immediately to settle the situation before peacekeepers from other countries were sent in, [the independence leader said. The Nobel Peace Prize laureate] did not expect any confrontation between the militias and a multinational force. "The militias will wet their pants when the troops arrive. They only know how to kill [gals] and children, and how to attack churches." N[Z]'s Red Cross spokes[person]... said the agency always sought security guarantees before going into trouble spots... Three International Red Cross delegates planned to go to Dili today to assess the situation... [A spokesperson for] Unicef, said the agency's staff of about 10 were in West Timor "waiting to go back in." World Vision is setting up a supply base in Darwin, and has specialist aid workers on 24 hours' notice to return to E[T]... Caritas... Tear Fund... and... Unicef... are running appeals for relief operations.

...After Timor, everything is changed It started out as an economic forum, but... Apec... has developed into much more... The crisis over E[T], and the even greater issues that it clouded, banished the quaint mythology that, in such a gathering, trade and economics can be quarantined from the wider complexities of regional interaction. [The US]President... did not come to Auckland to talk about abolishing export subsidies or the details of world trade negotiations... [but] came to talk to [the]Chinese President... in the hope of repairing the damage done to Sino-US relations by a series of mishaps, mistakes and miscalculations, capped by the almost impossibly stupid, if unintended, bombing of Beijing's Belgrade Embassy... Apec offered the chance to meet as a byproduct of a broad regional conference... Security can be discussed at official and ministerial level at the Asean Regional Forum, but there is nothing like Apec, with its private programmes of off-the-agenda discussions, cocktail diplomacy and corridor wheeler-dealing. Apec is also developing, as E[T] has shown, as a valuable platform for regional crisis management... [It] was... hundreds of encounters in Auckland between leaders, ministers and officials – in person and on telephones – that helped to force a turning point in the E[T] crisis... Timor was never on the agenda – but it was handled on the peripheries through the ability of leaders, ministers and officials to meet and make decisions face to face, collectively and separately. The US arrived with no intention of becoming involved. China did not want to know. Indonesia's neighbours and fellow members of... [Asean] would brook no breach of their tradition of non-interference in one another's affairs. But in a remarkable achievement, A[US], with help from N[Z] and Canada, used the intimacy of Anzus and a history of loyalty to the US to turn American indifference to outrage and action, brought Asean into a coalition demanding the acceptance of peacekeepers, and won China's involvement. Had the leaders of the region not been together in Auckland, it is doubtful if such a weight of influence could have been assembled... World leaders might be reflecting today on what they can achieve when they commit themselves to placing practical muscle behind condemnation.

...The tragic fiasco in E[T] once again shows the impotence of the U[N]. It reinforces once again the need to reform its structure, starting with the Security Council. The first major conflict the UN faced was the ethnic cleansing of Palestinians 50 years ago. That tragedy goes on today with 3.5 million UN-registered refugees still awaiting a solution and some form of right of return. Since then, conflict after conflict has involved the UN and the results have been poor to disastrous. As in Rwanda, Bosnia and Kosovo, E[T] has become a horrific tragedy, which should and could have been prevented. Sanctions, embargoes and peacekeeping forces are all processes that are used injudiciously and usually too late. Let E[T] be the last such disaster. The UN needs to be given more power to act in such cases... All we have is an impotent U[N, and a group] of nations periodically rounded up by a self-appointed sheriff (the U[S]) to mete out "justice" to those who threaten the perceived interests of the sheriff and [it's] buddies. All this is done (in this post-Cold War world) with or without the blessing of the UN. This is rule by posse, not by law.

...I remember just recently the pacifist theorists saying there is no need for defence forces in N[Z] with the argument: "Where is the threat, who is our likely enemy?" Now, right out of the blue N[Z] forces could be in armed conflict with the Indonesian Army and police. The Indonesians have sophisticated weaponry and plenty of it. N[Z] has offered troops who will have to be transported by air, requiring fighter aircraft cover. They will require logistical support requiring a support ship which in turn will require frigates for protection. No need for defence forces?

...As the Anzac advance guard – likely to include 40 [NZ]SAS soldiers – prepared to land this weekend... [in ET], a militia leader [said militia members] are volunteering to attack and kill troops of the multi-national force... "If necessary we will go to A[US] and have guerrilla warfare with the white people there." ...But... [AUS's PM] said any attacks... would bring a more powerful response from the U[S], which has so far committed around 200 support troops to the mission. The Pentagon has said that number could rise if A[US] wants more help... The risks N[Z] troops will face were voiced yesterday in a sombre four-hour parliamentary debate which unanimously backed the... decision to send up to 1000 military personnel to E[T] over the next few days and weeks... handing the Government the multi-party backing – and therefore the minimal political risk – that it was seeking by recalling the House for the special debate... This time, unlike our Gulf War involvement in 1991, no protester leaped into the debating chamber splattering animal blood around. Nor was there any objection from Opposition leaders to the intervention – UN approval saw to that... When [the]Greens co-leader... rose to "fully support the decision" to send in a force which includes the SAS (which the Greens want to disband) and the frigates and their support ship Endeavour (which they want to get rid of) universal backing was assured. In the circumstances, [the Greens' co-leader] chose not to hark back to her party's view that "the only Asian invaders we are likely to face are pests like the Japanese gypsy moth." Surrounded by plaques on the walls of the chamber commemorating previous battles – the Somme, Egypt, Messines – [the]Defence Minister... said: "If Indonesia was on our doorstep, then it was in A[US's] porch,"... as his rhetoric threatened to get a beachhead on his logic... Movingly, [the minister] mentioned the personal pressure of being the minister who would send young troops off to war... □ [The crew]... of the frigate Canterbury set sail again last night for what could be their most dangerous mission... a three-month [assignment in ET]... More than 250 people gathered at the Devonport naval base to farewell the... ship[– which had] been back in port only a few days, after finishing its last three-month mission, exercising off the coast of A[US]. Many of the... 245[-strong]... crew had planned leave and holidays with families, partners and friends, but this was cancelled soon after their arrival. They are now unlikely to be home for Christmas. "Bye Daddy" was squealed out across the water by one small girl as the ship was towed out by a tug into the Waitemata just after 7 pm. One father learned for the first time yesterday what it was like to say goodbye to a young family before heading to a war zone... "I am a bit nervous, it is my first deployment..." [The]Surgeon-Lieutenant... was a GP... before joining the Navy last year. "It is not a very nice feeling," said [his wife while] comforting their children... aged 5, and... 1... on the dockside[, "to send] your husband off to... [ET] – going to the Gulf would have been better." ...A week ago, [one wife] was among

hundreds of Aucklanders marching in support of an independent E[T. Last night the wife] found herself making an even greater commitment to the cause by farewelling her husband... a chief petty officer. While pleased [her husband] would be part of the international operation, the issuing of neck tag identification labels to all crew drove home the danger faced... ...[NZ military] planners left without a proper troop ship have chartered a Dutch civilian vessel to trundle elderly Army equipment to E[T]. The Army has disclosed that the Edam Gracht, the only available ship, will arrive from A[US] next weekend to load 25 Vietnam War-vintage armoured personnel carriers and other heavy equipment. Government leaders said on Thursday that a giant US Galaxy or Starlifter aircraft would help to carry troops and equipment to Darwin, but defence officials were last night uncertain about that... Unlike in Bosnia, the... armoured... personnel carriers would not face a threat of landmines... [but they are still] likely to be severely tested by E[T]'s rugged terrain, with similarly old and less-than-reliable radios on board to call for help if they break down. This will put great pressure on the Air Force's contribution of four Iroquois helicopters, which are also well into their 30s. But [the] Wing Commander... in charge of 100 Air Force personnel preparing yesterday for E[T], said they had been substantially overhauled over the years and performed very well in Bougainville.

...120 PNG Defence Force soldiers... stationed on the island of Bougainville who claim they have... not received food supplies... and have not been paid their duty allowances... [for three months] have threatened to disrupt peace on the island unless the Government addresses their plight... Some of the... soldiers... are also reportedly ill but there is no medicine for them. The soldiers are supposed to spend three months on the island but have been there on duty for seven... [In related news, m]ilitants in the Solomon Islands have agreed to lay down their arms in return for the police ending their "brute force" approach. [The] Acting Police Commissioner... will meet the[m]... today to discuss a new form of "community policing" while the paramilitary units will be pulled out... The contract of the former... commissioner... who previously worked in South Africa, expired last month. Diplomatic sources say [his] methods may have been the kernel of many of the problems... Next month a... former Auckland police commander... will become commissioner... Militant indigenous people of Guadalcanal, have tried to drive out settlers from neighbouring Malaita. The death toll in the conflict which began late last year has never been formally established but about 10,000 refugees have passed through Honiara.

...Senior N[Z] diplomats were last night trying to avert a full-scale civil war in the Solomon Islands by talking directly to the armed [militants] who staged a coup in the capital, Honiara, yesterday morning... The capital, Honiara, was quiet yesterday as the A[US]n Navy ship Tobruk continued to load expatriates and tourists wanting to flee the country. The Ministry of Foreign Affairs and Trade confirmed last night that 23 N[Z] passport-holders were on the ship... The Tobruk might delay its departure if the ceasefire holds and Honiara airport is reopened to international flights this weekend. Many in the Solomons denounced the escape fees as blackmail, especially as they had to sign IOUs and face the threat that their passports might be confiscated if they did not pay up. But after a public outcry in A[US], the Navy beat a hasty retreat and agreed that the... [e]vacuees will now be taken to A[US] without charge... The second coup in the South Pacific in just over two weeks was conducted by the Malaitan Eagles militia plus elements of the local police...

Copycat coup waiting to happen... [T]he Solomon Islands P[M]... knew to expect the worst. Early this year, just after the Malaitan Eagle Force launched itself by seizing high-powered police weapons, [the PM]... feared for his life. "I'm very vulnerable... They tried through a vote of no confidence, and now what they can try is to kill me." Last week... [the spokesperson] for the Eagle Force, gave an even sharper warning of what lay ahead. "Law and order can no longer be upheld where there is a breakdown in the police network," [the spokesperson told AUS]'s ABC television. "The situation will give rise to criminal elements and the two militant groups taking control of their relevant sectors. In the end we will have a major confrontation between the two. So a civil war... is a probability." Yesterday, as the PM] reportedly sat with an Eagle Force gun to his head, both... prophecies were within a hair trigger of fulfilment. Like Bougainville, Fiji and a string of embattled Indonesian provinces, the Solomons have collapsed into violence fomented from long-brewing local disputes and the hangover from colonisation. The conflict is between the people of Guadalcanal, site of the capital, Honiara, and immigrants from the poorer island of Malaita. A[n A]uckland University Pacific history expert... says tension has been rising for months. "People there have long memories. Every action gets a reaction; every hurt is reciprocated." Solomon Islanders are all too aware of precedents... Bougainville, with its insurrection against rule from Port Moresby, is a short boat ride away, and Fiji]'s previous coup leader]... was much admired when... [the] Major-General... went to the islands to broker peace. [The latest Fijian] coup in Suva... almost certainly encouraged the Eagle Force to act... "The young [guys], or the hot-heads, think, 'Well, we want some action'. It's the [Fijian] coup leader thing – the latest Fijian coup leader] just seemed to cut through all the theatre of protocol. I rather fear that's what has happened now in the Solomons." Amnesty International's N[Z] executive director... says the human rights group feared the Solomons would blow up while the Pacific was watching Fiji... [The] head of political science at Canterbury University, wonders if the absence of the police commander... may have sparked action. "For a time it's been suspected that the police are sympathetic with the Malaitans. The police force in the Solomons is made up mainly of

Malaitans, and they have not been very effective in attempting to arrest the Malaitan group.” Now, with the Malaitan militia apparently controlling Honiara, and a large and reportedly well-armed opposing force of native Guadalcanal guerrilla fighters encircling it, yet another island state is on the verge of war. There is, as 18 months of failed peace attempts have shown, little chance of an early, lasting solution. The two sides are locked in by economic as well as tribal jealousies, and bound almost as firmly by internal political schisms that have allowed [the PM], a Malaitan, to be taken captive by his own people. There are even widespread reports that the P[M] had raised his own paramilitary force, called the Seagulls, to combat both the Eagle Force and the Guadalcanal Revolutionary Army (GRA). According to other reports, [the PM], disappointed at N[Z and AUS]n reluctance to intervene, this year sought unspecified security assistance from Cuba. The approach, said to offer new diplomatic ties and possible mineral concessions, alarmed A[US], but it was a measure of the P[M]’s desperation. A reformist who has ruled since 1997 with wide support, especially in impoverished rural areas, [the PM] had become hopelessly enmeshed in the mounting violence between the people of Guadalcanal and Malaita. Malaita has long been, in Solomons terms, rich in people but poor in arable land, home to a people who had been taken for virtual slave labour in Queensland canefields and to plantations elsewhere in the Solomons group. The main island of Guadalcanal, in contrast, has fewer people and far more agriculture. In the later stages of... W[W2] it also had the Americans, who poured their vast wealth into huge military facilities, including Henderson Field, now Honiara’s international airport. The advantages of an instant city of roads, hospital, buildings, port and the like were immediately obvious to the British after the war, and they made Honiara the new capital. For the people of Guadalcanal, this was bad news. Thousands of newcomers, mainly from Malaita, descended on a city that became stretched beyond the limit providing housing, education and healthcare. Malaitans came to dominate the economic and political life of Honiara. And in 1998 tensions found their expression in the creation of the GRA – initially a disorganised and ill-equipped band of unemployed youths but now a formidable and well-armed force of up to 2000... [When Guadalcanal’s] provincial premier... demanded that the Government pay millions of dollars in rent and compensation for the unconstitutional resumption of traditional land for Honiara, and for the victims of alleged rape and murder[, t]he GRA backed his demands with beatings and bloodshed. By June the violence had forced 2000 Malaitans to flee rural areas, and the GRA’s policy of cleansing Guadalcanal of outsiders by terror and violence had left up to 55 people dead. As many as 20,000 Malaitans fled to the relative safety of Honiara, or to their home island. Young Malaitans, from an island with a warrior history which had resisted British control, refused to be cowed. After seeing their families safely back on Malaita, they... overran a police station in the Malaitan capital of Auki, stole high-powered rifles and declared themselves openly in Honiara... [when they] returned to Guadalcanal to fight under the banner of the Eagle Force... “The Malaitans are very resentful about being pushed off Guadalcanal... They lost a lot – many of those people had been born there. It was home. They didn’t have much to lose in fighting back.” Repeated efforts at brokering peace have failed, including two attempts by [the Major-]General... the 1987 Fiji coup leader, who was sent to the Solomons as a special Commonwealth envoy... ■ [Fiji’s latest]... coup leader... was last night holding on to his hostages... “There’s a good chance they won’t be released this weekend,” [the coup leader] said... and claimed they were all in good health. They were getting fed, had accommodation and access to a doctor... The 30 hostages, including Fiji’s first ethnic-Indian [PM,] ...have been held for 17 days. An agreement to free them and for [the coup followers] to surrender their weapons was to be signed at noon yesterday but talks broke down... [The coup leader, who believed it] had the “overwhelming support” of... the indigenous Great Council of Chiefs[, said]... it... would abide “unequivocally” by any decision... the council... made – possibly tomorrow or on Tuesday – on the administration of Fiji. After that... the hostages could be released... The [coup leader]... and his rebels stormed the government in the name of indigenous Fijians... The former business[person] wants civilian rule, with him serving as PM.

...A WEBSITE by Fijian journalism students was disconnected after it ran foul of coup leaders... The... Pacific university’s website... ran a transcript of an unflattering interview with... [the coup leader. S]tudents were providing coverage of events in Fiji before the website was closed.

...A Fiji Website reported that t[housands]... of Fijians danced and cheered outside Parliament as [the]coup leader... and his squad of nationalist[s]... continued to hold the country’s first Fiji Indian P[M]... and his cabinet prisoners. However, early this morning it was unclear how much support the rebels had... The President... [has] labelled the coup “unlawful” and “unconstitutional” and declared a state of emergency with a dawn-to-dusk curfew. But Radio Fiji reported that the curfew seemed to be having little effect, with youths burning kiosks around Suva’s central bus station. Later reports indicated that 100 looters had been arrested. [The President – whose daughter, the] Tourism and Transport Minister... was... among the hostages – pleaded with [the rebels] to disband, return to their homes and pursue their concerns in a lawful way.

...[the c]oup leader... has been dismissed by many Fijians, including his own step-mother, as nothing but a criminal holding the country to ransom. [The coup leader], a supremely confident – some would say arrogant – part-European with a string of shady business dealings in his murky past, does not appear to have the support of the [people] in the street, and has a tenuous hold on power. Since the siege began, [the coup leader] has revelled in the attention of the world’s media... h[olding] long press conferences, at which [it] asked journalists their names and chatted casually, and has also wandered out of the parliamentary compound to mix with a small band of his supporters, once drinking kava with them [until] 5 am. While [Fiji’s] P[M]... has collapsed at least once from exhaustion, [the coup leader] remains calm, impeccably groomed and seemingly unaffected by the rigours of the hostage drama... When... his band of thugs... stormed Parliament, many stunned Fijians were asking “[A son of] who?” “A son of Fiji” prepared to die for his cause, came the answer from... himself. Certainly [the coup-leader] has an impressive Fijian pedigree to go with his European heritage... com[ing] from a long line of wealthy Fijian land-owners, and his grandmother is a member of the respected Waimaro clan, traditional warriors of the village of Bau. His father... is an MP who left Parliament House shortly after the hostage drama began. But not everyone accepts [hi]s claim to be a son of Fiji... [The son of the] Social Welfare Minister... who is one of the hostages, said [the coup leader] could not even speak the language... Indeed, many are asking whether [the coup leader] is a warrior hero or a self-centred fraud... Aged 43, [the coup leader] studied commerce in A[US] and the U[S], and also served in the Fijian Army, [before coming]... to some prominence in A[US] in the early 1980s after the Wattle Group, an A[US]n investment company of which [it] was a director, was accused of unfair dealings with investors and was eventually wound up. On his return to Fiji, [the coup leader] went into insurance broking and under the Government of [the]1987 coup leader... was appointed head of the state-owned Fiji Hardwood Company. [Fiji’s first Indian PM] sacked him soon after the Labour Party won last year’s general election. The *Fiji Times* reported that [the 43-year-old] was an undisclosed bankrupt who had pleaded not guilty to exchange rate charges and extortion when [it] appeared in the High Court in Suva [just before his coup]. It also alleged [the 43-year-old] was a director of an A[US]n company that siphoned millions from A[US]n and Fiji citizens’ life savings. [The 43-year-old] stormed Parliament with [7 supporters] armed with a variety of weapons, including Israeli-made Uzi submachine guns, Russian AK-47s and [US] M16s... That the rebels have at least one Uzi suggests they may have links to the disbanded Counter Revolutionary Warfare Unit – similar to the British SAS – as that was the only unit issued with Uzis. Crates have been trucked into the compound at night and it has been suggested they contained more weapons... In [local news]... Fiji’s coup came to Auckland yesterday with a mass protest... Thousands of Fijians, mainly of Indian descent, crammed into Aotea Square after marching from the... Domain. They presented a petition to [the Foreign Affairs] Minister... calling for democracy to be restored and [the]coup leader... brought to justice. [The minister], whose Roskill electorate has the highest population of Fiji Indians in [NZ], told the crowd the Government “unequivocally” supported [Fiji’s PM. A]... ...The firepower of N[Z]’s military and police elite remained firmly in the Government’s holster last night amid fears international intervention in Fiji could result in bloodshed. The Minister of Foreign Affairs... said last night it was “unlikely” specialists such as the S[AS] or police anti-

terrorist unit would be dispatched to Suva to help end the hostage crisis. Instead, N[Z] would maintain diplomatic pressure, supporting the constitutionally elected Fijian Government and ensuring authorities were aware that any suggestion the [Labour Party] Administration might be deposed would result in severe consequences... N[Z] has offered to send a team of police negotiators, but Fijian authorities... declined the offer.

...A bare-chested, muscle-bound [rebel] carrying a submachine gun wanders out of Parliament Buildings and swears at the gathered throng of journalists before shouting a bizarre order at one of his [mates] – “walk straight – like a snake.” It’s 2 am yesterday, and this is Fiji. The [rebel], with his drunken gait and love of expletives, is a rare glimpse of one of the people who have held Fiji to ransom since [his leader] arrived at Parliament... with a minibus full of hooded and armed accomplices. [The coup leader seized the Fijian P]M... and members of his Coalition Government, handcuffing the Premier and humiliating him by making him kneel in the centre of the debating chamber. Since then, the face of Suva has changed. With 20 stores burned out and 167 looted during a rampage after the coup... [- t]he courthouse and a school were also set alight, and youths stoned the police station... [-] it is a very different Fiji to the cheerful holiday destination that is a haven for thousands of tourists every year... Fiji has not had such an influx of the world’s press and TV since the first coup in May 1987.

...International journalists were forced to dive for cover last night when shots were fired as they entered the grounds of Parliament in Suva – scene of the ongoing Government hostage drama. About 20 foreign reporters and photographers, including two from the [NZ] *Herald*, huddled nervously after a volley of shots rang out just as they were being escorted inside Parliament Grounds... [who led the 1987 coup -] said the President... had signalled [it] was prepared to step down providing a request came from the Great Council of Chiefs, which is due to meet tomorrow. There were fears last night that the shots signalled a deteriorating relationship between the armed rebels... and the soldiers and police officers [stationed at] roadblocks around Parliament Grounds. The shots seemed to come from the submachine gun of one of the rebels... hiding in bush about 30m away. There were several theories about who fired the shots and why. One Fijian journalist suggested the rebels were trying to frighten the police while [the rebels] said it was an accident. [The coup leader] himself suggested the shots were fired by “third parties” intent on “creating a situation against the honourable intentions of non-confrontation” but... did not say who they might be. [The coup leader] also talked of apprehending journalists [it] suggested had deliberately filed “emotional reports” aimed at “stirring up confrontation.” ...At his first meeting with journalists [the coup leader] denied... threatening the media. It is clear [the coup leader] wants them close by so [the coup leader] can send his messages to the world. [The coup leader was furious when] the police had ordered reporters and photographers to move about 1km from their established position outside Parliament.

...Fiji’s captive] PM... has been sacked to end bloodshed after three people were shot. Fiji’s president... dismissed him... last night in a bid to end the... crisis... The sacking came hours after [the coup leader]’s supporters stormed a road block. Dozens of shots were fired and... two soldiers and an English camera[person]... were injured... They were taken to Suva’s hospital. The soldiers eventually abandoned the road block and fled.

...Fiji teetered on the brink of chaos last night as a mob of [the coup]’s supporters rampaged through the streets of Suva. Gunshots rang out and Fiji’s main television channel went off the air. Unconfirmed reports said [coup] supporters had firebombed the Fiji TV station and cut power to the central police station. Auckland’s Fiji Indian station Radio Tarana reported that... [a] police officer was also shot when driving in his car. Suva’s Colonial War Memorial Hospital confirmed [the officer] was admitted and said his injuries were not life-threatening. Earlier, nine journalists, including N[Z]ers... were rescued by their colleagues after being held in the parliamentary complex against their will... [The journalists] were covering talks between [the coup leader]’s group and the Great Council of Chiefs when about 200 [of hi]s supporters silently walked out, grabbed rocks and headed for the streets. The journalists hid with a group of Fijian[s]... However, they were found by a security guard who took them to the normally secret coup control room, where they... were made to hand over their cellphones and were not allowed to leave – supposedly for their own safety – or make phone calls... The journalists were eventually allowed to go when a group of their colleagues... walked in and demanded their release. Only hours earlier, [the coup leader] said the hostages could soon be released after “fruitful discussions” between his group and representatives from the Great Council of Chiefs. “Not 24 – say 48 hours...” However, [the coup leader] has cautioned that the release of the former P[M]... and his ministers, rests on the removal of the 1997 constitution and the President. His claims follow [the President]’s decision on Saturday to sack [the P]M... and his democratically elected Government... • [A]... Northland Maori leader has spoken out in support of Fiji[’s] coup leader... and his armed hostage-takers. A spokes[person] for Ngapuhi, [the Maori leader] said yesterday that [it] had received many calls from some factions of the Northland iwi who disagreed with the N[Z] Government’s stance on the political crisis in Fiji. “We don’t support what [the NZ P]M... is saying, that all N[Z]ers are against that guy... We support any indigenous people who are fighting for their independence. [The PM] talks about a constitution – we had a constitution in N[Z] in terms of Maori and that was what was taken away from us by the point of a gun. Then they became civilised and used a pen to remove our independence.” ...[a] Maori rights campaigner... said the political crisis should be resolved by the Fijians themselves. Maori must support indigenous Pacific peoples who want to protect their sovereign rights but N[Z] as a nation must mind its own business, [the America’s Cup smasher said. An] Auckland theology lecturer... said most Maori... were sympathetic to the stand taken by the rebels but did not support the use of arms. Rubbishing reports that Maori could also resort to violence, [the lecturer] said the conflict was a legacy of a colonial regime. [The]Maori Council chair[person]... urged Maoridom to stay out of the conflict... [A] Labour MP... plans to holiday in Fiji this... weekend – flouting... Government... warnings to avoid non-essential travel... But [the Maori MP said it] might not go if the situation worsened.

...Army takes charge in Fiji... Fiji is today under military rule as the Army attempts to end the hostage crisis and impose control in a country reeling from mob violence. Announcing martial law late last night, the head of the armed forces... said: “All the nation has been saddened by the extent to which the country has fallen during the last week. I have therefore, with much reluctance, assumed executive authority.”[Fiji’s] President... who two days earlier had appointed himself interim ruler and dismissed [the elected P]M... quit before martial law was imposed... Yesterday evening, soldiers enforced a 48-hour curfew, putting up barricades and taking up positions on the roofs of key buildings as scores of people began to flee Fiji. The Army, almost invisible in the early days of the crisis, cracked down after a 200-strong mob of rebel supporters armed with guns and knives rampaged through Suva, killing a police[officer]. The officer, Filipe Seavula, was shot several times in the back... The curfew has forced the *Fiji Times* newspaper to stop production. On Sunday, a mob descended on Fiji Television offices, smashing millions of dollars of equipment, putting the station off air... Radio reports that Fiji Indians had been warned especially to leave Suva were last night denied by police chiefs... The N[Z] Government yesterday issued its strongest warning yet to the 2700 N[Z] tourists in Fiji to leave as soon as possible.

...[last night the coup leader complained] the military had “changed its stance” and was insisting on staying in power for three months instead of allowing tribal elders to decide the country’s fate. “We do not believe it is necessary that the commander of the military should retain executive authority of Fiji,”... The military took over on Monday after a rash of violence including the murder of a police[officer. The coup leader]... has demanded an amnesty for himself and [six followers] but the military said an amnesty would not apply to crimes committed since the coup...

Compassion arrives in a plastic bag in the hands of a gun[-holder]. As the ordeal of Fiji’s political prisoners drags on, the only relief they receive from the outside world are packages of food, books, clean clothes and hand-written messages from home. Each day at 10 am, [the]Red Cross director... visits the more than 30 hostages... to check on their wellbeing and drop off individually named plastic bags. What follows is a bizarre ritual: bored supporters of [the]coup leader... gather around [the Red Cros]s truck in the parliamentary complex, eager to help unload it as a way of breaking the monotony of their days. [The director] and a nurse see the prisoners, but [the director] will not discuss any specifics of their condition – fearful the rebels would stop him visiting the hostages, or, worse, would harm them... Since the coup began... the captives have been

subjected to psychological harm. Unconfirmed reports say many of them, including [the deposed P]M... sit in silence with heads bowed all day long. [The coup leader]’s public comments hint at the trauma they must be going through. “Look, I could easily have shot all these people, okay,” [the coup leader] told a press conference late on Sunday. “Don’t forget the cause for which we have acted. I’m talking Fijian to Fijian and I don’t expect European journalists to understand that.” If that is what [the coup leader] tells the world’s media, what is [it] saying to the prisoners in private? But at the same press conference [the coup leader] went to great lengths to convey the image of a reasonable [perso]n being kind to the MPs [it] kidnapped... Quite what is going on inside the hostage quarters... is a mystery. By [the coup leader]’s own admission, they know nothing of the progress of talks between him and the military. To them it must seem there is no end in sight. To them it must seem a lifetime ago that they and not a [guy] with a gun were running the country. No doubt, the captors would have told the hostages the unfavourable news from the outside world, such as the trashing of the home of [the deposed PM]’s son and private secretary... on Friday. Just as likely, they would not have been given the messages of support that flow from those in Fiji brave enough to speak out...

Fiji’s political crisis deteriorated to the point of a showdown last night, with [the]hostage-taker... digging in despite an Army ultimatum... The military ruler... told [the coup leader] to forget any deals or aspirations of power and pulled the plug on further negotiations. [The]Commodore... turned directly to the people of Fiji to signal his new hardline attitude, addressing the nation to make his stand clear. “We will not entertain any more demands by [the coup leader] and his m[ilitants],” the military ruler said in a speech on radio and television. It ended a charade of conciliation with the rebel group and showed the military had heard international threats of isolation loud and clear. But behind the gates of Suva’s parliamentary complex... [the coup leader] lashed out at the Army and said [it] would remain firm in his resolve to install a racially biased government of his choosing. “I can wait here for as long as I have to and if the Army doesn’t come on side, we’re not too concerned about that... I’m not in any corner – [the]Commodore... is the one in the corner.” [The coup leader] said his group would shoot hostages if the Army forced its way into the compound, though [it] was confident that would never happen. “I do not believe that the hostages’ lives are in danger. That is not the issue.” The Army confirmed it did not want bloodshed either. “We are not here to battle anyone – we have not even considered the military option as a means of freeing the hostages,” the commodore said. Quite how the standoff would end was unclear last night.

...PRO-COUP supporters have seized a Fiji town and taken 30 soldiers, police[officers] and civil servants hostage. They also threw up roadblocks... Around 100 villagers seized the police station in Korovou. Dozens of [villagers] armed with M-16s and knives roamed the streets, taking ethnic Indians off buses and holding them in the street. One protester claimed the[y]... were relatives of [the]coup leader... whose home town is Korovou. Other roadblocks were thrown up by [coup] supporters near Suva, and 60 villagers blocked the road to the international airport in Nadi. Fiji’s main power station is in rebel hands, leading to widespread power and water cuts. [The coup leader] said there would be more unrest until the military gave in to his demands. “It is going to escalate,” [the coup leader promise]d... As the protests escalated, America recalled [its]ambassador... and threatened action. America repeatedly said it could take steps that would have a “serious impact” on Fiji.

...village mourns a patriot... “It’s OK to die like that – for the Fijians and in Fiji.” [The villager] is talking about Kulinio Tabua, who died yesterday in Suva’s Colonial War Memorial Hospital from gunshot wounds. The 24-year-old was one of six [people] wounded in the shootout last Tuesday between the military and coup supporters at the parliamentary complex in Suva. Mr Tabua, a cassava farmer and father of one, is the second person to have died since [the coup leader] and his rebel[s]... stormed Parliament... Seated in Mr Tabua’s home in the tiny village of Nakorolevu, [the villager]... told the *Herald* why his friend’s death was not in vain. “When they [Fijians] die in Lebanon or Bosnia to keep the peace there, it is not like this. It’s better to die here, this way, because we are fighting for our rights.” Mr Tabua, his father and several other villagers left Nakorolevu soon after the takeover to join [the coup leader]’s supporters inside Parliament. His father remained at Parliament yesterday... The dead [villager]’s namesake, Nakorolevu village[’s leader, said the coup leader]... had the village’s support because his actions signalled a positive future for indigenous Fijians. “We are thinking of our children. What [the coup leader] did was for the country, for Fiji, for tomorrow.” Mr Tabua[’s father] blamed the military for the death, labelling them “liars.” “They [the Army] came to us on Monday and spoke to us and they never said anything about fighting. They said everything would be solved by meeting, not fighting. The next day they did it. What they said and what they did – it’s different.” ...[an Army spokesperson]n... said the shootout happened after [the coup leader]’s supporters mistook a two-m[ember] Army patrol as a strike. [The coup leader] yesterday said Mr Tabua’s death “marks a point in Fiji’s history. [The 24-year-old] was shot and killed by the military – another example of the military misusing and abusing its power.”

...The Fijian hostage crisis could be resolved in three days under an agreement signed last night between [the]coup leader... and military leaders. If the deal lasts, 27 hostages held at gunpoint by... rebels for seven weeks will be freed on Thursday. Both sides have agreed in writing that the Great Council of Chiefs will meet that day to nominate a new president and vice-president for Fiji... The coup leader has pulled out of several previous commitments to end the 53-day-old hostage crisis. But this is the first time [the coup leader] and his rebels have made a deal... Under the agreement, the... interim Government will be dissolved and the rebels and those responsible for other uprisings around Fiji since the coup will be granted amnesty... The agreement is likely to make Fiji an international pariah. Governments, including the U[S] and key trading partners N[Z, AUS] and the E[U], have threatened economic sanctions unless Fiji returns to full multiracial democracy.

...The [perso]n who held Fiji’s Parliament hostage is now facing the death penalty as the nation calls him to account... Fiji[’s] coup leader... has been charged with two counts of treason... One charge of treason and another of conspiring to commit treason were read in the Suva Magistrate’s Court. It was alleged [the coup leader] “intended to levy war against His Excellency the President of Fiji...” The charge carries the death penalty, but no one has been executed in Fiji since it became independent from Britain in 1970. [The coup leader]’s security adviser... media adviser... political adviser and his younger brother... were among 10 others also charged with treason... The [coup leader]... and the other accused will not enter pleas until... a hearing in Fiji’s High Court in four weeks, after which a trial date will be set... Earlier, [the coup leader] appeared for a bail hearing on five minor charges relating to his raid on Parliament. The hearing was deferred for a week. [The]Chief Magistrate... ordered that [the coup leader] and 12 key supporters be returned to the prison island of Nukulau, off Suva, until Friday for the bail hearing... [The coup leader, who says it] was injured in military custody, appeared in court with a small bandage on the back of his head. [The coup leader] was arrested... at the start of a military crackdown, during which about 450 of his supporters were arrested. [The coup leader] and his supporters held... Fiji’s first ethnic Indian P[M], and most of his multiracial cabinet hostage for 56 days in a bid to end the political influence of ethnic Indians. Indo-Fijians make up 44[%] of the country’s 800,000 population and dominate the important sugar and tourism industries. [The coup leader] won a series of concessions before freeing his hostages. A military-backed interim Government... made up almost entirely of indigenous Fijians will rule for up to three years... [NZ’s PM] has welcomed the decision to charge [the coup leader] and his supporters with treason... “It is important that a clear message is sent that displacing a constitutionally elected government at gunpoint is a treasonous act which will be dealt with very seriously,”... said [the NZ PM].

...last month the NZ] Immigration Service... Suva office posted out... 1505 resident application forms. For the same time last year, the figure... w[as]... 45... One family able to flee the unrest arrived on Saturday. The [family] had an emotional reunion with relatives when they arrived at Auckland Airport... [The head of the family], who was a public servant for the former... Government, said his family lived in constant fear that they would be attacked... during the coup... Some nights [coup] supporters pelted their home with rocks... [The former public servant] said his family would never return to Fiji. When they had left their village, several hundred fellow Fiji Indians had come to farewell them. “They pleaded with us

to ask the N[Z] Government to relax immigration policies to allow Fijian Indians to escape. These people need the support of N[Z]ers.” ...many Fiji Indian families were being forced off their land, had no money to rebuild their lives and were going without food as many factories had closed. [The former public servant said that the coup leader] had to be heavily penalised for his actions so that a message would be sent to all Fijians that overthrowing the Government would have serious consequences. “If the message is not clear, then this will continue to happen. There will be another... [coup],”... The Fijian Bureau of Statistics said that more than 900 people left Fiji in the two months to the end of [last month]. More than 90[%] of them were Fiji Indians, prompting fears of an exodus like that which followed the 1987 military coups. About 67,000 Fiji Indians left then, creating a vacuum in business and bureaucratic leadership which took more than a decade to fill. Almost a third of those who left in [the latest two month period] held professional, managerial or supervisory jobs.

...REBEL soldiers are being urged to give themselves up after a failed Fijian mutiny. Fijian authorities say they are closing in on the last of the heavily-armed rebel soldiers from the counter-revolutionary warfare unit, which staged an uprising at Fiji’s military HQ. About 14 rebels are still thought to be on the run after escaping from jail while Fiji’s military dealt with the mutiny. Thirteen have already been caught. Eight soldiers – including five rebels – died in bloody gun battles at the barracks on Thursday. More than 20 people were injured during the fighting, including seven civilians hit by stray bullets. Two regular soldiers are in a serious condition in hospital. [The m]ilitary-backed interim [PM]... is pleading for calm. [The interim PM] said Fiji’s post-coup recovery had been set back by the killings, but it wouldn’t stop the government recovery programme. The mutiny came at a bad time for Fiji’s battered economy, [which]... was just starting to recover from the... coup... [The m]ilitary commander... said [it] was convinced... the country’s forces were united... □ T[he part-time *NZ Herald* columnist], of Whangarei, w[ho w]as part of the last team of international observers to be evacuated from E[T] last week... remains [convinced that the]... TNI... must not be allowed the obscenity of continuing to operate in E[T], adding that NZ]... has been refurbishing Indonesian military aircraft in Blenheim, with the assurance that the planes would not be used against the E[T]ese (they had been used for bombing villages in 1981). Yet two fighters roared over Dili during the [observa]tion period...

A N[Z] firm is continuing to refurbish Indonesian attack aircraft, unhindered by the Government decision to halt military ties with Jakarta. Safe Air, a Blenheim company owned by Air N[Z], has staff in Indonesia completing a contract to refit and repair two military Skyhawk jets. The contract went ahead with the approval of the Government, which is now under pressure from Opposition parties to step in and require the work to stop. They say it conflicts with the decision 12 days ago to suspend military cooperation with Indonesia in response to the E[T] crisis. But a Ministry of Foreign Affairs spokes[person] said last night that the ministry had granted a licence which covered only the export parts of the deal, so the Government’s role was complete once the Skyhawks left in May. “What they are doing in the way of maintenance and support is a commercial arrangement between the Indonesian Air Force and Safe Air.” The Skyhawk project manager for Safe Air... said from Jakarta yesterday that the company had gone through the proper channels and it had no concerns before embarking on the contract.

...the arrival of the international force is the best hope E[T] has for peace and normality... [without] question... But any relief was overwhelmed by dismay at how uselessly late the troops are – a crisp white bandage painstakingly applied to an already-amputated limb. All last week, there had been growing anxiety in A[US] about what the force would meet on its arrival, but the landing itself was almost eerily smooth. Shooting had been heard in the... morning[as AUS]n SAS troops in helmets and goggles scuttled from the first plane. But the few soldiers of the Indonesian Army... on the ground displayed only friendly indifference towards the “invaders.” “So far we’ve been benignly and cordially accepted by the TNI,” said the force’s... commander... sounding almost grateful. The impression of goodwill went no farther than the airport runway... The airport offices have been comprehensively looted, of furniture, computers, even lightbulbs. The departure lounge smells like a sewer, with a coating of human filth spread evenly over its white tile floor. But even here, there are signs of the sinister control that lurks behind so much of E[T]’s devastation: the VIP terminal, through which visiting Indonesian generals arrive and depart, remains untouched. The road into town is worse. In the suburb of Comoro, barely one house in three remains unburned. The flimsier dwellings are piles of ash and corrugated iron. The sturdier ones remain standing, but sooty marks stain the concrete above the windows. We passed the gutted shops, gutted offices and the burned shell of the Toto Nito restaurant where journalists and UN workers used to dine on Portuguese steak... The handset of an office telephone lies in the middle of the road, a few metres from the crushed carcass of a dog... In the harbour stand two large ships: a passenger ferry... and a low, grey barge. Lining the railings, clambering on board and huddling on the quayside are Dili’s remaining refugees... It seems strange for refugees to be leaving now, just as the international community promises peace. “But they are not leaving because they want to,” said [a Catholic] Father... “They are leaving because they are being made to leave, by the Army and the militias. They wear the T-shirts of the Indonesian side... [(pre-election gifts distributed freely to the people of ET, together with] instructions to vote for... [continued autonomy within Indonesia]), but they do this as insurance because they are afraid.” Where are the militias? ...Officers of the peace force reported seeing them carrying homemade guns and, all afternoon, you could glimpse young [guys] in the black T-shirts of the Aitarak militia, huddled in groups of two or three or zipping by on motorbikes. Once, as we were trying to talk to a group of refugees, one of them rode up and barked at them in Indonesian. We heard the words “journalists” and “Aitarak.” As [the militia guy] left, the refugees shrank away from us. “There must be some militias still around,” said [the AUSn] Major-General... “But I can say clearly at the moment that none of the troops have had brushes with the militias.” The truth remains, however, that E[T]ese are still being deported by armed thugs under his eyes. It is harder than ever to work out what is really going on. A senior UN official said on Monday that... it was all over – the Indonesian military had bowed to international pressure and acknowledged that the game was up. But the international force has hardly begun its job; its personnel are holed up in a few secure bubbles scattered across Dili: the airport, heliport, the UN compound and a couple of hotels. Outside is the rest of E[T], and it is still in darkness.

...Dancing... tears of joy... and... [chants of] “Viva Timor l’este,”... greeted A[US]n troops yesterday as... refugees began pouring... into Dili, now safely under the control of foreign peacekeepers. The tension of Monday’s occupation of the ruined ghost-town was replaced by the cheers of jubilant citizens who flashed “V” for victory signs at peacekeepers and mocked Indonesian troops... Unfortunately, [the]... fact that our assistance and goodwill have gone hand in hand with oversimplified views of Indonesian politics may harm future relations in our region. The consequences will work to nobody’s benefit. There has been little acknowledgment of the fact that many Indonesians also have serious concerns over human rights abuses in E[T] and accept the legitimacy of E[T]’s decision in favour of independence. [Now], in the increasingly polarised diplomatic environment of the past few weeks it has become... more difficult for them to express their concerns for fear of appearing anti-nationalist or, worse, subversive. Even more concerning is that some political and military elites... may use “anti-foreign” sentiment, portrayed as defence of Indonesian nationalism, to support calls for a return to a more authoritarian style of government which, in the lead-up to Indonesia’s elections, appeared to be on the wa[ne]. Incidentally, leaders]... at the Commonwealth Heads of Government Meeting in South Africa... are expected to... start the clock on a two-year deadline for Pakistan to return to democracy or face expulsion from the association... [following] a military takeover last month.

...Friday’s [CHO]G meeting welcomed former dictatorial pariah state Nigeria back into the Commonwealth family fold... Nigeria’s military [leader] turned democrat, urged Pakistan and Africa’s military regimes to restore democracy... ■ [IN] NIGERIA... the... riot-torn city of Kaduna was under curfew as contestants for the Miss World pageant left Nigeria... last night after more than 200 people died in violence provoked by the contest. Relieved beauty queens slipped out of their luxury hotel to board a chartered Cameroon Airlines Boeing 747 flight to London, the new venue for the event... [L]ast week, Nigeria[’s] Information Minister... stood on the tarmac of the airport serving the capital, Abuja, and proclaimed: “Welcome to God’s own country,” as the Miss World contestants stepped off a plane... The collision of two worlds – the beauty queens bathed in glamour and glitter and poor African Muslims... – was enough to make trouble inevitable... In other violence, an explosion ripped through the

cargo wing of Lagos airport yesterday, killing at least one person and trapping others inside... Religious tensions were still running high in the... northern city of Kaduna, where most of the violence has taken place, despite the decision to move the pageant from Abuja. More than 4000 people have fled their homes, according to the Red Cross, and about 1000 have taken refuge in a local brewery compound guarded by soldiers. Saturday's decision to abandon Miss World Nigeria followed a third day of Muslim-Christian blood-letting in Kaduna, site of previous religious violence... The rioting began on Thursday as a protest against an article in a national newspaper that offended Muslims because it said the Prophet Mohammad would have married one of the Miss World beauty queens were [Islam's founder] alive today. Disappointed Nigerians watched the beauty queens leave from the windows of the hotel lobby. "This is a very sad moment. It is Nigeria's biggest international disaster," one spectator said... The... head of the Miss World Organisation, blamed the foreign press for the uproar because they "deliberately tried to tear Nigeria to pieces" over sharia in the run-up to the event. "You pulled Nigeria down and you allowed Nigeria to be humiliated," [the head] told reporters. In particular, [the head] took exception to stories which appeared in the international press about the use of amputation as a punishment by Islamic courts in northern Nigeria... The largely Islamic north of Nigeria has witnessed deadly eruptions of sectarian and ethnic clashes since about a dozen states began implementing strict Muslim sharia law... [-] a six-day clash two years ago between Christians and Muslims left 2000 people dead...

POLICE are too scared to remove the corpses of the victims of Nigeria's ethnic riots. Charred corpses lie where they fell in the aftermath of the slaughter which has killed at least 45 people. The clashes between Nigeria's two biggest tribes, southern Yorubas and northern Hausas, are the latest in a catalogue of bloodshed since [the country's] president... took office in May. His leadership marks the end of 15 years of crippling military rule in Africa's most overcrowded nation.

...Nigerians are fleeing potential racial flashpoints after riots in Lagos killed 50 people and triggered fears of a backlash in other areas. Hundreds of terrified people packed into trucks heading for northern Nigeria at the Mile 12 market, where violence erupted last week between immigrant Hausas and Yorubas, whose homeland lies... around Lagos, Nigeria's commercial capital... 26 rioters had been arrested but adequate evidence... ha[s] not yet been forthcoming... In Hausa-speaking... Kano, police were on standby last night to prevent trouble with the expected return of Hausas from Lagos bearing tales of horror... [as] resident Yorubas tried to move out of districts where scores died in July when rioting flared in response to clashes in the southwest... Nigeria has been the victim of numerous upheavals in the past, with a population of more than 108 million divided into at least 200 distinct ethnic groups and about evenly split between Muslims and Christians... [In related news, f]resh religious riots rocked eastern Indonesia's Ambon City yesterday as a lawyer for the local Christian community accused security forces of shooting dead 16 people, including unarmed bystanders... [A further 56 Christians] suffered gunshot wounds... The lawyer... accused Muslim extremists of a co-ordinated campaign of attacks against Christians to drive them out of the once-idyllic spice islands... "They were all shot by the security forces... [who] used Army trucks and went from house to house. People who were standing in the street and did not know anything about the riot were shot to death. I saw it." ...Responding to [the] allegations, a military spokes[person] said yesterday that it was true soldiers had shot some people, but denied they had favoured either group. "We tried to stop the groups but then one of our soldiers was shot dead by them. It's true that we shot at them but we did not aim at a specific group... We did not discriminate and we did it for protection." Human rights groups say more than 1000 people have died across the archipelago in religious fighting this year.

...[the violence in ET is threatening] to spill over into the volatile West Timorese capital, Kupang, where resentment is mounting against abusive behaviour by armed militia groups... Kupang was the scene of serious unrest last November when Christian and Muslim gangs clashed on the streets, sparking an exodus of local residents.

...Indonesia said yesterday that it had handed over security control for E[T] to the UN] force in the territory... at a meeting with the UN force (Interfet) commander... and that only about 1000 Indonesian troops would remain... but the... commander denied there had been any transfer of power... Only two hours after the meeting, [the AUSn]... Major-General... said Indonesia was still formally in control of security... adding that his force's UN mandate barred a transfer of power until Jakarta had given E[T] independence. Dili was quiet yesterday, but some fires were still burning in the charred city and tensions ran high... People who fled the city during the bloodshed have... return[ed], only to... recover what belongings they can and return to hiding places in the hills. [The US] Secretary of State... demanded that the Indonesian Army stop "colluding" with militias against E[T]ese in West Timor refugee camps and warned that US aid would remain suspended until the situation vastly improved.

...British Gurkhas [have] freed more than 2000 E[T]ese hostages after a brief gunbattle with their militia captors... The freeing of the hostages in the northeast of the island was the first... [time] international peacemakers have returned fire. U[N] troops also seized two truckloads of heavy-calibre ammunition hidden by the militia, including 12.7mm machinegun rounds, rockets, detonators and hand grenades. As events accelerated after the lull since the first peacekeepers landed two weeks ago, soldiers disarmed seven Falintil pro-independence fighters, and a militia suspect was badly beaten on the streets of Dili. The... suspect... had his jaw broken in a brutal attack by members of the Commission for Timorese Resistance, the political body that will form the nucleus of an independent E[T]. The dramatic rescue of the hostages was effected... near Com... where N[Z] SAS soldiers this week swept down on a militia arms cache. Gurkhas leading a humanitarian aid convoy to Banchu and Lospalos sent a platoon into the bush near Com when they were told that militiamen were holding more than 2000 people at gunpoint. The Nepalese found a unit of 12 militia... with assault rifles who fled to the hills... Two... were arrested and the rest later tried to broker a surrender through a priest and community leaders during a stand-off that degenerated into a fight among the militiamen and another run for the hills. Pursuing Gurkhas captured one more... before driving on to the badly damaged towns where they were met with banners and cheering crowds. In the west, the push from the town of Balibo... will take the A[US]ns into the island's most dangerous region, with the possibility of further tension with Indonesia. They have been told to remain strictly on the eastern side of the border, ruling out pursuit into Indonesian West Timor... Meanwhile, it was reported that seven church workers, including two nuns and a priest, have been killed by Indonesian troops in the eastern part of E[T].

...the UN] was yesterday accused of presiding over a whitewash, as it emerged that an investigation into crimes against humanity in E[T] will be carried out in co-operation with Indonesian politicians and generals... The resolution also calls for participation of Asian experts, likely to be from neighbouring countries traditionally deferential to Indonesia. "It's an absolute joke..." one furious UN official said... [Furthermore,] the evidence of crimes against humanity is literally rotting away because of inadequate forensic resources. [Today UN CivPol officers] will... work on a maggots-filled well in Dili where an unknown number of bodies lie.

...The wailing begins as a low, sobbing moan as... [the NZ military police officer]'s trowel scrapes away the last of the dirt to expose a head wrapped in patterned red cloth. [A British police officer] crouches beside the E[T]ese villager, a hand on his shoulder in mute sympathy as the mourner rocks gently on his haunches... The small tragedy played out in an overgrown field in Liquica has become an everyday part of life in E[T]. Official AUSn estimates suggest the toll from militia atrocities is between 500 and 1000, a figure supported by N[Z] investigators. Only 160 deaths have been confirmed by the discovery of bodies... Bodies are being found throughout E[T], usually in single graves and most killed with a single shot to the head, but sometimes in groups of two or four, and in a disturbing number of cases mutilated or dismembered. One victim had been staked by the hands and feet and buried alive; another was a witch-doctor whose remains were found next to an altar on which the bodies of two young children had been placed. Others have drifted in from the sea - some, investigators say, possibly from the reported dumping of truckloads of bodies in a ravine west of Liquica after a massacre in the Catholic church in which more than 40 people are thought to have died. Liquica... a ravaged and broken town, has already yielded horrors. [A NZ]Corporal... was part of the team called to investigate a report of 57 bodies in a

village well 9km west of Liquica. In the well... they found 11 bodies... victims of brutal machete slayings by the Besis Merah Putih militia that laid waste to Liquica. [The]Corporal... says more bodies may have been in the well: at about 5m investigators hit the water table of nearby Maubara Lake, preventing further excavation. N[Z] soldiers at Suai, on the southern border with West Timor, live with similar horrors: in addition to the regular discovery of bodies, they daily pass the ruins of the Church of Nossa Senhora de Fatima, and the bamboo scaffolding-clad shell of Suai's uncompleted cathedral. Indonesian soldiers and local militia... herded thousands of people into the church compound shortly after the August 30 independence referendum, most of them [gals], children and the elderly. The massacre began on September 6. Fathers Hillario, Francisco and Tianto were pulled from their presbytery and slaughtered. Others were hunted down and killed where they hid in recesses in the nave, or on the mezzanine galleries of the cathedral. Zig-zagging bullet holes show where more were gunned down as they scrambled up scaffolding. [Gals] were hauled from the church classroom, raped and then killed. Others inside – including children and nuns – were butchered en masse before the militia set fire to the church. In the courtyard outside, flowers still cover skeletal remains; a hank of long black hair falls out from beneath petals.

...The dark of streets left... without illumination by the militias' systematic destruction is broken only by the sharp bark and growls of the oddly squat dogs that prowl constantly through the debris and human campsites. And by roosters... The only human movements are the Army patrols quartered in the city, the distant growl of armoured personnel carriers, or the... chop, chop of military helicopters. No one moves in Dili at night unless they have to. The terror the militias used so effectively to drive people from their homes into dangerously inhospitable mountains still governs after dark, even in the tent city that has sprung up under the guns of Interfet soldiers and in the sports stadium housing a growing number of people returning to Dili... 15,000 people a day have come down from the hills over the past few days and... 70,000 more may return over the next few weeks. That will push resources to the limit as aid and medical workers try to feed, clothe, shelter and care for... so many people in a city that effectively has nothing to offer except what is shipped in from Darwin. The World Food Programme is launching a food-for-clean-up programme under which rice and other essentials will be distributed in return for labour to purge the city of the debris and filth of war. Later, this will become a food-for-building programme, switching the effort to the reconstruction of E[T]. It is a task far beyond the new nation that will emerge after the Indonesian Parliament's ratification of the independence vote. World Vision estimates that E[T] will be among the poorest nations on the planet with a per capita annual income... below that of Bangladesh. "The poverty here will be comparable with sub-Sahara Africa,"... The desperation is already emerging. Twice in the past week the main food warehouse near the A[US]n consulate has been looted by locals who brushed aside civilian guards and took what they could carry... "When a child cries for food, who cares about morality?"... says... [a] World Vision worker... At the sports stadium, where several hundred people now live, registration for rice rations this week disintegrated into a stampede as people tried frantically to collect the 50kg of rice a family World Vision is distributing... World Vision is [also] searching for 2000 sponsored children and their families who were helped into rudimentary village enterprises... But even as the urgency grows with the approach of the wet season, and the need to provide housing and sow crops, the terror that emptied the streets at night continues as a noose around humanitarian relief. Most of the people who pour down to the sports stadium for food and company during the day will return to the hills before dark, their health steadily sapped by hunger and emerging disease... In the village of Motalaran, at the foot of the mountains outside Dili, eight out of 10 children have the warning signs of marasmus, the saggy skin, pale nails and eyelids that precede by only a few weeks the more serious protein deficiencies of kwashiorkor, the precursor to malnutrition... In... Dare... the National Commission of Timorese Resistance reported... 30 children had died in the past few weeks...

For 25 years they fought against Indonesian soldiers to free their country and then, on the verge of victory, they had to stand by and watch it destroyed. To hear the guerrilla fighters of the Falintil speak in the resistance stronghold of Waimori, it was the hardest thing they had to do in their long struggle... Falintil forces were ordered not to fight by their leader... to prevent E[T] descending into a full-scale civil war – an outcome the Indonesian military tried to provoke... "It made me feel mad. I felt so sick and sad when I saw what was happening, but I must obey my commander..." [a]Falintil officer... said... While Falintil was careful not to be drawn into a full-scale civil war, it did occasionally respond in its strongholds outside the capital... In towns such as Laleia and Manatutu, Falintil fighters... engage[d] the militias and the military... to try to save the population. "We went in there and they surrendered their weapons. The Indonesian police gave us all their guns without a fight and we let them leave from Laleia... But we were too late. The town was destroyed and most of the population had left." ...Falintil... now control all of the area east of Dili, except for Baucau and Los Palos where Interfet are... Food is still in short supply. The soldiers and refugees exist on one meal a day... Under guard in a sweltering grass-and-bamboo hut are 16 former militia members who admit to burning their own town on the orders of the Indonesian military... One of them is... a farmer. "The... Indonesian... soldiers... gave us 20,000 rupiah (\$NZ5) and told us that they would pay us more when we got... to Atambua,"... said[the farmer. The militia] were told they would be transported to Atambua in West Timor, where they would be given weapons to come back to fight Falintil. But 16 of the 300 locally recruited militia did not make the trip. "We heard they were separating the [guys from the gals] there and killing the [guys], so we hid," said [the farmer.

...the commander of] the Blood of Integration militia is giving a tour of the sprawling Tenuboot refugee camp in West Timor, with an M-16 donated by the Indonesian military across his back... [– which constantly reminds us that during] a UN visit in September, militia... stoned foreign observers and threatened to kill any other "white faces" that dared to enter the camps... In a few hours [the commander] will lead a foray over the border into E[T], hoping to gather extra food and weapons in preparation for cross-border attacks against... Interfet... Despite warnings of retaliation from A[US] and the U[S, ET]'s pro-Indonesian militias are plotting to launch a guerrilla war under cover of West Timor's crowded refugee camps, hand-in-hand with sympathetic Indonesian military units. Pausing to greet Indonesian soldiers laundering their uniforms with other camp residents, [the commander] says, "We have no official plans to engage them yet, but we are ready and we have support. We are on the border waiting for orders from our leaders and that is all. They want a war and that's what they'll get." Nearly 200,000 E[T]ese... fled for the marginal safety of West Timor... where the very people that helped destroy E[T] now provide food and shelter in exchange for a teeming pool of recruits for their cause... [Al]though the military denies forcing any of the refugees to leave... [ET, most] were trucked in by military and police convoys... "They're not refugees; their hostages," says one relief worker. "The militia and the military – you can't make a different any more – are in complete control. And the Government can't do anything about it." ...Residents spend sleepless nights listening to soldiers vent their anger by firing off bursts of automatic gunfire... One refugee who refused to give his name said: "The scariest is at night when the militia drink and sit at the gates watching everyone who comes in. No one dares step out after 5 pm for fear they will be shot, just for fun." "Everyone here is pro-integration because all the pro-independence people have been kidnapped and taken away to who knows where..." whispers [a]young refugee... At the end of the tour, [the]Commander... dons a red beret to complement his surplus Indonesian Army uniform and hikes his gun on his hip for photos. One militia member nudges visitors to have their picture taken with the commander. "Then you... can say 'I knew... the pro-integration hero'. When the war begins, you will have something to remember us by." ...[I prefer to remember the photo we got back in ET that shows a] young... girl in front of the bars protecting an Indonesian Army landing ship which has been loaded with looted goods for selling back to the people.

...The Indonesian Government wants to set up a border buffer zone between East and West Timor to prevent accidental clashes with Interfet troops... [A]n Indonesian police[officer] died in a clash at the border village of Motaain in an incident which both sides eventually agreed to blame on miscommunication between the two forces... Meanwhile, [a]... large militia army of up to 15,000... continues a brutal reign of killings, beatings, kidnappings and sex slavery in West Timor, a new report by A[US]'s combined aid agencies says... [S]ince October militia... have... abduct[ed]... as many as 1000... young [gals]... from the northern border area of Betun alone, reportedly to be raped or forced into prostitution or marriage... The... report [also] says many refugees continue to be deterred from returning to the east by threats and intimidation – including attacks on UN staff –

and by propaganda alleging rape of returning [gals] by UN soldiers, continuing war in the east and helicopter gunship attacks on refugees attempting to cross the border... The report... came as the flow of refugees across northern border crossing points was stemmed by a militia attack on a 15-truck convoy carrying E[T]ese home from camps in the west, prompting condemnation from the U[N] High Commissioner for Refugees in Geneva. A UNHCR statement said the attack was the worst involving refugees since the UN started repatriations from the West Timorese area of Atambua, close to the border, last month. The report for the A[US]n Council for Overseas Aid... says that while Indonesian officials estimate the total number of refugees in the west as about 270,000, other estimates place the number as high as 400,000, living in 135 camps or sites. This could explain up to 200,000 E[T]ese still missing. "It is not clear to us where these people are," N[Z]'s senior military officer in Timor... told the *Herald*. "It has become a bit of a mystery." ...While food supplies are adequate, the health of the refugees is deteriorating: diarrhoea is killing children – up to 100 a day, according to one report – and endangering... the... pregnant... and... elderly. Many camps do not have adequate sanitation or clean water, and up to 30,000 refugees are facing a wet season under trees without blankets or tarpaulins.

...cancer-causing asbestos found in ruined houses across the territory is complicating the job of rebuilding[ET]... "There is a lot of asbestos in the roofs and walls of these houses and now that material has been burned and broken... the asbestos... [dust is becoming airborne." By the way, g]un crews on HMNZS Canterbury jumped to action stations as an unidentified aircraft ignored urgent inquiries and warnings and flew towards the frigate in the tense waters off E[T]. It was potentially the most dangerous of 10 approaches by aircraft since the Canterbury began protecting ships heading for the troubled island and patrolling off a coast still held by hostile militias. As the ship went into action stations, the aircraft – possibly an Indonesian Nomad on coastal patrol – veered away, about 15 nautical miles from the Canterbury[, which]... is now on its way home...

[ET's foremost] independence campaigner... returned home yesterday after spending 24 years in exile... [The Nobel Peace Prize laureate, who fled ET] in early December 1975, just three days before the Indonesian Army invaded... stepped from a C-130 U[N] plane which arrived at Dili Airport to be met by the deputy commander of the Falintil resistance fighters... in a devastated land. • Jakarta... appears to be abandoning the militias that razed E[T], despite continued training, intimidation of refugees in the west and threats of guerrilla war. Last week N[Z] troops protecting the southwest corner of E[T] were on heightened alert after reports and rumours of a planned militia assault across the border. The predicted attack... was supposedly timed to coincide with the 25th anniversary of the Indonesian invasion of E[T]. Its failure to eventuate, linked to tighter control of the border by the Indonesian Army... and other indications, suggests that Jakarta wants to rid itself of a force that has become both an international embarrassment and a burden to an Army with too many other problems on its plate.

...Pirates and marauders will rule what are now Indonesia's territorial waters if the country disintegrates, increasing security risks to the whole region, says Jakarta's Minister for Maritime Exploration... His warning comes as Indonesia faces growing calls for independence from several provinces, in particular Aceh at the northern tip of Sumatra, the gateway to the strategic Straits of Malacca... Staunchly Muslim and resource-rich, the proud Acehese are resentful at Jakarta siphoning off the natural resources while most of the population remain poor. Acehese are also angry at the Government's failure to make the military account for its human rights abuses. An estimated 2000 people died during a nine-year military operation from 1989... [Aceh, unlike ET,] has not received any international support[, but]... Aceh's calls for independence have increased since the Government allowed E[T] to vote to break away in August. On November 8, more than half a million people flooded Aceh's capital Banda Aceh to demand a referendum... Analysts worry that a breakaway Aceh will trigger the disintegration of Indonesia. "If this country breaks up, these archipelagic seas would become internationalised. Anybody could come in and it will be a battleground between various interests," said [the minister]. "...It would be more dangerous for anyone to venture into these waters... they would be harassed, pirated." The International Maritime Bureau reported that the number of actual or attempted pirate raids worldwide surged more than 25[%] to 180 in the first nine months of this year... More than a third of the attacks took place in Indonesian waters. In August, a department of the U[N] called on Southeast Asian nations, particularly Indonesia, to respond immediately.

...The [UN] chief has outlined a plan for the UN to take control and protect E[T] with a 9000-strong peace-keeping force... [which] would replace the A[US]n-led force... The UN is to assume civilian and military control... after Indonesia's Parliament ratifies the results of the independence referendum... But because of the precarious humanitarian situation in the province... the UN civilian authority must immediately take charge of infrastructure, including water, electricity, hospitals, courts and some public offices... [the Secretary-General] said... In many ways, [his proposal for ET] is similar to his plan for Kosovo after Nato ended its bombing campaign and Yugoslav forces withdrew from the province... But unlike Kosovo, there will be more need for international experts to run those public sectors... [However, with a US] debt of \$US1.7 billion... the U[N] has few funds to pay for operations in Kosovo this year, much less new ones in E[T], Sierra Leone or the Democratic Congo, says a senior UN finance official. "The U[N] is running on empty with many miles left to travel,"... the... undersecretary-general for management, said yesterday... [I]n December the world body would have an estimated cash balance of around \$US727 million, but all except \$2 million of that was owed to countries which fielded peacekeepers and were never paid. The operation in Kosovo... had received only \$US35 million of the \$US200 million requested and the \$US135 million approved by the General Assembly... Officials estimate the new mission in E[T] could cost half a billion dollars next year... [The undersecretary-general spoke after the official and the] Secretary-General... made presentations to the assembly's finance committee, where the US arrears were sharply criticised. [The] US Ambassador... insisted that the UN must observe "budget discipline" and sound management principles as well as lowering the US dues from 25[%] to 22[%] of the organisation's budget. "A UN budget that is sensible and lean, a scale of assessments that is fair, is not something the U[N] can just hope to do. It is what the UN must do," [the ambassador] said. No one else agreed with him. Britain's [UN ambassador] said his country, not the U[S], was the largest "net creditor" because of funds owed to it for peacekeeping... A typical comment came from Singapore's deputy representative[, who]... described the situation as "most bizarre" because the US, unlike other debtors, was not a "failed state" or one that was not doing well economically. At the same session, [the Secretary-General] complained that member states were adopting resolutions for meaningless administrative tasks without "responding effectively to real problems and the needs of real people."

...The US has paid \$US151 million... to the UN in the past six days – enough to save its vote in the General Assembly. UN officials in New York confirmed the payments and said the new funds had put Washington \$US43 million over what it needed to fulfil conditions in the UN Charter and keep its vote in the 188-member assembly. They said the US debt was now down to \$US1.17 billion – until January 1, when it would be billed for new dues... • N[Z]ers are being asked] to donate to famine appeals... The UN estimates that some eight million people are threatened with starvation in Ethiopia, and a similar number face famine in neighbouring Horn of Africa states... After hearing a report by a special envoy to the area, EU foreign ministers... urged coordination with the U[N] to ensure the efficient and speedy delivery of international aid.

...As the desert sun began to dip towards the scorching horizon, Bashir Ahmed Abdi died. The 3-year-old had spend his last day unconscious in a tiny hut built from sticks and sacking, in the middle of a barren, red-earthed plain. His mother fed him a little water and food around noon. It was all there was. [His mother] was the only one to notice when the emaciated boy's shallow breathing stopped. Only when her shoulders began to shake with tight, constricted, coughing sobs did her husband realise that his youngest child was dead. [The father] touched the boy's hollowed cheeks and then slowly pulled a faded blanket over his body. The blanket covered everything but the boy's feet, still cut and callused from the 10-day walk that had brought the family to this place. His legs rested on the rim of a wicker basket that has, in the last week, been a funeral bier for three of the couple's five children. The... family's hut is at the edge of a settlement of 9000 starving people that did not exist a month ago. Now it swells every day as more of southern Ethiopia's desert farmers stagger in from the bush... Some have trekked 240km, mainly at night to avoid the heat. They have abandoned their villages, now empty but for dead livestock... Famine has come again to Ethiopia... [In 1985,] news reports brought

the desperate scenes in the hunger camps into the living rooms of the Western world and sparked the Live Aid appeal, [but now] people are dying again. So far, the deaths are “only” in the thousands. But a catastrophe is imminent... Since the last famine and the fall of the Soviet-backed Marxist regime... the new Government has worked hard to guard against a repeat. But the country’s population has nearly doubled since then and Ethiopia is deeply in debt... Although the E[U and U]S... have pledged nearly a million tonnes of aid, little has reached the capital... let alone the remote regions where people are suffering the most... [The] deputy head of the Government’s Disaster Prevention Planning Committee, said all the aid pumped into Ethiopia after the last famine has done little to stave off the present crisis. “Most of it was spent on emergency provision, not long-term development.” Although some roads were built with the international cash, the logistics facing aid workers are still huge. Even getting food into Addis Ababa may be impossible. The continuing war between Ethiopia and Eritrea has sucked up valuable funds and limited access to the small independent port of Djibouti. There are no planes to mount the huge airlift that might be the lifeline to save thousands more from starvation. The new roads that do exist are in appalling condition. Some areas remain inaccessible to vehicles altogether. Bandits pose another threat. An aid worker in Ogaden was killed this month [during] a robbery... Many say it has taken the international community too long to react... “We have been screaming about this for a year,” said one World Food Programme adviser. “It seems it takes dead people on TV to get anything moving.”

...Why did we let it happen again? ...I am kneeling on the ground, crouching so my eyes can look directly into his. Down here, in this children’s world, in this forest of adult legs, [the boy] looks just as bewildered as [it] did from above... [The boy] is what we have come looking for... the classic famine child... His arms and legs are distressingly thin and his stomach is distended. [The boy] is four but looks as if [it] weighs less than a 1-year-old. The flesh has shrunk to nothing around his face, giving him the highly defined cheekbones that slimming Westerners crave. But his jaw has shrivelled to a ghastly point. By contrast his head has remained the size that nature intended, as if to signal that here, in the seat of his consciousness, his personhood remains undiminished. We fix each other’s gaze. I am looking into the eyes of an equal. Above us his mother is telling the rest of the press pack their story... The notebooks close, and the legs step back so the photographers can let off their motorised cameras, shooting frame after frame of the famished boy. It is an eerie compact between his mother, the media, the Government officials and the aid workers. Everyone knows that without pictures like this there will be no food aid. Everyone consciously conspires in the indignity, except the little boy. We have been here before... [In 1985] there was famine on a terrible scale in Ethiopia. Then I walked through the refugee camps in Korem, Kobbo, Kembolcha and a grim litany of other places that remain with me still. I saw thousands of little boys and girls like Abdifata. So, thanks to the television cameras, did [a British singer]. His indignation became the irresistible force that created the biggest fundraising event the world had ever seen. A billion people watched the Live Aid concert and gave the largest amount ever raised for charity. The world would make sure, we said, that this would never happen again. So how have we come back to this? The first thing to say, however, is that we are not back in the same place. Abdifata may be dead by the time you read this. His mother will be forever scarred by the events of these past months. Yet, thankfully, her anguish has so far been repeated here hundreds of times rather than hundreds of thousands of times as it was in 1985. For today, though things are grim in the Ogaden, they are not yet beyond hope in the rest of the country, most particularly in the highlands where the vast majority of those at risk live. It is still not too late to save the 8 million people estimated to be at risk of starvation throughout the land. Throughout Ethiopia things are different from 1985. Then, millions of people abandoned their homes and congregated at food distribution places that swiftly became swills of dirt and disease; today, most people are still at home, surviving – just – on food aid rations... The Government context has changed, too. In 1985 the country was run as a Soviet-style command economy by a blood-thirsty dictator... (now being sheltered... in Zimbabwe). Today there is a democratic Government (up for re-election next month), which has followed a more market-led approach. In the bad old days there was no incentive for farmers to produce a crop surplus – even if they could – because they were forced to sell it to the Government at a ludicrously low price. Now farmers are free to sell on the open market – and they have lifted production to such an extent that in 1997, for the first time in its history, Ethiopia became a net exporter of grain. But most significantly the Government has set up an effective early warning system, which monitors rainfall, along with crop and livestock conditions, and prices of both in the marketplace. Alongside that it has established an emergency food security reserve and built stocks to 300,000 tonnes, which it began to hand out last year when the third year of drought began to bite. So what has gone wrong? The chief problem lies with us in the Western world. Last year the developed countries promised deliveries of cereals to replenish that dwindling food reserve. We promised, but we didn’t deliver. That reserve is now down to a critical 35,000 tonnes. It will run out [soon]... And although donors, like the U[S and EU] – shamed by the pictures of dying children on our TV screens – have promised to deliver the amount of food needed, there is no saying how long it will take to arrive. In the past the notoriously bureaucratic EU has routinely taken five months to deliver. On some occasions, as in Cambodia, its food actually arrived when the crisis was over and the vulnerable had died. To cover their embarrassment at having ignored the early warning – which they insisted be set up – Western donors have been blaming Ethiopia’s war with Eritrea, which invaded its territory in 1998. Self-evidently it would be better if the country were not trying to repel an invader at the same time as coping with the threat of famine. But the war is a standoff with skirmishes rather than a fullscale battle, and present defence spending is only a third of what it was in 1985...

It is the kind of thing you thought just did not happen any more. The young conscripts were told by their superiors that it was time for the big push. They were to go over the top and run upon the enemy trenches. Out they climbed. As instructed, they... advanced at a slow running pace upon the bunkers of the foe. The machineguns spat. From one end the khaki conscripts began to fall, like a line of dominoes. But behind them came another wave. Tens of thousands died that day to capture a short stretch of mud... It ought to be a fading recollection of the pointless horror of... W[W1]. But it is an account from survivors of a war which is being fought today. The world’s silliest war, between two of the poorest nations... “It is like two bald [guys] fighting over a comb,” said one Western diplomat. But what is it actually about? No one seems really to be able to explain, for the nominal issue – a tiny disputed border region of no value – seems too preposterous. The war had taken its toll on the two economies before the drought set in... Businesses are suffering and economic growth has taken a dive. Revenue from the ports which served Ethiopia has dried up. The oil refinery in Assab is shut. [Yet, i]n the past 18 months, both sides have spent large sums on arms and ammunition. Eritrea has bought MiG 29s and Ethiopia has bought Sukhoi 27s, Mi 24 helicopter gunships, and Mi 8 cargo helicopters, all from Russia. Ethiopia has also bought arms and ammunition from China, and tanks from Bulgaria. Ethiopia will not launch another offensive in the next few months with famine looming. And neither wants to fight in the rainy season... But come the autumn the world’s most senseless war could all too easily recommence.

...the recently rearmed Sierra Leone Army and the pro-Government Kamajors – a militia made up of traditional hunters – ...drove rebel forces further from the capital [yesterday] as the Government moved to head off a feared guerrilla offensive on Freetown. The... fighting near the town of Newton, 40km east of Freetown, came as U[N] peacekeeping troops and pro-Government forces geared up for a possible Revolutionary United Front... advance on the nervous capital, where thousands of frightened villagers have sought sanctuary in recent days. The battle near Newton... [did] not involve... UN peacekeepers... said... a UN spokes[person] in Freetown. They did[, however,] come under rebel fire... along a key highway at Port Loko, 105km to the east of Freetown. No UN casualties were reported, but there were unconfirmed reports some rebels were wounded... In Washington, [the US] President... dispatched... a special envoy to the region in an effort to halt “a return to all-out war.” The President also directed American military officials to hasten efforts to ferry in more international peacekeepers... Chaos swept Sierra Leone after a Nigerian-led regional intervention force – which had been in the country along with UN peacekeepers – pulled out last week. Angered by efforts to disarm them, the rebels – who were to share power with the Government under a peace accord signed in July – began seizing peacekeepers. By week’s end, they held more than 500 UN personnel... The UN wants to speed deployment of additional peacekeepers to bring its 8700-strong force up to its mandated strength of 11,100. [The UN Secretary-General] suggested that the peacekeepers may need to take on a more active military role to enforce

the country's peace accord. Britain signalled that crack paratroops sent to Freetown on an evacuation mission at the weekend might stay for another month – far longer than the timeframe of a week as previously announced. But B[ritain's]... Government, worried that public opinion is against any "mission creep," repeated that the troops would not take part in combat... [– although the] Foreign Secretary... repeated a warning to the rebels that if British troops came under fire, they would hit back and hit back hard. Russia said it was considering sending a helicopter unit and paratroopers to beef up the US force and two Jordanian parachute companies were expected to fly to Freetown within 48 hours. Canada, the Netherlands, Russia and the U[S] were to help ferry in more troops from Jordan, India and Bangladesh.

...As fighting spilled outside the Freetown home of... the main leader of rebel forces in Sierra Leone, diplomats in New York struggled with a conundrum that is pivotal to the prospects for peace in the country. What should they do with this [rebel leader] whom they know to be a beast? No one at the U[N] questions that a trial of [the] former Army corporal and TV camera[-operator] who took control of the ...RUF... in 1991, would end with his conviction [for] some of the worst human rights crimes ever seen. But would such a trial now help Sierra Leone? It was... July's Lome peace accord, which was meant to bring an end to... years of civil war, that ensured [the RUF leader]'s continued influence on his country. In return for a pledge to disarm, [the rebel leader] was given a cabinet position as well as an amnesty from prosecution for him and his followers. "Everybody knows the truth that [the RUF leader] is totally to blame for the violence at the moment," one senior Western diplomat at the UN commented. "In a normal world that would put him beyond the pale." ...The crimes committed by the rebels during... [the] civil war have been documented by groups such as Human Rights Watch. In a brutal quest to suppress all opposition in the population, they routinely hacked limbs from civilians and raped [gals]. Children as young as 10 were forced to fight with the rebel militia. As many as 10,000 children, some given cocaine and scarred by the initials RUF carved into their flesh, were pressed into fighting. [The RUF leader] kept discipline by ordering the execution of any commanders who challenged him. Officials in New York estimate that only about a quarter of the estimated 16,000 rebels under his... command have entered UN disarmament camps and handed over their weapons. And most of those have been in areas far away from the country's diamond mines. Nor is there any reason to suppose that the RUF has honoured the agreement to suspend mining of diamonds until full peace has been restored. Whether or not the UN Security Council will seek to remove [the RUF leader] from the picture entirely and attempt to impose justice on him, perhaps through a court dedicated to unearthing the crimes committed in Sierra Leone or a commission of inquiry, is unclear. The guerrillas are armed by renegade leaders of surrounding states, motivated purely by greed for diamonds... [The] RUF has, in the past two years, received at least five large plane loads of weapons from eastern Europe, channelled through Burkina Faso... The shipments were in breach of an international arms embargo.

...Time once more to whistle up the dogs of war? ...The U[N] debacle in Sierra Leone has reopened controversy over the role of "mercenary" teams – or as they prefer to be called, private military companies – in suppressing rebels in countries racked by civil war. Both Britain's Sandline International and South Africa's Executive Outcomes have operated in Sierra Leone in the past on behalf of... [the Sierra Leone] Government. Senior figures from both firms say that using private military companies could have prevented the present crisis. "...the RUF, are not soldiers; they are criminals and should be treated as such," says a former senior officer of the Executive Outcomes force that routed the rebels in 1995. "They are no match for highly trained, properly equipped soldiers whose commander has a clear mandate. The problem for the UN is that they do not have a clear mandate. You cannot sign an accord with rebels in this situation. That is why 500 soldiers have been taken hostage." [A c]olonel... of Sandline, agrees: "It's the standard problem for the UN. They have no standing military structure, no commonality of equipment, no common training or language. All the fabric that makes up a professional fighting force is missing." Writing in *Business Day* magazine, [a]South African journalist... called for Executive Outcomes to be allowed back into Sierra Leone. The Sierra Leone Government was forced by the World Bank to disperse with the firm's services at the beginning of 1997 because of the cost of the contract... In 1995, it took an Executive Outcomes force of 300 troops supported by four helicopters two months to suppress the rebels at a cost to the Sierra Leone Government of \$US1.7 million a month plus some mining concessions. After the main operation, it required just 90 soldiers to keep the lid on the rebels at a cost of \$US55,000 a day... [T]he UN has just increased the number of [peacekeeping]troops in Sierra Leone to 11,000...

Is Sierra Leone the end of UN peacekeeping? ..."So far, we have had no offers," said... [the chief UN spokesperson of his Secretary-General]'s call for the major military powers to send experienced troops to bolster the crumbling UN peacekeeping operation in Sierra Leone. [The spokesperson] should not hold his breath. The U[S] offered to airlift Bangladeshi troops to the devastated West African country, but none of its own. Britain initially sent 800 paratroopers to secure Freetown's airport and evacuate Western civilians who are threatened by the rapid advance of... [RUF] rebels. Russia promised to fly in some Indian and Jordanian soldiers earmarked for the UN force, but said nothing about sending Russian troops. "We would have liked to see some of the governments with capacity, with good armies and well-trained soldiers, to participate," said [the Secretary-General] mournfully. "But they are not running forward to contribute to this force. We have to take the forces we get." A few thousand Western ground troops, backed by all the high-tech weaponry that the US can rapidly deploy, could quickly halt [the RUF leader]'s advance on Freetown and destroy the bulk of his... forces. They are, after all, mostly drug and drink-sodden teenagers with much experience in chopping off the limbs of helpless civilians, but few real military skills. But that would involve killing lots of those teenagers. It looks bad on television when heavily armed white [adults] slaughter ragged African kids – even drug-crazed, murderous ones. It plays even worse with the Western public when some of those same Western troops die on live television, and the reality of ground war is soldiers get killed. So there will be no Western troops for Sierra Leone, even if Freetown is overrun by the RUF again as it was in January... (when around 5000 civilians were butchered in a few days). But there should be no need for Western troops anyway. The... UN troops already in the country, if properly equipped and led, should be more than a match for... ill-disciplined thugs. Some of the UN troops, like the Zambian soldiers who make up most of the 500-plus UN troops being held hostage by the rebels, are poorly equipped and a bit out of their depth in Sierra Leone. The bulk of the force, however, is made up of Indian, Nigerian and Jordanian soldiers whose military skills are not in question. Indeed, the situation in Sierra Leone was fairly much under control until a regional peacekeeping force dominated by the Nigerian Army handed over to the UN less than two weeks ago. The problem is the UN. The UN bureaucracy is capable (barely) of running a classic peacekeeping operation where forces are deployed into a static situation and a ceasefire is already being observed. It is ill-fitted to command a real-time military operation where the bullets are flying and hard decisions are needed. And it gets worse. The UN system is almost congenitally incapable of ordering troops under its command to shoot people, even if killing them is the only way to save the lives of far greater numbers. The bad guys know this, and regularly take advantage of it. It's not just Zambian troops who fall victim to this phenomenon. Remember the Western soldiers serving with the UN in Bosnia whom the Serbs seized and tied to stakes in 1995 in order to deter Nato air attacks? There is a useful contrast to be drawn between Bosnia in 1992-95, where mainly Western troops under UN command failed miserably to prevent a Serbian genocide of the Muslim population, and Kosovo... where Western forces under Nato command nipped a similar situation in the bud by using limited military force against Serbia. A similar contrast can be drawn between the brutally effective regional intervention force (Ecomog) under Nigerian leadership that routed [RUF] forces and imposed a ceasefire in Sierra Leone, and the UN force that has now replaced it. The Nigerian troops shot first, looted freely, and rarely took prisoners, but they did bring a kind of peace to the country. The UN troops are much better behaved, and the slaughter has started again. The UN hasn't actually got worse since the end of the Cold War. It's just that the tasks have got a lot harder. If the job is to stop a genocide or to halt a civil war, perhaps it is best left to regional security organisations (like Nato in Kosovo) or coalitions of the like-minded and willing (like... [Ecomog]). There would still [be]the problem of providing these alliances and coalitions with legal cover from the UN Security Council (which Nato conspicuously lacked in Kosovo)[, and t]he Western powers, in

particular, would remain reluctant to commit their ground forces to combat... But at least there would be some chance that the job gets done properly.

...The bodies of nine rebels lie piled up under reed mats after being carried from the spot where they were ambushed and shot. A Sierra Leone Government soldier raises a long stick and brings it down on the chest of one of them with a sickening thud. "We have killed the rebels here," [the SLA soldier] says triumphantly, though the wreckage of the town of Masiaka says little about victory and much about the appalling destruction of almost a decade of civil war. Masiaka is a ghost town and the road to it is a scary drive through jungle and bush deserted of everyone except gun-totting soldiers. Its streets are littered with cartridge casings... and its buildings are collapsed and burned-out shells. The town straddles a vital crossroads on the main road to the interior from the capital Freetown. After fierce battles this week it was at last firmly in Government hands. The capture of the town, still deserted by all its previous inhabitants, is a victory for the current U[N] and British strategy of fighting the rebels... The plan seems to involve providing the planning expertise and logistical back-up to allow the Sierra Leone Army and its allied militias to fight the war. It is working and a string of villages and towns have fallen to the Government... But the UN, and also Britain, have chosen strange allies in their fight against the fearsome RUF. The road to Masiaka, about 64km from Freetown, is punctuated by roadblocks [patrol]led by excitable troops, especially those from the Civilian Defence Force militia, also known as the Kamajors, which means "powerful ones" in the local Mende language. At one roadblock SLA troops are already gulping down plastic sachets of powerful gin, despite the fact that it is only 10 o'clock in the morning. At others, scruffy soldiers armed with assault rifles angrily demand gifts of cigarettes, bread or drink before allowing vehicles through. In many ways it is hard to tell the Kamajors, who are full of teenage boys, from the RUF, whose use of drugged child soldiers is notorious... The battles ahead lie on the road that leads out of Masiaka and towards the RUF stronghold of Makeni and beyond that to the diamond fields far to the east. About 4.8km beyond Masiaka, SLA and Kamajor fighters closed on an important bridge held by the RUF. However, it will take weeks and maybe even months for Sierra Leone's conflict to be settled on the ground, which is precisely what the UN mission to the country was meant to avoid.

...Sierra Leonean rebels appear to have released the last of more than 500 U[N] peacekeepers they took hostage almost four weeks ago when a peace accord foundered. "We are optimistic that the release of the hostages signals a positive change of direction by the R[UF] in coming back to seek a peaceful settlement," said... the UN spokes[person] in Freetown. The last group of 85 hostages – all Zambian apart from a Gambian observer with a broken leg – returned to Freetown from the Liberian capital, Monrovia, yesterday. A further group of 223 Indian peacekeepers remain surrounded by rebels in two eastern towns... But what happened at a mission run by the Catholic charity Caritas in the town of Makani in the past few days is an ominous sign that the rebels are returning to a full-scale drive of forcible child recruitment... The Makani mission had in recent months become the home of around 240 former children at arms and girls used as sex slaves, all from 16 to 18. Some had been sent by RUF commanders after the country's fledgling peace accord... Almost all had been weaned from the drugs and alcohol which had fuelled their murderous rampage with the rebels. The mood of the RUF in Makani began to turn ugly as the war reignited and their leader... was captured. Last week the rebels suddenly turned up at the mission and demanded back its former soldiers. None wanted to return to the life spent meting out and watching death and maiming. Some of them tried to fight their former masters with kerosene bombs and stones. It was an unequal fight quickly over, and the rebels departed with 54 chosen children crying and pleading to be let go. The next few days were spent in fear that the rebels would come for the others. The staff and the older children decided the only option was to attempt to flee... They walked for 17km through the bush, the staff and the older children hushing the crying little ones as they dodged RUF patrols. But [at] the first village they went into, Mamudu, their luck ran out when they came upon a rebel unit. The children and the staff were lined up and the staff thought shooting would begin next. The RUF did not fire but they took all the money and food, and some of the clothes. When they were told the younger children would not survive without food and water, the rebels said that would save bullets... [T]he rebels... wanted to take the boys away, but in the end decided on only one, Kawutu... The rest of the party continued towards Freetown... Yesterday, after a three-day trek of 86km... 83 children and 27 staff from the mission arrived at another Caritas centre at Mahera, near the capital... The children's injuries were treated and they wolfed down 122 tins of rice and beans. They also discovered that Kawutu had escaped and made his own way there, following their trail.

...Fresh reports of murders, rapes and amputations by the rebel forces in Sierra Leone have emerged as British aid workers in Freetown go on red alert for fear of a rebel hit squad seeking "soft" targets. The British Department for International Development warned aid agencies to get out. One aid agency source said the department had received "credible intelligence" that a rebel assassination squad... may be in Freetown. Christian Aid has withdrawn its team while the Red Cross said it and other agencies were reviewing security. [Britain's] Foreign Office warned Britons to stay out of the country. The nature of the intelligence is unclear, but the threat is believed to have come after [Sierra Leone's] President... who is backed by Britain's military presence, announced that [the captured] RUF leader... would soon stand trial. The security fears follow the RUF's killing of two reporters last week. Outside the capital, fresh evidence of atrocities by the RUF have been reported by Human Rights Watch... A team from Human Rights Watch last week interviewed refugees from... Lungi who fled to the capital. One victim of the RUF was a 10-year-old girl who had been captured outside a village with her parents and 10 brothers and sisters... The... tiny girl[, who]... was flogged, then raped... said... [t]he rebels grabbed her sister... aged 20, the mother of a young baby. "They cut off both her hands and a foot," said the girl. "Then [my sister] died..." When Government troops attacked the rebels, [the girl] made her escape... [The 10-year-old] walked through bush roads to evade danger... One morning [the 10-year-old] saw a young girl and a [guy] lying by the side of the road. The girl's hands had been cut off, as had the [guy]'s right foot. Both were still alive, but barely breathing. These are the first reports of amputations that Human Rights Watch has heard for a year... The group's spokes[person]... said: "What we are most concerned about is the possibility of another Kosovo or E[T] happening behind RUF lines..."

...An Indonesian general is warning of the possible consequences of legislators' plans to question senior officers over the military's human rights abuses. "Who would not be offended if their father, or their leader, is treated like that...", [the general]... who heads the Kostrad Army elite force, told the *Media Indonesia* daily... [The] Lieutenant General... said plans by Parliament to summon several top generals over alleged rights abuses may... lead... soldiers... to act "wantonly." "If that happens, then pity the innocent people." ...the criticism of the generals was mostly the doing of "a few people who always make statements and corner TNI..." and had already exceeded "the limits of fairness." Several senior Army officers have been indirectly accused by the state-backed Commission of Human Rights Abuses in E[T] of orchestrating and supporting the violence in the territory that followed the vote for independence there on August 30. The commission plans to question [the] former armed forces commander[, who]... has denied the charges... [His] special team of lawyers plan to gather their own data and evidence in West Timor, and E[T] if possible, to counter the allegations. A member of the Indonesian commission... said in Dili that the military and police collected, dumped and buried bodies from massacres. They also cleaned the crime scenes to hide evidence... [L]ists... found of pro-independence people targeted for death... had been... termed "indications of genocide policy." And in Geneva, a U[N] commission of inquiry into human rights abuses has evidence that Indonesian troops and militia groups were involved in acts of terror in E[T]. "Witnesses gave evidence that intimidation and terror was systematically used... They also spoke of... sexual abuse and rape." These attacks extended to UN staff who went into E[T] after the Indonesian forces had withdrawn... The team were sent to E[T]... by the UN High Commissioner for Human Rights... Members of the commission – from Costa Rica, Nigeria, India, Papua New Guinea and Germany – urged that investigations into atrocities continue, to bring those responsible to justice. On the basis of their report, [the] UN Secretary-General... will then have to decide whether to recommend the creation of an international war crimes tribunal for E[T].

...[the] American ambassador... has told Indonesia's military to bring those behind the violence in E[T] to trial. Suspects could face an international tribunal if Indonesia did not start proceedings, [the ambassador] said... Meanwhile... the... UN High Commission for Refugees... said

last night it was shocked by the growing number of deaths due to disease... in West Timor refugee camps... “More than 200 people, mostly children... have died of various illnesses over the last week in the Indonesian-run camps for E[Tese,” a UNHCR spokesperson] said. The UNHCR has limited access to the camps but is attempting to send in disease control experts to report on the deaths. Sanitary conditions at the camps have deteriorated due to flooding from the monsoon rains, which have led to growing problems of disease and hygiene. An estimated 100,000 E[T]ese refugees remain in camps in West Timor. [The UNHCR spokesperson also] said militia activity was a serious worry.

...Villagers in E[T]’s mountainous central southwest have again fled to the forest afraid for their lives, while others have organised vigilante groups to defend themselves against possible militia attack. The exodus to the mountains of 1200 people from the... village of Maununo, roughly 40km from the West Timor border, is the first time people have felt compelled to leave their homes since international security forces arrived in... [ET. T]he militia killed 12 people in Maununo in one of the worst single massacres recorded in the central southwestern region. The town’s entire population is now camped in the open air along a river not far from the village. “I will not return until the peacekeeping force send some soldiers to live in the town,” said... a mother of six, who is camped in the same patch of dirt... her family inhabited for a month... before the arrival of peacekeepers... Portuguese peacekeepers based in Ainaro, 10km north of the village, were reluctant to base soldiers in the village...

Indonesia’s reformist President... yesterday apologised for Jakarta’s often harsh 24-year occupation of E[T], but his landmark visit was marred by gunshots and angry protests. U[N] peacekeepers from Portugal fired two warning shots to calm a waiting crowd... of... 5000... as [the President] drove into Dili from the city’s Komoro Airport. [The President] closed his brief visit by laying wreaths at Dili’s Santa Cruz cemetery, the site of an infamous 1991 massacre by Indonesian troops... [-] when... up to 250 people... on a funeral procession... died... [(I)Indonesian authorities put the number at more than 50] [-] ...and at a neighbouring cemetery where Indonesian soldiers who died in a long guerrilla war are buried... It was the first official visit by an Indonesian leader since Jakarta gave up its claim to the territory... Just after declaring [it] felt “at home” in Dili soon after his arrival, [the President] was forced to shelter in the governor’s palace, which now serves as offices for the interim UN administration. Around 300 protesters noisily demanded Indonesia reveal the truth about the deaths or disappearances of resistance fighters during its 24-year occupation.

...The A[US]n Defence Force denied yesterday that a specialist team had been sent to E[T] to curb the growing number of illegal weapons discharges by A[US]n peacekeeping troops. A report in yesterday’s *Sunday Telegraph* said one senior Interfet officer had narrowly missed an enlisted [soldier] when his weapon fired accidentally. The paper said... experts had been brought in after more than 65 cases of unauthorised firing by Interfet troops. The problems were reportedly related to cutbacks in the length of basic infantry training from 10 to six weeks and budget cuts which reduced the practice time for troops with the standard issue 5.56mm Steyr assault rifle. Defence authorities were said to be concerned about the possibility that troops may end up seriously wounding or even killing one of their own number. In A[US]’s Somalia deployment, Lance Corporal Shannon McAlinney was shot and killed after an unauthorised discharge. But in... Dili, [an Interfet spokesperson]... said the latest reports were inaccurate. “There’s no expert team, never has been...” ...Fines for troops found to have unlawfully fired their weapons include two weeks’ loss of pay and a black mark on their records.

...A hail of bullets over... [the squadron leader]’s head didn’t stop him helping a shot colleague on to a helicopter in an emergency evacuation at an E[T] village. The West Harbour [resident]’s actions in the week leading up to the independence referendum in E[T]... earned him... the N[Z] Gallantry Decoration for acts of exceptional gallantry in situations of danger. [But the squadron leader says it] didn’t think of the danger when protecting frightened E[T]ese and his own colleagues from militia. “...although it’s scary, it’s a buzz at the same time.” ...now [stationed back at]... Whenuapai air base[, the squadron leader says it]... empathises... with W[W]II veterans who didn’t know how to communicate with people when they arrived home. “I didn’t have to do any one on one combat like those guys but it’s a different reality.” • ...A donation of 3000 pairs of shoes to E[T] has been stopped after most were found to be either high heels or white wedding shoes – not the most appropriate attire in the war-ravaged state. Sandals and jandals are the footwear of choice in E[T] since many roads and footpaths are still being cleared after the violence which accompanied independence from Indonesia. The shoes were to be loaded in the Royal N[Z] Navy frigate Endeavour, but the aid agency World Vision found most of them would be impractical... [The] director of communications at World Vision... said the only possible place where high heels could be of use in the future in Timor was in the capital, Dili... [The director also] said the supplier who donated the shoes wanted to remain anonymous[, then added that]... the shoes were not useless and would be sent to other countries... [such as] India or Cambodia. Th[e]... Lieutenant-Commander... from the Endeavour, said: “I think they realised that last season’s shoes with high heels were not the most entirely appropriate footwear for Timor.” ...The Endeavour sails for E[T] on Wednesday... laden with diesel, aviation fuel, clothes, water pumps and computers.

...Army medics battled in vain to save a N[Z] soldier who was critically injured during a road accident in E[T. His]... Unimog utility truck rolled down a 6m bank on Tuesday... Warrant Officer Tony Walser... had been transporting a load of gravel and was following another truck when the road, believed to have been weakened by monsoon rains, collapsed under his vehicle. The accident happened 8km from the border with West Timor... An Army inquiry is under way... Walser had been in the Army for 16 years and was with the second wave of N[Z] soldiers to be deployed in E[T]... Walser’s body is in Darwin and will be flown to N[Z] once formalities are completed. The 37-year-old father of three is expected to be given full military honours, although the decision about the style of funeral rests with his partner... Last night [the P]M... offered her condolences to his family over the tragedy. “I know the thoughts of every parliamentarian will be with his family. They can be proud of hi[m]...” ...Walser was the first N[Z] soldier to die on operational duty in 28 years. The last was Private Kenneth Horomai Harding, who was killed in Vietnam in 1971.

...As mourners filed past Leonard Manning’s grave, many paused to let fall a poppy – or a tear. Private Leonard William Manning, aged 24, was laid to rest on Saturday at Rangiriri, near his hometown of Te Kauwhata, after dying in combat a week ago today... the first N[Z] soldier killed in action [since 1971]. About 800 mourners had earlier attended his funeral service at his old school, Te Kauwhata College, to comfort his grieving family. They included [the P]M... Army Chief of Staff... and [the AUS]n High Commissioner... During his leave [Manning] planned to visit the A[US]n Army recruiting office... [because] the \$27,000... earned in the N[Z] Army would rise to \$41,000 with the A[US]ns, and all money earned in E[T] would be fax free. The P[M], visibly shaken at the beginning of her eulogy, had stern words for the killers and the Indonesian Government. “What we all share is absolute repugnance at what happened to Private Manning. NZ has conveyed that strong message to Indonesia. We want the militias disbanded by Indonesia and we want Private Manning’s murderers tracked down and brought to justice.” ...Among the most moving tributes was one in uncertain English from the schoolchildren of a small E[T]ese village, Bobonaro. “We were greatly distressed hearing of happened. We wish to express our greatest sympathy.” Private Manning’s 22-year-old sister... said during the service: “There are no words on this Earth to do you justice, Leonard. You were always the best you could be, and I am so proud of you – I always have been, you know that.” Private Manning’s mother... read out her son’s last letter home.

...WHEN the letter arrived, it brought more tears from a family who thought they were all cried out. “Dear Mum and Dad,” the note read. “Hope this letter finds you well and you’re not missing me too much.” The letter was written by Private Leonard William Manning 11 days before his murdered and mutilated body was found in E[T]’s rugged mountains. It reached the family home three days ago. Private Manning[, who]... was shot twice by pro-Indonesian militia... was laid to rest with full military honours in a service attended by... a host of... dignitaries. His body was taken to the Rangiriri cemetery on a gun carriage escorted by three Maori warriors and an honour guard with weapons reversed. Three volleys were fired – the ultimate mark of respect for a fallen soldier – and, as the mournful notes of the Last Post hung in the still air, Pte Manning was

lowered into the ground. As Pte Manning's comrades farewelled him with a haka, [his parents]... were presented with memories of an army career that meant so much to him. They received the N[Z] flag that draped his coffin, his U[N] medal for service in E[T] and the pale blue U[N] flag.

...On November 4, 1918, The Great War had a week to run when the then Lieutenant Curly Blyth and the New Zealand Rifle Brigade were ordered to rout the German soldiers occupying the small French town of Le Quesnoy on the border with Belgium. With artillery support the N[Z]ers could have achieved the mission with little or no loss of life. But the centuries-old ramparts surrounding the town were too precious and historically significant to destroy, the villagers told the Kiwi soldiers. Would they please not use their big guns. The N[Z]ers obliged, fixing their long bayonets to their .303 Lee Enfield rifles and going over the top, eventually capturing the town after fierce hand-to-hand fighting. The cost to the N[Z]ers was high – 200 killed or wounded – but the victorious N[Z]ers were embraced by the villagers with a warmth that has not faded in 8[decade]s. Four years ago Blyth received France's highest honour, the Legion of Honour, not only for his role in liberating Le Quesnoy, but also for his tireless work in keeping the bond between Le Quesnoy and N[Z] alive. In Le Quesnoy, the N[Z] flag which flies every day at the Town Hall was at half mast last week... Blyth's indomitable and irrepressible spirit was with him until the day [the]... Lieutenant-Colonel... died... A stroke robbed Blyth of his speech several years ago but his wit and awareness were never dulled... His death last week brought a tribute from [NZ's P]M... who said it was nearly the end of an era with only one W[W]I survivor remaining. Blyth will be farewelled with full military honours at 2pm tomorrow at St Mary's Church in Holy Trinity Cathedral in Parnell, Auckland, in a service [Blyth] organised several years ago... A volley of shots will be fired from the honour guard as Blyth's casket is carried from the cathedral and placed on a 25-pound gun carriage... The last time the gun carriage was used was for the full military funeral of Private Leonard Manning, the N[Z] soldier shot dead by militia in East Timor in July...

In a brazen show of force yesterday, about 1000 militia... gathered for the funeral of one of their commanders. The unexplained murder on Tuesday of Olivio Mendosa Moruk is said to have triggered Wednesday's rampage against... a refugee camp in West Timor... [when] 20 people... were... massacred... [There is] no information so far about the [number of] wounded... As well as the deaths, 69 houses were reportedly destroyed and about 100 cattle slaughtered... near the town of Betun, just south of Atambua where three U[N] relief workers were brutally murdered... Betan is a stronghold for the militia... who razed E[T] after it voted... to end Indonesia's military rule and who fear returning to their homeland, now under UN rule. Although details of ongoing violence were sketchy, it appears law and order has broken down in the... border... region...

A DOZEN air crew from Hobsonville are recovering after an heroic rescue mission to West Timor. Three Iroquois helicopters from 3 Squadron based in E[T] lifted 43 U[N] workers to safety after four of their colleagues were murdered by militia. About 50 west Auckland air force staff took part in the rescue, [which included a]... helicopter... from A[US]... After landing at Atambua, 5 kilometres inside West Timor... soldiers patrolled the landing zone while the helicopters carried the UN workers back across the border in two trips... [N]o air force crew were hurt in the rescue... ■ [NZ's]... Defence Minister... has told Parliament... [that] [l]egislation to reverse a decline in the number of territorial soldiers will be introduced soon... A[n A]ct MP... claimed yesterday that the territorial service was at the point of collapse, after a steady decline in the number of people participating in it. Statistics... showed that in the past 10 years the number of territorials had fallen from 5332 to 2467. Army territorials were down from 4615... to 1920 at the beginning of this year... Territorials were praised by the Government for their contribution to the E[T] peacekeeping force. A survey of the 108 territorials who went to E[T] as part of NZBatt 3 found half had resigned from civilian jobs because they could not get paid or unpaid leave. There was another embarrassment for the Army when some territorials returning home from E[T] were sent letters saying they had been overpaid... and... threatened [the] soldiers with court action if amounts of up to \$4700 were not repaid... The Army quickly apologised...

KIWI soldiers in E[T] are set to get a pay rise after their brave rescue of U[N] aid workers from rampaging militia... World leaders, including [the US] president... praised the courage of the Kiwi peacekeepers... But the Kiwi troops are the second-lowest paid of the multi-national force in E[T], with a daily danger allowance of \$96 – a third of the A[US]n allowance. Disgruntled squaddies are looking to quit and join the A[US]ns. "Something has to be done," [NZ's PM] told *Sunday News* from New York where [it] has been at a UN security council meeting... Braving hundreds of gun-toting, machete-wielding militia – who had already butchered three UN workers – the Kiwi soldiers flew into the killing zone in three Iroquois helicopters and rescued 43 UN workers. Eight... soldiers and two medics guarded other UN staff until the choppers returned to airlift them to safety. [The PM] wants the N[Z] peacekeepers to get more money as an acknowledgment of their courage and as a tribute to Kiwi private Leonard Manning... "One of many sad things at the funeral of Leonard Manning was his mother reading his last letter that said [Leonard] was thinking of going to the A[US]ns because they get more money. If a young [NZer] is putting a lot on the line, including his life, for quite a low salary then we have to look at it." Even Pakistani soldiers get more than the Kiwis. Brazilian troops get twice as much a day and only the Canadians get less.

...Slaughter on a distant patch of soil, not for the first time, has trampled on the best-laid plans of [the UN Secretary-General, who]... had not meant to open the [UN] Summit with talk of tragedy. But [coming so soon] after the murder of three UN staff workers in West Timor, a rosy evocation of peace and light for [hu]mankind would have been tasteless. It is hard for any Secretary-General not to take loss of life in the UN family personally. The emotion felt by [the Secretary-General] was visible in his face as [it] stood at the podium of the General Assembly and asked a solemn favour of a hall filled with the world's most powerful people – to rise with him and to observe a minute of silence. Those 60 seconds of quiet among so querulous a group was an exceptional tribute. The prime ministers and the presidents and other sundry leaders all bowed their heads together. The deaths did more than just puncture the mood... [T]he British P[M] was one of those to make explicit what many in the corridors were already observing – that what happened on Indonesian territory was one more vivid reminder of the inadequacy of the current arrangements for UN peacekeeping. Yesterday, world leaders on the Security Council voted to overhaul peacekeeping operations to provide better trained troops that would respond faster to crises... Britain has already offered to establish a training school... Neither [the British PM] nor any of the other leaders needed the latest atrocity to drive home the need for peacekeeping improvements. Peacekeeping activities in the past weeks, months and years have supplied [the Secretary-General] and his organisation with enough humiliation and catastrophe already. The worst has been in Sierra Leone, where 500 UN blue helmets were taken hostage... and where even now six British soldiers are being held in captivity... One of the blackest days came in Rwanda in 1994, when seven Belgian soldiers serving with the UN died trying to protect the country's P[M]. Reform is always a sluggish business at the UN but the will to make peacekeeping work better has gradually grown... "Increasingly, the U[N] has been called into situations where brave people seek reconciliation but where the enemies seek to undermine it," [the US President] said, citing UN peacekeeping operations in E[T] and Sierra Leone. "But in both cases, the UN did not have the tools to finish the job. We must provide those tools..." ...[the US President], however, has always found it easier to offer encouragement to the UN – and there is no reason to doubt his personal commitment to the UN ideal – than to deliver any material help, thanks to hostility to the body among Republicans on Capitol Hill. No delegates at the U[N] can listen to a US President without recalling the... back payments... that Washington owes... [□ NZ] peacekeepers in E[T] are being armed with heavy duty machineguns... Kiwi infantry have been carrying Steyr 5.56mm rifles and machineguns. But they can't penetrate the thick jungle so more patrols are being given 7.62mm guns – capable of firing through small trees killing anyone hiding behind... The soldiers are being given the bigger guns after the death of private Leonard Manning[, who]... was carrying the only 5.56mm machinegun in his Bravo Company patrol – who were out-gunned by the militia... "In the jungle you want as many big ass guns as possible. It is a sad lesson to learn from the death of private Manning,"...

The Kiwis have also changed procedures. Rather than going into the jungle to track down the enemy they are setting up posts and letting the militia come to them.

...A U[N] investigating team has found that N[Z] peacekeepers were justified in killing an Indonesian soldier last month. The finding came just hours after [NZ's P]M... dismissed new concerns raised by the Indonesians about the shooting as "different levels of the Indonesian system speaking at different places". Initially, the local Indonesian commander was reported as accepting responsibility for the gunfight, but last week the Indonesian Government issued statements demanding investigations into the "unprovoked attack"... [NZ's] Foreign Affairs Minister... said Indonesia had made a "formal and strong" protest to Untaet (the transitional authority in E[T]) calling for an investigation... The... 21-year-old sergeant, was shot dead... in a clash with about 30 N[Z] troops. The soldier, out of uniform, fired at least two shots at the peacekeepers from the Indonesian side of the unmarked border before they returned fire[– hitting him with bullets '22 times'. NZ]... had indicated its regret but remained confident the N[Z] troops had acted in accordance with the UN's rules of engagement. There had been no indication the incident would upset our relationship with Indonesia's new Administration[. The PM]... said yesterday that the issue was not between Indonesia and N[Z], but a matter for discussion between Indonesia and the UN... [Incidentally, another NZ] soldier has died in E[T]... Private Dean Russell Johnston, a 20-year-old movements operator, was found dead near the U[N] Obrigado Barracks in Dili at 3.45am yesterday. The U[N] military police are investigating, but do not believe [Dean] died as a result of military action or that anyone else was involved... Johnston was not on leave and it was unknown when [Dean] was last seen... N[Z] Joint forces would not elaborate on the circumstances surrounding his death... [which] brings the number of N[Z] service people] deaths in E[T] to five since troops were committed. [The other four are:]■... Warrant Officer Tony Michael Walser... ■... Staff Sergeant William Edward White[– who] died when the Unimog truck [it] was in plunged down a 30m bluff in Suai. ■... Private Boyd Reagan Henare Atkins, a 19-year-old infantry soldier,[who] died in a swimming accident while at a military recreation centre near Dili... ■... Private Leonard Manning...

THE militia[ember] suspected of murdering... Leonard Manning in E[T] has been found dead. Jacobus Bere was the leader of the Laksaur militia group. U[N] officials suspect Jacobus] led the ambush against Manning's Bravo Company... It is believed [Jacobus] was slain by [a]rival militia... But UN troops are still hunting about 10 others suspected of being involved in Manning's killing. They are thought to have fled to West Timor. Military sources told *Sunday News* Kiwi troops wanted revenge and would attack the suspected militia if they were found in E[T]... The UN is conducting a homicide investigation into Manning's death. "If we find the people responsible for the killing of the N[Z]er then we have the right to arrest them and bring them to court for justice," [a UN spokesperson] said. The N[Z] defence force report into the killing is due in about two weeks... [I]t is expected to focus on how Bravo Company came to be cut off from support...

No saving Private Manning... Private Leonard Manning's comrades tried but were unable to recover him immediately after [the Kiwi] was shot by E[T]ese militia... an Army Court of Inquiry has found... The report, made public yesterday after Private Manning's battalion returned to N[Z], says there was no opportunity for the out-numbered patrol to recover his body, because of the dominating position of the threat group and the lack of cover. "One of the patrol members attempted to make contact with Private Manning, but because of the way [Leonard] was lying and his lack of response, it was believed [Leonard] was dead." The soldier was able to rejoin the group, which had withdrawn after the initial militia volley. The six-m[ember] patrol had been tracking the group of what is now believed to be nine armed militia since the previous afternoon. It had seen the group the night before but the commanding officer was reluctant to follow at that stage, uncertain of its size. The soldiers set up an observation post, and during the night heard voices less than 100m away. A trip wire was also set off... The next morning the patrol came into contact with the group, which "held the upper hand tactically..." A militia sentry fired at the soldiers. "The initial rounds were directed at Private Manning, who was fatally hit by one of these shots." His body was recovered five hours later, with weapons and other kit missing. His throat had been cut and his ears removed after [the NZer] died, the report confirmed. It says the patrol members believed the militia sentry had opened fire because [the sentry] felt threatened by the proximity of the soldiers. The Army inquiry has found that nothing could have been done to prevent Private Manning's death. The Army has refused to make public complete details of the inquiry... The summary of the report does not mention that the patrol's Steyr rifles jammed during the firefight, as a group of soldiers in E[T] claimed last month in an anonymous e-mail. But [the]Defence Minister... said the claim was unfounded and the rifles did not jam. Meanwhile, forensic investigators are looking for the remains of five Western journalists, including a N[Z]er, murdered in E[T]... during Indonesia's occupation. [A]Darwin police investigator... is leading a team of four in the painstaking task of looking for proof that the five... died in the border town of Balibo while trying to cover the Indonesian attack...

U[N] investigators have sought international warrants to arrest three [people] – including a former Indonesian Government minister – for the slaying of five journalists... at Balibo on October 16, 1975... The international investigators in E[T] believe they have gathered enough evidence... to prosecute the three... the *Sydney Morning Herald* reported... The source said investigators had asked the UN Prosecutor-General in Dili... to organise the arrest of [the]former cabinet minister... another Indonesian... and an E[T]ese citizen]... At the time of the killings, [the minister] was allegedly an Indonesian Army captain commanding an elite unit called Team Susi involved in the covert invasion of what was then Portuguese Timor. [The other two suspects] were members of the unit... It was not immediately clear where the [suspects] are now... A[U]S]n investigators and the Indonesian Government have said the[journalists] were caught in a firefight between Indonesian troops and E[T]ese defenders. But former resistance fighters testified that the journalists were put to death... Investigators recommend they be charged with crimes against humanity under the 1946 Geneva Convention. If convicted, they face a maximum sentence of life imprisonment... [In related news,] Cambodia laid charges against[a] Khmer Rouge chief... yesterday, making him the first member of the murderous leftist group set to answer directly for the deaths of almost two million of his country[people]. Thought to be one of the Khmer Rouge's most brutal cadres, the [guy] they called "The Butcher" will be charged under a 1991 law banning the radical group, a military prosecutor said... The law stipulates up to life in prison for members of the Khmer Rouge, whose 1970s "killing fields" regime remains one of the century's most atrocious legacies... The one-legged... 72[-year-old] was arrested on northern Cambodia's border with Thailand on Saturday and taken to Phnom Penh, where [The Butcher] has been kept under heavy military guard... Diplomats and regional experts said any domestic trial would undercut any attempt to convene an international tribunal... U[N] legal experts have recommended that an international tribunal be set up to try 20 to 30 top Khmer Rouge members for crimes against humanity and genocide...

In a steady voice that echoed around the gilt-and-marble courtroom, a skinny young [guy] from Rwanda recounted the day his father, mother, younger brother and baby sister were murdered. "They lined us up and told my mother we had to die because we were Tutsis and had no right to live..." [the 21-year-old] told the jury, the unfamiliar syllables of his Kinyarwanda language relayed in French by a translator... [The 21-year-old] is one of 60 witnesses flown from Rwanda to Brussels for the trial of the factory manager and neighbour accused of ordering the murder of his family. [The manager], two Catholic nuns and a physics professor stand accused of complicity in the 1994 genocide that killed at least half a million people – mostly Tutsis, along with some moderate Hutus. They have pleaded not guilty. Like UN tribunals in the Hague, the Netherlands and Tanzania, the trial in Chamber 34 of Brussels' Palace of Justice is breaking new ground. A hairdresser, truck driver and 22 other Belgians are the first civilian jury to judge people accused of war crimes in another country. "This is a really important step forward for the principle that justice has no borders," said... Human Rights Watch. "It shows every country has the right and the moral duty to try the worst crimes." The trial began... under a 1993 law that allows Belgian courts to try alleged violations of the Geneva Convention on war crimes. The four are among thousands of Hutus who sought refuge in Belgium, Rwanda's former colonial master, after Tutsi-led rebels gained control of Rwanda... After fleeing Rwanda,

the nuns found sanctuary in a monastery in southern Belgium. [The factory manager] lives in Brussels. [The professor] has been working at a university south of the capital... Trying them is a colossal task. [The i]nvestigating magistrate... and lawyers are sifting through the minutiae of mass murder to determine whether the defendants were among members of Rwanda's majority Hutu community who joined in killing their Tutsi neighbours in the 13-week rampage... The nuns... are alleged to have helped the Hutus who massacred thousands of Tutsis seeking refuge in their convent in the southern Rwandan town of Sovu... [The professor] is accused of whipping up anti-Tutsi sentiment and drawing up lists of families for death squads[, and] is also alleged to have taken part in the slaughter personally. [The factory manager] is charged with helping plan and execute the genocide to head off a deal between the Hutu Government and Tutsi rebels. His match factory in Butare was allegedly a hotbed of militia activity.

...Three Bosnian Serbs yesterday became the first [people] convicted of using mass rape and enslavement as a weapon of terror, as they were found guilty of torturing or assaulting girls as young as 12. The historic ruling in the The Hague came at the end of one of the most harrowing cases to be heard by the war crimes tribunal, the first in which sexual assault was prosecuted as a crime against humanity... The... commander of a special reconnaissance unit of the Bosnian Serb Army, was sentenced to 28 years, while... one of the subcommanders of the paramilitary police, was given 20 years. The third defendant... another subcommander of the military police and a former waiter, will serve 12 years in jail... The three... were key figures in a vicious series of events which followed the capture of the town of Foca, southeast of Sarajevo, in April 1992... The length of the sentences delivered yesterday reflected the sheer brutality of the attacks. Victims were often threatened and taunted, told they would become pregnant with Serb babies, that their limbs would be cut, that the[Muslims] would be taken to church to be baptised... [The commander] not only abused [gals] personally but organised their transfer to the "rape camps." ...The judge said the participation of a military commander in this "nightmarish scheme" made it "even more repugnant." By day, girls held captive were enslaved and forced to perform household chores. By night they were subjected to systematic sexual abuse. One of those was a 12-year-old who was raped repeatedly over several weeks and... was later sold by [the paramilitary subcommander] for 200 marks (\$216) and... remains missing. In sentencing [him, the j]udge... said his treatment of the girl illustrated his "morally depraved and corrupt character." His captive was, the judge added, "a helpless little child for whom you showed absolutely no compassion whatsoever... You sold her like an object..." The judge also noted how [the other subcommander] had raped a girl of 15 – the same age as his own daughter – after threatening to kill her mother. The defence did not deny the occurrence of widespread rapes in Foca but argued that the [victims] who testified had been willing partners... After the verdict... the lead prosecutor, said that justice had been done and commended "the bravery of the victims who came forward to tell their stories." However, many of the perpetrators have never faced justice. The indictment has references to rapes by "unidentified" soldiers and not all charged were brought to The Hague. Of the eight [Bosnian Serbs] originally accused in the Foca rape trial, one was killed when troops tried to arrest him and another blew himself up. Three others remain at large.

...A U[N] war crimes court has handed down a 40-year sentence, its most severe yet, to a Bosnian Serb who styled himself the Serb Adolf Hitler and enthusiastically killed and tortured Muslims and Croats. "The crimes that you have committed shock the conscience of [humankind,] the [the] presiding judge... told... [the] farm mechanic... The International Criminal Tribunal for former Yugoslavia convicted... [the] 31-year-old... on 31 counts of torture, murder and plunder at the Serb-run Luka prison camp near the northern Bosnian town of Brcko in May 1992. But it acquitted him of the gravest charge of genocide because the prosecution had failed to prove the intent to wipe out an entire ethnic or religious group.

...The skeletal torsos and lifeless expressions of [guys] lined up at an iron-ore mine turned into a Bosnian prison camp were chillingly reminiscent of the emaciated Jewish survivors photographed at the close of... W[W2]. When war correspondents discovered starving Bosnians at Omarska camp in 1992, the news footage jolted the world's conscience and prompted calls for intervention to stop Balkan "ethnic cleansing." Yesterday, the images were shown to judges at the Yugoslav war crimes tribunal, where Serb police[officers] who allegedly ran the camp went on trial in a UN court set up in The Hague after the global outcry to punish the perpetrators of Balkan atrocities. It is the... tribunal's first case to deal directly with what prosecutors call a system of concentration camps within a deliberate strategy to rid northern Bosnia of non-Serbs. Three defendants... are accused of running Omarska as commandants and shift commanders. The [fourth, a] taxi driver... is accused of torturing and murdering prisoners. If found guilty, the[y]... face life imprisonment in a European jail. All four have pleaded not guilty... Defence lawyers are expected to claim their clients are scapegoats for the tribunal's inability to apprehend the architects of that strategy. Despite repeated calls by the tribunal for the arrest of the most senior figures on the Serb side – [the]... former Bosnian Serb leader[, his]... military chief... and the... Yugoslav President... – [not to mention America's offer to pay a multi-million-dollar reward for the latter's conviction (the US has also given his 'election opponents \$US77 million'), the three] remain free.

...a murderous despot... has successfully clung to power for more than a decade. Now, that long reign may be coming to an end. [The]Yugoslav President... is playing for time, denying outright victory to the Opposition after Monday's election. The Opposition launches a five-day campaign of strikes and civil disobedience today, with the threat of more to come, hoping to force the President to quit. When [the President] does go, peacefully or otherwise, [it]... looks set to remain an enigma. Certainly, nobody can doubt that [the President] is marked by his family history: an adored uncle shot himself; his father, a defrocked priest and then Communist Party member, was the next to commit suicide; his mother hanged herself from a light fitting. With such a heritage, a balanced and stable character would be little short of miraculous. For many years, [it] did nothing that would mark him out as unusual, let alone a murderous despot. The real turning point – perhaps the moment at which the disintegration of Yugoslavia itself became inevitable – was in 1987, when, as Serb Communist Party leader, [it] visited the Albanian-majority province of Kosovo to deal with protesting Serbs. Instead of seeking to calm emotions, [it] suddenly decided to do the opposite. In a phrase that became famous, [it] told the protesters: "Nobody shall dare to beat you any more." Overnight, [the Communist Party leader] became a popular hero. For the next two years, [it] was adored. Serbs held his image high, and chanted his name. In 1989, on the 600th anniversary of the Battle of Kosovo Field – which Serbs see as a defining point in their history – [it] made a triumphantly nationalist speech, even while representatives of other Yugoslav republics looked on aghast. By 1990, disillusion had begun to set in, not least because of the disastrous state of the economy. There were huge demonstrations in March 1991, which were crushed by riot police and tanks. From then onwards, the pattern became dismally familiar. Unpopularity, followed by a war, which brought a temporary revival in [hi]s fortunes; then comes resentment and disillusion; then another war. A few months after the 1991 demonstrations, [it] unleashed a war against Slovenia and then Croatia. Then it was Bosnia's turn – for three bloody years... Theoretically, [the Yugoslav President] was uninvolved. In reality, [the]... leader of the Bosnian Serbs, would have got nowhere without [the Yugoslav President] – a point which the West, eager to have [the Yugoslav President] "onside," consistently failed to understand. [The Yugoslav President] would, one senses, be unfazed by any lie-detector machine. When I had a long meeting with him late one evening in 1992 – as I guiltily sipped the large whisky that [the President] insistently pressed upon me – [it] cheerfully denied the undeniable. [It] declared his enthusiasm for the idea that war criminals might be brought to trial – and looked at me in astonishment at the suggestion that [the President] himself, already responsible for so much bloodshed, might be included on such a list. [The President]'s family is a powerful part of his story. Like Ferdinand Marcos in the Philippines or Nicolae Ceausescu in Romanian, the role of [hi]s... Marxist sociologist... wife... is a key element in the equation. The couple are clearly close; equally, few doubt that if it ever comes to a [husband vs wife] difference of opinion, it is [the wife] who gets her way. Like Ceausescu, [the Yugoslav President] has a playboy son for whom no rules exist – profitable smuggling rackets of various kinds are generally reckoned to be [the son]'s main line of business. Part of [the President]'s strength has been his unpredictability. [It] has also succeeded in making power a portable commodity... When... Communist Party leader, the presidency was an empty vessel. When [it] became Serb President, the Yugoslav presidency was irrelevant. Now that [it] is Yugoslav President, that is all that matters. And nobody knows what comes next. It is merely a question of how angry the protesters will be,

cheated of what they believe to be rightfully theirs. It is also unclear how much violence [the President] is still capable of unleashing in his determination to cling to power. Any democratic Government would feel obliged to deliver [him] to [the war crimes tribunal] in The Hague. [The President] knows that, everybody knows that. The chances for compromise seem few; and the likelihood of a violent ending seems high.

...West gambling on nationalist... [The guy] the West is relying on to break... [the President]'s hold in Yugoslavia, is a fervent Serb nationalist who blames Nato as much as the regime for Serbia's present woes. According to his own statements – although they may have been tailored to a domestic audience – [if it becomes President it] will refuse to turn [the incumbent President] over to the Hague War Crimes Tribunal or allow Montenegro independence. [It says it] will also demand that Nato forces leave Kosovo and Serb forces be allowed to return. The mild-mannered and soft-spoken lawyer who wears drab grey suits and drives a battered Yugo was even photographed last year in the Serb-held enclave of northern Kosovo brandishing an automatic gun, paramilitary-style. Critics say the West has been blinded to his faults by their burning desire to oust [the incumbent President and that it] may prove equally intransigent, albeit less malign. Western diplomats, whose countries have poured millions of pounds into his campaign, explain away such flaws by saying [it] is forced to play the nationalist card to win over... voters. Serbian analysts reject this claim. “[The lawyer] has been consistent in his views since the very beginning,” one said. For most Serbs, [the lawyer]'s nationalism is seen as a political plus and even most pro-democracy activists find no problem with his views. Supporters say [the lawyer] is a refreshing change from other Opposition leaders who have won themselves unenviable reputations for corruption and compromise with the ruling regime... In the late 1980s when [the President] was seeking nationalists to replace the remnants of the pro-Tito nomenklatura, [the President] offered the lawyer a job. The lawyer refused and formed a small political party... Perhaps the West's best hope is that if [the lawyer gains power, it] will change his spots.

...Flames of freedom burn in Belgrade... As dusk fell on a Serbia with its institutions going up in flames, crowds of smiling people promenaded on Belgrade's main boulevards, crunching on broken glass, coughing in the thick black smoke and wondering at the revolution they had begun. The tear gas of the early afternoon had been replaced by an overwhelming euphoria. For the Serbs, whose history has been a litany of internal divisions, it was a rare moment of unity. Outside the federal Parliament, people carried away bits of furniture and souvenirs rescued before flames engulfed much of the building... At the state television building nearby a dozen cars were burning or burned out. The building housing the hated television station, which broadcast [the President]'s vitriolic propaganda... was also in flames. As in all revolutions, news was transmitted by mouth. The electricity supply came and went. The telephone networks went down. They came back on... The revolution was a people's protest, joined by Serbs from every walk of life, young and old, poor and rich. Professors, workers, students and just ordinary Belgraders were all in it together. It started that way, too. Serbia's revolution began to arrive in the streets of Belgrade early on Thursday in a convoy of filthy buses. By midday, workers and miners from the opposition towns of the south were beginning to mass, their grimy faces a testament to the roots of this revolution. They were deadly serious and very determined. The workers of Cacak had brought a bulldozer on the back of a lorry, and said they had used it to crush police barricades on the motorway. As hundreds of thousands of demonstrators poured into the city, Belgraders could not believe their eyes. One... with a baby in her arms burst into tears. “I can't say anything, I'm just too overwhelmed,” [the mother] said. The federal Parliament building was a prime target. The [protesters] lined up outside, buoyant with expectation... Officials from inside the Parliament came out behind the police to look at the crowd. They were whistled at. “Red bandits, Red bandits,” the crowd chanted... Nearby a Volkswagen van with a red flashing light played *The Clash's Should I Stay Or Should I Go?* A few minutes later outside the Parliament, a fight broke out between a demonstrator and a nervous riot police[officer]. Protesters began to pound the street with stones, then three [guys] in full combat gear dashed out from the building and began pumping tear gas grenades into the crowd. Middle-aged [gals] and children were crying from the gas. But the crowd regrouped. About 20 minutes later, drummers led the protesters back towards the Parliament... “We are not scared any more of the gas,”... said... [a gal], aged 50... wearing a red and white track suit and Reebok trainers... “We want to see this through to the end.” ...The revolt gathered new life shortly after 3.30 pm. Young... students broke through police lines and began running towards the Parliament building. The police were confused, then ran for cover inside. As they mounted a rearguard defence, salvo after salvo of tear gas was fired into a crowd... But the gas did not deter the hard [guys] at the front as they threw wave after wave of attacks against the building. Then the football fans from Partisan Belgrade stormed the building, apparently from the left. A roar went up from the crowd: “Serbia, Serbia, Serbia, Serbia.” The tear gas began to bite again, but nobody wanted to run this time... People were now flooding into the space in front of the Parliament from every direction. The huge Bulevar Revolucije was jammed. Protesters began to throw papers out of the first floor windows of the Parliament. A [protester] clambered on to one of the green domes on top of the sandstone Parliament and changed the flag... wreathed in smoke from the fires below. Burned paper from the Parliament floated gently through the air, suspended by the rising heat... One young [protester] pointed at the setting sun as its last rays fell obliquely on the ravaged square and said: “You see, there is sun over Serbia for the first time in 50 years.” ...There was no official word on the whereabouts of [the President], but Serbian opposition sources said yesterday that [it] was under heavy guard in a bunker in the village of Beljanica, about 80km from Yugoslavia's border...

End of road for Butcher of Balkans... [The] Yugoslav President... was in hiding last night after losing control of his country in a popular uprising on the streets of Belgrade. As rumours swept Serbia that [the President] had fled the country, three Antonov transport planes left Belgrade's military airport. But the Opposition claimed [the President] was holed up in a bunker at Bor in eastern Serbia, protected by 92nd light infantry brigade and other Army troops. Sporadic confrontations with security forces firing teargas and stun grenades gave way to a carnival of freedom as hundreds of thousands of Serbs turned on the... [person] who had led them through four failed wars and into international isolation. Riot police took off their helmets and danced with jubilant protesters waving the Serbian flag... [The main] challenger in the presidential elections, addressed the crowds with the words: “Dear liberated Serbia... I am now President. [The former President] has fled his home. Serbia has risen.” Opposition leaders said they had begun talks with the Army to take power. [The self-proclaimed President] called on world leaders to lift sanctions, but added: “We do not need Moscow or Washington; we are ready to liberate Serbia by ourselves.” The scenes were reminiscent of the “people's power” uprisings that swept eastern Europe after the fall of the Berlin Wall and Western leaders demanded that [the Yugoslav President] bow to the inevitable and give up power... [The British P]M... said. “Go before any more lives are lost, before there is any more destruction.” [The US] President... said: “The people of Serbia have made their opinion clear. They did it when they voted peacefully and quietly and now they are doing it in the streets because there has been an attempt to rob them of their vote.” Western leaders were quick to hold out the prospect of Yugoslavia's reintegration with the international community... The E[U] and the US said they were ready to respond to [the lawyer]'s request for an end to sanctions... [T]he director of studies at the Royal U[S] Institute in London, said that [the Yugoslav President] was unlikely to survive. “[It] will end up like Ceausescu. Everybody has an interest in having him dead; [it] knows too much.” But yesterday, all resistance from [the President]'s regime appeared to have melted away... [After the recent presidential election,] Opposition leaders had given [the President] who had ruled them with an iron rod... an ultimatum: [it] must step aside. But then state radio announced that the Constitutional Court had annulled the... presidential election and ordered a new vote to be held at the end of [the President]'s mandate, effectively leaving him in power for another eight months. But [the President] had not calculated on the overwhelming desire for change at every level of Serbian society. This time the great magician had fatally underestimated his people's determination to see the massive mandate the[y gave the lawyer] respected.

...the master manipulator who finally ran out of cards to play... Psychologists will no doubt make much of his parents' suicides. [The son] is branded both the “beast” and the “butcher” of the Balkans. But the truth is that [the Yugoslavia]President... soaked in the blood of thousands of

his fellow citizens, was as much puppeteer as psychopath. His trouble really began only when [the puppeteer] ran out of strings. It is little more than a decade but it seems a lifetime since the baby-faced apparatchik with the shapeless commie suits and shoebrush hairstyle manoeuvred his way to the top of Tito's crumbling federation. Even his many enemies have to admit his record for survival would make Machiavelli – who believed 'love of country transcends everything religious and moral, so that one may even lose his own soul for his country's sake' – proud. When... elected President of Serbia, the first of many titles [it] held, Yugoslavia was a beacon for Eastern Europe. With its blend of Western consumerism and wishy washy communism it was the half way house between East and West. Romanians under Ceausescu risked their lives to reach Belgrade. It had a McDonald's and real cappuccinos, and even petrol without queues. That affluent Yugoslavia was an illusion. The characters with long beards and khaki... W[W2] uniforms peddling nationalist Serb trinkets in Belgrade gave a more accurate guide to the health of Tito's old state. As Eastern Europe in 1989 threw off the shackles of tyranny, Yugoslavia was moving the other way. It was two years earlier... that [the son] broke the old Yugoslav taboo on nationalism when [it] delivered a rabble-rousing speech to hundreds of thousands of Serbs in Kosovo. In that instant [it] paved the way for the break-up of the old collective presidency[, and] also unleashed Yugoslavia's old nationalist furies that cost hundreds of thousands of lives in the 1940s and would do so again... It should not be forgotten that many of those baying for [hi]s blood in Belgrade yesterday had eagerly fought his wars. The violence distracted Serbs from the implosion of the economy. The wars also tapped the historic Serb victim mentality which dates back to the defeat by the Turks in 1389. [The son] perfected the old Soviet art of ruling from the shadows. His was the world of corridors and cabals. Thus [the son] brazened out street demonstrations in 1991 and 1996, and thus... hoped no doubt to see off the resurgent Opposition. But in 1996 [the son] could count on the support of the state media and the police. And [it] still had the Kosovo card to play. Now the only puppets left are the Serbs' kins[people] in Montenegro. But even the most red-blooded Serb would have balked at taking on their own. Serbs have a bloody history of butchering their leaders. Now, after a decade of quiescence, his people have finally risen and [it] will be lucky to avoid his predecessors' fate.

...Days before [the Yugoslav President]'s regime fell, vast crowds were still supporting him. Or were they? ...[the Butcher of the Balkans'] Yugoslavia was extraordinary in many respects. It was brutal, paranoid, resentful. In particular, however, it had an unparalleled shamelessness in telling lies. Other regimes make at least a token effort not to get caught out. [The Butcher's regime] scarcely bothered with such pedantry. They lied in your face – and defied contradiction. Often, that sheer insolence succeeded. One photograph neatly sums up the attitude: never tell the truth, when a lie will do as well. Published on the eve of last month's elections, it stands as a testament to the [Butcher's] madness. The *Vecernje Novosti* newspaper took a photograph of a pro-[President] rally, discovered that the crowds were too thin, and – employing techniques reminiscent of those used by Hollywood special-effects units – multiplied the numbers with a tweak of the mouse. Why have that snowy-haired [supporter appear] once, when we could see him twice? Why should the [gal] with long dark hair appear only on the left, when [it] could be on the right, too? In short, why have half a crowd, when you can have twice a crowd instead? When opponents... spotted the lie, the editors insisted simply that there had been a "technical error." It could have happened to anyone[, they proclaimed. However, i]t was part of a pattern of brazen, institutionalised deceit that in recent weeks had been reaching new heights of absurdity. Football matches were being broadcast with falsified soundtracks, because the favourite chant on the terraces had become: "[President], save Serbia and kill yourself." And when, as part of the national protest campaign at the Government's refusal to acknowledge election defeat, a university boycott was announced, the television news none the less managed to broadcast pictures showing row upon row of eager-looking students – which would have been more impressive had the same pictures not first been broadcast last year. When Serb state television, RTS, was short of admirers, it simply invented them. To my lasting shame, I myself was once roped in as an alleged fan. Three years ago, I interviewed the editor-in-chief of RTS for a report commissioned by the E[U. The editor] told lies; I argued a little; above all, I did what I needed to do: I took notes. That evening I turned on the television news to see pictures of my politely nodding head – and hear a report about how impressed the [journalist] from the *Independent* was by RTS's impartial coverage. I raged, and demanded a retraction. It was, of course, to no avail. RTS regularly broadcast a familiar farrago of lies in which the main elements were always the same: [the President as the statesperso]n (receiving foreign guests, smiles, handshakes); Serbia's booming economy (a red ribbon being cut for yet another new building project, even while the real economy plunged further into the abyss); venal, brutal, and mendacious Western Governments (stories from the foreign press, plus some invented conspiracies); and approving comments from foreigners (Chinese or North Korean, or misquoted journalists like me). [The Butcher] seized control of the media when [it] first came into power, and used [the media] with great effect to create a climate of xenophobia and fear. Serbs learned to think of themselves as innocent victims, and were taught that only [their President] would stand up on their behalf. When [the President] suffered defeats – such as the expulsion of Serbs from Croatia in 1995, or the humiliation in Kosovo – the public were told only about victories. They did not quite believe; but their senses were deadened by propaganda. Above all, they were repeatedly assured that Serbs had done nothing wrong. At the beginning, the stream of hatred against Albanians in Kosovo meant that [the President] was adored. But the crowds supporting [the President] soon shrank, while those supporting the Opposition grew. But there was too little solidarity to achieve the necessary change. Beaten down – and incessantly lied to – the Serbs lacked self-belief. During the winter of 1996-97, when a series of demonstrations threatened to bring [the President] down, people in Belgrade hung out their windows at 7.30 pm every evening, banging saucepans to drown out the RTS lies. But the propaganda ground on, unabashed. And despite the heartening din, the truth was that too many Serbs believed at least part of what RTS told them... [A] classic essay *The Power of the Powerless*, talks of the change that becomes possible when societies start to believe in themselves – in [the essayist]'s phrase, "to begin living in truth." Citing the example of a single greengrocer who makes his own... small revolution by confronting an official lie, [the essayist] concludes that the knock-on effect of confronting lies can be dramatic, creating a "complex ferment" inside the regime. "By the time it finally surfaces into the light of day as an assortment of shocking surprises to the system, it is usually too late to cover them up in the usual fashion." [The essayist] wrote those words 15 years ago. [It] might have been writing about Serbia in the past few weeks. Following last month's election, scores of journalists – hitherto loyal to their President – joined the protests against [hi]s refusal to relinquish power. They began demanding, and soon realised, the right to report freely. I will never forget the glorious moment 10 days ago when I came in off the revolutionary streets of Belgrade, sat down in the friends' flat where I was staying and switched on the television. Even after all that I had seen outside, I could scarcely believe my eyes. Simple truths began to replace the lies that had oozed from the screen only hours earlier. As one Serb friend said: "That was the moment at which we knew that nothing would be the same again." ...In future we may reasonably hope that a photograph of a crowd will be just that. That is an important beginning, which can allow much bigger truths to be spoken – and heard.

...Gangland bosses in Serbia are vying for control of the black-market economy in the power vacuum left by the flight to Moscow of... the son of the ousted dictator. The full extent of [the son]'s violent crime network emerged last weekend as his rivals began competing for dominion over an empire of smuggled arms, petrol, drugs, people and goods such as tobacco, with an estimated worth of £500 million... Two of Serbia's most feared gangsters are battling for his crime interests, leaving Serb citizens in fear that warfare between underground gangs will spill on to the streets... In a further threat to Serbia's economy, gang leaders are thought to be shifting vast sums in assets abroad in the wake of the change in Government. An estimated £300 million has been salted away... While Switzerland has blocked £57 million in assets in about 100 bank accounts linked to the... [ousted dictator's family – Serbia's] criminal circle included most members of his family... [–] Croatian police allege that [his son] used Liechtenstein to stash millions from his vast empire in contraband cigarettes. [The] known cocaine-user... aged 25 [– who] paid no tax on his string of glamorous "legitimate" businesses, which included an internet cafe, two duty-free shops on the Hungarian and Bulgarian borders, bakeries and cosmetics and electrical stores... a radio station, a theme park called Bambiland and a nightclub named Madonna, and profited from trading the wildly fluctuating national currency, the dinar, against the German mark... [– is also] known to have siphoned funds to Lebanon and China... The... family

is believed to have £100 million hidden in China, the intended destination of [the son]'s failed escape attempt last week, where a large and liquid banking system facilitates money laundering... Today Bambiland is closed[. hi]s discotheque... has been ransacked by angry citizens[. h]is perfumery in Belgrade, Scandal, where [the son] sold cut-price smuggled scent, is a shattered wreck, daubed with the graffiti: "Daddy, they smashed my shop." Insiders say it was inevitable that sooner or later [the son] would have clashed with Arkan, the paramilitary leader and gangster. Serbia's shrinking economy was not large enough to support two [gangsters] with such powerful egos and greedy business interests. When Arkan was gunned down in the lobby of a Belgrade hotel in January, informed insiders said [the son] was responsible. Underworld rumours speak of a reward of several hundred thousand pounds put on [hi]s head by Arkan's Tigers... [T]he director of the crime prevention unit at Keele University, Britain, and an authority on eastern Europe's mafia, said that rooting out corruption would be an impossible task for [the]new President. "Serbia is underpinned by organised crime, which is about the most adaptable of institutions in times of political change. The same characters are involved behind the scenes; they will just update their political contracts with the new administration. [The ousted dictator] came up through a corrupt political apparatus, where allegiance to the local kingpins and black marketeers facilitated his rise to power."

...[dictator set] to rise again... S[erbia's ousted dictator] has returned to the political arena, denouncing his opponents as Western spies and traitors, as his Socialist Party re-elected him its leader weeks before crucial elections. Without a word of regret about his... [past, the dictator] pledged at the weekend to wreak revenge against his enemies, who[. it claims.] ousted him simply by chance. [The dictator] and his socialists said [the]new Yugoslav President... and his 18-party pro-democracy alliance had brought only violence and lawlessness since taking over from him... The rhetoric was strikingly reminiscent of phrases [the dictator] used in leading the country into four Balkan wars and economic decline... There have been calls for [hi]s arrest, both in Yugoslavia and abroad. But [the dictator] and his closest allies have been buoyed by [the new President]'s refusal to hand him over to the UN war crimes court. The UN court has indicted [the dictator] and four of his associates for atrocities committed in the war in... Kosovo.

...The end for [the]former Yugoslav President... came in the chilly pre-dawn hours. Bundled into the back of a police car, the former Balkans [tyrant] was whisked away from his Belgrade villa to prison to face corruption charges arising from a decade of iron rule. His arrest came after [the tyrant] twice repulsed heavily armed black-clad masked commandos who stormed his compound and waged a gunbattle with the former President's private guards. [The tyrant], who had boasted that [it] would "not go to jail alive," surrendered to avoid a bloodbath, said one of his Socialist Party associates. Although [the tyrant] was put behind bars on suspicion of abuse of office, [it] is also wanted by the U[N] war crimes tribunal to face charges of crimes against humanity... Nato, the E[U] presidency, France, Britain, Germany and ex-Yugoslav republic Slovenia led an expected flood of international reaction welcoming the arrest... "This is very welcome news to all those who have struggled so long to bring peace and justice to the Balkans," said Brit[ain's] Foreign Secretary... Belgrade newspapers ran special Sunday morning editions. "It's Finished, [Butcher] is Arrested!" read one headline. The arrest followed U[S] threats to suspend \$US50 million... in aid if [Yugoslavia's new]... Government did not show cooperation by midnight Saturday... on the UN charges.

...the former dictator, could be in a cell in The Hague by tomorrow after the Yugoslav Government yesterday cleared the way for his extradition on war crimes charges... Pro-democracy members of the cabinet of [the new]Yugoslav Premier... forced through a law for cooperation with the tribunal by cabinet decree after [the dictator's]former allies from Montenegro refused to back the Bill in Parliament. [The dictator]'s extradition is a Western condition for Yugoslavia to receive billions in aid money. Previously, his extradition had been blocked by Yugoslav law. [Yugoslavia's new Deputy-P]M... believed there were indictments against 16 Yugoslav citizens including [the dictator] and they would all have to be handed over. "There will be no bargaining about them. The Hague will demand the extradition of these people and we will have to do it,"... [The dictator], who has been in Belgrade's central prison since... [being arrested on charge]s of corruption... would be the first former head of state to be brought before the court... The decision on extradition of war crimes suspects... has become increasingly urgent ahead of a key aid donors conference on Friday in Brussels. However, [the dictator] remains defiant... "My destiny is linked with the destiny of the state and the nation. This case against me was faked," [the dictator] was quoted as saying by one of his lawyers... "I have done everything for benefit of the nation and the state and it was difficult to make decisions but I have always been inspired by our glorious history. I hope that history will make the final judgment."

...How the mighty evil are fallen... A... 'saviour'... has been sent to face justice for his numerous war crimes on a day that is full of dark portents for his native Serbia. [The former dictator] was flown to The Hague yesterday, the anniversary of the Battle of Kosovo in 1389, which is... also the day, in 1914, that a Serb nationalist assassinated Austrian Archduke Franz Ferdinand, an act that sparked... W[W1], and on that same day in 1989... [the dictator] made an inflammatory nationalist speech to a crowd of Serbs... that [is regarded] as the spark for the four Balkan wars and the atrocities that took place... During his decade of power [the dictator] achieved misery, not only for the rest of the Balkans but for Serbs as well. Estimates of the number of dead in the wars vary, but it seems certain there were more than 275,000. The term "ethnic cleansing" brought chilling reminders of the Nazis as three million people were driven from their homes. And there were massacres the like of which Europe had not seen in nearly 50 years. One... turned the name of the Bosnian town Srebrenica into a byword for horror. The wars had a devastating economic effect as well. In 1990, Serbia was part of Eastern Europe's most prosperous and vibrant economy. But after the wars, eight years of punitive international sanctions, 11 weeks of Nato airstrikes and a decade of systematic graft, its economy is in a shambles. Half the population is jobless or on indefinite leave from obsolete, bankrupt or bombed industries... If found guilty [by the war crimes tribunal the dictator] faces life imprisonment... [The dictator] has been taken to a special section of Scheveningen prison in The Hague. His 3m by 5m cell has an en-suite shower, coffee-maker and television offering a range of satellite channels, including some from the Balkans... Prosecutors may yet lay... other... charges... At present [the dictator] is charged only over massacres and the expulsion of hundreds of thousands of people during the Kosovo conflict, the last of his wars.

...Yugoslavia has been plunged into political turmoil after a major Government split over the decision to extradite [the former President] to face charges before the UN war crimes tribunal. The snap transfer of [the ousted dictator] to The Hague has been met with international applause and pledges of more than \$3 billion in vital aid at a donors' conference in Brussels. [The dictator] will be formally arraigned tomorrow on counts of war crimes... The handover is being hailed as a breakthrough towards cleaning up the Balkans and a triumph for global justice. But it also casts a long shadow over the future of the federation linking Serbia and Montenegro... "The federation is in a deep crisis,"... Serbia's P]M... told German ARD television... [The Yugoslav PM], one of the leaders of the... Montenegrin Socialist People's Party... immediately resigned, which under Yugoslav law means the whole federal cabinet must step down. However, Belgrade analysts said the crisis could be defused as Yugoslav[ia's] President... has no deadline for naming a new Government line-up. That means the Government can continue as a caretaker until a durable solution is found. Analysts said federal elections were unlikely as voters had already been to the polls twice in the past 10 months, and little had changed in the various parties' manifestoes... Meanwhile, forensic experts have exhumed 74... bodies from two mass graves in eastern Serbia... Some of the decayed bodies had bullet wounds. Experts from the UN war crimes tribunal monitored the work. A Belgrade court said last week that at least 36 bodies in civilian clothes were exhumed from another mass grave found in a police compound near Belgrade. They were believed to be bodies of Kosovo Albanians brought to Serbia in a freezer truck during Nato's... bombing campaign on Yugoslavia to halt Belgrade's repression in the province. The truck was later found in the River Danube. Serbia's new authorities last month linked [the dictator] to the case, accusing him and top aides of covering up evidence of possible war crimes in Kosovo. In Belgrade, police fired in the air yesterday in a bid to disperse several hundred nationalist thugs who stoned and beat gay activists taking part in the first-ever Gay Pride parade in Yugoslavia. At least four activists... were injured...

One Serb was stoned to death... yesterday when Serbs and ethnic Albanians fought a running street battle in Kosovo... Tensions between the ethnic Albanian majority and Serbs still run high across Kosovo in the wake of years of Serb repression and Nato's bombing campaign to drive Serb forces out of the province. Hostility is particularly intense in Mitrovica, which is divided by the Ibar river into Serb and Albanian areas... Rioting flared in the northern city of Mitrovica when thousands of mourners spotted Serbs in cars on a main road after a funeral to rebury about 20 ethnic Albanians... [who were] kidnapped... by Serb paramilitaries during Nato's bombing... and... whose remains were exhumed from a mass grave last month. The Albanians stoned Serb cars and threw petrol bombs at a Russian armoured personnel carrier and vehicles were set ablaze. Around 10 Serbs and about the same number of K-For troops from French and Russian contingents were injured.

...Russian troops marched to within 2km of Grozny yesterday as federal forces tightened their grip on the Chechen capital. With a Russian pincer movement closing in, an official in Grozny said the rebel leadership was ready for "constructive talks" with Moscow. But Russia's PM... flatly rejected any possibility of negotiation until the Chechen rebels had been crushed. "We will not let up in the slightest..." [the PM] insisted on television after meeting [Russia's President. The President had summoned the PM] and the foreign and defence ministers to the Kremlin to discuss last week's European security summit in Istanbul, where Western leaders assailed the Chechnya campaign... State-run RTR television confirmed the advance, adding that Chechen fighters were mining public buildings as they retreated into Grozny. Russian troops are now closer to the city than at any time since the disastrous 1994-1996 bid to snuff out Chechen independence in which about 80,000 people, mainly civilians and Army conscripts, died. On the ground, Russian commanders brushed off the criticism and turned up the heat on Grozny, blasting the western Zavodskoi and Staropromyslosky districts with multiple-rocket launchers... Kulari, Alkhan-Yurt and Urus-Matan were also blitzed... Urus-Matan is widely seen as the centre of the lucrative hostage-taking trade which has plagued Chechnya since the end of [the]1994-1996 war, which left the republic with de facto independence from Russia. Moscow has used the rise of rampant crime to justify its new crackdown in the lawless republic, which [the PM] has branded a "huge terrorist camp."

...The perennially unpredictable [Russian President] astounded the world one last time last night by announcing his early retirement from the Kremlin to make way for his anointed successor, [Russia's P]M... The resignation came into effect immediately... [The President's] announcement caught Russia by surprise, and is likely to launch his country into yet another political crisis as parties scramble for position... Under the Russian constitution, presidential elections must be held within 90 days of the President's resignation... [The PM] will act as President until... [the elections. The PM], a virtual unknown tapped for the P[M]'s job barely five months, has risen to unprecedented public approval levels and appears fully in charge of Russia's Government, military and security apparatus.

...Rebel forces battled Russian soldiers amid the wreckage of bombed homes and factories in southern Grozny yesterday as federal artillery pounded the Chechen capital from all sides... [A] senior Chechen commander in Grozny, said that rebel forces had repulsed six Russian ground attacks in the north and southeast of the city during the past 24 hours. But the Russians were still attacking... [The commander] claimed that 111 Russian soldiers had been killed and 18 others were taken prisoner over the last two days, while saying Chechen losses were minimal. There was no way to independently confirm the claim and both sides routinely exaggerate each other's losses... Despite heavy and indiscriminate Russian artillery fire, the Chechen fighters appeared to be holding their own. The Chechens are fighting from bunkers in buildings wrecked by Russian bombing. Such positions are difficult to capture, requiring costly infantry attacks. Plumes of black smoke rose over the city's devastated centre as salvos of Russian shells screamed overhead, exploding in bright flashes of red and orange. The streets were deserted, with nobody daring to move outside. Chechen units were still fighting Russian troops around the city airport, which the Russians claim to have captured. It was not clear who, if anyone, held the shattered facility... There are some 7000 rebel fighters in Grozny... But rebel groups outside the city are finding it difficult to send reinforcements and supplies through the Russian lines encircling Grozny... Russian authorities repeatedly have told civilians to clear out of Grozny in preparation for a major attack on the city... Up to 40,000 civilians are believed trapped in the city, many too old to make the dangerous journey through Russian shelling out of the capital... 86 civilians had been killed in Grozny by Russian shelling during the past 10 days.

...Russia's military, clearly stung by Western criticism, denies having ordered the residents of... Grozny to flee the city or die, and says their ultimatum had been aimed only at rebel fighters. But despite the more conciliatory language, Russian planes and artillery kept up their bombardment of guerrilla targets in Chechnya... Earlier this week, Russian planes dropped leaflets on Grozny urging the estimated 40,000 people trapped in the bombed and burning city to leave by Saturday or be destroyed. The leaflets said a safe corridor would be provided them. Western criticism was swift and particularly harsh. Canad[a's] Foreign Minister... said Russia was "crossing the line into potential crimes against humanity." But Itar-Tass news agency quoted Russia's chief commander in Chechnya... as saying the move had been intended to make Islamic militants fighting Moscow's rule in the North Caucasus think again and lay down their arms. "This is a warning to the bandits – a week's grace has been given to them,"... However, [the]... General... did not explain how the Army intended to wipe out the "bandits" while saving the lives of the civilians. [The General] said the plan was: "minimal losses on the side of the federal forces and civilians and maximum destruction of the international terrorists." Russia's Interior Minister... also cast doubt on the initial ultimatum, saying a checkpoint being organised outside Grozny would operate beyond Saturday... Russia's Emergencies Minister... gave a list of 23 Chechen villages, including some close to Grozny, ready to accept refugees from rebel-controlled areas. Russia is trying to persuade some of the more than 200,000 refugees in the adjacent region of Ingushetia to return. Russian troops control most of central and north Chechnya.

...Moscow's *Nezavisimaya Gazeta* is normally a good newspaper, but this week it carried a picture of a city in ruins, with the caption: "This is not Grozny, but Pristina after the Nato bombardment." It expressed the almost universal feeling in Russia that foreign protests about Moscow's military offensive in Chechnya are mere hypocrisy after the Western alliance's air attacks on Serbia and Kosovo... The picture lied, of course: Pristina was knocked around a bit in the Kosovo war, but the damage did not remotely compare with the Stalingrad-style ruins of central Grozny after the first Russian attack on the city in 1995, let alone the wholesale destruction of the entire city now being wrought by daily torrents of rockets, bombs and shells. The Russian Government has plainly said that its aim is to erase Grozny (which had 300,000 people in 1995) and start again elsewhere with a new capital for Chechnya. From there, it was a short step to the chilling decree issued by the Russian high command that all those who did not leave the city would be killed: "Those who remain will be treated as terrorists and bandits... There will be no talk. All those who do not leave the city will be destroyed." Never mind that it's a 25km walk under Russian air and artillery attacks from central Grozny to the designated checkpoint at Pervomaiskoye. Never mind that the city still contains tens of thousands of innocent civilians too old, ill or poor to leave, or that about one-third of these civilians are Russians. Never mind, either, that there is a yawning gulf between Nato's precision weapons and its largely successful efforts to minimize civilian casualties in Kosovo on the one hand, and Russia's free-fall bombs, unguided missiles and indiscriminate targeting in Chechnya on the other. Never mind even that the campaign is being waged mainly for domestic political reasons. The patriotic fervour it has unleashed in Russia is meant to boost the... President's... Unity Party (founded only two months ago, but already second in the opinion polls) in next week's Russian parliamentary elections... But... is... there any moral equivalence between what the Russians are doing in Chechnya and what Nato did in Kosovo? Those in the West who opposed the Kosovo campaign now insist that there is. So do the Russians, rejecting mounting Western criticism of the war as cynical meddling in Russia's affairs. They fail to realise that in this comparison, they are not playing Nato's role – they are the Serbs. In both cases, a small Muslim subject people, conquered by a much bigger Slav Christian nation generations ago and treated so brutally over the years that they now desperately want to break away, has been savagely punished for its ambition.

...Chechnya has suffered 250 years of Russian aggression. Last century Iman Shamil led the Chechens in a 25-year struggle against Tsarist armies. Said Bek led another campaign of resistance against the occupying Red Army in 1920. Stalin resolved that conflict with promises of internal sovereignty and autonomy if the people of the Caucasus joined the Soviet Union. Those promises turned to dust during the forced collectivisation of the late 1920s and early 1930s. Some 35,000 Chechens were arrested, including the leaders who had supported Stalin's deal, charged with "bourgeois nationalism" and disappeared. That sparked a new wave of anti-Soviet guerrilla warfare, which intensified with the onset of... W[W2]. Russia's response was to deport 1.5 million north Caucasus people in cattle trains, including 800,000 Chechens and their close neighbours, the Ingush. When Khrushchev returned them to their homelands in 1957, fewer than half had survived. In 1991, with the old Soviet Union breaking apart, the Chechens made another bid for independence. The National Congress of Chechen People... held hurried parliamentary and presidential elections, formed a "National Guard" and seized key Soviet assets. Attempts at reaching a compromise with Russia failed. The Kremlin refused to entertain Chechen independence and the Chechens refused anything less than an interstate treaty. [The then Russian President], ignoring calls from other Russian politicians for a referendum on Chechen self-determination, declared a "state of emergency," which drove the sides further apart and set them inexorably on the path to conflict. The Russians seeking to take advantage of splits in the Chechen leadership sent a tank column into Chechnya, which ignited the disastrous war of 1994 to 1996. As many as 60,000 Chechen civilians and several thousand Russian soldiers lost their lives. Russia has learned from that experience. The latest campaign of destruction is sophisticated, systematic and brutal, with no expense spared. The Chechen capital of Grozny will likely fall in the next few days. So why is small, beleaguered Chechnya so important to Russia? Russian justifications that the imbroglio is to prevent the spread of radical Islam in Central Asia, Chechen involvement in Dagestan and that the Chechens were responsible for a series of bombings, are insufficient. The real answer lies in Chechnya's strategic position astride the pipeline that links the oil-rich, land-locked republics of Azerbaijan and Kazakhstan on the Caspian Sea with the Russian port of Novorossiysk on the Black Sea. In 1995, Azerbaijan signed an \$8 billion oil deal with a consortium of Western oil companies to build a new pipeline skirting Russia to the Black Sea. Other important deals were also signed between Kazakhstan, Russia and other consortiums to develop the giant Karachaganak natural gasfield, and to develop vast oil fields. All told, these Western deals with Central Asian states bordering Chechnya total \$28 billion. Originally none of the deals included Russia. However, Moscow demanded a share in all energy export deals by its former republics and secured a percentage share in each one signed. Cash-starved Russia stands to gain more if it controls Chechnya and the pipeline running through it. The war began after Russian-Chechen agreements to share the pipeline collapsed because of mutual mistrust, theft of oil from the pipeline and mismanagement by the Russian pipeline company Transneft. In an era when the West has ousted Iraq from Kuwait, bombed Serbia out of Kosovo, and forced the Indonesian Government out of E[IT], there seems little we can do for the Chechens. Militarily, the West cannot act but it can suspend IMF funding. It is perhaps no coincidence that the 1994 invasion corresponded with an IMF grant of \$11 billion to Russia.

...THE west has been urged to intervene in Chechnya after video footage showed soldiers piling bodies into a mass grave in the troubled province. "The West can no longer sit by on its hands issuing strong statements but not backing that up with action," said... Human Rights Watch. "The film looks extremely authentic... and raises a lot of very, very serious questions about the treatment of said Chechen prisoners of war." Germany's N24 television yesterday released footage showing what appeared to be soldiers dumping dozens of corpses... into a rectangular pit and covering them with clumps of earth. Many of the dead were in military uniform, suggesting they were Chechen rebel fighters. But some had been tied up, suggesting they did not die in combat. Others were mutilated... Russia said its military was investigating but the E[U] and a top human rights group demanded an independent inquiry... [and] autopsies on the bodies. If Russia would not do this, an international body needed to look into the allegations... Russian officials, who have strongly denied previous accusations of abuse, said they doubted the tape.

...A human rights group says it has medical evidence that Russian troops tortured Chechen civilians, the latest charge to taint Russia amid a new wave of international criticism of the Chechen war... The Russian Defence Ministry has... denied the accusations. Moscow was still smarting from television footage at the weekend that suggested Russian soldiers had committed atrocities against Chechens. Preliminary findings from a random survey of refugees by Physicians for Human Rights reveals systematic abuses of Chechen civilians, including summary executions, illegal detention and torture. The Boston-based volunteer group interviewed 326 Chechens at refugee camps in Ingushetia... Nearly half said they had seen civilians killed by Russian forces... In Moscow, [the]Council of Europe human rights commissioner... met Russia's human rights commissioner... who expressed concern about exaggeration of rights abuses in Chechnya. In Chechnya, rebels penned in the southern mountains ambushed Russian troops in an attempt to break out of their last major stronghold, the town of Shatoi, but the military claimed to have pushed the militants back.

...It is the first large city to be destroyed by military action in Europe since 1945. Two months after the Russian Army captured Grozny, the capital of Chechnya and once home to 400,000 people, its ruins look like pictures of Stalingrad or Dresden... I re-enter Grozny sitting on top of a Russian armoured personnel carrier. Its driver manoeuvres between the heaps of rubble and the deep bomb craters that puncture the road. For kilometre after kilometre not a single building is intact. The only place I have ever seen this level of destruction was the frontline in wartorn Beirut. Grozny is much worse. It is not just the frontline, but the whole city that has been torn apart. I was last here... when it was still held by the Chechens. Then... saplings and grass sprouted from the tops of the walls of wrecked buildings. Now the foliage that colonised the wreckage is shrivelled and burned. The devastation even extends below ground level: penetration bombs have torn up water pipes, which stick out at crazy angles into the air, like the guts spilling from a corpse... Russian soldiers are standing close to where the Chechens queue for their rations, but this does not stop one old [gal] speaking out. "The Russian Army must go home... We support the rebels. We just want to live peacefully." Other Chechens speak bitterly about their own leaders. "Both sides are responsible," says [another gal]... A group... sweep the roads with broomsticks in a bid to clear lumps of concrete that would take a dozen bulldozers a week to shift. A little further on... [o]thers sit on scaffolding to apply... plaster to the front of the once-pretty 19th-century station building. One track of the railway is, in fact, working, but is used exclusively by the Russian Army. "We are rebuilding so people can come back to the city," says... a burly Chechen... who once worked on the railways... Neither [the ex-railway worker] nor the other workers are being paid but they hope to receive money from the Russian Administration. It may be a long wait... [Asked if it] expects anything from... the Chechen President now hunted by the Russians in the mountains, [one says: "No, our President] is a dead loss." Nothing angers the Chechens so much as to hear that... the Russian President-elect who this week met Brit[ain's P]M... and the Queen in London, claim that the war, of which [it] is the architect and beneficiary, is directed against "terrorists" and not the Chechen people as a whole.

...More than 100 people are feared dead after troops stormed the Moscow theatre where Chechen rebels held 700 hostages. The dead included 34 of the 40 Muslim terrorists. But other casualties include at least 67 hostages. The hostage-takers – including leader Movsar Barayev... the nephew of the ruthless warlord who killed Kiwi Stan Shaw... and three Britons... [before himself being] killed last year, allowing Movsar to take control... of... the gang... [for which n]o tactic was too bloody... in their fight to gain Chechen independence from Russia... – were gunned down when elite Russian troops stormed the building to end the three-day siege. Special forces used sleeping gas then burst in after the terrorists shot four hostages – two fatally. "We could no longer sit and wait," said [a]federal security service spokes[person]... As many as 75 foreigners – including A[US]ns, U[Ser]s and Britons – were among those being held... A[US]n diplomats said they believed none of the dead were tourists... The[]rebels had] promised to release the hostages if Russia[']s President... declared an end to the war in Chechnya and began withdrawing troops. [The Russian President] said preserving the lives of the hostages was his only concern but negotiations broke down and the rebels threatened to kill the hostages. They laid explosives and some strapped mines and grenades to themselves. About 60 hostages had been let go but [an]eyewitness... said conditions in the theatre were terrible. "There was a big bomb in the centre of the hall. The stage was mined as well as all the passage ways... They had to use

the orchestra pit as a toilet.” [A]Kremlin official... said authorities had not been worried by the threats to kill hostages. “We thought they were overdramatised and exaggerated,”... [Russia’s President], whose tough line against Chechnya helped propel him into office, has always vowed not to negotiate with Chechen rebels unless talks focus on disarmament... [Movsar] appeared in a video that Al-Jazeera TV said was taped before the raid. “Each one of us is willing to sacrifice himself for the sake of God and the independence of Chechnya... I swear by God that we are more keen on dying than you are on living.” Last night his wish came true...
